AMERICAN POPERTY OF THE BRARY O

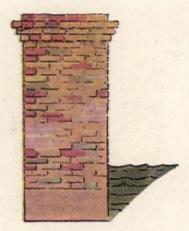

JANUARY 1934

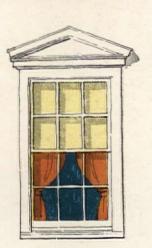

Build it Yourself— with Shears and Paste

HERE'S a unique service for AMERICAN HOME readers. A model house from which several designs can be made with a wide choice of architectural detail. The material is printed in five colors, and you will find this a novel plan for designing your house. It is actually more fun than a jig-saw puzzle and infinitely more instructive, especially if you are cherishing a dream picture of the little Colonial house you would like to build.

Cut-out patterns include two types of side walls and floor plan, three styles of fence shutters, two types of windows, doorways, chimneys, roofs, planting plans, trees, flowers, etc. You will spend many pleasant hours building and re-building your model home with these color patterns.

We have priced them within the reach of all. A complete set, with floor plans, and postpaid, for only 50c, and you may remit in stamps or by money order. Address The American Home, Garden City, New York.

Complete color pattern postpaid only 50c

To the Man who is " on the fence about automatic heating

ARE YOU one of the thousands and thousands of people in this country who are gosh awful tired of playing nurse to a furnace? Do you hate to get up half an hour earlier in a cold house so you can have heat up before you leave for work? Do you hate the idea of the "little woman" playing janitor all day? Sure!

Then you are probably one of those who have reacted very favorably to the idea of enjoying the luxury and economy of a G-E Oil Furnace. You probably would like very much to get up in the morning and find the house at about 72 degrees; have good hot water on tap for your shave and shower. You like to imagine your wife not having to run up and down the cellar stairs a dozen times a day, opening and closing the drafts. You would like very much to yawn and go to bed at 11 or 12 P.M.—without having to go down and bank the furnace.

If all this is so, what are you waiting for? The day you put the G-E Oil Furnace in, a real saving starts along with the luxury. Many owners are cutting their fuel bills by 20% to 50% — have been for two heating seasons.

And if paying for the furnace is what is bothering you — set your mind free on that score. A small down payment puts it in. The G-E Purchase Plan gives you 30 months—2½ full years—to pay the balance.

You'll have a complete, coordinated heating unit. Not an attachment for your old furnace, but an arc-welded steel boiler, burner, controls, and water heater designed and built to work together, by

one responsible company — General Electric.

INSTALLED IN ONE DAY

Don't let cold weather, or coal in your bin, hold you back. We install the furnace within a day,

before your house can grow cold. The work is done under the supervision of factory trained engineers. If you have a supply of some other fuel we will exchange it for oil.

All you have to do about it is to let us know you are ready. Stop in at the nearest dealers' showroom—or telephone—or mail the coupon—and we will send you complete information.

Appreciate these differences: arewelded steel boiler, burner on top, chimney connection at bottom.

70,000 Copies Sold The American Home Service Booklets

The Editorial Department of THE AMERICAN HOME has compiled this series of practical handbooks, and in recent months our readers have purchased 70,000 copies. Many of the booklets have recently been completely revised and greatly enlarged.

How Many Do You Want?

1. WHAT YOU OUGHT TO KNOW ABOUT 6. HOW TO MAKE SLIP COVERS & HOUSE PLANTSPostpaid 10c DRAPERIESPostpaid 10c A valuable handbook of what to grow and how Famous interior decorators describe in detail to grow house plants under difficult conditions. how to make professional-looking covers and 2. MAKING LILY POOLS AND ROCK draperies. Profusely illustrated. Complete, detailed construction information with 7. 15 PLANTING PLANS FOR SMALL appropriate plantings for small pools and realistic rock gardens. Complete planting plans drawn to scale, with actual results and other valuable information. WHAT YOU OUGHT TO KNOW ABOUT ROSES..... Beautifully illustrated. J. Horace McFarland; J. H. Nicolas; Romaine B. Ware; C. E. F. Gersdorff and other famous Rose specialists. 8. SUMMER CAMP AND LOG CABIN Smart, simple interiors by famous decorators. Comfortable, inexpensively built summer camps 48 pages, beautifully illustrated with color and log cabin plans, specifications, costs, etc. schemes, descriptions, etc. An invaluable handbook, with original, practical ideas for every room in the house. Profusely illustrated. 9. 300 AMERICAN HOME RECIPES AND MENUS......40c THE AMERICAN HOME BOOK OF HOUSE PLANS.....\$1.00 A new, completely revised and greatly enlarged 120 pages of houses-hundreds of them-costing book of 300 recipes and carefully planned menus. from \$3,000 to \$25,000, with complete floor plans, costs, etc. America's foremost architects have made this book possible. Also many ex-72 pages. Hundreds of illustrations. amples of remodeling with before and after illustrations and complete details as to cost, etc. This Covers every important furniture period, with is a new and completely revised book, substana story of their famous designers. Illustrated tially bound, and if you are planning to build or remodel, you will find it invaluable. Mailed with drawings of rare museum originals, photographs of modern reproductions. 28 pages, all illustrated. anywhere postpaid.

ORDER BY NUMBER and USE THE COUPON

These booklets have been compiled from material which has appeared in previous issues of this magazine. You will find each of them a veritable encyclopedia on the subject covered. Order by number and remit by check, money order, or currency.

"-because it is an honest expression of present-day living, modern

design should interest all thinking Americans."

Russel Wright

WE MAY be tired of this modern world, we may not like riveters and traffic, we may loathe telephones and abhor electric lights. In our homes, we want peace, we want the quiet charm, the comfort and beauty of the past. A world that was not harsh and strident. And we think we want the comfort and beauty of the past. Unfortunately this is no longer possible-we cannot pick and choose our centuries and piece them together again. Twentieth century living is scientific, simplified comfort and can be achieved only by twentieth century means.

You are a thoroughly modern person everywhere but in your home. You are not ashamed to admit that a 1934 car is better looking and more comfortable in every respect than even a three-year-old model. You spurn the folly of dragging about heavy,

uncomfortable clothing. You do not think it an admission of laziness or sloth to put the newest electric dishwasher or washing machine in your home. In fact, in your kitchen, period furnishings are put to rout without a murmur. Yet in other rooms of your home, where living is just as modern, you insist on absurdities. Why this reluctance to fit the rest of your house to modern requirements? Why not be consistent?

A modern girl sprawling in a Louis XVI chair is pretty absurd, you will admit. These chairs were designed for elegant ladies of the court who sat primly and daintily upon them. Jacobean furniture was designed to withstand armor and metal trappings of the rough and sturdy gentleman who used it—not for compact, suburban homes. Chests were made of heavy oak that their precious contents of linens and silver might

not be stolen. Surely, there is no such excuse for linen and silver chests today! Our pilgrim fathers put canopies about their four-poster beds to keep out drafts and the dreaded night air. Surely, it is not unreasonable of me to state that in an age which almost worships sun and air, it is a little incongruous to find a canopied four-poster in a 1934 home.

Thinking about it, it seems that we are merely clinging tenaciously to sentimentality. But to those of us who are trying to make modern design an honest expression of present-day living, it is more than a sentimental clinging to the past. It is sheer tragedy of waste—waste of intelligent machines and waste of splendid new materials.

But you do not like modern decoration? You think it harsh and strident? True, many atrocities have been committed in the name of modernism, and these

This Wurlitzer Baby Grand, because it is the first modern piano made for mass consumption, marks an important step in the history of piano design.

Authentically modern, dignified yet not extreme, it harmonizes well with the best contemporary living-room furniture. Furnished in walnut with shiny copper hardware, or ebony with bright chromium hardware—Russel Wright design

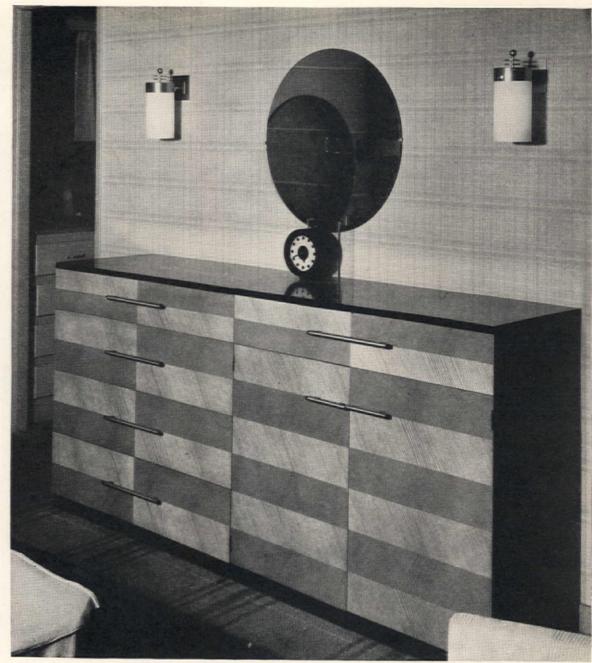

have properly and justly been spurned by American homemakers. On the other hand, very little has been done to encourage good modern design to fit modern requirements. It has been ridiculed and ignored to such a point that few manufacturers dare turn their skill and ingenuity to the problem of finding good designs. For want of a market, for want of interest and sympathy, present-day living threatens to leave no sign of progress in home furnishings. Can it be that we make such remarkable progress in all else-but lack the imagination to progress in our own homes?

Modern decoration does not mean angles instead of curves; it need not remind one of a laboratory or a clinic. It is not a machine shop instead of a home, neither is it a new kind of decoration. It is a design solution to living, a solution that is absolutely necessary if you are going to live gracefully, comfortably, and naturally in the world at the time at which you happen to be born into it. Thus if our homes are planned for modern comfort by means of modern materials, it is possible to achieve a new kind of beauty-not the pictorial beauty of the past, but the honest practical beauty of the present, which is the only true refuge in these harsh and strident times.

In self-defense, we must learn to accept the Machine Age, which is *our* age, and let it work for us.

The machine is a tool and, like the simpler old tools, it can do certain things supremely well. The new metals and chemical compositions are materials and, like the older materials of wood, silk, wool, and hemp, they are supremely fitted to perform certain functions. Our need, then, is

Hendrich-Blessing

to have the courage of our ancestors: to use our tool, the Old habits are not always good habits. Just because "her bureau" has always been low and broad and "his dresser" high and narrow is no reason why the small bedroom should continue to be burdened with two separate and ungainly pieces. Above, these pieces joined together as one, with the obvious advantage of space saving. This compact piece was designed by Gilbert Rohde for Herman Miller Furniture Company

These typical examples of "stove to table" aluminum ware designed and manufactured by Russel Wright furnish further evidence of the new simplicity. Good design makes it possible to use this walnut and aluminum rarebit dish and soup tureen for both cooking and serving

machine, for the work it can do for us. To use our new materials as they used the only materials they knew, seizing eagerly upon them for every scrap of comfort or beauty that we might derive from them. And the fact remains, however much we prefer to ignore it, that there are things which a machine can do that can never be done by hand. Machine imitations of hand work, for that is what we have in virtually all of our machine-made furnishings, are not and never can be anything more than cheap versions of handwork, therefore losing every quality of individuality which belongs to handwork. We waste our inheritance of cunning machines in a fruitless, sentimental effort to reproduce the natural accidentals of handwork.

The machine can produce no

beauty but its own. A wood carver does not use an axe to cut a fine molding. Similarly, machine-made moldings that were designed in terms of a chisel wielded by a human hand are ugly. Why then do we persist in making machines waste their power in pretending to be human beings? Why do we persist in seeing no beauty and no art in modern furnishings which truthfully represent what the machine can do?

Advocates of modern decoration are likely to talk of suiting home furnishings to modern needs, and exploiting modern materials as though these were fundamental principles that have only in this age been discovered. Yet if this age of ours is at all peculiar in this respect, its peculiarity lies in the reluctance with which it takes up new mate-

rials and its unwillingness to be comfortable to the degree which modern science has made possible.

Our grandmothers knew full well that the business of living in any degree of cleanliness and comfort was at best a difficult one. They did not hesitate to add to their homes or to make changes that would make the job easier, whenever they were given the opportunity. With the materials at hand, they made themselves homes that were so consistent, so comfortable, and so charming that even today we should like to cling to their solution of the problem, forgetting entirely that their solution cannot be our solution because their problem is not our problem.

Consider the differences. Maid service in those days was inexpensive and maid's day off unknown. If then we can afford enough maids to keep an antique household going, or are willing to devote the time grandmother spent on running her home, then of course it is possible for us to have an antique home. But is the sentiment worth the cost? Consider dust and dirt, for instance. Anyone in the past century who gave as much thought to germs and dirt as we do, would have been thought insane. Nor, for that matter, would we spend the amount of time chasing dust and dirt that our grandmothers thought only the natural thing to do. But we have modern conveniences, you say? True, but brass and silver, fireplaces cluttered with contrivances that were cooking utensils and not decoration, still demand cleaning and attention. Windows filled with old glass, carpets tacked tight to the wall base-some of these things are necessary to correct atmosphere if you insist on being sentimentally old fashioned. Are they worth it?

Where, you will ask, can one find such modern furnishings that are more comfortable, more suitable than the old, or even more beautiful because they are the forms that are most admirably fitted for the 1934 design of living? To this I must truthfully answer that they are far and few between. Many atrocious things have been done, and are being done in the name of modernism. But to be fully truthful, I must also add that much of the blame for present Americans being unable to live in surroundings which typify them lies in their stubborn refusal to see any beauty in new things, and a tenacious desire to reproduce and buy only things of the sentimental past. As soon as we demand them, manufacturers will give them to us. At

Hendrich-Blessing

Because this flat ware was designed primarily for use, its beauty does not depend on added embellishment. This set is undoubtedly the forerunner of a new type of table ware. Experimental sterling flatware designed and manufactured by Russel Wright

☐ € E LYRIC

Dana B. Merrill

Were we ashamed of our radios there might be some excuse for disguising them—biding them in cases that are supposed to look like old leather bound editions, or making them look like miniature Gothic churches, Sheraton sewing cases, etc. Above, a midget radio carried out in rare wood veneer—good-looking chiefly because it is designed to look its part. Designed by Russel Wright for the Wurlitzer Manufacturing Company

present, we demand oil lampsfor electricity. We must have radiators-but French Provincial houses did not provide for radiators. We therefore make a window seat to conceal the radiator and have neither a convincing radiator nor a convincing window seat. That secretary desk or period cabinet which conceals the radio must have its doors gaping open if we are to use it. And so with all the modern conveniences in our period homes there are weaknesses for comfort of which we apparently are so ashamed that we must disguise them.

Why should we be ashamed of progress in our homes? We are thoroughly modern persons—everywhere but in our home. There we deny and disguise our modern mood, the mood that is necessarily ours because we happen to live in the twentieth century world—and under an eighteenth-century roof pretend to be

The lines of this dining room group were not curved solely to prove that modern furniture need not be confined to straight lines, but for two more basic reasons. First, because this furniture is made according to the new "Bent Wood" principle, a comparatively inexpensive woodworking process in which the thin strips of wood used are necessarily bent in curves for reinforcement. Second, the curving lines of the chair backs conform to the human body, giving a maximum of comfort. Designed by Gilbert Rohde for Heywood-Wakefield Co.

recreating a better world of the past. There is, however, no assurance that it is a better world; actually it is a poorer one since so much of it has to be disguised!

Do you wonder then that the manufacturer has to charge us for all this disguise we insist upon? When we can bear to think of things being shaped in forms that mean something in terms of the use to which we must put them, the designers and manufacturers will give them to us. We are not asked to decide between old-time charm and modern efficiency. We are asked to create our own charm in the only way that we can create it validly-and that is asking no more than was asked of our grandmothersusing the materials which are given us for greater beauty, comfort, and efficiency.

Simply put, my plea is merely for a clean and absolute beauty of the simple truth—an athlete's beauty: rooms with muscles and bones that do things, rather than imitate things they are not. Our homes will look like us and be better adapted to our use of them, just as grandmother's eighteenth-century house looked like her and the use she made of it It would be pretty sad to admit that with our genius for making new things we cannot find honest and appropriate use for them!

A stone path is easily built

There is charm in the unevenness of the stones, and great fascination in collecting them, one by one — Mary Lewis

Does it cost very much to build one?" visitors always ask a little enviously, as they admire my newly-acquired stone walk, and then look at me skeptically, when I answer laughingly: "This walk cost me almost nothing in money; just determination, and some work."

The first step in the making of a stone walk is securing the stones. They may, of course, be purchased from a stone company, but, even if one can afford it, buying the stones doesn't give nearly the joy and satisfaction that gathering them does. Almost anyone with an automobile or some kind of conveyance can eventually collect enough flat stones to make a walk. Of course, the country affords greater territory for gathering them, and a stone walk is particularly lovely for the country home. I was four years collecting the stones for my walk and they came from parts within a radius of one hundred miles. When intuition made me hope I had enough I began laying them. I had exactly enough and four stones left over! Such was my faith! During those four years, I never traveled a mile that I was not watching out for flat stones. Once I bought an old chimney for a dollar that yielded a great many lovely flat flint rocks. Many sections have old forgotten quarries and tumble-down chimneys that hold a wealth of flat stones that

Stone path built by the author

can be had "for a song"—as the saying goes.

Next comes the laying out of the walk. A curving walk is more naturalistic looking than a straight walk; but the curve should follow some natural course and not turn too sharply or unnecessarily—it must be justified, even if an obstacle has to be introduced artificially, for an unjustified curve is simply an irritation.

How to fill the space between the stones? Grass is lovely, but unless the stones are quite flat and laid very evenly, the lawn mower cannot be run over them. Mortarfilled joints are far more practical and lasting and give a very pleasing appearance of permanency and solidness. Many use grass, thinking the mortar joints too difficult, but it is very simple to lay the rocks with mortar.

When the walk has been laid off exactly by careful measuring, remove three or four inches of earth and partly fill in with sand making what masons call a "cushion." This sand-cushion allows the stones to be pushed about freely, so a flat surface is easily obtained. After the stones are placed, thoroughly soak everything with a hose and let it settle for several days before proceeding.

Finally comes the filling of the cracks between the stones with mortar, using what is known as a "one-two" mortar mixture—one part cement and two parts sharp sand. Lime gives the mortar a white appearance and may be used or not according to taste. Personally, I think the dark mortar is better looking. If some mortar does get on the stones, it may be washed off with water. After the joints are filled, sprinkle the walk and keep damp for several days to prevent cracking.

The garden gate has a host of uses. It is especially appropriate as an intimate ingress where one part of a garden is separated from another. This one, a day's work for the carpenter, would look equally as well in a hedge or wood fence

A garden of loveliness in San Diego

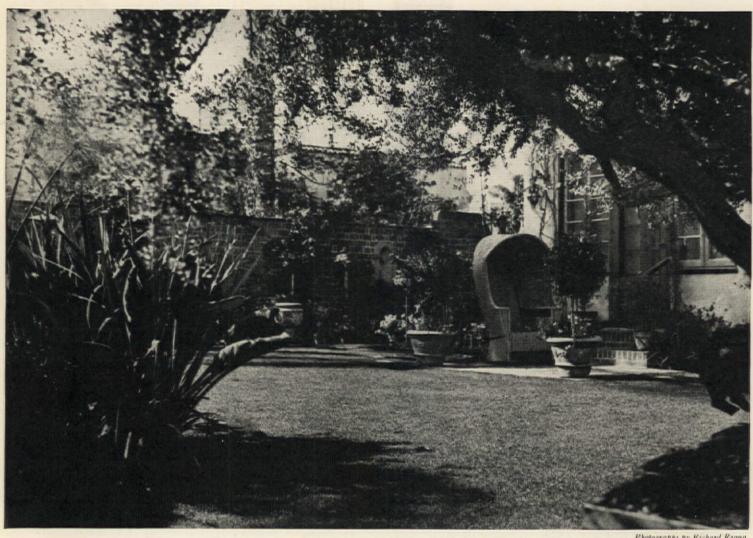

How beauteous is this garden: where the flowers of the earth vie with the stars of heaven.

This lovely inscription, written upon the walls of an old Alhambra garden, might suitably have been engraved upon the wall that Mrs. Herbert Evans has set between her garden and the street. Roses, as they grow here, do their fornia gardens are avoided-such as Palm trees springing from the center of a lawn, square beds cutting senseless patterns in an otherwise gorgeous lawn, jungles of shapeless shrubbery shutting light from windows, Cactus and Ferns in unnatural combinations, magenta Bougainvillea and red Geraniums, orange Lantana and

give a succession of color for the pleasure of the passers-by

Two gates pierce this wall. The arched one leading directly into the upper garden, with its guard of sword-leaved Yuccas on the outside and of Roses within. Here hangs a bell for the convenience of those who wish admission. And the name of the garden "La Co-

The San Diego garden of Mrs. Her-bert Evans is described aptly by Eloise Roorbach as "Mrs. Evans' report of earth at its California best." Here is one of the very friendly entrances to the house

Photographs by Richard Requa

utmost to prove that perfection is possible if wise care, sacrifice, and love are poured out in their service like some precious ointment. Setting a rose plant in the earth and giving it water is not enough, it seems, to inspire it to the utmost of its glory. Students often visit this garden to note its compactness, its order (the Greek word for beauty), its complete-ness. Great self restraint is needed out here in Southern California to keep a garden from appearing crowded. There must be incessant and wise control and a fine sense design and composition. Though the plant possibilities of California are widely drawn upon yet there is no sense of its being that unlovely, though interesting thing, a plant museum. Certain mistakes so often seen in CaliRosy Morn Petunias. Perhaps a better appreciation of what has been done toward perfecting the garden possibilities of cañon gardens, can be reached if we begin with the wall, and follow its growth down the trails of the cañon that was so recently a menacing jungle.

If a garden lacks privacy, it fails in the first principles of gar-den making—repose, privacy. "To enjoy solitude with the consciousness of neighborhood," as Thomas Wainwright expresses it. The wall, of brick, rises well back from two streets, giving rich possibilities with the corner it makes within. Slender Cocos plumosa Palms stand at the street curb. Here also are planted the Roses which climb the wall and spring far above it and various annuals to

lina Redenta." A second gate, squared at the top, is distinguished on the street side by flowering vines and a curb garden changed as the season advances so that there is always color and perfume to gladden the stranger.

Mrs. Evans' idea was to compose a succession of pictures, to be specially effective at different seasons. For, in spite of general belief, there are distinct seasons here. Plants come to the climax of their growth, then retreat into a lengthy sleep. Red Poinsettias flame gorgeously for the Christmas holidays, then the leaves fall, stalks must be cut back and a sad "blank" confronts one where once superb beauty reigned. So garden makers plan to have something else come into bloom while they are resting.

Winter-blooming Cinerarias must be replaced with Petunias or some such favorite. Winter stock and Antirrhinums must give way to Marigolds, or Asters, or other summer blooming plants. There is always some color in a California garden and it is quite a task to plan shades and height of plant for best effect. There is one beauty of the winter and quite another one for the summer, there is one for sunny situations and another for shady ones, so there is always change, excitement, activity.

The green lawn is set with a veritable jewel of a pool, low in the ground, grass fringing it simply, tall Iris and Bird-of-Paradise succeed one another and give height where needed. Waterlilies (blue ones) thrive in one corner. An ancient grinding stone of

The Wisteria, a fragrant and celestial-like drapery with sprays hanging two feet from the roof of the pergola, seems almost unearthly in its rare beauty and charm

The pool, shown below, with its blue Waterlilies is a veritable jewel in the green lawn. Tall Iris and Bird-of-Paradise and a vase give height, while grass and low plants fringe the edge. A bird bath, once an Indian grinding stone, is placed beside it

Indian workmanship, serves as a bird bath. Back of this picture is a seat with pergola top over which Roses run, giving grateful shade and sense of retreat.

From this seat, with the pool for immediate foreground, one looks toward an outdoor sitting room, with Italian vases, chairs, and tea table for suitable furniture. If the eyes turn to the right, the pergola overrun with Wisteria, lavender, white, and purple, centers the interest. In the spring this pergola seems unearthly in beauty for the sprays of Wisteria, the Japanese varieties, hang two feet and over through the roof making a fragrant and celestial-like drapery. When these are not in bloom, then the orange-scented Syringa takes chief place, for out here it is difficult to tell whether it is a sprangling shrub or ambitious vine. It is a persistent bloomer and fills the air with perfume.

Still another picture seen from the seat, is of a Leptospermum laevigatum grown to tree height. In spring it puts forth a profusion of white blossoms. This provides a graceful "visiting" place. Here famous horticulturists, landscape

architects, flower enthusiasts, and writers have spent pleasant hours talking about gardens, their charm and how best to plant, furnish, and maintain them.

Following the path as it curves behind grouped shrubbery, one walks beneath the pergola, always offering some sort of interest even when the Wisteria is not in bloom. Here hang baskets of Tuberous Begonias and Maidenhair Ferns, Helxine, the Fairy Moss, creeps in and out of crevices of the rocks and makes a soft green cover in a shade too dense for grass,

Fuchsias flourish at the sides, with openings through which the Mission Valley far below may be seen—a lovely vista.

This pergola path leads to a terrace where distant mountains lure the eye and where tea is served. Italian jars are here, comfortable chairs, benches, and other suitable articles of furniture. In the spring a giant Echium lifts superb spikes of blue far into the air. Later the red flowering Eucalyptus reigns supreme and in the winter season the Toyon Berry (or Birds' Christmas Tree)

brings warm color and attracts myriads of birds.

Returning by another fernfledged path, interspersed with Violets and Freesias, the Iris banks are seen. She has made a special study of these splendid flowers, and during the season they represent almost the entire range of Iris possibilities. Further down the cañon are wild shrubs which San Diego garden makers are endeavoring to civilize. Here are several varieties of Wild Lilas, in light and dark shades, glossyleaved Rhus, dainty pink and white Buckwheat, Mimulus, Wild Gooseberry and so on, a long list of lovely things which seem to like a little care and attention. Beside this path is a tiny pool and a stone frog sits in sleepy content near by.

When Mrs. Evans selected this cañon for her home, the lower part was but a dense tangle of tough growth, the most stubborn of which elbowed out the less hardy. Wild vigor prevented tender beauty, no man dared venture through its thorny growth. Now Iris stand where rank grasses once flourished in hostile colonies, flowering vines wander where brier once thrived. Lovely trees stand just where they look their best against the amethistine hills beyond. Shrubs of delicate bloom or gay berries thrive where nondescript growth stood rampant, a friendly path conducts graciously where once a rabbit scarce could scamper.

A garden has character, individuality and can no more be described in detail than a person can be known by casual view of eyes, nose, and mouth. It is the

[Please turn to page 111]

Unusual wall treatments

Some old houses still have an inside window and the photograph above shows a very smart solution for a seemingly impossible wall treatment. The doors may be decorated by hand, or wallpaper motifs used with smart architectural border

For a smallish room or one inclined to be dark, nothing could be more effective than the arrangement above, with bookshelves flush with the walls flanking a built-in and set-back mirror. The value of reflections is heightened and a focal point for a furniture grouping provided. Arrangement by James McCreery & Co.

Perhaps nothing is more difficult to treat than a wall niche in a stucco or rough plaster wall. It has been effectively decorated in the photograph above by placing a bird cage against a small tapestry

Photographs by M. E. Hewitt
Mid-Victorian decoration has definitely returned, and in the ensemble above an old
marble topped table, Rogers group, lovely
old lamp, and trailing ivy combine to make
the old very modern indeed in its treatment. Trailing ivy, suspended from a curtain tie-back adds a picturesque quality

A cupboard becomes a principal wall decoration in the room of Italian inspiration, below. Doors painted and fitted with an old lock, shelves with a few well-chosen ornaments, and a collection of volumes bound in lovely Italian book papers, make a picture above a painted commode

Cures for post-holiday doldrums Elsie King Moreland Illustrations by Dorothy Bayley

Changing the furniture around is to a woman what a vacation is to a man

If HOMEMAKERS had a theme song it might well be, "I'm just so weary all the time." Especially after the holiday excitement, when more is expected of homemakers, and fun for the familv is work for mother.

Chronic fatigue may come from any number of physical causes, and if it persists it is always wise to consult your doctor. Often, however, it can be traced to an accumulation of little things-certain little faults or habits that we are barely conscious of-or at this season, to an overdose of work. If rest doesn't do it-check these.

For instance, shoes. Probably no other one thing contributes more to the comfort and energy of the homemaker than the shoe she wears. Two necessary requirements are a built-in arch support and a heel of medium height. And be sure the heel has a rubber tip -it's as important as the shock absorbers on your car.

Next, the little matter of breakfast and lunch. It is surprising how many homemakers and mothers neglect to eat properly. So anxious are they that Senior gets off to work in the right frame of mind, and that Junior drinks his orange juice and eats his cereal, their own breakfast usually consists of a cup of warm coffee, and toast.

For lunch, which is the homemaker's most important meal because it is the most neglected, we usually just open the refrigerator door and choose between whatever we see there. The slice of butterscotch pie left from last evening's dinner, or the dish of cold baked beans. Maybe if we're very hungry, we will eat them both. They will not quite satisfy us, so we will nibble at the fudge

all afternoon, and our appetite for dinner will be spoiled.

Now! Be sure that you eat a good breakfast. If you can't eat until the family is straightened out, then wait, and take plenty of time. And be your own guest for lunch every day! Take at least an hour. Prepare it carefully, arrange it attractively. Turn on the radio, or read the new magazine that came that morning. Don't think you are wasting time, and don't think once of what you have to do that afternoon. You

Put bluing in the dish water, sleep in your own guest room — anything to break the monotony of bouse-

will be surprised what a difference it will make, physically and mentally.

Plenty of fresh air is also very important. In the summer with all the windows and doors open, and our porches so inviting, fresh air is not much of a problem. But in winter we are apt to spend too much time indoors. In one large office where I worked, the windows in the entire building were opened at ten-thirty and three o'clock every day, for fifteen minutes. Why isn't it a splendid idea for homes?

And here's another fresh air idea, given me by a doctor. When you begin to feel tired, open all the windows, stretch flat on the bed, properly covered of course, and prop your feet up higher than your head. Fifteen minutes will make you feel like another

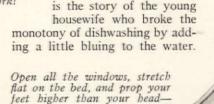

person. This is also an excellent time to listen to that "inner voice," to draw fresh courage and inspiration for your daily tasks and problems. A time to remember these beautiful words, "Come unto me, all ye that labor and are heavy laden, and I will give you rest.

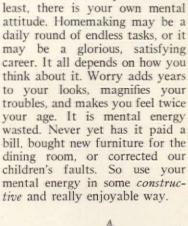

And then every homemaker needs some outside interest. Some club or church activity, some form of expression that has nothing to do with child training or the keeping of a home. The cultivation of some talent or some hobby, something to think about as you go through the day, something to look forward to. The homemaker, like Lot's wife, is apt to look back. Especially today, when so many of them have left behind other careers or high salaried positions.

Change is also an excellent remedy for that tired feeling. And by change I do not necessarily mean taking a trip. I once read somewhere these words: "Changing the furniture around is to a woman what taking a vacation is to a man." And I

know it to be true. Nothing seems to refresh me quite so much, to give me a new 'lease on life," as seeing my piano in another corner, the sideboard under the windows, my bed facing another wall.

Sleep in your guest room for a night or two. It was Benjamin Franklin, I believe, who found it more restful to have two beds to sleep in. And there is the story of the young

Yes, change is an excellent tonic.

And last, but by no means

Too busy for anything but a slice of butter-scotch pie? Sakes alive, woman, be your own guest for lunch. Prepare it carefully, turn on the radio. Even a little office clerk takes an hour for lunch and relaxation

Keep a bit of verse, a favorite hymn, tucked away to carry you over the "blue moments." And don't take your job too seriously. Don't be so "cumbered with much serving" that you miss the beauty and joy of life. Cultivate your sense of humor. There's no better tonic for that tired feeling than laughter. Remember Shakespeare's little verse:

A merry heart goes all the day, Your sad tires in a mile-a."

Above, the home of Mrs. A. H. Fenerbacker, St. Louis, Mo.

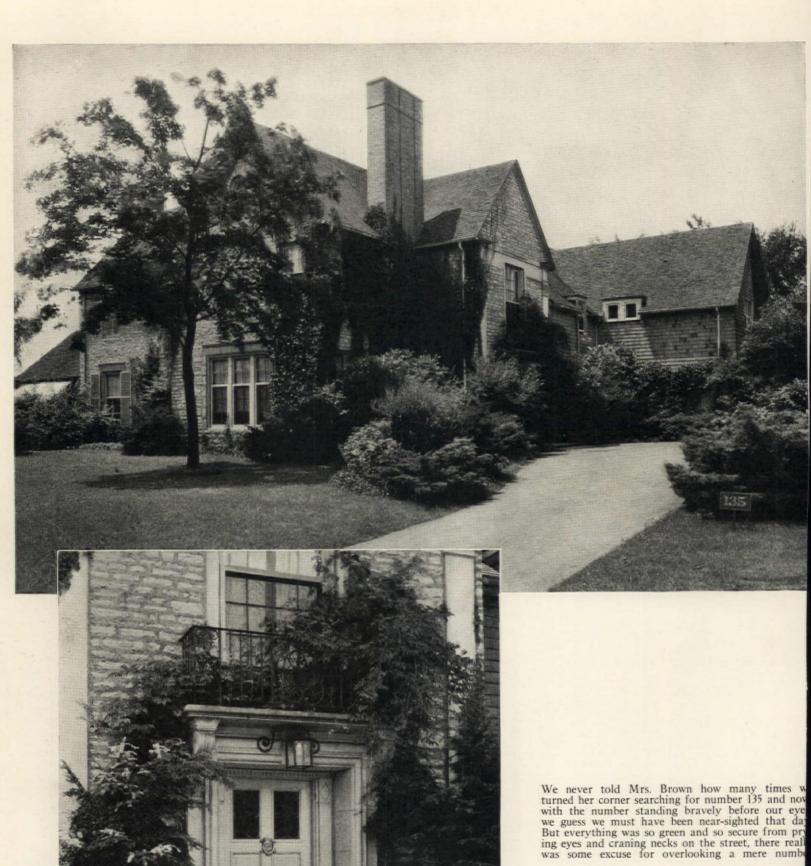

The Editor Goes West~ and visits some readers' homes

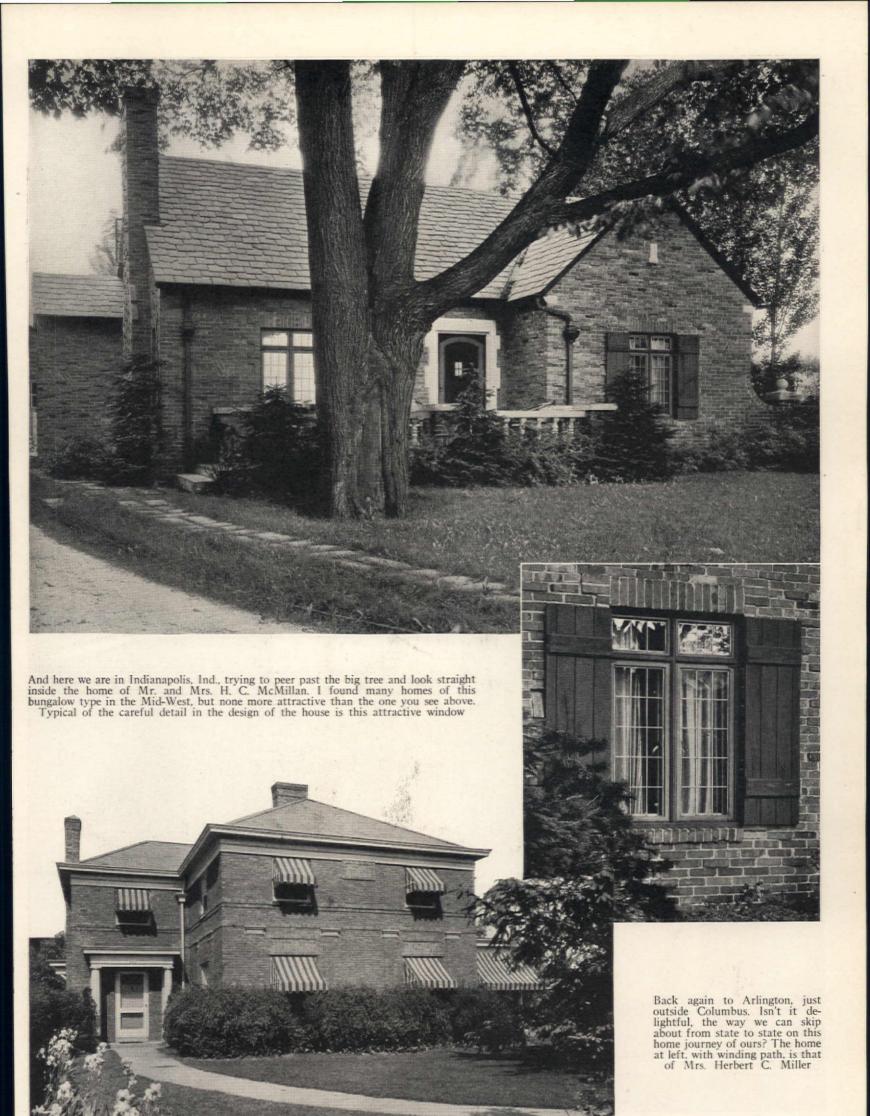

Above, you see a broad, sunny expanse of lawn eading to the home of Mr. and Mrs. W. L. Payne in Arlington, a lovely suburb of Columbus, Ohio. The day I came upon it, I literally kidded right into the living room, for Columbus welcomed me with a most impressive hunder shower! However, I found the huge, hospitable living room, with its lovely French urniture, sufficient reward for braving the nostile elements. Sorry, but you'll have to be content to gaze upon its exterior charm only

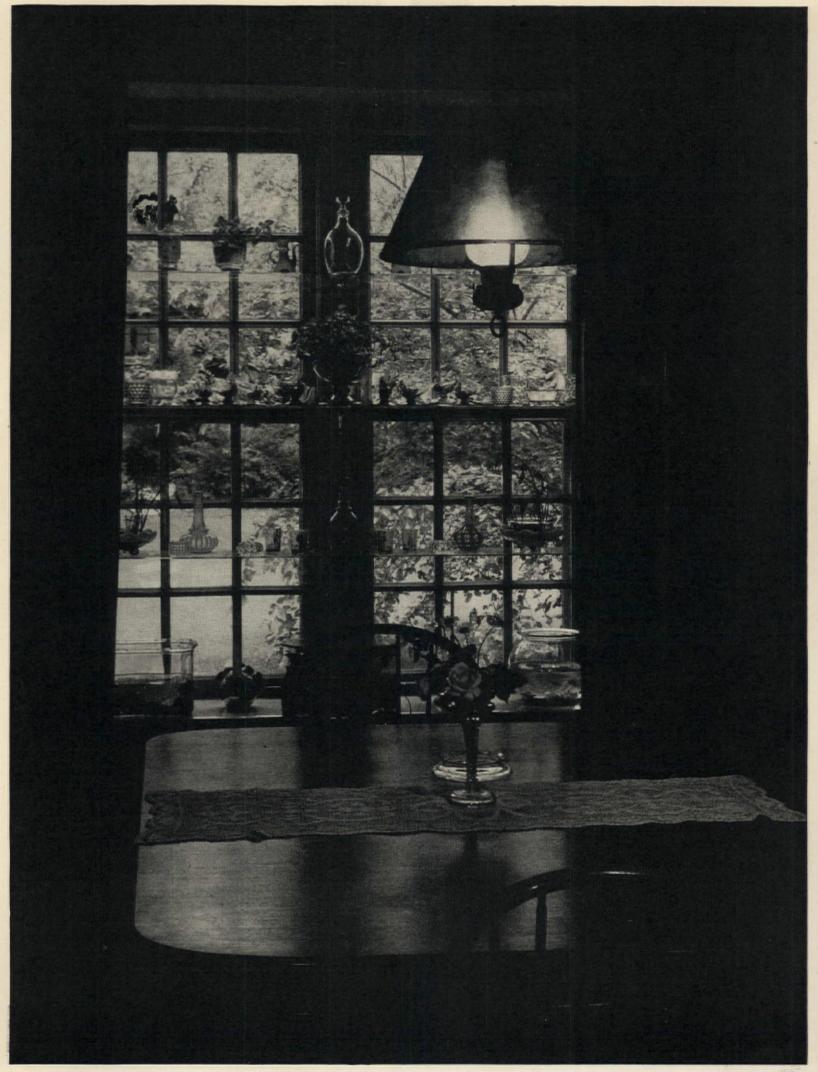

At right, the home of Mrs. C. F. Setz in St. ouis, cool and green in its summer dress of ivy

Of stone and timber, adorned with fine architectur details, is this charming home of Mrs. John Edw Brown, in Bexley Park, Ohio. The doorway detai are particularly pleasing, I'm sure you will agn

Mr. Piaget, our photographer, made this study of the breakfast room in the home of Mrs. James W. Harris, St. Louis, Mo.

I believe every single word that Mr. Russel Wright has written in his article and am in entire sympathy with his point of view. But what a test it is put to, when one makes a happy landing at a home like the one above! Indeed, the modernists will have to go a long way yet to persuade us to give up such utterly charming tradition in the building of our homes, for to most Americans this home of Mrs. James W. Harris, in St. Louis, Missouri, still typifies the best of American architectural design

Still another perfectly good reason for sentimental attachments to our Colonial heritage, is this beautiful Colonial dining room in the home of Mrs. Harris. Say what one will about efficiency, compactness, et cetera, here is a dining room built around the idea of hospitality on no meagre scale, and as yet no acceptable substitute has been found for that quality of graciousness in our homes

The origin of present-day architecture

Courtesy of Harvard School of Architecture

A country house in Horsham showing the severity and formality of the Georgian work. Only the chimneys and the ivy vines have deviated from absolute symmetry

At left: A house in Wingham. The hip roof, tall windows, symmetrical chimneys, and mutuled cornice are characteristic of the period

III. Characteristics of the Georgian house-Don Graf

GREAT amount of confusion A has been caused by the indiscriminate use of the word Georgian. English writers, particularly, are prone to include the contemporaneous architectural movement of the American colonies within the term, thus suggesting a unity of style in the two countries which never existed. It would be in the interest of accuracy to class the architecture of America as Colonial and that of England as Georgian, foralthough contemporaneous and parallel, each influencing the other-they were separate and distinct expressions which maintained their individual entities and feeling.

But just as we find Englishmen who speak with an American accent, and conversely Americans whose speech betrays a residence in England, so we find that the close relation existing between the

two countries sometimes produced a hybrid whose real identity is difficult to determine. Even the mere accident of location is not sufficient for classification, for we meet Americans in London and Britishers in New York. So buildings of this period are found on the tight little isle which are decidedly American Colonial, and many historical houses of our South and middle Atlantic states that are undeniably English Georgian. Present-day architects have, either by accident or intention, mixed the two types to produce what might be termed Colonial-Georgian. These hyphenated houses are often charming because of the natural compatibility of the two modes of architectural design.

The Georgian period dates approximately from 1700 to 1820. It is perhaps better known for the famous furniture designers Chip-

An etaborate Georgian doorway in Horsham. Observe the intricacy and beauty of the wood carving, and the fine proportions of the entire treatment

pendale, Heppelwhite, and Sheraton, than for its architects Gibbs, Chambers, and the Adam brothers. Indeed, the true Georgian reflects the same stiffness and formality as the chairs. The interiors smack of artificiality and pretentiousness, the exteriors have bauteur and coldness.

The small houses of the period are usually rectangular in plan. There was a predilection for

elliptical, octagonal, or circular rooms, which fortunately, has not found its way into modern adaptations of the style generally. The principal stair often had a very prominent place and consumed a generous amount of space in the plan. A symmetrical plan was most usual.

The exterior expressed the symmetry of the plan. Brick was the most popular material for the

" " " " THE AMERICAN HOME

walls, although stucco, stone, weather-boarding and slates were occasionally used. Early in the period red brick, and later, brown or yellow brick was laid in English or Flemish bond, giving an interesting texture. The sash window, or double-hung as it is now called, became almost universal. The windows were relatively tall, cut into small lights by muntins, and regularly spaced. The façade was crowned with a heavy mutuled cornice, unbroken by dormers and located well above the second-story window heads. English ivy lent a softness to the country house which belied the hidden architecture.

The roofs were mostly hipped and of fairly gentle pitch. The first roofs were red-tiled, but gradually the tiles were supplanted by slates of quite regular size and shape. The large chimneys—symmetrically disposed—indicate the absence of central heating and the generous fireplaces within.

In the interiors, we find that a government duty was not sufficient to overcome the demand for printed wallpapers. The sixpaneled door, and the wooden

A favorite brick bond employed. It is called English bond and consists of alternating courses of headers and stretchers symmetrically placed dado or wainscot, were characteristic, and made use of the classic moldings that appeared elsewhere in door and window trim, mantels, and woodwork. Plaster ceilings and the frieze of cornices in principal rooms made use of garlands, ribbons, and cherubs for their embellishment.

The furnishings consisted of furniture in the mode of the great Georgian designers, or even that of the earlier William and Mary or Queen Anne periods. Empire furniture was also used and is in perfect harmony with the architecture. A great deal of color is typical of the Georgian interior, secured by use of damasks, cut velvets, printed linens, etc., for upholstery and hangings. Oriental rugs or chenille carpets make appropriate floor coverings for the modern home of this character. Silver and crystal ceiling fixtures and wall sconces for lighting are in the proper spirit, true to type.

A modern American adaptation of Georgian motifs. The treatment of the fan light in wood and glass is especially effective

A wrought-iron fanlight grating, showing the great delicacy and grace with which iron was handled

Compare this historic doorway from Guilford with the American interpretation from a modern house. Replace the wood panel side lights with glass, and the fluted casing with pilasters, and the door above becomes almost a twin of its modern counterpart

A Georgian fireplace bay. The marble mantel, the relief plaster overmantel decoration, the simple wood wainscot and the modeled plaster cornice are all typical of the style

ARCHITECTURAL PORTFOLIO

Homemaking around the globe

A Caribbean cruise: our seventh port-of-call

PORT-AU-PRINCE, HAITI

Now that we are at last comfortably settled, I know that you will be anxious to hear how we live in the tropics. The climate here is delightful during the winter and not too hot in the summer. The houses are built for comfort, placed well back from the street in attractive gardens, surrounded by high walls. The rooms have high ceilings and many long windows reaching to the floor and opening on nice porches, or galleries as the natives call them. Our house hasn't a pane of glass in it. Inside, we have jalousies, similar to our outside shutters in the States and on the outside, there are heavy wooden blinds with huge iron hooks to keep them closed. There are many beggars and thieves in Port-au-Prince and at night the house boy closes everything on the first floor as tight as though we were leaving for a long vacation, a necessary precaution.

The houses are ornate outside, with a great deal of "ginger-bread" decoration, but inside they are extremely plain. We have painted walls, bare floors, and

few rugs or draperies and pictures. The bedrooms are large and we have a nice porch from which we can see the bay and the glorious sunsets. Just now, the sun is going down behind La Gonaive, Wirkus' island kingdom forty miles away.

It is surprising how few flies and insects there are here. Nothing is screened. When it rains, the termites do fly in and drop their wings in the soup, but at other times there are few flying things in the dining room. We sleep under nets as precaution against mosquitoes. And there are plenty of ants in the kitchen—every table and food storage cabinet stands in cans of kerosene.

High-walled, brickpaved gardens, run over with ferns, all kinds of gorgeously colored flowers and shade provided by palms and banana trees are a part of every old tropical home

A typical street scene in the tropics, where loud bickerings and bright costumes add to the general confusion and gayety. Below, a typical Haitian house, ornate with much "gingerbread" decoration, but surprisingly severe and plain inside. Below at right, Villa Espinosa, the home of Mrs. Kohn in Bayamon, P. R.

The houses all have outside kitchens with old-fashioned built-in charcoal stoves of stone. We do some cooking by charcoal but also have kerosene stove and, to go to the other extreme, are very up to date with electric range and refrigerator.

Now I must tell you about our corps of servants. We have four who manage to keep us comfortable and we pay them from \$6 to \$12 a month. They are slow, but do manage to get things done after a fashion. They understand very little English and speak only Creole which is a patois inherited from early French planters who occupied Haiti two hundred years ago. Sometimes, after I have struggled to explain in French the preparation of some special food, something entirely different will appear on the table. Twice a week I take Belle, my cook, to the native market and for fifteen

or twenty cents we get enough vegetables to last a couple of days. Oranges, limes, and grapefruit sell for four or five cents a dozen, and at this season we are getting perfectly luscious alligator pears for one cent each.

The servants feed themselves, and live mostly on rice and beans, bananas and mangoes and, like the old saying, "eat when they're hungry and drink when they're dry"—usually sitting down under a tree with their food in a tin

cup or on a plate. In the streets all day there is a steady stream of people selling things. They are called marchands, and sell everything imaginable, carrying their wares on their heads-be it large baskets of fruit, chairs, or clothes hampers. One day, I saw a woman with a tin measuring cup perched on her head and, of course, noth-

ing in her hands.

Our garden is very pretty. At one side of the front gate, we have a rose garden and on the other side there is a little pool where the frogs sing lustily at night. We have hibiscus, poinsettia, oleander, and bougainvillea, also cocoanut palms, orange, banana, and mango trees. At the rear there is a flamboyant tree which now is a mass of red flowers about the shade and texture of red geraniums. Beyond the flamboyant tree are the garage, the row of servants' quarters and the bassin, the native idea of a bathroom. Ours is about ten feet square and three feet deep, with a pipe for a shower at one end. The last corner of the garden is occupied by the laundress, who does all the washing out of doors, squatting on her haunches over

the wash tub with a pipe in her mouth, leisurely scrubbing the family's clothes.

Now, I've tried to give you an idea of how our household carries on in Haiti. For amusements we have golf, swimming, tennis, and riding and for a change we can take a trip up into the mountains. To celebrate Washington's birthday we took a trip to Furcy, eight thousand feet up, where in the evening, we hovered around the open fire and slept under four or five blankets. In the morning we were dazzled by the brilliant blue sky and the marvelous sunshine and the sight, sixty or more miles away of Morne La Salle, the highest peak in the West Indies. We came part way down on horseback, where we had left our car, and in two hours were back again in Port-au-Prince with the thermometer at 84°.—KATHERINE JENCKES KNOX, Port-au-Prince,

BERMUDA

Bermuda: Islands of white coral houses, white roads, and Haiti, where oranges and grapefruit sell for four or five cents a dozen and alligator pears cost a whole cent! Photo taken our reader, Knox, who contributes one of the charming let-ters for our cruise

Idling along a sea wall at dusk is just one of the many delightfull ways to spend one's time on the white coral islands that have been taken very early or very late, for all day long there is a steady stream of people selling things in Haitian streets, carrying their wares on their heads, be it large baskets of fruit, chairs, or clothes hampers

blue sky and sea and flowers everywhere. The stone that many of the houses are built with is quarried on the same piece of ground, the stone used for the house and the hole from which it was taken used for the tank. All the drinking water is rain water which is caught from the roofs and preserved for future use in these big tanks.

The house I live in is

called "Jadow." Many years ago its name was "Shadow" but a child in the family who could not pronounce it called it 'Jadow" and the name will be that until the end of time. On remodeling the oldest part of the house, we found a stone with the name of the original owner and the date 1674.

Inside walls are usually white as they are plastered on the coral stone which is porous and no pictures can be hung on an outside wall.

Many of the native houses are of one room with a large chimney

at one end, in which the little colored babies are often put to sleep.

Living is expensive in Bermuda as everything except a few vegetables must be imported. There are said to be 365 islands in the group that makes Bermuda, and nowhere is it over a half mile from sea to sea.

Afternoon tea is a regular feature of Bermuda and one of the most charming. Guests and family gather round the big dinner table. Places are set with wonderful English china and old silver, the large silver tray and hot water kettle and tea pot at one end. Sandwiches, fruit cake, home made bread and butter and cheese, and often loquot (a kind of plum) jam, or marmalade is served.

We have a large banana orchard and usually you will find five or six bunches hanging on the veranda in different processes of ripening.-Mrs. F. W. WATLINGTON, Hamilton, Ber-

SANTURCE, PUERTO RICO

There are many homes in Puerto Rico just like the one that your imagination pictures, and the majority of the modern ones are built of concrete or stucco. Of course the Spaniards built of brick or stone, and then covered this with plaster, and it is this finish (peeled off in places) that imparts, at a distance, that striking effect of combinations of pastel colors.

In San Juan, the capital, threaded by narrow streets— many with sidewalks scarcely two feet wide-and lined on

[Please turn to page 108]

The Flowers That Bloom Before Spring-

THE way to yank the family out of the post-holiday doldrums is to continue being gay without being fancy. A few bright thoughts, some Narcissus bulbs, the existing houseplants, all washed and shining, and a nice bunch of soup greens are the dry ingredients. Add a few bread tins, half a dozen gelatine moulds, and

an old whatnot or so, and, in a nutshell, the thing is done.

In view of the almost inescapable fact that spring can indeed lag quite a distance behind, these few suggestions are offered to assuage the awful itching brought on by the arrival of the seed catalogues. If you were very forehanded last October and potted up Tulips and Hyacinths and a Nasturtium or two, these ideas may seem like very minor poets, but in case you haven't pots to bring into the open now, try some of these tricks with what you have or can easily get.

Stories and pictures by Marni and Harrie Wood

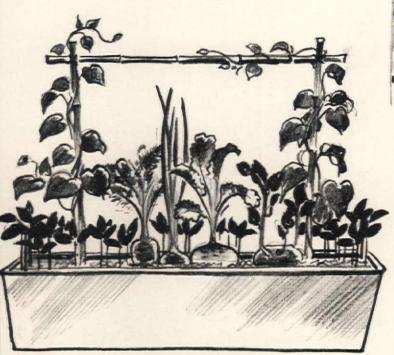

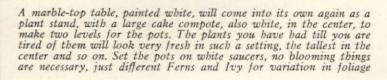

Rout out, or steal, or if absolutely necessary, buy a whatnot, the most curlicued one available, and paint it a glowing shade of unadulterated pink. At a reasonable expenditure you can get from a nurseryman a dozen small yellow Primroses that are not quite ready for the market, therefore less expensive. If yellow Primroses are out of reach, reverse the order, pink Primroses, yellow whatnot. Arrange the nice terra cotta pots with their beautiful nests of leaves on the whatnot and put it very conspicuously in the hall or living room. It's not the primrose path, maybe, but to all intents and purposes it will most certainly do to brighten things a bit

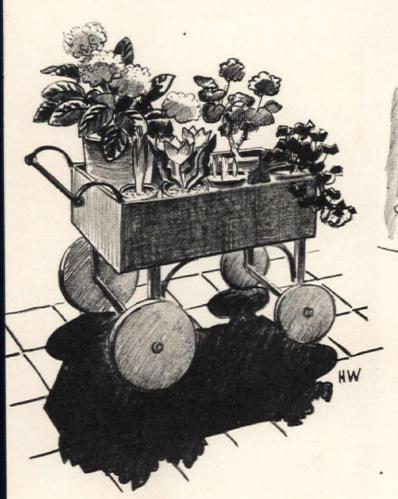

A dozen paper white narcissus bulbs, planted at this late date in six identical gelatine moulds, and set in a row on the serving table will do something pretty stylish to a dining room when most narcissus are gone. It really will lift it out of the commonplace. A row of containers all similar and military in effect is always attractive. Crockery kitchen bowls may be substituted for the moulds

When you were a child you probably had a carrot or turnip of your own growing in water, in the nursery, but have you done this for your own children? It's a far cry from the renowned silver bells, cockle shells, but just a shade more reliable. Take a nice fat carrot and a small white turnip, cut them in half crosswise, and plant the top half, leaving half an inch out of the earth (which must be very sandy, with plenty of small stones for drainage), a few shell beans, a small onion, or better still, a leek, a parsley root, if possible, ten cents worth of chives, and a potato. Plant them in a window box, with a row of grapefruit seeds all around like a hedge, set the box in the sun and give it plenty of water, and you will have a kitchen jungle in no time at all

For a room where many books give rich color, take at least two of the longest, narrowest bread tins you can find and paint them chartreuse. Put plenty of broken pots and some charcoal in the tins, as in all containers that have no drainage holes, and fill them just as full as they will stick with little Coleus slips. They lose their Victorianism set stiffly in a row, and are very gay. The bread tins will just fit most window sills

If you are one who was bitten by the beer-cart craze and have reluctantly put it away with the garden furniture, bring it right back out and fill it with your potted plants (the aforementioned Nasturtiums, and Tulips and Hyacinths). Add a blue Hydrangea and some salmon-pink Geraniums, with pots of Ivy in the corners, trailing over the sides. A tea-wagon can be used in lieu of a beer-cart. Just give it a coat of paint and a frame of painted tin or beaver board around the tray to box the plants in. The effect will be the same, and nothing Sicily has to offer will be any gayer

An American Home reader's garden The garden of Mrs. Booth Tarkington, Kennebunkport, Me.

A summer resort home that pulses the real feeling of all that "home" can mean; and set in a garden of ordered naturalness. The garden has varied interests sweetly blended and harmonized. The forecourt approach to the house is reached by a shrub-lined driveway and you are welcomed by a burst of bloom from the variety of massed herbaceous groups

Turning left you wander down through a "woods" of Flowering Dogwood and other natives in splendid informality to the pool terminal while off to one side is the effective border of hardy flowers that supplies abundance of bloom for the house all summer. You may rest here in Rose embowered arbors

At right and below: The formal pool, with naturalistic background of Hemlock and Iris, terminates the vista through the "woods." Here is the only strict formality of the entire garden and is in harmonious contrast to the frame. The ornaments give scale and add the needed emphasis of accent to the vista through the trees. Lily pads add charm

Remodeling pays!

Jefferson Hamilton, A. I. A.

During a period which has resulted in enforced economies at every turn, it is only natural that the question of renovations and alterations to existing bouses should reduce itself to one of dollars and cents. The more intangible values

of increased comfort, pleasanter family surroundings, and pride of ownership in a modernized bome—all are second in importance to the definitely practical and searching question: "Will the expenditure show a cash return?"

THE suggestions on these pages are offered as a practical illustration of the possibilities which exist for bringing back to an active market many of the houses which are now passed by because their appearance and accommodations are referred to as "old fashioned."

In the photograph below is seen some of the remaining glory of the jig-saw era in building, when porches ran riot and were covered with every conceivable form of scroll, spindle, and even lace patterns. By referring to the accompanying design it is quite a revelation to discover the simple, pleasant architectural quality which can be given to this house merely by removing the existing

porch, and substituting a more substantial and better proportioned porch, in the proper location. A vestibule is added to answer the requirements of many sections of the country. On the whole, however, the main lines of the building have not been altered. A stucco treatment on metal lath applied directly to the existing siding, has been shown. This not only carries out the architectual character established, but will give added permanence, cover all patching, and avoid the necessity of painting the exterior walls. In some rooms new windows are shown where it seems desirable to provide more adequate lighting.

In the accompanying floor plan

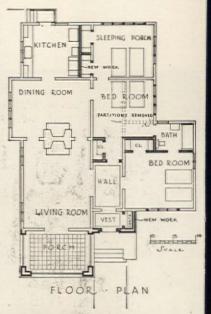

the general arrangement of the house is shown as it exists as well as the suggested changes which would make the interior more consistent with the exterior after it has been re-designed. The existing work is shown in light outline, the partitions to be removed are only dotted in, while the new work is shown in heavier outline.

It will be found that one of the common faults with houses of this period was lack of proper communication between the different rooms. While large halls are not infrequent, this did not necessarily result in good communication, as it was quite common to go through one room to gain access to the next. Then again, closet space was invariably

lacking. In general, the correction of such errors in planning is the extent contemplated in the accompanying suggestions. However, in the cottage type of home, even the plumbing can be changed without undue expense since it is not built into the walls, and quite often decided advantages in plan can be accomplished thereby.

You will notice on the floor plan that an additional bedroom was gained by eliminating the long hall. This suite of rooms including the sleeping porch would prove very desirable for many types of families.

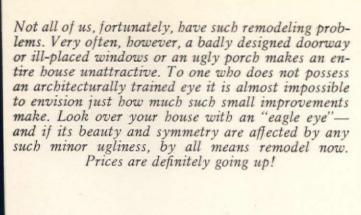

The plan does not suggest the addition of extra rooms, as this would introduce a more extensive building program and likewise a greater expenditure, neither of which seems to be in favor just at this time. The chief purpose in this instance is to show, through minor changes, the possibilities which exist for marked improvement to the greatest market of the building industry—the small

COST OF MODERNIZING

EXTERIOR 15	Demolition \$ 15 Partitions—Lath and Plaster 60 Millwork 25 Painting 30 Patching 15
\$560	\$145

Not only does remodeling pay—but it pays to do it now! This was proved by Mr. W. H. Shaffer, Jr., whose unusually successful remodeled home is pictured here. Mr. Shaffer was given a "low" bid of \$1,490 for the work of remodeling in the fall of 1931. The work has just been completed at a cost of \$650—60% lower than the 1931 estimate. The "before" and "after" photographs tell their own convincing story as to whether it paid!

Another convincing "before and after" remodeling story—Dr. A. J. Sherwood's home. The complete cost for modernizing the exterior was \$2,500, and \$1,500 spent on the interior. Did it pay? The house was valued at \$5,000 before modernizing and its assessed valuation is now \$10,000. The eastern section of this house is seventy-five years old, the west portion fifteen years old—yet looking at it as remodeled it is completely modern in every respect

Photographs of Dr. Sherwood's house by courtesy of the Weatherbest Stained Shingle Co.

louse. In order to give an idea of the expense involved, a ost set-up is shown on the facing page for each operation. The exterior and interior work are noted separately, in order to present the option of carrying out all or any part of he work. It would seem safe to say, in judging these facts and illustrations, that any out-of-date house of reasonable lan and fair construction is susceptible of similar satisfactory renovation and improvement, and can be made to pay eal dividends on the expenditure, no matter how small the llowance for this work or how great the changes needed.

What, no cellar?

Cellars cost as high as 20% of the house . . . bouses are not damp or floors cold without them . . . we no longer store barrels of apples or quantities of preserves . . . game rooms are seldom used after the first enthusiasm for them dies down . . . so why a cellar?

Our efforts to reduce the costs of building have so far been along the lines of finding cheaper materials to substitute for those hallowed by time, or of lessening labor costs by simplifying details, or in extreme cases, it has been suggested that houses be made in factories like automobiles on the quantity production scheme. With the first two I have no quarrel, but as an architect I shudder as I picture our cities and countryside when our homes are bought F. O. B. Detroit!

There is one possibility of a large saving, however, that has been all but overlooked, and that is the elimination of the costly, dirty, useless cellar. Cellars run as high as 20% of the cost of the house when bad conditions are met, and yet a considerable amount of it could be saved with a great increase in convenience to the householder. So why a cellar? As a matter of fact, the reason we have one is because houses have always had cellars and therefore, we argue, they must be necessary.

Of course up to very recent times cellars were necessary. We had to have some place to store coal and wood, our only fuels, and as they are both dirty things to keep, we preferred them where a little dirt more or less didn't matter. And besides that women used to spend days and days putting up preserves and jams and jellys that had to be put away somewhere; and potatoes and apples and other vegetables and fruits were bought by the barrel and had to be spread out in a dark cool place. So cellars were

Brown Rolston, A. I. A.

really a necessity. No one wanted the coal bin next to the parlor nor did anyone want to give up sufficient space on the ground floor to store all the foodstuffs that had been collected to last over the winter, so the cellar was the logical place for them. No, in those days every bit of the cellar had its special value and not to have provided one for every house a generation or so ago would be like leaving out the electric outlets in the modern house.

But those days are past; life today is quite different. Who puts up a year's supply of preserves? Who stores barrels of apples or potatoes? Echo answers: "Practically no one." So why spend all that money needlessly?

So let's see what can be done about it. The first thing we architects have to do is to convince you, and you, and you that you can get along perfectly well without a cellar. And that is no easy job, I can assure you. When the daring architect presumes to suggest such a thing his client stares at him with incredulity in his wide open eyes and exclaims: "What, no cellar? Why we must have a cellar!" And if the architect has enough courage to press the subject further he learns that the house would be damp and the floor cold without a cellar and besides where would the furnace go and where would one have one's cold closet and laundry and service toilet, and where would one store the screens and-and things! No cellar indeed; perfectly ridiculous! And so the architect, poor wretch, just sighs resignedly as he sees another opportunity to do something out of the ordinary lost, and in goes the cellar. But when it is all down on the plans he is appalled at the amount of unused space there is, so in an effort to make the plan look less wasteful he puts names on various sections, and thus were born the "Game Room" and "Whoopee Room" and other "Rooms" that look well on the plans but which, after the first enthusiasm about the new house has died down, are seldom used.

Of course if we eliminate the cellar we will have to provide more space above ground for the few things that are still necessary like the heater and laundry and service toilet. The only real problem is the matter of the heater; it is simple enough to build the laundry off the kitchen and work in a toilet, and how much better to have them up in the sun and air instead of down in a gloomy cellar! A good sized kitchen closet, or larder, will hold all the jellies and preserves we get from old Mrs. Throckmorton, poor thing, in addition to the cans and jars we buy by the dozen at the bargain day sales of the chain stores. So all that remains is to take care of the heater. I won't go into the mechanics of how the heating plant can be made to work with the heater on the first floor, it would be dry reading for the layman, but believe me it can, and your own architect will be able to handle that part of it once he has your consent to work along those lines. It just means small grilles fairly well up on the walls and while it may take a little time to get used to them, how much better they are than those bulky, hideous old iron radiators that took up all the choice furniture spaces! And we put up with them uncomplainingly for years. Reassured on this point, it only remains to provide a small heater room as near the center of the house as possible. In this room the domestic hot water heater will also be placed, for if you use an oil-burner that also heats your water; and if you use gas, gas will also be used for the hot water.

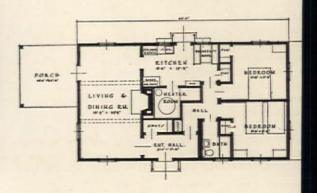

As to the house being damp or the first floor cold, that is a fallacy. The only sources of moisture are the skies and seepage from streams or tides or springs. Given a dry spell long enough and everything but the tides will dry up, so unless you pick out a lot that is swampy or below stream bed or high tide, you need fear no dampness in your floor. Nor is the ground naturally cold, Its temperature it takes from the air, so if you keep your house warm enough the floor also wil be warm enough.

By eliminating the cellar we save a large part of our foundation walls, all the waterproofing concrete for the floor, lots of piping, a flight of stairs, all the trouble that frequently come when we try to put plumbing fix tures in the cellar and all the worry and mess of having tha big cave cleaned every so often We gain a larger floor area, fres air and sun light for our laundry and toilet and all the convenience of having everything where w can easily get at things. So I re peat-Why a Cellar?

Kaufmann-Fahry

This small cot-tage built by tage Fordyce Crossett Sales Co. at the fair in Chicago shows the effective planning of a heater room on the first floor

The home vegetable garden earns its space

Ezra Stiles

Do small home vegetable gardens pay? If you have someone else attend to them, no! If you will care for them yourself, yes, indeed they do!

And the best part of it all is that it will pay two kinds of dividends: financial saving and good health. If you have been living upon even the freshest of market vegetables, it is an actual

fact that you do not know what

You may have the best market gardener in captivity; but just you try for once salads prepared a half hour from the time that the ingredients are picked and investigate green String Beans, Summer Squash, and Swiss Chard direct

rom the garden to the kettle.

One who is not willing to work regularly should not indulge in gardening. Weeds grow reguarly, the vegetables need attenion regularly, the weather acts rregularly, and there you have he whole story. If one will work or an hour or two say for two venings a week and will put in a egular Saturday work period he will be able to take care of the verage small garden easily, and to time will the work reach the roportions of lumbago.

And this is the only way to do ! Two weeks' layoff plus a puple of idle Saturdays and not ply will your back give out enrely, but the weeds will simply harch in and smother the vegeables beyond recovery.

And now for the technical conderation of the problem; namely ne choice of the vegetables. There likely to be trouble in an overmount of personal preference, lus a lack of a knowledge of crop alues. Some vegetables will only ay when grown in large quanties; others yield plentifully on nall areas.

In the first class we have those nds which either occupy a good eal of room or which take a long me to grow and then yield only ne or two gatherings. Corn, otatoes, Spinach, Beets, Celery, nd Peas belong there. Certain getables, such as Radishes and arrots require an exceptionally iable soil to develop without beming woody and tasteless.

Here is a definite list of what I ow from actual growing experice will take the least room to ow, will be the most successful just average soil, will give you e least trouble to care for, and II yield bountifully and con-

tinuously all summer long. These, it would seem to me, are the prime requisites for the small home garden. As a financial success I can vouch for them emphatically. Last year I raised in my own garden an amount which I estimated at the then current prices was a return of \$42 worth of vegetables for \$1.90 worth of vegetable seed.

The first thing of course is Lettuce; that is to say, Leaf Lettuce. Head Lettuce I think takes altogether too much time to bother with. I prefer Black Seeded Simpson—a strong grower, a good color, grows rapidly and crisps up beautifully after a half hour in cold water.

Next in order is the Onion. Use the yellow and white sets and you will get along beautifully. They may be grown as scullions for salads or you can let a portion of each planting grow as large as a small horse-chestnut. When creamed, this size onion is simply unbeatable—mild and succulent.

Quantity Guide for Vegetables. Adapted from the food budget chart of Mary E. Wells, New York State College of Agriculture

Swiss Chard (or Lucullus Beet) provides perhaps even better greens than Spinach. Then add Green String Beans and Tomatoes.

Of course provide for a cucumber patch, plus a small spot of Parsley. And then, last but not least, either the white or the yellow Summer Squash, which is perhaps our one extravagance. If you do not like this, you may substitute Kale or Broccoli.

Each crop of String Beans (green or wax) will yield several pickings and if you will start the crops two weeks apart, you can keep on with successive sowings all summer.

Of all the garden crops, nothing can be more successful for the small gardener than the Tomato. Its uses are legion and a dozen and a half plants will give you four or five tomatoes daily for your salad.

This schedule will give you a basic supply of vegetables all summer and for occasional variety or an unusual supply at any one time you have merely to fall back upon the vegetable gardener, or provide an "extra" in your own garden.

The significance of better bedding

Florence B. Terhune

NDOLENT hoof beats—rusty bells -the junk man! Watch as he passes by. In all probability there will be an old mattress or two, a raggy comforter, and dirty miscellaneous rags on his load. Heaven knows from where he got them! The truth may hurt, but those very same filthy materials are on the way to a new glory.

There are many cheap bedding factories, frequently operating in basements, that are only too glad to buy that junkman's spoils. There, for a few pennies, are the stuffings for a new piece. The old mattresses, blankets, rags, and whatnots, without any sterilization or cleaning of any sort, are thrown into the shoddy picker. The materials are ground upcovers, dirt and all-and then exalted by a bright new ticking. And behold if you please, a bargain mattress is born!

Unfortunately there are no Federal laws controlling the manufacture of bedding. Thirty-two states

have some manner of legislation, but most of these laws are inadequate, enforcement slack, and subject to flagrant violation. Pennsylvania has the best bedding laws to date. New York passed a law last July requiring all bedding to be labeled with white or vellow tickets indicating whether the mattress content was "new" or "used" materials. Where no laws prevail "new" may mean dirt, shredded old fabrics, and mill sweepings mixed with new cotton. Many factories would find their markets cut off if the consumer knew the conditions of sanitation prevailing. The need for clean, truthfully and clearly labeled bedding is a matter very directly related to health. For your own protection you cannot be too fastidious about what and where you buy.

There are always two sides to every story, and happily, the

second side of this one is a sweeter tune. There are some splendid bedding factories whose merchandise is sold by many reputable stores. Were you to tour one of these fine factories and see the making of bedding from start to finish, you would be impressed with the care and sanitary pre-cautions taken in every step. You would marvel at the numerous processes necessary in the evolution of a quality spring and mattress, and at the skilled technique of the experienced artisans who build them.

When you consider that you spend one third of your life in bed, and that that one third exercises a powerful influence on the remaining two thirds, little wonder that you should weigh this bedding problem seriously. Whether your bedsted is of directoire sophistication, or iron simplicity, and whether your bedspread is of taffeta or a patchwork quilt is of no consequence here. But to point out to you the important factors of what constitutes better bedding, from the standpoint of health, and to help you determine what your ideal bed should be is the raison d'être of this article.

Obviously, when selecting bedding, individual differences have to be recognized. A bed that i just right for a woman of 11 pounds will not be suited to a man a hundred pounds heavier. There are, however, generalizations ap plicable to both. For example, th ideal bed for any individual is of double size. Two such beds bein impracticable in many of ou homes where two people share th same room, the next best choic is the twin bed type, but be sur it is a full size twin-one requir ing a 39" mattress. This width the narrowest upon which yo can sleep without muscular ter sion. This may sound tempera mental to you, but in reality yo subconsciously entertain a cor stant fear of falling from a na rower bed. Your bed must not b so soft as to envelope you con pletely, thus overheating you body and causing restlessness, no so hard as to delay relaxation, remind you of the spiked boar of the ascetic Indian. It must just right.

Bedding is a difficult item buy wisely. All that is built for beauty may not be built for res Unless you see a cross section the merchandise, you have no wa of telling what is concealed wit in. The progressive stores great stress on their bedding departments. The merchandi they sell must be made to the standards. It is tested in the laboratories; and cross sectio are offered for your inspection Shop only in such a store a you will be sure that nothing w be misrepresented. Aside fro the health standpoint, consid quality bedding from the budg angle. Well-made bedding is most judicious investment. C good mattress and spring will or last several inferior ones, addition to the dividends of mo refreshing sleep.

Following, the various types mattresses, springs, and pillo are classified for you in a co densed, semi-outline form. can easily glean the details t you should know when select your bedding. This will ser also, as a handy reference.

of mattresses now being sold

pocketed places to allow

> MATTRESSES Innerspring: Ninety per c

of innerspring construction. The popularity is deserved, but if you prefer one of the other types of mattress, do not be misled by some of the current advertising claiming that only the innerspring is truly comfortable. Innerspring construction may be one of two types, (1) the multiple unit, and (2) the one-piece spring unit. The multiple unit consists of a number of small springs each encased in an individual muslin pocket and tied together to keep them in place and from interlocking. The wellmade innerspring mattress of this kind may have as many as 837 coils but should never have less than 408, because the coil then becomes so large that there is no support for the upholstery. A deep upholstery covers the springs and, while hair is preferable, felt is entirely satisfactory. The in-nerspring mattress is very resilient and conforms to the contours of the body readily. It should be used with a box spring for the best results. An open coil spring does not give the proper support and causes that rolling sensation bothersome to many people. The one piece spring unit used in the other type of innerspring mattress consists of fewer but stiffer coils linked together with wire helicals, or screw coils, to form one large spring. Each coil of this spring is not encased in muslin as in the other variety just described, but the entire spring is covered with burlap or heavy sheeting and then ipholstered in the same fashion as its brother. From 180 to 312 coils may be used to make the spring. This unit may be bought ooth in an expensive or inexpensive piece depending upon the way the oils are constructed. There is no simple test to give you to deermine this; but if you concenrate your shopping in the right stores the comparative prices will be indicative of the various qualities. This innerspring matress is stiffer than the other, nultiple unit and a firmer support for the heavier person. It, coo, should be coupled with the

Hair: The pure horsehair matress, despite the popularity of other types, is still believed by ome to be the very finest. It gives enduring service; is cool; and can be as luxuriant or as firm a support as you want, depending upon he amount and kind of hair sed. After hair is curled, steamed. and dried it becomes springy and vill hold weight. When thoroughly cleansed, and sterilized, nair is absolutely sanitary. A hair nattress can be remade by pickng, a process of loosening and eparating the hair strands with very little loss. This should be done about every four years. The operation is inexpensive, and whereas department stores do not usually handle this job, they will recommend a reliable dealer who does this type of work.

Horse bair: Government inspected South American hair is considered better than domestic. The mane hair is soft, the tail hair hard. A mixture, the larger proportion being mane, is the most comfortable for the average person. A heavier person requires a greater proportion of tail hair to keep the mattress resilient. Light weight persons need practically all the soft mane hair.

Hog bair: Winter hog hair is oftentimes used in conjunction with horse hair. It is a durable hair and makes the mattress less expensive. A mattress of all hog's hair, however, is impractical as it mats easily and soon becomes very hard.

Cattle bair is springier than hog's hair, but in many instances during warm or damp weather gives off a very offensive odor. It has not generally proven itself acceptable for use.

Labelling in a hair mattress is very important. The label should show the kind of hair used and where more than one kind is used, the percentage of each. "Mixed hair" is not sufficient.

Lambswool is sometimes used as a top covering over the hair to make the mattress very soft. Lambswool added makes the mattress more expensive and that is a point to watch. Lambswool may be indicated, but in reality it is only Virgin wool or shoddy wool made into a bat and substituted. It would seem that lambswool defeats the purpose of that cool refreshment of the hair mattress.

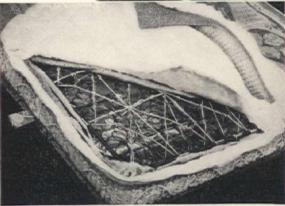

Cotton: There are many different grades and classifications of cotton. The finest cottons for mattress purposes, known as Peruvian, China, or long staple domestic cotton, are suitable for spinning. These fine grades of cotton are never sold in a mattress without being felted. (An explanation of felting follows subsequently). This spinning cotton makes a superior felt and a wonderfully fine mattress, but even a small amount of it mixed with shorter length, less expensive fibers makes a felt of sufficient tensile strength and good wearing qualities. The ratio of fine spinning cotton used with the shorter length fibers makes different qualities of felt and are proportionately cheaper.

A mattress labeled just "cotton" is of the very poorest grade cotton which has not been felted. This type might well be allocated to bargain merchandise, for it deserves no consideration. It readily lumps and is extremely uncomfortable to lie upon.

The shorter cotton fibers are generally termed cotton linters.

In this mattress bundreds of coil springs are sewn in woven seam muslin pockets, cross-tied top and bottom. This makes for extreme comfort

A section of another excellent mattress (top) of inner-spring construction and, below it, a durable box spring—both of Karpen make

These shorter fibers which adhere to the cotton seed pod and are cut from it are graded, first, second, or third, according to the closeness of the cutting to the pod. The third grade is cut so close as to be oily and full of seed particles and is seldom used except for shoddy merchandise. It is disastrous for victims of hay fever or asthma. The quality of linters of both the first and second cuttings depends, of course, upon the quality of the cotton of which they are a part. A good grade of linter can be felted advantageously and lessens the cost of felt. Incidentally, you will be interested to know that about 50-60 pounds of first cutting linters are taken from a ton of cotton seeds. Willowing, or cleaning, extracts much of the oil and seed particles from the first two grades. This cleaning involves about 15% loss of weight so that the less reliable factories elminate this process. The substance removed is known as "dust house sweepings" and is sold for the manufacture of cheap roofing construction material.

Felt: Refers to material that has been processed or felted. Either prime cotton, cotton linters, or a mixture of both is put into a cylindrical machine which picks the fibers apart, then combs and smooths them into fine layers. These fine layers are piled back and forth, layer on layer, and slightly compressed to form felt. Naturally the quality of felt is entirely dependent upon the grade of cotton used. As discussed

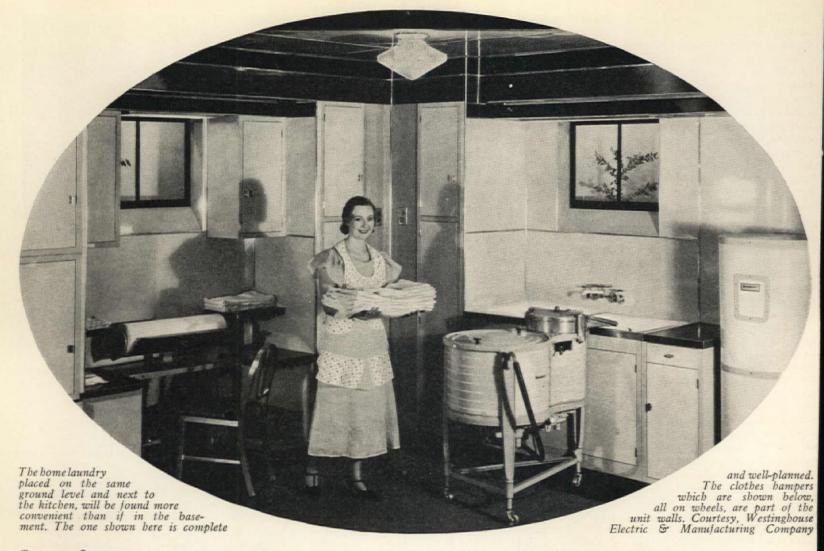

before, the long fibers, or staples as they are called, of prime white cotton make the most resilient and durable felt. The cheaper grades of cotton and their linters follow suit.

A felt mattress is warmer than a hair mattress. Teamed with a box spring it is resilient but firm, without the vibrancy of an innerspring mattress, and is a combination liked by many. It is less expensive than hair and has a goodwearing record.

Kapok: That soft, floss-like substance that grows and is not, as some believe, manufactured. The best kapok is grown in the Dutch East Indies. Prime Japara is a trade name for you to remember. Kapok has an individuality all its own. Medicinally, doctors recommend it for mattresses and pillows for patients with asthma. Kapok is nonabsorbent and particularly popular for warm, damp climates and camp life. It makes splendid lifepreservers. The kapok fibers are brittle and will not wear as long as other types of mattresses, but the cost is less. Frequent sunning and airing help keep kapok buoyant. The complement for the kapok mattress is the box spring as its surface construction is smooth and it is less apt to pulverize the brittle fibers, thus extending the life of the mattress quite considerably.

Ticking: A six-ounce Government standard ticking is the minimum weight recommended for wear. The light weight drills and sheetings which are printed

[Please turn to page 104]

Is there actual economy in doing the "family wash" at home? Della T. Lutes says yes!

E ven with the dark curtain of the depression lifted and the recovery act in full swing, we shall still have to practice economies for some time to come. Acceptance of this fact brings no unhappiness in its wake, for we have found that many of those performances which at first we looked upon as hardships and met with resentment, have actually brought us satisfaction—yes, even pleasure—in the doing.

The American homemaker met the percussion of hard times just as she has always met calamity, with a stiff lip and a high chin. And immediately she began to search seriously for not only the small economies to be practiced in every-day living, but all possible savings on an even larger scale. The family laundering was one of the first, if not the very first operation in household procedures to present an opportunity, for it ran into real money when sent to a commercial laundry, and the money saved by doing it at home had the very desirable quality of economizing behind the scenes. Then a new phase of the situation loomed up. Not all homes were equipped for doing the washing and ironing. The old-time wash-bench, wash-tubs, board, boiler, and wringer just didn't jibe with the modern woman's ideas of efficiency. Whether to experience the exhaustion caused by the hand ironing method

The next step, therefore, was to consider whether proper labor-saving equipment could profitably be bought out of the money

the economy of the home laundry was to be achieved by the housewife herself or relegated to a helper already employed, it was neither desirable nor economical to spend the time and energy required for washing by the scrubboard and bent-back method, nor formerly spent in sending the laundry out.

Shortage of income has taught us, among other things, conservative buying. We don't just walk into a store and buy, as we once did. We ask questions—of ourselves and others. And we study

the answers before spending our money. This we shall continue to do, for a lesson so bitterly learned clarity in the increased production-and use-of home laundry equipment.

So much for general facts. Now let us see in just what way this economy of home laundering is actually effected. If it seems necessary to present a few figures it is because we want to show, out of our actual experience, just what we have found in this one branch of saving.

First, of course, comes the purmachine we can find, the longest lived and the most modern, or a cheaper type. In the first we shall find machines of various designs, each producing the necessary action for effective cleaning and some with a centrifugal dampdryer which takes the water out of the clothes speedily, thor-

is not easily forgotten. The result of such cogitation with particular relation to the laundry question has been shown with amazing

chase of equipment and at the outset we have to decide the kind we are going to buy-whether we shall invest in the best washing oughly, and with no danger eitherto operator or clothing. This washer will cost us about \$150. In the cheaper range

we find the agitator

type of washer with electric wringer

ranging as low as \$60. There are, of course, in between prices too.

To make our equipment complete and to save the greatest amount of time and energy we shall want an electric ironer. This device takes the second half of the work out of wash day. We can get a good ironer for \$60 to \$75, or one of better quality for \$90 to \$100.

Now that we have an estimate of the actual first cost of equipment, let us simmer these rather large and unwieldy cost figures down to the cost per pound of clothes washed and ironed-a method of handling that will give us a direct comparison with the more commonly known costs

of sending clothes out to the laundry.

We shall assume a ten-year life for our equipment. On the better makes this is a very conservative estimate. This gives us a cost per year of \$12 for the lower priced types, \$25 for the better grades. If used by a family of five with an average laundry of thirtypounds

clothes a week, the cost of equipment will be from 3/4c to 11/2c a pound.

One dollar a year is a good round figure for repairs and servicing. This will add another fraction of a cent.

To save complication, we shall not charge any interest on money invested in equipment. If we did not buy this equipment we should not put this money out at interest since we should spend it-and a tidy sum besides, for outside work. Unless, of course, we

for good measure. Divide this by sixteen (number of pounds in two loads of clothes) as one tub of water is usually used for two loads of clothes, and the cost of hot water is 1/8c per pound of clothes washed.

Glance at our summary of costs. We find that at 3c a pound, we can own the best equipment money can buy and still do both washing and ironing for less than half the cost of washing alone by the cheapest of agencies available outside the home. Our home laundry earns from \$2.50 to \$5 a week compared to the cost of having both washing and ironing done outside the home. This is a clear cash return if the work is done by a maid or helper.

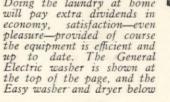

But there are other economies to be achieved by doing the laundry work at home-economies that many women will consider as important as the immediate cash savings. For instance, there is the saving in outlay of money for an extra supply of clothing and household linens which are necessary when the washing is sent out. Clothing laundered at home may be conveniently washed at any time, ironed the same or the next day, and be ready for wearing at once. Clothing and linens sent out are usually out of service for at least a week or ten days, as it is customary to let the bundle accumulate for weekly pick-ups.

Clothing and table and bed linens sent outside do not last as long as they do when washed at home. This statement is so well known to all homemaking women that it seems almost unnecessary to mention it, and yet here is so definitely a saving that it must be enumerated amongst the economies. The life of table linen particularly is shortened by the harsher method

The loss of valuable and personally treasured articles consti-

[Please turn to page 103]

Doing the laundry at home

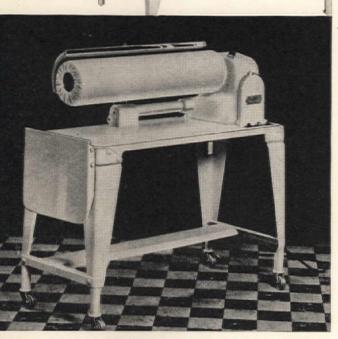

are doing the laundry work by laborious old-fashioned methods.

So much for the fixed charges. But how about operating costs? These being, of course, (1) electricity, (2) soap, (3) hot water (fuel and water included). Both laboratory and practical experiments have given us the following results:

Electricity: Average cost about 2c an hour for washing, 8c an hour for ironing. Our washer will handle at least sixteen pounds of clothes in an hour, the ironer, eight to sixteen pounds. Cost of electricity for washing, 1/8 cents per pound; for ironing, 1/2 to 1c.

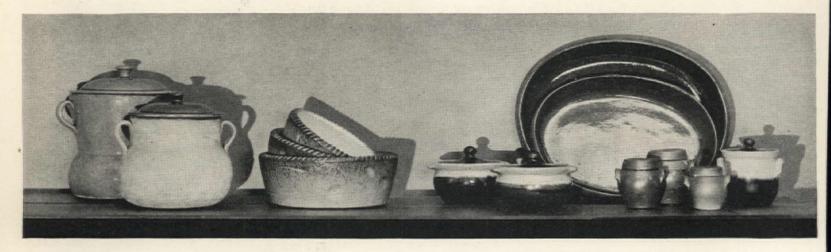

Soap: Three ounces of soap will be ample for eight pounds of clothes, at a cost of 1/2c to 1c an ounce. Cost, per pound of clothes, about 1/4c. In localities where only hard water is available the amount of soap used would be greater.

Hot water: The cost of heating fifteen gallons of water to 140 degrees F. is about 3/4c for oil heat; 1/2c for gas. Add the cost of the water and call it two cents

be home laundry is only fifty per cent efficient if it has no elecnc ironer. No longer massive—these ironers are very compact and are designed to handle even the most delicate and intricate tork. The General Electric ironer is shown in the center above, and the Rotarex ironer at the bottom of the page

Accessories before the food

E ARTHENWARE—an old tradition in cookery with picturesque and practical utility for new kitchens! There are those who say the only proper way to cook vegetables is to steam them, and the pot at the left above is for this purpose, with a strainer inside to separate boiling water from vegetables. Next it is a family soup pot. Both are from Charles R. Ruegger, Inc. The nested baking dishes have a "crusty" texture, good looking for use on the table. Individual "onion soups" come in several sizes, as do bean pots like the one at extreme right, and are nice for informal entertaining. These utensils are from Lewis & Conger. The two oval baking dishes for fish and similar things, and the three little covered pots in graduated sizes for mustard, marmalade, or anything you choose, are also from Ruegger

China—white and gleaming, and a smart touch besides, this year when white is so fashionable in decoration! All of china, strainer and all, is the drip-coffee "biggin" below at the left. This and the hospitable waffle batter bowl, with its convenient handle and spout, come from Lewis & Conger. The latter is available in several colors. The other articles in the row are all from Hammacher, Schlemmer & Co., Inc., and are all white china. The utensil with a metal lid is a steaming mold, while in front of it are turtle-shaped molds for jellied dishes and the like, which come in half a dozen sizes. The covered canisters are so decorative that they make one long to do over the kitchen entirely, in a white color scheme. Pitchers to match, in three sizes, are ready to take their place with the canisters

E NAMELWARE—not new itself, but with so many new improvements! A choice of colors, chromium covers, and easy-to-pick-up bake-lite knobs add to the appearance of interesting straight-sided shapes. But the practical features are even more exciting. All of the enamelware shown below has the quick-heat-conducting black bottom, and vapor-seal rims for waterless cooking, which some say preserves flavor and vitamins. The tea kettle at the left is designed with an "easy-pour" handle. If you look carefully at the stew pot next it, you will see the little steel safety-valve in the lid. Over toward the right is a new type sauce pan with strainer-cover, which makes it so easy to pour off the liquid and save the food itself. From B. Altman & Co.

Copper—another inheritance from old-time kitchens that is newly revived for new ones! Copper, so they say, heats quickly and evenly, and with chromium linings there is no chance of metallic taste or food discoloration. The little skillet in the left foreground has a long brass handle with a convenient thumb rest. The tea kettle in back of it, just the right size for the kitchenette, has a broad base for quick heating of small amounts of water. Sauce pans in graduated sizes have sturdy wooden handles. These are from B. Altman & Co. Right in the center, front, are three copper casseroles with brass handles from Ruegger. The little ones are for individual serving, larger ones for serving the entire family from one dish

F. M. Demarest

More fun than large formal dinners ~ you can entertain oftener this way ~ G. M. Blair

IN PLANNING any kind of Sunday night party, it is wise to take two things into consideration. First, that the greater part of the preparation can be done on Saturday; and second, that you are almost certain to add a number of last-minute guests to your original list. The following menus are both simple and practical. One hot dish is sufficient, and any but the simplest sweet for dessert unnecessary. When coffee is served, instead of cold drinks, it is a thoughtful gesture to serve one decaffeineated coffee for those who cannot drink the regular coffee at night, without dire results.

A steaming dish of spaghetti with meat sauce, baked beans, and corned beef hash are great favorites and served at the smartest buffet suppers. Any one of these may, of course, be substituted for any of the hot dishes given below. A variety of cheeses, with crackers make a substantial, satisfactory substitute for any of the desserts given below, and very often a tray of French pastries (the simpler varieties) are the only sweets offered at smart buffet suppers.

Following are menus that are easy to prepare and do not take too much of the hostess' time.

MENU I

Cold ham with mustard sauce
Creamed chicken with mushrooms
and sweetbreads
Frozen cheese
Shredded lettuce salad
Strawberry tarts or French pastry
Coffee

CREAMED CHICKEN WITH MUSH-ROOMS AND SWEETBREADS

Cooked chicken Parboiled sweetbreads Bechamel sauce

Heat the chicken and sweetbreads in the sauce and serve piping hot.

Bechamel Sauce

1 small onion 2 slices carrot Butter Minced parsley Bay leaf Chopped mushrooms 2 cupfuls chicken stock 1 cupful cream Salt, pepper

Chop a small onion and two slices of carrot. Fry in butter with a little minced parsley, two sprigs of thyme, a bay leaf, and twelve chopped mushrooms. Add three tablespoonfuls of flour and, when the flour is thoroughly mixed, add two cupfuls of stock and a cupful of cream. Cook

until thick, stirring constantly. Season with salt and pepper. Simmer slowly for half an hour.

FROZEN CHEESE

There are countless variations of this. Roquefort may be used instead of cream cheese, and any number of different seasonings—it is fun to make them up yourself—but the following happens to be my favorite.

6 Philadelphia cream cheeses Cream Chives Salt

Mash the cheese with the cream until of about the consistency of cottage cheese, mix in chopped chives, and salt to taste. Place in a melon mould, pack in ice cream salt and ice, and allow to stand three hours, or place in an electric refrigerator. When ready to serve turn out of mould onto platter as you would a mousse. Serve with a salad that has been shredded and mixed in a wooden bowl and, of course, well chilled.

MENU II

Alligator pear filled with caviare
Virginia ham
Chaud-froid of Chicken
Strawberry mousse Small cakes
Coffee

CHAUD-FROID OF CHICKEN

This sounds rather difficult, but is actually a very simple dish to prepare, and looks very Café de Paris if it is done nicely.

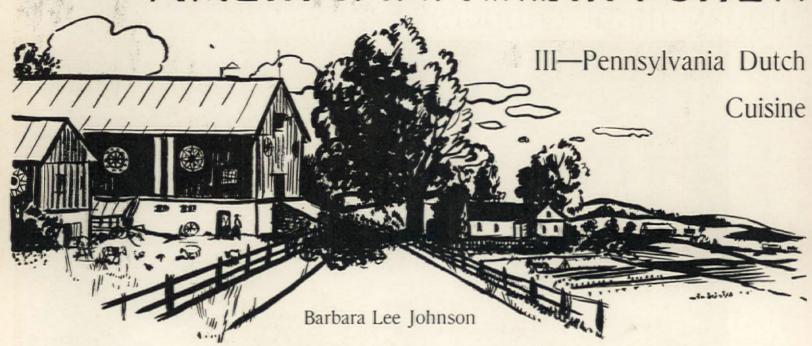

- 4 tablespoonfuls butter
- 2 cupfuls chicken stock
- 4 tablespoonfuls cream
- 2 scant teaspoonfuls gelatine dissolved in 2 tablespoonfuls cold water
- 6 tablespoonfuls flour
- Yolks of 2 eggs
- 2 tablespoonfuls lemon juice
- 12 pieces cooked chicken
- Aspic jelly mixture

Make a sauce of butter, flour, and stock; add egg yolks diluted with cream, lemon juice, and salt; add dissolved gelatine. After the sauce has cooled pour it over the pieces of chicken. Garnish with truffles cut in attractive shapes and green pepper if desired. Chill and then cover carefully with aspic jelly mixture. Then chill again. When firm, the chicken chaud-froid may be served on a lettuce leaf or not, as you choose.

MENU III

Cold tongue
Salmon mayonnaise Potato salad
Gooseberry tarts
[Please turn to page 104]

AMERICANA IN THE KITCHEN

DEEPLY rooted in certain parts of these United States are native dishes that are as characteristic of the section as the local accent or dialect. The gumbos of New Orleans, the hot biscuits of the South, the tamales of the Mexican border statesall are as typically American as the baked beans and brown bread of Boston. Many of these dishes are the result of Old World cookery brought to America by early settlers and modified by native food products. Because most of them are genuine delicacies, and because they are too often just names to the rest of the American

Amish sect are common in the land. But there is much more than scrapple and bonnets for those who are not of the *freundschaft* to become acquainted with and enjoy. We advise all outlanders to seize upon the very first opportunity to visit the hills and valleys of pastoral simplicity in southeastern Pennsylvania. There is no section in the United States today where the people have so carefully preserved Old-World ways and preferences.

Farmers they arrived and farmers they are basically now. The huge red Swiss barns—six times the size of the houses—are

outstanding symbols of their calling just as the well-filled ground cellars, smoke-houses, and groaning board are concrete proof of their success in that calling. A thrifty people neither afraid of hard work nor ashamed of their truly Gargantuan appetites.

Seven sweets and seven sours long served as the inexorable rule for the company dinner and often for dinner without company. The numbers may not be so closely

may not be so closely adhered to today, but the gamut of pickled onions, pickled cauliflower, pickled beets, pickled gherkins, dill pickles, green tomato relish, coleslaw, and so on is not unknown. Jams, jellies, preserves, apple-butter, puddings, and pies are likewise indulged in at one sitting. But so few of us have the Pennsylvania Dutch capacity for manual labor that we suggest discretion when going in for Pennsylvania Dutch quantities and combinations.

SCHNITZ AND KNEP

1 smoked ham 2 pts, dried apples (schnitz) Brown sugar Dumpling dough (knep)

Wash ham thoroughly and soak in cold water over night. Soak the dried apples over night or at least two hours in cold water—enough to cover. In the morning put fresh water on the ham and boil until tender—allowing twenty minutes to the pound. Remove the ham to a platter and skin carefully with a sharp knife. Keep the liquor in the kettle—you will need it.

While the ham is cooking take a bit of the broth to start the apples stewing. When the apples are tender sweeten them to taste with brown sugar and set to one side until the ham has been taken up. Or stew the apples in the ham kettle after the ham is done.

Now decide upon the number of dumplings necessary for your family and pour off some of the liquor—leaving enough to cook the dumplings. Thicken the liquor to the consistency of a thin cream soup by adding flour dissolved in a little cold water. Stir in vigorously so that it will not be lumpy. Sweeten the mixture to taste with brown sugar.

Now add your dumplings to the boiling broth—carefully placing them side by side. Cover the kettle quickly and do not remove the cover until ready to serve—twenty to thirty minutes

depending upon the size of your dumplings.

Serve the dumplings on a deep platter with the apples around them and over all the thickened ham liquor. If the platter is large enough place the sliced ham at one end and the schnitz and knep at the other. The knep recipes vary from the elaborate rules that call for yeast and letting the dough rise three times or more to the very simple never-fail recipe. The latter calls for three teaspoonfuls baking powder and ½ teaspoonful salt sifted into two cupfuls of flour; 1 egg added; then enough milk barely to moisten the whole. Drop a dessert spoonful at a time into the broth.

RIVEL SOUP

I egg

Flour enough to rivel egg (about 1 cupful)

Beef broth or any strained soup Put flour into a bowl and cut the egg into it till well mixed the mixture should not be too dry.

When the soup is piping hot drop the rivels into it. When they come to the top they are done. Serve at once.

SCHMIER KASE

Heat very, very slowly to lukewarmness clabbered milk. When it has become about fifty-fifty milk and whey, place in a cheesecloth bag and drain thoroughly. Remove the curd from the bag,

"IT'S NO JOKE TO FEED A BIG FAMILY ON

a food \$0 a week!

... but even if I had less—I'd still use ROYAL BAKING POWDER"

(An intimate chat with Mrs. E. M. VIGNERON, of Larchmont, New York)

WHEN you do all your own housework, and cook for a family of five, you soon learn the meaning of true economy.

And Mrs. Vigneron says she has HAD to learn it—because her food budget is only one-third what it used to be!

"I've learned by experience," says Mrs. Vigneron, "that it's really wasteful to try to save on baking powder. For, when I don't use Royal, my family complain—and leave halfeaten cake on their plates.

"After all, you use so little baking powder in a cake, you might as well use the best. My Royal cakes are always successful. They NEVER fail!"

SOUND REASONING, Mrs. Vigneron! If you stop to figure the approximate costs* of your ingredients for a cake (say a chocolate layer cake)—like this:

1/3 cup butter
3 cups sugar
2 eggs
2 cups pastry flour 56
3/8 cup milk
2 squares chocolate 56 1½ tsps. vanilla
3 tsps. Royal Baking Powder 16

it does seem foolish, indeed, to experiment with a cheap, doubtful baking powder.

As a matter of fact, Royal Baking Powder is actually selling now at its lowest price in seventeen years.

You know, of course, the kind of baking job Royal does . . . that for 65 years that been the choice of fine cooks and food experts famous for the flavor of their cakes and pastries.

REMEMBER, when you buy bakng powder, how little Royal costs! Don't skimp yourself needlessly. Use the best .. and cheapest in the end—Royal!

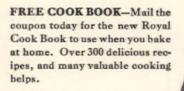

These costs vary, of course, according to locality.

• "I don't dare to have a cake failure. I really couldn't afford to throw out 35¢ or 45¢ worth of good cake ingredients. That's why I always use Royal Baking Powder! I'm sure of perfect results."

• This charming house in Larchmont, New York, is the home of Mr. and Mrs. Vigneron and family.

PRICE IN 17 YEARS!

ROYAL NOW SELLS AT THE LOWEST

Wouldn't the folks back home be excited to hear your cheery "hello"? Isn't there some friend in another city you've been intending to write to, but just haven't found the time? Or a boy or girl away at school, and maybe a little lonely, too?

The day station-tostation rate is low—about 25c for 25 miles; 50c for 75 miles; 75c for 125 miles. Many evening and night rates are lower. Your telephone directory will give you details.

Your house—its care and repair

Jonas Pendlebury

Mr. Pendlebury, a well-known architect, will be glad to help you with your individual problems in the care of your house and its upkeep. If there is something inconvenient or unattractive about your house that you think might be improved send him a snapshot of it. Address him in care of The American Home, and please enclose a stamped envelope for reply

Does the above sketch represent the chimney on your house? Very likely no. Yet how many chimneys outlined against the sky are in this condition. One does not have far to look without seeing such an example. And what a pitiful, neglected object it is. The result of long exposure to the elements. Another bad storm and down come the pots. Soon the bricks will come tumbling after. There are thousands of masons in these years of enforced idleness who are eagerly waiting to take up their tools to repair chimneys like this. The rebuilding of a chimney above the roof is, comparatively speaking, a minor operation. And yet what a tremendous difference it would make to the appearance of the house. The chimney is one of the most important features of the house. One has only to consider its use to realize that. And, surely, this necessary adjunct should always be kept in constant repair. So why not do it now?

LOCATING THE HEATING

UNIT

I am planning a new house and one of my problems is proper location of the boiler in the cellar. Any suggestions you may offer regarding same will be appreciated.

The boiler should be located approximately in the center of the building, and so situated that there is plenty of natural light. There really is no necessity to crowd the various heating units in a small house. The boiler and hot water heater should be separated by at least three feet, this allows space for the convenience of making the proper connections and provides access to the various trimmings. Where coal is used the space in front of the boiler should be sufficient for stoking and removal of ashes.

The space at the rear should be enough for flue and chimney con-

nections and accessibility to damper regulators. The space on the side should be two and one half to three feet.

DAMPNESS THROUGH

STUCCO

My house is stuccoed on the outside. The walls are damp. I am quite certain that the windows are weathertight. How can this condition be remedied without restuccing?

It may be possible to eliminate the dampness by applying water-proof stucco paint to the exterior stucco surface. This paint may be obtained in various shades from any of the well-known paint manufacturers. Another way is to cover the stucco with clear cement waterproofing. This material is almost colorless, is applied like paint, and effectively waterproofs stucco work. It may be advisable to have a roofer examine the condition at the roof and gutters. Sometimes the dampness is due to leaks there.

DAMP-PROOFING CELLAR

WALLS

Is it possible to damp-proof cellar walls on the inside with a cement coating or other material? The walls are not excessively damp, but I would like to guard against the dampness.

The application of a heavy bituminous damp-proofing paint may be used. Then a cement mortar coat may be applied directly over the damp-proofing. This method frequently is used on existing cellar walls where dampness is not excessive. In some cases a waterproof cement coat-

ing is applied on the cellar floo and carried up on the inside of the cellar walls to a point just above finished grade. Where this method is used, the surfaces are thoroughly roughened and cleane before application.

LOG CABIN CHINKING

I am interested in securing a formula for log cabin chinking. I want some sort of a mixture that will not crack and crumble like the cement does with which we now have our cabin clinked.

Would suggest the use oakum caulking and pieces wood of various sizes nailed curely in the interstices of the logs. I know of one instance where this method was used for exterior and interior chinkin Then the chinking was plastered over with a mixture of lime, sar and cement. According to repo the chinking was in good cond tion after two years' exposure. must be remembered that co siderable shrinkage takes pla in the logs. The interstices crease, but, where cement has be used, the cement does not pand, consequently the ceme looses its bond and falls out. would seem that the proper thi to do would be first to chink wi oakum and wood strips. Then caulk with same after shrinka has taken place and finally plast over with the cement mixture. would also seem that an elas waterproof plastic compour such as is used for exterior wi dow and door frames, remaini plastic and pliable for consider able time and not affected by pansion and contraction may substituted for oakum.

For the home craftsman

Decorating a fruit or nut bowl

William Longyear

ON FIRST thought I hesitated to offer this project, fearing some modest reader might feel the process too complicated for one intrained in the crafts. As I conidered further, listing the halflozen simple materials needed ind the fact that a little crudity n applying the designs could nly add charm, I decided to proeed. The result is a thing of eauty with many practical uses. he common wooden chopping owl costing a few pennies beomes an antique Greek or Indian owl for fruit and nuts, or as a able decoration by itself.

No great skill is necessary to reate a really beautiful bowl. irst purchase one or more ooden chopping bowls, prefably unstained and unwaxed. I ave bought small ones eight ches in diameter at a five and n cent store. The larger bowls at a little more and are much ore desirable for fruit.

The designs below are divided to an Indian group on the left d a Greek group on the right, the interior and exterior ews of a Greek bowl in the nter.

the designs for the inside center the bowl should be drawn in ncil about one half the diameter the bowl in size. Borders may applied on both inside and outle edges. Perfectly parallel and aight guide lines may be drawn ound the bowl by resting your fingers against the edge and turning the bowl while the pencil makes the line. The outside borders should be in width about a third of the height of the bowl. These designs may be drawn first on tracing or thin paper and then transferred to the bowl. This can be done with carbon paper or by blackening the back of the paper with pencil lead and pressing the design off. Only two or three inches of the border need be drawn on the paper as it may be repeated by moving the tracing. Let us proceed to make the gesso.

Gesso work is one of the oldest of arts. Gesso is simply a thick paint-like substance which when applied to a surface stands out in relief. All of the materials needed are extremely simple. Whiting is a common powdered substance which may be purchased at the paint or hardware store.

Gesso is made as follows:

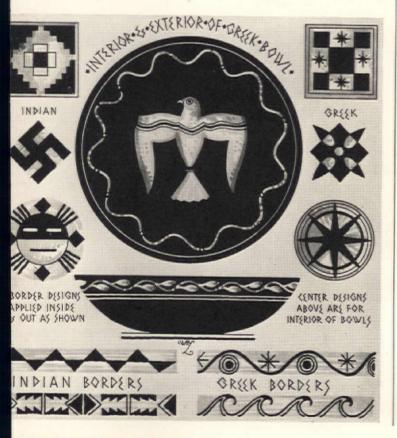

Part One

- 10 tablespoonfuls of whiting mixed with water to a thick cream
- 6 tablespoonfuls of liquid glue Part Two

1 tablespoonful of varnish 4 tablespoonfuls of linseed oil

Stir part two into part one and boil for ten minutes in a double boiler. Pour the gesso, when cooled slightly, into a bottle and cork well. This keeps it in good condition.

Cut months from your Heating Season

-this Fireplace Circulates Heat

THOSE chilly weeks in early spring and fall—how they run up your yearly heating cost! When all you really need is enough heat to take off the chill. That's the time when a Heatilator Fireplace will cut dollars off your fuel bills—provide complete complete without the cost of plete comfort without the cost or bother of furnace operation.

The Heatilator works on the same principle as a warm air furnace. It actually circulates heat-to all corners of the room and those adjoining. Cold air enters the double-walled fire-box where it is heated and then passed out in a steady flow of even warmth. This is the heat that is lost in the average fireplace—90% goes up the chimney. In mild climates and for summer came is the control of the control o for summer camps it is all the warmth needed for year 'round comfort.

Guaranteed Smokeless!

Over half of all existing fireplaces are not used because they smoke or fail to heat. The Heatilator eliminates all chance of failure by providing a correctly designed form for the masonry. It is simple to install masonry. It is simple to install—saves buying damper, smoke dome and firebrick—adds little to fireplace cost. And you can have any style of fireplace you like—the Heatilator does not alter the general appearance of hearth or mantel.

Send the Coupon Below

If you are planning to build a new fireplace or rebuild one that smokes and wastes heat, be sure to find out how a Heatilator Fireplace will help you cut your heating costs.

HOLIDAY SALAD

Pare and cut into quarters or eighths rather tart eating apples. Cook carefully in a syrup of 1 cupful of water to 1/2 cupful of sugar; flavor. Divide the apples and syrup equally, making one half green and the other red by using a few drops of vegetable coloring. Place the apple segments around a sherbet dish, alternating the colors and fill the center with whipped cream. Top with a cherry! BARBARA LEE LIV-INGSTON, Clearfield, Pa.

GERMAN COOKIES

Cream 1/2 lb. butter with 2 cupfuls powdered sugar 8 hard boiled egg yolks mashed 1 raw egg

Combine these ingredients and beat together for thirty minutes or longer. Add the juice of half a lemon and about four full cups of flour. Let stand overnight in cooler or four hours in refrigerator. Roll out and cut with cookie cutter and bake. Mrs. W. B. SMITH, Seattle, Wash.

HAM SALAD LOAF

1 package lemon flavored gelatin mixture

13/4 cupfuls boiling water

1 teaspoonful finely chopped onions

1/2 cupful diced celery

3 tablespoonfuls chopped green

2 tablespoonfuls chopped pimentoes

1/4 teaspoonful salt

2 cupfuls diced cooked ham

Pour boiling water over gelatin and stir until dissolved. When cool, add rest of ingredients and pour into glass mold which has been rinsed out in cold water. Set in refrigerator to stiffen. Unmold on lettuce and surround with salad dressing. Garnish with hard-boiled egg and sweet pickles. Recipe serves six. Mrs. CURPHEY, Columbus, Ohio.

LEMON COCOANUT ICE-BOX DESSERT

2/3 cupful fresh cocoanut 11/4 cupful sifted powdered sugar

3 eggs 1 cupful toasted cocoanut ½ pint heavy cream, whipped Grated rind of 1 large lemon

tablespoonful lemon juice 2 dozen lady fingers

Line mold with waxed paper. Split and trim lady fingers to fit the mold. Cream the butter, add powdered sugar gradually. Beat well and add yolks, cocoanut, lemon rind and juice. Fold in the whipped cream and egg whites stiffly beaten. Turn half the mixture into the mold. Top with lady fingers and add the remaining mixture. Cover with waxed paper and set in the refrigerator for 24 hours. Unmold and remove wax paper. Garnish with whipped cream and maraschino cherries. This will serve 12 to 14 people. Mrs. I. M. Doudna, Spirit Lake,

PINEAPPLE RICE

I cupful cold boiled rice 1 cupful diced or crushed pine-

1/3 cupful sugar Dash cloves, ground Whipped cream

Mix ingredients in the order named, adding more or less sugar depending upon the grade of pineapple used. Mix with whipped cream, reserving a portion of the cream to garnish each dish when serving. Set in refrigerator several hours to blend.

When Spanish cream or boiled custard has been made the day before, a portion can be reserved to use in the place of the whipped cream. M. Moore, New Orleans,

TOMATO JELLY

Put in a saucepan 1 can of tomato soup. Fill empty can with water and rinse carefully to get all of it. Put 2 tablespoonfuls of granulated gelatine or envelope of plain minute gelatine in sauce pan and heat until gelatine is thoroughly dissolved in soup. Pour into small moulds and set in refrigerator. These may be served as an appetising first course or as a salad. Mrs. George R. Dodge, Fall River, Mass.

HARLEQUIN COOKIES

2 cupfuls sugar

11/2 cupfuls melted butter (or other shortening)

3 eggs

41/2 cupfuls flour

2 teaspoonfuls baking powder

I teaspoonful salt

Mix butter and sugar; drop in eggs one at a time, alternating with flour, salt, and baking powder sifted together. Work into a smooth dough and divide into

To one quarter add 1/4 cupful cocoa and a half cupful coarsely chopped walnuts. To second quarter add 1 cupful macaroon cocoanut and 1/4 teaspoonful vanilla. To third quarter add sliced stoned dates and one teaspoonful each nutmeg and cinnamon. To last quarter add 1/2 cupful finely cut citron, orange, and lemon peel and a few drops of almond flavoring.

Divide each of these quarters in half and make each into a roll about 1/2" in diameter. Make different cookies by combining the rolls. For instance place two cocoanut rolls and two cocoa and

two nut rolls opposite each othe Rolls should be placed on oile paper and chilled overnight cooler or four hours in refriger tor. Slice and bake. Mrs. Wa

NORWEGIAN CHRISTMAS BREAD

1 qt. sweet milk

NELSON, Taco

Is there actual economy in doing the "family wash" at home?

[Continued from page 91]

tutes one of the features to be taken into consideration when evaluating comparative methods. Of course, one might send out the most valuable possessions for a lifetime and never meet with a loss. Still it does happen sometimes. This is a chance that one does not take in the home laundry.

The realm of fastidiousness takes us out of the realm of actual cash savings, but is one that we find many housewives considering seriously. Standards of sanitation may be high-and, if the washing be sent to a commercial institution of the higher

type, they usually are. Germs cannot live through a bath of water at the temperature which is used in the higher-class establishments. It is not the danger which prejudices the fastidious homemaker and her family against mixing

In using the up-to-date ironer the operator may sit at her work in perfect comfort. Skill comes with practice. Easy Ironer

dirt but I can't stand the dirt of somebody I never saw.'

The statements made in this article are in no way condemnatory of commercial laundries. For those who can afford the public laundry for general washing, with

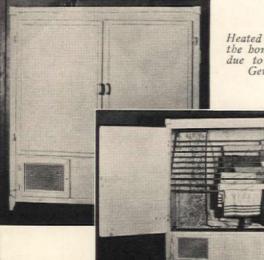

the home laundry for personal and special things or, where the home maker's time is put to some economic use that is of greater value than it would be here, the commercial laundry is the logical and desirable solution of the family problem. But if the woman in the home has no outside work which is of greater monetary value, then here is the place more

than any other where she can make a genuine contribution to the family income.

But the modern homemaker will not work under the same conditions as did the "hired girl" of a few years ago, or the washer-

personal clothing, table and bed linen with that of utter strangers. It is the same feeling that once prompted a woman to say upon moving into a house that was dirtier than most unlived in houses—"I can stand my own

Heated dryers are practical for the home and eliminate delays due to inclement weather. A General Electric dryer

woman who came in at forty cents an hour and car fare. She thinks too much of her hands, her back, and her time. If she has not already bought a washing machine when she decides to practice this economy she does so now. And if she wants to make the economy complete (which means the saving of time and a tremendous amount of energy) she will make a supreme effort (if this is necessary) to become the proud owner of an ironer at the same time.

The significance of better bedding

[Continued from page 89]

or striped are the least desirable. The woven damasks and art tickings are suggested.

Tufting: The concealed sewn eyelet is the finest. There is no metal, no hard tufts to tear the sheets, nothing to get out of order. It is more sanitary.

Ventilators and handles: In most cases ventilators are just a talking point and are of no particular importance. The ticking is sufficiently porus to take care of the air requirements. Handles are, of course, a convenience.

Edges and side stitchings: The rolled edge machine sewn with a lock stitch is a reasonably good finish. Hand tailoring, however, is always desirable, for the stitches are closer together and the edge stronger. The imperial edge, slightly more expensive, is very square in effect, a sturdier construction, and gives the bed a more trim appearance. Side stitching is essential to the hair or felt mattress to keep the material in place.

SPRINGS

Whereas the mattress is generally the recipient of the greater glory, the honors should be shared equally with the spring. Select a spring that will hold your mattress level, permitting no sagging when the bed is occupied. When you try it without the mattress it should not compress by more than half its own depth. There should be no side sway, or trembling to rock you after each turn. If you can force it sideways by more than an inch your bed is too "nervous." See that the frame for the spring is strong and that the component parts are well assembled so they will neither slip nor slide easily to make scraping

Box springs: The well-made box spring outshines all others. It costs no more than other springs of equivalently fine construction, and custom-made according to your individual needs merits your first consideration. It is adaptable

Where space will permit, double laundry trays are desirable. Be sure that they are set at a comfortable working height. Kohler of Kohler

to the mattress of your preference. When used with a hair, felt, or kapok mattress the box spring should be of softer construction than with an innerspring mattress. The number of coils and type of wire in them determines this. From 80 to 63 prime wire coils mounted on a Canadian spruce framework, the coils tied eight ways with Italian twine, cane fastened to the coils at the outer edge, flax webbing, and upholstery of hair or white cotton layer felt are the pointers to quality construction. The same ticking data holds true as for mattresses.

Open coil springs: The open coil spring is more yielding to the body pressure and more springy. The coils are usually the spiral type and from ninety to ninetynine is the number accepted as standard for the full-size bed. Helical screw springs crossing diagonally should be used to hold the coils in place. If straight wire is used instead of helicals the ties are likely to break under strain. A steel frame is necessary to prevent swaying. The double-deck open coil spring of heavy gauge wire is more expensive but well worth the difference in price for the person tipping the scales to two hundred.

Miscellaneous springs: With the distinct advantages afforded by the more scientifically constructed box or coil spring, very few of the flat springs are used. Steel ribbon, lined wire, or continuously intersecting helical screw springs are classified in this category.

CUSTOM-MADE BEDDING

By all means have your bedding custom made if you can. The up-to-the-minute bedding shops can make a mattress and spring

to your own personal requirements, giving you a bed that will be adequately soft or firm, warm or cool, and durable.

PILLOWS

To top off the ideal bed you may have your choice of pillows. Down, the light fluffy filament from the undercoating of water fowl, is very soft. It has little power to resist weight and frequently gives inadequate support if used alone. A mixture of down and goose feathers makes the better pillow. Upholsterer's down is generally 50% down and 50% goose feathers, but as high as 80% goose feathers is acceptable for a down pillow. The down pillow is the most expensive of all varieties.

Goose feathers: The most practical pillow for general use is that of new, sterilized all goose feathers.

Duck feathers: Not as good as goose. The feathers of water fowl feeding on fish are apt to throw off an unpleasant odor unless thoroughly treated chemically.

Chicken feathers: Although the feathers have been improved for pillows by separating the barb from the stiff quill, they are the least desirable. The fibers are weak and lack durability. They are the cheapest. Lumpy or heavy pillows weighing three or more pounds are certain to contain chicken feathers.

Regardless of the kind of pillow you select, demand washed and sterilized feathers. Do not place too much emphasis on tags bearing merely descriptive words as-"pure," "selected," "pearly," et cetera. China feathers are not as resilient nor as durable as do-mestic feathers. White feathers are always at a premium. Perhaps logically this should not be so, but you have the feeling of a more friendly pillow when the feathers are immaculately white.

Pleasant dreams to you!

Sunday night suppers

[Continued from page 93]

MAYONNAISE OF SALMON

6 lbs. salmon Juice of one lemon Parsley Bay leaf Thyme (pinch) Whole black pepper 4 cloves

Boil salmon in salted and acidulated water, season with parsley, bay leaf, thyme, six bits of whole black pepper, and a few cloves. Be careful that salmon does not break, as it looks more attractive in a whole piece. Cool. skin, and serve with mayonnaise. Some people like to color the mayonnaise with water in which spinach has been cooked.

GOOSEBERRY TARTS

1 quart gooseberries 1 cupful sugar

I teaspoonful cornstarch

Cook the gooseberries and sugar fifteen minutes, thicken with cornstarch, remove from fire, chill thoroughly, and serve in rich pastry shells. Tarts can be topped with a dab of whipped

MENU IV

Cold chicken Cold ham Lobster cardinale

toto salad Peas Potato salad Strawberry ice cream Chocolate cake Coffee

LOBSTER CARDINALE

mericana h the kitchen

Continued from page 941

dd salt to taste, and mix with a oon, fork, or hand till it is very nooth. Then stir in thick sweet eam till of the desired constency. Chives or caraway seed ay be added for variety.

FASTNACHTS

I cake yeast

1/2 cupful shortening

1/2 teaspoonful salt

1 egg

11/2 cupful milk 1/2 cupful sugar

Flour enough to make a very soft dough

Scald the milk; when cool add e yeast, shortening, sugar, salt, d flour. Work thoroughly until ht and smooth. Put in warm ace to rise until light. Roll out, , and let rise again on a cloth. y in deep fat till golden brown d drain on brown paper.

PHILADELPHIA SCRAPPLE

Hog's head and 4 pig's feet or 21/2 lbs. fresh pork and pigs' feet

White corn meal

Seasonings to taste-cayenne, sage, salt, and pepper

Clean hog's head—scraping and shing thoroughly; remove eyes d brain. Wash and scrape the t. Put both in kettle and cover th cold water and simmer. ping vessel covered, till meat oks off of the bones. Remove m the broth; chop the meat d return to the kettle. Heat to ling. Add the seasoning and ough corn meal to make a

medium stiff mush. Cook over a moderate fire about an hour-till the corn meal does not taste raw. When done pour into wet molds or loaf cake pans and let cool. Scrapple can be kept in the refrigerator several weeks-enough sliced for each meal as desired. Cut in slices about as thin as those for fried mush; roll in

white corn meal and fry quickly till brown in a heavy skillet.

Scrapple is primarily a breakfast dish but may be served for luncheon or supper.

APPLE BUTTER

Beg, borrow or steal a huge kettle—a regular apple-butter kettle if possible. Pare and quarter two bushels of cider apples and one peck of quinces. Cook the quinces in a little water till soft and mash through a collander. Boil and skim one half barrel of sweet cider until no froth gathers. Remove part of the cider leaving in the kettle only enough for cooking the apples till soft. When the apples are soft add the mashed quinces. As the mixture cooks down add the rest of the cider a little at a time. When the butter is of the desired consistency, add sugar, cinnamon, and cloves to taste. The sugar thins it so continue to cook it until it is again thick. Watch it closely and stir it carefully with a wooden spoon or paddle. When it is done pour it into jars or jelly glasses or even into little crocks. It will keep indefinitely if

FUNNEL CAKES

2 cupfuls milk

2 eggs

1/2 teaspoonful baking powder

Pinch salt

Enough flour to make a thin batter.

Beat the eggs well; add milk; sift salt and baking powder into a little flour and add to the eggmilk mixture. Continue adding flour till you have a thin batter.

Have hot fat one half to one inch deep in pan. Put batter into funnel and then into hot fat-beginning in the center of the pan and turning the stream around in a gradually increasing circle being careful not to overlap batter into a solid cake. Fry a light

brown and serve hot with any tart jelly.

PIGS KNUCKLES AND SAUERKRAUT WITH DUMPLINGS

4 or 5 pigs' knuckles

2 lbs. sauerkraut

Dumpling dough seasoned to taste with nutmeg

Scrape and wash thoroughly the knuckles. Put into a pot with the sauerkraut; cover with cold water; cook over a moderate fire till tender. When the knuckles are almost done drop the dumpling dough, a spoonful at a time, into the pot. Cover quickly and cook about twenty minutes. Serve immediately.

SAND TARTS

1/2 cupful butter

1 cupful sugar

1 egg

teaspoonfuls baking powder

Egg white or yolk

Flour to make dough stiff enough to roll out-about 13/4 cupfuls sugar and cinnamon

Cream butter and sugar; add eggs and beat thoroughly. Sift baking powder with the flour and stir into the butter-sugar-and-egg mixture. Roll thin on a wellfloured board; cut into squares; brush with either the white or yolk of an egg; sprinkle with sugar and cinnamon. Bake eight or ten minutes (on a buttered sheet) in a slow oven.

FRESH RELISH

2 cupfuls cabbage, finely chopped 2 green peppers, finely chopped I teaspoonful celery seed

2 tablespoonfuls brown sugar 1/4 teaspoonful mustard seed

1/4 cupful vinegar

Salt and pepper to taste

Use crisp cabbage and peppers. Chop fine with sharp knife. Mix all ingredients thoroughly and let stand in cool place several hours before serving.

The home craftsman

[Continued from page 101]

You will need a small watercolor brush, the pointed kind commonly found in children's paint boxes. When the gesso is ready fill in the pencil design using a stipple technique. Do not try to brush it out. You may build up the design by applying added layers of gesso, but a slightly round surface a sixteenth to an eighth of an inch is ample. Allow the gesso to dry and stain the entire bowl, design and all. with dark oak stain. Immediately after the stain has been applied, wipe the entire bowl with soft cloths. The trick is that the stain will not readily penetrate the gesso, so when you wipe the bowl the design stands out in slightly stained white. Allow a little stain to remain in the depressions of the design. Lastly, wax the bowl.

Garden facts and fancies

THE day of the utility garden is with us again, and I am glad to see it. It is an omen of the way the country is meeting the present-day problems of living and making the most of opportunity and doing things for ourselves.

A generation ago, nobody thought of the home plot without having the inevitable vegetable patch some-where—indeed, "vegetable patch" and "garden" were almost synony-mous terms. They were so closely related that, in the minds of a great multitude to "make garden" meant merely to till the soil, scatter the fertilizer and sow the seeds for the

In recent years, we have somehow drifted away from this very homelike and practical service of the garden and, perhaps, we have come to give an over-emphasis to display and become avershipers of color in bowing become worshipers of color in bowing before the gods of a so-called aestheticism. Though "man cannot live by bread alone" the while he craves for an emotional outlet for the soul within, yet as a plain mat-ter of fact, a well-kept vegetable garden may be equally as beautiful as the bed of finest flowers. "Hand-some is as handsome does" perhaps. From the standpoint of the one

who tends the needs of living things, there is a mighty wealth of satis-faction to be had in a well-main-tained, well-developed old-fashioned vegetable garden, serving the needs of the household and family, and displaying eloquently that skilful cultural care has been given.

No need to offer any apology for making the intimate home plot productive of things good to use, well as good to see. Profit in the home vegetable garden? Perhaps not if measured at the market value of produce, but there's far more to it than that; freshly gathered salads of your own handwork have an in-terest quite apart from their ex-ceptional crispness and quality, an interest in which the whole family

will join.

And, while you are about it, take advantage of the opportunity to go backwards a generation or so with some of the flowers you would grow. Many of the sentimental old timers were so satisfying in those days bewere so satisfying in those days because they were grown along with the vegetable and under the same conditions. This is particularly true of certain of the annuals. For example, the Sweet-pea. Its requirements, though simple, are precise, and it finds exactly what it wants in some little corner of a well organized and rotated vegetable plot.

There is deep tillage of the soil, because the vegetable garden if not plowed, at least is dug deeply, so that the root crops, in particular, may have an uninterrupted oppor-

may have an uninterrupted opportunity for growth below the surface. Deep soil cultivation is all too rarely given in the average flower garden and not at all in the shrub-

bery border.
The Sweet-pea, given the chance to grow, invariably responds mag-

of modern development. Burpee's Ruffled White. (3/5ths actual size)

nificently and it combines within itself a great many qualities that are sought in a garden flower. It is large, it is fragrant, it is graceful in bearing, and of pleasant form; it is to be had in a great range of colors, and it is one of the most appreci-ated of all garden flowers for cut bloom, for use in table decoration and suchlike.

and suchlike.

In recent years, the Sweet-pea has not occupied the place of prominence that it had in earlier days, largely because the fashion of recent years, of putting all the garden flowers into some kind of planting scheme in the border, has put the Sweet-pea into the background.

It endures as one of the most popular of all garden flowers and continuously it has been evolving improvements. In fact, the Sweet-

improvements. In fact, the Sweet-pea is a very good demonstration that progress is sure and not neces-sarily slow. The limit of color im-provements would seem to have been reached. With such a wealth of varieties that have been available for many years now, it is increasingly difficult to get anything that is really new in the way of colors. New shades of old colors perhaps, but not anything that may be called really new color.

Realizing this, the Sweet-pea specialists have turned to other lines Sweet-pea of selection, looking for greater vigor in the vine and greater length of stem. The ideal has not yet been of stem. The ideal has not yet been attained. Though the ultimate goal may not yet have been reached—a Sweet-pea that can successfully be grown in the dry hot climates of the East and Middle West—still real progress may be noted. Pinkie, for instance, a novelty of six years ago was itself a great advance along those lines, but the complete answer was not there even and since then was not there even and since then other strong growing varieties that respond well, even in those difficult sections, have been offered.

The modern Spencer type Sweet-pea, with its splendidly improved flower, is so transcendently superior to the old original ordinary Grandi-flora type, that the latter is prob-ably not to be found anywhere.

Another more recent development is the ruffling, not doubling, but such an increase in volume, as it were, in the petals and standards as to give the effect of doubling. These ruffled flowers are now appearing in

a quite diversified color range.
Perhaps with a revival of the practical vegetable garden, there will also be a revival of these good old-timers (in better form) as wel as other old, serviceable annual flow-

Of interest to you?

Mr. Walter Teague, one of America's foremost designers, has just designed some lovely new pewter for Marshall Field's of Chicago, of which some pieces are illustrated above. Those whose love for pewter is still undiminished, had better hasten in and see this unusual centerpiece and candelabra. Those of us outside Chicago, can only admire the photographs or write to Marshal Field's for further information

GOOD EYES FOR LIFE

In our November issue we published an important article on saving American eyes by Olive Grace Henderson and Hugh Grant Rowell, M.D., Appleton has just published a book by these same authors: Good Eyes for Life

CHIMNEY POTS

Most catalogs are just mere catalogs to us. However, one came across our desk this month which may interest many readers. This Chimney Pot catalog is really a handbook on the use of old English chimney pots and may be had for the mere asking. Send your requests to the Atlantic Terra Cotta Co., 19 West 44th St., New York City. We have only one copy.

LETTERS, PLEASE!

Well, we started something when we asked readers if they would like to exchange letters with other readers. Mrs. John Engelien, Apt. 5H, 2925 Webb Avenue, New York City, was the first one to ask you to exchange letters with her, and now Miss Doris Thomas, 741 Howden Street, Muskegon Heights, Mich., asks to be the second of said list. We know they'll both be deluged—and you too may flirt with anonymous homemakers by merely sending your name and address to us to publish next month.

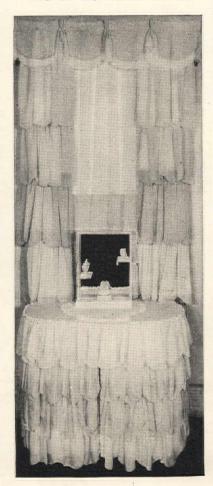

Americana Lovers Please Note

If you never expect to devour too much information on historic houses, if you have never feasted your eyes to satiation on lovely old Colonial houses, there's a book that will at least appease your hunger for many months to come. Historic Houses of Early America, by Elise Lathrop and published by the Tudor Publishing Co., is nothing less than 464 large pages of delight for Americana lovers. Hundreds of houses, from humble cabins to magnificent Georgian mansions, from New England to Florida, are pictured and described.

NEW POTTERY

Graceful shapes provide accommodation for growing plants or cut flowers, in the pottery at the left. The urn is particularly suitable for the mantelpiece, and the "flower pot" will add to any windowful of growing plants. Both are from Trenton Potteries Company

We were proud to contribute our beauty bit to the drapery style show recently held by Stix, Baer and Fuller Company in St. Louis, Mo. Our window treatment and matching dressing table is shown below, and was carried out in sheer voile in variegated pastel tones. Designed for a young girl's room, it is dainty and summery enough for any summer bedroom

Burpee's Seeds Grow

Burpee's Garden Book

This famous garden guide tells you all about every flower and vegetable worth growing—all the old favorites and standard varieties, and all the best of the new things, too. Full descriptions of thousands of varieties, with hundreds of illustrations. A wealth of reliable information and valuable advice on all matters of gardening. It will save you time and money and assure success. Over a million gardeners every year rely on Burpee's Garden Book as a guide in selecting, buying, and planting the best seeds. This year it is more interesting than ever. There is some sensational news in it—and many attractive special offers. Burpee's Garden Book is free. Send the coupon below today.

Burpee's Guaranteed Seeds At Last Year's Low Prices

Every variety of seed in this catalog is offered at last year's low price—or lower. We have raised wages and shortened working hours—but we have NOT increased the price of any variety of seed and in some cases we have even reduced prices. Nowhere can you buy such high quality seeds for less money. Nowhere can you buy better seeds at any price. Burpee's Seeds are highest quality, tested, and guaranteed. Burpee's prices are the lowest at which good seeds can be bought.

The Best Seeds That Grow

All Burpee Seeds are tested for purity and vitality in Burpee's own proving gardens at our famous Fordhook Farms. That is why we guarantee them and agree to refund the full purchase price if results are not satisfactory. 59 years of experience are back of Burpee's Seeds and Burpee Service. "Your catalog is a gem," wrote Luther Burbank, the great plant wizard. "I always refer anyone asking for seeds to your firm as I consider your house the most reliable seed house in the world and I think that would be the verdict of the public at large." either side by balconied plastered or cement buildings and mostly all painted in gay colors, the passer-by can glance through open doorways, down long narrow corridors ending in courtyards, where the cooking, washing, and other family activities center. Very few, if any, of these old homes are now used by the families of the original owners. Almost all have been converted into tenements. However, in the small towns in the interior of the Island the homes are the same as formerly and here the spirit of old Spain still lingers.

In most old houses there is a long corridor at the entrance opening on to a brick paved drive that leads under intriguing arches into a partially enclosed (also paved) garden. Two sides of this are enclosed by the house, and the other two are protected by a high wall. It is overrun with ferns, all kinds of gorgeous tropical flowers and shaded by palms

Mrs. Kohn's daughter perched on the entrance gate of their bunga-low villa, with Sonny and his cart and nine Royal Palms to complete the picture

and banana trees. There is a roof garden as well which is reached by stairs paved in exquisite blue tiles. The woodwork is mahogany. The rooms inside are high ceilinged, dim, and cool and have tile floors; very sparsely fur-nished, but every piece hand carved and made of solid mahogany. On one wall of the Sala (parlor) hangs a beautiful antique gold mirror, surmounted by the Spanish coat-of-arms.

The old kitchens are fascinating to look at, though I should hate to have to prepare all of my meals in one, and maybe this rough little sketch will give you an idea of what the stoves used in the old homes are like. After the charcoal is in place, kerosene is poured on, lighted, and then the cook fans and blows herself red in the face until the coal catches. Once started, these burning coals throw out a very steady and hot

This is Mrs. Cabrera's drawing of This is Mrs. Cabrera's drawing of the charcoal stoves still in use in the old homes of Haiti. After the charcoal is in place, kerosene is poured on, lighted, and then the cook fans and blows herself red in the face until coal "catches." Then all is ready for the rice and beans that are cooked in quaint iron pots over this fire

fire, and then all is ready for the Arroz y Habichuelas (rice and beans) that go on the fire in quaint iron pots.

Although we have very modern grocery stores in San Juan, and some of the larger towns, the native markets are more popular with the Puerto Ricans, and the prices much more reasonable.

Jadow, the home of Mrs. Watlington in Bermuda. On remodeling the oldest part of the house, they found a stone with the name of its original owner—and the date 1674!

The new 1934 Storrs & Harrison Co. catalog is now ready for mailing. From cover to cover it is filled with good news for those planning to plant this spring. In it you will find the most complete listing of high quality nurs-

low prices will delight you.

There are hundreds of illustrations, many of them in full natural colors; also charts, diagrams and information on planting and culture. Send today for this helpful new catalog. It is FREE!

West Grov

DELPHINIUMS. We are privileged to sell a limited quantity of seed from the collection of a delphinium enthusiast. More than 50 named varieties, all doubles, from Europe and this country are in this collection, ranging from white and rich yellows to deep purples and navy blues. The rare and gorgeous intense sky and corn blue selfs are included. Very complete instructions with each packet. Mixed colors. Pkts., 25, 50 and \$1.00. Limited supply. Order at once. James A. Sherman, 242 Leroy Ave., Buffalo, N. Y.

Rio, the lovely South American jewel set on a circular bay at the foot of majestic mountains, and the city which Richard Haliburton claims can be second only to Paradise

They are picturesque places. The main market is a barn-like structure, just about open on all sides. Booths are on all four sides, and

here everything from fresh fish to yard goods and shoes is sold. All of the floor space is taken up bv huge tables (al-

most shoulder high, with platforms to stand on) and piled high on these are all kinds of native fruits and vegetables, and hanging from the ceiling are bunches of bananas in all stages of ripeness. Tiny ones for frying (twenty for a nickle), big fat red ones, and bunches of green ones, yellow ones, and luscious brown speckled ripe ones. It all makes a colorful and attractive picture. Outside the market is even more interesting, for here the farmers bring their pigs, turkeys, chickens, and fighting cocks (it is not legal to have the latter, but most of the peons do, and it has been the Island's sport since about the 15th Century), not to mention goats, and oh what a racket! Piles of golden and green grapefruit, pineapples,

and oranges cover the ground, and then there are the flower and herb stalls. The fragrance from these compensates for all of the ugly odors. Just imagine the perfume from still dew-drenched gardenias, roses, delicate tropical lilies and all kinds of sweet grasses and herbs mingled into one! No one hurries with her buying, for neither first nor for that matter second price quoted will be the price received, and the housewife must be prepared to bargain and argue, if she wants to secure reasonable provisions. Even the drygoods stores in the capital still have this custom, and those few that have acquired the North American manner of doing business, display signs to the effect that Precios Fijos (prices are fixed).

Before closing this rather lengthy letter, I want to add a few words about the revendones (peddlers). These are men who go from house to house, and they begin their rounds about six o'clock every morning. Each man has a chant or song that more or less denotes the kind of wares he has for sale. Their carts range from just a platform on two hand-made wheels to gaily painted, many tiered affairs with

HENDERSON'S

Special FREE OFFER

1934 SEED CATALOGUE and 25c REBATE SLIP

 MAIL THE COUPON and we will send you free of charge "Every-

thing for the Garden," Henderson's new seed catalogue, together with the new Henderson 25-cent rebate slip.

"Everything for the Garden" is the title of our 1934 catalogue. It is a beautifully illustrated book with 32 full-color plates and hundreds of illustrations direct from actual photographs of the results of Henderson's seeds. It offers many special collections of vegetable seeds arranged so as to give a continuous supply of fresh, crisp vegetables throughout the summer, and collections of flower seeds especially arranged for harmony of color and continuity of bloom.

It is a complete garden book and should be in the hands of every lover of the garden beautiful or bountiful. Clip the coupon now!

> The Henderson Rebate Slip, which will be sent with every catalogue where the coupon in this advertisement is sent us, will be accepted by us as 25 cents cash payment on any order of two dollars or over.

For 87 years, HENDERSON'S TESTED SEEDS have been the standard. Year after year, our constantly improving methods

have enabled us to maintain our supremacy among American seed houses. The initial cost of your seeds is the smallest item in your garden's expense, and it is of advantage to plant seeds of recognized quality from a house of reputation and standing.

THE LIVINGSTON SEED CO.

Mrs. Schilling calls this elevated cold frame her "fat man's delight," invented from necessity and a small picture

bells on. They are truly picturesque, as you can imagine.

Do not think by the emphasis that I have given to the quaintness of customs and things on the Island, that modern conveniences are lacking, for Puerto Rico has its electric light, gas, trolley line, etc., but, fortunately, our modern ways have not caused the old ones to disappear as yet.

Later, you might like to hear about the Jibaros (country people) who live in little thatchedroof shacks, called ranchitos, that cling to the bare volcanic hills, or that are hidden in the cane fields. -INEZ HIDALGO CABRERA, Santurce, Puerto Rico.

BAYAMON, PUERTO RICO

I remember my own first impressions when I came here for army service, during the war. Like you, I pictured homes with patios as in Mexico, but even yet there are few of that type. On coming here to live as a bride, I had to work out my own living problems with what we have on hand. Most of the older planters' houses are two-story wooden buildings with large porches,

often screened. Most have servants' quar-ters, laundries, and store rooms below, while some have dining room and kitchen below also. The family living quarters on the second floor are more private, and so may be thrown open for light, breeze, and freedom from intrusion

Fairly competent native help, usually living near, may be had and as electricity is cheap and satisfactory, we use it for everything.

Mornings and evenings are lovely in the country, and nights are cool. Puerto Rican coffee and fruit are served early. From 11 to 12 o'clock light lunches are the rule, with a short siesta after. Dinner at 5:30 to 6:30, with a long quiet evening with the radio and reading or possibly a short run over excellent concrete roads to a modern "talkie."

There are swimming pools and

some safe beaches, and we live practically out of doors the year round. It is a very healthy place for children the first few years. Lack of change in seasons is not very stimulating and so family life is monotonous but happy.-RITA S. KOHN, Bayamon, P. R.

BRAZIL, SOUTH AMERICA

In answering your request what embarrasses me is selecting from a wealth of material. I should like whatever I send you to be representative of Brazilian life, and it is so varied according to city or country and according to section of this country, which is so vast.

While Brazilian architecture and life follows the Mediterranean standards more or less, it also shows a strong American influence. In the large cities, the architecture is rococo, while in small towns and the country, the houses in solid-row type prevail, very plain stucco houses, but not the Spanish balcony and patio type. No shawls, no mantillas, but wrought-iron grilles, gates, and shallow window balconies, with stone animals over gateways,

elaborate side entrance verandas with stained glass and iron work, and climbers, roses, and other flowers picturesquely twined about the ironwork.

My own garden is in a situation most people would reject as impossible, amongst fruit trees, up and down steep hills. I enclose a small snapshot

of my "Fat man's delight," a cold frame on cement legs so that the fat and high-blood pressure folks need not stoop or bend over to plant their special choice seeds. Necessity and a picture of a tiny lean-to conservatory prompted the invention. The frame is a wooden box made of planks, bored for drainage on the bottom and lined with zinc. I have the sash entirely free so that it can be removed in certain kinds of days when the plants are up.—Vera E. Friburgo. SCHILLING, Nova Brazil, So. America.

FINER LAWNS with 1/3 LESS TIME-WORK

FADOUS the mower that cuts when you push cuts when you pull

• The Famous Ohio Reversible is the first improved lawn mower in many years. It saves at least a third of the time required on the average lawn because it trims right up to the edges, the walls and underneath the shrubbery, thus eliminating tedious hours with shears and sickle. It makes terrace cutting a pleasure instead of hard work because it cuts as you pull it down. It is instantly adjusted to cut the grass any height up to 3 inches.

Famous Ohio Reversible Mowers are sold by exclusive distributors dealing directly with us. If there is not one near you, write for descriptive folder and price list.

THE OHIO CULTIVATOR CO.

Bellevue, Ohio

A franchise for the sale of this mower will be granted to hardware merchants or to specialty selling organizations who can measure up to our requirements in certain territories yet open. If interested, write us.

\$ Dollar Ideas \$

KEEP CLOTHES FROM FREEZING

In hanging clothes out in cold weather, add a little salt to the last rinsing water and they will not freeze. Mrs. R. O. Betts, Hillsdale, Mich.

TOASTING CAKE FAILURES

Instead of depositing the next unsuccessful cake in a reliable garbage pail, slice the offending article in ½" slices and spread out on a cookie sheet. Then place them in the broiler oven and watch closely that they do not scorch. When crisp and brown the cake loses its indigestible quality and develops a nice nutty flavor. PAULA PARTYKA, Hasbrouck Hts., N. J.

UNSIGHTLY MUSTARD POTS

When mixing mustard, add a few drops of cooking oil. This will prevent the unsightly black surface of the interior of your mustard jar. The mustard will retain its original bright yellow color. Mrs. R. B. Cobbs, El Reno, Oklahoma.

WHEN POPPING CORN

Try using your omelet pan (cast aluminum if you have it), and before you put in the corn. melt about a tablespoon of butter and one of any desired butter sub-

stitute in the pan, both sides down on the flame. Sprinkle this melted fat with salt. Get the pan hot. Then put in the corn, and proceed as usual, but holding onto only the bottom handle, so that the popped kernels will not be crushed. When you empty the pan you will find the salt and fat well distributed over the hot corn. Mrs. Albiona M. Nelson, Minneapolis, Minn.

Spurting Sausages

Every housewife knows how prone are the case sausages to spout small geysers of grease over everything at every prick of the fork-and if not pricked they burst! I have learned to leave the fork in the sausage for a moment, which seems to siphon out the surplus fat without the hateful spurt which is not only annoying but dangerous. Mrs. M. E. S H., Pontiac. Mich.

THE AMERICAN HOME MENU MAKER

Another Service for Our Readers

THE AMERICAN HOME presents a new method of giving our readers recipes and offers a unique recipe filing service.

THE AMERICAN HOME recipes are printed in standard card file size, requiring no cutting down or pasting. Each recipe is backed up with a photograph of the tested product. No recipe appears in THE AMERICAN HOME unless it has been tested in the AMERICAN HOME kitchen. Each issue of the magazine will contain at least four pages of recipes such as you will find in this issue.

pudding

With the American Home Menu Maker we believe we have overcome all the difficulties of the old-fashioned, unwieldy cook book and the

home-made card files which required the cutting and pasting of recipes. The American Home Menu Maker is more than a filing system. With recipes properly indexed it will be easy to plan your menus well in advance.

The American Home Menu Maker is a heavy black enameled and aluminum box with a pull-drawer. It is compact yet large enough to take care of all of your recipes. We supply the Menu Maker as illustrated with indices and fifty cellophane envelopes for \$1.00, postpaid.

n pricing the American Home Menu Maker we have had no thought of profit. It is a genuine service to our eaders, and to get the widest possible distribution of the Menu Maker we have put a price on it which barely covers the cost of manufacturing, wrapping and mailing.

The recipes printed in THE AMERICAN HOME for the American Home Menu Maker are standard card size, asily clipped to be slipped into cellophane envelopes which we provide. This gives visibility on both sides and the envelopes are easily cleaned of cake batter or finger prints. Filed with the picture side out, it will be an inspiration to thumb through your Menu Maker file for your favorite recipes.

these every month

See how easy it is to start your own filing system. Why not use the American Home Menu Maker once a week, pulling out those recipes which appeal and filing them behind the day of the week you want them? The result will be a complete week's menu at one time with greater economy in marketing.

The Menu Maker complete, with indices and cellophane envelopes, will be sent to you postpaid for \$1.00. (Add 25 cents for Canada). Just write a note to The American Home, Garden City, N. Y. Pin your check or a money order or, if more convenient, the currency to this letter. The Menu Maker will go forward promptly. Mail your order today before our present stock is exhausted. Please address
