## Executive Summary

In 2014, the City of Palm Springs commissioned a citywide historic context statement and historic resources survey of built resources as part of the ongoing historic preservation planning efforts in the city. The City initiated its first comprehensive historic resources survey in 1976 as a result of the community's desire to identify and document its rich architectural heritage. Citywide surveys undertaken in 1983 and 1987 resulted in the creation of a base list of potential architectural and historical resources throughout the city. These surveys were updated in 2001 and 2004. In 2014, the City of Palm Springs became a Certified Local Government; maintaining and updating historic resources surveys of the built environment undertaken by qualified historic preservation professionals is a requirement of that program.

The 2014 project included the development of a comprehensive citywide historic context statement and survey update of buildings constructed through 1969. The project was conducted between July 2014 and June 2016; the Ethnic Minorities chapter was commissioned by the City in 2017 and is included at the end of the citywide context statement. The historic context statement follows guidelines established by the National Park Service and the California Office of Historic Preservation, and outlines the major development patterns in the city for use in identifying and evaluating potential historic resources. The survey component of the project reviewed the properties that collectively comprised the City Historic Resources Database, and identified additional properties and neighborhoods that may be eligible as historic resources for inclusion on the City's inventory. These properties were assessed from the public right-of-way using current preservation standards and practices. Each property was evaluated for potential eligibility for listing at the federal, state, and local levels according to the registration requirements developed for each context/theme in the historic context statement. The result is an updated citywide inventory of properties and neighborhoods with potential historic significance that will satisfy the requirements of the Certified Local Government program; provide baseline information for planning purposes and environmental review in the City of Palm Springs; and assist property owners and the Historic Site Preservation Board in the identification of properties for local designation. Note that this study covers the built environment in Palm Springs; archaeological and other subterranean resources are outside the scope of this project and were not surveyed.

**City of Palm Springs**

**Citywide Historic Context Statement & Survey Findings**

**HISTORIC RESOURCES GROUP**

## INTRODUCTION

As part of the ongoing efforts to identify and evaluate the City's historic resources, in 2014 the City of Palm Springs embarked on a citywide historic resources survey and development of a comprehensive historic context statement. The context was developed by Historic Resources Group (HRG), including Christine Lazzaretto, Principal; John LoCascio, AIA, Senior Architect; Molly Iker, Architectural Historian; and sub-consultants Sian Winship, Architectural Historian; and Alan Hess, Architect and Architectural Historian. Local historian Steve Vaught was an advisor and contributor to the project. The field study was conducted by HRG staff Christine Lazzaretto; Paul Travis, AICP, Principal; Robby Aranguren, Planning Associate; John LoCascio, AIA, Senior Architect; and sub-consultant Sian Winship. All HRG staff meet the Secretary of the Interior's qualifications in historic preservation.<sup>1</sup> The City Planning Department was responsible for management and coordination of the project with input provided by the Historic Site Preservation Board (HSPB).

### **Historic Context Statement: Purpose**

In order to understand the significance of the historic and architectural resources in the City of Palm Springs, it is necessary to examine those resources within a series of contexts. The purpose of a historic context statement is to place built resources in the appropriate historic, social, and architectural context so that the relationship between an area's physical environment and its broader history can be established.

A historic context statement analyzes the historical development of a community according to guidelines written by the California Office of Historic Preservation (OHP) and the National Park Service, as specified in *National Register Bulletin 16A: How to Complete the National Register Registration Form* and *National Register Bulletin 24: Guidelines for Local Surveys*. Bulletin 16A describes a historic context as follows:

Historic context is information about historic trends and properties grouped by an important theme in pre-history or history of a community, state, or the nation during a particular period of time. Because historic contexts are organized by theme, place,

<sup>1</sup> Federal Register, Vol. 48, No. 190, p. 44738-44739, September 29, 1983.

and time, they link historic properties to important historic trends. In this way, they provide a framework for determining the significance of a property.<sup>2</sup>

A historic context statement is linked with tangible built resources through the concept of “property type,” which is a grouping of individual properties based on shared physical or associative characteristics.<sup>3</sup> It should identify the various historical factors that shaped the development of the area, including:

- Historical activities or events
- Historic personages
- Building types, architectural styles, and materials
- Patterns of physical development

A historic context is not intended to be a comprehensive history of a city. Rather, its purpose is to highlight trends and patterns critical to the understanding of the built environment. It identifies the various historical factors that shaped the development of the area, including historic activities or events, important people, building types, architectural styles, and patterns of physical development. The historic context provides a framework for the continuing process of identifying historic, architectural, and cultural resources in the city. It is meant to serve as a guide to enable citizens, planners, and decision makers to evaluate the relative significance and integrity of individual properties and neighborhoods. Specific examples referred to in this context statement are included to represent significant examples of a pattern of development; architectural style; the work of a significant architect; or to illustrate physical and associative characteristics of a particular resource type. The survey findings included in Appendix C (individual properties) and Appendix D (historic districts) indicate which properties appear eligible for designation under each context and theme as a result of this study.

#### **Historic Context Statement: Methodology**

The historic context statement and survey uses the National Register of Historic Places Multiple Property Submission (MPS) approach, and covers each significant phase of the city’s built environment, from the

<sup>2</sup> National Park Service, “National Register Bulletin 16A: How to Complete the National Register Registration Form,” Washington, DC: U.S. Department of the Interior, National Park Service, 1997.

<sup>3</sup> National Park Service, “National Register Bulletin 24: Guidelines for Local Surveys,” Washington, DC: U.S. Department of the Interior, National Park Service, 1977; revised 1985.

19<sup>th</sup> century through 1969.<sup>4</sup> Existing studies, contexts, and survey evaluations were used in the development of this document. These were supplemented by additional research using both primary and secondary sources and consultation with local experts to develop the historical narrative of Palm Springs, and provide additional information about significant individual properties, tract developments,<sup>5</sup> and neighborhoods.

Research efforts to inform both the context and field study included:

- Literature review of published and online sources for property-specific information about potentially architecturally or culturally significant properties in Palm Springs.
- Review of the 2004 survey.
- Review of relevant building permits, tax assessor data, Sanborn Fire Insurance Maps (available for select areas in 1929 with a 1962 update), and aerial photographs. Note that City of Palm Springs historic building permits do not list the name of the architect, making attribution difficult in many cases.
- Development of study maps illustrating the growth of Palm Springs by decade in order to review development and settlement patterns.
- Mapping of residential tracts in Palm Springs subdivided prior to 1969 using the Riverside County Land Information system, tract maps, and survey records.
- Research on ownership of all tracts to confirm individuals, developers, or investor consortia.
- Search of the *Palm Springs Villager* for key developments, owners, architects, and other historic personages.
- Search of the clippings files at the Palm Springs Historical Society.
- Search of the clippings files at the Palm Springs Library.
- Search of Palm Springs Historical Society Photo Collection.
- Online and manual search of Palm Springs City Directories up to 1970, as available.
- Selected reading and research of the *Desert Sun* on microfilm and online. Note that the *Desert Sun* did not become available online until after the development of the first draft of the context

<sup>4</sup> A significant context in Palm Springs is the influence of the LGBT community; however, much of the documented history dates to the recent past and therefore was outside the scope of this project. Early associations with the LGBT community are largely based on undocumented rumors that should be confirmed as part of a comprehensive study of the LGBT community in the city.

<sup>5</sup> Note that research into the tract development of Palm Springs was undertaken by the project team in order to understand the residential development patterns in the city, and to aid in development of the historic context narrative and the identification of potential historic districts. A complete history of each tract subdivided in a city is not typically included in a historic context statement, which is meant to document overall patterns and trends, and it was outside the scope of this project. All tract research that was compiled as part of this project is included, either in the historic context statement, in the Overview of Tract Development in Appendix B, or as part of the statement of significance for a potential historic district.

statement and the completion of the reconnaissance survey, limiting the availability of information from this primary source to the project team.

- Review of *Palm Springs Life*.
- Online searches of the Avery Index to Architectural Periodicals and review of articles generated.
- ProQuest searches of the *Los Angeles Times* and other publications, including period trade publications.
- Searches of the *Desert Sentinel*, *San Bernardino County Sun*, and other Inland Empire newspapers available online.
- Review of American Institute of Architects (AIA) membership files.
- Review of all HOA websites and outreach to selected HOAs for historical information.
- Review of selected neighborhoods in U.S. Census.
- Field trips to relevant architectural archives including the Getty Research Institute, University of California, Santa Barbara (UCSB), Cal Poly Pomona, University of California, Los Angeles (UCLA), University of Southern California (USC), and Cal Poly San Luis Obispo.
- Review of photo databases including Calisphere, Los Angeles Public Library, the Mott Collection, USC Digital Archive, UCLA Digital Archive, and Getty Images.
- Email outreach to architects William Krisel, Paul Thoryk, Roger Bray, Peter Munselle, Gruen Associates, and B3 Architecture Studio.
- Outreach (email/in person) for the residential development sections includes: Peter Moruzzi, Chris Menrad, Nicole Wenzell, Renee Brown, Lauren Weiss Bricker, Volker Welter, and Hicks Stone.
- Outreach/consultation for the architectural history sections includes: Palm Springs Modernism Committee; Palm Springs Art Museum/Architecture + Design Center (Sidney Williams, J.R. Roberts, Beth Edwards Harris); Palm Springs Preservation Foundation (Ron Marshall, Barbara Marshall, Tracy Conrad, Susan Secoy Jensen); Palm Springs historians, preservationists, architects: Jim West; Mark Davis; William Kopelk; Michael Stern; Brad Dunning; Volker Welter; Eric Williams; William Krisel, architect; Hugh Kaptur, architect; Donald Wexler, architect; Cal Poly Pomona (Lauren Bricker, archivist); Cal Poly San Luis Obispo (Jessica Holada, archivist); and landscape historian (and Herbert Burns expert) Steven Keylon.
- Comments on the first draft were received from John Sanborn and Will Kleindienst.
- Comments on the second draft were received from the Agua Caliente Band of Cahuilla Indians.
- Significant input on both drafts provided by members of the HSPB and Marvin Roos. HSPB members additionally consulted with Kitty Keiley Hayes, Steve Nichols, and Moya Henderson.

### **Historic Resources Survey: Methodology**

Following an initial research period to review existing documentation about historic resources in the city, including the 2014 City Historical Resource Database, the project team conducted a citywide, street-by-street reconnaissance survey. The reconnaissance survey helped to inform the development of the context statement and was used to identify specific local conditions, the number and type of extant resources in the area, and the overall character of the commercial and residential neighborhoods within the city. The development of evaluation criteria, integrity thresholds, and registration requirements for evaluating historic resources in Palm Springs for eligibility at the federal, state, and local levels was also informed by information gathered during the initial field study. Based on this information and research efforts for the context statement, a study list of properties was developed for further review and documentation. Additional field study and research was conducted on all properties on the study list, which was then updated and revised to comprise the final inventory list. In general, only those properties or neighborhoods identified as eligible for designation were documented as part of this survey. The exception is those properties that were on the City Historical Resource Database but that are no longer eligible for designation; those properties have been documented in the database for reference by City staff. Note that this study covers the built environment in Palm Springs; archaeological and other subterranean resources are outside the scope of the project.

All properties and neighborhoods that were documented as part of this project were observed and photographed from the public right-of-way. A considerable obstacle in Palm Springs is that many potentially significant properties are not visible from the street. Those properties that are not fully visible, but for which there is a known historic association, were documented in the database with all available information. There are several significant subdivisions and neighborhoods, including Southridge Estates and Smoke Tree Ranch, which are not included in the survey findings as those neighborhoods are not accessible to the public. Those areas should be included in future studies, if possible.

### Data Management

All property-specific information was documented in an Access-based database which includes a digital photograph; general property information (Assessor parcel number, address, date of construction, architect (if known); significant owners (as needed); documentation of alterations (based primarily on field observations); identification of architectural features; and a current evaluation. An electronic version of the database accompanies this report. Data can be sorted for further analysis and/or linked with the City's internal mapping and database systems. The database includes properties that were included on the City's Historic Resources Database and additional properties and neighborhoods identified as part

of this study. Individual property data sheets were generated from the database for reference purposes for City staff.

### Analysis

Properties documented in the database were analyzed based on the contexts/themes and the registration requirements for each developed as part of the historic context statement; in general, only eligible properties were documented. This context-based methodology is preferred by OHP and follows established guidelines for the multiple property documentation approach. This allows for the evaluation of a large number of resources specifically tied to development patterns in the city. The documentation in the database includes an identification of the relevant context/theme from the Palm Springs Historic Context Statement, a concise significance statement indicating why the property may be significant under that context/theme, and brief additional information (where applicable) supporting the recommendation. This approach is consistent with current historic preservation practice, and was approved by City staff and the OHP for this project.<sup>6</sup>

For additional information about evaluating potential historic resources, please see the registration requirements included at the end of each context/theme in the historic context statement. In general, the analysis considers historic integrity; architectural style; rarity of type; historic association; neighborhood cohesion; and relationships to larger development patterns in the area. Each surveyed property was evaluated for eligibility for listing in the National Register of Historic Places, the California Register, for local designation as a Class 1 Historic Site, and/or as part of a historic district. Each property has been assigned a [California Historical Resource Status Code](#) (Status Code). Additional information about the Status Codes and the survey findings can be found in Appendix C (individual properties) and Appendix D (potential historic districts). Note that this survey identifies a small number of planning districts; these are areas that do not retain sufficient integrity for designation as historic districts, but that represent a specific type or period of development and contain features that warrant consideration in local planning.

### Maps

The survey findings map contained in this report, and provided to the City in digital format, represents those properties identified by this study as potential historic resources within the City of Palm Springs. The boundaries for the identified potential historic districts are included on the survey findings map; individual maps of each district identifying the contributors and non-contributors are also included in

<sup>6</sup> Office of Historic Preservation, letter to City staff, August 17, 2015.

this report. Standard preservation practice defines the boundaries of an historic property as the parcel on which an historic structure is situated. Specific boundaries of a historic property should be clearly defined at the time of designation. Additional maps are included with this report for reference purposes, these include a map of the known tract boundaries to illustrate the pattern of residential development in Palm Springs, and a map illustrating the development by decade of parcels within the city. All maps were generated using data from the County of Riverside Tax Assessor.

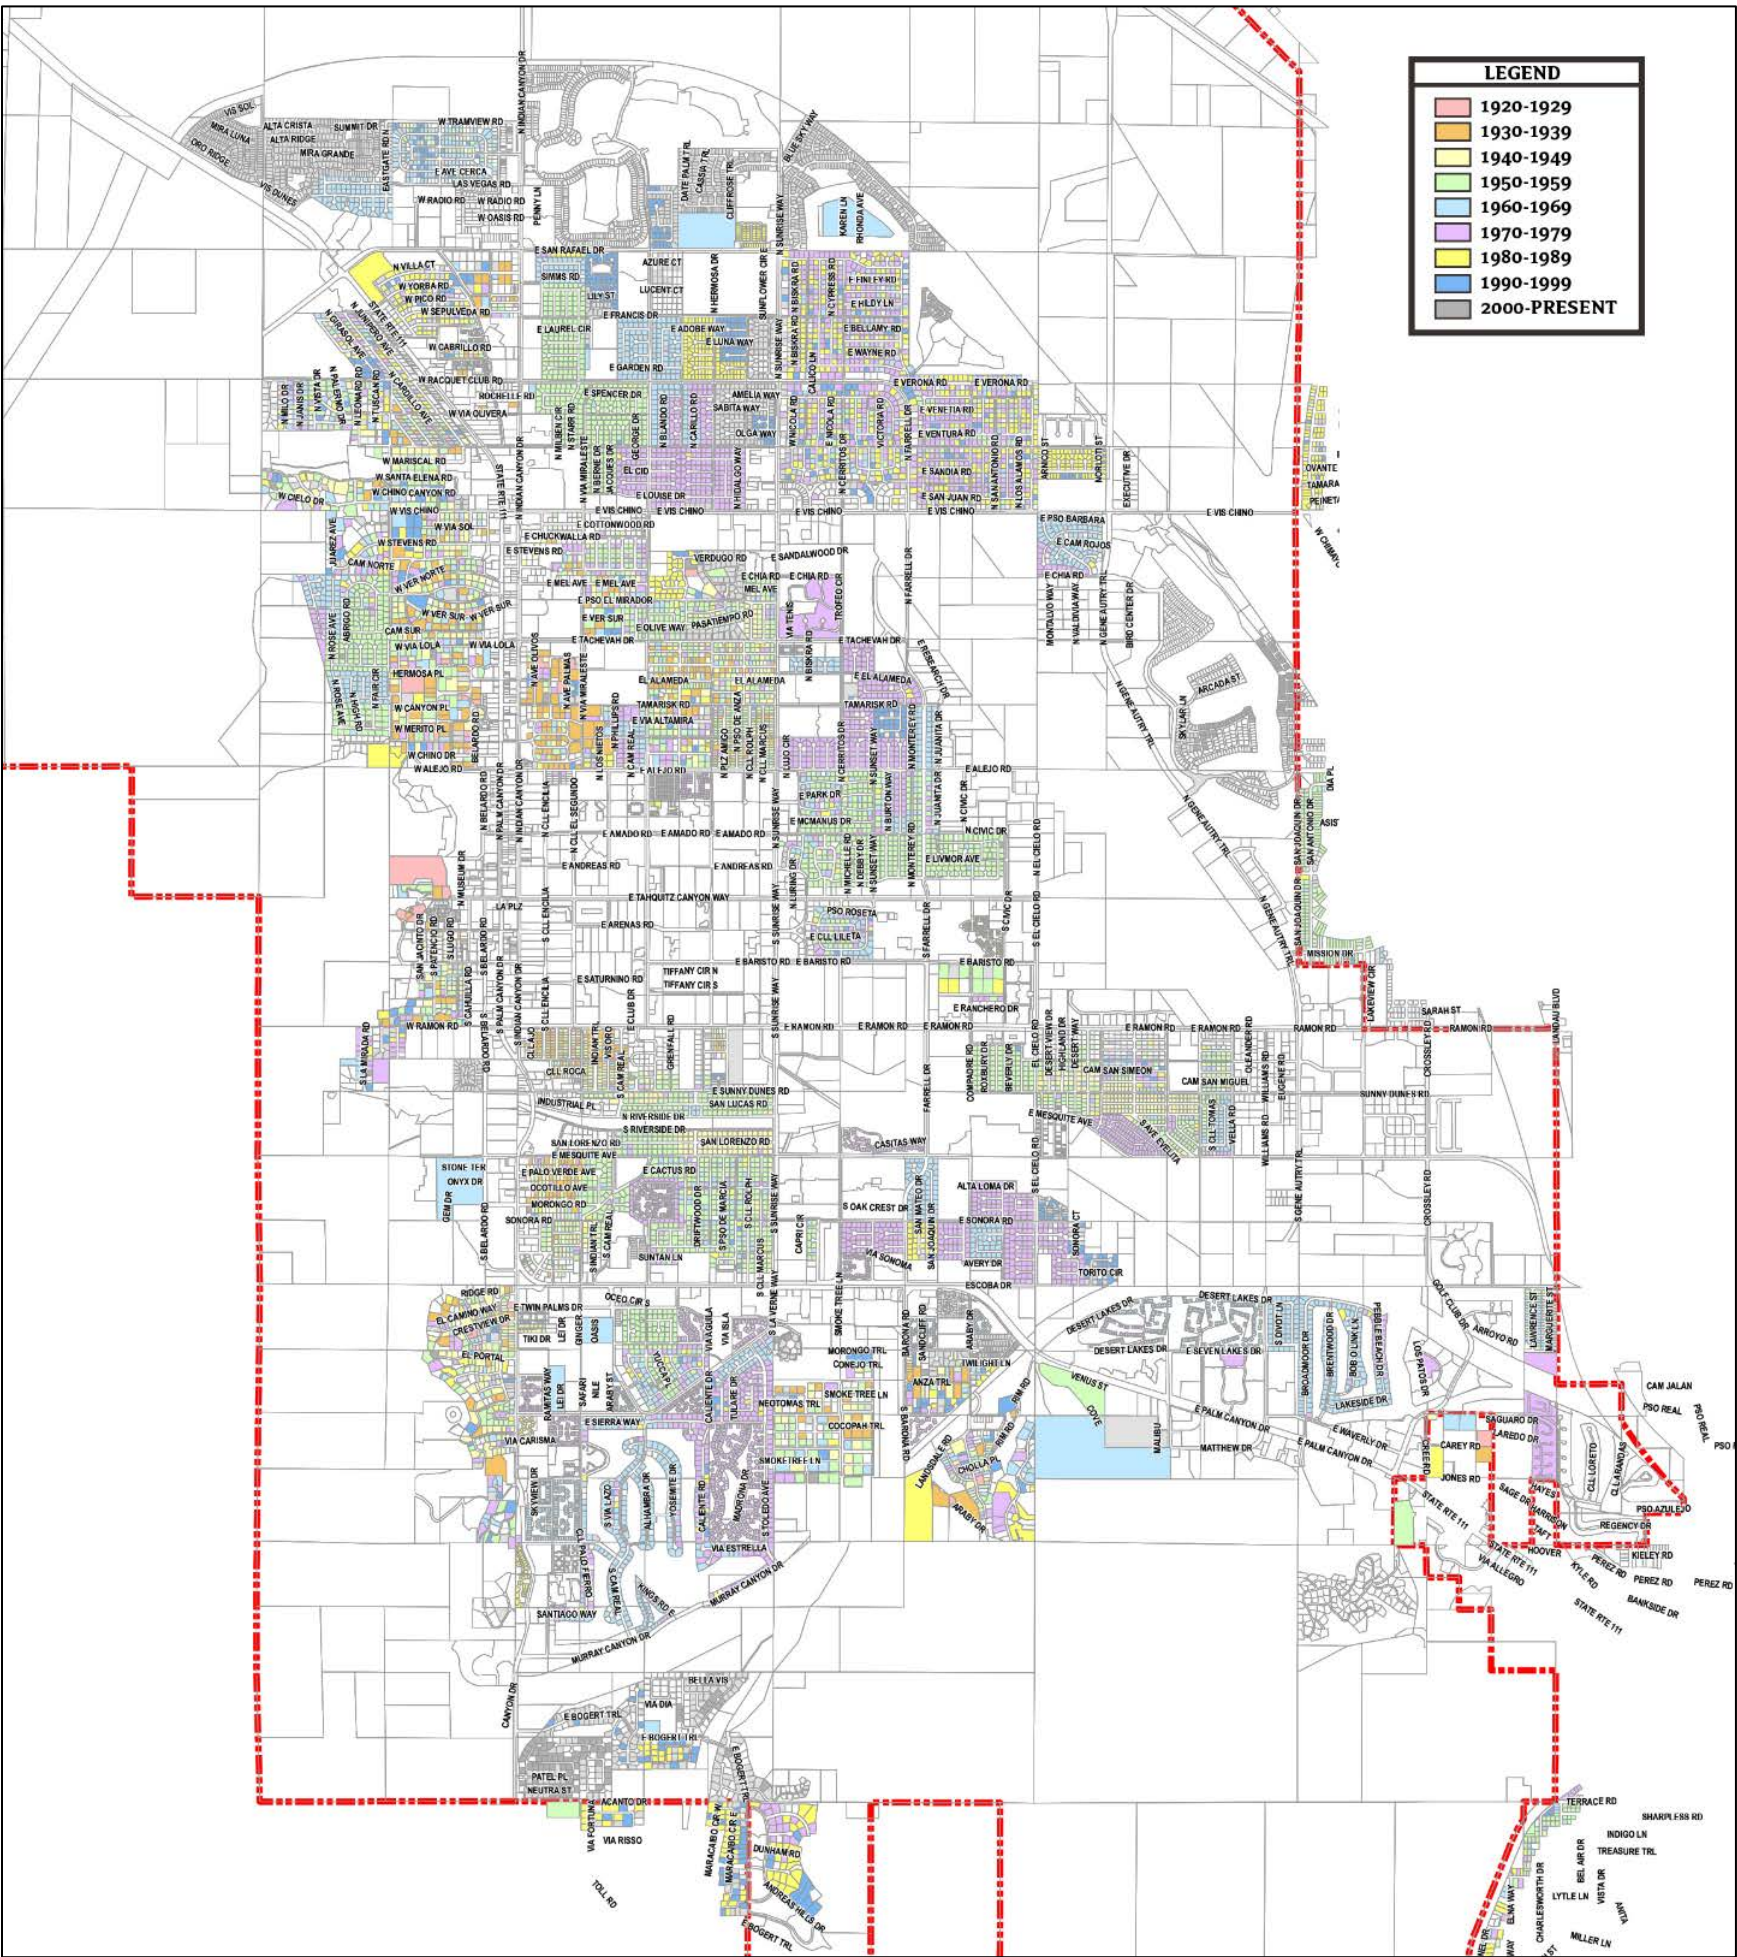

### Study Area

The study area for the project is the current boundary of the City of Palm Springs. Palm Springs is located in Riverside County, California. It is approximately 60 miles east of the City of Riverside, and 100 miles east of Los Angeles. It is located in the Coachella Valley, with the Mojave Desert to the north. Access to Palm Springs from the west is via the I-10 Freeway which passes through the San Geronimo Pass. Palm Springs is one of nine adjacent cities that make up the Coachella Valley, and is sheltered by the San Bernardino Mountains to the north, Santa Rosa Mountains to the south, San Jacinto Mountains to the west, and Little San Bernardino Mountains to the east. A map indicating the general geographic location is included above; a map with the City boundaries (and illustrating major development periods) is included in Figure 1.

FIGURE 1: CITY MAP

## **REGULATORY FRAMEWORK**

The identification and protection of historic resources is supported by Federal and state regulations. It is important to note that portions of the City of Palm Springs are situated within the Agua Caliente Indian Reservation. The Agua Caliente Band of Cahuilla Indians maintains an active Tribal Historic Preservation Office promulgated through the National Historic Preservation Act.

### **National Historic Preservation Act**

The National Historic Preservation Act (NHPA), which was most recently amended in 1992, created the framework for preservation activity in the United States. The NHPA redefined and expanded the National Register of Historic Places which had been established by the Historic Sites Act of 1935; created the position of State Historic Preservation Officer (SHPO) and Tribal Historic Preservation Officer (THPO) to administer state and tribal historic preservation programs; established the Certified Local Government Program; and set up the Historic Preservation Fund to fund the provisions of the Act.

Section 106 of the National Historic Preservation Act, through a consultation process with the Advisory Council on Historic Preservation, mandates that the effects of all federal undertakings on properties listed in or eligible for listing in the National Register be taken into account.

### **National Environmental Policy Act**

The intent of the National Environmental Policy Act is to protect the natural and built environment, including historic properties, from adverse effects resulting from federal actions. Before a federal agency may proceed with a proposed action, it must first perform an environmental assessment to determine whether the action could have any significant effect on the environment. If it is determined that the action may have an effect on the environment, the agency must then prepare an Environmental Impact Statement (EIS) which identifies all environmental impacts resulting from the action and lists mitigation measures and project alternatives which avoid or minimize adverse impacts.

Impacts involving historic properties are usually assessed in coordination with the process established under the National Historic Preservation Act of 1966. Normally, the Section 106 process must be completed before the Environmental Assessment or EIS can be finalized.

### **California Environmental Quality Act**

The California Environmental Quality Act (CEQA) was enacted in 1970 and most recently modified in 2016. The basic purpose of CEQA is to inform governmental decision makers and the public about the potential significant adverse effects, if any, of proposed activities and projects. As environmental policy, CEQA requires that environmental protection be given significant consideration in the decision-making process; historic resources and tribal cultural resources are included under environmental protection. When the California Register of Historical Resources was established in 1992, the Legislature amended CEQA to clarify which cultural resources are significant; and more recently, CEQA has been amended to define tribal cultural resources.

For purposes of CEQA, the term "historical resource" includes the following:

- A resource listed in, or determined eligible for listing in, the California Register of Historical Resources;
- A resource included in a local register of historical resources; or
- A resource identified as significant in an historical resource survey.

For purposes of CEQA, the term "tribal cultural resource" includes the following:

- A site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place;
- A resource listed in, or determined eligible for listing in, the California Register of Historical Resources;
- A resource included in a local register of historical resources;
- A resource that the lead agency chooses, in its discretion, to treat as a tribal cultural resource;
- A cultural landscape that meets the criteria of subdivision (a) is a tribal cultural resource to the extent that the landscape is geographically defined in terms of the size and scope of the landscape; or
- A historical resource described in §21084.1, a unique archaeological resource as defined in subdivision (g) of §21083.2, or a "nonunique archaeological resource" as defined in subdivision (h) of §21083.2 may also be a tribal cultural resource if it conforms with the criteria of subdivision (a).

For more information regarding the implications of CEQA on local historical resources and tribal cultural resources, see [\*Technical Assistance Series #1: California Environmental Quality Act \(CEQA\) and Historical Resources\*](#), published by OHP.

#### **GUIDELINES FOR EVALUATION**

A property may be designated as historic by National, State, and local authorities. In order for a building to qualify for listing in the National Register of Historic Places, the California Register of Historical Resources, or as a local Class 1 historic site, it must meet one or more identified criteria of significance. The property must also retain sufficient historic integrity to evoke the sense of place and time with which it is historically associated. This historic context statement will provide guidance for listing at the federal, state, and local levels, according to the established criteria and integrity thresholds.

### **National Historic Landmark**

The National Historic Landmark program is conducted by the National Park Service to identify, designate, and protect cultural resources of national significance that commemorate and illustrate United States history and culture. (National Historic Landmarks are identified by special theme studies prepared by National Park Service professionals as an additional level of documentation in the National Register designation process.) Information is compiled on the history, significance, and integrity of the property and a statement on its relationship to the criteria for determining significance is prepared. Nominations are then reviewed by the National Park Service Advisory Board, which forwards recommendations for designation to the Secretary of the Interior for a final decision. National Historic Landmarks are afforded the same limited protections and benefits as properties listed in the National Register of Historic Places.

### **National Register of Historic Places**

The National Register of Historic Places is an authoritative guide to be used by Federal, State, and local governments, private groups, and citizens to identify the Nation's cultural resources and to indicate what properties should be considered for protection from destruction or impairment.<sup>7</sup> The National Park Service administers the National Register program. Listing in the National Register assists in preservation of historic properties in several ways, including: recognition that a property is of significance to the nation, the state, or the community; consideration in the planning for federal or federally assisted projects; eligibility for federal tax benefits; and qualification for Federal assistance for historic preservation, when funds are available.

To be eligible for listing and/or listed in the National Register, a resource must possess significance in American history and culture, architecture, or archaeology. Listing in the National Register is primarily honorary and does not in and of itself provide protection of a historic resource. The primary effect of listing in the National Register on private owners of historic buildings is the availability of financial and tax incentives. In addition, for projects that receive Federal funding, a clearance process must be completed in accordance with Section 106 of the National Historic Preservation Act. State and local regulations may also apply to properties listed in the National Register.

The criteria for listing in the National Register follow established guidelines for determining the significance of properties. The quality of significance in American history, architecture, archeology, engineering, and culture is present in districts, sites, buildings, structures, and objects:

- A. That are associated with events that have made a significant contribution to the broad patterns of our history; or

<sup>7</sup> 36CFR60, Section 60.2.

- B. That are associated with the lives of persons significant in our past; or
- C. That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- D. That have yielded, or may be likely to yield, information important in prehistory or history.<sup>8</sup>

Standard preservation practice evaluates geographically contiguous collections of buildings from similar time periods and historic contexts as historic districts. The National Park Service defines a historic district as “a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development.”<sup>9</sup>

### Integrity

In addition to meeting any or all of the designation criteria listed above, the National Park Service requires properties to possess historic integrity. Historic integrity is the ability of a property to convey its significance and is defined as “the authenticity of a property’s historic identity, evidenced by the survival of physical characteristics that existed during the property’s historic period.”<sup>10</sup>

The National Register recognizes seven aspects or qualities that comprise integrity, which are also referenced in the City’s local ordinance: location, design, setting, materials, workmanship, feeling, and association. These qualities are defined as follows:

- *Location* is the place where the historic property was constructed or the place where the historic event took place.
- *Design* is the combination of elements that create the form, plan, space, structure, and style of a property.
- *Setting* is the physical environment of a historic property.
- *Materials* are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.

<sup>8</sup> 36CFR60, Section 60.3. Criterion D typically applies to archaeological resources, which is outside the scope of this project.

<sup>9</sup> National Park Service, *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation*. Washington D.C.: National Park Service, 1995.

<sup>10</sup> *National Register Bulletin 16A*.

- *Workmanship* is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory.
- *Feeling* is a property's expression of the aesthetic or historic sense of a particular period of time.
- *Association* is the direct link between an important historic event or person and a historic property.<sup>11</sup>

In assessing a property's integrity, the National Park Service recognizes that properties change over time. *National Register Bulletin 15* provides:

To retain historic integrity a property will always possess several, and usually most, of the aspects. It is not necessary for a property to retain all its historic physical features or characteristics. The property must retain, however, the essential physical features that enable it to convey its historic identity.

A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.<sup>12</sup>

A property that has sufficient integrity for listing at the national, state, or local level will typically retain a majority of the identified character-defining features, and will retain sufficient integrity to convey its significance. The required aspects of integrity are dependent on the reason for a property's significance. Increased age and rarity of the property type are also considerations when assessing integrity thresholds. For properties that are significant for their architectural merit (Criterion C), a higher priority is placed on integrity of design, materials, and workmanship. For properties that are significant for their association with important events or people, integrity of feeling and/or association may be more important.

<sup>11</sup> *National Register Bulletin 15.*

<sup>12</sup> *National Register Bulletin 15.*

For properties which are considered significant under National Register Criteria A and B, *National Register Bulletin 15* states:

A property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s).

A property important for illustrating a particular architectural style or construction technique must retain most of the physical features that constitute that style or technique.<sup>13</sup>

### **California Register of Historical Resources**

The California Register is an authoritative guide in California used by State and local agencies, private groups, and citizens to identify the State's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change.<sup>14</sup>

The criteria for eligibility for listing in the California Register are based upon National Register criteria. These criteria are:

1. Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.
2. Associated with the lives of persons important to local, California or national history.
3. Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values.
4. Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.<sup>15</sup>

The California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register includes the following:

- California properties formally determined eligible for (Category 2 in the State Inventory of Historical Resources), or listed in (Category 1 in the State Inventory), the National Register of Historic Places.

<sup>13</sup> *National Register Bulletin 15.*

<sup>14</sup> California PRC, Section 5023.1(a).

<sup>15</sup> Criterion 4 typically applies to archaeological resources, which is outside the scope of this project.

- State Historical Landmarks No. 770 and all consecutively numbered state historical landmarks following No. 770. For state historical landmarks preceding No. 770, the Office of Historic Preservation (OHP) shall review their eligibility for the California Register in accordance with procedures to be adopted by the State Historical Resources Commission.
- Points of historical interest which have been reviewed by the OHP and recommended for listing by the commission for inclusion in the California Register in accordance with criteria adopted by the commission.<sup>16</sup>

Other resources which may be nominated for listing in the California Register include:

- Individual historical resources.
- Historical resources contributing to the significance of an historic district.
- Historical resources identified as significant in historical resources surveys, if the survey meets the criteria listed in subdivision (g) of Section 5023.1 of the Public Resources Code.
- Historical resources and historic districts designated or listed as city or county landmarks or historic properties or districts pursuant to any city or county ordinance, if the criteria for designation or listing under the ordinance have been determined by the office to be consistent with California Register criteria.
- Local landmarks or historic properties designated under any municipal or county ordinance.<sup>17</sup>

#### **California Points of Historical interest**

The California Point of Historical Interest Program was established in 1965 to accommodate an increased interest in recognizing local historic properties not able to meet the restrictive criteria of the State Historical Landmarks program. The criteria for the Points are the same as those that govern the Landmark program, but are directed to local (city or county) areas. California Points of Historical Interest do not have direct regulatory protection, but are eligible for official landmark plaques and highway directional signs.

#### **Local Designation**

The seven-member Palm Springs Historic Site Preservation Board (HSPB), established by the Palm Springs City Council in May 1981, identifies, nominates, and recommends potential historic sites and districts to the City Council while fostering public awareness and appreciation of the City's rich cultural

<sup>16</sup> California PRC, Section 5023.1(d).

<sup>17</sup> California PRC, Section 5023.1(e).

and architectural heritage. The purpose and authority of the HSPB as outlined in section 8.05 of the Municipal Code is to stabilize and improve buildings, structures, or areas which are considered to be of historical, architectural, archaeological or ecological value, to foster civic beauty, to strengthen the local economy, and to promote the use of specific buildings for the education and welfare of the citizens of Palm Springs.<sup>18</sup>

In 2014, the City of Palm Springs became a Certified Local Government (CLG). The CLG program is a preservation partnership between local, state, and national governments focused on promoting historic preservation at the grass roots level. The program is jointly administered by the National Park Service (NPS) and the State Historic Preservation Offices (SHPOs) in each state, with each local community working through a certification process to become recognized as a CLG. CLGs then become active partners in the Federal Historic Preservation Program and the opportunities it provides.

The City's Historic Preservation Ordinance is codified in section 8.05 of the Municipal Code. The Historic Preservation Ordinance defines the criteria for designating historic resources in the City:

(a) Historic Site. An historic site is any real property such as: a building; a structure, including but not limited to archways, tiled areas and similar architectural elements; an archaeological excavation or object that is unique or significant because of its location, design, setting, materials, workmanship or aesthetic effect and:

- (1) That is associated with events that have made a meaningful contribution to the nation, state or community; or
- (2) That is associated with lives of persons who made meaningful contribution to national, state or local history; or
- (3) That reflects or exemplifies a particular period of the national, state or local history; or
- (4) That embodies the distinctive characteristics of a type, period or method of construction; or
- (5) That presents the work of a master builder, designer, artist, or architect whose individual genius influenced his age; or that possesses high artistic value; or
- (6) That represents a significant and distinguishable entity whose components may lack individual distinction; or
- (7) That has yielded or may be likely to yield information important to national, state or local history or prehistory.

<sup>18</sup> City of Palm Springs, "Historic Resources," <http://www.ci.palm-springs.ca.us/index.aspx?page=495> (accessed January 2015).

(b) Historic District. Any area of the city of Palm Springs containing a number of structures, natural features or sites having historic, architectural, archaeological, cultural or aesthetic significance and designated as an historic district under the provisions of this chapter. (Ord. 1320 § I, 1988; Ord. 1140 §I (part), 1981).

Designations are made by the City Council by categorizing nominated sites and districts into one of the following classifications and such other categories as may be designated by resolution:

Class 1. Structure/site qualified for city designation; may be qualified at the federal, state and/or county level. Archival file will be maintained. Structure/site may not be modified nor objects removed without the approval of the city council; usage may be limited by the city council to the extent that it may impair the integrity of the site. Site will be plaqued. (Intended for use when the structure or site still exists as it did during the historical period or is restorable).

Class 2. Site qualified for city designation; may be qualified at the federal, state and/or county level. Archival file will be maintained. Site is eligible for plaquing. (Intended for use when the site is not occupied by a modern structure or use which is different than that of the historical period or if structure is unusable, nonconforming, unrestorable or the like).

Class 3. Structure/site was constructed before 1969, or a year to be determined by the city council, or construction date cannot be confirmed. Eligible for a six-month stay of demolition. Action of the HSPB may include recommendation to reclassify. All structures built prior to the subject date would be automatically so classified.

Historic District. Qualified for city designation; may be qualified at the federal, state and/or county level. Archival file will be maintained and shall contain a map delineating contributing and noncontributing structures or sites. Contributing structures/sites shall be subject to Class 1 regulations until such time that they may be reclassified. Noncontributing structures/sites shall be subject to review by the HSPB before demolition or construction. A specific plan, containing special regulations pertaining to the subject area, may be adopted for each district. (Ord. 1320 §5, 1988; Ord. 1140 § I (part), 1981).

In order to complete the designation process, the City Council must make a finding according to 8.05.160 of the Municipal Code:

If the city council shall find that the purposes of this chapter are furthered by designation of property as an historic site or district, such findings shall be stated in a resolution designating such property within such historic site or district. From and after the adoption of such resolution, all property within such historic site or district shall be subject to the rules and regulations governing the demolition, preservation, rehabilitation or alteration of historic sites. (Ord 1140 § 1, 1981).

A list of locally-designated Class 1 and Class 2 historic sites and historic districts are available on the City's website at <http://www.palmspringsca.gov/home/showdocument?id=58223>. Buildings, natural

sites, and archaeological sites in Palm Springs that are listed in the National Register of Historic Places can be found on the National Park Service website at <http://npgallery.nps.gov/nrhp/SearchResults/>. In general, designated properties were not re-evaluated as part of this study.<sup>19</sup>

### **Palm Springs Historic Resources Surveys**

The City initiated its first comprehensive historic resources survey in 1976 as a result of the community's desire to identify and document its rich architectural heritage. During that effort, primarily Native American sites were identified. Citywide surveys undertaken in 1983 and 1987 resulted in the creation of a base list of potential architectural and historical resources throughout the city. These surveys were updated in 2001 and 2004. As a result of these previous surveys and a variety of other efforts, the City has a list of approximately 700 properties included in the City Historic Resources Database. Previous surveys are housed in the City Planning Department. The 2014-2016 survey project reviewed all properties on the City Historic Resources Database list for potential significance, and identified additional properties and neighborhoods that may be eligible as historic resources. The result of the 2014-2016 survey is an updated citywide inventory of properties and neighborhoods with potential historic significance for use as a planning tool by the City.

<sup>19</sup> With the exception of the Las Palmas Business Historic District, which was resurveyed at the request of the City. The findings of this study are included in Appendix E.

HISTORIC RESOURCES GROUP

## HISTORIC CONTEXT: SUMMARY

The historic context statement provides a narrative historical overview of the overarching forces that shaped land use patterns and development of the built environment of the City of Palm Springs, and provides a framework for the identification and evaluation of potential historic resources in the city. The context is organized chronologically, and the relevant themes are organized by type of development (single- and multi-family residential, commercial, and civic/institutional) within each chronological period. The themes outline the historical development patterns, significant events or activities, and important individuals in Palm Springs' history in order to establish the potential historical significance of properties associated with each context and theme.<sup>20</sup> At the conclusion of each theme is a discussion of the relevant criteria, integrity considerations, and registration requirements for determining whether a property may be eligible for designation at the federal, state, and local levels under that theme.

Five broad periods of development have been identified to provide the framework for evaluating resources within the City of Palm Springs. These comprise the contexts:

- Context: Native American Settlement (through 1969)

The earliest inhabitants of the Coachella Valley were the Cahuilla Indians, who established summer settlements in the palm-lined mountain canyons around the valley, moving each winter to thatched shelters clustered around the mineral hot springs on the valley floor. The history of the Cahuilla in the Coachella Valley is critical to the development of Palm Springs and is included as a separate context.

- Context: Early Development (1884-1918)

This context explores the first Anglo-American settlers of the area, the founding of what would become the town called Palm Springs, and its subsequent development into a winter health spa for patients afflicted with asthma, tuberculosis, and other respiratory diseases.

- Context: Palm Springs Between the Wars (1919-1941)
  - Theme: Single-Family Residential Development (1919-1941)
  - Theme: Multi-Family Residential Development (1919-1941)
  - Theme: Trailer Park/Mobile Home Community Development (1917-1944)
  - Theme: Commercial Development (1919-1941)
  - Theme: Civic & Institutional Development (1919-1941)
  - Theme: Influence of the Entertainment Industry (1919-1941)

<sup>20</sup> Note that there is a significant association with the LGBT community in Palm Springs. This history largely dates to the recent past as early associations are undocumented; therefore, an LGBT context is outside the identified period of study for this survey. It is recommended that a detailed examination of the role of the LGBT community in the development of Palm Springs be included in future studies.

This context explores the transformation of Palm Springs from a modest spa town into a luxury winter resort in the years between the First and Second World Wars. During the 1930s, Palm Springs became the winter weekend getaway destination for a growing number of Hollywood celebrities, and more and more development sprang up to house and entertain them.

- Context: Palm Springs During World War II (1939-1945)
  - Theme: The War Effort in Palm Springs (1939-1945)

Palm Springs and the surrounding desert played an important role in the war effort: what would become Palm Springs International Airport was established as an Air Corps landing field;<sup>21</sup> in March of 1942 General George S. Patton established the Desert Training Center at Camp Young, an hour east of Palm Springs at Shaver Summit (between Indio and Desert Center; now called Chiriaco Summit), to train his army for combat in North Africa;<sup>22</sup> and the El Mirador Hotel was temporarily converted into Torney General Hospital, a 1,600 bed military hospital. But following the Japanese attack on Pearl Harbor in December 1941, significant material resources and labor were dedicated to the war effort, and nearly all private construction ceased for the duration of the conflict.

- Context: Post-World War II Palm Springs (1945-1969)
  - Theme: Post-World War II Single-Family Residential Development (1945-1969)
  - Theme: Post-World War II Multi-Family Residential Development (1945-1969)
  - Theme: Post-World War II Commercial Development (1945-1969)
  - Theme: Post-World War II Civic and Institutional Development (1945-1969)
  - Theme: Influence of the Entertainment Industry (1945-1969)

This context explores the post-World War II boom and related development that left Palm Springs with what many consider the largest and finest concentration of mid-20<sup>th</sup> century Modern architecture in the United States. Hollywood film stars and Eastern industrialists were joined in the postwar decades by ever-increasing numbers of tourists.

- Architectural Styles & Local Practitioners

This section provides information about the architectural styles and local practitioners in Palm Springs. An overview of each style is provided, along with the significant character-defining features. A brief biography of each known practitioner is included for reference in Appendix A.

<sup>21</sup> This would be the city's second municipal airport. The first, founded in 1934, was located on leased land in Section 14, on a parcel bounded by Alejo Road, Sunrise Way, Tahquitz Canyon Way, and Avenida Caballeros.

City of Palm Springs

Citywide Historic Context Statement & Survey Findings

HISTORIC RESOURCES GROUP

#### CONTEXT: NATIVE AMERICAN SETTLEMENT TO 1969<sup>23</sup>

The earliest inhabitants of the Coachella Valley are the Native people known ethnohistorically as the Cahuilla Indians. The Cahuilla territory includes the areas from the San Jacinto Mountains, the San Gorgonia Pass, and the desert regions reaching east to the Colorado River. The Cahuilla language is part of the Takic branch of the Uto-Aztecan language family and all the Cahuilla groups speak a mutually intelligible despite different dialects. The Cahuilla group that inhabited the Palm Springs area are known as the Agua Caliente Band of Cahuilla Indians. The Cahuilla name for the area that is now Palm Springs is *Sec-he*, “boiling water,” named for the hot springs located in what is currently the center of the Palm Springs business district. The springs have always provided clean water, bathing, and a connection to the spiritual world, and were used for ceremonial and healing purposes.<sup>24</sup>

The Cahuilla people refer to themselves as *‘ivilyu’atum* and are ethnographically divided into two patrilineal moieties: the Wildcats and the Coyotes. Each moiety was further divided into clans which are made up of lineages. Lineages had their own territory and hunting rights within a larger clan territory. There are a number of lineages in the Palm Springs area, which each have religious and political autonomy.

Prior to European contact, Cahuilla communities established summer settlements in the palm-lined mountain canyons around the Coachella valley; oral histories and archaeological evidence indicates that they settled in the Tahquitz Canyon at least 5,000 years ago.<sup>25</sup> The Cahuilla moved each winter to thatched shelters clustered around the natural mineral hot springs on the valley floor.<sup>26</sup> The Desert Fan Palm, *máwul*, is native to California, the only native palm tree in North America, and the only palm tree to retain its dried fronds throughout its life, creating a skirt-like appearance around the trunk. The Cahuilla used the leaves of the palm trees that grew around the around the springs to weave baskets, sandals, and thatch roofing.<sup>27</sup> They hunted some game but subsisted primarily on gathered local food plants including the fruit and seeds of the Desert fan palm, acorns, mesquite beans, seeds, wild fruit, agave, and yucca, and had an extensive trading system with neighboring tribes.<sup>28</sup>

<sup>23</sup> The history of the Cahuilla in the Coachella Valley is critical to the development of Palm Springs and is included here as a separate context, primarily to provide background about this important component of the area’s history. There is one known built resource from the historic period that is significant for its association with the Cahuilla: the Tahquitz Ditch, remnants of which can be found on various properties. This overview history is included to inform the context statement; this narrative is by no means the inclusive story of the Agua Caliente Band of Cahuilla Indians, or their importance to the region. For more information about the history of the Agua Caliente Band of Cahuilla Indians, please see <http://www.aguacaliente.org/content/History%20&%20Culture/>.

<sup>28</sup> Agua Caliente Band of Cahuilla Indians, “Cultural History.”

The Cahuilla lived far enough inland to avoid early contact with Spanish explorers and colonists. Gaspar de Portolà led the first European land expedition into Alta California in 1769-70, traveling with Franciscan missionaries headed by Father Junipero Serra to establish the first of California's missions, San Diego de Alcalá and San Carlos Borromeo, and the presidio of Monterey. In 1776 Juan Bautista de Anza led the first overland colonizing expedition of 30 families, totaling approximately 240 men, women, and children, from the Tubac Presidio in what is now Arizona to found a settlement at San Francisco Bay.<sup>29</sup> Both expeditions bypassed the Coachella Valley: Portolà followed close to the coast, and de Anza passed to the west of the San Jacinto and Santa Rosa mountains. As a result, the Cahuilla of Sec-he were left largely to themselves until the mid-19<sup>th</sup> century. Between 1823 and 1826, Captain José Romero established an overland route from California to Mexico. He encountered the hot spring at Sec-he and named it *Agua Caliente*, "hot water," from which the local band of Cahuilla takes its name.<sup>30</sup> The Cahuilla constructed the Tahquitz Ditch, a stone-lined canal that carried water for crops and human consumption from the mouth of Tahquitz Canyon to the village at Sec-he, possibly as early as the 1830s.<sup>31</sup>

In 1852, the Treaty of Temecula between the United States government and Cahuilla leaders set aside lands for the occupation of Cahuilla, Luiseño, and Serrano Indian tribes. Unbeknownst to the Indians, the treaty was never ratified.<sup>32</sup> In the 1860s the Bradshaw stagecoach line began to cross the desert from Banning to the Arizona territories, stopping at the oasis of palm trees and hot springs.<sup>33</sup> In 1876 the Southern Pacific Railroad completed its line through the desert to Los Angeles, dividing the land for ten miles to either side of the tracks into a checkerboard of one-mile-square sections allotted alternately to the railroad and the federal government. On May 15, 1876 President Ulysses S. Grant issued an Executive Order setting aside Section 14 and a portion of Section 22, including Tahquitz Canyon, as the Agua Caliente Indian Reservation.<sup>34</sup> In 1877, President Rutherford B. Hayes expanded the reservation's boundaries, granting the area's odd-numbered square mile parcels for ten miles on either side of the tracks that run through the desert around Palm Springs to Southern Pacific Railroad and holding the even-numbered parcels in trust for the Agua Caliente Band of Cahuilla Indians.<sup>35</sup>

Early Palm Springs settlers, such as Judge John Guthrie McCallum, purchased land from the Southern Pacific. However, federal law prohibited the Agua Caliente Band of Cahuilla Indians from selling the

<sup>35</sup> Sheila Grattan, "The Woman Leads," *Palm Springs Life*, March 2013.

land or leasing it for income. This resulted in the “checkerboard” pattern of land in Palm Springs where development was either permitted or prohibited. The reservation today occupies 32,000 acres; of these 6,700 acres lie within the city limits, making the Agua Caliente Band of Cahuilla Indians the city's largest landowner.<sup>36</sup>

In 1891, Congress passed the Mission Indian Relief Act. This authorized the Secretary of the Interior to make individual allotments from reservation lands. However, it wasn't until the tribe took their case to the U.S. Supreme Court (*Lee Arenas v. United States*, 1944), that they would win the legal right to have allotments approved. The success was short-lived, however, due to the need for equalization of allotments and federal laws denoting the length of leases on Indian lands.<sup>37</sup> There are currently ten distinct Cahuilla Reservations, more than any other federally-recognized Indian tribe in California.

In 1887, Welwood Murray constructed the first hotel in Palm Springs near the Agua Caliente hot spring on land leased from the Agua Caliente Band of Cahuilla Indians. Individuals suffering from pulmonary and tubercular conditions were drawn to the desert and the hot spring in the hope of curing their ailments. A simple bathhouse was also constructed on the site.<sup>38</sup> In the 1910s, leaders of the Agua Caliente Band of Cahuilla Indians demolished the rustic bathhouse located over the spring and constructed a new one in an effort to promote health-focused tourism and to generate tribal income.<sup>39</sup> In the early 1930s, the Agua Caliente Band of Cahuilla Indians constructed another new bathhouse in response to Palm Springs' increasing popularity with health seekers and the Hollywood film industry.<sup>40</sup> In 1957, the third bathhouse was demolished in preparation for the construction of the Spa Hotel and Bathhouse, completed in 1963 (100 N. Indian Canyon Drive; demolished). Built on reservation land, it was the first long-term Indian land lease in the country.

<sup>36</sup> “Palm Springs,” Los Angeles Public Library.

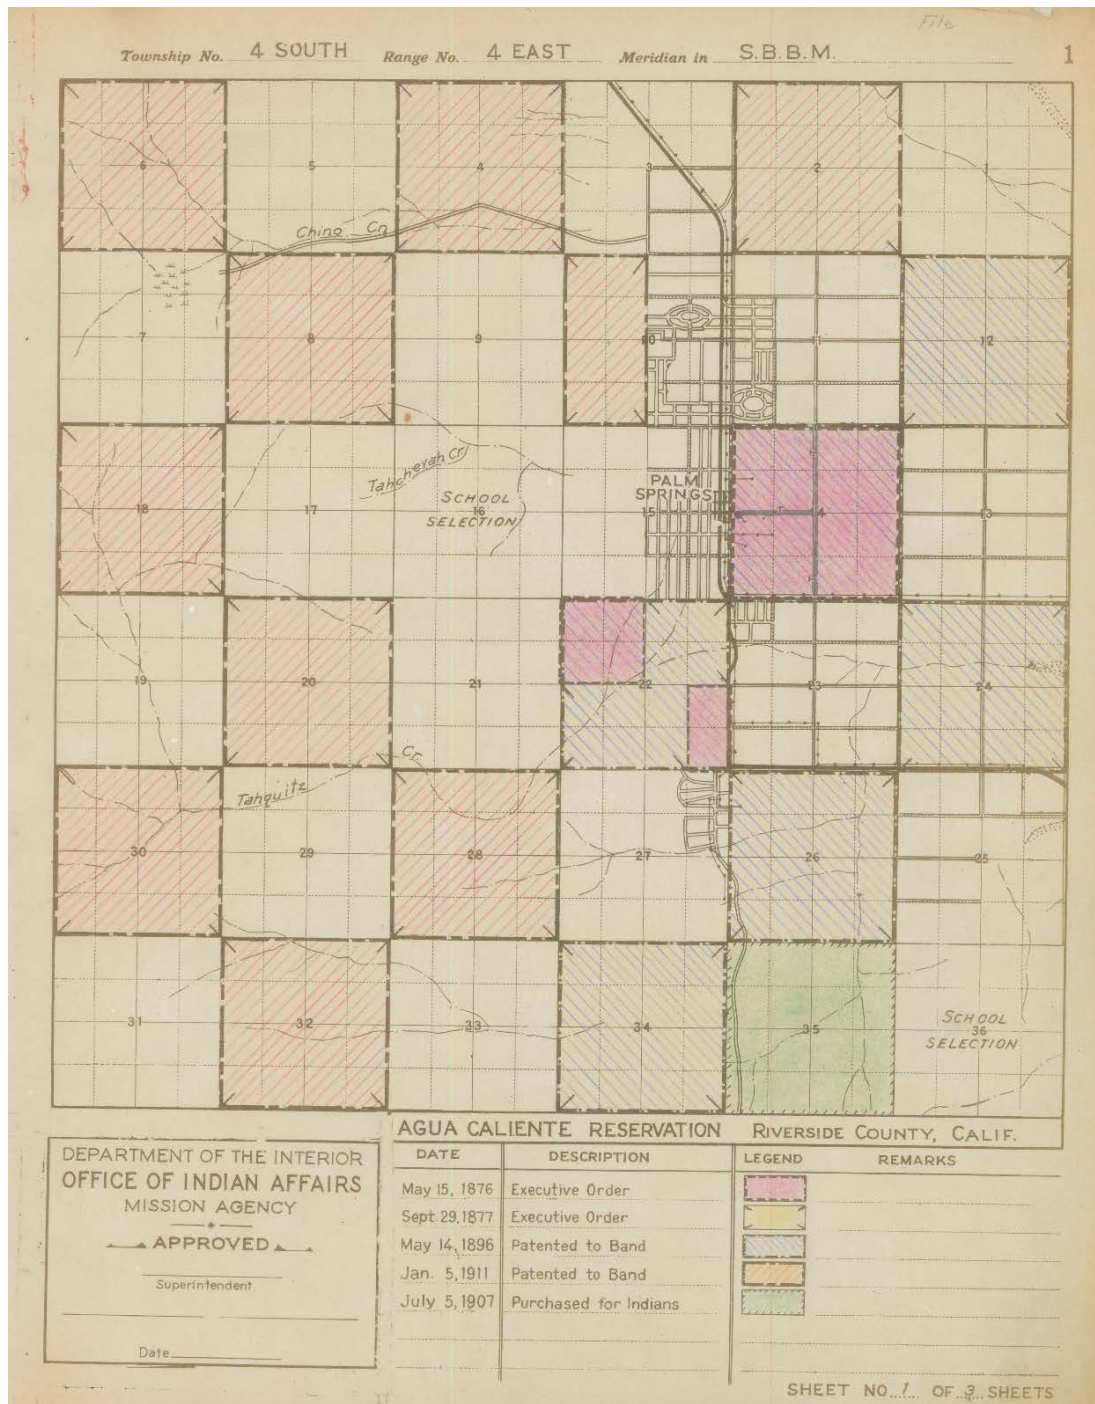

<sup>37</sup> These land struggles of the Agua Caliente Band of Cahuilla Indians came to an end when President Eisenhower signed the Equalization Law in 1959. The tribe and tribe members (allottees) could now realize profits from their lands and developed the ninety-nine-year lease.

FINAL DRAFT – FOR CITY COUNCIL APPROVAL

City of Palm Springs

Citywide Historic Context Statement & Survey Findings

HISTORIC RESOURCES GROUP

In 1951, after the death of their last ceremonial leader, Albert Patencio, the Agua Caliente Band of Cahuilla Indians decided to burn and not rebuild the ceremonial roundhouse (located at what is now the intersection of Arenas and Calle Alvarado), formally making a break with traditional life.<sup>41</sup> In 1962, City of Palm Springs Resolution No. 6781 requested cooperation between the Bureau of Indian Affairs and the Association of Conservators and Guardians to clear lots on Indian-owned land in Section 14 for speedy re-development, frequently without informing all affected parties, including Indian landowners and Section 14's low-income residents. The demolition of Section 14 was described in a later California Department of Justice report as "a city engineered holocaust." In response, the Agua Caliente Band of Cahuilla Indians filed a lawsuit against the City of Palm Springs to resolve the question of who had jurisdiction over zoning of Indian lands. In 1975, the U.S. Supreme Court recognized that Indian tribes retain "attributes of sovereignty over both their members and their territory" (*United States v. Mazurie*, 1975).<sup>42</sup>

#### **NATIVE AMERICAN SETTLEMENT TO 1969: ELIGIBILITY**

Today, reminders of the traditional Cahuilla society exist in the canyons, such as rock art, house pits and foundations, irrigation ditches, dams, reservoirs, trails, and food preparation areas.<sup>43</sup> Many of Palm Springs' streets are named after notable members of the Agua Caliente Band of Cahuilla Indians, including Ramon Road, Patencio Road, and Amado Road. Archaeological artifacts discovered from this period are likely to yield information about the life and culture of the Cahuilla and neighboring Native American cultures. There are two National Register Archaeological Districts in Palm Springs, on the Agua Caliente Indian Reservation, that document the cultural significance of the Agua Caliente Band of Cahuilla Indians and their importance to the history of the city. The study of archaeological resources is outside the scope of this project.

#### CONTEXT: EARLY DEVELOPMENT (1884-1918)

This theme explores the first Anglo-American settlers of the area, the founding of the town called Palm Springs, and its subsequent development into a winter health spa for patients afflicted with asthma, tuberculosis, and other respiratory diseases. Among the early settlers who played particularly important roles in the founding of the town and its development as a health resort were John Guthrie McCallum, the town's founder; Welwood Murray, who built and promoted the first hotel; and, remarkably for the time, a group of enterprising, resourceful businesswomen who played a critical role in the town's early commercial and social development, including McCallum's daughter, Pearl McCallum McManus; Nellie Coffman, who founded the Desert Inn and developed it into the village's most renowned resort; Dr. Florilla White and her sister Cornelia; and Zaddie Bunker, who operated the village's first automotive garage and became one of Palm Springs' wealthiest landowners.

The Coachella Valley's first permanent Anglo settler was John Guthrie McCallum, a San Francisco attorney and former State Legislator who arrived in Agua Caliente with his wife Emily and their five children in the spring of 1884. A typhoid epidemic five years earlier had left the McCallums' eldest son, Johnny, with tuberculosis; the family doctor had advised that the boy's only hope for recovery was to relocate to a warm, dry climate. The family moved to Los Angeles and McCallum secured an appointment as Indian agent in San Bernardino. It was from the nearby town of Banning that a local Indian guide named Will Pablo led McCallum through the San Geronimo pass to the Cahuilla village of Agua Caliente.<sup>44</sup> As described by Pearl McCallum McManus, her father "...pictured this area with its dry healing climate as the answer to his prayers that his son might be healed. And in this new land he saw, from the sunshine, rich soil and abundant life-giving waters that flowed from the canyons, a vast future development...for abundant crops."<sup>45</sup> He purchased an initial 64 acres of railroad land<sup>46</sup> and employed local Indians to build a small adobe house at what is now the southwest corner of Palm Canyon Drive and East Tahquitz Canyon Way (now located at 221 S. Palm Canyon Drive; HSPB-5). When the adobe was complete McCallum fetched his family, with the youngest, four-year-old daughter Pearl, perched on the back of his saddle.<sup>47</sup>

The Tahquitz Ditch had long been a feature of village life by the time John Guthrie McCallum arrived in 1884. He expanded the Tahquitz Ditch, increasing its flow by tapping into one of the canyon's springs. McCallum began using water from the ditch to irrigate his ranch, and, as new settlers came, they availed

<sup>45</sup> W.H. Bowart with Julie Hector, Sally Mall McManus and Elizabeth Coffman, "The McCallum Centennial – Palm Springs' founding family," *Palm Springs Life*, April 1984, <http://www.palmspringslife.com/the-mccallum-centennial-palm-springs-founding-family/> (accessed September 25, 2012).

<sup>46</sup> Bowart et al., "The McCallum Centennial." Sources differ on the total amount of land McCallum ultimately acquired, ranging from approximately 1,800 to 6,000 acres.

<sup>47</sup> Ardmore, "Memories," W51.

themselves of the water provided by the Tahquitz Ditch. This became increasingly problematic for the Agua Caliente Band of Cahuilla Indians as settlers continued to arrive in Palm Springs. Although McCallum had significantly increased the output of the Tahquitz Ditch, its resources were far from enough to accommodate the influx of new settlement he hoped to generate. In 1887, after forming the Palm Valley Water Company, McCallum embarked on the creation of an extensive new canal that would carry water from the Whitewater River for over eight miles across the rugged desert until it reached the McCallum ranch.<sup>48</sup> Completed in the fall of 1887, the stone-lined Whitewater Ditch had the capacity to carry a thousand miner's inches<sup>49</sup> of water into Palm Springs.<sup>50</sup>

The McCallum ranch flourished, and young Johnny McCallum's health improved in the desert climate. Firmly believing, in the words of his daughter Pearl, that the "dry healing climate [was] the answer to his prayers that his son might be cured," the elder McCallum promoted Palm Valley, as he called the area, as "an absolute cure for all pulmonary and kindred diseases."<sup>51</sup>

Welwood Murray's Palm Springs Hotel. Source: *Palm Springs Life*, "Men on the Forefront."

<sup>48</sup> McCallum believed the Tahquitz and Whitewater ditches would provide enough water to maintain the peace between the new settlers and the Agua Caliente Band of Cahuilla Indians. However, inevitably, disputes over water remained a regular source of contention long after McCallum's death in 1897. This situation was exacerbated by an eleven-year drought that struck the region in 1893. It was not until 1911 that the federal government set distribution standards and repaired and modernized the Tahquitz Ditch. By the 1920s, well drilling in the area had made both the Whitewater and Tahquitz ditches obsolete. While the Whitewater quietly disappeared, the Tahquitz remained mostly intact well into the 1950s. McCallum's daughter, Pearl McManus, ensured it was retained not only as it ran before her Pink Mansion on Tahquitz Drive, but also within her Tennis Club. In 1939, a section was stocked with fish and made into the club's new trout stream (Vaught, *Sentinels in Stone*, 9).

<sup>49</sup> A miner's inch is a unit of flow in terms of volume per unit time, usually used in relation to flow of water. This unit of measure is derived from the amount of water that flows through a hole of a given area at a given pressure. The word 'inch' refers to the area of the hole in square inches. While the definition of a miner's inch varies by location, its usage was standardized in California in 1905. A Californian miner's inch is equivalent to 1/50 ft<sup>3</sup>/s (1 cubic foot per 50 seconds).

<sup>50</sup> Vaught, *Sentinels in Stone*, 9.

<sup>51</sup> Bowart et al., "The McCallum Centennial," quoted in John LoCascio, "A Different Kind of Eden: Gay Men, Modernism, and the Rebirth of Palm Springs" (Master's thesis, University of Southern California, 2013), 8.

In 1886 McCallum persuaded Scottish-born Dr. Welwood Murray to move from Banning and establish a health resort at Palm Valley.<sup>52</sup> Murray purchased a five-acre parcel on the north side of what is now Tahquitz Canyon Way (then Spring Street) between Palm Canyon Drive (then Main Avenue) and Indian Canyon Drive (then Indian Avenue) and opened the village's first hostelry, the Palm Springs Hotel (demolished).<sup>53</sup> Murray built a one-story, wood-framed building with a wraparound veranda and accommodations for 20 guests, and planted the land with oranges, ornamental shrubs, and trees.<sup>54</sup> Directly across Indian Canyon Drive were the mineral hot springs, where a bathhouse was built for the convenience of Murray's guests, many of whom suffered from respiratory diseases.<sup>55</sup> Murray later built a house for himself on his property, using railroad ties salvaged from the abandoned Palmdale Railroad (now located at 221 S. Palm Canyon Drive; HSPB-4).<sup>56</sup> Murray promoted the place by purchasing a camel and hiring a local Indian, Willie Marcus, to dress in Arab robes and stand with the camel at the Seven Palms train station, handing out brochures.<sup>57</sup> Though a seven-mile ride across open desert from the train station, the hotel was soon attracting visitors, including such noted personages as Fanny Stevenson, widow of Robert Louis Stevenson; John Muir; and Vice President Charles W. Fairbanks.<sup>58</sup>

Some of the visitors to Palm Valley stayed and settled the little village that began to develop around the McCallum adobe and the Palm Springs Hotel, at what is now the intersection of South Palm Canyon Drive (then Main Avenue) and East Tahquitz Canyon Way (then Spring Street). McCallum co-founded the Palm Valley Land and Water Company with Los Angeles businessmen O.C. Miller, H.C. Campbell and Dr. James Adams, and in 1887 surveyed and platted 320 acres of his land into a township that

<sup>52</sup> Greg Niemann, *Palm Springs Legends: Creation of a Desert Oasis* (San Diego: Sunbelt Publications, Inc., 2006), 43. Murray was not a licensed physician; his title was honorary, granted for outstanding medical service rendered to wounded sailors on a battleship during the American Civil War.

<sup>53</sup> Murray was also responsible for the establishment of Palm Springs' first cemetery in 1894. That year, when Murray's son Erskine died he was buried on a triangular plot of land his father owned at the west end of what is now Alejo Road. Elizabeth Murray was laid to rest alongside her son in 1911, and Welwood Murray himself was buried there in 1914. Following Murray's death, his heirs deeded the plot to the village, the Palm Springs Cemetery District was established to manage it, and it was named the Welwood Murray Cemetery (HSPB-2). Many of the town's pioneers were subsequently buried there, including Pearl and Austin McManus, Zaddie Bunker, the White sisters, Nellie Coffman, and Alvah Hicks. Source: Niemann, 46. Cornelia White, Dr. J. Smeaton, and Edward Bunker were the three trustees of the Palm Springs Cemetery District at its formation. Source: "Post Held Since 1917 is Resigned by Cornelia White," *The Desert Sun*, March 7, 1941; "Pair Honored for Long Service Careers in Palm Springs Cemetery District Work," *The Desert Sun*, December 19, 1964.

<sup>54</sup> Western Resort Publications, *Palm Springs Area Yearbook* (Palm Springs: Ferris H. Scott, 1954), 15. The 1929 Sanborn map shows the main hotel building, expanded with stone and adobe additions, located near the corner of what were then called Spring Street and Indian Avenue.

<sup>56</sup> Niemann, 46. A 1936 article in *The Desert Sun* ("Landmark is Removed from Plaza Project," *The Desert Sun*, October 23, 1936) notes that the house "was constructed many years ago for Mrs. Brooks," and later purchased by Dr. Murray, and was moved in 1936 to the "Indian Reservation" to make way for the construction of the Plaza. However, all other sources note that it was built by Murray. The house, later owned by Cornelia White, was relocated at least twice, first in 1944 to the southwest corner of Tahquitz Canyon and Indian Canyon, then to the Village Green in 1979. The reference to its relocation to the "Indian Reservation" in 1936 is unclear.

corresponds to what is today's downtown. An auction on November 1, 1887 sold 137 parcels for a total of more than \$50,000.<sup>59</sup> Houses were built, orchards planted, and more visitors and seasonal residents arrived each winter.<sup>60</sup> McCallum opened a small one-room store to provide canned goods, hay, grain, and other merchandise needed by early settlers and travelers.<sup>61</sup> The first church, later the Community Presbyterian Church, was built in 1890 by Thomas Chritchlow in memory of his wife, on a parcel at the southeast corner of Palm Canyon (then Main) and Andreas Road (then Lawn Street) donated by Welwood Murray (HSPB-11; demolished).<sup>62</sup> Although McCallum called the place Palm Valley, it soon came to be known as Palm Springs after Murray's hotel.<sup>63</sup>

In 1890, Johnny McCallum relapsed, and died the following January at the age of 26. Three years later, torrential rains caused a flood that wiped out Palm Springs' fields and orchards. This was followed in 1894 by the start of a devastating drought that would last eleven years. The village's water sources in Whitewater and Tahquitz canyons dwindled and eventually dried up completely,<sup>64</sup> and McCallum and other settlers lost their petition with the federal government to gain control over the Agua Caliente Band of Cahuilla Indians' water rights in Tahquitz and Andreas Canyons.<sup>65</sup>

The McCallums' second son, Wallace, died in 1896 at the age of 29; John Guthrie McCallum died in 1897. Daughter Pearl, away at school in Chicago, returned to the family's Los Angeles home to care for her widowed mother while her only surviving brother, Harry, tried to maintain the ranch. After Harry's death in 1901 at the age of 30, Pearl McCallum and her by-then invalid mother returned to Palm Springs.<sup>66</sup> Pearl had the dead trees in her father's apricot orchard cut down and sold for firewood, sold her family's shares in the Palm Valley Land and Water Company, and periodically sold pieces of land to pay debts and taxes.<sup>67</sup>

Palm Springs withered as many settlers moved away, abandoning their houses and orchards.<sup>68</sup> But a few hearty pioneers, including the McCallums and Murrys, stayed through the years of drought, and some newcomers arrived as well. In 1898 Mrs. Lavinia Fryatt Crocker opened a sanatorium, the Green Gables

<sup>68</sup> The drought effectively ended any serious farming endeavors in Palm Springs itself but the southeast Coachella Valley became a major agricultural center, particularly after the introduction of date palms in the early 20<sup>th</sup> century.

Health Resort, at the foot of Mt. San Jacinto, with tent houses to accommodate her patients.<sup>69</sup> That same year David Manley Blanchard, a tubercular auctioneer from Minneapolis, opened the town's first general store.<sup>70</sup> Blanchard had arrived in Palm Springs in 1897 after contracting tuberculosis following a bout of pneumonia. He bought three burros and transported mail between Palm Springs and the train station at Seven Palms. In 1898 he opened a feed and grocery store in the adobe that had formerly housed the Bradshaw Stage station. He later purchased property on Andreas Road (then Lawn Street) between Palm Canyon (then Main) Drive and Indian Canyon Drive (then Indian Avenue) on which he built a larger store along with a small four-room hotel and several tent houses (demolished). Blanchard also served as the village's postmaster and barber.<sup>71</sup>

Nellie Coffman, the daughter of hoteliers and wife of a Santa Monica physician, first visited Palm Springs in 1908 and was immediately impressed with the village's potential as a winter health resort. At that time the town's permanent population was 14.<sup>72</sup> The following year Nellie, her husband Dr. Harry Coffman, and their sons George Roberson<sup>73</sup> and Earl Coffman, bought a bungalow on almost two acres just north of the McCallum adobe, at the northwest corner of Palm Canyon Drive (then Main Avenue) and Tahquitz Canyon Way (then Spring Street) and opened a boarding house, the Desert Inn and Sanatorium (demolished; HSPB-17). Nellie rented the bungalow's three bedrooms to guests, mostly respiratory patients escaping harsh winters, and put up a tent house for herself and her family, adding more for additional guests as needed.<sup>74</sup> Dr. Coffman cared for the medical needs of their guests while Nellie managed the housekeeping and the books.<sup>75</sup> She soon gained a reputation for her culinary skills after stuffing two traveling reporters from the *Los Angeles Times* with chicken soup, lamb chops, hot biscuits and strawberry jam.<sup>76</sup>

By 1915, with the growing understanding that tuberculosis was a communicable disease caused by microbes rather than "unhealthy" climates, Nellie recognized that her Inn would be more successful hosting tourists rather than consumptives; beginning that winter season, tuberculosis patients were no

longer permitted at the Desert Inn.<sup>77</sup> She began acquiring more land, including the adjacent Green Gables. In 1917 Coffman's sons, George and Earl, went off to Europe to fight in World War I.<sup>78</sup>

Coffman's decision to focus on the tourist trade was propitious. It coincided with a series of events whose combined effects would set the stage for the transformation of Palm Springs in the 1920s. The growing popularity and affordability of the automobile, and the completion of a new road from Banning, made the village more accessible.<sup>79</sup> Wealthy American tourists, cut off from Europe for the duration of the war, were forced to limit their travels to domestic destinations and discovered the rustic spa town set amidst the beauty and solitude of the surrounding desert. The lethal postwar influenza pandemic of 1918-19 brought more well-healed visitors fleeing the contagion of the big cities; Los Angeles doctors sent their own families to Palm Springs for safety.<sup>80</sup>

The lodge at the Desert Inn, c. 1920.  
Source: Calisphere.

When George and Earl returned from the war in 1918 they, like Nellie, saw the town's full potential, not as a health spa for asthmatics and consumptives but as an exclusive winter resort for the well-to-do, and went into business with their mother.<sup>81</sup> They dropped "Sanatorium" from the boarding house's name and over the next decade set about expanding and reconstructing the Desert Inn into a first-class resort hotel, a "vast grassy haven"<sup>82</sup> occupying the entire block between Andreas and Tahquitz and extending west into the foothills of Mount San Jacinto.

A number of other settlers contributed to the development and growth of Palm Springs in the early 20<sup>th</sup> century. In 1913 Dr. Florilla White, a physician originally from upstate New York, and her sister Cornelia,

<sup>77</sup> Apparently, Dr. Coffman felt there was no place for him in the new operation, and the couple soon divorced. Lawrence Culver, *The Frontier of Leisure: Southern California and the Shaping of Modern America* (New York: Oxford University Press, 2010), 153-154.

a former teacher at the University of North Dakota, purchased the Palm Springs Hotel from Welwood Murray. Dr. White had stayed as a guest at the hotel the previous year before joining her adventurous younger sister in Mexico, where she was then living. Forced to return to the United States to escape the chaos of the Mexican Revolution, the sisters settled in Palm Springs to manage the hotel and invest in real estate, buying entire blocks of what would become downtown Palm Springs. Cornelia White moved into Murray's "Little House" of railroad ties (now located at 221 S. Palm Canyon Drive; HSPB-4). Dr. White served as the village's health officer during World War I and organized The Nightingales, a group of volunteer nurses from Riverside, to help in the 1918 influenza pandemic.<sup>83</sup>

Carl Gustav Lykken, a mining engineer from North Dakota, knew Cornelia White from her teaching days and later in Mexico, where he worked as a surveyor. He fled the Mexican Revolution with the White sisters and at their suggestion settled in Palm Springs in 1913. With a partner, J.H. Bartlett, Lykken purchased David Blanchard's general store and in 1914 moved the operation to a new building across Main Street, a simple frame building at what is now 180 N. Palm Canyon Drive (HSPB-9). Originally called Lykken and Bartlett, the store became known as Lykken's Department and Hardware Store after Lykken became the sole operator. For many years the store housed the town's post office, telegraph service, and only telephone, with an extension to the Desert Inn.<sup>84</sup>

J.H. Bartlett and Carl Lykken in front of their store. Note the First Community Church in the background. Source: *Palm Springs Life*, "Men on the Forefront."

<sup>83</sup> Niemann, 77-79.

<sup>84</sup> Niemann, 95-96. The store was remodeled in the Spanish Colonial Revival style in the 1930s.

Master carpenter Alvah Hicks also arrived in Palm Springs in 1913, with his wife Tess and their two young sons. Originally from New York, Hicks had moved to Los Angeles in 1912 and then to the desert, looking for building and contracting work. He quickly gained a reputation for high-quality work and built houses for many of the village's early settlers. In the 1920s Hicks would develop some of the village's premier neighborhoods including Old Las Palmas and Little Tuscany, and bought control of the Palm Valley Land and Water Company founded by John Guthrie McCallum.<sup>85</sup>

Ed Bunker and his wife Zaddie, self-taught mechanics from Missouri, arrived in Palm Springs with their young daughter in 1914 and opened the village's first automotive garage in a corrugated metal shed (demolished) on the west side of Palm Canyon Drive (then Main Street) at Andreas Road (then Lawn Street), just north of the Desert Inn. They purchased additional property nearby and built the Bunker Cottages (demolished). After Ed left and the couple divorced, Zaddie continued to run the garage on her own. During World War I Zaddie took over the transportation of mail and visitors from the train station, which had been the responsibility of George Roberson, and became the first woman issued a chauffeur's license in California.<sup>86</sup> She eventually became one of the village's wealthiest landowners and most prominent citizens, as well as a licensed pilot, taking her first solo flight at age 66.<sup>87</sup>

Prescott T. Stevens, a successful Colorado cattle rancher, relocated with his wife Frances to California in 1912 to seek refuge from her respiratory problems. They first settled in Hollywood, where he invested in real estate, then moved to Palm Springs for the better air. By 1920, Stevens had purchased a large amount of land north of downtown Palm Springs, as well as several thousand acres from the Southern Pacific Railroad to the east and the north of the village to ensure a steady supply of water for his holdings. Stevens also bought shares in the original Palm Valley Water Company, and then formed the Whitewater Mutual Water Company and the Palm Springs Water Company. He put in underground piping to bring water to Palm Springs from Whitewater Canyon at Windy Point ensuring a steady supply of water despite wind or rain. Many of the homes in northern Palm Springs still use this water system.<sup>88</sup>

The village's first pharmacy was opened in 1917 by Dr. Jacob John Kocher, who constructed an adobe building (demolished) on the east side of Main Drive (now Palm Canyon), across from the Desert Inn and south of Lykken's Department Store.<sup>89</sup> Kocher became one of the town's leading physicians and when the Palm Springs Board of Trade was founded in 1918, was elected its first president.

<sup>85</sup> Niemann, 129-130.

<sup>86</sup> Niemann, 81-83. Zaddie Bunker would become one of Palm Springs' wealthiest landowners and at the age of 60 obtained her pilot's license.

<sup>88</sup> Greer, "Men on the Forefront."

<sup>89</sup> Sanborn fire insurance map, 1929.

In addition to respiratory patients, hoteliers, and merchants, Palm Springs attracted artists and writers in the early years of the 20<sup>th</sup> century, drawn no doubt by the beauty and solitude of the desert. The first of these was Carl Eytel, a German-born artist who emigrated to the United States in 1885 and developed an interest in the American west. He settled in Palm Springs in 1898 and, with the permission of the McCallums, built a small cabin out of lumber salvaged from abandoned houses (demolished). It was located near the site of the present-day Tennis Club. Eytel's pen and ink drawings helped to expose Palm Springs to the outside world, and he was hired by author and booster of the American West George Wharton James to illustrate James' book *The Wonders of the Colorado Desert*.<sup>90</sup> Landscape artist and Hearst cartoonist Jimmy Swinerton traveled to Palm Springs in 1907 after contracting tuberculosis and being given less than a year to live. He lived in Palm Springs until his death in 1974.<sup>91</sup> British-born writer and photographer J. Smeaton Chase arrived in Palm Springs in 1915. Chase was the author of several popular books about California, including *Yosemite Trails* and *California Coastal Trails*. He married Isabel White, the sister of Dr. Florilla and Cornelia White, in 1917, and in 1920 wrote *Our Araby: Palm Springs and the Garden of the Sun*, a book that did much to publicize the up-and-coming desert resort.<sup>92</sup>

## EARLY DEVELOPMENT (1884-1918): ELIGIBILITY

### Property Types: Single-family Residence, Commercial Building, Remnant Feature

Properties eligible under this theme represent some of the earliest extant *built* resources in the city's history. Resources from this period are associated with the Anglo-American settlers of the area, the founding of the town called Palm Springs, and its subsequent development into a winter health spa and tourist destination. Resources from this period are rare,<sup>93</sup> and all extant resources are likely already known. Resources eligible under this theme may include buildings (residential and commercial), along with ancillary structures, infrastructure, or other remnant features.

Remnant features from this period may include infrastructure improvements, including irrigation and stone walls. Of the many stone walls found in Palm Springs, perhaps the most historically significant are those lining the remains of the village's legendary irrigation canals – the Tahquitz and Whitewater ditches.<sup>94</sup> Entering the village across the modern-day Las Palmas neighborhood, the Whitewater Ditch skirted the mountain edge along the present-day sites of the O'Donnell Golf Course, Desert Inn, and The Willows, before crossing diagonally over the Tennis Club neighborhood. Not long after its completion, the Whitewater Ditch was extended to bring water to the development of Palmdale, site of modern-day Smoke Tree Ranch. A remnant of John McCallum's irrigation canal remains on the grounds of the Casa Cody Inn (175 S. Cahuilla Road; HSPB-59). There are also remnant stone walls in many residential neighborhoods, including the area now known as the Tennis Club neighborhood.

Rare surviving properties from this period include the McCallum Adobe (HSPB-5), the oldest remaining building in Palm Springs; and Miss Cornelia White's "Little House" (HSPB-4). Both buildings have been moved from their original locations and reconstructed at the Village Green Heritage Center. Another early example is the 1916 Reginald Pole adobe on the grounds of the Casa Cody (1916, 175 S. Cahuilla Road; HSPB-59). Also remaining from this period is the stage stop at Smoke Tree Ranch.

<sup>93</sup> The Palm Springs Hotel was demolished in 1954 to clear the site for new development (Fred Weigel, "Another Landmark of Village Disappearing," *The Desert Sun* XXVIII, 32, December 9, 1954.). Lykken's Department Store (HSPB-9) still stands but was remodeled in the Spanish Colonial Revival style in the 1930s. Bunker's Garage was replaced in 1929 with a Mission Revival-style building and eventually became the Village Pharmacy; it was demolished in 1967, along with the Desert Inn, to make way for the Desert Inn Fashion Plaza. Kocher's adobe pharmacy was demolished, probably in 1934 for construction of Kenneth Colborn's Palm Springs Shops Building (Roger C. Palmer, PhD, *Palm Springs Then & Now* (Charleston, SC: Arcadia Publishing, 2011), 49. Sanborn maps indicate that the adobe was intact in 1929 and was located where the Colborn building and the Center's Bank of America branch were successively constructed.)

<sup>94</sup> Information about the Tahquitz and Whitewater Ditches largely adapted from Steve Vaught, *Sentinels in Stone: Palm Springs' Historic Tennis Club Neighborhood and its Iconic Walls* (Palm Springs, CA: Palm Springs Preservation Foundation, 2015), 7-11.

### Applicable Eligibility Criteria

A building or remnant feature from this period may be eligible for historic designation under one or more of the following criteria:

CRITERIA	REASON
A/1/3 (Pattern of Development/Period) <sup>95</sup>	As a rare example of early residential or commercial development, or a remnant feature representing the first built resources associated with the Anglo-American settlement of Palm Springs.
B/2/2 (Person)	For its association with a significant person in the early history of Palm Springs. Significant persons within this theme include the earliest Anglo-American settlers who were influential in the establishment and development of Palm Springs.
C/3/4,5 (Architecture)	As a good or rare example of an architectural style, property type, or method of construction, particularly adobe construction, from the period; or as the work of a master builder, designer, artist, or architect. Additional information about architectural styles from each period and their associated character-defining features are outlined in the Architectural Styles chapter.

### Integrity Considerations

Each type of property depends on certain aspects of integrity to express its historic significance. In order to be eligible for listing at the federal, state, or local levels, a property must retain sufficient integrity to convey its historic significance under this theme. Properties and features from this period are extremely rare and represent some of the earliest development in Palm Springs; therefore, a greater degree of alteration may be acceptable.

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
A/1/3 (Pattern of Development/Period)	A property or feature from this period eligible under Criteria A/1/3 (Event) should retain integrity of design, feeling, and association, at a minimum, in order to convey the historic association with the city's early Anglo-American settlement. It is expected that integrity of setting may have been compromised by later development. Due to the importance and rarity of resources from this period, a property may remain eligible if it has been relocated.

<sup>95</sup> Note that eligibility criteria are listed in the standard format National Register/California Register/Local. Note that National Register/California Register Criterion A/1 can be applied to a single event important in history, or to an overall trend or pattern of development. The City of Palm Springs local ordinance distinguishes these into separate criteria – Criterion 1 applies to properties that are associated with a singular event; Criterion 3 applies to properties that “reflect or exemplify a particular period” in history.

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
B/2/2 (Person)	A residential property significant under Criterion B/2/2 (Person) should retain integrity of design, feeling, and association, at a minimum, in order to convey the historic association with a significant person.
C/3/4,5 (Architecture)	A property important for illustrating a particular property type, architectural style or construction technique; or that represents the work of a master must retain most of the physical features that constitute that type, style, or technique. <sup>96</sup> A property significant under Criterion C/3/4,5 (Architecture) should retain integrity of design, workmanship, and feeling, at a minimum, in order to be eligible under this theme. In adobe structures, the adobe walls should remain largely intact, and the building should retain the majority of the character-defining features associated with an adobe structure of its age. Alterations that are consistent with upgrades typically seen in early adobe structures, including later wood frame additions and replacement windows within original window openings, are acceptable. It is expected that the setting will have been compromised by later development.

#### **Early Development (1884-1918): Registration Requirements**

To be eligible under this theme, a property must:

- date from the period of significance;
- display sufficient character-defining features of the construction method or architectural style to convey its historic significance; and
- retain the essential aspects of historic integrity.

HISTORIC RESOURCES GROUP

## CONTEXT: PALM SPRINGS BETWEEN THE WARS (1919-1941)

### Overview

This context explores the transformation of Palm Springs from a modest spa town into a luxury winter resort in the years between the First and Second World Wars. By 1918 Nellie Coffman and her sons, George Roberson and Earl Coffman, understood the town's potential, not as a health spa for asthmatics and consumptives, but as an exclusive winter resort for the well-to-do, and set about transforming their sanatorium into the luxurious Desert Inn, one of the most renowned hostleries in the country. Their success inspired the development of two equally spectacular hotels in the 1920s and cemented the town's growing reputation as one of the country's premier luxury winter resorts. These were the Oasis Hotel (121 S. Palm Canyon Drive; HSPB-10), designed by Frank Lloyd Wright, Jr. (known as Lloyd Wright) and opened in 1925 by Pearl McCallum McManus;<sup>97</sup> and the grand Hotel El Mirador (1150 N. Indian Canyon Drive), designed by Walker and Eisen in a sumptuous Spanish Colonial Revival style and opened in 1927.<sup>98</sup>

El Mirador Hotel, photographed c. 1933. Source: Security Pacific National Bank Collection, Los Angeles Public Library.

<sup>97</sup> The Oasis Hotel opened on a provisional basis in 1924, but the official opening was in 1925.

<sup>98</sup> There was a New Year's Eve party held at El Mirador on December 31, 1927; the hotel officially opened for business on January 1, 1928. Burton L. Smith, "Miracle Hotel Graces Desert," *Los Angeles Times*, January 2, 1928.

Automobile tourism played an early and important part in the success and growth of Palm Springs as a resort destination. In 1914, highway bonds were passed in Riverside County for extensive road improvements and construction of new routes. As part of these efforts, the highway connecting Los Angeles and Palm Springs was completed in October 1916.<sup>99</sup> Pavement of the highway through to Indio was completed in 1924, allowing travelers to drive all the way from Los Angeles to Palm Springs in less than 4 hours, all on paved roads.<sup>100</sup>

The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. Several tracts were subdivided by Prescott T. Stevens, along with other prominent early Palm Springs settlers including Pearl McManus, Raymond Cree, and Harriet Cody. There are extant properties from this period associated with some of the village's most prominent citizens, including Ted Fulford, Carl G. Lykken, Zaddie Bunker, Alvah Hicks, Harold Hicks, Katherine Finchy, Earle Strebe, Phil Boyd, and many others.

In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. Wealthy capitalists who came to Palm Springs in the 1920s include King Camp Gillette; Carrie Humphrey Birge, widow of George K. Birge, the wallpaper & Pierce-Arrow magnate; businessman and philanthropist William Mead; Frederick W. Stevens of the American Locomotive Company; Chicago capitalist John Burnham; steel magnate Louis R. Davidson; and cereal king S.K. Kellogg, who began wintering in Palm Springs as early as 1926.

The 1930s saw Palm Springs blossom, as more and more celebrities made it their winter weekend getaway, and more development sprang up to house and entertain them. By the start of World War II, Palm Springs had so long been thought of as a movie star's playground that some of the neighborhoods were described as "Beverly Hills in the desert." One section was so filled with film notables, the neighborhood was ultimately dubbed the "Movie Colony."

In the 1930s important figures in finance and business continued to flock to the desert in the winter, helping to cement the village's reputation as one of the nation's top winter resort destinations. Internationally famous names such as Walter P. Chrysler; Alfred Vanderbilt; Herbert F. "Hib" Johnson of the S.C. Johnson Co.; John Jakob Raskob, former chairman of the Democratic National Committee, head of finance for both General Motors and Dupont de Nemours, and builder of the Empire State Building; auto magnate Walter Marmon; Julia S. Carnell of National Cash Register; Arthur K. Bourne of Singer Sewing Machine fortune; Franklyn Hutton, James S. Kemper and his brother Hathaway of the

<sup>99</sup> Steve Lech, "Back in the Day: Jackrabbit Trail was a first link between Moreno and Redlands," *The Press Enterprise*, February 27, 2014.

insurance giant, Kemper Insurance Group; Russell Vought of Vought Aircraft; and Lawrence Mario Giannini, who made the Bank of America into one of the world's largest financial institutions.

Architecturally, the Spanish and Mediterranean Revival styles were the town's dominant architectural expression during this period. In addition, there are examples of simplified Ranch houses featuring rustic details and board-and-batten exterior walls. Beginning in the 1930s, prominent Modernist architects began making significant contributions to the architectural landscape in Palm Springs.<sup>101</sup>

This context examines influences on the built environment in Palm Springs between World War I and the onset of World War II. The first section provides an overview of the important developments in architecture during this period and a brief discussion of some of the significant architects. Following the introductory section are the themes and sub-themes, divided by property type: single-family residential development, multi-family residential development, commercial development, and civic and institutional development. At the conclusion of each theme are registration requirements for evaluating resources under that theme.

<sup>101</sup> Discussion of Modern architectural trends in Palm Springs largely derived from Alan Hess, "Historic Context of Modern Architecture: Residential, Commercial and Civic Architecture," for Historic Resources Group, January 23, 2015 and revised June 9, 2015.

**THEME: SINGLE-FAMILY RESIDENTIAL DEVELOPMENT BETWEEN THE WARS (1919-1941)<sup>102</sup>**

**Residential Architecture (1919-1941)<sup>103</sup>**

This sub-theme explores the important role of architecture in the development of single-family housing in Palm Springs, and discusses buildings that are significant examples of particular architectural styles or the work of important architects. In the early 1920s the utilitarian structures built to serve the basic needs of early settlers began to give way to more stylish housing designed for the pleasure of seasonal residents and visitors. There are a range of architectural styles seen in the residential neighborhoods of Palm Springs from this period, including period revival, Ranch, and early Modernist works.

Early aerial view of Palm Springs, showing sparse development in 1920s. Photograph is taken above present-day Tennis Club. Indian Avenue (now Indian Canyon) is the tree-lined street at the top of the photo; the perpendicular street is Arenas Road. The open space on the left is the Desert Inn Mashie Golf Course. Source: *Palm Springs, CA: Images of America*, p. 68.

<sup>102</sup> Multi-family residential development is discussed in a separate theme, below.

<sup>103</sup> This section includes an overview discussion of the predominant architectural styles from this period. A more detailed description of each style, including character-defining features, is included in the Architectural Styles section.

### Early 20<sup>th</sup> Century & Period Revival Styles

There is a small number of 1920s and 1930s “California bungalows” influenced by the Arts and Crafts movement in Palm Springs. Although these examples are rare, tenets of the style reflect the lifestyle of Palm Springs (rugged/rustic setting, use of natural materials, connection to outdoors), and the modest, one-story, bungalow type is seen throughout the early neighborhoods, albeit with varying stylistic details. The California bungalow was a simple, garden-oriented house uniquely suited for the climate and lifestyle of the region. The term bungalow typically refers to a modest, one- or one-and-a-half-story house with an informal floor plan. The exteriors were generally simple, to fit with the rugged lifestyle of the inhabitants, and the use of natural materials was important to the design aesthetic. Wide, overhanging eaves not only emphasized the horizontal emphasis of the small bungalow, but were also practical in shading the house from the hot California sun. Structural members were exposed, particularly at the roof line. Brick or stone foundations supported the wood frames, which were clad either in wood shingles or stucco, and heavy supports define the deeply recessed front porch.

Residential design in the 1920s displays an eclectic array of period revival styles, inspired in part by the Panama-California Exposition and the burgeoning film industry. As the focus on regional expression through architecture evolved, period and exotic revival styles took hold throughout California. Mediterranean Revival and Spanish Colonial Revival examples prevailed, in large measure due to the Panama-California Exposition, held in San Diego in 1915. The lead architect was Bertram Grosvenor Goodhue, who was assisted by Carleton Winslow. Goodhue chose an eclectic Spanish style for the exposition buildings, setting it apart from the more formal European Renaissance and Neoclassical styles which were being employed at the San Francisco World’s Fair the same year. Goodhue’s architecture featured stylistic references to the Catholic missions and churches of Southern California and Mexico, as well as to grand palaces of Mexico, Spain, and Italy. Well suited to the region’s warm, dry climate, the Spanish Colonial and Mediterranean Revival styles in particular appealed to many Southern California residents for their exotic appearance and sense of history. “Here were two styles supported by the regional myth of California as the Mediterranean shores of America and even, in the case of Spanish Revival, supported by a slight degree of historical justification.”<sup>104</sup>

In the 1920s and 1930s a number of architects and designers from Los Angeles and elsewhere worked in Palm Springs, designing Spanish and Mediterranean Revival-style residences primarily as winter homes for seasonal residents. Many of these were constructed of cast-in-place concrete, likely in response to the desert climate. Architects working in Palm Springs during this period included: Paul R. Williams, the talented and prolific “Architect to the Stars” and first African American member of the American Institute of Architects; Gerard Colcord, a Beverly Hills architect best known for his sprawling “Country Colonials;” Wallace Neff, whose highly refined, distinctive interpretations of traditional styles made him one of Southern California’s most sought-after residential architects; John Porter Clark, a young designer who,

<sup>104</sup> Starr, *Material Dreams*, 191.

after working in Pasadena for Garrett Van Pelt, moved to Palm Springs and worked under the license of Van Pelt and Lind until securing his own certification; and William Charles Tanner, an artist and draftsman based first in Riverside and then Hollywood, who was not a licensed architect but who managed to secure some of the most important projects in Palm Springs in the 1920s, including the revamped Desert Inn and the house called *Ojo del Desierto* ("Eye of the Desert").

*Ojo del Desierto* (447 W. Alejo Road, HSPB-19 and listed in the National Register of Historic Places), the winter home of oilman Thomas O'Donnell, a Desert Inn regular, and his wife Dr. Winnifred Willis Jenney, is one of the best examples of the Spanish and Mediterranean Revival in Palm Springs. Constructed in 1925 on the hillside above the Desert Inn, *Ojo del Desierto* was designed by Tanner, who was simultaneously working on the Desert Inn, and built by Alvah Hicks on land that had been owned by Nellie Coffman. The house was built of reinforced concrete, clad in plaster to resemble adobe, and topped with a clay tile roof. Cantilevered wood balconies shield the house from the sun, and French doors open to tiled patios and a large stone terrace with a commanding view over the city. The interior features tile floors, hooded fireplaces, exposed wood trusses, wrought iron balconies, and *Mudejar*-style paneled wood doors.

Other high-style examples include The Willows (412 W. Tahquitz Canyon Way, HSPB-34), originally constructed in 1925 as the winter home of businessman, philanthropist, and Los Feliz developer William Mead and designed by architect William J. Dodd of Dodd & Richards.<sup>105</sup> It is built into the lower slopes of Mt. San Jacinto at the west end of Tahquitz Canyon Way. The house is a cluster of simple rectangular volumes finished in plaster, with clay barrel tile roofs, wrought iron balconies supported on elaborate plaster brackets, and an elevated, arched loggia with a plaster groin vault. The interior features plaster walls, polychrome coffered ceilings, and tiled fireplaces. That same year, Dodd & Richards designed a twin of The Willows for Roland P. Bishop (468 W. Tahquitz Canyon Way). Bishop was a prominent Los Angeles businessman who headed Bishop & Co., Southern California's largest confectioner and purveyor of baked goods, which was acquired by the National Biscuit Co. (NABISCO) in 1930.

One of the most exotic Mediterranean-inspired houses in Palm Springs is Dar Maroc (now the Korakia Pensione, 257 Patencio Drive), the home of Scottish-born painter Gordon Coutts, who after a lifetime of wandering the world spent his last years in Palm Springs. Coutts was born in Aberdeen in the mid-1860s and studied art at the *Académie Julian* in Paris, where he distinguished himself with his landscapes and portraits; he later spent ten years as an art instructor in New South Wales, Australia, and some of his works now hang in the Australian National Art Gallery, the Adelaide National Gallery, and the

<sup>105</sup> "The History," *The Willows Historic Palm Springs Inn*, <https://thewillowspalmsprings.com/press-history-of-the-willows/> (accessed June 23, 2015).

Melbourne Art Gallery.<sup>106</sup> Coutts moved to San Francisco with his American wife Alice about 1900; after their divorce in 1917, he spent several years living in Spain and North Africa with his second wife, Gertrude.<sup>107</sup> In the early 1920s ill health ended Coutts' travels and brought him to Palm Springs, then a budding artists' colony whose climate and light reminded him of North Africa. He built Dar Maroc in 1924, complete with crenellated walls, horseshoe arches, tiled patios, and tinkling fountains. Coutts settled there with his wife and daughters and hosted a bohemian salon of artists that included *American Gothic* painter Grant Wood, the great English portrait artist Sir John Lavery, and film stars like Errol Flynn and Rudolph Valentino.<sup>108</sup> Coutts died in Palm Springs in 1937.<sup>109</sup> After his death, Dar Maroc was converted into an apartment building.<sup>110</sup>

In 1929 photographer Stephen H. Willard built an exceptional Spanish Colonial Revival house at 1701 S. Palm Canyon Drive. Willard was raised in Corona and learned photography in high school. After graduating in 1912 he made photographic trips through the Sierra Nevadas and the deserts of the Southwest. In 1922 he and his wife Beatrice settled in Palm Springs and opened a studio and gallery, and Willard continued his travels to photograph the Colorado and Mojave deserts. His photos, donated

High style Spanish and Mediterranean Revival examples such as The Willows, *Ojo del Desierto*, and Dar Maroc are comparatively rare in Palm Springs, where the simpler, more rustic style of traditional southwestern adobe, hacienda, and wood ranch vernacular types were believed to be better suited to the desert climate and casual lifestyle. These tended to be informal one-story houses finished in plaster, brick, or board-and-batten siding, with irregular or rambling plans, low-pitched tile or wood shake roofs, wood or steel windows, and minimal ornamentation. The Ranch-style house proved particularly popular both before and after the war, combining as it did modernist ideas of space and function with traditional elements of working ranches and Spanish ranchos. This minimalist trend continued into the post-World War II years; the city has a collection of 1940s bungalows that feature red clay tile roofing and steel casement windows. The Arthur Bourne House (1933, 486 S. Patencio Road; altered) by Wallace Neff is a Spanish-style hacienda built around a central courtyard and swimming pool, but the simplicity of its forms and its integration of indoor spaces with exterior terraces reflects this important architect's attempt to “fuse the Mediterranean Revival with the modern style.”<sup>113</sup>

### The Advent of Modernism

The International Style – an architectural aesthetic that stressed rationality, logic, and a break with the past – emerged in Europe in the 1920s with the work of Charles-Édouard Jeanneret (Le Corbusier) in France, and Walter Gropius and Ludwig Mies van der Rohe in Germany, where the Bauhaus School trained a future generation of Modern architects. For these early 20<sup>th</sup>-century Modernists, the machine was “the great vehicle of aesthetic transformation not only for its suggestion of cleanliness and efficiency, but also for the new materials and techniques it introduced,”<sup>114</sup> including steel, glass, and concrete. Their buildings were minimalist in concept, stressed functionalism, and were devoid of regional characteristics and nonessential decorative elements. Modern architects were working to establish a new architectural style that was reflective of the Modern era.

Crucial to the development of the International Style was Le Corbusier and Pierre Jeanneret’s 1926 “Five Points Towards a New Architecture,” which outlined their principles for modern design: *piloti* (columns which raised the building above the ground), a free plan (possible through the use of concrete construction), free façades (because the exterior walls are no longer load-bearing), flat roof with roof garden (replacing land lost underneath the building), and ribbon windows. These ideas are most fully expressed in Le Corbusier’s 1929 Villa Savoye, located in Poissy, France.

Mies van der Rohe espoused a slightly different interpretation of the International Style, based upon the aphorism that “less is more.” Mies focused upon the concept of enclosing open and adaptable “universal spaces” within a clearly arranged structural framework of pre-fabricated steel members infilled with glass. This concept was expressed in three Miesian subtypes: the glass-and-steel pavilion, the all-glass curtain wall, and the modular building.<sup>115</sup>

In 1932, New York’s Museum of Modern Art hosted an architecture exhibition curated by Henry Russell-Hitchcock and Philip Johnson entitled “The International Style: Architecture Since 1922.” The accompanying publication was the first to name and define the style, introducing the American public to the new European approach to design and highlighting its major practitioners. This helped promote the style, which was critical to the development of Modernism before World War II. Hitchcock and Johnson identified the primary aesthetic principles of the International Style as: “an emphasis upon volume – space enclosed by thin planes or surfaces as opposed to the suggestion of mass and solidity; regularity as opposed to symmetry or other kinds of obvious balance; and lastly, dependence upon the intrinsic elegance of materials, technical perfection, and fine proportions.”<sup>116</sup>

<sup>114</sup> Paul Gleye, *The Architecture of Los Angeles* (Los Angeles: Rosebud Books, 1981), 137.

<sup>115</sup> City of Riverside, “Modernism Context Statement,” November 3, 2009, 15.

<sup>116</sup> Henry Russell Hitchcock and Philip Johnson, *The International Style* (New York: H. W. Norton & Company, revised edition with new foreword published in 1995), 29.

The Nazis closed the Bauhaus in 1933, and Gropius and Mies van der Rohe fled to the United States, by which time they had both established international reputations as pioneers of Modern architecture. Mies taught at the Illinois Institute of Technology, and Gropius at the Harvard School of Design. This meant that the tenets of International Style Modernism were now being promoted in the United States by two of its leaders. Two Austrian immigrants, Richard Neutra and Rudolph Schindler are credited with introducing International Style architecture to Southern California. Both worked briefly for Frank Lloyd Wright before settling in Los Angeles and embarking on their own careers, contributing to the development of a distinctly regional interpretation of Modern architecture.

The earliest known Modern building to be built in the Palm Springs area was the Popenoe Cabin (1922, demolished) by Schindler.<sup>117</sup> The Popenoe Cabin was located in what is now Palm Desert, but it is notable here as a significant and early Modernist work in the Coachella Valley.

Popenoe Cabin (1922, R. M. Schindler). Source: UC-Santa Barbara Architecture and Design Collections, Schindler Papers.

Several architects who would be central to the development of Palm Springs Modern architecture arrived in the city in the 1930s, launching a fertile and innovative era. In addition, several important out-of-town architects began their association with the city during this period. Though not all clients wanted Modern design, the commitment of these architects to Modern concepts helped lay the foundation among private and civic clients and the general public for the acceptance of Modern design in ensuing decades. The presence of these architects demonstrates that environmental and economic conditions in Palm Springs were, and continued to be, conducive to innovative architecture. It also reflects the variety of Modern architectural concepts, from International Style, to Streamline Moderne, to Organic, which would be characteristic of Palm Springs Modernism.

Two key Palm Springs architects, Albert Frey and John Porter Clark, worked together for more than 15 years. They were partners from 1935 to 1937, although their work at this time was published under

<sup>117</sup> Paul Popenoe (1888-1979) was born in Kansas but grew up in California. He was the founder of modern marriage counseling in the United States. Popenoe and his wife lived in the Coachella Valley from 1920 to 1926; in 1926 they moved to Los Angeles. Designs for the Popenoe Cabin show Schindler playing with composition, proportion, and space.

the name Van Pelt and Lind; they worked together under the firm name Clark & Frey from 1939 to 1952.<sup>118</sup> Though clients were still favoring traditional styles (with which Clark, who had trained at Cornell and worked for the firm of Marston, Van Pelt & Maybury, was familiar), Clark and Frey continued to promote Modern design, seen in the Guthrie House (1935-37, 666 E. Mel Avenue; altered), Halberg House (1935-37; demolished), and particularly in Clark's own house (1939, 1200 E. Paseo El Mirador). Clark's house expresses the freedom of design and freedom from convention embodied in Modernism: its materials include steel columns and corrugated metal siding (a material previously confined to industrial uses), and its unusual plan lifting the small house off the ground, leaving the ground floor open as a shaded patio, shows the architect's response to environmental conditions.

L: John Porter Clark House (1939, John Porter Clark) at 1200 E. Paseo El Mirador. Photographed by Julius Shulman, 1947. Source: The J. Paul Getty Research Institute, Los Angeles. Source: Los Angeles Public Library.

The Davidson Residence/Ship of the Desert (1936, 1995 Camino Monte; HSPB-47) is one of the few Streamline Moderne buildings in Palm Springs; as such it represents one important expression of Modern design reflecting the machine imagery of automobiles, steamships, and airplanes. It was designed by the architectural firm of Earle Webster & Adrian Wilson; Bashford and Barlow were the landscape architects; and Earle Webster's wife Honor Easton did the interiors, for which she received an award from the Southern California Chapter of the AIA. In addition, the Ship of the Desert marks the first work in Palm Springs by California School artist Millard Sheets, who consulted on the house's colors. The home was featured on the cover of *Sunset* magazine in October 1937.

<sup>118</sup> Joseph Rosa, *Albert Frey, Architect* (New York, NY: Rizzoli International Publications, Inc., 1990), 150.

Richard Neutra interpreted the International Style in his design for the Grace Lewis Miller House (1937, 2311 N. Indian Canyon Drive; HSPB-45). This small house combined a home with a dance studio for the owner. It is a good representation of Neutra's use of simple, flat-roofed forms arranged and adapted to the sun, outdoor space, and the need for coolness and ventilation in the desert.

### Sub-Theme: Single-Family Residential Development (1919-1929)

If [Herodotus] were to visit this modern ‘Occidental Araby’ at Palm Springs which is becoming world famous for its beauty and wonderful winter weather conditions...he would find flora and fauna of infinite variety and kind....he would find that men of wealth had preceded him to enjoy the natural beauty, the perfect winter climate, the rejuvenating elevation and the curative spring waters by building fine homes and establishing here a winter community.<sup>119</sup>

From the start, Palm Springs owed much of its residential development to tourism. Guests who stayed at the Desert Inn (able to accommodate 200 guests by 1925), the Oasis Hotel (officially opened in 1925), and El Mirador (opened with a New Year’s Eve Party in 1927) came for the warm desert air and positive health effects.<sup>120</sup> Those same guests began to consider the value of residency in Palm Springs and as author Lawrence Culver points out, “...Hollywood vacationers-turned-residents portended the future of the resort.”<sup>121</sup>

Pre-World War II residential development was largely concentrated on land immediately surrounding the existing village and the resorts: “the sheltered area.”<sup>122</sup> Development to the west of Palm Canyon Drive at the base of the foothills provided shelter from wind and blowing sand as well as vistas of the surrounding mountains and desert landscape. Less expensive tracts clustered on the east side of the Palm Canyon/Indian Canyon spine that bisected the village. However, the developments south of El Mirador catered to guests of the hotel that cultivated a distinctly Hollywood clientele.<sup>123</sup> Many hotel guests later bought homes in the area around El Mirador.

The other major area of prewar residential development in Palm Springs was to the south along the spine of South Palm Canyon Drive around Tahquitz Creek. With the exception of Smoke Tree Ranch, south Palm Springs remained largely undeveloped until the late 1950s and 1960s. Before World War II, there was no development east of Sunrise Way.

In addition to the rise of the automobile, the prewar residential development of Palm Springs was influenced as well by the Los Angeles press. During the 1920s, the society pages of the *Los Angeles Times* and other newspapers extensively covered the arrivals and departures of wealthy industrialists from all over the country who opened their homes for the season or took up winter residency in Palm Springs. Social occasions in Palm Springs were also widely covered—be they parties in private homes or one of the many public events (e.g., the Desert Circus, dog shows, fashion shows, or other events). With

<sup>119</sup> *Brochure for the Araby Tract, 1925.*

<sup>120</sup> The development of these hotels is discussed in greater detail in the Commercial Development theme; they are mentioned here as catalysts for residential development during this period.

<sup>121</sup> Lawrence Culver, *The Frontier of Leisure* (New York: Oxford University Press, 2010), 156.

<sup>122</sup> “Ad for Austin G. McManus,” *Palm Springs California Magazine*, 1929, 27.

<sup>123</sup> The El Mirador was the only one of the Palm Springs hotels that welcomed Jewish guests. This and purposeful cultivation of Hollywood through publicist and free accommodations for the press made it popular with actors, writers, directors, and other Hollywood notables.

the arrival of the Hollywood actors, writers, producers and directors, photographs of stars enjoying the desert playground were distributed nationally.

Development in all of Palm Springs' pre-World War II residential tracts was sparse, and in-fill construction continued in virtually all of them throughout the postwar period. As a result, the period revival style residences from before World War II often sit side-by-side with Ranch and Mid-century Modern designs from later periods. Many early homes were constructed on multiple parcels with ample space for landscaped private gardens.

#### Residential Subdivisions from the Period

Following is a discussion of select residential subdivisions that were recorded in the 1920s. The narrative discussion is intended to provide an overview of residential development during this period, including the earliest recorded tracts, those that were particularly significant in the development of Palm Springs, or those that were associated with an important developer. The subdivisions are listed chronologically by the date they were initially recorded. The Overview of Tract Development in Appendix B includes a list of the residential subdivisions in Palm Springs that were studied as part of the survey effort, including any information compiled about additional tracts not included in the narrative. The information included in the table is intended to provide additional data about residential development in Palm Springs and inform future researchers about this facet of Palm Springs history; a complete history of each tract is outside the scope of this project.

**FIGURE 2: RESIDENTIAL SUBDIVISIONS RECORDED IN THE 1920S**

Vista Santa Rosa	1927	Raymond Cree & John Chaffey
Palos Verdes Tract	1928	Harriet Dowie Cody and Reta McDowie

### Vista Acres, Las Hacienditas, Tahquitz Park (1923)

Palm Springs' transition from resort to residential development began in earnest in 1923. In January of that year, Prescott T. Stevens developed Vista Acres, a twenty-seven parcel subdivision west of Palm Canyon Drive along W. Chino Drive. This was quickly followed in March by the subdivision of Las Hacienditas, immediately to the south of El Mirador, developed by Dr. J.J. Kocher.<sup>124</sup> Las Hacienditas was bordered by Tachevah Drive to the north, Tamarisk Road to the south, N. Indian Canyon to the west, and N. Via Miraleste to the east. Today, Las Hacienditas is part of what is known as the Movie Colony.

In March of 1923, Pearl McCallum McManus, daughter of early Palm Springs settler John Guthrie McCallum, subdivided Tahquitz Park (colloquially known as the Tennis Club neighborhood).<sup>125</sup> Tahquitz Park was bordered by Baristo Road on the south, Tahquitz Drive on the west, the north side of Arenas Road to the north, and Patencio Road on the east. McManus built a Mediterranean villa-inspired home, "The Pink House" at 281 S. Tahquitz Drive (demolished) that was a noted local landmark.<sup>126</sup> However, building was generally slow. To boost sales at the tract, McManus and her husband built a speculative house known as "The Tahquitz Park Demonstration House" (a.k.a. Tahquitz House; 1937-38, Charles O. Matcham) on Valmonte del Norte. Interiors were furnished by Barker Brothers "in the soft subtle shades of desert color."<sup>127</sup> The Minimal Traditional-style house was featured in the November 1938 issue of *Arts + Architecture* magazine along with ads by the McManus Realty Co. for its sale. There are a number of architecturally significant residences in Tahquitz Park, including the Roberson Residence (1926; 385 W. Tahquitz Drive; HSPB-21); the Bourne Residence by Wallace Neff (1933, 486 W. Patencio Lane; altered), and the Burnham Residence by H. Palmer Sabin (1929, 147 S. Tahquitz Drive).<sup>128</sup>

The Burnham property was the site of an artists' colony founded by John Burnham, the son of Chicago architect Daniel Burnham (1846-1912). The elder Burnham was famous as the supervising architect of the Chicago World's Fair and the designer of the Flatiron building in New York City. The younger Burnham was a banker and investor who founded the nationwide investment firm of Burnham & Co. He was also an amateur painter and a patron of the arts. Burnham retired in 1924 and shortly after

<sup>124</sup> Dr. J.J. Kocher was the brother of architect A. Lawrence Kocher. In 1934, Kocher and Frey designed the Kocher-Samson Building for Dr. Kocher.

<sup>125</sup> The residential area now known as the Tennis Club Neighborhood is home to several historic stacked stone walls. the main house.<sup>131</sup> The earliest reference to the complex appears in a 1927 *California Southland* article that refers to one of the buildings as the Alson Clark studio.<sup>132</sup> In addition to his own artists' colony, in 1930 Burnham co-founded, with Pearl McManus, the Desert Art School, housed in the old McCallum adobe (HSPB-5). He also served as director of the San Diego Fine Arts Gallery.<sup>133</sup> In the 1950s, Burnham sold the main house and two of the bungalows to Francis Crocker, the "Father of the Palm Springs Aerial Tramway."<sup>134</sup> However, the site remained an artists' colony as late as the 1960s or 1970s, as several artists were still living there at that time.<sup>135</sup>

The desert studio of Alson Clark, as published in *California Southland*, 1927.

<sup>131</sup> The main house is believed to have been completed in 1929, but it may have been too late to be included on the 1929 Sanborn map. The house is mentioned in an April 1930 article in the *Los Angeles Times* that notes a studio occupied by Nicolai Fechin next to Burnham's residence.

One of the Homes We Have Built

IN 1884, while searching for the finest climate in California, John Guthrie McCallum was told by his friends, the Cahuilla Indians, of a sheltered nook on the edge of the desert, nestling at the foot of the snow-capped San Jacinto mountains.

The first view of this lovely valley so strongly impressed him that he decided to make this his winter home, and during the next three years purchased approximately 6,000 acres on which has developed the now world famous winter resort of Palm Springs.

The village is built on and around the original McCallum Ranch, and the old adobe ranch house, built by the Indians, still remains to form a part of the delightful Oasis Hotel.

From this foundation has developed the McManus Realty Co., largest owners and developers of fine business and residential properties, all located within the sheltered area.

This firm has built many fine homes, an apartment and one of the beautiful hotels.

Sales consummated during recent years have totaled over \$400,000. At this time several newly completed cottages and larger residences designed especially for sunshine and desert conditions, are available for lease or sale.

A new schedule of prices, as a result of lower building costs, now prevails.

Satisfactory terms and financing can be arranged.

**AUSTIN G. McMANUS**  
PALM SPRINGS, CALIFORNIA

Advertisement from a 1929 issue of *Palm Springs, California* magazine features Pearl McManus' "Pink Mansion in the Tahquitz Park." Source: Palm Springs Historical Society.

Both McManus and Stevens would go on to shape residential development through the 1920s. Pioneer Properties, the real estate sales company founded by McManus and of which she was president, "played a major role in Palm Springs' development."<sup>136</sup> Austin McManus, Pearl McManus' husband, had been a realtor in Pasadena.<sup>137</sup> By 1929, the McManus Realty Co. was the "largest owner and developer of fine business and residential properties...and had built many fine homes, an apartment and one of the beautiful hotels."<sup>138</sup> Pearl McManus had a great deal of power, and "ruled the roost in the sale of anything she owned with an iron glove – insisting that plans for development had to have her approval."<sup>139</sup> According to more than one account, "[Pearl] scrutinized the people and the plans – for purchase or construction – turning them down if she didn't like them for any reason."<sup>140</sup> As a result, builders and real estate brokers went to see her "with fear and trembling" when presenting sales offers.<sup>141</sup>

Part of McManus' vision for the development of Palm Springs during this period included the idea for the first residential subdivision in Palm Springs utilizing modern architecture. In 1925, she approached Lloyd Wright, whom she had engaged to design the Oasis Hotel (1925) to design a "prototype house" for a subdivision that McManus, herself, described as "very modern."<sup>142</sup> Wright's designs for the model house reveal the expressive modern, yet pre-Columbian influenced forms and decoration he used in the Samuel-Navarro Residence in Los Angeles (1926-1928). Yet, it is unclear from the drawings if the geometric decoration was intended as textured concrete block or stenciled detailing. Regardless, the plan for the "prototype house for Palms Springs" features rooms organized around a walled-in and covered patio integrating interior and exterior space.<sup>143</sup> Whether it was due to construction costs or other factors is unknown, but the homes were never built.

### Palm Canyon Mesa (1924)

Palm Canyon Mesa (a.k.a. Tahquitz Desert Estates)<sup>144</sup> is a development nestled in the foothills of the southern end of the city. Palm Canyon Mesa is bordered on the east by S. Palm Canyon Drive and includes Ridge Road to the north, Crestview Drive to the west, and Camino Descanso to the south. The subdivision was the vision of Edmond T. Fulford (1890-1936), the founder of the successful Builders Supply Company in Palm Springs.<sup>145</sup> Fulford and his wife Marion took up residency in the desert in 1921.

Palm Canyon Mesa was planned as a self-contained community accessed through a common main entrance.<sup>146</sup> The development was created in two phases: phase one included 172 parcels in 1924, followed by an additional 71 parcels to the south in 1927. Development in Palm Canyon Mesa was not instantaneous; Sanborn maps from 1929 show just ten homes had been constructed in the

<sup>144</sup> The *Palm Springs Limelight* of December 26, 1936, the *San Bernardino County Sun* of April 7, 1936, and the *Los Angeles Times* of April 7, 1936 refer to the Edmond T Fulford and Edmund Goulding estate on Ridge Road as being in "the former Tahquitz Desert Estates."

<sup>145</sup> Per HSPB, the Purcell family was associated with the Builders Supply Company. The *Desert Sun* notes that Frank Purcell, Jr., was associated with Builders Supply as early as January 1963.

<sup>146</sup> Howard Johns, *Palm Springs Confidential* (Fort Lee, NJ: Barricade Books, 2004), 233.

development by that time; however, development continued in the 1930s and 1940s.<sup>147</sup> A gate for the community still stands at the corner of South Palm Canyon Drive and El Portal (HSPB-14).

Palm Canyon Mesa entry portal, southwest corner of W El Portal and S Palm Canyon Dr (HSPB-14). Photograph 2015, Historic Resources Group.

One of the earliest homes constructed in Palm Canyon Mesa was for King Gillette, the inventor of the safety razor, at 324 West Overlook Road (1923). The Spanish Colonial Revival style residence and guest cottage were surrounded by an acre of landscaped gardens and "...a cactus garden of several hundred varieties."<sup>148</sup> That same year, Edmond T. Fulford engaged renowned architect Paul R. Williams to build a residence at 152 El Camino Way – one of the architect's earliest residential commissions.<sup>149</sup> Fulford died unexpectedly from a heart attack. At the time of his death, his civic work included his role as one of the founders and manager of the Palm Springs Field Club.<sup>150</sup> Other significant properties in the Mesa include: the iconic Howard Davidson Residence/Ship of the Desert (1936, Earle Webster & Adrian Wilson; HSPB-47) at 1995 South Camino Monte; the F.H. Bartholomay Residence (c. 1936, Gerard R.

<sup>147</sup> In 1934, two hillside streets adjacent to Palm Canyon Mesa No. 2 Tract were developed as "Palm Canyon Estates" by Los Angeles real estate man, Herbert W. Stanton and his son Forrest O. Stanton, a building contractor. Forest O. Stanton built a house at 2097 Camino Barranca for himself and his wife.

### Araby Tract (1925)

South and east of the village of Palm Springs, H.W. Otis and Son, owners/sub-dividers began marketing and selling “Our Occidental Araby at Palm Springs.”<sup>151</sup> The 138-parcel tract of irregularly-shaped lots included graded streets, electrical service, and 10,000 feet of water pipe with “city pressure.”<sup>152</sup> The Los Angeles-based Otis “fell in love with the area and purchased this property for development as a community of desert homes-sites have in mind a completed whole which will be artistic and charming...in keeping with the natural beauty of the surroundings and thoroughly protected by sensible racial and building restrictions.”<sup>153</sup>

<sup>151</sup> “Our Occidental Araby at Palm Springs” Sales Brochure, Clipping File, Palm Springs Historical Society.

<sup>152</sup> “Our Occidental Araby at Palm Springs” Sales Brochure, Clipping File, Palm Springs Historical Society.

<sup>153</sup> “Our Occidental Araby at Palm Springs” Sales Brochure, Clipping File, Palm Springs Historical Society.

A view of the Araby Tract office and water tower as featured in the Araby Tract sales brochure, *Our Occidental Araby*. A key selling feature of the tract was the 10,000 feet of water pipe improvements that delivered good water pressure. Source: Palm Springs Historical Society.

The sales brochure explained Otis' vision for an attractive community, "Bear in mind, however, that the building of expensive homes is not required or expected. Suitable artistry is the keynote of this development."<sup>154</sup> However, development was not instantaneous and Otis' vision of a cohesive community never came to fruition. Otis did, however, build his own home at 2200 E. Mesquite Drive.

View of the Araby Tract as presented in the tract's sales brochure, *Our Occidental Araby*. Source: Palm Springs Historical Society.

<sup>154</sup> "Our Occidental Araby at Palm Springs" Sales Brochure, Clipping File, Palm Springs Historical Society.

Adjacent to the Araby Tract, R. Lee Miller owned twenty acres of desert hillside. Miller, a civil engineer/contractor built a compound of rock houses referred to as a “Hopi Village” in the 1920s.<sup>155</sup> The distinctive, circular, stone R. Lee Miller Residence (c. 1925)<sup>156</sup> and the stone “Casa Contenta, Perle Wheeler Martin” Residence (c. 1933) were among them. Wheeler resided in her “Araby rock house” well into the late 1930s.<sup>157</sup> Four extant rock structures located at the end of the present-day private drive at 2540 S. Araby Drive match historic images of the Miller Residence and the Wheeler Martin Residence.<sup>158</sup> Miller was responsible for the construction of many early Palm Springs residences, including the Casablanca Adobe (590 S. Indian Trail, 1936; HSPB-68) for Pearl McManus in the Indian Trail Tract.

Little Araby Rock House. Source: Los Angeles Public Library.

### Merito Vista (1925)

Prescott T. Stevens (1846-1932) was ultimately Palm Springs’ largest pre-World War II residential real estate developer. Stevens, a successful Colorado cattle rancher, relocated with his wife Frances to California in 1912 to seek refuge from her respiratory problems. They first settled in Hollywood, where he invested in real estate, then moved to Palm Springs for the better air. By 1920, Stevens had purchased a large amount of land north of downtown Palm Springs. He also bought several thousand acres from the Southern Pacific Railroad to the east and the north of the village to ensure a steady supply of water

<sup>155</sup> No Title, *The Desert Sun*, October 7, 1929 reprinted in *The Desert Sun*, October 7, 1959.

<sup>158</sup> Historic addresses for these properties include the Martin Residence at 2540 and 2450 S. Araby (*Desert Sun*) and the Miller Residence at 2350 S. Araby (Palm Springs Historical Society).

for his holdings. He bought shares in the original Palm Valley Water Company and then formed the Whitewater Mutual Water Company and the Palm Springs Water Company.

**PALM SPRINGS**  
"OUR ARABY"

If you have not been to Palm Springs, now is the time to go, in order to fully enjoy its sheer natural beauty, its delightfully ideal winter climate and its invigorating elevation.

Men of wealth have always been quick to find and appreciate the beauty spots of America and convert them to their own pleasure, and in the past the development of Palm Springs has been confined to men of large means who pioneered this treasure spot.

With the subdividing, however, of Merito Vista into small estates, its privileges have been made available to those who do not necessarily care to erect pretentious homes here.

*Go to Palm Springs this month and while there, investigate Merito Vista, one of the most unique of the exclusive California subdivisions.*

(By auto, via the Los Angeles-Imperial Valley Route. Daily stage from Union Stage Depot, Los Angeles to Palm Springs.)

Advertisement for the Merito Vista subdivision. "Display Ad 109," *Los Angeles Times*, February 7, 1926.

With his colleague Alvah Hicks, a carpenter and nascent homebuilder, they subdivided many of Palm Spring's earliest developments: the Merito Vista tract (1925), Las Palmas Estates (1926), and Palm Springs Estates (1927). Recognizing the best way to sell homes was through tourism, Stevens, Hicks and other developers built the legendary El Mirador Hotel in 1927. Before long, Stevens was convincing tourists to trade up to home ownership.

Merito Vista was advertised for its "natural beauty," its status as a playground for the wealthy, and its subdivision into "small estate parcels" for those who "...do not necessarily care to erect pretentious homes here."<sup>159</sup> Indeed the parcel sizes for the 125 lots in Merito Vista are narrow and deep. However, the design of the subdivision deviates from a basic grid pattern to include curving and rounded streets evocative of the suburban residential community plans of Frederick Law Olmsted.<sup>160</sup> Merito Vista was a success as it reportedly "...practically sold out during the first season."<sup>161</sup> Sanborn maps from 1929 reveal that sales may have been brisk, but building was far slower; just twelve parcels in the development had structures associated with them by 1929.<sup>162</sup> Homes in Merito Vista were chiefly Spanish Colonial Revival, other period revival styles, or early iterations of the California Ranch style. More than twenty of them were reportedly built by carpenter-turned-general-contractor, Alvah Hicks, who developed a reputation for quality building. Often these houses were built on speculation, then quickly sold.<sup>163</sup> Homeowners also purchased multiple parcels for their estates – contributing to relatively low-density

<sup>159</sup> "Display Ad 109," *Los Angeles Times*, February 7, 1926.

<sup>160</sup> Olmsted was America's pre-eminent landscape designer in the late 19<sup>th</sup> century. He designed the Columbian Exposition of 1893, New York's Central Park and the improvements to the White House grounds of 1902.

development. Even as late as 1952, aerial photographs show significant numbers of undeveloped parcels within the tract.

Aerial view of the Merito Vista subdivision in 1952. As a result of sparse residential development in the Merito Vista subdivision even twenty-five years after the original subdivision, Spanish Colonial Revival style homes from the 1920s and 1930s often sit alongside postwar Mid-century Modern-style residences. Source: *Palm Springs Villager*, April 1952.

### Las Palmas Estates (1926)

On the heels of his success with Merito Vista, Prescott T. Stevens immediately began subdividing a large parcel of land directly to the north which he called Las Palmas Estates. Las Palmas Estates is bordered by Palm Canyon Drive on the east, Stevens Road on the north, Via Monte Vista on the west, and Via Lola on the south. Under the name Evans-Lee Corporation of Los Angeles,<sup>164</sup> the land was purchased for \$150,000 and subdivided into 165 parcels of one-fourth to one-third acre.<sup>165</sup>

Once again a layout of gently curving streets evoking Olmsted's ideas for gracious neighborhood development was employed. The large lots and groups of native palms made it a sentimental favorite of local developer Raymond Cree (1875-1967).<sup>166</sup> Warm weather, recreational amenities, and good schools were featured selling points in advertisements to Los Angeles residents. The tract also boasted "underground utilities and [an] abundance of meterless irrigation water."<sup>167</sup> With ads pronouncing "A

<sup>164</sup> Evans-Lee was a big Los Angeles Developer; however more research is needed to confirm the relationship with Stevens and Cree.

<sup>165</sup> "Desert Acres Jump to \$1500," *Los Angeles Times*, April 25, 1926, E7.

<sup>166</sup> In the Riverside Community Book, Cree called it "His crowning achievement." Often, the owners, developers, builders, and realtors played multiple roles in multiple developments. For example, someone might be the owner on one tract, the real estate agent on another, or in cases of builders, just build the houses independent of any ownership. In this case, Prescott T. Stevens is listed on the tract map, the *Los Angeles Times* mentions the Evans-Lee Corporation, and Cree is quoted in the Riverside Community Book.

<sup>167</sup> "Fine Homes Rise in Las Palmas," *Palm Springs News*, December 17, 1936, 6.

Home in Palm Springs is Well within Your Means,” Stevens marketed the accessibility of these homes.<sup>168</sup> Hollywood celebrities, Los Angeles businessmen, and Eastern and Midwestern snowbirds soon were building homes in Las Palmas Estates. As a result, the tract was referred to by Los Angeles society columnist Joan Winchell as “The Bel-Air section of Palm Springs.”<sup>169</sup>

One of the common sales techniques for Palm Springs real estate was the building of “demonstration homes.” Homes built on speculation were furnished by department stores in the latest interior designs and furnishings. Demonstration homes became fashionable tourist destinations where potential real estate (and hence, home furnishings) buyers could envision their own piece of the Palm Springs lifestyle. Bullock’s was a common partner in these demonstration homes, cross-promoting them in the furniture departments of their Los Angeles stores. Las Palmas Estates was home to two demonstration homes: Bullock’s Demonstration Home #1 (1935-36) at 339 Vereda del Norte, and Bullock’s All-Electric Demonstration Home (1936-37, Brewster and Benedict) at 201 Vereda Del Norte. The latter house, a self-described “modern interpretation of a French New Orleans type residence” drew 1,000 visitors on opening weekend, January 30-31, 1937.<sup>170</sup>

### Palm Springs Estates (1927)

In 1927, Prescott T. Stevens once again subdivided a large parcel of land – this time east of Indian Canyon Drive. The smallest of the Stevens subdivisions to date, the curving streets of Palm Springs Estates held just eighty-three lots. The subdivision was bordered by Tamarisk Road to the north, Via Miraleste to the east, Indian Avenue (now Indian Canyon Drive) on the west, and the lots just south of Via Colusa on the south.

Brochure for Palm Springs Estates, subdivided by Prescott Stevens in 1927. Source: Palm Springs Historical Society.

<sup>168</sup> “Display Ad 41,” *Los Angeles Times*, December 19, 1930, B2.

<sup>169</sup> “Joan Winchell,” *Los Angeles Times*, January 21, 1958, A1.

<sup>173</sup> “Inspect Home,” *Palm Springs News*, February 4, 1937, 1.

To support tourism and residential sales, Stevens built a golf course near the El Mirador hotel, as well as a landing strip to bring visitors by air to the desert community. The Great Depression was hard on Stevens, however. The golf course closed, the hotel was sold, and he died in 1932. Ultimately, Palm Springs Estates would become part of the larger area associated with residences of Hollywood stars known as “The Movie Colony.”<sup>171</sup>

By 1939, Palm Springs Estates was well populated with vacation homeowners from Los Angeles, the East, Midwest, and Pacific Northwest. The neighborhood was popular with members of the Los Angeles social circles featured in the *Los Angeles Times* and frequently included wives of wealthy businessmen.<sup>172</sup> Prewar residences in Palm Springs Estates were designed predominately in the Spanish Colonial Revival and other period revival styles, with postwar infill development in Mid-century Modern and Minimal Traditional styles.

#### Vista Santa Rosa (1927)

There are three residential tracts (Vista Santa Rosa, Indian Trail, and Warm Sands) developed in the 1920s and 1930s that are immediately adjacent to each other and form a small neighborhood at S. Indian Canyon and E. Ramon Road. These tracts were subdivided by various owners, including Pearl and Austin McManus, over a ten-year period, but have the physical appearance of an early residential subdivision in Palm Springs, related by architectural style and period of development.

In 1920, former Riverside County educator Raymond Cree moved to Palm Springs and was appointed the first President of the Palm Springs Union High School District. Cree’s first wife Margaret was a realtor and together they purchased a great deal of land in Palm Springs and in nearby communities. Cree was actively involved with several Palm Springs developments as “...either developer, owner, selling agent or all three.”<sup>173</sup> Among the tracts with which he was involved in some capacity other than direct ownership are Palm Canyon Mesa, Merito Vista, and Las Palmas Estates. Cree appears as part owner for the 60-parcel Winterhaven Manor tract (1931-34) along with Elliot M. Bank and Evelyn Bank.

<sup>171</sup> The “Movie Colony” was not a tract development, rather a neighborhood name that developed later to describe the high concentration of Hollywood personages residing in the area around the El Mirador Hotel. Although a wider area is sometimes claimed, the boundaries of the Movie Colony as recognized by the City of Palm Springs, the Palm Springs Board of Realtors, and the Movie Colony Neighborhood Association are: Tachevah Road on the north, Alejo Road on the south, Avenida Caballeros on the east, and Indian Canyon Drive on the west (source: The Movie Colony Neighborhood Association, <http://www.themoviecolony.org/history.php>). This boundary corresponds to the Palm Springs Estates and Las Hacienditas tracts, and to the potential district assessed in the 2015 survey. For purposes of this report, tract names are used to discuss development patterns and “Movie Colony” is used when referring to the broader social history of the area.

<sup>172</sup> 1939-40 *Palm Springs City Directory*, 87-96.

<sup>173</sup> “School Ceremony to Recognize Early California Educator,” *The Desert Sun*, March 1, 1968.

In 1927 Cree subdivided the Vista Santa Rosa tract into 131 parcels measuring 60 x100 feet each.<sup>174</sup> Vista Santa Rosa is bordered by Ramon Road on the north, S. Indian Canyon on the west, Calle Palo Fierro on the east, Camino Parocela west of Calle Encilia, and the south side of Calle Rock east of Calle Encilia.

Cree described the venture: “One day Nellie Coffman dropped by [my] office and wondered why [I] couldn’t develop a subdivision for the town’s working people.”<sup>175</sup> “Well, we did,” recalled Cree, “and before we knew it, we were selling to people with lots of money who built nice homes.”<sup>176</sup> Lots were priced from \$300 to \$500. Cree’s partner in the Vista Santa Rosa tract was John R.E. Chaffey (1901-1976),<sup>177</sup> an investor in Smoke Tree Ranch as well as developer of the 1934 La Rambla tract (phases one through six) at the southeast corner of Tachevah Drive and Avenida Caballeros. Chaffey was also the founding publisher of the *Palm Springs Limelight*. By February of 1937 lots in the tract were almost entirely sold out and eleven homes were under construction.<sup>178</sup> A review of the 1940 U.S. Census shows the Vista Santa Rosa tract sparsely populated mostly with the middle-class residents of the city. The houses were primarily modest bungalows.

At least one of the houses in the Vista Santa Rosa tract was experimental in its construction method. The Lee Humbard Residence (1936, Van Evera Bailey) was built with the Van Guilder System of hollow concrete blocks. The system was deemed desert appropriate by the architect for its economy, fire resistance and insulating properties.<sup>179</sup>

<sup>174</sup> The tract map for this development does not list Cree as an owner, however, various sources indicate Cree was the developer behind this early residential neighborhood. Add citation.

### **Sub-theme: Depression-Era Single-Family Residential Development (1930-1941)**

The popularity of Palm Springs with the Depression-proof movie industry surely provided more economic stability for real estate than in most other cities in the United States. There were also plenty of vacant lots available in existing tracts for those who wished to invest or build a house. New subdivision development, however, did not resume in earnest until the mid-1930s, and when it did, it tended to be smaller tracts than those developed in the 1920s. Like other cities in the country, economic recovery from the Great Depression, and residential development and expansion in Palm Springs, were halted by the advent of World War II.

#### Residential Subdivisions from the Period

Following is a discussion of select residential subdivisions that were recorded in the 1930s. The narrative discussion is meant to provide an overview of residential development during this period. The subdivisions are listed chronologically by the date they were initially recorded. The Overview of Tract Development in Appendix B includes a list of the residential subdivisions in Palm Springs that were studied as part of the survey effort, including any information compiled about additional tracts not included in the narrative. The information included in the table is intended to provide additional data about residential development in Palm Springs and inform future researchers about this facet of Palm Springs history; a complete history of each recorded tract is outside the scope of this project.

### Smoke Tree Ranch (1931)

Whatever you seek in housing, Palm Springs now has it...those who prefer the familiar are found in the villas and haciendas. Life in levis [sic] revolves around such districts as Smoke Tree Ranch. And the Modernists may lounge on chromium and nylon before houses of glass and steel. These are the houses that Palms Springs built.<sup>180</sup>

Smoke Tree Ranch is a 375-acre resort and housing development located at 1800 South Sunrise Way. Smoke Tree Ranch was one of the few subdivisions developed in Palm Springs during the Great Depression. Originally developed as a dude ranch resort,<sup>181</sup> the “guest ranch” was started in 1930 by L. Mac Blankenhorn and named after the characteristic trees that dot the landscape.<sup>182</sup> A syndicate of investors including C.F. Doyle, developer George Alexander, Nicholas Harrison, architect Garrett Van Pelt, Jr. (1879-1972), and Blankenhorn purchased the property for \$500,000 and invested another \$100,000 in improvements.<sup>183</sup> Blankenhorn was a successful Pasadena-based realtor/investor during the 1920s.

In 1887, the Smoke Tree Ranch site had been selected by a group of land promoters for development of a city called Palmdale, which was connected to the Southern Pacific Railroad by a narrow gauge railway. Residents were to grow “melons, grapes and citrus in the mineral rich soil” with water provided by a stone-lined irrigation ditch.<sup>184</sup> The Ranch still contains adobe ruins from this early period of development. An archaeological investigation at the site in 1983 yielded artifacts that dated fruit packing activity to 1895. Drought combined with a shutdown of Native American-controlled water caused the Palmdale dream to collapse shortly before the turn of the 20<sup>th</sup> century. The railway tracks were taken up and the adobes cannibalized and abandoned.<sup>185</sup>

This 1941 image of the Smoke Tree Ranch shows the pool as well as the water tower emblazoned with the Smoke Tree Ranch brand. Source: Palm Springs Historical Society.

Early advertisements for the guest ranch emphasized an exclusivity that continues to this day: “Designed for those wishing to escape from the turmoil of weekend resorts...introductions or satisfactory references are required.”<sup>186</sup> The ranch featured cottages, stables, and a school for grades two through eight. Three school buildings and a playground were located along the western border of the ranch. Facilities included the Ranch Rodeo Field, stables, and the pool. The ranch house building contained two dining rooms, kitchen, lobby, and storerooms. There were 15 cottages for guests, two buildings for servant’s quarters, and a twenty-car garage. These buildings were designed by Pasadena-based architect Garrett Van Pelt, Jr. (1879-1972).<sup>187</sup>

In 1936, Fred and Mazie Belle Markham (operating as the Mardo Corporation) bought Smoke Tree Ranch. Whereas Blankenhorn and his syndicate of investors may have been overextended at Smoke

Tree Ranch, Markham was able to bring financial stability to the venture. With the help of local educator and real estate investor Raymond Cree, Markham subdivided the ranch into parcels for single-family residences.<sup>188</sup> This occurred in three phases: 52 parcels in the northern portion of the ranch in 1936; 30 parcels in spring of 1937; and 24 parcels in summer of 1937.

Under the Markhams, the guest ranch did not advertise or seek publicity. The Smoke Tree way of life (for guest ranch patrons as well as homeowners who are historically known as “Colonists”) was simple without the need to impress, as “most who have come here have been every place, seen everything and done most things.”<sup>189</sup> The gated community also provided hotel-like amenities, including meals in the clubhouse restaurant, a pool, tennis courts, and maid service; “care of property by a capable all-year organization and innumerable services the lack of which makes the ownership of a resort property a burden.”<sup>190</sup>

During incorporation discussions for the city of Palm Springs in 1936, Charles F. Doyle, Vice President of Mardo Corporation, protested against the inclusion of Smoke Tree Ranch within the proposed city boundaries. In 1945, the Markhams sold the entire Ranch operation to the Colony as a group. Colonists retained ownership of their homes and home sites.

Of the approximately 400 acres, 300 acres were devoted to the home sites for the Colonists and twenty acres for the guest ranch. The remaining land was leased for the present-day Smoke Tree Village Shopping Center at the corner of East Palm Canyon Drive and La Verne Way, and for the stables at the southern end of the property. Smoke Tree Ranch purposefully maintained a rustic atmosphere. Homes were required to be one story and sit apart on large lots with no large lawns or non-native shade trees.<sup>191</sup> They were to be built in a traditional Ranch style with a pitched shingle roof.<sup>192</sup> Streets were intentionally left as dirt roads groomed by a sprinkler wagon and scraper. There were no street signs, and instead roads were indicated with rock markers. The compound was originally encircled by barbed-wire fencing. Prior to 1946, there were no private pools at Smoke Tree Ranch. Instead, colonists used the communal pool area which became a focal point of social activity.<sup>193</sup> The pool and tennis courts were designed by architect Harold J. Spielman.<sup>194</sup>

<sup>194</sup> “Subdivision of New Unit Started in Ranch Area,” *Los Angeles Times*, January 10, 1937.

In his book *The Frontier of Leisure*, historian Lawrence Culver identifies Smoke Tree Ranch as looking unlike much of Palm Springs architecture of the time and instead reflecting the Ranch-style architecture in California and across America. “They were clear early examples of the ranch house—the domestic architectural style that would carpet the floor of the San Fernando Valley after World War II, “ writes Culver, “and appear in every community in the United States in the 1950s and 1960s.”<sup>195</sup>

<sup>195</sup> Culver, *The Frontier of Leisure*, 167.

The first house in Smoke Tree Ranch was built by Ted and Isabel Slocum.<sup>196</sup> Residents of Smoke Tree Ranch tended to be wealthy industrialists such as the Weyerhaeuser family (of the Washington-based forestry and paper company), King Gillette (of safety razor fame), and Milo Bekins (of Bekins Moving and Storage).<sup>197</sup> Another prominent resident was the Reverend Charles E. Fuller,<sup>198</sup> whose house was constructed in 1940-41 and designed by architect Rose Connor.<sup>199</sup> The Fuller Residence and studio are of adobe construction, reflecting the resurgence of adobe as a contemporary building material in the 1920s and 1930s as advocated by Southern California architects such as John Byers and Clarence Cullimore, Sr. The thermal properties and western heritage of adobe made it a logical choice for Smoke Tree Ranch.

One of Smoke Tree Ranch's most famous residents was Walt Disney. Disney purchased his first Smoke Tree Ranch home in 1948.<sup>200</sup> In 1954, Disney sold the home to raise money for the creation of Disneyland in Anaheim. According to a 1977 interview with Smoke Tree's Vice President Brad Poncher, Disney's "studio set designers were responsible for the design of some of the ranch's guest cottages."<sup>201</sup> The Disneys purchased their second Smoke Tree Ranch home in 1957, two years after Disneyland opened and Disney's movie and television empire was well established.

Many Smoke Tree Ranch homes were built by the noted local Modernist architect Albert Frey.<sup>202</sup> Frey's preference for modern architecture is evident in the houses he designed at Smoke Tree, where his eye for proportion and simplicity created elegant modern ranch houses. Frey's design for the Lyons Residence (1948, Clark & Frey) was, in fact, deemed "too modern" and the architect was banned from building there for almost three years.<sup>203</sup> Between 1941 and 1983, Albert Frey designed houses and additions for 30 Smoke Tree Ranch residences. Examples include the Markham Residence (1941; 1950), the Overly Residence (1941, 1947, 1948, 1983), Gilmore Residence (1944, 1947, 1956, 1966, 1977), Turner Residence (1948, 1956, 1986), and the Armstrong Residence (1964). Frey also designed additions to the Administration and Dining Room Building (1967) and was responsible for further work on the Smoke Tree Ranch Office in 1983.

The Lyons Residence (1948, Clark & Frey) was deemed "too modern" and "too tall" for the rustic community and the Board of Directors banned Albert Frey from building in Smoke Tree Ranch for three years. Source: *Albert Frey, Architect*, p. 100.

<sup>202</sup> There are residences in Smoke Tree Ranch by the both the partnership of Clark & Frey, along with later residences designed by Frey individually.

<sup>203</sup> Joseph Rosa, *Albert Frey, Architect* (New York, NY: Rizzoli, 1990), 74.

Other architects known to have worked in the Smoke Tree Ranch development include William Cody, Harold B. Zook, Allen G. Siple, E. Stewart Williams, and Wallace Neff. Siple designed the Paul Trousdale Residence (c. 1950), which was featured in *House Beautiful* magazine.<sup>204</sup> Neff designed the Smoke Tree Ranch home for Mr. and Mrs. George Miller (c. 1950). Carl W. Denney, AIA is credited with the design of Walt Disney's second house.<sup>205</sup>

### Chino Canyon Mesa (1935-36)

Chino Canyon Mesa was developed by local realtor Rufus J. Chapman (1907-1970) in 1935. This forty-eight parcel subdivision was developed in two phases during 1935-36 and is bordered by Vista Chino on the north, Stevens Road on the south, Wawona Road on the east, and a line mid-block on the west at approximately 500 Wawona Road. A third phase of the tract consisting of twelve parcels bordered by Chino Canyon Road to the north, Vista Chino to the South, and Via del Norte to the east was subdivided in 1945 by W.J. Reynolds and Charles J. Burket (who at one time served as Palm Springs School Board president).

### Vista Del Monte (1935)

Vista del Monte, one of the larger developments of the 1930s, was an extension of the Palm Springs Racquet Club that opened in 1934. Racquet Club owners Charlie Farrell and Ralph Bellamy subdivided the forty six-parcel Vista del Monte tract (1935), just north of the resort in the area bordered by San Rafael Drive to the north, Santa Clara Way to the south, Indian Avenue (present-day Indian Canyon Avenue) to the east, and Virginia Road to the west. At the time, Vista del Monte was the northernmost residential neighborhood in Palm Springs.

### El Mirador Estates (1935-1936)

Following the Depression-era demise of the golf course at El Mirador, El Mirador Estates (1935-36) was subdivided by Prescott Stevens' daughter Sallie Stevens Nichols and her realtor husband Culver Nichols, along with local developer Ernest Off.<sup>206</sup> These large parcels continued the elite residential development agenda for the area around the El Mirador Hotel. Given its prime location and large parcels, the tract quickly became home to prominent villagers who built architecturally significant homes. These include the James V. Guthrie Residence (1935, Clark & Frey) at 666 Mel Avenue; Frey House #1 (1940, Clark & Frey; demolished); the Halberg Residence (1936, Clark & Frey) at 723 E. Vereda del Sur; the Williams Residence (1956, E. Stewart Williams; demolished) at 1250 Paseo El Mirador; and the Sieroty Residence (1941, Clark & Frey) at 695 E. Vereda del Sur.

Residents of El Mirador Estates included a number of historically significant personages including movie star Eddie Cantor (720 Paseo El Mirador, 1941; substantially altered); singer Keely Smith (1055 Paseo El Mirador; substantially altered); MGM Screenwriter Irving Brecher (723 E. Vereda Sur, 1941, Clark & Frey); famed interior designer William Haines (651 Paseo El Mirador; demolished); and artist Dale Chihuly (1250 Paseo El Mirador). Local Racquet Club owner and actor Charles Farrell lived at 630 E. Tachevah Road (1934; HSPB-80).

<sup>206</sup> The golf course was developed by Prescott T. Stevens. The Great Depression was hard on Stevens, however. The golf course closed, the hotel was sold, and he died in 1932.

### Desert Sands (1935)

One of the most interesting tract developments of the mid-1930s is that of Desert Sands (1935-36). It was developed by real estate broker Edmond F. Lindop (1901-1968), who was also a distributor for General Houses, Inc., a company specializing in prefabricated steel houses. General Houses was a pioneer in the production of prefabricated houses, which were designed by Chicago-based architect Howard T. Fisher. The company received national media attention in 1932, and a prototype steel house was exhibited at the 1933 Chicago World's Fair. Originally from Chicago, Lindop worked in real estate there and may have become aware of the work of Howard T. Fisher in that capacity. Lindop continued to diversify his business holdings during this period, expanding into the insurance business.<sup>207</sup> By 1936, Lindop operated three offices: Chicago, Palm Springs and downtown Los Angeles.<sup>208</sup>

Desert Sands is a 104-parcel development subdivided in three phases. Initially, Lindop envisioned the tract as traditionally constructed homes. To ensure high architectural standards, Lindop formed a review board for Desert Sands by which all designs had to be approved. The board consisted of Lindop himself, Hollywood architect William C. Rich,<sup>209</sup> and local designer/builder Van Evera Bailey.

In 1935, Lindop erected a Ranch-style tract sales office at the corner of Hermosa Avenue and Tamarisk Road. He commissioned Van Evera Bailey to design and build a Model Home (1935, Van Evera Bailey), and then enlarge it six months later.<sup>210</sup> In late 1935 he constructed a speculative home in the "Bavarian style" and in early 1936 began construction on a "New England Colonial" type home fashioned in plan as a "Maltese cross" where each wing was designed as an entity: den, bunk room, fireplace, and dinette.<sup>211</sup> Around this time, Lindop expanded his firm's services to include architectural design services and general contracting (headed by Myron H. Lewis). These services were also made available to homebuyers not purchasing in the Desert Sands tract.<sup>212</sup>

By spring of 1936, lots in the first phase were nearly sold out. In October of 1936, Lindop was appointed the California Distributor for General Houses, Inc. and in November of 1936, Lindop erected a General Houses steel house in the subdivision at 1320 Tamarisk Road (1936, General Houses, Inc.). Advertised as "The House That Science Built" the public was invited to observe the unique building process. The house had a steel framework with panels of compressed asbestos composition on the exterior, sheet aluminum insulation and plywood panel on the interior wall.<sup>213</sup> Sales rhetoric advised buyers that due

<sup>212</sup> "Start Work on Unusual Home," *Palm Springs News*, February 27, 1936-March 5, 1936, 3.

<sup>213</sup> "Different," *Palm Springs News*, December 7, 1936, 13.

to this construction technique space equivalent to an extra room was retained vs. standard construction methods. Notably, the house was also an all-electric home and “the first house of [General Houses, Inc.] to be erected in California.”<sup>214</sup>

L: Rendering of a General Houses, Inc. model house constructed by Edmund F. Lindop at 1320 Tamarisk Road (HSPB-87). There were many different style model houses, including period revival styles. Source: Ladies Home Journal, 1934. Rendering by Earl Horter.

R: 1320 Tamarisk Road in 2012, <http://www.kcet.org/arts/artbound/counties/riverside/steel-modern-a-history-of-steel-houses-in-palm-springs.html>.

In an attempt to appeal to a wider market, by January 1937, Lindop was featuring another architecturally unique home in the tract. Known as the “Pink Oasis,” it was located on Verbena and built for Fred C. Baker with a distinctive octagon-shaped living room.<sup>215</sup> By April of that same year, Lindop was featuring a “modern-ranch style all-gas home” located on San Jacinto Way between Hermosa Drive and Paseo De Anza.<sup>216</sup> Lindop’s construction of model homes was supported by an extensive local advertising campaign that served him well. Lots sold quickly.<sup>217</sup>

### Racquet Club Colony (1935)

The Racquet Club Colony is a small, but notable subdivision. It was developed beginning in 1935 on land located directly north of the Racquet Club. The developer of the tract was Walter N. Marks of Beverly Hills. Marks was heavily involved in Southern California real estate development for decades and was, along with his wife Doris, actively involved with the desert community and a major figure in the creation of the Palm Springs Desert (Art) Museum, among other civic and charitable endeavors.

<sup>214</sup> “Steel House Now Being Erected,” *The Desert Sun*, November 20, 1936, 1.

<sup>215</sup> “Home Sold,” *Palm Springs News*, March 11, 1937, 5. The address could not be confirmed.

<sup>216</sup> “Many Inspect Ranch Home,” *Palm Springs News*, April 29, 1937, 9.

<sup>217</sup> Lindop was not the first builder to erect a prefabricated steel house in Palm Springs. Ralph A. Nesmith, a sales representative for Palmer Steel Buildings, Inc. built a Palmer Steel House in Palm Springs circa 1935. The Palmer product used steel sections developed for commercial buildings that were in regular production. The method of “cellular steel construction” was deemed unique among steel systems. As reported in the *Desert Sun* in December of 1936, “Palm Springs now has two or three steel buildings and it is reported a number of people are considering the construction of steel.” Additional Palmer Steel Buildings were constructed in Palm Springs: a multi-family residential complex of Palmer Steel Buildings was built along S. Indian Canyon Drive (behind the Tahquitz Vista Apartments, 418 S. Palm Canyon Drive, demolished) in 1937 (demolished).

Marks was also an avid tennis player and one of the original founding members of the Racquet Club. He was the third person to sign up for club membership just behind actors Paul Lukas and Charles Butterworth. Shortly after the club's opening, Marks purchased the property to the north and laid out streets in a grid. The main thoroughfare was Santa Catalina Road and Marks had an ornamental gateway constructed at the tract entrance just off Indian Canyon Drive.

Marks took an active hand in the tract's development, and the first eight houses were built under his supervision. The first three were for his friends and fellow Racquet Club members Paul Lukas, Charles Butterworth, and I. Rubin. The three houses were built together along what was originally known as La Puesta Del Sol (presently Puerta del Sol). They were designed by Los Angeles architect John P. Pedersen and built by Harvey Maclean. Marks engaged architect Roland E. Coate to design his home (174 W. Santa Catalina Road, 1936; extensively altered).<sup>218</sup> The tract was advertised as having generous three-quarter acre lots and the Marks-built homes were sold completely furnished with interior decoration by Mrs. Thelma Wertheimer, owner of the Colonial House Hotel. The tract's development slowed during the war years but resumed in the late 1940s. Although there are a few exceptions, most homes in the tract were constructed by 1952.

### Little Tuscany (1936)

Builder and real estate developer Alvah Hicks (1884-1944) worked extensively with Prescott T. Stevens during the 1920s to develop residential neighborhoods in Palm Springs. However, in summer of 1936, Hicks decided to create a subdivision of his own, "Little Tuscany," in a short rocky wash in the north end of Palm Springs. The Little Tuscany tract includes Chino Canyon Road, Lombardy Road and Panorama Road, Vista Drive, W. Cielo Drive, Tuscan Road, and Leonard Road west of Via Monte Vista. Hicks gave the area the name Little Tuscany, "because it reminded him of the Tuscan Hills of Italy."<sup>219</sup> In total, it includes sixty-two large, irregularly-shaped parcels, the first forty of which were subdivided by Hicks and his wife Teresa (Tess) Hicks in 1936-37.

Bullock's Demonstration House in Little Tuscany, as published in *Palm Springs News*, December 1937. Photograph by Frank Partridge, Jr.

<sup>218</sup> The home bore stylistic similarities to another residence the architect designed around the same time for actor Gary Cooper in the Brentwood Highlands in Los Angeles.

<sup>219</sup> "Sand Traps and Sun Lure Outdoor Types to Desert," *Los Angeles Times*, February 26, 1967, J1.

In 1938, Bullock's department store furnished another "Demonstration House" in Little Tuscany (1937-38, Brewster and Benedict) that was featured in *California Arts + Architecture* and promoted in the *Los Angeles Times*. The original Ranch-style home, located at 1725 Tuscan Road, was a showcase for Hicks, the former carpenter turned homebuilder.

The second phase of Little Tuscany, including the westernmost portions of Chino Canyon Road and West Cielo Drive, were developed in 1948 by Harold Hicks (1909-1997) and Caroline Hicks, the couple's son and daughter-in-law. Harold carried on the prominence of the Hicks name in Palm Springs by being active in insurance and real estate. While some construction in Little Tuscany took place before World War II, the majority of homes were constructed after the war. Common styles include Mid-century Modern and Hollywood Regency.

As told by Harold Hicks to the *Los Angeles Times* in 1967, "Residents had laughed when his father had been forced to buy 250 acres of what looks like a veritable sea of stones from the Southern Pacific Railroad in order to utilize a few acres as a reservoir site... (he) used mules pulling timber sleds to remove the rocks in a pyramid-like operation."<sup>220</sup> Later, the younger Hicks used bulldozers to move the stones.

<sup>220</sup> "Sand Traps and Sun Lure Outdoor Types to Desert," *Los Angeles Times*, February 26, 1967, J1.

## SINGLE-FAMILY RESIDENTIAL DEVELOPMENT BETWEEN THE WARS (1919-1941): ELIGIBILITY

### Property Types: Single-family residence; Historic District

There are significant residential developments in Palm Springs dating to the period between the First and Second World Wars. These include several large residential subdivisions that were recorded in Palm Springs in the 1920s. Residential growth and development continued through the 1930s, unlike in many cities in the United States; however, in general the large residential subdivisions of the 1920s were replaced by more modest developments. Architecture in Palm Springs from this period largely reflected wider trends in Southern California, including a prevalence for period revival styles; however, there are significant local works of Modern architecture dating to the pre-World War II era. There is infill development throughout Palm Springs' early residential tracts, as most early tracts were developed over several decades; as a result, there are few pre-World War II tracts that are eligible as historic districts. Tract features, such as original landscape features and rock walls should be considered when evaluating residential neighborhoods. Remnant rock walls that are not part of historic districts should be given special consideration for local planning purposes.

### Applicable Eligibility Criteria

A residential property or neighborhood from this period may be eligible for historic designation under one or more of the following criteria:

CRITERIA	REASON
A/1/3 (Pattern of Development/Period) <sup>221</sup>	As a good and intact example of 1920s or 1930s residential development reflecting an important period of growth and transition in the city. Due to development patterns in Palm Springs, there are few tracts developed during this period that are eligible for historic designation; therefore, intact examples that are scattered throughout the prewar neighborhoods are eligible for individual designation.
B/2/2 (Person)	For its association with a significant person. Significant persons within this theme include members of the community who may have been influential in the development of Palm Springs, or who gained significance within their profession. Homes associated with people in the entertainment industry are evaluated under a separate context. Properties eligible under this criterion are typically those associated with a person's productive life, reflecting the time period when he or she achieved significance.

<sup>221</sup> Note that eligibility criteria are listed in the standard format National Register/California Register/Local. Note that National Register/California Register Criterion A/1 can be applied to a single event important in history, or to an overall trend or pattern of development. The City of Palm Springs local ordinance distinguishes these into separate criteria – Criterion 1 applies to properties that are associated with a singular event; Criterion 3 applies to properties that “reflect or exemplify a particular period” in history.

CRITERIA	REASON
C/3/4,5 (Architecture)	As an excellent or rare example of an architectural style from the period, or as the work of a master builder, designer, artist, or architect. Additional information about architectural styles from each period and their associated character-defining features are outlined in the Architectural Styles chapter.
A/1/6 (District)	A collection of residences that are linked geographically may be eligible as a historic district; eligible districts may span several periods of development. Residences from this period may also contribute to historic districts that are significant under other contexts and themes. District boundaries may represent original tract boundaries, or they may comprise several adjacent tracts, or a portion of a tract or neighborhood. The district must be unified aesthetically by plan, physical development, and architectural quality. Tract features, including street lights, landscaping, parkland, and other amenities may contribute to the significance of the district.

### Integrity Considerations

Each type of property depends on certain aspects of integrity, more than others, to express its historic significance. Determining which of the aspects is most important to a particular property type requires an understanding of the property's significance and its essential physical features. The rarity of the property type should also be considered when assessing its physical integrity. In order to be eligible for listing at the federal, state, or local levels, properties and districts must retain sufficient integrity to convey their historic significance under this theme.

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
A/1/3 (Pattern of Development/Period)	A property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s). <sup>222</sup> A residential property from this period eligible under Criteria A/1/3 should retain integrity of location, design, workmanship, materials, and feeling, at a minimum, in order to reflect the important association with the city's residential development during this period. A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships,

<sup>222</sup> *National Register Bulletin 15.*

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
	proportion, pattern of windows and doors, texture of materials, and ornamentation. There is a relatively large number of prewar single-family residences, particularly from the 1930s, scattered throughout the early residential subdivisions. Therefore, individually eligible examples identified in the survey typically retain all or most of their original windows, particularly on the primary façade, original wall cladding, and do not have additions that are visible from the public right-of-way.
B/2/2 (Person)	A residential property significant under Criterion B/2/2 (Person) should retain integrity of location, design, workmanship, and feeling, at a minimum, in order to convey the historic association with a significant person.
C/3/4,5 (Architecture)	A property important for illustrating a particular property type, architectural style, or construction technique; or that represents the work of a master must retain most of the physical features that constitute that type, style, or technique. <sup>223</sup> A residential property significant under Criterion C/3/4,5 (Architecture) should retain integrity of design, workmanship, materials, and feeling, at a minimum, in order to be eligible for its architectural merit. A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.
A/1/6 (District)	In order for a historic district to be eligible for designation, the majority of the components that add to the district's historic character must possess integrity, as must the district as a whole. A contributing property must retain integrity of location, design, setting, feeling, and association to adequately convey the significance of the historic district. Some alterations to individual buildings, such as replacement roof materials, replacement garage doors, and replacement of windows may be acceptable as long as the district as a whole continues to convey its significance. Major alterations such as substantial additions that are visible from the public right-of-way or alter the original roofline would not be acceptable. Original tract features may also be

<sup>223</sup> *National Register Bulletin 15.*

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
	contributing features to the historic district under this theme. Eligible historic districts may span several periods of development.

#### **Single-family Residential Development between the Wars (1919-1941): Registration Requirements**

To be eligible under this theme, a property must:

- date from the period of significance; and
- represent important patterns and trends in residential development from this period, including representing 1920s and 1930s development and settlement patterns; an association with an important developer; an association with Palm Springs as an artists' enclave; an association with tourism in Palm Springs; or
- represent an excellent, rare, or influential example of an architectural style, property type, or method of construction; or be associated with a significant architect or designer; and
- display most of the character-defining features of the property type or style; and
- retain the essential aspects of historic integrity.

To be eligible under this theme, a historic district must:

- retain a significant concentration of the contributors dating from the period of significance;
- reflect planning and design principles from the period;
- display most of the character-defining features of a residential subdivision, including the original layout, street plan, and other planning features; and
- retain the essential aspects of historic integrity.

#### THEME: MULTI-FAMILY RESIDENTIAL DEVELOPMENT BETWEEN THE WARS (1919-1941)

This theme explores the design and construction of early 20<sup>th</sup> century multi-family residences in Palm Springs. Unlike densely populated urban areas of Southern California where duplexes, fourplexes, and large multi-story apartment buildings flourished during the 1910s and 1920s, multi-family residential development in Palm Springs generally took three forms: mixed use commercial and residential, bungalow courts or courtyard apartments, and two-story apartment buildings. In most cases, these multi-family configurations were listed as “apartment-hotels” with “housekeeping apartments”<sup>224</sup> where renters could rent by the day, week, month, or season. They were also distinguished from hotel/resort accommodations by the presence of kitchens or kitchenettes and a lack of common congregating areas and/or recreational amenities.

The bungalow court was an adaptation of the Craftsman bungalow as an innovative solution for higher density housing for Southern California’s growing middle class. The courts promoted a specific style of living, providing the amenities of a single-family residence – privacy, gardens, and porches – with the convenience of an apartment – affordability, community, and security in the early 20<sup>th</sup> century. The courtyard form was quickly embraced by advocates for better housing conditions for the working class. For a small sum, the courts provided greater comfort and independence than apartment living, while also providing residents with a sense of community. The courtyard apartment grew directly out of the California bungalow tradition – a regionally suitable, moderately priced, and carefully designed domestic architecture. The courtyard type would persist into later periods of development, with Spanish Colonial Revival examples in the 1920s and 1930s, simplified Minimal Traditional examples in the 1930s and 1940s, and Modern courts in the post-World War II era.<sup>225</sup> The bungalow court naturally evolved into other types of courtyard housing, including one-story courts with attached units and two-story courtyard apartments oriented around a swimming pool. All courtyard housing types share the common characteristic of a space-oriented, rather than object-oriented, approach, with the outdoor space as the central, defining element.<sup>226</sup>

A small number of notable apartment buildings were constructed in Palm Springs in the 1920s. Spanish Colonial Revival was the predominant architectural style associated with multi-family residential buildings in Palm Springs from this period, although there were some Monterey Revival and other period revival examples.

<sup>224</sup> “Display Ad 33,” *Los Angeles Times*, December 18, 1936, B2.

<sup>225</sup> The bungalow court led directly to the development of the motel, established in 1925 in San Luis Obispo by Arthur Heineman and designed by his brother and business partner Alfred.

<sup>226</sup> Stefanos Polyzoides, Roger Sherwood, and James Tice, *Courtyard Housing in Los Angeles: Typological Analysis*, 2<sup>nd</sup> edition (Princeton: Princeton Architectural Press, 1992), 9.

The two-story El Encanto Apartments (1928, Marshall P. Wilkinson) at 415 S. Palm Canyon Drive (demolished) in an elegant Monterey Revival style. Source: Mott Collection, California State Library.

The first apartment building in the city was La Hacienda Apartments at 259 South Palm Canyon Drive, built by Austin and Pearl McManus.<sup>227</sup> The first apartment court, Sunshine Court (a.k.a. Las Salinitas; demolished), at 343 N. Palm Canyon Drive was built by Dr. J.J. Kocher about 1919.<sup>228</sup> This board-and-batten complex consisted of several individual units, each with its own fireplace. Ads from 1941 feature the court's proximity to the O'Donnell golf course as an amenity.<sup>229</sup> Another of the early of apartment complexes in Palm Springs was El Encanto, at 415 S. Palm Canyon Drive<sup>230</sup> (1928, Marshall P. Wilkinson; demolished) with its bachelor, double, and triple apartments.<sup>231</sup> El Encanto was published in the July 1932 issue of *Architectural Record*.

In 1928, master architect Paul R. Williams designed the Mira Monte Apartments for Ralph Pomeroy (1928, demolished)<sup>232</sup> at 265 E. Ramon Road.<sup>233</sup> It was one of a set of Palm Springs commissions

<sup>227</sup> "Palm Springs Destiny Placed in Good Hands," *Palm Springs News*, April 14, 1938, 10.

<sup>228</sup> Photo 7-103, Palm Springs Historical Society.

<sup>229</sup> "Display Ad 36," *Los Angeles Times*, December 19, 1941, B5.

<sup>230</sup> El Encanto was owned in part by Mrs. Gaylord Wilshire, wife of the land developer and publisher from which Wilshire Boulevard and the Gaylord Apartments in Los Angeles take their names.

<sup>231</sup> "Building at Resort to Open Soon," *Los Angeles Times*, November 3, 1929, D4.

<sup>232</sup> The Mira Monte was built on the site of the second home of Palm Springs pioneers, the McKinneys; their first home was on the Deep Well Ranch. When the house on Ramon Road burned to the ground in 1925, the McKinneys rebuilt elsewhere. Spanish American War veteran Oliver S. McKinney, who had fought in Cuba as a Rough Rider under Teddy Roosevelt, moved to Palm Springs in 1916 with his wife Rose and their five children. McKinney had constructed a steam-powered rig to dig wells on his Little Morongo Canyon Ranch, and was hired by rancher Raymond Cree, the Riverside Superintendent of Schools, to dig wells on Cree's Palm Springs property. The McKinneys stayed in Palm Springs and had three more children. In addition to digging wells, McKinney found steady work planting large palms and cacti in the growing village. In 1925 the McKinneys opened the Desert Nursery on South Palm Canyon Drive, along with a 20-unit tourist court and a trailer park. Sources: Niemann, 101 and Renee Brown, "Explore Palm Springs: Oliver S. McKinney," *Palm Springs Life, Desert Guide*, June 2015, [www.palmspringslife.com/Palm-Springs-Life/Desert-Guide/June-2015/Explore-Palm-Springs-Oliver-S-McKinney/](http://www.palmspringslife.com/Palm-Springs-Life/Desert-Guide/June-2015/Explore-Palm-Springs-Oliver-S-McKinney/) (accessed August 16, 2015).

<sup>233</sup> *The Desert Sun*, October 4, 1949.

designed by Williams at this early part of his career, which included the original Deep Well Ranch buildings, the Tahquitz Vista Apartments, the Del Tahquitz Hotel, and Casa Palmeras. The Mira Monte was a one-story courtyard apartment in the Spanish Colonial Revival style.<sup>234</sup>

L: The Casa Palmeras Apartments (1928, Paul R. Williams) at 175 E. Tamarisk Road. R: Mira Monte Apartments (c. 1930, Paul R. Williams) at 265 E. Ramon Road (demolished). Source: Mott Collection, California State Library.

Williams' Palmar/Casa Palmeras, completed in 1928, is perhaps the most prominent and distinctive multi-family residence from the period.<sup>235</sup> Located at 175 E. Tamarisk Road, it is a fanciful Spanish Colonial Revival design with Moroccan-influenced tower details. Casa Palmeras may have been developed by Ralph Pomeroy.<sup>236</sup> In 1936, an addition to Casa Palmeras was made by Charles Chamberlain, a major figure in the building trade in Palm Springs. Edna V. Keefe took over Casa Palmeras in 1951. She retained Los Angeles-based landscape architect Fred Barlow, Jr., FASLA to design the grounds.<sup>237</sup> Casa Palmeras is locally designated as a contributor to the Las Palmas Business Historic District.<sup>238</sup>

Despite the city's growing reputation as a tourist destination during the 1920s,<sup>239</sup> multi-family residential development did not begin in earnest until the 1930s when a number of "new and luxurious apartments" were constructed.<sup>240</sup> In the 1939-40 *Palm Springs City Directory*, 37 apartments are listed. The majority of these were clustered along Palm Canyon and Indian Canyon Drives, or a short distance

<sup>234</sup> The Mira Monte was expanded by H. Lawrence Plymrie in 1939, at which time the orientation was changed to front Indian Avenue and the address became 524 S. Indian Canyon (then Indian Avenue). The Mira Monte was demolished in the 1950s and replaced by the South Palm Springs branch of the Security-First National Bank, which opened to the public in September 1959.

<sup>235</sup> Casa Palmeras appears in the 1929 Sanborn map, which was published in February 1929, indicating a completion date by 1928.

<sup>236</sup> Steve Vaught, correspondence with project team, August 15, 2015. This association has not been confirmed. Some sources credit John Chaffey (of Cree and Chaffey) with its construction, but Chaffey did not purchase the building until 1941.

<sup>237</sup> Steve Vaught, correspondence with project team, August 15, 2015; confirmed by landscape historian Steven Keylon.

<sup>238</sup> A number of well-known people lived at Casa Palmeras in the 1930s, including Clifton Webb, Ann Sothorn, Alice Faye, Joe Penner, Bert Wheeler, and cinematographer Karl Struss, among others.

<sup>239</sup> According to Sanborn maps from 1929, the larger resorts (e.g., El Mirador) provided their own on-site residential accommodations for workers. The seasonal nature of the tourism business in Palm Springs also meant that many workers were likely not full-time residents.

<sup>240</sup> "Building Active in Desert Area," *Los Angeles Times*, February 23, 1930.

from those main thoroughfares on streets such as Tamarisk, Baristo, Belardo, and Andreas Roads. The apartments and bungalow courts were built primarily to accommodate seasonal visitors, rather than as long-term multi-family housing, and most were designed in the prevailing Spanish Colonial Revival style. Due to expanding commercial development during the post-World War II period, many prewar multi-family residential buildings were demolished or significantly altered.

Examples include the bungalow court of Los Arboles at 784 N. Indian Canyon Drive (1935; altered), the Ambassador Apartment Hotel, currently the Triada Hotel, at 640 N. Indian Canyon Drive (1937, Edith Northman; HSPB-49), and the Colonial House (1936, Charles O. Matcham), later Howard Manor and currently the Colony Palms Hotel, at 572 N. Indian Canyon Drive. The Colonial House was planned to occupy the entire block. The first unit of this Spanish Colonial Revival-style complex was built in 1936 along the lot frontage with two large wings to the rear enclosing a large landscaped patio and pool. The lower floor contained seven apartments with the second floor one huge apartment.<sup>241</sup> It was built for casino owner Al Wertheimer and allegedly featured an underground gambling den accessed only by a secret passage.<sup>242</sup> The second-floor unit was occupied by owner/manager Thelma Wertheimer (1907-1974).

As a byproduct of the interest in steel housing in Palm Springs and elsewhere, in 1937 construction began on the Palmer Steel Court (completed 1938, Vincent Palmer; demolished) which consisted of nine duplex units of Palmer Steel Buildings.<sup>243</sup> These units, constructed for Rose Dugan, fronted on Indian Avenue but were located directly behind the Tahquitz Vista Apartments at 418 S. Palm Canyon Drive. Dugan, recognizing that “low-rental homes should be provided for employees of Palm Springs establishments,” elected to construct these units. According to the *Desert Sun*, Mr. Spenser of Carl’s restaurant arranged to lease the court with plans to rent them only to local employees with “no apartments for tourists.”<sup>244</sup> As such, the Palmer Steel Court was one of the first projects to function purely as housing for local employees. It was featured in *Architectural Forum* in February 1938.

#### MULTI-FAMILY RESIDENTIAL DEVELOPMENT BETWEEN THE WARS (1919-1941): ELIGIBILITY

##### **Property Types: Multi-family residence (mixed use commercial and residential, bungalow court, courtyard apartment, two-story apartment building)**

Although there are some examples of multi-family residences dating to the early 20<sup>th</sup> century, multi-family residential development did not begin in earnest in Palm Springs until the 1930s. Many early multi-family residences in Palm Springs have been demolished to accommodate new development, and therefore extant examples from this period are rare. The predominant architectural style for multi-family residences from this period is Spanish Colonial Revival. There are several extant architecturally significant examples designed by prominent architects, including the Chaney Apartments at 275 E. Tamarisk Road (1939, Clark & Frey).

##### **Applicable Eligibility Criteria**

A multi-family residential property from this period may be eligible for historic designation under one or more of the following criteria:

CRITERIA	REASON
A/1/3 (Pattern of Development/Period) <sup>245</sup>	As an excellent example of early multi-family residential development reflecting the growth of Palm Springs during the pre-World War II era. Eligible examples represent some of the earliest extant multi-family residences in Palm Springs.
B/2/2 (Person)	For its association with a significant person. Homes associated with people in the entertainment industry are evaluated under a separate context. Properties eligible under this criterion are typically those associated with a person's productive life, reflecting the time period when he or she achieved significance.
C/3/4,5 (Architecture)	As an excellent or rare example of an architectural style from the period; as the work of a master builder, designer, artist, or architect; or as an excellent, rare, or threatened multi-family residential property type. There are a small number of bungalow courts that have infill buildings added to the site that obscure the original court; due to the rarity of this property type, these may be eligible if the original court configuration is still intact. Additional information about architectural styles from each period and their associated character-defining features are outlined in the Architectural Styles section.

<sup>245</sup> Note that eligibility criteria are listed in the standard format National Register/California Register/Local. Note that National Register/California Register Criterion A/1 can be applied to a single event important in history, or to an overall trend or pattern of development. The City of Palm Springs local ordinance distinguishes these into separate criteria – Criterion 1 applies to properties that are associated with a singular event; Criterion 3 applies to properties that “reflect or exemplify a particular period” in history.

### Integrity Considerations

Each type of property depends on certain aspects of integrity to express its historic significance. Determining which of the aspects is most important to a particular property type requires an understanding of the property's significance and its essential physical features. The rarity of the property type should also be considered when assessing its physical integrity. In order to be eligible for listing at the federal, state, or local levels, properties and districts must retain sufficient integrity to convey their historic significance under this theme.

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
A/1/3 (Pattern of Development/Period)	A property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s). <sup>246</sup> A multi-family residential property from this period eligible under Criteria A/1/3 should retain integrity of location, design, workmanship, materials, and feeling, at a minimum, in order to reflect the important association with the city's residential development during this period. A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style. <sup>247</sup>
B/2/2 (Person)	A residential property significant under Criterion B/2/2 (Person) should retain integrity of location, design, workmanship, and feeling, at a minimum, in order to convey the historic association with a significant person.

<sup>246</sup> *National Register Bulletin 15.*

<sup>247</sup> *National Register Bulletin 15.*

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
C/3/4,5 (Architecture)	A property important for illustrating a particular property type, architectural style or construction technique; or that represents the work of a master must retain most of the physical features that constitute that type, style, or technique. <sup>248</sup> A residential property significant under Criterion C/3/4,5 (Architecture) should retain integrity of design, workmanship, materials, and feeling, at a minimum, in order to be eligible for its architectural merit. A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.

#### **Multi-Family Residential Development between the Wars (1919-1941): Registration Requirements**

To be eligible under this theme, a multi-family residential property must:

- date from the period of significance; and
- represent important patterns and trends in multi-family residential development from this period; or
- represent an excellent or rare example of an architectural style or method of construction; or be associated with a significant architect or designer; or
- represent an important or rare multi-family residential property type; and
- display most of the character-defining features of the property type or style; and
- retain the essential aspects of historic integrity.

<sup>248</sup> *National Register Bulletin 15.*

**THEME: TRAILER PARK/MOBILE HOME COMMUNITY DEVELOPMENT (1917-1944)**

Palm Springs is said to be the “jeweled showcase of mobile living.” Probably nowhere else has this latest American phenomena reached such perfection in terms of simplified luxury and informal elegance. Here the mechanics of business have out-run lexicography. New words and terms are needed to describe what goes...it is a bit of a contradiction to apply the term “mobile home” to the many establishments where sturdy cabanas, car ports, fountains and stone walls enclose the central living unit. Hundreds of these homes can be seen in our many “super deluxe” parks.”<sup>249</sup>

Trailer and mobile home parks were largely a post-World War II phenomenon, but they have their roots in prewar America. The growth in automobile ownership combined with a post-World War I restlessness led to the rise of family “autocamping” trips as a popular pastime during the mid-1920s. Enterprising car campers began building their own canvas tent trailers on wooden single-axle platforms. The idea caught on and soon several manufacturers were making recreational tent trailers; these were called “travel trailers” or “trailer coaches” by the nascent industry. Soon manufacturers began to build larger trailers and add amenities such as camp stoves, cold-water storage, and fold-down bathroom fixtures.<sup>250</sup>

In the early days of autocamping, following the end of World War I, the most common practice was for campers to stop by the side of the road or in a farmer’s yard for the night. In the early 1920s, municipalities developed specially designed campgrounds made available at no charge to travelers, with potable water, toilets, electric lights, showers, and laundry.<sup>251</sup> During the mid-1920s, motels often sought to capitalize on the phenomenon by renting space between their cottages to autocampers. Many of these facilities were small family-run operations where the owners lived in a house or unit on the property.

The Great Depression proved a boon for the travel trailer industry as thousands of migrants from the Dust Bowl made their way to California – many in modified travel trailers – and with housing for the new migrants scarce, many turned to travel trailers as full-time living accommodations.<sup>252</sup> Campgrounds that accepted the trailers were referred to as “trailer parks” and their more urban concrete counterparts became known as “trailer courts.” By the mid-1930s, developers began planning luxury trailer parks that offered paved parking pads, individual service lines, toilet facilities and recreational amenities.<sup>253</sup> By 1938, the American Automobile Association calculated the number of travel trailers at 300,000 and estimated ten percent of them were being used for extended full-time living, not recreational travel.<sup>254</sup>

<sup>249</sup> Vollie Tripp, “Jewelled Showcases,” *Palm Springs Villager*, no date or page.

<sup>252</sup> Grissim, *The Complete Buyer’s Guide to Manufactured Homes and Land*, 15.

<sup>253</sup> Wallis, *Wheel Estate*, 41.

<sup>254</sup> Grissim, *The Complete Buyer’s Guide to Manufactured Homes and Land*, 15.

Nationally, many citizens reacted to the trailer parks and courts as unsightly and argued they were occupied by people of questionable character. In response, many cities passed zoning ordinances designed to keep the trailer villages out: banishing them from the city limits, prohibiting the use of such trailers for living, or requiring that they be moved every few days. In Palm Springs, the travel trailer's early identity as a vacation vehicle and the city's popularity as a vacation destination were a natural match. Here, trailer parks were far from reviled, and instead the trend of autocamping was embraced from the earliest days of the small family-run parks through the later establishment of planned trailer parks. In 1937, trailer manufacturers sponsored a caravan to Palm Springs. Over sixty trailers left Los Angeles but by the time they reached Palm Springs, some 275 trailers were part of the group.<sup>255</sup> During the 1930s, Palm Springs even developed its own specialized newsletter, *The Trailer Chronicle*, for the large numbers of trailer travelers to the city. In addition to the parks themselves, an important site associated with prewar trailer culture in Palm Springs was Pavy's Butane and Trailer Supply Store (1001 S. Palm Canyon Drive; demolished). Pavy's sold trailers, accessories, and replacement parts.

Orchard Trailer Park named for the adjacent apricot orchards and advertised as "the shadiest trailer park in Palm Springs." Source: Palm Springs Historical Society.

The first known accommodation in Palm Springs for trailer campers was McKinney's Palm Canyon Court and Trailer Park at 634 S. Palm Canyon Drive. It was established by Rose and Oliver McKinney<sup>256</sup> soon after their arrival in the city in 1916.<sup>257</sup> This property included 33 trailer spaces and 18 cottages. The site was razed in 1972 for new commercial development.<sup>258</sup> Other early trailer courts include Hatchitt's Auto Court at 196 S. Indian Avenue (demolished); Mountain View Trailer Park and Furnished Rooms at 273 S. Indian Avenue (demolished); and Orchard Trailer Park at 1862 S. Palm Canyon Drive, which took its name from the adjacent apricot orchards. Touted as "the shadiest trailer park in Palm Springs" Orchard Trailer Park included guest cottages and spaces for trailer parking by the day, week,

<sup>255</sup> "Rolling Homes Go into High," *Los Angeles Times*, June 13, 1937, 14.

<sup>256</sup> The proprietor Oliver McKinney also ran Palm Springs' first nursery.

<sup>257</sup> "Hotel to Replace Landmark," *The Desert Sun*, January 21, 1971.

<sup>258</sup> "Office Building Proposed for McKinney Site," *The Desert Sun*, February 17, 1972.

or month.<sup>259</sup> Another early and important example of a trailer court was the Crossley Trailer Court at 1543 E. Ramon Avenue. Owned by early African-American Palm Springs businessman Lawrence Crossley, he sold the site in 1953 to help fund his development of the Crossley Tract east of the city.<sup>260</sup>

Postcard of the Ramon Trailer Park at 1441 E. Ramon Road.

Although Palm Springs already had small facilities that welcomed trailer camping, in 1936 the city established Ramon Trailer Park (1441 E. Ramon Avenue), which was the city's first comprehensively-designed trailer park development. It was touted as the "first modern stopping place for those that have their home on wheels,"<sup>261</sup> and regaled as the equal of the best trailer camps in the United States and "the finest one on the Pacific Coast."<sup>262</sup> The Ramon Trailer Park was established by Jack Williams on two-and-one-half acres with 50 trailer lots.<sup>263</sup> A *Desert Sun* ad from 1937 touts Ramon Trailer Park as the "most modern and up-to-date park on the Pacific Coast."<sup>264</sup> In 1937, the park was enlarged and

<sup>259</sup> "Advertisement," *The Desert Sun*, September 18, 1942.

<sup>260</sup> Crossley was involved in other trailer park developments, including Tramview Village (which was located outside of the city). Crossley was also an investor/board member in the Mobile Hacienda Park, a \$600,000 trailer park built in October 1958.

<sup>261</sup> "De Luxe Trailer Park Is Busy Place," *The Desert Sun*, January 29, 1936.

<sup>262</sup> "De Luxe Trailer Park Is Busy Place," *The Desert Sun*, January 29, 1936.

<sup>263</sup> Although some have attributed the development of Ramon Trailer Park to Lawrence Crossley, Williams was the developer. During the Park's expansion in 1953, however, Ramon Trailer Park absorbed the adjacent land that was Crossley Court (a.k.a., Crossley Trailer Court) at 1543 Ramon Avenue.

<sup>264</sup> "Ramon Trailer Park Ad," *The Desert Sun*, January 29, 1937-February 5, 1937.

playgrounds for adults and children were added, including a large ramada with outdoor fireplace for BBQs, and shuffleboard and croquet courts. That same year, the first-ever private baths with hot and cold running water were constructed at Ramon.<sup>265</sup> It was also distinguished by its landscaping, as every lot had its own planting and small lawn. In 1938, the Ramon Trailer Park was awarded “The Finest Trailer Park in Western America” by Travel Data, a national travel organization.<sup>266</sup> That same year, the owners leased an additional five acres to expand operations even further. In late 1943 or early 1944, a new operator for the park installed a grocery store, lunch counter, and gas and oil station on the property.

Shuffleboard tournament at Ramon Trailer Park, featured in the *Palm Springs Villager* in the mid-1950s.

<sup>265</sup> “Palm Springs Has Finest Trailer Park in West,” *The Desert Sun*, January 14, 1938. By 1939, Ramon was only one of five in the U.S. that offered private bath facilities.

<sup>266</sup> “Palm Springs Has Finest Trailer Park in West,” *The Desert Sun*, January 14, 1938.

Ramon Trailer Park ad, *The Desert Sun*, January 29, 1936.

From the beginning, Ramon Trailer Park was regarded as a popular and elite destination. In February 1937, the *Desert Sun* reported 67 trailers at the park, with some of the “new trailers like palace Pullman cars, having every convenience and costing as much as \$10,000.” The clientele included “many important people who are touring the country” who, while in Palm Springs, “dined at the best hotels, cafes and spent much money with local business establishments.”<sup>267</sup> In the late 1930s the *Desert Sun* began to cover visitors to the Ramon Trailer Park in the society pages. Noted personages documented to have stayed at Ramon Trailer Park included one of the founders of the Mayo Clinic Hospital;<sup>268</sup> Walter A. Austin, former mayor of San Diego;<sup>269</sup> and Clarke Painter, Hollywood playwright.<sup>270</sup> By 1938, guests at Ramon Trailer Park were covered by the *Desert Sun* alongside visitors to the El Mirador and other resorts. A 1939 account of activities reported in the *Desert Sun* indicated that the park maintained a social director/hostess who planned two trips per week for the “trailerites” and a large lounge that featured nightly entertainment along with special lectures and film screenings.<sup>271</sup>

The Ramon Trailer Park ultimately grew to a 256-unit park featuring a clubhouse, swimming pool, and recreational courts at the center.<sup>272</sup> The park's design included a system of curving streets and use of the "town-house" layout for trailers in which the mobile home faces away from the street and is placed "in depth" to maximize privacy.<sup>273</sup> The use of diagonal (instead of rectilinear) spaces also created a more attractive community and efficient use of land. Automobile parking was located next to the trailer unit and not relegated to clustered parking areas as it was in some trailer park developments around the country.

1940 ad for Ramon Trailer Park at 1441 E. Ramon Road touting it as "the finest in Western America." *Los Angeles Times*, December 13, 1940, B5.

<sup>272</sup> The number of units represents current spaces, not historical spaces which may have been combined over the years to accommodate larger homes.

HISTORIC RESOURCES GROUP

In addition to Ramon, prewar Palm Springs was also home to the Rancho Trailer Park located at 1563 South Palm Canyon Drive (demolished). The 284-space facility included a fully landscaped park that featured a grocery, grill, barber shop, beauty shop, recreation hall, shuffleboard, and horseshoe court.<sup>274</sup>

**TRAILER PARK/MOBILE HOME COMMUNITY DEVELOPMENT (1917-1944): ELIGIBILITY****Property type: Historic District**

The development and rise in popularity of the trailer park/mobile home community reflects the growth in automobile ownership, combined with a post-World War I restlessness that led to autocamping as a popular pastime. The trailer park was embraced in Palm Springs unlike in many other cities, and has a particular significance related to the city's early growth and development as a tourist destination. The Ramon Trailer Park appears eligible under this theme. Although there were ad hoc family-operated trailer parks in Palm Springs as early as 1917, the Ramon Trailer Park represents the first comprehensively designed trailer park in the city. It reflects a new breed of upscale, planned/developed parks and is significant as an early and important example of this trend.

**Applicable Eligibility Criteria**

The Ramon Trailer Park is eligible for historic designation as a historic district:

CRITERIA	REASON
A/1/6 (District) <sup>275</sup>	As an early and excellent example of a trailer park community in Palm Springs. It is the first comprehensively designed park in the city, and at the time was lauded as the finest trailer court on the Pacific Coast. It has innovative design characteristics, including the street pattern, landscape features, and other amenities for residents.

**Integrity Considerations**

Each type of property depends on certain aspects of integrity to express its historic significance. Determining which of the aspects is most important to a particular property type requires an understanding of the property's significance and its essential physical features. The rarity of the property type should also be considered when assessing its physical integrity. In order to be eligible for listing at the federal, state, or local levels, properties and districts must retain sufficient integrity to convey their historic significance under this theme.

<sup>275</sup> Note that eligibility criteria are listed in the standard format National Register/California Register/Local.

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
A/1/6 (District)	In order for a trailer park/mobile home community to be eligible for designation as a historic district, the majority of the components that add to the district's historic character must possess integrity, as must the district as a whole. The trailer park must retain its original layout, street pattern, and planning characteristics. Original accessory buildings and amenities, including manager's office, pool, clubhouse, recreational, and other facilities should be present. An eligible trailer park/mobile home community will retain integrity of location, design, setting, materials, feeling, and association.

#### **Trailer Park/Mobile Home Community Development (1917-1944): Registration Requirements**

To be eligible under this theme, a trailer park/mobile home community must:

- date from the period of significance; and
- represent an early example of a trailer park/mobile home community in Palm Springs; and
- reflect unique or innovative design or planning characteristics; and
- display distinctive and cohesive design details; and
- display most of the character-defining features of the property type or style; and
- retain the essential aspects of historic integrity.

**THEME: COMMERCIAL DEVELOPMENT BETWEEN THE WARS (1919-1941)**

Commercial buildings in Palm Springs, c. 1925. Source: Los Angeles Public Library.

In the years following World War I, Palm Springs was transformed from a health resort for respiratory patients into an exclusive winter resort for the wealthy. Several resort hotels were constructed in the 1920s and 1930s, cementing Palm Springs' reputation as a first-class resort community. Commercial development during this period included facilities that catered to the tourist and seasonal community, along with a growing number of commercial establishments to serve the permanent residents. Throughout the inter-war years Palm Canyon Drive (until 1930, Main Avenue) remained the primary commercial thoroughfare in Palm Springs, growing north and, to a lesser degree, south from the village's historic center at Tahquitz Canyon Way (formerly Spring Street).

In an era when architecture was dominated by traditional styles, certain styles were considered appropriate for specific uses: Gothic, for example, was for churches, Beaux Arts and Classical were commonly used for business and civic buildings. In the desert environment of Palm Springs a simplified, rustic interpretation of the popular Spanish Colonial Revival style and traditional southwestern adobe, hacienda, and wood ranch vernacular types were believed to be the best styles and types, both for residences and commercial buildings. Palm Springs' Desert Inn was an example of this, and later the larger El Mirador Hotel reflected an even more elaborate use of Spanish-derived styles.

Broad development patterns in the inter-wars period include the continued emphasis on tourism and tourist-related resources. The most prominent examples of hotels and resorts from the pre-World War II period – the Desert Inn, Oasis, and El Mirador - had a significant impact on the overall commercial development in Palm Springs and the continued investment in the city. This resulted in the construction

**HISTORIC RESOURCES GROUP**

of a number of hotels and apartment hotels within the city's commercial center, along with retail, office, and entertainment-related development (represented by a variety of commercial property types), and resources that represent the growing influence of the automobile.

#### **Sub-Theme: Hotel and Resort Development 1919-1941**

In 1918 Nellie Coffman and her sons, George Roberson and Earl Coffman, began expanding and reconstructing the Desert Inn into a first-class resort hotel. They purchased more land until the hotel grounds consisted of a “vast grassy haven”<sup>276</sup> of 35 acres, occupying the entire block on the west side of Palm Canyon Drive between Andreas Road and Tahquitz Canyon Way, extending north behind the storefronts above Andreas Road and west into the foothills of Mount San Jacinto. The old tent cabins were gradually replaced with reinforced concrete buildings designed by William Charles Tanner in a simplified Spanish Colonial Revival style, including 29 bungalows and a luxurious main building with a lounge and dining room.<sup>277</sup> The lushly landscaped grounds included tennis courts and the village's first swimming pool. Square plastered piers on Palm Canyon Drive framed the main entrance, and a boutique on the grounds housed a branch of Bullock's department store.<sup>278</sup>

Desert Inn, photographed c. 1930 (demolished). Source: Security Pacific National Bank Collection, Los Angeles Public Library.

The Desert Inn quickly became one of the most famous hotels in the country, transforming the “hot little hamlet from obscurity to world fame” and earning Nellie Coffman the title “Mother of Palm Springs.”<sup>279</sup> As she upgraded, Coffman relocated the Desert Inn's original bungalows to a large parcel immediately south of the Oasis Hotel. There she operated the Village Inn, a more economical alternative

to the posh Desert Inn, until the mid-1940s when the site was sold and cleared for construction of Bullock's department store.<sup>280</sup>

The success of the Desert Inn inspired the development of two equally remarkable hotels in the 1920s and cemented the town's growing reputation as one of the country's premier luxury winter resorts. The first of these was the Oasis Hotel (121 S. Palm Canyon Drive, HSPB-10), opened in 1925 on the site of the McCallum family homestead.<sup>281</sup> In 1914, Pearl McCallum had married Pasadena real estate mogul Austin G. McManus; as Palm Springs grew McManus encouraged and guided his wife as she evolved into an astute businesswoman, developing or subdividing the McCallum acreage piece by piece.<sup>282</sup> But Pearl kept the McCallum homestead, and in 1923 the McManuses became the first patrons of Modern architecture in Palm Springs when they hired Lloyd Wright to design a 20-room hotel on the property and incorporate the family's adobe into the complex as a memorial to Pearl's father.<sup>283</sup>

Public Library.

Wright, who had previously experimented with concrete techniques while working on his father's textile block houses in Los Angeles, used a novel "slip-form" construction technique for the Oasis: twelve-inch courses of concrete were poured between wood forms and, when the concrete had set, the forms were "slipped" up and the next course poured, until the full height of the wall was completed. Pearl McManus later remembered that "It took a year to complete and was so beautiful that many people offered to buy it or lease it before it was finished."<sup>284</sup> The Oasis opened in early 1925.<sup>285</sup> Its plan and design responded to the desert climate, with one- to three-story wings clustered around landscaped courtyards, and concrete walls to insulate the interiors from the desert heat. Windows were screened with wooden grilles reminiscent of Spanish ironwork.

The entrance to the hotel's main building was marked with a four-story tower topped with stepped corner piers, decorated with abstract patterns cast into the concrete and supporting a pyramidal roof that echoed the profile of Mt. San Jacinto beyond.

The glass-walled dining room was built around two pre-existing cottonwood trees, which grew through openings in the roof; the adjacent McCallum adobe served as the hotel's lounge, with comfortable chairs clustered around the hearth.<sup>286</sup> The hotel grounds featured a lush lawn with a large brazier, surrounded by lounge chairs, where bonfires were lit each night;<sup>287</sup> and a "Persian" swimming pool set amidst the surviving fruit trees of the McCallum orchard.<sup>288</sup> The Oasis Hotel was the first of many innovative Modern concrete buildings in Palm Springs and is an original and significant example of Modern architecture in the United States. Author and historian Alan Hess has called the Oasis "one of the great neglected buildings of California architecture," and "one of the first defining statements about a Modern architecture in the desert,"<sup>289</sup> but its radical modern aesthetic would not be repeated in Palm Springs for a decade.

The city's third major resort of the 1920s, the grand Hotel El Mirador, was built in sumptuous Spanish Colonial Revival style by local developer Prescott Thresher Stevens, who spent the then-astronomical

amount of \$1 million on the resort.<sup>290</sup> Designed by the Los Angeles firm of Walker & Eisen, who also designed the Beverly Wilshire Hotel, the pink-walled El Mirador was set in lush gardens a mile north of the center of town on Indian Canyon Drive (then Indian Avenue) at Tachevah Drive. It featured an eye-catching bell tower (reconstructed; 1150 N. Indian Canyon Drive; HSPB-1) topped with Moorish tiles, two hundred luxurious guest rooms filled with hand-carved furniture, an Olympic-sized swimming pool, a tennis court, stables, and private golf course.<sup>291</sup>

El Mirador Hotel, photographed in 1953.  
Source: Herald-Examiner Collection, Los Angeles Public Library.

El Mirador was launched with an extravagant party on New Year's Eve, 1927, and officially opened for business the next day.<sup>292</sup> Less than two years later the stock market crashed, throwing the country into the Great Depression and wiping out many of the Midwestern and Northeastern industrialists who were the hotel's targeted clientele. El Mirador teetered on the brink of bankruptcy but was ultimately saved by its popularity as the favorite retreat of Hollywood film stars, who had discovered the joys of winter in Palm Springs and made the hotel "one of the most prosperous, orgiastic symbols of extravagance in the midst of national poverty."<sup>293</sup> In 1929 El Mirador opened a garage (HSPB-12) at the southeast corner of Palm Canyon Drive and Tachevah Drive to provide automotive service and chauffeurs' quarters for hotel guests.

<sup>293</sup> McDougal and Meenan, "It's Check-Out Time," P120.

The Desert Inn, Oasis, and El Mirador remained the preeminent hotels in Palm Springs through the 1930s, but as the village grew in popularity a number of smaller hostelrys sprang up to accommodate visitors of various means. In about 1919 Dr. J.J. Kocher built Sunshine Court (demolished) on a parcel in the 300 block of N. Palm Canyon Drive (then Main Avenue) that ran through to Belardo Road (then Palm Avenue). It consisted of a cluster of board-and-batten cottages around a central garden area, and its location near the O'Donnell Golf Club made it popular with vacationing golfers.<sup>294</sup> In 1921 the Foldes family purchased the Ramona Hotel, on a large parcel north of the Desert Inn, and converted it into the Spanish Colonial Revival-style Palm Springs Hotel, the second hostelry to bear that name.<sup>295</sup> In 1928 silent film actress Fritzi Ridgeway built the Pueblo Revival-style Del Tahquitz Hotel (demolished in 1960) at the southeast corner of South Palm Canyon Drive and Baristo Road.<sup>296</sup> In 1935 Ruth Hardy, an Indiana businesswoman, purchased the Birge estate (200 W. Ramon Road; HSPB-25), built by Alvah Hicks in the 1920s for the owners of the Pierce Arrow Motor Car Company. Hardy added bungalows and converted the property, a 20-room hacienda on two acres, into the exclusive, invitation-only Ingleside Inn. In 1948 Hardy became the first woman elected to the Palm Springs City Council, and is credited with the planting and lighting of palm trees along Palm Canyon Drive.<sup>297</sup>

Sunshine Court, c. 1919 (demolished). Source: *Images of America: Palm Springs*.

Many of the smaller hotels constructed in Palm Springs in the 1920s and 1930s, like Sunshine Court, took the form of the bungalow court. From about 1910 through the 1930s, the bungalow court flourished throughout Southern California. Composed of a series of individual dwelling units (bungalows) oriented around a central courtyard, the bungalow court promised much of the quiet and privacy of a single-family house with the flexibility and affordability of rental housing. Characteristics of the bungalow court include detached one-story bungalows usually symmetrically arranged around a central open space; the unified appearance of

individual units; separate unit entrances with front porches; and high quality interiors, including many built-ins. Often a larger multi-unit building was situated at the end of the courtyard, creating a U-shaped configuration and providing a visual terminus to the courtyard itself. The Spanish Colonial Revival-style

Orchid Tree Inn (261 S. Belardo Road; HSPB-72) constructed in 1930 is one of the best remaining examples of this property type in Palm Springs.

**Sub-Theme: Retail and Entertainment Development 1919-1941**

In addition to new hotels and resorts, the rapid increase in tourism in Palm Springs between the World Wars fueled additional commercial development, including shops, restaurants, theaters, and office buildings, to serve the growing populations of both seasonal and permanent residents. In the 1920s, Zaddie Bunker replaced the corrugated metal shed that had originally housed her garage with a substantial Mission Revival-style building, complete with an *espadaña*, a vent in the shape of a barbed quatrefoil, and a clay tile awning over the sidewalk. The Bank of America and retail shops occupied the street frontage, while the garage itself moved to the back of the building, off of Andreas Road (then Lawn Street). By the early 1930s the building was occupied by the Village Pharmacy, whose lunch counter was a popular local gathering spot.<sup>298</sup>

In 1930 Bunker's daughter, Frances, married Earle Strebe, who had arrived in Palm Springs during the 1926-27 season. Strebe worked at the Desert Inn as a bellman, night clerk, and projectionist, showing movies for guests in the Inn's lobby. These screenings were soon opened to the public, and as they became more popular Strebe relocated them to the auditorium of the Frances S. Stevens School. Strebe became a businessman and developer and helped his mother-in-law manage her properties. In 1932 Strebe constructed the Village Theatre on Andreas Road, just behind the Village Pharmacy, the first of eight theaters he would ultimately own or operate.<sup>299</sup>

The Indianoya building (HSPB-16) at 232 N. Palm Canyon Drive is characteristic of the simplified Spanish Colonial Revival style of retail development that proliferated in downtown Palm Springs in the early 1930s. The building is composed of one- and two-story volumes framing a small entrance court, with rustic brick walls and exposed wood lintels (now partially plastered). It housed an "Indian Trading Post" specializing in tourist souvenirs crafted by the local Cahuilla.

In 1933 actors Charlie Farrell and Ralph Bellamy built two tennis courts on a plot of land at the north end of town that they had purchased from Alvah Hicks.<sup>300</sup> The courts proved so popular with their Hollywood friends that the following year Farrell and Bellamy built additional courts, a swimming pool, dining room, and guest bungalows and offered memberships in the new Palm Springs Racquet Club (2743 N. Indian Canyon Drive; HSPB-83, partially damaged by fire in 2014). Pearl McManus opened her competing Tennis Club (701 W. Baristo Road) at the south end of town in 1937 on a boulder-strewn hillside at the west end of Baristo Road. The original building, altered and expanded in 1947

<sup>298</sup> Palmer, 59; Henderson, 79; and 1929 Sanborn Fire Insurance map.

with a design by Paul R. Williams and A. Quincy Jones, was modeled after a monastery on the Amalfi coast.<sup>301</sup> The club included an elegant oval swimming pool on a stone terrace, flanked by palm trees.

The village's most popular and most famous nightclub, the Chi Chi (217 N. Palm Canyon Drive; demolished), opened in 1935 on Palm Canyon Drive just north of the Village Pharmacy, on land leased from Zaddie Bunker. Beginning as a waffle house, it was converted by its owner, Irwin S. Schuman, first into a restaurant called the Desert Grille, and then into a full-fledged nightclub with dining, dancing, and live entertainment. It was expanded in 1938 and again in 1950 with the addition of the 750-seat Starlight Room. The Chi Chi was the premier nightspot of the Hollywood crowd into the 1960s, and its headliners were frequently interchangeable with its clientele.<sup>302</sup>

Carnell Building (1935, Harry J. Williams; HSPB-11).  
Source: Mott Studios Collection, California State Library.

In the early 1930s Desert Inn regular Julia Shaw Patterson Carnell began investing in Palm Springs real estate. Carnell, the widow of the co-founder of the National Cash Register Company (NCR) of Dayton, Ohio, was a prominent businesswoman and philanthropist in her home town. In 1919 she helped establish the Dayton Art Institute by donating a number of artworks and a mansion in which to house them; when the Institute outgrew its first home, Carnell donated \$2 million to build a new Renaissance Revival-style museum, completed in 1930.<sup>303</sup> In 1921 Carnell, along with other members of the Patterson family, donated \$250,000 in NCR stock to endow The Dayton Foundation, a community foundation supporting non-profit organizations in the region.<sup>304</sup> Turning her attention to her annual winter retreat, Carnell purchased the Community Church property at the southeast corner of N. Palm

Canyon Drive and E. Andreas Road and commissioned Dayton architect Harry J. Williams of Schenck and Williams, who had designed the NCR headquarters building, to design a two-story mixed-use building in Spanish Colonial Revival style.<sup>305</sup> The Carnell Building (196 N. Palm Canyon Drive; HSPB-11) was constructed in 1935 and featured multiple shops on the ground floor, fronting onto Palm Canyon Drive and Andreas Road, with 13 offices and five apartments on the second floor.<sup>306</sup> Carnell's purchase allowed the congregation to construct a new sanctuary, a striking concrete structure designed by William Charles Tanner, at 284 S. Cahuilla Road (HSPB-23).<sup>307</sup>

La Plaza and the Plaza Theatre (1936, Harry Williams; HSPB-22). Source: Palm Springs Historical Society.

Carnell also purchased from Cornelia White a three-and-one-half acre parcel that comprised most of the block bounded by S. Palm Canyon Drive, W. Tahquitz Canyon Way, S. Indian Canyon Drive, and W. Arenas Road.<sup>308</sup> There she constructed La Plaza and the Plaza Theatre (1936; HSPB-22), an innovative, multi-use, car-oriented shopping center designed by Harry Williams. Its central drive and parking area run through the block from Palm Canyon to Indian Canyon, flanked by picturesque Spanish Colonial Revival-style buildings with irregular volumes, plaster walls, tile roofs, overhanging wood balconies, and arcaded *corredores*. Williams and his son Roger, also an architect, reportedly flew to Santa Barbara to study examples of “Spanish” design there, and engineers incorporated the latest structural technology developed after the 1933 Long Beach earthquake.<sup>309</sup> The development included 38 shops, 24 bungalows, eight penthouses, a market, and a 137-car garage with chauffers’ quarters.<sup>310</sup> The Plaza Theatre, operated by Earle Strebe, featured interior walls “depicting lighted homes, [giving] one the

impression of sitting in an amphitheater.”<sup>311</sup> As Richard Longstreth has documented, Southern California developed a number of new architectural types to respond to the increasing use of the automobile. La Plaza is a sophisticated example of this, integrating retail, apartments, hotel, theater, garage, and parking areas.

#### **Sub-Theme: Las Palmas Business Historic District 1919-1941**

The Las Palmas Business Historic District was designated by the City in 1986.<sup>312</sup> It is bounded by Alejo Road to the south, El Alameda to the north, and includes most properties fronting N. Palm Canyon and N. Indian Canyon Drives on both sides. The district boundaries are illustrated in Figure 4. Through the 1920s the commercial center of Palm Springs remained clustered along a few blocks of Palm Canyon Drive (then Main Drive) primarily between Tahquitz Canyon Way (then Spring Street) and Amado Road (then Lemon Street). The area north of Alejo Road (then North Street) remained sparsely developed and almost exclusively residential through the end of the 1920s, dotted primarily with single-family residences and one notable courtyard apartment building, the Palmaire Apartments, now the Casa Palmeras (HSPB-82), designed by Paul R. Williams and located at the southwest corner of Tamarisk Road and Indian Canyon Drive. The Sanborn map from 1929 is included in Figure 5, illustrating the sparse development in the area during this period.

Casa Palmeras (1928, Paul R. Williams; HSPB-82). Source: California State Library.

<sup>311</sup> “Plaza Opening Set in Desert,” *Los Angeles Times*, October 31, 1936, 10.

<sup>312</sup> Although the district was designated in 1986, a historic context for the district was developed and a re-evaluation of the contributing and non-contributing buildings was undertaken as part of this project. The survey findings are included in Appendix E.

**Figure 4: Las Palmas Business Historic District 2015 Study Map**

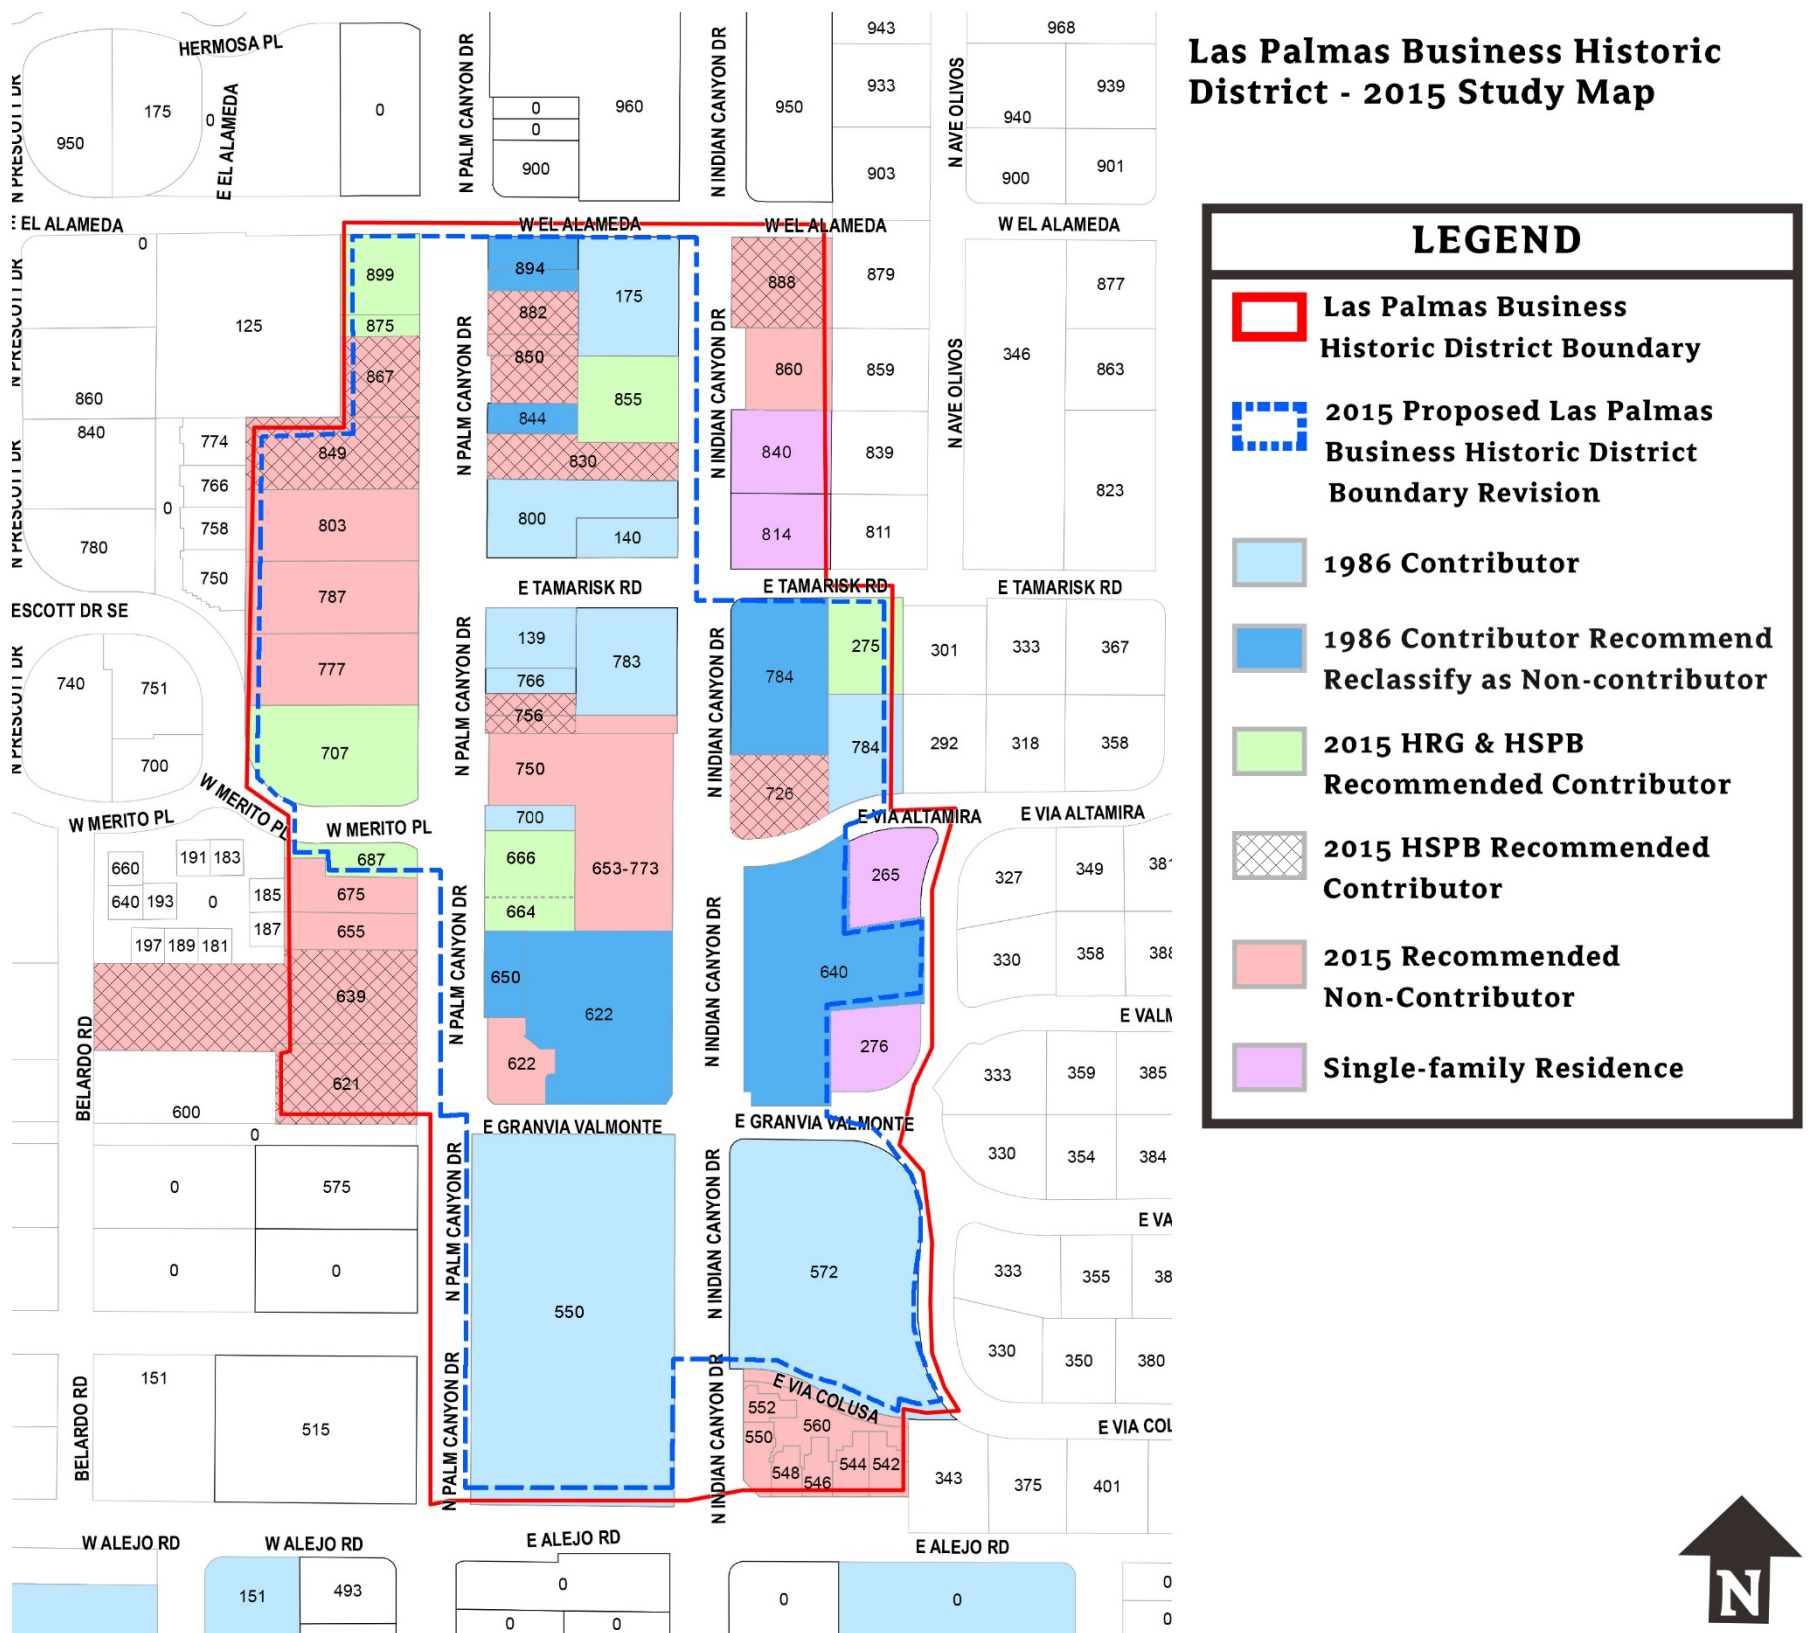

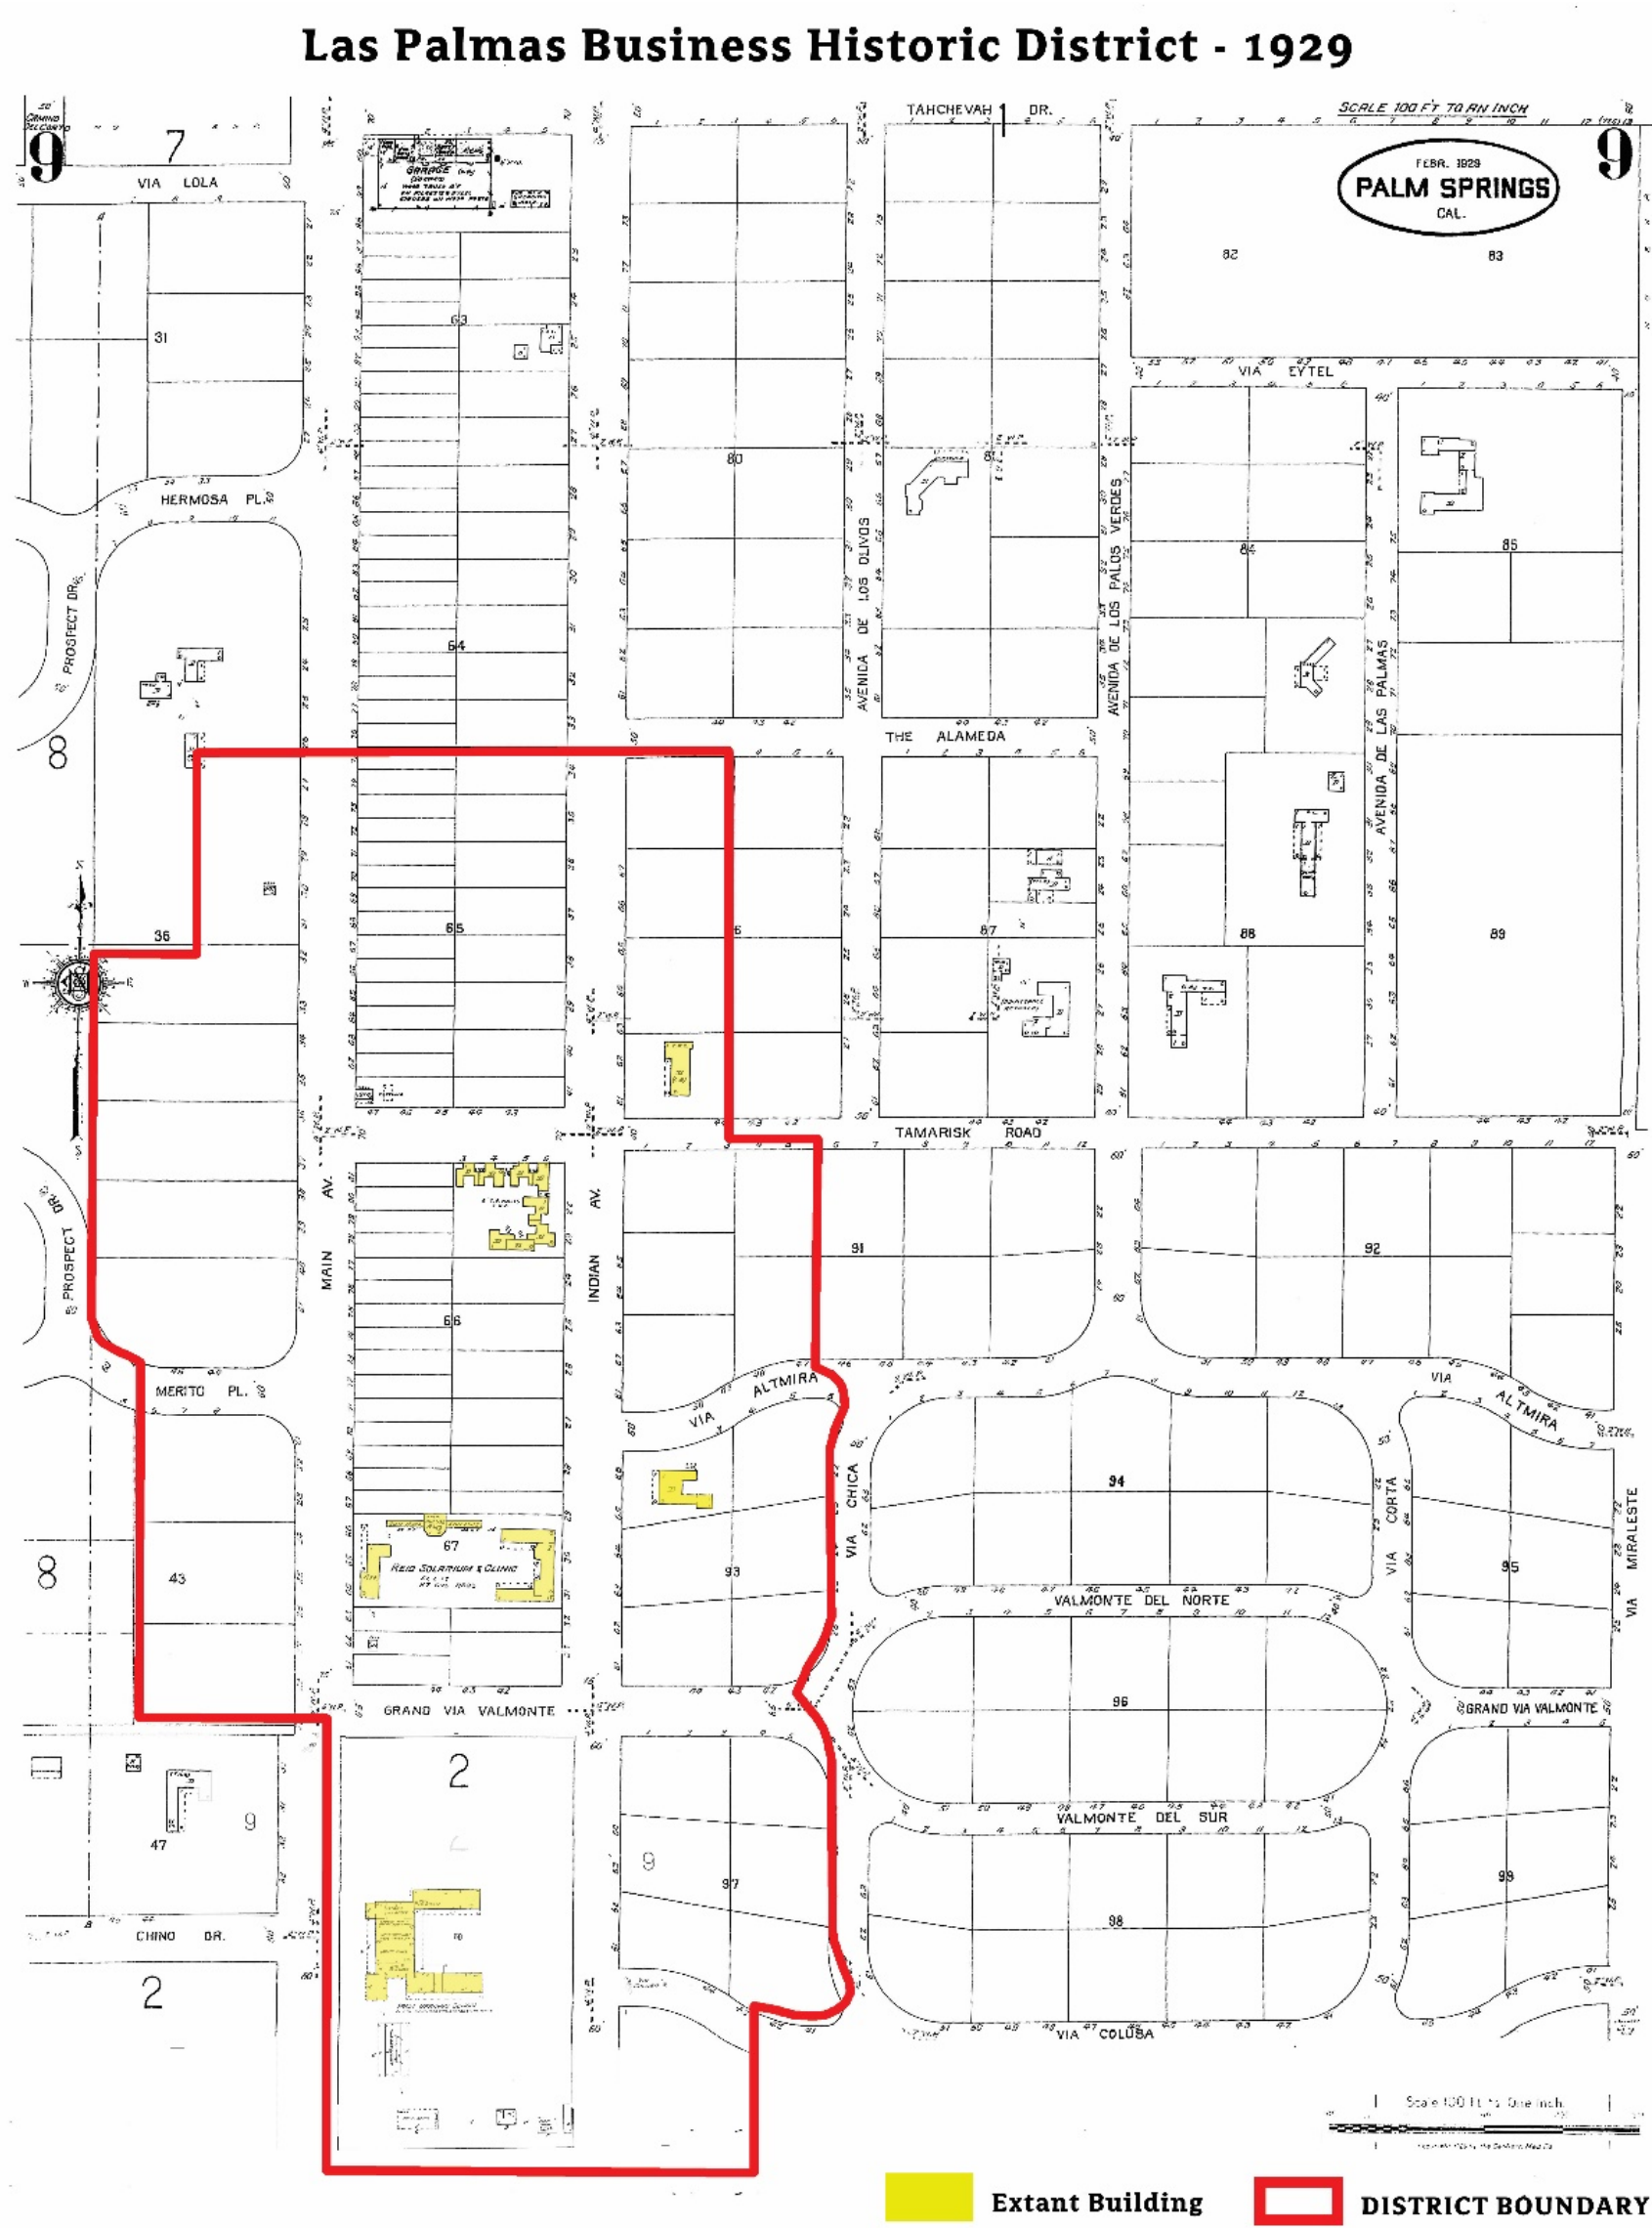

Figure 5: Sanborn Fire Insurance Map, 1929

The few exceptions to the scattered residential development in the north end of town in the late 1920s were the Hotel El Mirador and Garage; the Frances S. Stevens School (HSPB-7) occupying the entire block between Alejo Road and Granvia Valmonte; and the Reid Solarium and Clinic (HSPB-24) at what is now 648-650 N. Palm Canyon Drive and 645 N. Indian Canyon Drive.

The Reid Solarium represents Palm Springs as a health resort in the early 20<sup>th</sup> century. Dr. Henry Squire Reid was a New York native and a 1919 graduate of the University of Colorado Medical School. By 1927, when he obtained his California medical license, he was living in Palm Springs.<sup>313</sup> Reid constructed a “Solarium and Clinic” north of Granvia Valmonte, on a large parcel that fronted both N. Palm Canyon Drive (then Main Avenue) and N. Indian Canyon Drive (then Indian Avenue). The facility consisted of two Spanish Colonial Revival buildings – a rectangular one-story office building on Palm Canyon, and a U-shaped two-story building on Indian Canyon containing guest rooms and apartments; between them was a third building containing “sun rooms” and dressing rooms. Before 1936 Reid expanded the office building with an addition to the north that included a two-story octagonal tower.<sup>314</sup> Reid became “widely known in medical circles for his research on the curative values of sunlight using his Palm Springs solarium as a winter laboratory” to measure the healthful effects of ultra-violet light.<sup>315</sup>

<sup>315</sup> “Ultra Violet Rays Measured,” Los Angeles Times, December 29, 1932, A5.

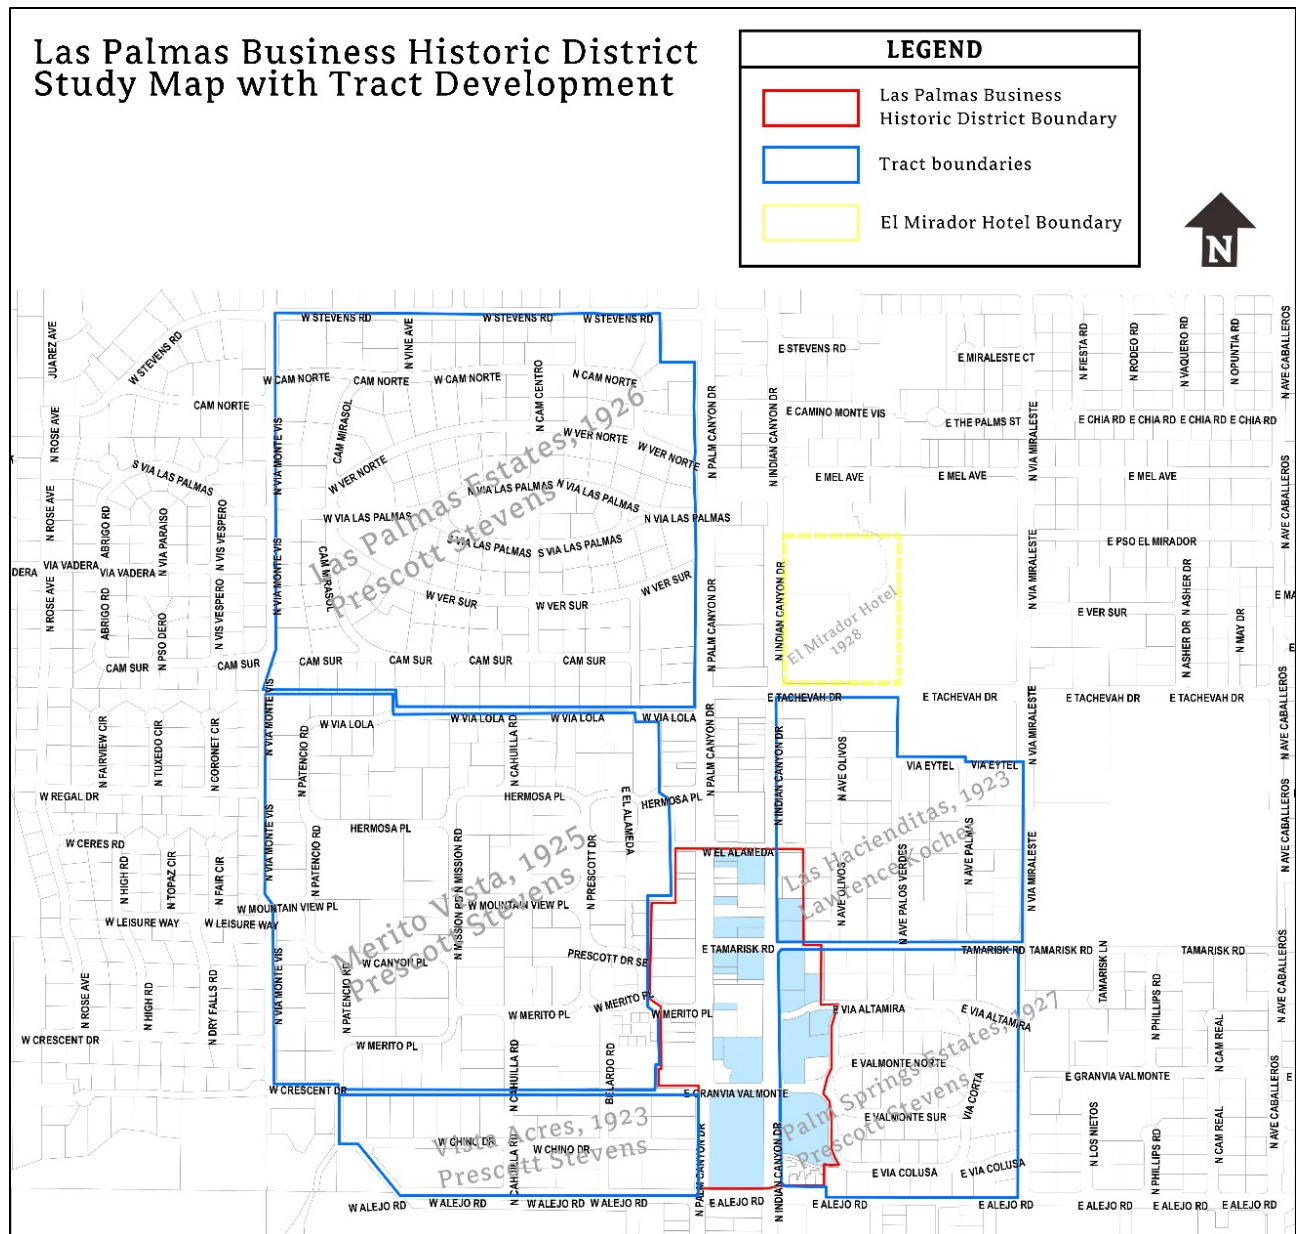

The uptown stretch of Palm Canyon Drive began to develop as a commercial district in the early 1930s. The popularity of Palm Springs with the Depression-proof movie industry provided more economic stability than in most other cities in the United States; as a result, there was continued commercial development during this period, and there are numerous buildings within the district constructed in the 1930s. The predominant architectural style in the district from this period is Spanish Colonial Revival; however, there are also notable Modernist examples.

Contributing buildings constructed in the 1930s represent the expansion of the city's original commercial core to the north as Palm Springs continued to grow during this period. Commercial development in the Las Palmas Business Historic District in the 1930s was partly a response to the increased pace of development in that decade in the flanking residential tracts that were originally established in the 1920s. Sparsely developed through the 1920s, these neighborhoods experienced a surge of residential construction in the following decade. (Parcel development by decade shown in Figure 5). This was likely due, at least in part, to their proximity to the popular El Mirador Hotel, which opened in 1928.<sup>316</sup> Several of these neighborhoods generally represent high end residential development of custom homes on large lots; Las Hacienditas and Palm Springs Estates became part of what would become known as the Movie Colony. Many of the businesses that concurrently sprang up along the adjacent stretch of Palm Canyon Drive – a market, a pharmacy, a movie theater, retail stores, and medical offices – catered to the growing residential neighborhoods to the east and west.

**FIGURE 6: RESIDENTIAL DEVELOPMENT ADJACENT TO THE LAS PALMAS BUSINESS HISTORIC DISTRICT**

View of the Pacific Building (c. 1936; HSPB-13) and the El Paseo Building (1930; HSPB-27). Photograph c. 1954. Source: Palm Springs Historical Society.

One of the most prominent buildings constructed during this period is the El Paseo Building (HSPB-27) designed by architect Jonathan Ring and constructed in 1930 at the northeast corner of N. Palm Canyon Drive and E. Tamarisk Road.<sup>317</sup> The Spanish Colonial Revival-style building surrounds a central courtyard and originally featured a columned *corredor* encompassing the sidewalk along Palm Canyon Drive and cantilevered wood balconies overlooking Tamarisk Road. Tenants included the El Paseo Market and Earl Strebe's El Paseo Theater.<sup>318</sup>

El Paseo Building (1930, Jonathan Ring; HSPB-27). Source: Mott Studios Collection, California State Library.

<sup>317</sup> Although several sources note 1926 as the construction date for the El Paseo Building, it is not shown in the 1929 Sanborn map. An article in the *Los Angeles Times* dates the building to 1930. "El Paseo Opens Tuesday," *Los Angeles Times*, January 13, 1930, A10.

<sup>318</sup> Palm Springs Historic Site Preservation Board, "Las Palmas Business Historic District Building Histories," (undated), 30. The El Paseo Building was extensively altered in the 1950s and partially rehabilitated in 2009.

International Style modernism made its first appearance in Palm Springs in 1934, with the construction of the Kocher-Samson Building (HSPB-79) on a lot north of the Reid clinic (766 N. Palm Canyon Drive). The two-story mixed-use building, with medical offices on the ground floor and an apartment above, was designed by the firm Kocher and Frey, which was composed of New York architect A. Lawrence Kocher and his Swiss-born business partner, Albert Frey. The building was designed for Kocher's brother, Dr. J.J. Kocher.<sup>319</sup> In the late 1920s Frey worked briefly in Paris for Le Corbusier (Charles-Édouard Jeanneret, 1887-1965), one of the leading modernist architects in Europe, who espoused formal, proportional compositions and declared the house "a machine for living."<sup>320</sup> Frey immigrated to the United States in 1930 and soon afterward began working with Kocher.<sup>321</sup> Frey designed the Kocher-Samson building in response to its desert setting as a cluster of square and rectangular forms enclosing a series of patios and small gardens. Frey traveled to Palm Springs at the end of 1934 to supervise its construction and was instantly attracted to the desert landscape. The partnership with Kocher was amicably dissolved, and in 1935 Frey formed a partnership with a young California architect, John Porter Clark, which was to last for nearly 20 years.<sup>322</sup> Clark and Frey are known as two of the founders of the "Desert Modern" style of architecture.<sup>323</sup>

Kocher-Samson Building (1934, Kocher and Frey; HSPB-79). Source: *Palm Springs Life*, Desert Treasures Gallery.

A large mixed-use building, the Mediterranean Revival-style Pacific Building (784 N. Palm Canyon; HSPB-13), was constructed in 1937 at the southeast corner of N. Palm Canyon Drive and E. Tamarisk Road, immediately north of the Kocher-Samson Building and opposite the El Paseo Building.<sup>324</sup> It was built by local contractor Charles Chamberlin, who also constructed the Welwood Murray Memorial Library.<sup>325</sup>

<sup>321</sup> Rosa, 26.

<sup>322</sup> Rosa, *Albert Frey*, 36.

<sup>323</sup> "Albert Frey," PS Modcom, <https://psmodcom.org/albert-frey/> (accessed March 2015).

<sup>324</sup> *Palm Springs News*, April 8, 1937. "Just completed and now ready for occupancy is the attractive Pacific Commercial building..."

<sup>325</sup> "Pioneer Village Builder, Charles Chamberlin Dies," *The Desert Sun*, XXVII, 77, May 16, 1955, 1a.

The building, with its central courtyard and four-story tiered corner tower, contained retail spaces and offices on the ground floor with apartments above. The Pacific Building is distinctive for its size and its strong Italian Renaissance Revival design elements, including wide overhanging eaves, corbeled balconies, Tuscan columns, and decorative quoins.

More typical of 1930s commercial development in the area are the one- and two-story Wilson-Sorum Building immediately north of the Reid Clinic at 664 N. Palm Canyon Drive (1937, Charles O. Matcham), built around a central courtyard; and the modest, one-story Clifton Dental Building (1936) at 700 N. Palm Canyon Drive designed by Brewster & Benedict.<sup>326</sup> The original design of the Clifton building appears to have been in the Moderne style, with plaster walls and steel sash casement windows that wrap the building's corners.

Pepper Tree Inn, previously the Reid Solarium (constructed c.1927; currently the Alcazar Hotel) designed in the prevailing Spanish Colonial Revival style.

A number of small hotels, apartment hotels, and bungalow courts were constructed in the Las Palmas Business Historic District in the 1930s along N. Indian Canyon Drive. The apartments and bungalow courts were built primarily to accommodate seasonal visitors, rather than as long-term multi-family housing, and most were designed in the prevailing Spanish Colonial Revival style. Representative examples include the bungalow court of Los Arboles (later the Indian Manor Hotel) at 784 N. Indian Canyon Drive (1935), the Ambassador Apartment Hotel (later the Spanish Inn and currently the Triada Hotel) at 640 N. Indian Canyon Drive (1936), and the Colonial House Hotel, later Howard Manor and currently the Colony Palms Hotel, at 572 N. Indian Canyon Drive (1936). The Colonial House occupies the entire block bounded by N. Indian Canyon Drive, E. Granvia Valmonte, Via Chica, and E. Via Colusa. It was built for casino owner Al Wertheimer.<sup>327</sup> The San Jacinto Hotel, currently the Movie

<sup>326</sup> This was attributed to John Porter Clark per the Historic Site Preservation Board, "Las Palmas Business Historic District Building Histories," undated, 22. That attribution is incorrect, and it has been confirmed as the work of Brewster & Benedict. It appears that John Porter Clark designed the covered drive that was added to the property.

<sup>328</sup> Due to alterations, the Movie Colony Hotel was identified as part of this study as a non-contributor to the district.

<sup>329</sup> Rosa, 36-37.

**SUB-THEME: DESERT GUEST RANCHES AND WESTERN-THEMED RESORT ACTIVITIES (1929-1969)**

In the past ten years a new institution has developed in American recreational life: the desert guest ranch. Its clientele is no longer limited to the adventurous few who seek hardships in the back areas. The modern guest ranch lures the discriminating of all ages who seek to escape the complicated existence of city life.

Smoke Tree Ranch Brochure, undated<sup>330</sup>

During the 1920s, the prevalence of “dude ranches” — working cattle ranches transformed by “the guest business” - increased across the United States. Driven by financial hardship, cattle ranchers joined forces with the railroads to promote a new kind of vacation experience. A 1928 article in the *Los Angeles Times* posed and answered the question “What is a Dude Ranch?” by defining it as “a resort where life on a ranch is offered without the frequent makeshifts for ordinary comforts...the main feature of entertainment is a stable of good horses where the able may ride to their heart’s content...”<sup>331</sup> With its rural, agricultural roots and its continued reliance on horses for transportation well into the 20<sup>th</sup> century, Palm Springs was especially well suited to the creation of western-themed resorts and activities that showcased ranch living.

**Deep Well Guest Ranch**

Among the first of these resorts was the Deep Well Guest Ranch located at 1020 Highway 111 (a.k.a. Indio Road).<sup>332</sup> After unsuccessful farming efforts in the early 20<sup>th</sup> century by two previous owners, Henry Parsons (a scientist and authority on rubber) purchased the property in 1926. He drilled a well and found water close to the surface. After drilling further he found water again at 630 feet and the property became known as Deep Well Ranch.<sup>333</sup>

In 1928, Pearson sold the Ranch to Charles Doyle who converted an old apricot shed and ranch house to guest accommodations and called it Deep Well Guest Ranch. A 1929 ad in the *Los Angeles Times* describes the nascent resort as “A desert dude ranch 10 minutes from Palm Springs with its own 400-foot well offers a children’s paradise.” Daily and weekly rates were available, however, the ranch’s unique identity as resort and not a sanitarium was reinforced by the fact that “no tubercular people are accepted.”<sup>334</sup> Attractions included an archery course, rifle and pistol range, trap shooting, horseback rides, and “hot and cold water and electricity.”<sup>335</sup>

<sup>330</sup> Smoke Tree Ranch: A Way of Life (2007), produced by Tracy Conrad (Digital Rain Films, [www.digitalrainfilms.com](http://www.digitalrainfilms.com)).

<sup>331</sup> “Arizona Resorts Popular,” *Los Angeles Times*, November 21, 1928, A1.

<sup>332</sup> Note that several of the dude ranches discussed in this section were later converted to residential subdivisions; that history is discussed under the relevant Residential Development themes.

In 1929, Doyle sold the property to Major and Mrs. Everet and Everet's brother-in-law, Carol Smith. They significantly improved the property when, in 1930, they engaged architect Paul R. Williams to design hacienda-type buildings around patios.<sup>336</sup> Major Everet died in 1929, and by fall of 1931 Frank and Melba Bennett of Beverly Hills had purchased the property along with Phillip Boyd (local banker and first mayor of Palm Springs). They operated the guest ranch for almost 20 years. In 1948-49, encroaching residential development made maintaining the rural atmosphere of Deep Well difficult and the Bennetts retired and sold the Guest Ranch and twenty acres surrounding it to experienced hotelier Yoland Markson<sup>337</sup> of Boston and Beverly Hills.<sup>338</sup> By 1952, Deep Well boasted 52 lodging units.<sup>339</sup> In 1963 Deep Well Guest Ranch was sold to a Los Angeles syndicate headed by Howard Green, Harry Dodson, and Arthur Glesby who intended to make improvements to the ranch resort.<sup>340</sup> However in 1965, demolition of the structures began in preparation for the construction of apartments on the site.<sup>341</sup> In 1968, the former Guest Ranch property was sold at public auction.<sup>342</sup>

### Smoke Tree Ranch

Smoke Tree Ranch, developed by Mac Blankenhorn and his group of Pasadena-based investors, opened in January 1931. From the beginning, Smoke Tree Ranch was unique: “Palm Springs newest dude ranch...[was] neither a resort nor public hotel.”<sup>343</sup> Early advertisements for the guest ranch emphasized an exclusivity that continues to this day: “Designed for those wishing to escape from the turmoil of weekend resorts...introductions or satisfactory references are required.”<sup>344</sup> The ranch featured cottages, stables, and a school for grades two through eight. Three school buildings and a playground were located along the western border of the ranch. Facilities included the Ranch Rodeo Field, stables, and the pool. The ranchhouse building contained two dining rooms, kitchen, lobby, and storerooms. There were 15 cottages for guests, two buildings for servant’s quarters, and a twenty-car garage. These buildings were designed by Pasadena-based architect Garrett Van Pelt, Jr. (1879-1972).<sup>345</sup> The property was also home to “historic adobe ruin relics” believed to date back to the 1880s and the failed efforts to establish the city of Palmdale.<sup>346</sup>

Blankenhorn sold part of his investment to Charles Doyle and in 1936, Fred and Maziebelle Markham (operating as the Mardo Corporation) bought Smoke Tree Ranch. Whereas Blankenhorn and his syndicate of investors may have been overextended at Smoke Tree Ranch, Markham was able to bring financial stability to the venture. The Markhams also brought many improvements. In 1936, they constructed an Olympic-sized swimming pool, five new cottages and the first tennis courts.<sup>347</sup> According to Smoke Tree Ranch Chief Executive Officer Tracy Conrad’s film *Smoke Tree Ranch: A Way of Life*, Maziebelle Markham regarded the Ranch as an expanded version of a well-run home with houseguests. Guests (and ultimately resident “Colonists”) were accepted by invitation only. There was no advertising. Ranch buildings were shielded from the highway and detached guest cottages provided maximum privacy for the patrons who consisted primarily of wealthy industrialists. According to a 1977 interview with Smoke Tree’s Vice President Brad Poncher, Disney’s “studio set designers were responsible for the design of some of the ranch’s guest cottages.”<sup>348</sup> Celebrities were purposefully discouraged.

Smoke Tree consisted of a working ranch with stables and a corral for instruction. Each guest (including each child) was assigned a horse upon check-in.<sup>349</sup> Popular events included breakfast rides, steak dinners, periodic rodeos, and gymkhanas.<sup>350</sup> Communal meals in the dining room, square dances and performances by well-known cowboy musicians such as Johnny Boyle or Cliff Campbell added to the authentic western flavor and social scene. Swimming, sunbathing, badminton, and lawn bowling were

included in the non-western themed recreational activities popular at Smoke Tree. In 1945, ownership of the Guest Ranch was transferred from the Markhams to the Colonists and it continues to operate as a resort to this day.

Postcard of La Paz Guest Ranch, c. 1948. Source: Palm Springs Historical Society.

### La Paz Guest Ranch

Another Palm Springs guest ranch was the Spanish Colonial Revival-style La Paz Guest Ranch (1939, John Porter Clark, landscape design by Millard R. Wright; demolished) located at 1150 State Highway (now E. Palm Canyon Drive). Opened on November 6, 1939, La Paz consisted of 22 rental units, owners' quarters, and several recreational facilities. It was located on a six-acre plot fronting Indio Road near Deep Well Guest Ranch.<sup>351</sup> During WWII the La Paz served as an Air Force Officer's Club.<sup>352</sup> James R. Fouch<sup>353</sup> purchased La Paz from Mrs. L.J. Mooney and William Heiser in 1945. By then, the resort offered "deluxe accommodations, swimming pool, tennis and horseback riding in a secluded oasis of Western Charm and Hospitality."<sup>354</sup> The La Paz featured Sunday Ranch Suppers with Western Dancing and encouraged people to "Wear your western togs or come with a western spirit."<sup>355</sup> Noted guests at

<sup>351</sup> "La Paz Guest Ranch Palm Springs Product; Opens for Season Nov. 6," *The Desert Sun*, October 27, 1939.

<sup>352</sup> "Its Patriotic to Keep Fit, Rest and Relax at a Resort," *Los Angeles Times*, January 8, 1943, 17.

<sup>353</sup> Fouch was the founder of Universal Microphone Company in 1928.

<sup>354</sup> Ad, *Palm Springs City Directory*, 1946-7, 104.

<sup>355</sup> Ad, *The Desert Sun*, February 22, 1946, 3.

La Paz over the years included many movie stars including academy-award winning actress Olivia De Havilland.

In 1946, the La Paz was “thoroughly redecorated inside and out” including the creation of a mural by noted Hollywood artist Paul Lutz.<sup>356</sup> In 1954, the La Paz was sold to Mr. and Mrs. William Halloran of Seattle who immediately embarked on plans to enlarge the existing facilities and build additional units.<sup>357</sup>

### **Rogers Stables**

With horses the focal point of activity, Rogers Stables (a.k.a. Rogers Ranch Club, Rogers Ranch Club Stables) at 1600 Chia Road near N. Sunrise Way (a.k.a. 1441 N. Sunrise Way) did not provide lodging but was a hub of western resort activity. During the day, owner Trav Rogers provided horses for trail riding. An arena held exhibitions and rodeos. At night, it became a dining venue and nightclub with square dancing. The lower floor of the two-story Pueblo Revival-style building was also home to the Mink and Manure Club with horse stalls on both sides where ladies could throw their mink coats on the long table and mingle with the locals. Hollywood stars also frequented the establishment including actors Peter Lorre and Judy Garland.<sup>358</sup> By the mid-1940s, the property was purchased by Charley Morrison and renamed “The Stables.”<sup>359</sup>

Rogers Stables.  
Source: Palm Springs Historical Society.

<sup>356</sup> “La Paz Will Open for New Season on October 1 is Word,” *The Desert Sun*, September 27, 1946.

<sup>357</sup> “Guest Ranch Sold in Palm Springs,” *Los Angeles Times*, November 21, 1954, F13.

<sup>358</sup> “Tattletale,” *Los Angeles Times*, November 9, 1941, D5.

<sup>359</sup> “Nothing To It,” *The Desert Sun*, October 1, 1946.

The popularity of the desert dude ranch phenomenon is further evidenced by the fashion of western wear promoted in Los Angeles as well as in the city of Palm Springs. A 1931 ad for Dyas Resort Clothes at 7<sup>th</sup> and Olive in Los Angeles features “Smart and Practical Clothes for Desert Dude Ranches.” Western shirts, hats, riding pants, and skirts are promoted “for lazy happy hours out of the saddle.” The ad even features a line of clothing specifically for “Smoke Tree Ranch...Dude Ranch Sports Clothes and whatever you like best to wear in the evening.”<sup>360</sup> In Palm Springs itself, popular sources for western wear included Marge Riley’s Westerns at 227 S. Palm Canyon Drive, Spaulding’s at 278 N. Palm Canyon Drive, Rasmussen’s Frontier Shop at 1995 Highway 111 (a.k.a. Rogers’ Frontier Shop at Rogers Stables) and later Rasmussen’s Saddlery & Western Wear at 1151 N. Indian Avenue.

Rasmussen’s Western Wear float in the Desert Circus. Source: Palm Springs Historical Society and *Palm Springs Life* Archives.

<sup>360</sup> “Display Ad 30,” *Los Angeles Times*, December 13, 1931, B6.

The Desert Circus, a western-themed parade, began in 1936 and was the biggest event of the season every year until it was discontinued in 1983.<sup>361</sup> By 1946, some 30,000 people lined the street for the event.<sup>362</sup> The parade included dozens of floats, bands, and equestrian units. It quickly grew into a week's worth of social activities including a "Kangaroo Court" during which anyone found not wearing western wear was "hailed into court" and made to pay a fine or to entertain.<sup>363</sup> Other activities included ranch dinners, dances, a fashion show, the Village Insanities, and the Big Top Ball. Another popular event was the "hat parade" for which Melba Bennett, co-owner of the Deep Well Guest Ranch contributed to the local fashion scene with the creation of the "palm springs hat" (a cowboy hat decorated with ribbons and flowers).

Palm Springs Desert Circus, 1940. Source: *The Desert Sun*.

Another annual western-themed event was Western Week begun in 1941 by Los Compadres riding club. The event featured a parade down Palm Canyon Drive, a rodeo, a carnival street dance and a deep pit barbecue.<sup>364</sup> Tourists and villagers alike sported western clothing during the week-long celebration which was held every October and marked the beginning of the season. Western Week attracted the participation of riding clubs from all over Southern California. Local stables from the pre-World War II period include Arol's Buckskin Stables at 1680 Ramon Road; Cowboy Stables on Arenas

<sup>361</sup> It was briefly and unsuccessfully revived in 1985.

Road; McDonald Stables at 1205 E. Ramon Road; and the Araby-Palm Springs Stables at 190 Avenue de Los Caballeros.

Barbeque at Los Compadres.  
Source: Palm Springs Historical Society.

Los Compadres originally began as the Palm Springs Riding Club in the late 1930s with about 40 members. The club would often stage breakfast rides, moonlight rides and weekend campouts accompanied by a chuck wagon.<sup>365</sup> After World War II, the club purchased land at 1849 S. El Cielo Road and built Los Compadres Ranch complete with stables and a clubhouse. In 1952, the clubhouse was damaged by fire. In 1968, club members began an annual deep pit barbecue event at the Ranch.<sup>366</sup>

Other prominent Palm Springs riding clubs included the Desert Riders (formed in 1931) that counted the elite of Palm Springs society as members, including Pearl McManus, Charles Farrell and celebrities Don Ameche, Dennis Day, Henry Fonda, Clark Gable, Gary Grant, Olivia de Haviland, William Holden, Hugh O'Brien, and Robert Taylor.<sup>367</sup> Rides into such areas as Andreas Canyon, Deep Canyon and even to visit more urban locations such as the Mission Hills Golf and Country Club<sup>368</sup> were commonplace in the postwar period. The Desert Riders' Oasis, a place for cookouts for that riding club, was located off Bogert Trail (formerly San Benito Way).

## COMMERCIAL DEVELOPMENT BETWEEN THE WARS (1919-1941): ELIGIBILITY

### Property Types: Commercial Building, Commercial Block, Historic District

Examples of commercial buildings from this period may include hotels, motels, theaters, retail stores, banks, restaurants, commercial storefront buildings, and automobile-related resources including auto dealerships, gas stations, and drive-ins. Examples of commercial properties in Palm Springs associated with this period include the remains of the Oasis Hotel, now wrapped by later development (1925); La Plaza (1936; HSPB-22), the town's first shopping center and an early example of automobile-oriented, multi-use retail development in Southern California; and a number of other office and retail buildings such as El Paseo (1930; HSPB-27) and the Pacific building (1937; HSPB-13). There are also several small hotels and motor court hotels such as the Colonial House Hotel (1936; presently the Colony Palms), the Ambassador Hotel (presently the Triada Hotel; HSPB-49), and the Orchid Tree Inn (HSPB-72).

### Applicable Eligibility Criteria

A commercial property from this period may be eligible for historic designation under one or more of the following criteria:

CRITERIA	REASON
A/1/3 (Pattern of Development/Period) <sup>369</sup>	As an early or excellent example of commercial development in Palm Springs. Commercial buildings may be eligible as rare remaining examples of the original commercial core; as an example of a particular trend in commercial development or growth during this period; or for a direct association with the tourism industry in Palm Springs (including hotels and related tourist amenities, along with dude ranch properties). Commercial buildings eligible under this criterion must represent a trend or pattern of development, they cannot simply have been constructed during the pre-World War II era.
A/1/6 (District)	A collection of commercial buildings that are linked geographically may be eligible as a historic district. A potential commercial district in Palm Springs will likely span several periods of development.

### Integrity Considerations

Each type of property depends on certain aspects of integrity to express its historic significance. Determining which of the aspects is most important to a particular property type requires an

<sup>369</sup> Note that eligibility criteria are listed in the standard format National Register/California Register/Local. Note that National Register/California Register Criterion A/1 can be applied to a single event important in history, or to an overall trend or pattern of development. The City of Palm Springs local ordinance distinguishes these into separate criteria – Criterion 1 applies to properties that are associated with a singular event; Criterion 3 applies to properties that “reflect or exemplify a particular period” in history.

understanding of the property's significance and its essential physical features. The rarity of the property type should also be considered when assessing its physical integrity. In order to be eligible for listing at the federal, state, or local levels, properties and districts must retain sufficient integrity to convey their historic significance under this theme.

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
A/1/3 (Pattern of Development/Period)	A property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s). <sup>370</sup> A commercial property from this period eligible under Criteria A/1/3 should retain integrity of location, design, workmanship, materials, and feeling in order to reflect the important association with the city's commercial development during this period. A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style. <sup>371</sup>
C/3/4,5 (Architecture)	A property important for illustrating a particular property type, architectural style or construction technique; or that represents the work of a master must retain most of the physical features that constitute that type, style, or technique. <sup>372</sup> A commercial property significant under Criterion C/3/4,5 (Architecture) should retain integrity of design, workmanship, materials, and feeling, at a minimum, in order to be eligible for its architectural merit. A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style. Replacement of original storefronts is a common and acceptable alteration.

<sup>370</sup> *National Register Bulletin 15.*

<sup>371</sup> *National Register Bulletin 15.*

<sup>372</sup> *National Register Bulletin 15.*

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
A/1/6 (District)	In order for a historic district to be eligible for designation, the majority of the components that add to the district's historic character must possess integrity, as must the district as a whole. A contributing property must retain integrity of location, design, setting, feeling, and association to adequately convey the significance of the historic district. Some alteration to individual buildings, such as replacement of storefronts is acceptable. Eligible historic districts may span several periods of development.

#### **Commercial Development between the Wars (1919-1941): Registration Requirements**

To be eligible under this theme, a property must:

- date from the period of significance; and
- represent important patterns and trends in commercial development from this period, including representing the original commercial core, early automobile-related development, dude ranch development, or a direct association with tourism; or
- represent a unique or rare commercial property type; or
- represent an excellent or rare example of an architectural style, property type, or method of construction; or be associated with a significant architect or designer; and
- display most of the character-defining features of the property type or style; and
- retain the essential aspects of historic integrity.

To be eligible under this theme, a historic district must:

- retain a majority of the contributors dating from the period of significance; and
- display the original planning features of a commercial enclave or corridor; and
- retain the essential aspects of historic integrity.

**THEME: CIVIC & INSTITUTIONAL DEVELOPMENT BETWEEN THE WARS (1919-1941)**

This theme explores the development of public services and infrastructure, schools, libraries, churches, and other local institutions in Palm Springs in the 1920s and 1930s. As the village grew in popularity and population, the ad hoc provision of services could not meet the increased needs of residents and visitors, leading in the late 1930s to a push for incorporation.

Prior to Palm Springs' incorporation in 1938, the village's services were managed by the volunteers of the Palm Springs Chamber of Commerce, originally founded in 1918 as the Board of Trade. The Board's founding president was Dr. J.J. Kocher, and the organization's offices occupied one of the bungalows of Kocher's Sunshine Court on North Palm Canyon Drive (then Main Drive).<sup>373</sup> Next door, at 365 N. Palm Canyon, was the California Water and Telephone Company (HSPB-26), a reinforced concrete building constructed in 1935.<sup>374</sup> The two-story, Spanish Colonial Revival-style building was finished with plaster walls, a clay barrel tile roof, and a second story balcony. Just to the north another Spanish-style building was constructed in 1936 to house the village's fire station and police department. The all-volunteer Palm Springs Fire District had been formed in 1931 after a fire destroyed a local grocery store.<sup>375</sup>

<sup>375</sup> City of Palm Springs, "Fire Department History," <http://www.ci.palm-springs.ca.us/government/departments/fire-department/history> (accessed June 19, 2015).

One of the most prominent institutional developments prior to Palm Springs' incorporation is the Frances S. Stevens School (HSPB-7) occupying the entire block between Alejo Road and Granvia Valmonte, in what is now the Las Palmas Business Historic District. Prescott T. Stevens, developer of the El Mirador Hotel, donated the site and the funds to build the school, in memory of his wife and her interest in education.<sup>376</sup> The first two rooms were completed in 1927. Katherine Finchy, who arrived in Palm Springs in 1922, became the school's first administrator. Palm Springs' first bond issue provided additional classrooms, a library, indoor plumbing, a cafeteria, an apartment for the principal, and a large auditorium. The Spanish Colonial Revival-style complex features a traditional layout with rooms arranged around an open courtyard. In the late 1920s local resident Earle Strebe began showing movies in the auditorium which was eventually converted into the village's first theater.

Until 1930 the Community Church remained the sole church in the village. The only other house of worship in the area was the little adobe chapel of St. Florian, built out on the Agua Caliente Reservation in 1912.<sup>377</sup> In 1926 Father Philip LaVies, who traveled weekly to Palm Springs from the mission school in Banning, began planning a permanent Catholic sanctuary in the village. In 1928 LaVies, with the assistance of P.T. Stevens, obtained from the Southern Pacific Railroad a parcel at the southeast corner of Alejo and Belardo Roads and engaged Los Angeles architect Albert C. Martin to design a church inspired by the California missions. The church, Our Lady of Solitude (151 W. Alejo Road; HSPB-15) was constructed by Alvah Hicks and completed in 1930.<sup>378</sup> In 1935 the Community Church, having outgrown its little white frame chapel at the corner of North Palm Canyon Drive and Andreas Road, sold the property to Julia Carnell for construction of the Carnell Building (HSPB-11). The Church used the proceeds to purchase from Pearl and Austin McManus three parcels at the northeast corner of Cahuilla and Baristo Roads. A new sanctuary (284 S. Cahuilla Road; HSPB-23), designed by William Charles Tanner in a pared-down English Gothic Revival style, was completed in 1936.<sup>379</sup>

Palm Springs High School (1938, G. Stanley Wilson). Source: The Living New Deal, <http://livingnewdeal.org/projects/palm-springs-high-school-palm-springs-ca/>

The Depression-era domestic policies of President Franklin Delano Roosevelt, popularly called the New Deal, allocated funds for the construction of public works projects across the country and created jobs for workers improving their own communities. The New Deal marshaled direct government investment to alleviate the problems of poverty, unemployment, and the disintegration of the American economy during the Great Depression. The Public Works Administration (PWA), which began in 1933 and the Works Progress (later Work Projects) Administration (WPA), which began in 1935, funneled significant financial resources to communities across the United States for the construction of roads, bridges, parks, and civic and institutional buildings. In Palm Springs, the Palm Springs High School (2248 E. Ramon Road) was constructed with New Deal funding. The high school was designed by G. Stanley Wilson and completed in 1938.

As Palm Springs grew, the need for infrastructure improvements, zoning restrictions, and other controls became apparent. In November 1936, a 30-member committee was formed to study the possibility of incorporation. The committee included early pioneers, developers, and other prominent citizens including Ralph

Bellamy, Phillip Boyd, Earl Coffman, Alvah Hicks, Fred Markham, Austin McManus, Culver Nichols, Warren Pinney, George Roberson, and Jack Williams.<sup>380</sup> Harold Hicks was selected as committee chairman. At its meeting on September 22, 1937 the committee fixed the city boundaries, divided it into seven wards, and authorized the drafting of an incorporation petition.<sup>381</sup> On Election Day, April 12, 1938, voters approved incorporation by a vote of 442 to 211.<sup>382</sup> Council members were elected to represent each of the seven wards; included in that first Palm Springs City Council were pioneers Alvah Hicks and Austin G. McManus. Philip L. Boyd was appointed the city's first mayor.<sup>383</sup> The city's permanent population in 1938 was 5,336, with a seasonal jump to 8,000, and the city's incorporated area covered 20 square miles.<sup>384</sup>

Postcard of the Welwood Murray Memorial Library (1938-41, John Porter Clark; HSPB-3).

One of the first civic buildings constructed in the new city was the Welwood Murray Memorial Library (100 S. Palm Canyon Drive; HSPB-3), constructed in 1941 at the southeast corner of S. Palm Canyon Drive and E. Tahquitz Canyon Way. It was named in honor of pioneer hotelier Welwood Murray. Concerned about the lack of reading material in the village, Murray had constructed a small adobe building at the rear of his hotel to house his private library, and loaned out his own books. In 1938, when the city was incorporated, Murray's son George Welwood Murray donated land for the construction of a public library in memory of his father.<sup>385</sup> Albert Frey submitted a Modern design but the library board, led by Nellie Coffman, preferred a more traditional Mediterranean Revival design by John Porter Clark.<sup>386</sup> The Welwood Murray Memorial Library served as the city's main public library until the completion of the new Palm Springs Library Center (300 S. Sunrise Way; William Cody) in 1975.

Several important cultural and social institutions were founded during this period as well. The Palm Springs Desert Museum (now the Palm Springs Art Museum) was founded in 1938 and was originally located in one of the buildings of La Plaza. The Museum at that time focused on Native American artifacts, the natural sciences, and the environment of the surrounding Coachella Valley.<sup>387</sup> The museum's programming included exhibits, lectures, and hiking excursions.<sup>388</sup>

Mrs. Warren Pinney, wife of Palm Springs' city clerk and manager of the El Mirador Hotel, invited sixty women to attend a luncheon on December 10, 1938, to discuss the formation of a woman's club.<sup>389</sup> At

the luncheon, a nominating committee was named to develop bylaws and a list of officers for the next meeting, two days later. On December 12, 1938, Nellie Coffman invited the potential woman's club to lunch at the Desert Inn. Seventy-three women signed on as charter members of the Palm Springs Woman's Club at this lunch, and their first official meeting was held on December 19, 1938. The Woman's Club completed its incorporation in 1939, affiliated with the Federation of Women's Clubs, but chose to become an independent organization in 1953.

Land for the clubhouse at 314 S. Cahuilla Road was donated by Pearl McManus, and John Porter Clark donated his services to design the building. The plans were accepted at the March 20, 1939 meeting.<sup>390</sup> \$12,000 was raised for construction, and contractors Wilson and Sorum won the bid to build the clubhouse.<sup>391</sup> Construction commenced in mid-April, and was completed on November 17, 1939.<sup>392</sup> The building consists of an auditorium with a stage, a large walled patio, sun lounge, entrance hall, dressing rooms, and kitchen.<sup>393</sup> Landscape architect Katherine Bashford designed a "far-reaching plan for planting," which was executed by landscape gardener Millard Wright.<sup>394</sup>

## CIVIC & INSTITUTIONAL DEVELOPMENT BETWEEN THE WARS (1919-1941): ELIGIBILITY

### Property Types: Civic or institutional building, Civic improvement

Civic property types include city halls or other offices for public agencies, post offices, fire and police stations, schools, and libraries. Infrastructural improvements and other civic amenities may also be eligible under this theme, including significant roadways, bridges, and other improvements. Non-governmental institutional property types include churches, meeting halls, and buildings associated with social organizations. Civic and institutional buildings constructed in the 1930s may have an association with New Deal funding programs including the WPA or PWA. Important works of public art were also funded by New Deal-era programs.

Institutional properties associated with this theme include the Frances B. Stevens School (1927, now the Palm Canyon Theater; HSPB-7) at 538 N. Palm Canyon Drive; Our Lady of Solitude Catholic Church (1930; HSPB-15) at 151 W. Alejo Road; the California Telephone & Water Building (1934); the Community Church of Palm Springs (1936, William Charles Tanner; north addition by Harry Williams; HSPB-23) at 284 S. Cahuilla Road; the Welwood Murray Memorial Library (1938-41, John Porter Clark; HSPB-3) at 100 S. Palm Canyon Drive; Palm Springs Women's Club (1939, John Porter Clark) at 314 S. Cahuilla Road; and Palm Springs High School (1938, G. Stanley Wilson; later additions in 1957/1958) at 2248 E. Ramon Road.

### Applicable Eligibility Criteria

A civic or institutional property or civic improvement from this period may be eligible for historic designation under one or more of the following criteria:

CRITERIA	REASON
A/1/3 (Pattern of Development/Period) <sup>395</sup>	<p>As an early example of civic or institutional development from this period, representing some of the earliest institutional buildings in Palm Springs and reflecting the area's growth in the pre-World War II era. Civic buildings from this period represent the first government buildings constructed following the incorporation of Palm Springs in 1938. Properties may also be significant for an association with important New Deal era programs.</p> <p>Note that there are particular requirements for listing religious properties in the National Register of Historic Places, which are outlined in National Register Criteria Consideration A.</p>

<sup>395</sup> Note that eligibility criteria are listed in the standard format National Register/California Register/Local. Note that National Register/California Register Criterion A/1 can be applied to a single event important in history, or to an overall trend or pattern of development. The City of Palm Springs local ordinance distinguishes these into separate criteria – Criterion 1 applies to properties that are associated with a singular event; Criterion 3 applies to properties that “reflect or exemplify a particular period” in history.

CRITERIA	REASON
	<p><i>National Register Criteria Consideration A: Religious Properties</i></p> <p>Note that a religious property is eligible for listing in the National Register if it derives its primary significance from architectural or artistic distinction or historical importance.</p> <p>“A religious property requires justification on architectural, artistic, or historic grounds to avoid any appearance of judgment by government about the validity of any religion or belief. Historic significance for a religious property cannot be established on the merits of a religious doctrine, but rather, for architectural or artistic values or for important historic or cultural forces that the property represents. A religious property's significance under Criterion A, B, C, or D must be judged in purely secular terms. A religious group may, in some cases, be considered a cultural group whose activities are significant in areas broader than religious history.”<sup>396</sup></p>
C/3/4,5 (Architecture)	<p>As an excellent or rare example of an architectural style from the period, or as the work of a master builder, designer, artist, or architect. Additional information about architectural styles from each period and their associated character-defining features are outlined in the Architectural Styles section.</p>

### Integrity Considerations

Each type of property depends on certain aspects of integrity to express its historic significance. Determining which of the aspects is most important to a particular property type requires an understanding of the property's significance and its essential physical features. The rarity of the property type should also be considered when assessing its physical integrity. In order to be eligible for listing at the federal, state, or local levels, a property must retain sufficient integrity to convey its historic significance under this theme.

<sup>396</sup> *National Register Bulletin 15.*

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
A/1/3 (Pattern of Development/Period)	A property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s). <sup>397</sup> A civic or institutional property from this period eligible under Criteria A/1/3 should retain integrity of location, design, feeling, and association in order to reflect the important association with the city's civic and institutional development during this period.
C/3/4,5 (Architecture)	A property important for illustrating a particular property type, architectural style or construction technique; or that represents the work of a master must retain most of the physical features that constitute that type, style, or technique. <sup>398</sup> A civic or institutional property significant under Criterion C/3/4,5 (Architecture) should retain integrity of design, workmanship, materials, and feeling, at a minimum, in order to be eligible for its architectural merit. A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.

#### **Civic & Institutional Development between the Wars (1919-1941): Registration Requirements**

To be eligible under this theme, a property must:

- date from the period of significance; and
- reflect important civic or institutional development from the period; and
- display most of the character-defining features of the property type or style; and
- retain the essential aspects of historic integrity.

<sup>397</sup> *National Register Bulletin 15.*

<sup>398</sup> *National Register Bulletin 15.*

### Theme: The Influence of the Entertainment Industry (1919-1941)

This theme explores the influence of the Hollywood film industry on the development and growth of Palm Springs in the 1920s and 1930s. Hollywood first discovered Palm Springs as early as 1915, when author-turned-director Edmund Mitchell filmed a silent adaptation of his 1901 novel *The Lone Star Rush*, the first motion picture to be filmed in Palm Springs.<sup>399</sup> Throughout the 1910s and 1920s the desert around Palm Springs was used for location shooting of numerous silent films set in Middle Eastern or North African locales, including *Salome* (1922) starring Theda Bara and, according to some sources, *The Sheik* (1921) with Rudolph Valentino in his most famous role.<sup>400</sup>

The movie industry brought additional attention to Palm Springs in 1922, when Valentino honeymooned at the Palm Springs Hotel with his second wife, Natacha Rambova, only to be arrested for bigamy because his divorce from his first wife was not yet final.<sup>401</sup> Syndicated gossip columnist Louella Parsons dispatched a number of columns from the Desert Inn during a 1926 visit, drawing wider attention to Palm Springs.<sup>402</sup> By the end of the decade the isolated desert village had become a favored winter weekend retreat for the burgeoning film industry, offering privacy and relaxation, warm winter sunshine and stunning natural beauty, just a few hours' drive from Los Angeles. This allowed actors to get away while complying with the studios' famous "two-hour rule," the contractual obligation to be available on short notice for filming or publicity purposes.

Perhaps the earliest house associated with movie people was the Reginald Pole adobe (1916, 175 S. Cahuilla Road; HSPB-59), which was said to have been visited by Charles Chaplin and exotic Russian silent screen star Nazimova.<sup>403</sup> It was one of the few homes associated with entertainment figures in Palm Springs in the teens and twenties, as almost everyone else congregated at the various hotels.

In the 1920s the film stars and studio moguls stayed primarily at the Desert Inn or the Oasis; beginning in 1928 they flocked to the extravagant Hotel El Mirador as well. Irving Berlin and Shirley Temple (with her parents) were Desert Inn regulars; Loretta Young favored the uppermost room in the Oasis' tower.<sup>404</sup> Hollywood's patronage saved El Mirador from bankruptcy at the onset of the Great Depression. In just its first two months of operation, the hotel's guest list included such Hollywood luminaries as Lillian Gish, Pola Negri, Mary Pickford and Douglas Fairbanks, and Gloria Swanson.<sup>405</sup>

<sup>399</sup> Niemann, 168.

<sup>400</sup> Niemann, 169-169 and Starr, 25. Other sources claim that exterior locations of *The Sheik* were filmed in other places including Guadalupe Dunes in Santa Barbara County and the Walking Dunes on Long Island.

<sup>401</sup> Gloria Greer, "Bringing Fame to Palm Springs," *Palm Springs Life*, January 2013, <http://www.palmspringslife.com/Palm-Springs-Life/January-2013/Bringing-Fame-to-Palm-Springs/> (accessed January 22, 2015). Valentino was acquitted after Dr. Florilla White testified that the couple had not shared a bed at her hotel.

<sup>402</sup> Greer, "Bringing Fame to Palm Springs."

<sup>403</sup> Steve Vaught, correspondence with project team, September 29, 2015.

<sup>404</sup> Niemann, 64 and 68.

<sup>405</sup> Niemann, 123.

A number of movie people who did not take houses, but wanted a more permanent place to stay while wintering in the desert, rented apartments. There were several high-end apartments catering to well-to-do visitors, beginning with the Casa Palmeras in 1928. Casa Palmeras residents included Clifton Webb; Ann Sothorn; Joe Penner; Bert Wheeler; Oscar-winning cinematographer Karl Struss; Harold Lloyd; and Joan Leslie. The El Encanto (completed in 1929), located across from the Tahquitz Vista and Hotel Del Tahquitz; the Colonial House (1936), and the Key Club (1938; demolished) were also popular apartment rentals for the Hollywood set.

Esther Williams on the cover of the *Palm Springs Villager*, September 1955. Source: Palm Springs Historical Society.

There was an early influx of significant radio personalities during this period as well, some of whom took their shows on the road and broadcast from Palm Springs. Each winter for several years, radio stars Freeman Gosden and Charles Correll broadcast their popular program *Amos n' Andy* from a small studio in the El Mirador Hotel's iconic tower (HSPB-1).<sup>406</sup> Radio giants Eddie Cantor and Al Jolson both started coming to the Desert Inn in the 1920s and then constructed more permanent winter homes in the 1930s.

<sup>406</sup> Dennis McDougal and Mike Meenan, "It's Check-Out Time for Palm Springs' El Mirador," *Los Angeles Times*, November 27, 1977, P120, <http://www.proquest.com> (accessed July 29, 2012).

Other Hollywood notables associated with Palm Springs during this period include Harold Lloyd; Adolphe Menjou; William Powell; studio chief Joe Schenck; producer Bryan Foy; Richard Arlen; Robert Woolsey; Tarzan author Edgar Rice Burroughs; George Bancroft; Reginald Owen; William Gargan; Chuck Morrison; Charles Butterworth; Paul Lukas; Ralph Bellamy; and Charles Farrell.

Publicist Tony Burke fostered the hotel's air of Hollywood exclusivity with photos of celebrities lounging and sunning themselves amidst El Mirador's lush grounds – Lucille Ball, Claudette Colbert, Gary Cooper, Marlene Dietrich, Clark Gable, Paulette Goddard, Olivia de Havilland.<sup>407</sup> Johnny Weissmuller, surfer Duke Kahanamoku, and Esther Williams – swimming champions turned film stars – swam and posed for photographers in El Mirador's pool. Frank Bogert, manager of the El Mirador Hotel and future Mayor of Palm Springs, also supplied and widely distributed images of stars at play in Palm Springs. The fame of these celebrity visitors inevitably made the town itself famous. "Through radio broadcasts, fan magazine layouts, movies and publicity shots," writes historian Alan Hess, "Palm Springs was defined by the media in the national consciousness to a degree out of proportion with its size or the number of people who had actually visited it."<sup>408</sup> On winter weekends in the 1930s the village's streets were jammed with ordinary day tourists from Los Angeles, hoping to catch a glimpse of a movie star.<sup>409</sup>

L: Photograph of New York Governor Herbert Lehman and Shirley Temple having lunch at the El Mirador, arranged by Frank Bogert and distributed to over 1,200 newspapers. <sup>408</sup> Alan Hess and Andrew Danish, *Palm Springs Weekend* (San Francisco: Chronicle Books, 2001), 38-39.

<sup>409</sup> Starr, 27.

As Palm Springs grew in popularity with members of the entertainment industry, hotels, sports facilities, restaurants, nightclubs and retail establishments were developed to accommodate the demand for recreation and diversion. Some of these establishments were owned by celebrities. In 1928 silent film actress Fritzi Ridgeway built the Del Tahquitz Hotel at the southeast corner of what is now South Palm Canyon Drive and Baristo Road. Ridgeway's film career did not survive the advent of talking pictures, and she sold the Del Tahquitz in 1931. The Pueblo Revival-style hotel featured wide balconies, a courtyard swimming pool, and the Saddle Bar Cocktail Lounge, with saddles as barstools. The Del Tahquitz was demolished in 1960 to make way for the Santa Fe Federal Savings and Loan building (HSPB-54).<sup>410</sup>

Del Tahquitz Hotel, 1928. Photograph c. 1933. Source: Los Angeles Public Library.

In 1933 actors Charlie Farrell and Ralph Bellamy built two tennis courts at the north end of town, on a plot of land that they had purchased from Alvah Hicks.<sup>411</sup> The courts proved so popular with their Hollywood friends that the following year Farrell and Bellamy built additional courts, a swimming pool, dining room, and guest bungalows and offered memberships in the new Palm Springs Racquet Club

<sup>410</sup> Niemann, 248-249. See also IMDb, "Fritzi Ridgeway Biography," *IMDb*, [http://www.imdb.com/name/nm0725904/bio?ref\\_=nm\\_of\\_bio\\_sm](http://www.imdb.com/name/nm0725904/bio?ref_=nm_of_bio_sm) (accessed January 26, 2015).

<sup>411</sup> Niemann, 132.

(2743 N. Indian Canyon Drive; HSPB-83). The club's Bamboo Bar became the social center of Palm Springs, with four seats permanently reserved for Farrell and his friends Clark Gable, William Powell, and Spencer Tracy.<sup>412</sup>

Pearl McManus opened her competing Tennis Club (Ormsby and Steffgren, 701 W. Baristo Road) at the south end of town in February 1938, on a boulder-strewn hillside at the west end of Baristo Road. Charter members included actors Ray Milland, Frank Morgan, Reginald Owen, and MGM musical star Jeanette MacDonald.<sup>413</sup> Pearl was heavily involved in the design of the Tennis Club, which was originally modeled after the Hotel Cappuccini, a former Capuchin monastery on the Amalfi coast from which she drew the inspiration for the stone-walled terraces above the club's elegant oval swimming pool.<sup>414</sup>

L: Racquet Club built by Charlie Farrell and Ralph Bellamy. Photographed in 1955. Source: Los Angeles Public Library.

R: Photograph of the world-famous Palm Springs Tennis Club pool, as it appeared in the 1950s. Source: Los Angeles Public Library.

The village's most popular and most famous nightclub, the Chi Chi, opened in 1935 on Palm Canyon Drive, just north of the Desert Inn, on land leased from Zaddie Bunker. Beginning as a waffle house, it was converted by its owner, Irwin S. Schuman, first into a restaurant called the Desert Grille, and then into a full-fledged nightclub with dining, dancing, and live entertainment. It was expanded in 1938 and again in 1950 with the addition of the 750-seat Starlight Room. The Chi Chi (217 N. Palm Canyon

Drive; demolished) was the premier nightspot of the Hollywood crowd into the 1960s, and its headliners were frequently interchangeable with its clientele – Louis Armstrong, Desi Arnaz, Pearl Bailey, Milton Berle, Nat “King” Cole, Vic Damone, Sammy Davis, Jr., Duke Ellington, Lena Horne, Eartha Kitt, Gypsy Rose Lee, Peggy Lee, Liberace, Jerry Lewis, Tony Martin, the Mills Brothers, Patti Page, Louie Prima and Keeley Smith, Sophie Tucker, and Mae West.<sup>415</sup>

Many of the Hollywood celebrities and executives who vacationed in Palm Springs eventually rented or bought seasonal homes there. So many of them settled in the area south of the Hotel El Mirador that the neighborhood became known as the Movie Colony.<sup>416</sup> Old Las Palmas (Las Palmas Estates) was another popular Hollywood enclave in Palm Springs.<sup>417</sup>

L: The Chi Chi nightclub, opened in 1935 on Palm Canyon Drive. Source: *Palm Springs Life*, “In the Swing.” R: Designed in 1927 by architect John Byers, this was the longtime residence of Cary Grant, who purchased it in 1954 (928 Avenida Palmas, HSPB-75). Source: Los Angeles Public Library.

<sup>415</sup> Niemann, 255-258. The Chi Chi closed in 1966 and, after a decade of failed attempts at a revival, the building was demolished in 1977.

<sup>416</sup> The “Movie Colony” was not a tract development, rather a neighborhood name that developed later to describe the high concentration of Hollywood personages residing in the area around the El Mirador Hotel. Although a wider area is sometimes claimed, the boundaries of the Movie Colony as recognized by the City of Palm Springs, the Palm Springs Board of Realtors, and the Movie Colony Neighborhood Association are: Tachevah Road on the north, Alejo Road on the south, Avenida Caballeros on the east, and Indian Canyon Drive on the west (source: The Movie Colony Neighborhood Association, <http://www.themoviecolony.org/history.php>). For purposes of this report, tract names are used to discuss development patterns and “Movie Colony” is used when referring to the broader social history of the area.

<sup>417</sup> The development of these neighborhoods is discussed in the theme Single-Family Residential Development between the Wars (1919-1941). Specific properties associated with the entertainment industry are identified in the survey findings.

#### THE INFLUENCE OF THE ENTERTAINMENT INDUSTRY (1919-1941): ELIGIBILITY

##### **Property Types: Single-family Residence, Multi-family Residence, Commercial Building, Film Location, Historic District**

Starting in the early 20<sup>th</sup> century, Palm Springs was a get-away for members of the entertainment industry, including movie stars, directors, composers, and other members of the upper echelon of the industry. Members of the entertainment industry became part of the fabric of the city. Properties significant under this theme include residents and commercial establishments with specific associations with the entertainment community. Commercial establishments may be eligible for a known association with the Hollywood social scene in Palm Springs. There are also identified concentrations of residential properties that are associated with famous residents, including the “Movie Colony” potential historic district. Many residences associated with people in the entertainment industry, in the Movie Colony and other neighborhoods, are not visible from the public right-of-way.

##### **Applicable Eligibility Criteria**

A property or district may be eligible for historic designation under one or more of the following criteria:

CRITERIA	REASON
A/1/1,3 (Pattern of Development/Event/Period) <sup>418</sup>	Commercial properties may be eligible under this theme for representing a known association with the Hollywood social scene in Palm Springs. Film locations may be eligible as the site of an early or iconic motion picture production (Criterion A/1/1). Individual residential properties significant under this theme will be eligible under Criterion B/2/2.

<sup>418</sup> Note that eligibility criteria are listed in the standard format National Register/California Register/Local. Note that National Register/California Register Criterion A/1 can be applied to a single event important in history, or to an overall trend or pattern of development. The City of Palm Springs local ordinance distinguishes these into separate criteria – Criterion 1 applies to properties that are associated with a singular event; Criterion 3 applies to properties that “reflect or exemplify a particular period” in history.

CRITERIA	REASON
B/2/2 (Person)	<p>For its association with an important person(s) in the entertainment industry. Properties eligible under this criterion are those associated with a person's productive life, reflecting the time period when he or she achieved significance. Properties associated with living persons are usually not eligible for landmark designation. Sufficient time must have elapsed to assess both the person's field of endeavor and his or her contribution to that field.</p> <p>Eligibility under Criterion B for listing in the National Register of Historic Places requires that:</p> <p>"Each property associated with an important individual should be compared to other associated properties to identify those that best represent the person's historic contributions. The best representatives usually are properties associated with the person's adult or productive life. Properties associated with an individual's formative or later years may also qualify if it can be demonstrated that the person's activities during this period were historically significant or if no properties from the person's productive years survives. Length of association is an important factor when assessing several properties with similar associations. A community or State may contain several properties eligible for associations with the same important person, if each represents a different aspect of the person's productive life."<sup>419</sup></p> <p>Note that some of these properties may not be visible from the public right-of-way. For survey purposes, these properties have been flagged and assigned a status code indicating that additional evaluation is needed due to lack of visibility.</p>
A/1/6 (District)	<p>A collection of residences associated with members of the entertainment industry that are linked geographically may be eligible as a historic district. Residences eligible under this theme will likely contribute to historic districts that are significant under other contexts and themes; an association with members of the entertainment industry represents one layer of an area's history.</p>

<sup>419</sup> *National Register Bulletin 15*, Section VI: How to Apply the National Register Criteria for Evaluation."

### Integrity Considerations

Each type of property depends on certain aspects of integrity to express its historic significance. Determining which of the aspects is most important to a particular property type requires an understanding of the property's significance and its essential physical features. The rarity of the property type should also be considered when assessing its physical integrity. In order to be eligible for listing at the federal, state, or local levels, a property must retain sufficient integrity to convey its historic significance under this theme.

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
A/1/3 (Pattern of Development/Period)	A property under this theme eligible under Criteria A/1/3 should retain integrity of location, design, feeling, and association.
B/2/2 (Person)	A residential property significant under Criterion B/2/2 (Person) should retain integrity of location, design, workmanship, and feeling in order to convey the historic association with a significant person.
A/1/6 (District)	In order for a historic district to be eligible for designation, the majority of the components that add to the district's historic character must possess integrity, as must the district as a whole. A contributing property must retain integrity of location, design, setting, feeling, and association to adequately convey the significance of the historic district. Eligible historic districts may span several periods of development.

### The Influence of the Entertainment Industry (1919-1941): Registration Requirements

To be eligible under this theme, a property must:

- date from the period of significance; and
- represent a known association with an important person or persons in the entertainment industry; because Palm Springs is a resort destination, eligible properties associated with people in the entertainment industry in the city will likely be second homes; for commercial properties, represent a known association with the Hollywood social scene in Palm Springs; a film location must represent an early or iconic location; and
- display most of the character-defining features of the property type or style; and
- retain the essential aspects of historic integrity.

To be eligible under this theme, a historic district must:

- retain a majority of the contributors dating from the period of significance; and
- retain a majority of the contributors with a known association with members of the entertainment industry; and
- retain the essential aspects of historic integrity.

HISTORIC RESOURCES GROUP

#### THEME: THE WAR EFFORT IN PALM SPRINGS (1939-1945)

This theme explores the development of World War II-related military facilities in Palm Springs. The small city played a significant role in the war effort, but few war-related resources survive. The period of significance under this context begins in 1939, when what is now the Palm Springs International Airport was established as an Army Air Corps landing field in anticipation of the United States' eventual entry into the European war. Following the Japanese attack on Pearl Harbor in December 1941, significant material resources and labor were dedicated to the war effort, and nearly all private construction ceased for the duration of the conflict.

The first airfield in Palm Springs was a dirt landing strip next to the Hotel El Mirador, laid out soon after the hotel opened in 1928. It was used by early aviation pioneers, and by Army and Navy cadets from March Airfield and San Diego. Fed up with the noise and dust, Prescott T. Stevens, El Mirador's owner, built a new strip and two hangars further away from the hotel to the northeast. This strip was in use until about 1934 and served the village's first commercial service from Maddux Airlines on its Los Angeles-Tijuana route, stopping in Palm Springs only upon passenger request. In the early 1930s, as air travel increased in popularity, the Chamber of Commerce leased a parcel of Section 14 land from the Agua Caliente Band of Cahuilla Indians and built a third airstrip. It was located just east of downtown, bounded on the north by Alejo Road, on the east by Sunrise Way, on the south by Tahquitz Canyon Way, and on the west by Avenida Caballeros. The new airport had two runways and was served by American Airlines, Western Airlines, and the locally-owned and operated Palm Springs Airlines, which started out with one four-passenger plane and added a second in 1937. When Palm Springs incorporated in 1938 the airport was officially named the Palm Springs Municipal Airport.<sup>420</sup>

In 1939 the Army Corps of Engineers selected Palm Springs, protected from fog and rain by Mt. San Jacinto, as the location of an Air Corps landing field. The chosen site was east of the village on Cahuilla land, and was leased by the city and subleased to the Federal government. In early 1942, following the attack on Pearl Harbor, the airfield was taken over by the Air Transport Command and a new field with an A-frame terminal building and two runways was completed a half mile from the original site.<sup>421</sup> The Palm Springs Air Base's principal mission was the deployment of aircraft from U.S. manufacturing plants to training facilities and overseas combat theaters.<sup>422</sup> To disperse aircraft away from the field in case of enemy attack, circular concrete parking pads or "tie downs" and taxiways were built in the surrounding area.<sup>423</sup> The city constructed a new road to the Air Base, an extension of Tahquitz Canyon Way, to

replace the existing dirt roads. Pearl McCallum McManus gave the right-of-way for the road to the city and in exchange, it was named McCallum Way in honor of her father.<sup>424</sup> Within six months a control tower, Command headquarters, barracks, and a base hospital had been constructed, with many of the new buildings lining either side of McCallum Way.<sup>425</sup>

The Air Base also served as a receiving facility for wounded troops returning from overseas. In 1942 the luxurious El Mirador Hotel was purchased by the Army and converted to the 1,600-bed Torney General Hospital, specializing in general medicine, rheumatic fever, and orthopedic surgery. An adjoining detention camp housed approximately 250 Italian prisoners of war who worked at the hospital.<sup>426</sup> The camp was located on the block now occupied by Katherine Finchy Elementary School, Wellness Park, and Ruth Hardy Park.<sup>427</sup> The surrounding desert also played an important role in the war effort. In March of 1942 General George S. Patton established the Desert Training Center at Camp Young, an hour east of Palm Springs at Shaver Summit (now called Chiriaco Summit), to train his army for combat in North Africa.<sup>428</sup>

## THE WAR EFFORT IN PALM SPRINGS (1939-1945): ELIGIBILITY

### Property Types: Commercial, civic, or institutional building; structures, sites, or objects

Property types significant under this context include commercial, civic, or institutional buildings co-opted or developed specifically to support the war effort; structures, sites, or objects developed specifically for the war effort or in response to the onset of World War II (examples may include tie downs, air raid sirens, and Quonset huts). Resources associated with this theme are rare. The Air Base was turned over to the city after the war and was converted into a new Palm Springs Municipal (now International) Airport, which has been expanded and upgraded a number of times since. Torney General Hospital was converted back into the Hotel El Mirador, and later into the Desert Regional Medical Center. It is unlikely that elements of World War II-era development remain on either property.<sup>429</sup> A surviving tie down on Easmor Circle near the airport has been designated (HSPB-40) and at least seven others remain in the general vicinity.<sup>430</sup> Katherine Finchy Elementary School, Wellness Park, and Ruth Hardy Park are collectively eligible for Class 2 designation as the site of the prisoner-of-war camp.

### Applicable Eligibility Criteria

A building, structure, site, or object from this period may be eligible for historic designation under one or more of the following criteria:

CRITERIA	REASON
A/1/3 (Pattern of Development/Period) <sup>431</sup>	For a specific association with the World War II war effort in Palm Springs.
C/3/4,5 (Architecture)	As an excellent or rare example of a property type related to the war effort in Palm Springs.

### Integrity Considerations

Each type of property depends on certain aspects of integrity to express its historic significance. Determining which of the aspects is most important to a particular property type requires an understanding of the property's significance and its essential physical features. The rarity of the property type should also be considered when assessing its physical integrity. In order to be eligible for listing at

<sup>429</sup> There appears to be an extant Quonset hut on the airport property.

<sup>430</sup> The tie downs are visible in aerial photographs.

<sup>431</sup> Note that eligibility criteria are listed in the standard format National Register/California Register/Local. Note that National Register/California Register Criterion A/1 can be applied to a single event important in history, or to an overall trend or pattern of development. The City of Palm Springs local ordinance distinguishes these into separate criteria – Criterion 1 applies to properties that are associated with a singular event; Criterion 3 applies to properties that “reflect or exemplify a particular period” in history.

the federal, state, or local levels, a property must retain sufficient integrity to convey its historic significance under this theme.

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
A/1/3 (Pattern of Development/Period)	A property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s). <sup>432</sup> A property from this period eligible under Criteria A/1/3 should retain integrity of location, feeling, and association, at a minimum, in order to reflect the important association with the war effort during World War II in Palm Springs.
C/3/4,5 (Architecture)	A property important for illustrating a particular property type, must retain most of the physical features that constitute that type. <sup>433</sup> A property significant under Criterion C/3/4,5 (Architecture) should retain integrity of design, workmanship, materials, and feeling.

#### **The War Effort in Palm Springs (1939-1945): Registration Requirements**

To be eligible under this theme, a property must:

- date from the period of significance; and
- have a direct association with the war effort during World War II; and
- display most of the character-defining features of the property type or style; and
- retain the essential aspects of historic integrity.

**Citywide Historic Context Statement & Survey Findings**

**HISTORIC RESOURCES GROUP**

## CONTEXT: POST-WORLD WAR II PALM SPRINGS (1945-1969)

### Overview

This context explores the post-World War II boom and related development that left Palm Springs with what many consider the largest and finest concentration of mid-20<sup>th</sup> century Modern architecture in the United States. Hollywood film stars and Eastern industrialists were joined in the postwar decades by ever-increasing numbers of tourists. The growing prosperity of the postwar years and the rise of the car culture created a leisured, mobile middle class that sought, in Palm Springs, the “good life” that had previously been available only to the wealthy.<sup>434</sup> This surge of visitors and seasonal residents - by 1951 the city’s winter population swelled to almost 30,000 from a permanent population of 7,660 - coincided with the peak of Modernism’s popularity.<sup>435</sup>

The population growth accelerated in the 1950s, bringing a demand for civic necessities such as schools, libraries, museums, a city hall and police headquarters, as well as offices, stores, and housing. Palm Springs’ growth as a tourist destination brought a demand for inns, resorts, and tourist attractions. Tourism also introduced a demand for affordable second homes for a growing middle class; the construction and financing methods for building such mass-produced housing tracts were already developing in suburban areas of larger cities, including nearby Los Angeles, and found a ready market in Palm Springs. Though Palm Springs was a smaller municipality, this economic climate provided many opportunities for locally-based architects, as well as several Los Angeles architects, to explore and develop a wide range of architectural types and ideas, sometimes influenced by sophisticated global design trends. These conditions and the architects’ talents lead to the development of an exceptional group of Modern buildings which later came to be identified as “Palm Springs Modernism” or “The Palm Springs School.”<sup>436</sup>

The desert climate and casual lifestyle all but demanded unconventional design, and clients were more accepting of, even sought out, a more adventurous style in the resort atmosphere of Palm Springs than they would have in their primary residences.<sup>437</sup> In the two decades after the war, Palm Springs was transformed with new commercial and institutional buildings, custom homes, and a large number of housing tracts.

This context examines influences on the built environment in Palm Springs following the conclusion of World War II. The first section provides an overview of the important developments in architecture

<sup>434</sup> Prior to completion of Interstate 10 through the Coachella Valley in the 1960s, the many visitors who traveled to Palm Springs by automobile used U.S. Highways 60, 70, and 99.

<sup>435</sup> *Western Resort Publications*, “Yearbook,” 16.

<sup>436</sup> Discussion of Modern architectural trends in Palm Springs in the post-World War II era derived from Alan Hess, “Historic Context of Modern Architecture: Residential, Commercial and Civic Architecture,” for Historic Resources Group, January 23, 2015, and updated June 9, 2015.

<sup>437</sup> Jeff Book, “Palm Springs Revisited,” *Departures*, October 2000, <https://www.departures.com/travel/travel/palm-springs-revisited> (accessed October 2014).

during this period and a brief discussion of some of the significant architects. Following the introductory section are the themes and sub-themes, divided by property type: single-family residential development, multi-family residential development, commercial development, and civic and institutional development. At the conclusion of each theme are registration requirements for evaluating resources under that theme.

For additional information about the development of neighborhoods associated with the ethnic minority communities in Palm Springs, see the Ethnic Minorities Context that is included as the final chapter of this study.

**THEME: POST-WORLD WAR II SINGLE-FAMILY RESIDENTIAL DEVELOPMENT (1945-1969)**

**Postwar Residential Architecture in Palm Springs (1945-1969)<sup>438</sup>**

The exuberance and optimism from the war victory, the population explosion, and the creation of automobile-centric suburbia in the building boom that followed meant great changes for the way Americans lived in the post-World War II era. Southern California was at the forefront of this new era, and its tradition of experimentation in architecture placed it in an ideal position to lead the exploration of suburban residential architecture after World War II. This sub-theme explores the important role of architecture in the development of Palm Springs after the war, and discusses buildings that are important as examples of particular architectural styles or as the work of significant architects or designers.<sup>439</sup>

Following precedents started in the 1930s, the decade of the 1940s further reinforced the prominence of Modern architecture in defining the growth of Palm Springs after World War II. This paralleled the trend throughout California; as prosperity returned with the war, and as the peacetime return of soldiers brought a demand for new development, a young generation of architects exposed to Modernism in their training or travels before and during the war wanted to put those ideas into practice. This new generation of architects combined a concern for landscape and site relationships, the use of natural materials, and innovative building technologies to create a new regional architecture. This was also a period of exuberance and optimism that was directly reflected in the architecture. According to historian Kevin Starr, the theory that domestic architecture would not take up where it had left off before the war was fundamental.<sup>440</sup>

Though many clients still preferred traditional styles, their architects, committed to Modern ideas, championed its cause. In one prominent example, singer Frank Sinatra walked into the offices of Williams, Williams & Williams in May 1947 and asked for a Georgian Revival-style house, to be completed by Christmas, on a lot the singer had just purchased east of the Movie Colony. E. Stewart Williams instead designed a low, sprawling Modern house with shed roofs, clerestory windows, and walls of stone, stucco, and redwood siding (1947, 1148 E. Alejo Road; HSPB-77). A wall of sliding glass panels opens at the push of a button to a central patio with a piano-shaped swimming pool and cabana.<sup>441</sup> A pergola with cutouts in its roof casts noontime shadows resembling piano keys along one edge of the pool – an unintentional effect, according to Williams.<sup>442</sup> The landscape design is the work of Tommy Tomson.<sup>443</sup> The commission helped E. Stewart Williams helped launch his long career. The design is an

<sup>438</sup> This section includes an overview discussion of the predominant architectural styles from this period. A more detailed description of each style, along with a list of character-defining features, is included in the Architectural Styles section.

<sup>439</sup> Many of these same architects produced important commercial and institutional designs in the city as well; those properties are discussed in separate themes.

<sup>440</sup> Kevin Starr, "The Case Study House Program and the Impending Future: Some Regional Considerations," in Elizabeth Smith, *Blueprints for Modern Living* (Cambridge, MA: MIT Press, 1989), 131.

<sup>441</sup> Colacello, 205, and Adèle Cygelman, *Palm Springs Modern* (New York: Rizzoli International Publications, Inc., 1999), 72-82.

<sup>442</sup> Johns, 182.

<sup>443</sup> Steven Keylon, landscape historian, correspondence with project team, April 10, 2015.

early and important step in Williams' evolution as a residential designer. Though he had not been trained in Modernism at Cornell's School of Architecture, his travels in Europe introduced him to many of the varied approaches to Modern design there. The organic forms and natural materials used in Scandinavian Modern design influenced him the most.

Sinatra House (1947, E. Stewart Williams; HSPB-77). Photographed in 1949 by Julius Shulman. Source: The J. Paul Getty Research Institute, Los Angeles. Digital Photo Collection.

Residential designs in the 1940s established the pattern of a wide range of interpretations of Modern architecture. The decade brought Palm Springs the building which was, and remains, the most famous in terms of international recognition: Richard Neutra's Kaufmann House. Following architects like Albert Frey and John Porter Clark, who began working in Palm Springs before the war, more architects who would become central figures in the Palm Springs School settled there in the 1940s. William Cody, a graduate of the USC School of Architecture, moved to Palm Springs in 1946 for health reasons. After serving in the war, E. Stewart Williams joined his father, Harry, and his brother Roger to begin their joint practice.

Albert Frey had worked with Le Corbusier in Paris in 1929 before immigrating to the United States. He worked first in New York, but after visiting Palm Springs in 1934, the Swiss-born architect determined to settle there. Though trained in European Modern ideas, he quickly adapted them to the desert conditions which appealed to him, arriving at a varied and original expression of Modernism. While exploring the potential of new materials such as corrugated steel, trusses made of thin pipe, and concrete block, Frey used them to reflect the desert climate, landscape, vegetation, and colors. He also adapted

**FINAL DRAFT – FOR CITY COUNCIL APPROVAL**

**City of Palm Springs**

**Citywide Historic Context Statement & Survey Findings**

**HISTORIC RESOURCES GROUP**

his designs to the casual Palm Springs culture. The size of Palm Springs and the relatively few number of architects gave him opportunities to design a wide range of building types. His own house, Frey I (1941; demolished) was experimental. A small house for a bachelor, it used minimal walls and a flat roof to create living space that opened to a patio and (eventually) a pool. The vacation home Frey designed with (and for) industrial designer Raymond Loewy (600 W. Panorama Road; HSPB-33) celebrated the modern desert lifestyle by bringing the swimming pool into the living room. In contrast, the Markham House (1941) and the Lyons House (1948), two of several Frey built over the decades in Smoke Tree Ranch, had to conform to the design guidelines calling for Ranch style. The simple, low scale roof forms helped blend the houses into the natural landscape, as intended by the Smoke Tree Ranch planning guidelines.

Loewy Residence (1946, Albert Frey; HSPB-33). Photographed in 1947 by Julius Shulman. Source: The J. Paul Getty Research Institute, Los Angeles. Digital Photo Collection.

Another approach to Modern residential design is seen in the work of William Cody. Cody trained in progressive Modernism at the USC School of Architecture and graduated in 1942, but also worked with Cliff May. May's designs were influenced by vernacular historic architecture in California, but incorporated elements of Modern architecture to create houses that were convenient and comfortable, as proven by the widespread popularity of his designs. Cody's own house (1947, 1950 E. Desert Palms Drive) showed both his interest in innovative structure and details, and in developing livable spaces that incorporated openness and views. His house was organized as a series of pavilions and courtyards that brought in light, views, and nature. The thin sections of roof and walls demonstrate his search for clean, elegant structures. At the Perlberg House (1952, 888 N. Avenida Palmas), Cody continued to explore simple forms with flat or gently sloping shed roofs that reduced the dimensions of column and roof structures to a minimum, creating light profiles.

# **Citywide Historic Context Statement & Survey Findings**

**HISTORIC RESOURCES GROUP**

Kaufmann House (1946, Richard Neutra; HSPB-29B). Photograph by Julius Shulman. Source: The J. Paul Getty Research Institute, Los Angeles. Digital Photo Collection.

The 1946 Kaufmann House (470 W. Vista Chino; HSPB-29B) was designed by Richard Neutra as the winter home of Pittsburgh department store owner Edgar Kaufmann. Kauffman was already known for building another world-famous house, Fallingwater by Frank Lloyd Wright (designed 1935; main house constructed 1936-38, followed by the guest house in 1939). The design of his Palm Springs home summarized Neutra's ideas at the time: the flat roof, steel frame, and glass walls embodied one prominent version of Modernism by using sharp, clean, minimalist, machine-made lines contrasting with the beauty of the open, natural site with the rugged slopes of Mt. San Jacinto as backdrop. The use of stone and wood finishes represented an evolution of Neutra's ideas from those seen in the earlier Miller House (1937, 2311 N. Indian Canyon Drive; HSPB-45). When photographed by Julius Shulman and disseminated worldwide, the Kaufmann House became an iconic image of Modern architecture.

In the 1950s, with the town's expansive growth, Palm Springs architects were able to explore a wide range of residential architectural ideas with willing clients interested in Modern design. These respond in various ways to the demands of the location: controlling the sun's heat, respecting the natural landscape, and creating homes of pleasure and recreation. Palm Springs' residential architecture of this period included affordable, mass-produced housing, along with custom homes designed with sizeable budgets. The distinctive solutions of several local architects show a high quality of concept and execution that matches the quality of the more widely publicized Los Angeles Modern architects of the same period.

Donald Wexler and Richard Harrison formed a partnership in 1952 after meeting at the office of William Cody, where both worked. Wexler, a graduate of the University of Minnesota architecture school, had worked for Richard Neutra in Los Angeles before moving to Palm Springs. Wexler & Harrison's early house designs show the influence of both Neutra and Cody, but also the beginning of a distinctive approach to design. Wexler's interest in engineering led to simple designs expressing their wood post-and-beam and steel frame structure. This is seen in three particular houses: for developer Sam Martin Zalud, Wexler & Harrison designed two houses as part of a small planned neighborhood around a communal park, named Lilliana Gardens. The floor plans of these two houses were the same, featuring a central open atrium next to the living room; the two houses were differentiated by their front walls, one faced in rubble stone, and one with slump block, which William Cody often used. At the same time, Wexler built a house (1955, 1272 E. Verbena Drive) for his family. It is also wood post-and-beam, but smaller and simpler, and designed to be expanded as his family grew.

L and R: Edris House (1953, E. Stewart Williams). Photographed in 1954 by Julius Shulman. Source: The J. Paul Getty Research Institute, Los Angeles. Digital Photo Collection.

E. Stewart Williams developed an interest in natural materials including stone, which tied his designs visually to the desert site. The Edris House (1953, E. Stewart Williams, 1030 W. Cielo Drive; HSPB-46) is located on a boulder-strewn slope overlooking the Coachella Valley. The house's inverted truss roof rests on pillars of natural stone, with glass infill. Williams' own house (1956) responds to a very different, flat site. A long, gentle butterfly roof is supported on steel columns allowing the walls of the public areas to be mostly glass. This also allows the garden landscaping and stone walls to extend from outside to inside and then outside again to create an especially open and light filled house.

Carey House (1956, Clark, Frey & Chambers; HSPB-33, listed in the National Register). Source: *Albert Frey, Architect*, p. 115.

In the 1950s Clark, Frey & Chambers experimented with new, lightweight building technologies, including composite wall panels (as at the Carey House, 1956, 651 W. Via Escuela; HSPB-33 and listed in the National Register); and corrugated plastic and metal panels (as at Frey House I, 1941; demolished). Frey's exploration of structure and materials included a major expansion of his own house (Frey House I, expanded 1953; demolished), where he added a second story turret with circular windows shaded by tubular metal sun shades. Always responding to the desert climate in shaping his designs, Frey charted the sun's path in order to orient windows, overhangs and sunshades, and frequently "lifted" his houses off the ground to minimize disturbance of the desert landscape (as at the Carey House).

Among other locally-based architects and designers, builder Herbert Burns designed Late Moderne houses similar to his inns, which emphasized volumes and streamlined forms rather than structure, as seen in the Crockett House (1956, 457 W. Arenas Road). Hugh Kaptur, trained in Detroit at the Lawrence Technological University, brought the simple frame construction he used in multiple housing tract designs to the William Burgess House (1958, 550 W. Palisades Drive). Walter White's design for the Franz Alexander Residence (1956, 1011 W. Cielo Drive; listed in the National Register) has a dramatic, upswept, curving roof.<sup>444</sup>

**HISTORIC RESOURCES GROUP**

Palm Springs architects continued their wide-ranging, eclectic exploration of Modern architecture in the 1960s, with William Krisel's Robert Alexander House (1960, 1350 Ladera Circle); William Cody's collection of pavilions at the Abernathy House (1962, 611 N. Phillips Road; HSPB-86); Frey's minimalist second home (Frey House II, 1963, 686 W. Palisades Drive; HSPB-33, listed in the National Register); Donald Wexler's steel-frame Dinah Shore House (1963, 432 W. Hermosa Place); John Lautner's concrete Elrod House (1968, 2175 Southridge Drive, listed in the National Register); Craig Ellwood's Palevsky House (1968, 1021 W. Cielo Drive); and designer James McNaughton's abstraction of historicist influences seen, for example, at the Kramer House (1963, 800 E. Granvia Valmonte). Other notable Los Angeles architects who built houses in Palm Springs in the post-World War II era include Harold Levitt, Fred Monhoff, and Edward Fickett. Each architect had a distinct interpretation of Modern design to expand the wide range of Modern expressions in Palm Springs. Architects in Palm Springs produced major works in the 1960s that stand out in a period when Southern California residential design in general became internationally recognized.

Sutter House (1960, E. Stewart Williams).  
 Photograph by Julius Shulman. Source: The J.  
 Paul Getty Research Institute, Los Angeles.  
 Digital Photo Collection.

While continuing to design large commercial and institutional buildings, E. Stewart Williams designed several custom houses, including the Sutter House (1960, 1207 Calle de Maria) using striated concrete block. William Krisel's Robert Alexander House (1960, 1350 Ladera Circle) used a symmetrical plan of three hexagons which were adapted according to the sloping site, and the interior uses for living room, master bedroom, and kitchen. William Cody's residential designs from this period demonstrate his awareness of international trends in Modern architecture, his modernist education at the USC School of Architecture, and his own creativity in interpreting and adapting those concepts to the desert. The range and variety of Cody's custom residential designs is seen in the large Abernathy house (1962, 611 N. Phillips Road; HSPB-86), which uses a more formal plan and pyramid-shaped roofs.

L: Robert Alexander House, "House of Tomorrow," (1960, Palmer & Krisel). Photograph by Robert Doisneau for *LIFE*. R: Interior view of living room by Julius Shulman. Source: The J. Paul Getty Research Institute, Los Angeles. Digital Photo Collection.

Frey House II (1963, expanded 1967, 686 W. Palisades Drive; HSPB-33 and listed in the National Register), Albert Frey's second house for himself, was an equally striking design on the mountainside overlooking the central business district. Frey House II was an essay in minimalist steel and glass perched lightly on a mountainside boulder field, bringing together nature and modern technology. As did Lautner at the later Elrod House, Frey left a large, natural rock outcropping in place and used it to divide the main living space from the adjacent bedroom.<sup>445</sup> A similar treatment is also found in Hugh Kaptur's nearby Burgess House from 1958.

Frey House II (1963, Albert Frey; HSPB-33, listed in the National Register). Photograph by Julius Shulman. Source: The J. Paul Getty Research Institute, Los Angeles. Digital Photo Collection.

<sup>445</sup> Frey added a 300 square foot guest bedroom to Frey House II in 1967. L: Shore House (1963, Donald Wexler). Photographed by Julius Shulman, 2007. Source: Palm Springs Art Museum. R: Palevsky House (1968, Craig Ellwood). Source: <http://www.ncmodernist.org/ellwood.htm>.

Donald Wexler's Dinah Shore house (1963, 432 W. Hermosa Place) is representative of several of his custom homes, combining large glass-walled pavilion structures for living and dining areas, and more intimate, enclosed wings for bedrooms. Craig Ellwood designed the Max Palevsky house (1968, 1021 W. Cielo Drive) in the spare rectilinear style for which he was known in the Case Study program houses of Los Angeles.

Kramer House (1963, James McNaughton).  
Source: *Architectural Digest*, Summer 1965.

In a distinctive Modern variation, building designer James McNaughton's Kramer House (1963, 800 E. Granvia Valmonte) reflects modernized historic elements. Since the 1930s and the development of the Hollywood Regency style, Southern California architects integrated historical elements with modern aesthetics through simplification; designers and architects including Paul R. Williams, Tony Duquette, Caspar Ehmkke, and John Elgin Woolf continued this exploration in Los Angeles, while McNaughton and others brought it to Palm Springs. Both custom homes and mass produced developments reflect this style in the symmetry of façade and plan, and in the use of columns, mansard roofs, and traditional decorative elements such as carriage lamps. One custom example is the house that

Arthur Elrod remodeled at 350 W. Via Lola. Related design concepts appeared nationally in public and institutional buildings in the same period in the New Formalist designs of Edward Durrell Stone, Minoru Yamasaki, and others.

The Elrod House (1968, 2175 Southridge Drive; listed in the National Register) by Los Angeles architect John Lautner exemplifies the Organic and Expressionist influences in Modern architecture. The chief concept of Organic architecture is the merging of building and nature, so that the design responds to the environment rather than imposing itself upon it. Expressionism repudiated modern rationalism and

**FINAL DRAFT – FOR CITY COUNCIL APPROVAL**

**City of Palm Springs**

**Citywide Historic Context Statement & Survey Findings**

**HISTORIC RESOURCES GROUP**

emphasized abstraction of form to symbolically express subjective interpretation of inner experience. Both employed natural shapes, complex geometries, and new building materials and technologies. Designed for Palm Springs interior designer Arthur Elrod, the house sits on a prominent ridgeline above the city. Lautner used concrete to blend the home into its rocky hillside site. The site was excavated to reveal rock outcroppings which helped to shape and define the main living area, a 60-foot diameter, split-level open space surmounted by a shallow, conical concrete dome with skylights. The dome is supported on a continuous concrete tension ring and concealed steel columns, giving the impression that it is suspended over the space. The original zigzagged, frameless glass walls facing the view were later replaced by Lautner with a curving wall of glass that encompasses part of the swimming pool and, at the press of a button, retracts to the side, leaving the living room open to the vista beyond.

The Ranch house that emerged in the 1930s also became increasingly popular in Palm Springs in the post-World War II era, combining modernist ideas of space and function with traditional elements of working ranches of the American West and Spanish ranchos of the colonial era. The architectural style – characterized by its low horizontal massing, sprawling interior plan, and emphasis on indoor-outdoor living – embodied the mid-20<sup>th</sup> century ideal of “California living” and was well-suited to the desert climate and casual lifestyle of Palm Springs. The Ranch style enjoyed enormous popularity from the 1940s to the 1970s, especially in Western-themed developments such as Smoke Tree Ranch. It was more conservative than other modern residential architecture of the period, often using decorative elements based on historical forms and capitalizing on the national fascination with the “Old West.” The underlying philosophy of the Ranch house was informality, outdoor living, gracious entertaining, and natural materials. In Palm Springs, Ranch houses used wood clapboard and board-and-batten siding, as well as concrete slump block walls which served to insulate the interiors in the hot desert climate.

### **Sub-theme: Single-Family Residential Development (1945-1969)**

The postwar boom, a prosperity beyond imagination, combined with surging population growth and the democratization of privilege, would change Palm Springs forever.<sup>446</sup>

In the immediate post-World War II era, California in general experienced a period of unprecedented growth. Many individuals who came west to participate in the war effort, including former military personnel, decided to settle permanently. Between 1940 and 1950, California's population increased by 53 percent, which was partially accounted for by the 850,000 veterans who took up residence after the war.<sup>447</sup> As a result, the construction of residential properties became a major focus of development in the post-World War II era. The immediate and widespread need for housing inspired a variety of responses. For communities that were largely built out, land previously considered "unbuildable" became more attractive. For newer communities, large new tracts were developed.

Development in Palm Springs during this period reflected these wider trends. The permanent population of Palm Springs rose 292 percent between 1940 and 1960, from 3,434 to 13,468 people. Charting the local population shows this steep growth lasted in Palm Springs for decades after the war.<sup>448</sup> Even as full-time residency increased in Palm Springs, the seasonal visitor population outpaced these increases. Whereas seasonal visitation in 1940 was estimated to be 100,000 people, by 1953 it was 250,000, and 500,000 by 1960.<sup>449</sup>

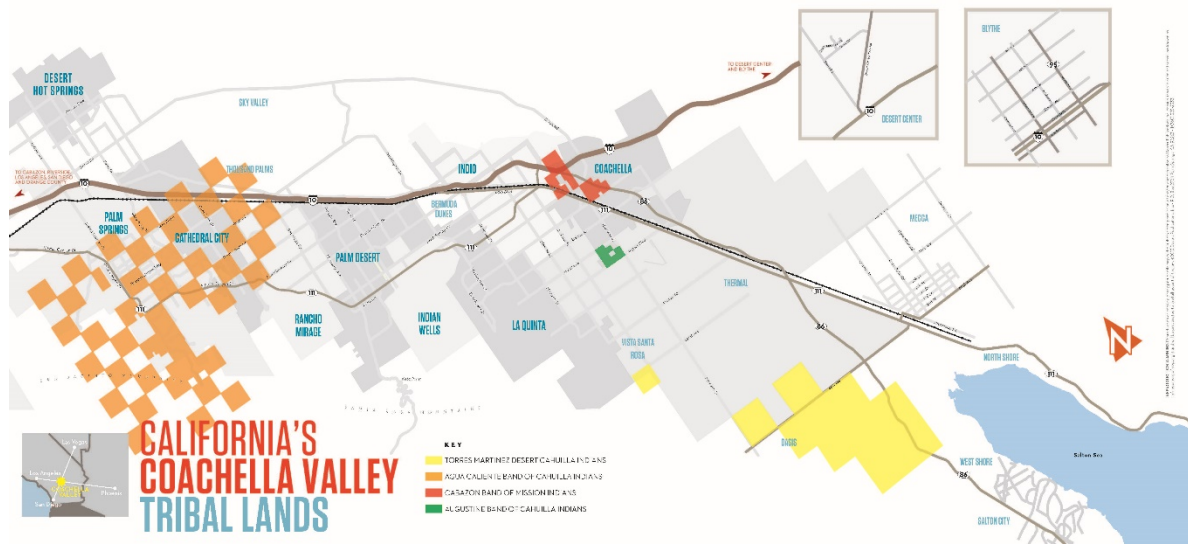

In Palm Springs, postwar single-family residential development followed several patterns. First, expansion/tract development occurred eastward, and then southward into the flat exposed parcels of the desert floor with the creation of homes for middle-class and upper-middle class residents. Second, empty parcels within existing developments were subject to in-fill development. Third, previously "unbuildable" parcels in the foothills were now economically viable for the development of luxury homes. Fourth, after 1959, new laws permitted the lease and development of the checkerboard of open parcels owned by the Agua Caliente Band of Cahuilla Indians. This offered developers a wide variety of opportunities previously denied within the city.

Source: *Palm Springs Life*, “Coachella Valley Maps – Vision 2013/14.”

Immediately after the war, between 1945 and 1949, some 20 new tracts were recorded in and around Palm Springs. The developers involved in these ventures tended to be early citizens of the city who saw potential in Palm Springs. An example of this was the Chino Mesa Estates tract (1945) developed by Ernest Off (1901-1993). Off had been instrumental in pre-war housing development in the city. After leaving Palm Springs in 1937 and moving to Brentwood and Beverly Hills, he returned to purchase and develop the 22 ½ acres north of Las Palmas for the development of high-end homes.<sup>450</sup> The home sites were marketed as “Exclusive, Restricted, Sheltered” and noted for their proximity to Las Palmas Estates.<sup>451</sup>

Prior to World War II, Palm Springs had been a tourist and vacation home destination for the wealthy. Postwar prosperity brought a new group of tourists and second home-owners to the city: the upper-middle and middle classes. This gradual democratization of Palm Springs would irrevocably change the city during the 1950s and 1960s, first with expansive single-family residential development and ultimately through the creation of innovative forms of multi-family residential development and ownership options.<sup>452</sup> The creation of new tracts and subdivisions also resulted in a less concentrated, more scattered development pattern.

<sup>450</sup> “Former Villager Returns and Plans New Development,” *Desert Sun*, February 22, 1946, 3.

<sup>451</sup> “Chino Mesa Estates Ad,” *Desert Sun*, March 1, 1946, 11.

<sup>452</sup> Post-World War II multi-family residential development is discussed in a separate theme.

A more practical, yet important factor in residential development in Palm Springs and the entire southwest was the accessibility of air conditioning. Although individual residential air-conditioning units were available as early as 1939, widespread acquisition and use was delayed by the war. In 1947, British scholar S.F. Markham wrote, “the greatest contribution to civilization in this century may well be air-conditioning – and America leads the way.”<sup>453</sup> In the 1950s, residential air conditioning became another way to keep up with the Joneses. More than one million units were sold in 1953 alone.<sup>454</sup> For communities like Palm Springs, air conditioning meant the “season” could be extended and year-round living was practically viable for the first time.

By the 1950s, demand for quick-to-market, inexpensive houses for returning GIs and their families inspired many architects in Southern California and throughout the country to develop ideas about prefabrication and design. In 1949, industrial designer Henry Dreyfuss and architect Edward Larrabee Barnes created the Vultee, a prefabricated home produced in the Consolidated Aircraft Factory in South Pasadena.<sup>455</sup> In April of 1950 Reginald Fleet, a former Consolidated Aircraft executive, erected one of the prefabricated aluminum Vultee houses at the corner of Mesquite Avenue and Calle Marcus in the Sun View Estates tract in a single weekend.<sup>456</sup> The Vultee interior, roof, and garage walls were constructed of “lumicomb,” a lightweight material made of a cardboard-like honeycomb core bonded between sheets of high-strength aluminum, used at the time for airplane bulkheads.<sup>457</sup>

The simple, 1,000-square-foot house enraged neighbors as not conforming to the architectural styles of the homes in the surrounding neighborhood and a threat to property values.<sup>458</sup> The issue became front-page news in the *Desert Sun* as homeowners filed an injunction suit against Fleet; later Fleet consented not to build any more in the area.<sup>459</sup> Although the homes had been out of production for two years, many were still in stock by 1951. The site of the house is believed to be either 1000 or 1015 S. Calle Marcus.<sup>460</sup> Both properties have been significantly altered.

Another player in the prefabrication field was Cliff May, who collaborated with his friend and associate Christian E. Choate on a low-cost panel system for Ranch style houses. The prototype was called Factory Model and the erection of the first one in Pacific Palisades spawned both large orders from developers

and media attention from the professional trade publications and national magazines like *Sunset*, *House Beautiful*, and *Better Homes and Gardens*.

By 1952, May and Choate's Ranch House Supply Corporation standardized the "Cliff May Ranch House" and by 1953, the architects had a growing network of distributors around the country. By the fall of 1953 Palm Springs was added to the list of franchisees when Palm Valley Associates became the exclusive distributors of "Cliff May *Desert Homes*." Palm Valley Associates, a partnership between L.E. Manseau, Norman A. Ostberg, and Tony Burke, promoted the prefabricated homes for building on "Your lot or subdivision" using the standard advertisements provided by the Cliff May Company.<sup>461</sup>

<sup>461</sup> "Cliff May Desert Homes," *Palm Springs Villager*, September 1953, 24.

Palm Valley Associates erected a model home at the Thunderbird Country Club, but the designs were available to anyone throughout the Valley. The location of any prefabricated Cliff May Ranch House in Palm Springs is currently unknown; however, company records located at the UC Santa Barbara archives indicate over a dozen orders were received and shipped. There were two- and three-bedroom plans that evolved over time. It should be noted that some of the distributors around the country modified or added touches to the homes, such as brick detailing in the South, to increase sales.<sup>462</sup> Ultimately, a lack of uniform building codes across the country undermined the fundamental premise of the business. May and Choate dissolved their partnership in 1955, but continued to receive royalties on houses built until 1961. It is estimated that nationwide, approximately 18,000 Cliff May Ranch Homes were built.<sup>463</sup>

One of the key features of Palm Springs' postwar homes was the presence of the individual, private swimming pool. In keeping with the resort lifestyle, many home builders and home owners added the backyard attractions to their parcels. Palm Springs resident and sportsman Bob Howard (famed owner of Howard Manor) began marketing Palm Springs as "The Swimming Pool City" and great fanfare was generated for the issuance of the 1,000<sup>th</sup> swimming pool permit in 1956 for Mrs. Henry Clark at 410 Via Entrada.<sup>464</sup> The city's fascination with the swimming pool was further evidenced by an appeal to the U.S. Postal Service in 1975 to commemorate the 2000<sup>th</sup> swimming pool built in Palm Springs with the issuance of a postage stamp.<sup>465</sup>

During the 1950s, residential development in Palm Springs continued to expand eastward and southward. Like other locations in Southern California, it was a period in which large developers dominated the scene; among them were William Grant, Noel B. Clarke, A. R. Simon, George and Robert Alexander, Roy Fey, and Jack Meiselman. However, a series of small developers still flourished. Examples included Roy W. Burton's Burton Tract (1957); auto salesman-turned-real estate developer Sam Janis who subdivided Janis' Hilltop Estates (1958); and David M. Benjamin (1894-1987), who developed the El Mirador Park tract (1946) and Mountain View Estates (1956).

Another trend in development was the investor consortium, such as the one established for El Camino Estates (1956) a large 110-parcel tract development in north Palm Springs that included no fewer than sixteen owners. A smaller consortium of ten owners subdivided Palm Vista Estates (1953). Promoted as "wind free half acre sites" Palm Vista Estates played off the reputation of its neighbors Little Tuscany and Las Palmas Estates.<sup>466</sup> In 1956 Howard Lapham designed a speculative residence in Palm Vista

By the close of the 1950s great changes were afoot for Palm Springs residential development. New communities to the south and east including Palm Desert, Indian Wells, and Rancho Mirage were beginning to encroach on Palm Springs as the chic desert destination for home ownership. Another important factor was the 1959 Equalization Law signed by President Eisenhower that equalized allotted Indian lands, thereby setting the stage for development of Reservation lands within the City of Palm Springs. The Equalization Act was intended to provide for a reasonable degree of equalization of the value of allotments made to tribal members and was enacted in response to litigation in Federal court

<sup>467</sup> "Your Dream of Perfection," *Palm Springs Villager*, May 1956, 10.

in *Segundo et al. v. United States et al.*<sup>468</sup> The tribe and tribe members (allottees) could now realize profits from their lands and developed the 99-year lease. This allowed for longer agreements, encouraging development that had previously been hindered by short-term leases. For developers, this represented new opportunities for projects throughout the city. From large (Canyon Country Club) to small (Smoke Canyon Estates), residential projects on leased land were often attractive for their location and lower sales prices (made possible because the purchase of land was not involved). With increased demand, economic prosperity, air conditioning, and availability of new land for development, Palm Springs became home to a number of custom and tract home developments by prominent Southern California developers and wealthy speculators. From early on, many of these subdivisions emphasized architecture and/or the glamour associated with Palm Springs.

#### Residential Subdivisions from the Period

Following is a discussion of select residential subdivisions that were recorded between 1945 and 1969, reflecting the significant amount of residential development in Palm Springs during this period. The narrative discussion is meant to provide an overview of residential developments after World War II, including a discussion of each Alexander tract. The subdivisions are listed chronologically by the date they were initially recorded. The Overview of Tract Development in Appendix B includes a list of the residential subdivisions in Palm Springs that were studied as part of the survey effort, including a description of additional tracts not discussed in the narrative. The information included in the table is intended to provide additional data about residential development in Palm Springs and inform future researchers about this facet of Palm Springs history; a complete history of each tract is outside the scope of this project.

### Tahquitz River Estates (1947)

In response to the need for postwar housing, well-known developer Paul Trousdale teamed up with Pearl McCallum McManus on a Palm Springs development. In a 1948 interview, McManus remembered, “When I built the Oasis Hotel I had dreams of a project like Trousdale’s...Frank Lloyd Wright [Jr.] had drawn plans...very modern.”<sup>469</sup> As previously discussed, these plans never came to fruition; however, McManus clearly saw in Trousdale a man of similar vision. By this time, Trousdale had already built over 1,700 tract homes in Southern California.

Pearl McCallum McManus and Austin McManus sitting on the earthmover at the beginning of the channel project at Tahquitz River Estates. Source: Palm Springs Historical Society.

The area that became Tahquitz River Estates was bordered by Sunny Dunes Road on the north, Calle Palo Fierro on the west, Mesquite Avenue on the south, and Sunrise Way on the east. At the time, it was the largest and most ambitious standardized tract housing development that had been attempted in Palm Springs; it was also the first large postwar development of tract homes by a major developer.

In 1947, Trousdale subdivided the land into 213 one-hundred-foot wide parcels averaging 10,000 square feet each.<sup>470</sup> In 1948, he added another forty-nine parcels to the far western end of the subdivision in a second unit. “Outdoor living” was promoted by the inclusion of patios with mountain and garden vistas. Another featured amenity was the location adjacent to schools and shopping centers.<sup>471</sup> The fact that the homes were architect-designed also featured prominently in the marketing materials.

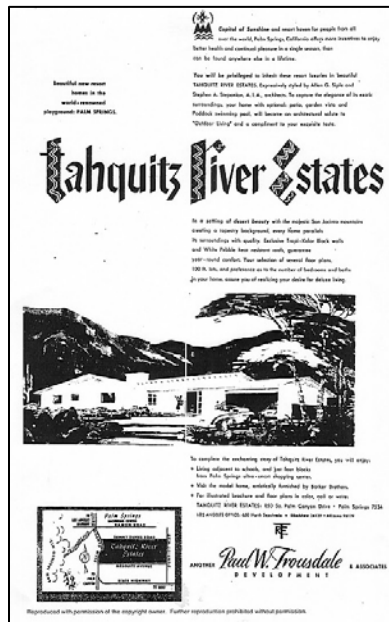

<sup>469</sup> Interview of Pearl McManus To Melba Bennett, April 26, 1948, Clippings Files, Palm Springs Historical Society.

<sup>470</sup> Trousdale received a blanket variance on setbacks to allow his plans, per Marvin Roos correspondence May 11, 2016.

<sup>471</sup> Display Ad 66, *Los Angeles Times*, January 18, 1948, F14.

The first part of the project was to construct the Tahquitz Creek Channel storm drain, which divided the development from east to west. On September 22, 1947 the first earthmovers appeared and the \$100,000 flood channel project began. Pearl and Austin McManus were photographed on the earthmover and the picture appeared on the front page of the next day's *Desert Sun*.<sup>472</sup> At some point, the McManuses sold their interests in the project to Trousdale.<sup>473</sup>

Ad features model home rendering by architects Allen G. Siple and Stephen A. Stepanian who are mentioned by name in the ad copy. Source: Display Ad 66, *Los Angeles Times*, January 18, 1948, F14.

Trousdale engaged architects Allen G. Siple and Stephen A. Stepanian to design eight models with two- and three-bedroom floor plans. Edward Huntsman-Trout, a frequent collaborator with Trousdale, was brought on as landscape architect.<sup>474</sup> Each house was completely landscaped, and owners had the choice of including a pool designed by Huntsman-Trout. According to the *Desert Sun* and the sales brochure, “the models were designed so that each home would be situated on the lot in such a way that it allowed for complete privacy while enjoying the pool.”<sup>475</sup>

<sup>472</sup> Renee Brown, “Palm Springs History: Homes Bloomed Along Tahquitz Wash,” *Desert Sun*, September 11, 2014.

<sup>473</sup> The reason for the McManus selling their interest in the development is unknown.

<sup>474</sup> “Finding Aid to the Edward Huntsman-Trout papers,” *UCLA Special Collections*, <http://www.oac.cdlib.org/view?docId=tf1x0nb0cp&developer=local&style=oac4&s=1&query=%22palm+Springs%22&x=16&y=12&serlet=view>

<sup>475</sup> Renee Brown, “Palm Springs History: Homes Bloomed Along Tahquitz Wash,” *Desert Sun*, September 11, 2014.

Eight different floor plans were created for the two-bedroom/one-bathroom models and two floor plans for the three-bedroom/two-bathroom homes. Each plan makes the most of its outdoor space by featuring large lanais and/or porches with large expanses of glass to the backyards and the desert vistas beyond. Breezeways were also common features on these plans, "...a fashionable, convenient addition nearly doubles the size appearance of your home." Each model also featured a large fireplace.

**HISTORIC RESOURCES GROUP**

As described in the sales brochure, eighteen different exterior designs created “a unique and personalized pattern of deliquescent charm.”<sup>476</sup> Variety in tract home styles within a subdivision was a reaction to the Levittown model of postwar America that was decried for its relentless cookie-cutter streetscapes. Renderings from the sales brochure for Tahquitz River Estates show the design of the houses to be Modern Ranch style with restrained façades of plaster, Tropic-Kolor cement block, and vertical wood siding. The houses featured steel reinforced concrete slabs and heat reflecting roofs. As described by Allen G. Siple’s sponsor for AIA Fellowship, noted architect A. Quincy Jones, “the houses of masonry and heavy timber in the planned community of Tahquitz River Estates provide[d] comfortable living in the desert with an unusually high degree of protection against the hot, windy days and cold, windy nights.”<sup>477</sup> The sales brochure went a step further claiming that the houses were designed to be “earthquake proof.”<sup>478</sup> While the supporting evidence for this claim remains a mystery, Siple’s ongoing interest in building science and seismic protection are consistent with this idea. Lots in Tahquitz River Estates were landscaped with native desert plants including athel, cottonwoods, and palms.<sup>479</sup>

By March of 1948, half of the first unit of 72 homes had been sold.<sup>480</sup> By August, the first unit was completely sold out. In 1949, two new model homes were added. The subdivision received national acclaim when the March 1950 issue of *House Beautiful* featured a Tahquitz River Estates model home.

Mr. and Mrs. Paul Trousdale at the Palm Springs Tennis Club c. 1956. Source: *Look*, September 18, 1956, 27.

Paul Whitney Trousdale (1915-1990) was a second-generation developer. Trousdale was responsible for the development and creation of more than 25,000 homes throughout Southern California.<sup>481</sup> Born near Gallatin, Tennessee, he attended Los Angeles High School and completed one year at USC. A born salesman, he dabbled in advertising, selling gum and other products, then switched to real estate. During World War II, he built large houses for movie stars and executives, as well as 3,000 more modest houses, including seven large housing projects.

A 1949 *Los Angeles Times* ad for Trousdale and Associates featured the Palm Springs development of Tahquitz Canyon Estates with a valuation at \$1,500,000, which was the second smallest of the organization's holdings. Trousdale would later embark on two of his best-known developments: Baldwin Hills Estates in Los Angeles and Trousdale Estates in Beverly Hills. By the end of 1949, Trousdale's involvement with the subdivision appears to have waned. In November of 1949, Henry S. Reid, Russell Wade, and Walter

Morrison formed a company to construct FHA qualifying residences for returning GIs on the north side of the channel in Tahquitz River Estates.<sup>482</sup> Morrison, a seasoned San Fernando Valley contractor, partnered with local doctor Reid on the project. Another developer, Carl Bohne, completely took over the project from Trousdale by April of 1950.<sup>483</sup>

### Deep Well Ranch Estates (1951)

Deep Well Guest Ranch. Source: *Palm Springs Life*, May 2013.

Deep Well Ranch Estates (also known as Deep Well Estates, Deep Well Colony Estates, or Deepwell Ranch Estates) is bordered by Mesquite Avenue to the north, the east side of Sagebrush Road to the east, Primavera Drive to the west, and the south side of Deep Well Road to the south with an extension at Palm Tree Drive on the southern end of the development. Deep Well Ranch Estates had its origins in the Deep Well Ranch and guest ranch in the 1920s. The early development of Deep Well as a dude and guest ranch is discussed in the theme "Commercial Development between the Wars (1919-1941)" in the "Palm Springs between the Wars" context.

<sup>481</sup> "Paul Trousdale, Developer and Innovator, Dies," *Los Angeles Times*, April 12, 1990.

<sup>482</sup> "New Company Organizes for Building Campaign Here," *Desert Sun*, November 11, 1949.

<sup>483</sup> "Bohne Request Again Denied," *Desert Sun*, April 14, 1950.

Aerial view of Deep Well Estates circa 1955. Looking westward from Calle De Maria. The major east-west street is Mesquite Avenue; the development to the right of Mesquite Avenue is Tahquitz River Estates by Paul Trousdale. Source: *Palm Springs Life*.

By 1951, residential subdivisions were beginning to encroach on the land around the Deep Well Guest Ranch and it became clear that there was money to be made in real estate development. William Grant, a local builder for the Rancho Royale, Sun View Estates (immediately adjacent to Deep Well Ranch estates just east of Sagebrush Road), and Thunderbird Ranch and Country Club developments, purchased a significant portion of Deep Well Ranch and subdivided it for a custom home development that became Deep Well Ranch Estates.

The 231-parcel development was subdivided in ten units between 1951 and 1955. The earliest unit was developed by Grant; however, the subsequent units were developed in conjunction with Harry A. Dart and his wife Gladys M. Dart of Dart Properties. Properties south of Mesquite Avenue were subdivided in 1952, and the majority of the area was subdivided by 1953. In June of 1963, the remaining 22-acre Deep Well Guest Ranch was sold to a Los Angeles syndicate with the intent to make

it “an exclusive sportsman’s club.”<sup>484</sup> In 1969, the former guest ranch property was transformed into condominiums by another developer.

According to an article in the *Villager*, “One enters from the Palm Springs-Indio Highway over a beautiful new divided roadway, landscaped and decorated at the attractive entrance.”<sup>485</sup> Grant formed an architectural review committee for Deep Well Ranch Estates that included architects Cliff May and Phil Boyd. The ensuing long, low, one-story houses were a mixture of Spanish Colonial Revival, Ranch, and Mid-century Modern styles.

Deep Well Ranch Estates attracted its share of prominent residents and significant architecture. Architect Hugh Kaptur remembers designing several homes in the Deep Well Ranch Estates prior to becoming a licensed architect.<sup>486</sup> Deep Well homes by E. Stewart Williams include the 1958 Theodore Sutter House at 1207 S. Calle De Maria (with interiors by Arthur Elrod); and the Leo Koerner Residence (1955) at 1275 S. Calle Maria.<sup>487</sup> Wexler & Harrison built a residence at 1344 S. Calle De Maria, and the William Bogess House at 1366 S. Calle de Maria (with interiors by Arthur Elrod). Designer and builder A. Belden Crist built his home at 1366 S. Paseo de Marcia (1958), and Michael Black designed a residence at 1430 S. Calle De Maria (1967). Stan Sackley designed several residences in Deep Well, including 1131 S. Driftwood Drive (1955); 1475 S. Paseo De Marcia (1955); and the James M. Hollowell Residence at 1325 Sagebrush Road (1965), which was featured in *Playboy* magazine as a “Playboy Pad.”

Deep Well Ranch Estates tended to attract postwar professionals and newly retired industrialists. Examples include the residences of retired Innes Shoe Corporation executive Nat Burkett, who lived at 1346 S. Paseo de Marcia in 1958; Edward Kadlac, a retired executive from Du Pont Corporation, at 1411 S. Paseo De Marcia; and Abe L. Levin, a retired food executive, who lived at 1076 Deepwell Road in the 1960s. A significant number of local developers, realtors, and contractors lived in the neighborhood as well, including Leo Baker, Paul Keil, Herman C. Newman, and W.G. Hercules. Mr. and Mrs. Roy Fey lived at 1120 S. Calle de Maria. A large number of local hoteliers also resided at Deep Well. Deep Well residences were the focal point of an active social scene in the postwar period – the frequent sites of parties and charity events hosted by the socially prominent wives of Deep Well residents.

During the mid-1960s, film comedian Jerry Lewis lived at 1349 Sagebrush Road. In 1967 Oscar-winning actor William Holden established his permanent residence at 1323 S. Driftwood Drive. Two homes in Deep Well Ranch Estates are associated with the pianist Liberace. The first at 1516 Manzanita Avenue

is where the performer lived circa 1957. The second, at 1106 Driftwood Drive was built for his beloved mother, Frances. Noted television actor/producer Jack Webb lived at 1255 S. Manzanita Avenue next door to his first wife, actress Julie London at 1297 S. Manzanita Avenue.<sup>488</sup>

#### Ranch Club Estates/Desert Park Estates (1955)

In 1955, developer Noel B. Clarke (1896-1964) embarked on the most ambitious postwar tract development undertaken in Palm Springs: Ranch Club Estates (also known as Desert Park Estates). The 500-acre development was in the flats of northeast Palm Springs bordered by Joyce Drive on the north, Vista Chino on the south, the golf course and Whitewater Club Drive on the east, and Sunrise Way on the west. Developed in twelve phases between February of 1955 and November of 1958, the southwest portion of the development was bordered by Racquet Club Drive to the north and N. Farrell Drive to the east, and employed a street pattern evocative of the earlier Prescott T. Stevens developments like Las Palmas Estates and Merito Vista in which gently curving streets were favored over a rigorous grid pattern. The final five phases (seven through twelve) abandoned curving streets in favor of a more efficient grid pattern.

Noel Clarke was a hospitality man turned developer. Having owned clubs in southern Orange County during the 1920s, he invested in Walnut Estates, which was located near Encino and was one of the first San Fernando Valley suburban housing developments. Clarke and his wife Joyce then turned their talents to the desert playground and took over the Ranch Club in 1955. By 1961, they turned the basic nine-room hotel-club operation<sup>489</sup> into Ranch Club enterprises: the Ranch Club Hotel of more than 250 rooms, the Ranch Country Club (the 18-hole golf course designed by Joe Caldwell in the north east section of the city),<sup>490</sup> and Ranch Club Estates, the homes near the golf course built by Clarke's Ranch Construction Company.<sup>491</sup>

<sup>488</sup> Howard Johns, *Palm Springs Confidential* (Barricade Books, Fort Lee, NJ, 2004), 213-216. Other famous residents reportedly include Michael Todd and Elizabeth Taylor at 1315 Manzanita.

<sup>489</sup> Located at Paseo El Mirador and Sunrise Way.

<sup>490</sup> The Ranch Country Club Board of Directors also included Bob Kelley, broadcaster for the Los Angeles Rams; Raymond Parkhurst, a Hughes Aircraft executive; movie producer Bob Waterfield; local attorney Arthur Crowley; Gerald Sanborn, mayor of Palm Springs; and Joe Kirkwood, golf professional.

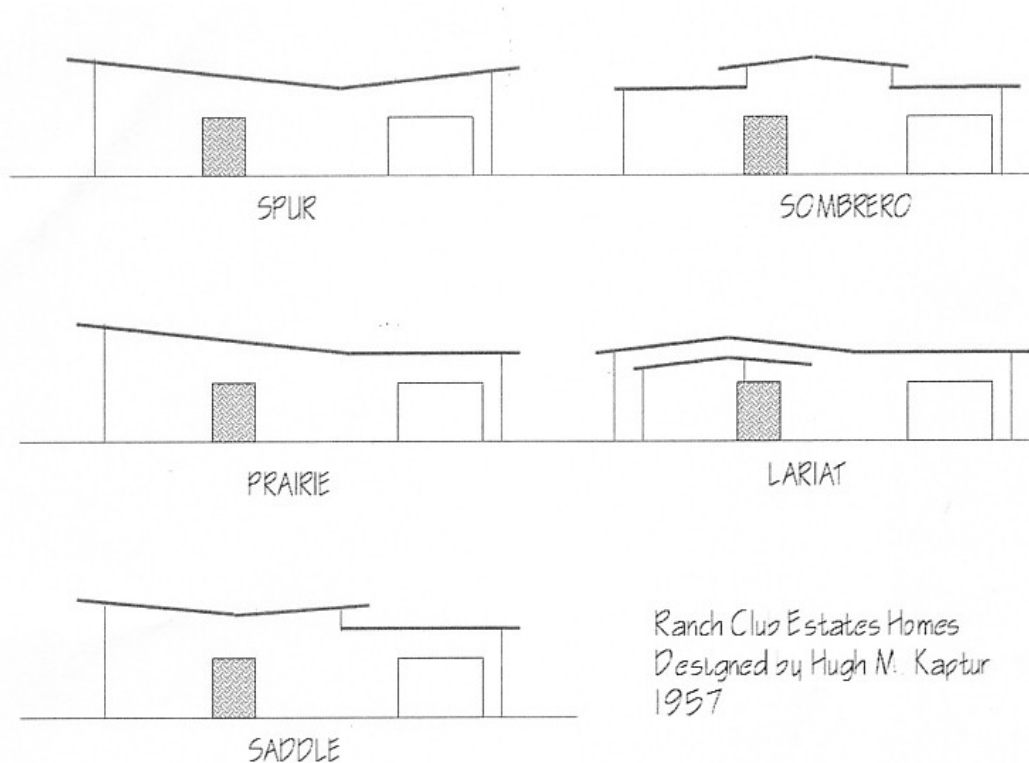

<sup>491</sup> Joan Winchell, "Real Whingdinger at Palm Springs," *Los Angeles Times*, February 3, 1961, A7.

This rendering for the "Lariat" model was featured in advertising for Ranch Club Estates in November of 1959. Source: Display Ad133, *Los Angeles Times*, November 15, 1959, G14.

In 1957, Ranch Construction Company foreman Tom Sills approached a young Hugh Kaptur to design the home plans. In the documentary *Quiet Elegance: The Architecture of Hugh Kaptur*, Kaptur remembers, "I filled the void for builders who didn't want to spend thousands of dollars for plans. They were using draftsmen or building designers. I started doing work for contractors...that's how I came to do houses out at Ranch Club Estates." Five designs were created: the "Spur," "Lariat," "Saddle," "Prairie," and "Sombrero." The Mid-century Modern designs abstracted features of adobe and indigenous

architecture to create solid expressionistic forms with a variety of rooflines. The homes were noted for masonry elements at the center of the façade designed to, in Kaptur's own words, "anchor the designs to the earth."<sup>492</sup>

Elevations of the five Hugh Kaptur designs from 1957 for Ranch Club Estates show the variety of rooflines. Each elevation is anchored by a strong masonry element in the center of the design. Source: <http://www.desertdreaming.com/ranch-club-estates.html>.

<sup>492</sup> John C. Brown, *Quiet Elegance: The Architecture of Hugh Kaptur*, CD-ROM (This N' That Films, 2014).

The development was envisioned to include between 800 and 1,000 homes. But sales were slow, and by 1961 only 250 homes had been built. Instead of building the homes in clusters and creating neighborhoods, the homes were built “scattershot” around the development in hopes that it would increase the value of the land between.<sup>493</sup> Unfortunately, this was not a successful strategy. In February of 1964, Clarke died of a heart attack after a year of illness.<sup>494</sup> In 1967, Clarke’s widow Joyce sold the Ranch Club proper and it was ultimately razed. The Ranch Construction Company went bankrupt and the undeveloped properties were sold to other developers who built more tract homes in the 1970s and 1980s.

L-shaped tract in foreground is Ranch Club Estates (a.k.a., the Desert Park Estates Tract). Note how homes were constructed scattershot around the 500 acres, as opposed to clustered in sequential units like most developments. Homes visible in the photo are likely Hugh Kaptur designs from 1957 or “knock-offs” of those designs. Source: Palm Springs Historical Society.

### Sunmor Estates (1955)

During WWII, the area now occupied by Sunmor Estates was part of the Palm Springs Army Airfield as a site for several “Tie Down” or hardstand stations for aircraft.<sup>495</sup> In 1955 the local Sands Realty and Development Corporation consisting of Abram Robert (A.R.) Simon and Merrill Brown subdivided the

<sup>493</sup> Brown, *Quiet Elegance: The Architecture of Hugh Kaptur*.

<sup>494</sup> “Clarke Services,” *Redlands Daily Facts*, February 17, 1964, 6.

<sup>495</sup> Historic Site Preservation Board #40 Plaque.

Local builder Robert “Bob” Higgins was engaged to build “a neighborhood of affordable modernist tract homes.”<sup>501</sup> Sunmor Estates included two-, three-, and four-bedroom plans.<sup>502</sup> According to the *Palm Springs Villager*, Wexler & Harrison designed the Mid-century Modern-style homes.<sup>503</sup> The post-and beam homes featured colored rock roofs, extra-wide overhangs, large expanses of glass and sliding glass doors, and large covered patios.<sup>504</sup>

Rendering for Sunmor Estates (1955, Wexler & Harrison) featuring a Mid-century Modern-style home of post-and-beam construction. Source: *Palm Springs Villager*, September 1955, 9.

Although Sunmor Estates was clearly envisioned as a series of tract homes, ads tout the houses as “individually designed and decorated.”<sup>505</sup> Ads also suggest that the developers were willing to sell unimproved property in the subdivision. In 1957, the Sunmor Estates property was sold to fellow developers George and Robert Alexander of the Alexander Construction Company; the property became part of the Alexander’s adjacent Enchanted Homes development (subdivided in 1957).<sup>506</sup>

<sup>501</sup> Sunmor Neighborhood, [www.sunmorestates.com/#!about/cjn9](http://www.sunmorestates.com/#!about/cjn9) (accessed December 5, 2014).

<sup>502</sup> Additional research is needed to confirm the number of models, plans, and layout of the development.

<sup>503</sup> *Palm Springs Villager*, July-August, 1955.

<sup>504</sup> “Sunmor Estates Advertisement,” *Palm Springs Villager*, October, 1955, 4.

<sup>505</sup> “Sunmor Estates Advertisement,” *Palm Springs Villager*, September, 1955, 9.

<sup>506</sup> In his book *The Alexanders*, James R. Harlan refers to the Alexander development here as Sunmor Estates, rather than its official tract name, Enchanted Homes. There is currently no evidence that the Alexanders ever marketed them under the Sunmor name. The reason for the sale is currently unknown. Simon may have decided that he preferred commercial instead of residential development, or he may have needed the cash to fund new projects. Simon expanded the nearby commercial shopping center in 1964, creating the first air-conditioned mall with an ice skating rink in Southern California. “Shopping Centers Showing Surge,” *Los Angeles Times*, January 19, 1964, K1.

Aerial photograph looking west c. 1960 with Plaimor and Livmor Avenues clearly identifiable in Sunmor Estates. The Alexander's adjacent Enchanted Homes (on the south and west of the original tract) has already been completed. The major east west road visible is present-day Tahquitz Canyon Way. Source: Palm Springs Historical Society.

FINAL DRAFT – FOR CITY COUNCIL APPROVAL

## City of Palm Springs

### Citywide Historic Context Statement & Survey Findings

HISTORIC RESOURCES GROUP

### The Crossley Tract (1956)<sup>507</sup>

This twenty-acre tract was subdivided by Palm Springs' first African-American resident, Lawrence Crossley (1899-1962). It was located in an area that was east of the city limits at the time of its subdivision. It was bordered by 34<sup>th</sup> Avenue to the north, Martha Street to the south, the west side of Lawrence Street to the west, and the east side of Marguerite Street on the east. The 77-parcel development was composed of a series of modest Minimal Traditional-style homes.

African American  
developer Lawrence  
Crossley. Source: Palm  
Springs Historical Society.

Crossley intended the subdivision to be for African-American families who were largely barred by racial restrictions from living in other Palm Springs developments. African Americans had migrated to Palm Springs in earnest during the mid-1940s when the oil fields of Texas offered little promise. Those who came primarily found work as domestic servants.<sup>508</sup>

As a result of racial restrictions, prior to the subdivision of the Crossley tract, African Americans and Mexican Americans all lived on Section 14 of the Agua Caliente Indian Reservation "...in a cluster of unpaved streets, jumbled shacks, no street lights and outside toilets."<sup>509</sup> When non-permitted structures on "the reservation" were demolished by the city and county health department in the early 1960s, African-Americans in Palm Springs migrated to outlying areas such as the Desert Highland Estates Tract (1951) north of the city where homes were relatively inexpensive and the Federal Housing Authority (FHA) offered low-interest loans.<sup>510</sup> The area was not annexed into Palm Springs until the mid-1960s.

<sup>507</sup> Additional information about the Crossley Tract is included in the Ethnic Minorities chapter included at the end of this study.

<sup>508</sup> "Palm Springs: North End is a Black Enclave Amidst Resort Town's Opulence," *Press Enterprise*, May 27, 1979, B1.

<sup>509</sup> Wendell Green, "Plan Negro Eviction from Palm Springs," *Los Angeles Sentinel*, October 5, 1961, A1.

<sup>510</sup> "The Other Side of Palm Springs," *Los Angeles Times*, November 5, 1984, F1.

By 1984, Desert Highland Estates and nearby Gateway Estates (1960)<sup>511</sup> had become the heart of the African-American residential community in Palm Springs.<sup>512</sup>

Crossley came to Palm Springs in 1925 and went to work for Prescott T. Stevens as a chauffeur and handyman. Crossley eventually became Steven's right hand man, designing and building the El Mirador Golf Course and managing the Whitewater Mutual Water Company.<sup>513</sup> He also became owner of the Tramview Water Company. He built and lived in the Crossley Court at 1543 Ramon Road.<sup>514</sup>

Crossley also befriended the Agua Caliente Band of Cahuilla Indians and was welcomed into tribal circles. From a recipe provided by his Native American associates, he created the Palm Springs Desert Tea Company. Crossley was instrumental as a liaison between the Agua Caliente Band of Cahuilla Indians and Judge McCabe's efforts to restore land promised to them by the federal government.<sup>515</sup>

### Meiselman Developments (1955-1959)

An important postwar developer in Palm Springs was Jack I. Meiselman (1899-1994). In the mid-to-late 1950s, Meiselman developed hundreds of Mid-century Modern style tract homes in the city. Meiselman was born in New York City to Jewish parents who had immigrated to the United States in 1891.<sup>516</sup> One of six children, Jack was involved in the family business of linen manufacturing and sales, specifically handkerchiefs.<sup>517</sup> During the 1920s Meiselman relocated to Chicago and continued in the handkerchief manufacturing business but broadened his interests into construction.<sup>518</sup> He did well financially as evidenced by his ownership of homes in an affluent neighborhood in north Chicago. In Chicago, Meiselman also met and married his wife Berne "Babe" Meiselman (1903-1991). Meiselman and his wife were always listed as co-owners/sub-dividers of Meiselman tracts.<sup>519</sup> In 1944, the Meiselmans moved to California.<sup>520</sup> They appear in the Palm Springs City Directory in 1946 at 1276 Indian Avenue.<sup>521</sup> By 1948, the Meiselmans had moved to 1240 Monte Vista Avenue.

<sup>511</sup> Gateway Estates is noted as "another community Southland Development Company" in a 1961 advertisement in *The Desert Sun*. According to *The Desert Sun*, Donald E. Hill was a partner in the Southland Development Company, as well as part owner of South Shores Management in 1961. The *Los Angeles Times* indicates that a Donald E. Hill was an executive at the Goodyear Tire and Rubber Company in the 1960s, though it is unconfirmed if this is the same Donald Hill referenced in *The Desert Sun*. The *Los Angeles Times* also notes that the Southland Development Company was based in Van Nuys by 1964, and built homes in Simi Valley that same year that were designed by the architectural firm Duncan and Conroy.

<sup>512</sup> "The Other Side of Palm Springs," *Los Angeles Times*, November 5, 1984, F1.

<sup>513</sup> Greg Niemann, *Palm Springs Legends* (San Diego, CA: Sunbelt Publications, Inc., 2011), 184.

<sup>514</sup> Pending additional research on the type of court development.

<sup>515</sup> "Well Known Palm Springs Realty Developer Dies," *Los Angeles Sentinel*, March 15, 1962, A10.

<sup>516</sup> U.S. Census, 1920.

<sup>517</sup> U.S. Census, 1920.

<sup>518</sup> "\$3 million Gift for Casa Colina," *Progress Bulletin*, February 16, 1976, 11.

<sup>519</sup> Some online sources have erroneously identified Meiselman's wife "Berne" as "Bernie," a brother to Meiselman. Meiselman family 1920 census records show no Bernard Meiselman in the family at that time. It is more likely a misattribution of Berne's name.

<sup>520</sup> "\$3 million Gift for Casa Colina," *Progress Bulletin*, February 16, 1976, 11.

<sup>521</sup> *Palm Springs Season 1946-7 Directory*, 50.

By 1960, the Meiselmans had a home in Beverly Hills at 509 N. Beverly Drive. In their later years, they were known for their philanthropic efforts in expanding services for low-income elderly populations – specifically the donation to Casa Colina Hospital of a \$3 million, 240-unit apartment complex on forty acres in Cathedral City, to be used for elder care.<sup>522</sup>

Some accounts indicate that Meiselman may have originally worked with developers George and Robert Alexander, but there may have been a falling out between the men.<sup>523</sup> Regardless, documentation shows Meiselman began building in the desert as early as 1951.<sup>524</sup> The first documented action of Meiselman as a developer on his own was recounted by local Palm Springs real estate agent George Gannon in the November 1956 issue of the *Palm Springs Villager*:

In 1953 Jack Meiselman came into my office and wanted to invest in Palm Springs real estate. I suggested that homes were needed within the reach of the average working man. At the time, I couldn't have shown you anything less than \$15,000 and you would have had to have a minimum of \$6,000 to \$7,000 down. That very afternoon, I sold him 10 lots in the Val Vista tract. He handled his own financing. By the time the 10 homes were up I had them sold. They were two-bedroom, one bath homes and sold for \$7,975, \$975 down and \$75 per month.<sup>525</sup>

In 1954 alone, Meiselman sold more than \$1 million of real estate in Palm Springs.<sup>526</sup> By December 1956, Gannon and Meiselman had completed construction on their 250<sup>th</sup> new home.<sup>527</sup>

Meiselman was a builder as well as a developer; therefore, he also constructed homes (presumably primarily on speculation) in tracts that he did not develop.<sup>528</sup> In 1953, the firm completed the construction of the Carl Schroder Residence designed by Walter White (1917-2002) in the Luring Sands Park tract.<sup>529</sup> Other tracts where Meiselman constructed homes included: Vista Del Cielo, Desert Tract, Deep Well, Ramon Rise Estates, Winterhaven Manor, Palm Springs Addition No. 1, and Desert Palm Estates. By November of 1956, Meiselman had built and sold 198 homes in Palm Springs ranging in

cost from \$8,000 to \$30,000.<sup>530</sup> George Gannon was the exclusive buying and selling agent for Meiselman.

George Gannon, realtor and Jack Meiselman, developer, review plans for a subdivision.  
Source: *Palm Springs Villager*, November 1956, 40.

Around 1950, Meiselman approached architect William F. Cody to design a series of three-bedroom/two-bathroom houses for a cluster of parcels within the Desert Palms Estates tract. Surviving drawings indicate what appear to have been two plans and three elevations for each plan, for a total of six designs. They appear to be bordered by Park Drive to the north, McManus Drive to the south, Sunset Way to the east, and other tract parcels to the west.<sup>531</sup> Based upon a comparison of Cody plot plans and elevations with extant structures, these houses are located at 2284 E. Desert Palms Drive, 2285 E. Desert Palms Drive, 2296 E. Desert Palms Drive, 369 Sunset Way, 2191 E. Park Drive, 2223 E. Park Drive, 2285 E. Park Drive, and 2295 E. Park Drive. Building permits for E. Desert Palms Drive were issued to Cody in 1951 according to the *Desert Sun*.<sup>532</sup> Existing archival documentation for this tract is incomplete.<sup>533</sup> The large number of plans and elevations suggest that additional parcels beyond the documented eight may have been included.

Designs in other Meiselman tracts are typically a simplified Mid-century Modern style that was less expressive and refined than their Alexander counterparts. Common elements of Meiselman homes are tongue-and-groove ceilings, clerestory windows, scored plaster, concrete block, and walls of glass at the

### *El Mirador Park (1946/1955)*

One of the earliest Meiselman developments began with the purchase of 26 lots from Rose Benjamin within the El Mirador Park tract. The El Mirador Park tract was originally subdivided in 1946. Meiselman purchased lots on Paseo El Mirador, Linda Vista Drive and Pasatiempo Road in April of 1955.<sup>535</sup> The original tract was subdivided into 49 parcels, so the Meiselman-built homes represent more than half of this tract. The model home for the development, also known as the "Jack Meiselman Home for 1957," was located at 1252 Pasatiempo Road.<sup>536</sup>

### *Karlisa Cove and Palm Lane (1956)*

In June of 1956 Meiselman subdivided two tracts in Palm Springs. The first, Karlisa Cove, was a small seven-parcel tract of homes in the Karlisa Cove cul-de-sac off Paseo de Caroleta in the area popularly known as the Veterans Tract. These irregularly-shaped parcels are unique among Meiselman

<sup>534</sup> J. Williams, "Know Your Meiselman," *Curbed*, July 20, 2014. <http://la.curbed.com/2014/7/20/10070656/know-your-meiselman-midcentury-with-enviable-outdoor-space>. Accessed June 2016.

<sup>536</sup> "New Presentation of Home Selling Announced by Gannon Realty Co.," *The Desert Sun*, October 19, 1956.

developments. The second, Palm Lane, was a 49-parcel subdivision bordered by Amado Road on the north, the parcels fronting the south side of Andreas Road on the south, Sunset Way on the east, and the parcels fronting the west side of Michelle Road on the west. These houses were three- or four-bedroom/two-bathroom plans with “spacious living rooms with fireplace, glass sliding doors leading to patio and pool areas, and Youngstown engineered kitchens...” priced at \$23,200.<sup>537</sup> Meiselman also allowed Palm Lane buyers to customize their homes in terms of plans and colors. The model home, located at 2247 East Amado Road, was lauded by the *Desert Sun* for its “desert contemporary design...refreshing in that it favors quiet and comfortable elegance instead of flashy gimmicks.”<sup>538</sup> A second model home was opened at 227 Sunset Way<sup>539</sup> in June of 1957.<sup>540</sup> By 1959, 217 Michelle Road was the model home on display.<sup>541</sup>

Although it is currently unknown which designer may have been associated with the first phase of Palm Lane, phase two of the tract was designed by John P. Moyer. These designs eschewed wood fascias in favor of rust-proof metal. Other model homes were opened in 1958 at 2281 E. Andreas Road and 225 Sunset Way.<sup>542</sup>

### *Chino Palms Estates (1958)*

In 1958-59 Meiselman embarked on the largest of his developments, Chino Palms Estates. This eighty-five-parcel development consists of two tangential property areas. The first, developed in 1958, is south of Via Escuela. The second, developed in 1959, consisted of the east side of Via Miraleste, all of Berne Street, and all of Jacques Street.<sup>543</sup> The second phase is comprised of smaller parcels than the first (100 x 100 feet vs. 125 x 150 feet in phase one). In February of 1959, Meiselman purchased from Julian Smith a 10-acre parcel adjacent to phase two of Chino Palms Estates; 30 additional homes were built on this parcel.<sup>544</sup>

<sup>542</sup> Advertisement, *The Desert Sun*, May 17, 1958.

<sup>543</sup> The residences on Jacques and Berne north of Via Escuela were designed by Palmer & Krisel for the Alexanders; the houses on Jacques and Berne between Via Escuela and Louise are part of Chino Palms Estates developed by Meiselman.

<sup>544</sup> “Meiselman Plan 30 New Homes,” *The Desert Sun*, February 12, 1959.

Chino Palms Estates houses were available in two-bedroom plus den or three-bedroom/two-bathroom plans. The Deluxe Youngstown kitchen and air conditioning were also featured as key selling points. Model homes for the development included houses at 1820 N. Via Miraleste, 1830 N. Via Miraleste, and 2295 N. Via Miraleste.

### *Alejo Palms Estates (1959)*

In August of 1959 Meiselman purchased 20 acres in Section 14 from the Bureau of Indian Affairs and developed the area known as Alejo Palms Estates, with designs by John P. "Jack" Moyer. Alejo Palms Estates is a 57-parcel development boarded by Tamarisk Road on the north, Alejo Road on the south, Juanita Drive on the east, and the properties fronting the west side of Monterey Road on the west. These three-bedroom, two-bath plus family room designs were modeled on the successful Chino Palms Estates plans and were marketed for their quality construction, for being "worry-free," and as the only Palm Springs housing development with concrete driveways.<sup>545</sup> Model homes for the development were located at 505 Monterey Road, 506 Monterey Road, and 584 Farrell Drive.<sup>546</sup> 506 Monterey Road contained a series of murals by John Morris<sup>547</sup> that were advertised to the public to increase viewing.<sup>548</sup>

### El Rancho Vista Estates (1960)

In 1960 Roy Fey, one of Palm Springs' most prolific developers and builders, looked eastward from the village and established the tract that would become El Rancho Vista Estates (1960-61, Wexler & Harrison). The "Barbara Tract" as it is officially known on the maps, was developed in three quick, successive phases from north to south and included a street named after the developer himself, Avenida Fey. The development consisted of 92 parcels bordered by Vista Chino on the north, Chia Road on the south, North Gene Autry Trail on the east, and Avenida Fey on the west.<sup>549</sup> El Rancho Vista Estates sat virtually isolated in the northeastern part of Palm Springs.

Seeing the potential of the Alexander Construction Company's use of modern architecture in housing tracts, Fey engaged the local architecture firm Wexler & Harrison to design homes in El Rancho Vista Estates; the subdivision was the first single-family tract residential development by Donald Wexler and Richard Harrison in Palm Springs.<sup>550</sup> Similar to the Alexander developments, the architects used a variety of rooflines throughout the curved streets of El Rancho Vista Estates, including gable, butterfly, and flat to give the neighborhood a dynamic architectural cadence. Variations in concrete block patterns were also used to give each house an individual look.

**PALM SPRINGS. - EL RANCHO VISTA ESTATES**  
 Selective site location, proper insulation, & white rock reflective roofs help give built-in comfort to these modern homes with 2 & 3 bdrms., 2 baths, large living rm., laundry rm.; air conditioning, wall-to-wall carpets, built-in Hardwick gas ranges, disposers. From \$16,795, with \$895 down; FHA. Open 9-5 at 3200 E. Vista Chino. Builders: Roy Fey & Joe Koch. Sales Office phone: 324-3381.

Three basic floor plans included three-bedroom/two-bath and two-bedroom/two-bath versions plus family rooms that were priced at \$16,995.<sup>551</sup> Buyers also received a "golfing membership in the nearby

<sup>549</sup> The adjacent parcels in the tract (780 along Chia Road and the southern cul-de-sac of Avenida Fey North) were subdivided in 1979 by Canadian-based Fairport Corporation and were not part of the original El Rancho Vista Estates.

<sup>550</sup> Fey, Wexler, and Harrison would continue to collaborate on projects over the years, including five speculative houses for Fey in the Caballeros Estates tract (1960) at 615, 681 and 755 Avenida Caballeros and 620 and 641 N. Camino Real. Fey also engaged the architects to design the clubhouse at Canyon Country Club (1961).

<sup>551</sup> "Classified Ad 15," *Los Angeles Times*, April 27, 1962, D14.

Ranch Club at no additional cost.”<sup>552</sup> A furnished model home was located at 3200 East Vista Chino—likely the present-day parcel located at the southwest corner of Vista Chino and Via Roberto Miguel. These homes were marketed to Los Angeles residents as part of the “Balanced Power Homes” program by the Southern California Gas Company that positioned the combined use of gas and electric power as less expensive than “All Electric Homes” that were popular in Southern California during the period.<sup>553</sup>

Developer Roy Fey and his son, Robert. Source: *Palm Springs Life*, May 1980.

Roy Fey (1915-2000) was one of Palm Springs’ most important developers. By some estimates he built over 1,200 homes in the Palms Springs area.<sup>554</sup> Born to Ukrainian Jewish immigrants, Fey grew up in Chicago and became an accountant. In 1940, at age 25, he formed his own accountancy group, and then moved into residential housing development after World War II. He built at least 3,000 houses in Chicago prior to moving to Palm Springs in 1955 with his wife Ethel who suffered from asthma.<sup>555</sup> Upon arrival, Fey founded a real estate company, Fey’s Canyon Realtors, and a construction company, Fey Construction Company. Immediately he began developing residential property. Fey developed Canyon View Estates (1961-68),

Canyon Estates (1969-72), Canyon Vista Estates (1976), Mesquite Canyon Estates (1978), Canyon West (1979), and many others. He was also instrumental in the city’s early co-operative apartment and condominium development. Taking a page from the Alexanders’ book, Fey brought his son Robert M. Fey into the business and together they created a family legacy in real estate, banking, and philanthropy.<sup>556</sup> Roy Fey was also a founder of the Bank of Palm Springs in the early 1980s.

#### Southridge Estates (1965)<sup>557</sup>

During the 1960s Southern California residential development turned to the hillsides. As flat, convenient parcels became scarcer and engineering advances made hillside development more feasible and economical, developers increasingly looked to the hills for property. The views associated with hillside properties also made these sites more desirable for homebuilders and buyers. Southridge Estates capitalized on these trends to create an exclusive neighborhood for an elite group of Palm Springs

<sup>552</sup> “Advertisement,” *The Desert Sun*, May 7, 1960.

<sup>555</sup> “The History of Desert Skies,” [www.desertskies.com/history.htm](http://www.desertskies.com/history.htm) (accessed November 18, 2014).

<sup>556</sup> The Alexanders are discussed in detail below.

<sup>557</sup> According to correspondence from Marvin Roos and John Sanborn March 23, 2015, Southridge Estates was developed by Jack Rauber (sic). Reportedly, the developer could not get approval from the city to build a subdivision in this location, due to the steep hillside site. The developer went to the site and graded the road and most of the lots first, at which point the city decided to let them proceed.

residences. On land sold to them by realtor Russell Wade, developers E. Allan Petty, Richard E. Rahn, and William Anable subdivided the twenty-two parcel tract (Tract 2928) in January of 1965.

Advertisements for the community, which appeared exclusively in local media like the *Palm Springs Villager*, touted the “view of Palm Springs and the Coachella Valley unequalled anywhere in the desert...underground utilities, A-1 engineering of the streets and lots and proper deed restrictions.”<sup>558</sup> The first home constructed in what would become Southridge was the Max Stoffel Residence (1961-62, Ross Patton and Duke Wild). According to the *Desert Sun*, Patton and Wild, general contractors, were “appointed by owners Richard Rahm, Alan Petty and William Anable to design and build Southridge Homes.”<sup>559</sup>

<sup>558</sup> Ad for Southridge, *Palm Springs Life*, December 14, 1960.

<sup>559</sup> "Untitled," *The Desert Sun*, November 3, 1961, no page.

A burgeoning Palm Springs population had made it harder to maintain the privacy that had traditionally been afforded the wealthy and famous residents of Palm Springs. As a result, the gated and guarded Southridge Estates appealed to those residents seeking maximum privacy. Southridge is home to several celebrity residences and numerous architecturally significant homes.

In the documentary *Quiet Elegance: The Architecture of Hugh Kaptur*, architect Hugh Kaptur remembers “courting the developers up at Southridge.” These efforts resulted in the Edwin H. Morris Residence (1964, Hugh Kaptur) at 2203 Southridge Drive. The Morris Residence was eventually purchased by the film actor Steve McQueen shortly after the release of his film *Bullitt* in 1969.

### George and Robert Alexander Developments (1955-1965)

George's vision for his construction company changed in 1956 when his health took a turn for the worse and, under his doctor's advice to seek a warmer, drier climate, he decided to relocate his George Alexander Company base of operations to Palm Springs. The Alexanders had already been enamored of the desert where they had been spending many weekends each winter. The timing couldn't have been better for the firm as the popularity of the desert resort was ready to explode. It would be there where he and his son Bob, and Bill Krisel would form the desert team that would go down in Palm Springs Modernism history.<sup>560</sup>

Through the Alexander Construction Company, George Alexander (1898-1965) and his son Robert "Bob" W. Alexander (1925-1965) were prolific Southern California developers of tract homes. Their company was responsible for thousands of homes in the San Fernando Valley and over 1,200 homes in Palm Springs. Before becoming a developer, George Alexander was an accountant who saw firsthand the profits made by his construction company clients.<sup>561</sup> Over time, the Alexanders earned a reputation for building quality homes of architectural merit, engaging licensed professional architects to produce the designs. George actually began investing in Palm Springs in 1930, as one of the original developers of the Smoke Tree Guest Ranch along with L. Mac Blankenhorn, C.F. Doyle, Nicholas Harrison, and architect Garrett Van Pelt, Jr.<sup>562</sup> The Alexanders were also active in Palm Springs society, civically engaged and known for their philanthropic work. Tragically, their lives were cut short by a plane crash that killed George, Robert, and their wives in 1965.

Since the days of Prescott T. Stevens and El Mirador, and Pearl McManus and the Oasis Hotel and Smoke Tree Ranch, the Palm Springs recipe for real estate and housing development focused on the building of a resort where people could experience the Palm Springs lifestyle before making the transition to home ownership. Recognizing this, George and Robert Alexander applied the same formula to the south end of the city and built the Ocotillo Lodge (1957-58, Palmer & Krisel).<sup>563</sup> The main building or "clubhouse" featured recreational and fine dining amenities for the more remote south end of Palm Springs, surrounded by the "individual villas" that were stepping stones to home ownership. As described in the *Los Angeles Times*, "the Boy Wonder Builders from Los Angeles," George Alexander and Joseph C. Dunas, rented half the villas as hotel rooms and leased half to executives for entertainment purposes.<sup>564</sup>

### *Twin Palms Estates (1955)*

Street view of Twin Palms Estates, showing the variety of rooflines. Photograph: Julius Shulman. Source: The J. Paul Getty Research Institute, Los Angeles. Digital Photo Collection.

The first Alexander Construction Company residential development in Palm Springs was Twin Palms Estates (a.k.a. Smoke Tree Valley Estates, El Camino Estates, and Royal Desert Estates). Twin Palms Estates was subdivided in 1955; the homes were constructed between 1957 and 1958 and designed by Palmer & Krisel. Krisel also served as the landscape architect for the development.<sup>565</sup> Sited on 10,000-square-foot lots and assembled on 40 x 40 foot concrete pads, the tract of more than ninety homes was built in three phases: the first two in the Twin Palms Estates I and II tracts and the third comprised 19 houses in the middle of the adjacent El Camino Tract in 1957.<sup>566</sup> Two variations (plans A and B) were offered of essentially one square floor plan with a utility core at the center; exterior options included several Mid-century Modern designs with different rooflines (butterfly, gable, and flat). This provided construction efficiency, the appearance of individuality for the buyer, and an engaging visual cadence for the streetscape.<sup>567</sup>

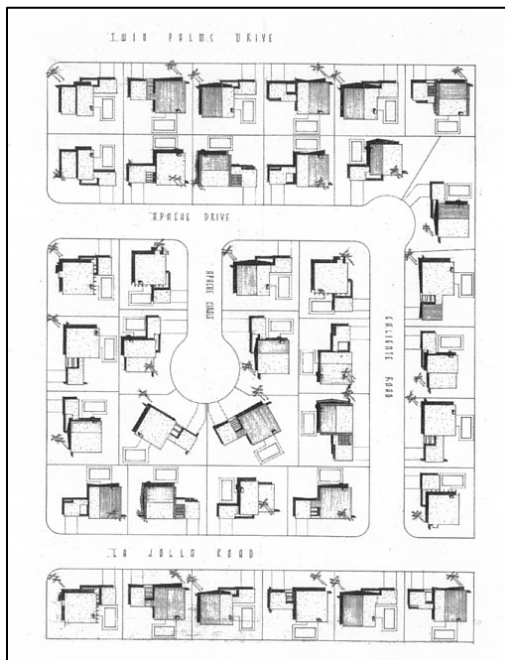

<sup>565</sup> Krisel studied landscape architecture under Garrett Eckbo and became a licensed landscape architect in 1954.

<sup>566</sup> This number comes from the Harlan book and appears to include a branch of another tract.

<sup>567</sup> Sian Winship, "Quality and Quantity: Architects Working for Developers in Southern California, 1960-1973 (MHP Thesis, University of Southern California, 2011), 192. This technique was a classic feature of Palmer & Krisel-designed developments, including Midland La Mirada (1955) in Fullerton, California that won the National Association of Home Builders Award (NAHB) of Merit in January 1956, as well as awards from the Home Building Institute and *American Builder* magazine.

FINAL DRAFT – FOR CITY COUNCIL APPROVAL

City of Palm Springs

Citywide Historic Context Statement & Survey Findings

HISTORIC RESOURCES GROUP

George and Robert Alexander's first project with Palmer & Krisel had been in the San Fernando Valley when George had provided Robert some land (which would become Corbin Palms, developed in 1954-55) on which he could experiment with tract housing design. Robert engaged William Krisel (b. 1924) and Dan Saxon Palmer (1920-2007) to design the homes. To the elder Alexander's surprise, the houses were both aesthetically successful and made a better profit than previous Alexander developments. A significant factor in the tracts created by the Alexanders was that the developers did not seek FHA loan approval<sup>568</sup> and therefore, the designs did not have to conform to limiting Minimal Property Standards.<sup>569</sup>

As author James R. Harlan notes, "The techniques that the Alexanders used to build their projects set the Alexander Construction Company apart from other Palm Springs builders."<sup>570</sup> Materials for Alexander homes were all standardized, pre-cut, labeled, and transported to the site as a kit, not to be customized. This enabled quick assembly by the Alexanders' crew of tradesmen. Standardization and efficiency were as much a part of the Palmer & Krisel design as was the artistry. As William Krisel remembered, "...every line I drew cost money."<sup>571</sup> Yet the designer's philosophy was that "the good tract house is not assembly line living, it improves both the physical shelter and the way of life of the people."<sup>572</sup>

The square floor plan was also key to Palmer & Krisel's economical work for the Alexanders in Palm Springs. After visiting a concrete tradesman, Krisel learned that a flat slab with only four corners would be the least expensive to construct. Although his Los Angeles designs were rectangles, Krisel remembers, "When I went to Palm Springs they became squares. Square was more efficient than a rectangle because it encompassed more square footage with the least amount of perimeter with four corners."<sup>573</sup>

<sup>568</sup> FHA and VA-insured loans were not the only types of loans available. Lenders offered buyers "conventional financing" with less favorable terms on down payment, interest rate, and fee waivers. Conventional financing also typically required borrowers to have excellent credit, job stability with sufficient income, a sizable down payment, and low debt to income ratios. Some developers (including the Alexanders) kept their own loans for deferred profits. As such they were not beholden to FHA Minimum Property Standards that also favored construction methods that added to the construction cost of single-family residences.

<sup>569</sup> These standards prohibited houses with a flat roof, a butterfly roof, or slab on grade construction without a double slab pour and a waterproof membrane between the pours. The latter requirement eased over the years, partially through the lobbying efforts of builders' organizations such as the NAHB.

Twin Palms received national recognition in the architectural trade press. It was lauded by *Progressive Architecture* in March of 1958 for artfully addressing the profession's issues with much postwar tract home design by flipping the plans, and using variations in orientation and fenestration to "...consciously minimize the tract look."<sup>574</sup>

### *Vista Las Palmas (1956)*

In December of 1956, the Alexanders subdivided the first phase of Vista Las Palmas (1956-59). This included the area bordered by properties fronting the north side of Via Las Palmas to the north, properties fronting the south side of Regal Drive to the south, Via Monte Vista to the east, and Rose Avenue to the West. Because of its central location and adjacency to Las Palmas Estates, this development was targeted to a more upscale clientele than Twin Palms.

Vista Las Palmas was developed in three phases and these phases appear to be loosely tied to their architectural heritage. The first phase, in 1956, is the northern portion of the development from the north side of Via Las Palmas to the south side of Camino del Sur. Many of these designs are attributed to architect Charles E. DuBois. Phase II includes Rose Avenue and the southwestern bend of Abrigo Road with houses all attributed to Palmer & Krisel. Phase III was subdivided in 1959 and included Fairview, Tuxedo, and Cornet Circles along with Regal Drive; these houses are also attributed to Palmer & Krisel.<sup>575</sup>

Vista Las Palmas (1956-59, Palmer & Krisel) model home located at the corner of Via Las Palmas and Via Monte Vista. Source: "Article 19," *Los Angeles Times*, September 22, F9.

The three-bedroom plus maid's room designs for the Palmer & Krisel-designed homes in Vista Las Palmas included three rectangular floor plans and three versions of each plan.<sup>576</sup> One design included "...a striking porte-cochere option."<sup>577</sup> Placement of the carport on these designs varied from street-

<sup>575</sup> Inexplicably, the tract map for Las Palmas Number 3 predates the map for Las Palmas Number 2.

<sup>576</sup> The rectangular floor plans for Vista Las Palmas did not accommodate the rotation of the plans as Palmer & Krisel did in their designs for Twin Palms.

<sup>577</sup> James R. Harlan, *The Alexanders: A Desert Legacy*, Palm Springs Preservation Foundation, 2011, 32.

facing to set at a right angle to the residence – contributing to a distinctive visual architectural cadence for this neighborhood. The designs feature long, low Mid-century Modern lines with varying rooflines of the butterfly, low-pitch, and folded plate. The model home was located at the corner of Via Las Palmas and Via Monte Vista. A second model home was located at 1215 Via Paraiso.<sup>578</sup>

The DuBois-designed homes in Vista Las Palmas featured “...floorplans with the living rooms angled at forty-five degrees and complementary stone walls likewise extended at that angle.”<sup>579</sup> DuBois is credited with the design of the “Swiss-Miss” houses that are dotted throughout Vista Las Palmas. These designs feature a distinctive A-frame roofline that projects above the rooflines of the surrounding houses. Based on the marketing materials, the steeply pitched A-frame elements which some have interpreted as alpine, may in fact draw more inspiration from Tiki or Polynesian architecture.

“Swiss Miss” home in Vista Las Palmas (c. 1956, Charles DuBois). Source: *Palm Springs Mid-Century Modern*, 22.

<sup>578</sup> A handwritten note by William Krisel in the Vista Las Palmas files at the Getty Research Institute indicates that “the Las Palmas Model Home was moved to Twin Palms.” Another letter from William Krisel to Paul and Michael dated October 17, 2006 indicates the new address was 922 E. Anza Road. Source: Flatfile 86.

<sup>579</sup> Harlan, *The Alexanders: A Desert Legacy*, 34.

### *Ramon Rise Estates (1956)*

Ramon Rise Estates (1956-58, Palmer & Krisel) consisted of a 106-parcel development bordered by Ramon Road to the north, Sunny Dunes Road to the south, Cielo Road to the east, and Compadre Drive to the west. The tract was subdivided by George R. Goldberg and Maurice Horner, Jr.<sup>580</sup> Goldberg, a Los Angeles-based real estate man, appears to have sold some of the parcels to the Alexander Construction Company. This includes 16 parcels at the north end of Roxbury, Bedford, Beverly, and Canon Drives, Compadre Road, and Cielo Road. Company partner Joe C. Dunas handled the project, and turned initially to Palmer & Krisel for designs. After the preparation of floor plans, plot plans, and elevations, Dunas engaged other designers to prepare the working drawings.<sup>581</sup>

According to the *Desert Sun*, the original developer of Ramon Rise, George E. Goldberg, partnered with Jack Meiselman in 1956 to construct a number of homes in the subdivision which were marketed as "Ramon Rise Estates."<sup>582</sup> Included among these were homes at 602, 630, 654, 676, and 688 Canon Drive, and 603, 631, 655, 677, 689, and 695 El Cielo Road.<sup>583</sup>

Plot plan for Ramon Rise Estates (1956-58, Palmer & Krisel) shows the alternating orientation for each house combined with the alpha-numeric variation of designs. Source: *The Alexanders*, 45.

<sup>580</sup> Tract map for this subdivision is illegible. The name may be Maurice Homer, Jr.

<sup>581</sup> Email from William Krisel, June 8, 2016.

<sup>582</sup> "Ramon Rise Groundbreaking Held," *The Desert Sun*, October 12, 1956.

<sup>583</sup> "Week's City Building Permits," *The Desert Sun*, November 30, 1956.

### *Enchanted Homes (1957-1958)*

The Enchanted Homes tract is located within the former Sunmor Estates which the Alexanders purchased from Sunmor developer A.R. Simon. It included three phases of Alexander development between December 1957 and February 1958. Although sources have attributed these homes to Palmer and Krisel,<sup>584</sup> the *Desert Sun* attributes phases two and three of this development to Richard R. Leitch (1922-2008).<sup>585</sup> Krisel recalls designing the preliminary drawings for the homes, but Alexander Company executive Joe Dunas later removed him from the project.<sup>586</sup> According to Krisel, the project was turned over to architect Anton Dalu, who was working in the Palm Springs area at the time as documented by the *Los Angeles Times*. Dalu's involvement cannot be verified at this time. A model home for the development was located at 2866 Livmor Avenue.

Phase one included the parcels along Andres Road and the four cul-de-sacs plus parcels to the east of Easmor Circle and along Farrell Drive north of Andreas Road. Phase two is bordered by Amado Road on the north, Andreas Road to the south, Farrell Drive to the east and Orchid Tree Lane to the West. Phase three is bordered by Amado Road on the north, Andreas Road on the South, Orchid Tree Lane on the east and Sunset Way on the west.

Advertisements for Racquet Club Road Estates (1958, Palmer & Krisel) touted the tract's proximity to the famous Racquet Club. L: Source: "Display AD 28," *Los Angeles Times*, November 26, 1961. R: Source: Racquet Club Road Estates Brochure, Private Collection of Donna Sherwood.

### *Racquet Club Road Estates (1958)*

Racquet Club Road Estates (1958-61, Palmer & Krisel) was by far the largest Palm Springs development by the Alexanders. It was developed in six phases and was bordered by Francis Drive to the north, the properties fronting the south side of Glen Circle and Via Escuela to the south, Avenida Caballeros south of Racquet Club Road, and Aurora Drive north of Racquet Club Road; the western boundary extends

<sup>584</sup> James R. Harlan, *The Alexanders: A Desert Legacy*, Palm Springs Preservation Foundation, 2011, 44.

<sup>585</sup> "Hold Open House for New Enchanted Homes Grouping," *The Desert Sun*, May 22, 1958, 7.

<sup>586</sup> Email from William Krisel to Chris Menrad, January 2016.

almost to Indian Canyon Drive. At the outset of the project, the Alexanders constructed a storage warehouse on West San Rafael Drive at North Puerta del Sol (designed by Palmer & Krisel). The warehouse was a key factor in the success of the Alexanders' operation, as to avoid delays subcontractors were required to store all construction materials there before construction began.

The irregularly-shaped development (punctuated by Victoria Park and a school) was first developed at the northwest end, then the southeast, then the southwest, and finishing in the summer of 1960 to the northeast – just in time for the beginning of the 1960-61 season. In May of 1958, the Alexanders purchased a forty-acre site from the Bureau of Indian Affairs “near the Racquet Club” which may have been the portion of the development east of Victoria Park School.<sup>587</sup> The design employed a series of streets and cul-de-sacs of 100-foot wide lots. Once again, the Alexanders turned to Palmer & Krisel for Mid-century Modern post-and-beam designs. In the sales brochure, they were billed as the “nationally famous architectural firm of Palmer & Krisel.”<sup>588</sup> Of course, proximity to the legendary Racquet Club and views of the mountains were also key selling points.

Looking westward from Racquet Club Road Estates (1958-61, Palmer & Krisel), the largest of the Mid-century Modern-style Alexander tracts developed in Palm Springs. Breezeway and carport extension on the western side along with the butterfly roofline elongates the façade and gives the illusion of a larger house. Photo: Julius Shulman. Source: The J. Paul Getty Research Institute, Los Angeles. Digital Photo Collection.

<sup>587</sup> “Indian Land Bids Total \$794,963 for 82 Acres,” *Los Angeles Times*, May 9, 1958, B6.

<sup>588</sup> Racquet Club Estates Sales Brochure, [www.racquetclubestates.com](http://www.racquetclubestates.com) (accessed January 2015).

Using the super-efficient square plan, Krisel devoted the full expanse of the rear of the plan to living and dining space and moved the kitchen to the center of the plan. According to author James Harlan, two basic floor plans were used at the development and two additional plans were experimented with and abandoned.<sup>589</sup> A later marketing brochure for the development shows a plan with a kitchen now integrated into the living-dining space at the rear of the plan.

Interior of unit at Racquet Club Road Estates (1958-61, Palmer & Krisel). Floor to ceiling glass on the rear façades of these Mid-century Modern homes integrated exterior patio/pool areas and allowed dramatic views of the neighboring mountains. Photo: Julius Shulman. Source: The J. Paul Getty Research Institute, Los Angeles. Digital Photo Collection.

Five different rooflines (butterfly, gable, low-pitch gable, side-gable, and flat) incorporated a carport and breezeway, creating a series of long, low horizontal façades along the street. Clerestory windows captured mountain views to the west. Palmer & Krisel laid out the specific combinations of floor plan and roofline on each parcel to maximize privacy and views, and to maintain an engaging visual architectural cadence.

<sup>589</sup> James R. Harlan, *The Alexanders: A Desert Legacy*, Palm Springs Preservation Foundation, 2011, 38.

FINAL DRAFT – FOR CITY COUNCIL APPROVAL

City of Palm Springs

Citywide Historic Context Statement & Survey Findings

HISTORIC RESOURCES GROUP

Model homes for the development included 325 Francis Drive and 289 Racquet Club Road (Palmer & Krisel architects, interiors by Arthur Elrod, landscape design by Don Crabtree). Sales were brisk and a marketing brochure for later phases of the development read, “Here your neighbors will number among them world famous personalities in the entertainment, business and professional world – people who have complete freedom of choice.”<sup>590</sup>

Racquet Club Road Estates received national attention in the architectural trade press with a feature in the June 1961 issue of *House and Home*. The development also earned several awards, including the National Home Builders Association Award of Merit in 1961.

Citywide Historic Context Statement & Survey Findings

HISTORIC RESOURCES GROUP

### *Golden Vista Estates (1960)*

In a new variant on the “resort stay to home sales” recipe, the Alexanders purchased the Desert Inn in 1950. In 1960, to promote their new residential venture, Golden Vista Estates, they erected a model home on the grounds of the Desert Inn.<sup>591</sup> Golden Vista Estates (1960, Palmer & Krisel) expanded the Vista Las Palmas offerings to the south; the tract is bounded by Via Monte Vista on the east, Leisure Way on the south, N. Rose Avenue on the west, and the properties on the south side of W. Regal Drive on the north. Here the developers offered three floor plans: two modified versions of the square Twin Palms plan and a larger four-bedroom/three bath plan that included a courtyard at the entryway.<sup>592</sup> A second model home for the tract was constructed at 963 Via Monte Vista.

Ad showing new model home on the grounds of the Desert Inn after the hotel was purchased by the Alexanders. Source: *Palm Springs Villager*, December 14, 1960, 18.

<sup>591</sup> According to James R. Harlan, the model home was moved in 1961 to the corner of Anza Drive and Joshua Tree Place.

<sup>592</sup> James R. Harlan, *The Alexanders: A Desert Legacy*, Palm Springs Preservation Foundation, 2011, 32.

### *Calcor Prefabricated Homes/Steel Development Houses (1961-1962)*

The advantages of prefabricated steel homes in the desert climate had been on developers' radar in Palm Springs since the 1930s. Now experiments in steel home construction on a mass scale were born out of an ethos of factory-based production which developed as part of the war effort and which continued into the postwar years. As described in *Architectural Forum* in 1951:

Today these three features: industrialization, flexibility and modular order are found only in a handful of custom-designed houses. Years from now they may well be found in half the houses in the United States – and the home-building industry will be able to point to higher quality, lower cost and better living as a result.<sup>593</sup>

Despite ambitious predictions, the building industry was slow to embrace the steel house for tract housing development. In 1955, noted developer and proponent of modern architecture, Joseph Eichler, commissioned the architectural firm Jones and Emmons (A. Quincy Jones and Frederick E. Emmons) to design an experimental exhibition house, the X-100, to explore the potential of residential steel frame construction for middle-class housing developments. While Eichler did not intend to put the X-100 into production, it garnered national media attention.<sup>594</sup>

This drawing shows the three rooflines: flat, clerestory, and folded plate giving the neighborhood an interesting visual appearance. Source: "AD Classics: Steel Pre-Fab Houses / Donald Wexler," *ArchDaily*, August 20, 2011.

In 1962, the Alexanders made a foray into steel housing development. Donald Wexler approached the Alexanders with the idea for using the Calcor steel wall system to which he had been introduced by Bernard Perlin, a Calcor engineer. The Alexanders decided to work with Wexler to develop steel tract housing in their 1961 tract north of the Racquet Club subdivision. As a result, the Steel Development Houses project, also known as Calcor Prefabricated Homes and Alexander Steel Homes, was born in

<sup>593</sup> "Preview of the Future," *Architectural Forum*, November 1951, 214-215.

<sup>594</sup> Brooke Hodge, ed., *A. Quincy Jones: Building for a Better Future* (Los Angeles, CA: Hammer Museum), 2013, 164.

partnership with the Columbia-Geneva Division of U.S. Steel and Calcor (a.k.a., Rheem Manufacturing Company) of Huntington Park, California. The 1,400 square foot homes were priced at \$13,000-\$17,000 plus the cost of the land.<sup>595</sup> The landscape design was by local landscape architect David Hamilton.

Rear façade of the steel house with folded plate roofline (1961-62, Donald Wexler or Wexler & Harrison). Source: *Steel and Shadow: The Architecture of Donald Wexler*, 23.

Architecturally, the use of a steel frame freed the interior of load bearing walls and enabled an open plan. A nine-by-thirty-six foot central core contained the kitchen and bathrooms, and the rest of the plan was flexible. Composed primarily of steel and glass, the houses feature eight-foot high glass sliding doors and stationary panels and the designs are quintessentially Mid-century Modern in style. The houses were designed with three different rooflines (flat roof, raised with clerestory, and folded plate) to give the identical pre-fabricated house development an interesting visual architectural cadence from the street.

<sup>595</sup> Adele Cygelman, *Palm Springs Modern* (New York: NY: Rizzoli), 1999, 142.

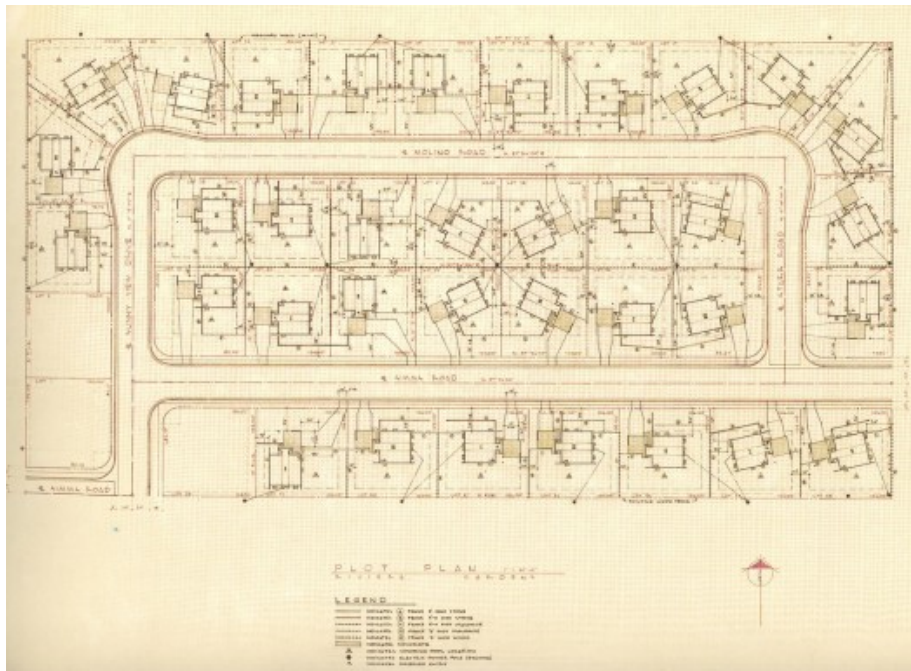

L: Architect Donald Wexler showing the design for one of the model houses. Note the central utility core and how interior partition walls are freed from being load bearing by the steel frame. Large expanses of glass through stationary and sliding doors integrate interior and exterior spaces in the classic Mid-century Modern style. R: The prefabricated steel houses were erected on their lots in three days. Here a crane lowers the basic frame of a model house on its concrete pad. Source: <http://www.racquetclubestates.com/Steel%20History.html>

With the use of the Calcor system, the homes utilized a unique combination of factory prefabrication and on-site assembly or “a factory in the field.”<sup>596</sup> The cores were prefabricated in the factory at the same time that concrete slabs were poured to a steel template. Non-load bearing walls came in large sections and were bolted into the concrete slab foundation. The result was a practical construction process that required only three days to complete.

<sup>596</sup> *Journeyman Architect: The Life and Work of Donald Wexler*, director by Jake Gorst (Palm Springs, CA: Jonamac Productions, 2009).

The thirty five-home steel house subdivision as originally envisioned for Tract 2085. Only seven homes were ultimately constructed due to a hike in steel prices. Source: "AD Classics: Steel Pre-Fab Houses / Donald Wexler," ArchDaily, August 20, 2011.

The Alexanders planned to develop 35 of the lots with steel housing.<sup>597</sup> The first three of the seven model homes were started in late 1961 and opened to the public in March of 1962;<sup>598</sup> the remaining four houses were constructed in phase two.<sup>599</sup> During the construction of the second phase, Calcor was purchased by a larger firm and the price of steel was raised. According to Donald Wexler, "The Alexanders wouldn't have any of it – they refused to pay more...someone had to be the pioneer. They were very powerful and all the other developers were watching them to see what would happen."<sup>600</sup> Ultimately, the higher cost of steel priced them out of the market and the plans for the tract were derailed.<sup>601</sup> The Steel Development Houses were published in *Architectural Record* and named Record House of 1963.

In 2001, the City of Palm Springs made the seven Steel Development Houses a Class 1 Historic Site. In 2012, Steel Development House No. 2 (3125 North Sunny View Drive) was listed in the National Register of Historic Places.

<sup>597</sup> Oscar Lopez, "AD Classics: Steel Pre-Fab Houses / Donald Wexler," *ArchDaily*, August 20, 2011, <http://www.archdaily.com/?p=155411> (accessed December 8, 2014).

<sup>598</sup> Racquet Club Estates, <http://www.racquetclubestates.com/Steel%20History.html> (accessed January 2015).

<sup>599</sup> The seven houses were constructed at 290 E. Simms Road; 300 and 330 E. Molino Road; and 3100, 3125, 3133, and 3165 N. Sunny View Drive.

<sup>600</sup> Adele Cygelman, *Palm Springs Modern* (New York, NY: Rizzoli, 1999), 142.

<sup>601</sup> On the remaining lots in the tract, the Alexanders built Riviera Gardens (1963-64). These were more traditional wood-frame Ranch-style houses. The model home was located at 370 Simms Road. James R. Harlan, *The Alexanders: A Desert Legacy*, Palm Springs Preservation Foundation, 2011, 42.

### *New Riviera Gardens (1961-62)*

When further development of the steel houses was abandoned due to increased cost, the Alexanders turned to selling off the rest of the subdivision with more traditional designs. This development was known as New Riviera Gardens (a.k.a., Riviera Gardens and Riviera Gardens Estates). Although the tract had been subdivided in 1961, the steel house project delayed construction in New Riviera Gardens until 1963-64.

Referred to as “Sunshine Homes” in advertising, the homes were conventional Ranch style in design and the model was located at 370 Simms Road.<sup>602</sup> New Riviera Gardens was unique among Alexander developments in that it offered a common pool and recreation area – the Riviera Gardens Recreation Club. Usage of the pool and cabana area were limited to residents of Riviera Gardens and ownership was held by all “owner members.”<sup>603</sup> It featured “the nation’s first prefabricated pool house,” manufactured by Anthony Pools, Inc., South Gate.<sup>604</sup> The cabana, with roof sections constructed of colored fiberglass, contained a dressing room. The new amenity proved popular as New Riviera Gardens was sold out by July of 1965.<sup>605</sup>

### *Las Palmas Summit (1962)*

In October of 1962, Las Palmas Summit<sup>606</sup> (1962, Charles E. DuBois), a tract of twenty homes including the north end of Los Robles Drive, Friar Court, and Capistrano Court, was developed by Alexander partner Joseph C. Dunas (1900-1987). Advertisements for the homes differentiated them from other Palm Springs offerings by evoking popular culture’s increasing interest in Hawaii as a vacation destination: “Where island living meets desert living, the ‘all seasons’ home designed for year round living.” Sales agent, “Aloha-Bob Paine” was on hand to provide “Hawaiian Hospitality.”<sup>607</sup> According to author James R. Harlan, 1211 Los Robles was likely the model home for the development.<sup>608</sup>

### *Farrell Canyon Estates (1963)*

By February 1963 the Alexander Construction Company had built over \$50 million worth of homes.<sup>609</sup> In December 1963, following the continued eastern movement of residential development in Palm Springs, the Alexanders subdivided Farrell Canyon Estates (1963), which included San Joaquin and San

<sup>605</sup> Advertisement, *The Desert Sun*, July 23, 1965, 14.

<sup>606</sup> Also known as Tract 2421.

<sup>607</sup> “Aloha Las Palmas Summit Ad,” *The Alexanders: A Desert Legacy*, Palm Springs Preservation Foundation, 2011, 32.

<sup>608</sup> James R. Harlan, *The Alexanders: A Desert Legacy*, Palm Springs Preservation Foundation, 2011, 34.

<sup>609</sup> “Display Ad 11,” *Los Angeles Times*, February 17, 1963, 13.

Mateo Drives North of Sonora Road and San Mateo Circle northwest of Farrell Drive. The 57-parcel development featured six elevation designs that evoked the exotic and international including Parisian, Mediterranean, Granada, and Tiki.<sup>610</sup> The Parisian featured a distinctive mansard roof. The model home, the “Spanish Ranchero” model was located at 1350 S. Farrell Drive.<sup>611</sup>

Farrell Canyon Estates was frequently cross-promoted with other Alexander developments in Palm Springs including Araby Estates and Sunrise Estates, both subdivided in 1964. Ads for the subdivisions reveal the pressure on residential developments within city limits from encroaching developments in other desert communities, and the higher cost of the land ownership model in comparison to the less expensive developments on leased Agua Caliente Indian Reservation lands.

In 1965, the Alexanders once again approached Palmer & Krisel with the intention of expanding Farrell Canyon Estates to the parcels south of Sonora Road. Plans were drawn and a plot plan developed for a new kind of Alexander development: 48 single family residences located around a common recreation area with swimming pool.<sup>612</sup> This project was cut short, however, by the death of the Alexanders in a plane crash on November 15, 1965. The family was on their way to Los Angeles to celebrate the opening of a luxury high-rise building by Robert Alexander’s brother-in-law, Sheldon Appel.<sup>613</sup>

#### *Desert Lanai (c. 1963)*

The Alexanders also decided to try their hand at the co-op apartment market. This project, Desert Lanai, was developed in at least three phases. Models included a two-bedroom/two deluxe baths and a one-bedroom-plus-den configuration.<sup>614</sup> Like other co-op communities, Desert Lanai offered buyers a property that would be “maintained to perfection, whether you are here or not.”<sup>615</sup> The model apartment was located at 1707 E. Tachevah Road, at Sunrise Way.

#### *Araby Estates (1964)*

Araby Estates, a small 40-parcel tract bordered by Sonora Road on the north, Avery Drive on the south, Beverly Drive on the east, and the properties fronting the west side of La Brea Road on the west, featured a wide range of exterior designs similar to Farrell Canyon Estates. The three-bedroom/two-bath plans featured lanais and enclosed, detached garages. Two model homes were located at 2996 Avery

<sup>610</sup> “Farrell Canyon Draws Visitors from Far Away,” *Los Angeles Times*, May 2, 1965, 120.

<sup>615</sup> “Display Ad,” *The Desert Sun*, April 21, 1964.

Drive (1965) and 2988 Avery Drive (1965).<sup>616</sup> Later, another model home was located at 2955 Sonora Road.<sup>617</sup>

Ads in the *Desert Sun* for Araby Estates tout “The address is Palm Springs...The architecture is international.” Six elevations were featured: the Polynesian inspired “Bali Hai” and “Tiki” models, the mansard-roofed “Parisian,” the Ranch style “Casa Grande,” the Spanish arched façade of the “Granada,” and the columned “Mediterranean.” Featured amenities included a “circulating floor-plan,” open living rooms with sliding glass doors in every direction, luxurious master suites with Roman tubs, underground utilities, and air conditioning.”<sup>618</sup>

<sup>618</sup> “Araby Estates Classified Ad,” *The Desert Sun*, October 7, 1965, 15.

### *Sunrise Estates (1964)*

In 1964 the Alexanders developed Sunrise Estates, a 21-parcel development that included the cul-de-sacs at Buttonwillow Circle and Cibola Circle, with six homes on Biskra Road and three on Cerritos (Tract 2809). At \$19,900, homes in Sunrise Estates were at a lower price point than other Alexander Homes available during this period. The designs are based on the same floor plans as the Golf Club Estates homes.<sup>619</sup>

After the plane crash that killed the father and son development team, the brother of Robert Alexander's wife Helene, Sheldon L. Appel (1931-1999) oversaw the company's projects in progress. Appel was a major Los Angeles developer in his own right – with millions of dollars in residential and commercial projects to his credit. Appel oversaw the sales of projects under construction but curtailed any new design and development.<sup>620</sup> Appel, however, ultimately acquired the parcels adjacent to the Farrell Canyon Estates development and subdivided them himself as Tract No. 3620 (a.k.a. La Reina Estates) in 1970 and Tract 8789 in 1978.

Had the lives of the Alexanders not been tragically cut short, additional residential projects would have been realized by the Alexander Construction Company in Palm Springs. Projects on the boards at the time of their deaths included the redevelopment of the twelve-acre Desert Inn property into a combination hotel/residential development, and a restoration of the Racquet Club facility and the construction of condominiums.<sup>621</sup>

### Sub-theme: Golf Course Residential Development (1960-1969)

While Palm Springs had long been known as a spot for “fun in the sun” and active outdoor recreation, in the years following World War II the desert became synonymous with the sport of golf.<sup>622</sup> Prior to 1950, the city of Palm Springs was home to only two golf courses: the small nine-hole course that had been laid out behind the Desert Inn in 1926 by Thomas O'Donnell; and Cochran Ranch, a nine-hole course opened in 1944.<sup>623</sup> The scarcity and high cost of water made golf courses an expensive proposition.<sup>624</sup>

That changed in 1951 when Thunderbird Ranch in Rancho Mirage was transformed into a golf community. Thunderbird quickly became the premier postwar housing development in the Coachella Valley.<sup>625</sup> It was distinctive in that residential parcels were integrated into course design. In addition to fairway vistas, the homes came with private country club membership. This innovative business model was enabled by the simultaneous development of golf carts, air conditioning, jet-age travel, and increased media exposure. The golfing habits of President Dwight D. Eisenhower and, ultimately, the creation of the Palm Springs Desert Classic tournament in 1960 popularized the sport across the nation.<sup>626</sup> By 1967, *Golf Digest* magazine reported that “communities that have been purposely planned and developed with a golf course as the focal point of neighborhood life have taken hold in this country with 125 locations in over twenty states.”<sup>627</sup> As of 1967, 400,000 people were living in these communities.<sup>628</sup>

By 1965, golf was “the major attraction in the Palm Springs area.”<sup>629</sup> Golf lured thousands of visitors to Palm Springs. Once there, they soon “started thinking of owning a home or a condominium.”<sup>630</sup> While some of the communities were planned for the very wealthy, many were created for people with middle-class incomes. The advent of golf carts meant that the elderly could easily play the sport. Carts also led to faster rounds with more foursomes able to play. By 1972, the *Los Angeles Times* had proclaimed the area the “Golf Capital of the World.”<sup>631</sup>

<sup>622</sup> Lawrence Culver, *The Frontier of Leisure* (New York: Oxford University Press, 2010), 189.

<sup>623</sup> The failed golf course associated with the El Mirador resort was replaced by housing starting in the mid-1930s.

<sup>624</sup> The discovery of a vast underground reservoir beneath the Whitewater River channel also enabled the development of golf course communities in Palm Springs.

<sup>625</sup> Although Thunderbird Ranch is not located within the City of Palm Springs, it is discussed here because of the impact it had on golf course development in the Coachella Valley during this period.

<sup>626</sup> The tournament was held at five clubs: Thunderbird, Bermuda Dunes, Indian Wells, Eldorado, and Tamarisk.

### Palm Springs Golf Club (1958)

One of the early residential golf communities in Palm Springs, the Palm Springs Golf Club (a.k.a. Palm Springs Municipal Golf Course and the Tahquitz Creek Golf Resort), dates back to 1958 (although it was not fully realized until the 1970s). The vision for the \$15,000,000 project included residential areas bordering the fairways of the golf course, a hotel and a shopping center. The 332-acre parcel along Highway 111 had been purchased in 1956 from Pearl McManus by the Palm Springs Capital Company (a holding company for the Palm Springs Turf Club) as a site for a horse-racing track.<sup>632</sup> At the time it was east of the Palm Springs city limits. When the California Horse Racing Board refused to grant the Turf Club a license in 1957, the holding company changed plans and partnered with Morton B. Zuckerman, President of the Westview Development Corporation, to turn it into a residential golf community. Zuckerman was a noted residential and commercial developer from Chicago. Frank Bogert was executive vice president of the Westview Development Corporation. For the housing development, Westview turned initially to architect William M. Bray (1905-1998) for the design of 350 units. Between 1961 and 1965,<sup>633</sup> Westview constructed the houses along Broadmoor Drive, Brentwood Drive, Bob O Link Drive and Cherry Hills Drive, Menlo Circle, and Oswego Circle.<sup>634</sup>

The vision for the development included the eighteen-hole championship golf course (1958-59, Lawrence Hughes), 240 single-family residences, plus 300 “garden cottages” that would feature swimming pools, and recreation and sports facilities. Owners were to automatically become members in the private country club.<sup>635</sup> Ads in the *Palm Springs Villager* not only touted these amenities, they featured a green map of the course and integrated home sites. Increasingly, however, the development began to face financial difficulties and on July 1, 1959 Westview turned over control of the course to the City of Palm Springs and it became a public course.<sup>636</sup>

The overall plan for the Palm Springs Golf Club included single-family homes along the fairways, a hotel, commercial shopping center, and garden cottages. Note how development lies just outside the city limits to the west. “Huge Development Set for Palm Springs Area,” *Los Angeles Times*, July 27, 1958, F8.

<sup>632</sup> “Land Sold for Race Track,” *Los Angeles Times*, January 18, 1956, 25.

<sup>633</sup> Pending confirmation of dates.

<sup>634</sup> The project team is in contact with the architect’s son, Roger Bray, to locate historic material on the plans for these houses.

<sup>635</sup> “Huge Development Set for Palm Springs Area,” *Los Angeles Times*, July 27, 1958, F8.

<sup>636</sup> “In Black and White,” *Corona Daily Independent*, April 21, 1959, 6.

### Canyon Country Club (1961)

The 368-parcel subdivision Canyon Country Club (1961-1965)<sup>637</sup> was developed by the Golf Club Sales Company. The clubhouse (designed by Wexler & Harrison) opened on New Year's Eve 1961. It is located on Agua Caliente reservation land and cost \$50 million. The Canyon Country Club was the culmination of efforts by Andrew Catapano and Harold M. Simon of the Palm Canyon Country Club, Inc. after years of complicated negotiations with the tribe. Ultimately, it became the largest Indian land lease in American history.<sup>638</sup>

View of Canyon Country Club (1961, Donald Wexler and Richard Harrison) from Murray Canyon Road looking northwest shows integrated homes and fairways. Source: Agua Caliente Cultural Museum.

The Golf Club Sales Company was a subsidiary of the New York-based First National Realty & Construction Corporation owned by Robert Grundt. Grundt started out building residential developments on Long Island shortly after the war; he built the business to a publicly-held corporation and by 1963 had developed more than 4,000 apartments in fourteen buildings in Manhattan.<sup>639</sup> Grundt was a long-time winter resident of Palm Springs. In 1963, Grundt established a West Coast office in Los Angeles and began developing high rise apartment buildings along the Wilshire corridor in the Westwood neighborhood, and in Phoenix, Arizona. Grundt described the process for Canyon Country Club:

<sup>637</sup> The original name of the club was "Wind Free" but it was quickly changed to Canyon Country Club.

<sup>638</sup> "Canyon Country Club," Clipping File, Palm Springs Historical Society.

<sup>639</sup> "Reach for the Sky," *Los Angeles Times*, April 21, 1963, 11.

Our introduction to Southern California in Palm Springs was one of the most fascinating and challenging experiences in my career. We were finally successful in arranging the first utilized lease on property owned by the Agua Caliente Indians...it was owned by no less than twenty five families and it took more than a year of negotiations before we finally concluded all the details of the master lease—which was about three inches thick...<sup>640</sup>

The custom home development was built in four phases: after the initial 168 parcels within the golf course were subdivided, parcels along the perimeter streets were subdivided annually in 1963, 1964, and 1965. To create interest in the subdivision, a “Plaza of Model Homes” was built—the eight residences on Bonita Circle.<sup>641</sup> Homes in the subdivision (along Caliente Road) were designed by Stan Sackley; designs for the 1963 homes along Yosemite Drive are attributed to contractor A. Belden Crist.<sup>642</sup>

Canyon Country Club “Plaza of Model Homes” on Bonita Circle (1961, Wexler & Harrison). Photographed by Julius Shulman, 1963. Source: The J. Paul Getty Research Institute, Los Angeles. Digital Photo Collection.

Originally completed in 1961, the Mid-century Modern style Clubhouse located at 1100 E. Murray Canyon Drive was V-shaped in plan with an expressive triangle-shaped porte-cochère at its center. The design was a precursor to the similar Palm Springs Airport Terminal. The building also featured large, abstract stone murals crafted by a local stonemason.<sup>643</sup> Large expanses of glass took advantage of the golf course and mountain vistas.

<sup>640</sup> “Reach for the Sky,” *Los Angeles Times*, April 21, 1963, 11.

Initially, due to its remote location, Canyon Country Club had a difficult time attracting members. However, a partnership with the Palm Springs Racquet Club helped boost its popularity and draw celebrities and politicians. Famous people associated with the club include Walt Disney, who purchased properties along the second hole of the course and donated a copper fountain to the club, erected between the ninth and eighteenth holes. In 1963, the course became the location of the annual Frank Sinatra Invitational golf tournament.<sup>644</sup> That same year the public south course was opened.

#### Golf Club Estates (1961)

In the early 1960s the Alexanders embraced the new trend of golf course-based residential development. To capitalize on general proximity to the Palm Springs Golf Club (a.k.a. Palm Springs Municipal Golf Course and the site of present-day Tahquitz Creek Golf Resort), in April of 1961 the Alexanders subdivided Golf Club Estates (1963-64, L.C. Major and Associates). Marketed as “accessible to the greens by golf cart,” ads for the development also refer to Palm Springs as “the nation’s winter golf capital.”<sup>645</sup>

This group of 52 homes is bounded by the properties fronting the north side of Par Drive to the north, the properties fronting the south side of Eagle Way to the south, the properties fronting the east side of Birdie Way to the east, and Bogie Road to the west. Construction followed the familiar pattern of one, three-bedroom floor plan and seven different designs for the exterior. Photographs indicate the plan

<sup>644</sup> “Remember When,” *The Desert Sun*, November 7, 1973, no page. “Golf Classic Renamed,” *The Desert Sun*, August 10, 1964.

<sup>645</sup> “50 Dwellings at Spa Planned,” *Los Angeles Times*, May 26, 1963, O11.

may be the same as that used for Araby Estates. Designs for Golf Club Estates were a modest, Modern Ranch style, often with decorative concrete block screen walls.<sup>646</sup>

### Green Fairway Estates (1964)

In early 1964 Robert and George Alexander subdivided the easternmost streets of the Palm Springs Golf Club subdivision: Pebble Beach Drive and Lakeside Drive.<sup>647</sup> Their development consisted of 55 parcels that they named "Green Fairway Estates." In marketing materials and advertising, the Alexanders turned the lack of exclusivity associated with being on a public (versus a private) golf course into a selling point: "because it is a municipal course, there are no membership charges – only low green fees when you play."<sup>648</sup> Other selling points included "golf-course living...with a golf course as your backyard," a "bi-functional floor plan" with "quiet areas separated from active living area," and oversized garages to accommodate an electric golf cart.<sup>649</sup>

For the design of these homes the Alexanders worked with Wexler & Harrison, who designed a three-bedroom and a four-bedroom plan along with nine different exterior designs. In plan, the designs are identical and divided into two distinct pavilions: one public and one private linked by a central entry. The four-bedroom plan includes the simple addition of another bedroom and bathroom completing the square of the public pavilion. Six of the nine exterior designs reflect a simple Mid-century Modern style (Gleneagles, St. Cloud, Wentworth, Hague, Maracaibo, and St. Andrews plans); there were three more "exotic" designs that evoke resort destinations (e.g. the Royal Singapore and Southwestern/Tunisian style Capilano models). With such a high ratio of designs to developed units (6:1), the streets of Green Fairway Estates resembled a custom home development instead of a standardized tract. According to Wexler, it was his architectural partner Richard Harrison who "provided the tropical touch."<sup>650</sup> The designs also feature prominent masonry accents.

<sup>646</sup> "50 Dwellings at Spa Planned," *Los Angeles Times*, May 26, 1963, O11.

<sup>647</sup> Green Fairway Estates was one of the last subdivisions built by the Alexanders before their tragic death in a plane crash in November of 1965.

**FINAL DRAFT – FOR CITY COUNCIL APPROVAL**

## City of Palm Springs

## Citywide Historic Context Statement & Survey Findings

**HISTORIC RESOURCES GROUP**

**POST-WORLD WAR II SINGLE-FAMILY RESIDENTIAL DEVELOPMENT (1945-1969): ELIGIBILITY****Property Type: Single-family residence**

The post-World War II population boom coincided with the peak of Modern architecture's popularity in Southern California, and Palm Springs has a vast number of architecturally significant single-family residences from this period designed by prominent local and regional architects of the period. Individually significant examples are custom-designed homes located throughout the city. Examples include the Kaufmann House, 470 W. Vista Chino (HSPB-29B); the Loewy House, 600 W. Panorama Road (HSPB-33); Frey House II, 686 W. Palisades Drive (HSPB-33); the Carey House, 651 W. Via Escuela (HSPB-33); the Grace Miller House, 2311 N. Indian Canyon Drive (HSPB-45); and the Edris House, 1030 W. Cielo Drive (HSPB-46).

**Applicable Eligibility Criteria**

An individual single-family residence may be eligible for historic designation under one or more of the following criteria:

CRITERIA	REASON
B/2/2 (Person) <sup>651</sup>	For its association with a significant person. Significant persons within this theme include members of the community who may have been influential in the development of Palm Springs, or who gained significance within their profession. Homes associated with people in the entertainment industry are evaluated under a separate context. Properties eligible under this criterion are those associated with a person's productive life, reflecting the time period when he or she achieved significance.
C/3/4,5 (Architecture)	As an excellent example of an architectural style or method of construction from the period, or as the work of a master builder, designer, artist, or architect. Additional information about architectural styles from each period and their associated character-defining features are outlined in the Architectural Styles section.

<sup>651</sup> Note that eligibility criteria are listed in the standard format National Register/California Register/Local.

### **Property Type: Historic District**

To accommodate the growing population in Southern California following World War II, there was a great deal of single-family residential development in Palm Springs. This included large and small tract development, infill construction in existing neighborhoods, construction on previously unbuildable lots, and the lease and development of Agua Caliente reservation lands. Subdivisions and neighborhoods from the postwar era retain a strong sense of time and place.

Due to the number of postwar developments in California and their characteristics – particularly the proliferation of large tracts by merchant-builders using tract designs and prefabricated components that were meant to be repeated – specific guidelines were developed by the California Department of Transportation for their evaluation.<sup>652</sup> It is recommended that these guidelines be considered in the evaluation of post-World War II residential subdivisions in Palm Springs, which share characteristics with statewide trends. The key components are excerpted for reference:

A key characteristic of postwar houses by merchant builders is that they were built in multiples. Unlike prewar tracts by subdividers, all of the houses within a postwar housing tract are often the work of a single builder and constructed in a short period of time using mass-production methods. Even in “custom home” tracts, which may include the work of more than one builder, all of the houses are likely to have been built within a short time period and will be similar in their size, quality, and degree of architectural elaboration. The fundamental unit for postwar housing is not the individual house, but the tract, or a single construction phase within a larger tract or new community. A single residence would generally not meet Criterion A for association with the postwar housing boom or suburban growth. While a subdivision or tract might be significant in that context, an individual residence would not be adequate to convey that association.

To meet National Register Criterion C, an individual residence must possess the distinctive characteristics of a type, style, period, or method of construction, or be the work of a master designer or craftsman, or exhibit high artistic value. Only in rare cases will a tract house by a merchant builder meet Criterion C as an individual property. Postwar tract houses by merchant builders generally will possess the distinctive characteristics of their type, style, and period. However, since these houses were built in multiples, it will not be possible to identify a single residence within a tract as being an important example relative to its neighbors. The tract as a whole, evaluated as a district, may be an important example of postwar housing within its context. When establishing significance at the local level, the context must be a city, town, or rural political division rather than merely a single tract, neighborhood, or district within a city.

<sup>652</sup> California Department of Transportation, *Tract Housing in California, 1945-1973: A Context for National Register Evaluation*, Sacramento, CA, 2011.

The work of a recognized master architect or architectural firm can be eligible for National Register listing under Criterion C. Several prominent California architects designed tract housing for merchant builders. Most of these architects also designed one-of-a-kind houses for property owners as individual commissions. These unique, high-style designs will need to be considered for National Register listing when they are present in historic property surveys. The tract house designs by these architects, on the other hand, were intended to be built in multiples. Variations within a tract are usually minor, and it will not be possible to single out one house as distinctive relative to others in the same tract. Tracts of houses designed by master architects should therefore be evaluated as districts rather than as individual properties.

While an individual residence of unique design may possess high artistic value, a tract house by a merchant builder will inevitably be similar to others within the same tract. A tract house will usually be similar to houses built in other tracts by the same builder, and may even closely resemble those by different builders. It is unlikely that any individual house within a tract will be distinguishable from its neighbors with respect to artistic value. An individual house may be an important example within its context, and therefore meet Criterion C, if it is distinctive relative to other houses of the same period. In many cases, these will be unique, architect-designed houses built for individual clients.

**Assessing Integrity:** Integrity of design, setting, and feeling are particularly relevant when evaluating a postwar housing tract or a portion of a tract as an historic district. In addition to considering alterations to the individual houses, a tract possesses integrity of design if it retains its original planning features and characteristics. These include the street layout, the pattern curb, sidewalk, and planting strip, and the type of curbing. There is no established rule concerning the proportion of contributing versus non-contributing properties that a district must possess to be eligible for National Register listing. However, a good rule of thumb is that an eligible district should have at least twice as many contributors as non-contributors. A district in which less than two-thirds of the properties are contributors is unlikely to adequately convey a sense of its time or historic significance. The integrity threshold for contributor status within a district is generally lower than the threshold for an individual property. Therefore, a residence may contribute to a district even if it does not possess sufficient integrity to be individually eligible for National Register listing. A house exhibiting some alterations may contribute to the historic character of a district if it retains its original form and enough integrity of design and materials to be seen as an integral part of the district.<sup>653</sup>

<sup>653</sup> Excerpted from California Department of Transportation, Chapter 11: Survey and Evaluation, 121-135.

### Applicable Eligibility Criteria

Using these guidelines, a post-World War II tract in Palm Springs may be eligible for historic designation as a historic district under the following criteria:

CRITERIA	REASON
A/1 and/or C/3/6 (District) <sup>654</sup>	A collection of residences from this period that are linked geographically may be eligible as a historic district. District boundaries may represent original tract boundaries, or they may comprise a portion of a tract or neighborhood. The district must be unified aesthetically by plan, physical development, and architectural quality. Historic districts representing post-World War II housing tracts will be eligible if they are excellent and intact examples of residential development representing the growth of the city during this period; or for an association with an innovative type of housing development or method of construction; or for an association with an important merchant builder; or as a collection of excellent Mid-century Modern architecture. Residences from this period eligible under Criterion A/1/3 will be eligible as contributors to historic districts. Typically individual tract homes are not eligible for individual designation; however, excellent and intact examples that are within subdivisions that are not eligible (e.g. that lack sufficient integrity for historic designation), may be eligible for locally for individual designation.

### Post-World War II Single-Family Residential Development (1945-1969): Integrity Considerations

Each type of property depends on certain aspects of integrity to express its historic significance. Determining which of the aspects is most important to a particular property type requires an understanding of the property's significance and its essential physical features. The rarity of the property type should also be considered when assessing its physical integrity. In order to be eligible for listing at the federal, state, or local levels, properties and districts must retain sufficient integrity to convey their historic significance under this theme. Palm Springs has numerous residential tracts and individual single-family residences from this period; therefore, integrity of these resources should be considered carefully in their evaluation.

<sup>654</sup> Note that eligibility criteria are listed in the standard format National Register/California Register/Local. Note that National Register/California Register Criterion A/1 can be applied to a single event important in history, or to an overall trend or pattern of development. The City of Palm Springs local ordinance distinguishes these into separate criteria – Criterion 1 applies to properties that are associated with a singular event; Criterion 3 applies to properties that “reflect or exemplify a particular period” in history.

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
A/1/6 (District)	<p>In order for a historic district to be eligible for designation, the majority of the components that add to the district's historic character must possess integrity, as must the district as a whole. Integrity of design, setting, and feeling must be strongly present in the district overall. A contributing property must retain integrity of location, design, setting, feeling, and association to adequately convey the significance of the historic district. The district overall should convey a strong sense of time and place. Common alterations in postwar subdivisions in Palm Springs include conversion of the original carport to a garage; enclosure of the original "entry courtyard" and/or breezeway between the main volume of the house and the carport (particularly in Palmer &amp; Krisel-designed tracts); rear additions; replacement of windows and doors; and replacement of original exterior wall cladding. In general, minor or reversible alterations or in-kind replacement of original features and finishes are acceptable within historic districts. Significant alterations that change the roofline, alter the original design intent, or that are not reversible may result in non-contributing status for an individual property. Because conversion of carports to garages is common throughout nearly all of the postwar tracts, a property with a converted carport can still be eligible as a contributor to a historic district. The conversion of an "entry courtyard" into permanent, fully enclosed living space is an unacceptable alteration.</p>
C/3/4,5 (Architecture)	<p>A property important for illustrating a particular property type, architectural style or construction technique; or that represents the work of a master must retain most of the physical features that constitute that type, style, or technique.<sup>655</sup> A residential property significant under Criterion C/3/4,5 (Architecture) should retain integrity of design, workmanship, materials, and feeling, at a minimum, in order to be eligible for its architectural merit. A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.</p>

<sup>655</sup> *National Register Bulletin 15.*

### **Post-World War II Single-Family Residential Development (1945-1969): Registration Requirements**

To be eligible under this theme, a property must:

- date from the period of significance; and
- represent an excellent example of an architectural style or method of construction; or be associated with a significant architect or designer; and
- display most of the character-defining features of the property type or style; and
- retain the essential aspects of historic integrity.

To be eligible under this theme, a historic district must:

- retain a majority of the contributors dating from the period of significance; a neighborhood with a lower percentage of contributors (e.g. approximately 50%) may be locally eligible if it maintains a strong sense of time and place with little to infill development or visual intrusion; and
- reflect planning and design principles from the period; and
- display most of the character-defining features of a residential subdivision, including the original layout, street plan, and other planning features; and
- retain the essential aspects of historic integrity.

**THEME: POST-WORLD WAR II MULTI-FAMILY RESIDENTIAL DEVELOPMENT (1945-1969)**

This theme explores the design and construction of mid-20<sup>th</sup> century multi-family residences in Palm Springs, from the immediate postwar period through 1969. While the emphasis in residential construction in Palm Springs following the war was decidedly in favor of single-family homes, a number of apartment buildings were constructed in the immediate postwar period. Apartments were typically found on Palm Canyon Drive, Indian Canyon Drive, Arenas Road, and Tamarisk Road. Significant architects and designers associated with multi-family residential development from this period include Clark & Frey, A. Quincy Jones, Wexler & Harrison, William Krisel, H.W. Burns, and many others. Developers include Phillip Short and Associates, William Bone, and Jack and Richard Weiss. As a result of increased demand for housing, post-World War II multi-family residential development in Palm Springs took a variety of forms including garden apartments, large low-rise multi-building communities (including early condominium projects), split-level attached townhomes, and attached and semi-attached residences in clusters as small as two and as many as eight. In virtually every configuration, the focus of the design was around the pool (or pools as the scale of the developments increased).

A rare example of wartime multi-family housing in Palm Springs is Bel Vista (1945-47, Clark & Frey; 1164 Calle Rolph is designated HSPB-100). Throughout the country, wartime housing projects were invariably the only building projects not stalled by the onset of World War II. Bordered by E. Chia Road on the north, Sunrise Way on the east, Tachevah Drive on the south, and N. Paseo De Anza on the west, the tract was first subdivided into multi-family residential housing units in 1945 by Sallie Stevens Nichols and her husband Culver Nichols.<sup>656</sup>

L: View of Bel Vista (1945-47, Clark & Frey). Photograph by Julius Shulman. Source: *Albert Frey: Architect*, 74. R: Plan for a unit at Bel Vista (1945-7, Clark & Frey) Source: *Albert Frey: Architect*, 74.

<sup>656</sup> Sallie Stevens Nichols was the daughter of early Palm Springs landholder and developer Prescott T. Stevens.

Bel Vista was designed as war workers' housing and its construction was subsidized by the government. As such, it had to meet specific design guidelines. Fifteen wood frame, plaster-veneered units all conformed to the same floor plan. To prevent the development from having a repetitive visual presence, the lead architect, Albert Frey, flipped the plan on each lot and varied the setbacks, creating an inviting architectural rhythm on the street. Each building also had a "distinct and individual color scheme."<sup>657</sup> The commission was an ideal project for Frey who was interested in economical and pre-fabricated housing.<sup>658</sup>

The identical floor plan for each unit is rotated and setbacks are staggered to create a unique architectural cadence for the street. Note how groupings of units face one another to enhance the sense of community. Source: *Architect and Engineer*, April 1951, 11.

Villa Hermosa (1945, Clark & Frey), located at 155 Hermosa Place, was designed not as wartime housing but as a collection of postwar apartment units with a pool and recreational facilities. For Villa Hermosa, Clark & Frey designed three separate unit types. According to author Joseph Rosa, the design is an "assembly of stacked and terraced apartments that forms a partial enclosure around a garden and a pool that is oriented to a mountain view...with access to all apartments through the garden."<sup>659</sup> Villa Hermosa was featured twice in *Architectural Record*.<sup>660</sup>

<sup>659</sup> Rosa, *Albert Frey: Architect*, 75.

<sup>660</sup> Per Marvin Roos, architect James Cioffi was hired to convert Villa Hermosa to condominiums in the early 2000s.

L: Villa Hermosa (1945, Clark & Frey). R: Interior courtyard view of Villa Hermosa shows how the stacked and terraced apartments form a partial enclosure. Photographs: Julius Shulman. Source: The J. Paul Getty Research Institute, Los Angeles. Digital Photo Collection.

As before the war, combined retail and multi-family usages were common along Palm Canyon Drive. The upper story of the Potter Clinic (1947, Williams, Williams & Williams; HSPB-58, demolished) at 1020 N. Palm Canyon Drive housed an apartment unit in which the architect E. Stewart Williams lived during 1949. This urban design did not come at the expense of the Palm Springs indoor-outdoor lifestyle: the floor plan included an outdoor dining terrace accessible from the kitchen.<sup>661</sup>

L: Potter Clinic (1947, Williams, Williams & Williams; HSPB-58) located at 1020 N. Palm Canyon Drive. The combination retail and residential apartment building was, according to Julius Shulman, where architect E. Stewart Williams lived in 1949. R: The apartment featured a dining patio that was accessible from the kitchen. The redwood trellis protected the glassed in dining area from the late afternoon sun in the southwest. Photographs: Julius Shulman. Source: The J. Paul Getty Research Institute, Los Angeles. Digital Photo Collection.

**HISTORIC RESOURCES GROUP**

A character-defining feature of postwar apartment construction in Palm Spring is the placement of the swimming pool as a central, unifying element in the design. In addition to being a social gathering place, a pool firmly cemented the Palm Springs lifestyle as one of leisure and outdoor recreational activities. An early example of this is the Town & Desert Apartments (1948, Herbert W. Burns, HSPB-90) at 360 W. Arenas Road. These apartments were featured in national trade publications including the May 1948 issue of *Architectural Record*. Another example of the purposeful orientation of the apartment complex around the swimming pool was the Premiere Apartments (1957-58, Frey and Chambers; demolished). The L-shaped plan of this building wrapped around the pool and each unit was recessed into the overall volume creating exterior corridors on the outer façade and private balconies facing the pool and mountains. The elegant Mid-century Modern design also featured Frey's signature round windows, suspended stairways, and use of corrugated metal planes.

L: The one-story Town & Desert Apartments (c.1948, H.W. Burns; HSPB-90) at 370 W. Arenas Road features an L-shaped Mid-century Modern design oriented toward the swimming pool. Photograph: Julius Shulman. Source: The J. Paul Getty Research Institute, Los Angeles. Digital Photo Collection. R: Ad for Town & Desert Apartments indicates the designer and his wife were also managing owners of the project. The architecture and the location were the clear stars of this ad. ### *exclusive* TOWN & DESERT

Offers delightful, luxurious living with spacious grounds, offering every convenience and comfort for a discriminating clientele during the coming season.

TOWN & DESERT is in the center of the Village, close to activities but within an atmosphere of quiet and refinement.

The managing owners, Mr. and Mrs. H. W. Burns, give their personal attention to the comforts and preferences of guests. Inquiries concerning reservations should be made as early as possible for the mid-season period. Such communications may be made by letter, telephone or telegraph to TOWN & DESERT at 370 West Arenas (two blocks toward San Jacinto foothills from Bullock's). The phone is 9001.

PRE-SEASON RATES PREVAIL UNTIL DECEMBER 14  
\$15 TO \$17.50 DAILY (PBG) PERSONS

**HISTORIC RESOURCES GROUP**

Advertisement for the Royal Hawaiian Estates (1960, Wexler & Harrison) shows site plan for clustering of units around recreational amenities and relegation of parking to the perimeter of the site to preserve the garden feeling of each unit. Source: *Palm Springs Life*, December 14, 1960.

The tropical destinations of Hawaii and Polynesia may seem incongruous as inspiration for a vacation home in the desert environment of Palm Springs; however, exotic tropical destinations, and their food, culture, and architecture were popular with Americans in the age of jet travel. Beginning in the 1930s with themed restaurants like Don the Beachcomber and Trader Vic's, the Tiki fad was fueled in the post-World War II years by returning GIs, explorer Thor Heyerdahl's voyage to Polynesia, and James Michener's Pulitzer Prize-winning *Tales of the South Pacific*. In 1959, the U.S. admitted Hawaii as the 50<sup>th</sup> state in union. As a result, Polynesian bar-restaurants like Don the Beachcomber and Tiki-inspired architecture were all the rage into the 1960s.<sup>662</sup> To capitalize on this trend, local realtor Philip Short created Royal Hawaiian Estates (1960, Wexler & Harrison; HSPB-73). It blended "the enchantment of the islands with the magic of sun drenched desert life."<sup>663</sup> Just as Joe Dunas had leveraged the concept at Las Palmas Summit for the Alexander Construction Company, an island theme was applied here to a multi-family residential development. The island theme in the desert proved popular; by February of 1962, the development was 60 percent sold.<sup>664</sup> In 2009, Royal Hawaiian Estates was designated a historic district by the City of Palm Springs.

<sup>662</sup> Don the Beachcomber, 1950, 140 Via Lola. Opened by Ernest Raymond Beaumont Gantt. Some original Polynesian-themed elements remain, including the original tikis that were recently restored.

<sup>663</sup> "Luxury Homes Selling Fast," *Los Angeles Times*, January 12, 1962.

<sup>664</sup> "Desert Development Employs Unique Plan," *Los Angeles Times*, February 11, 1962, M23.

Clearly targeted to seasonal residents, as described in the *Los Angeles Times*, “among the many advantages of the co-operative plan is the services of a resident manager who administers the property maintenance program to which the homeowners subscribe. In addition to relieving owners of maintenance problems, the program also provides several tax benefits.”<sup>665</sup>

Bordered by Twin Palms Drive on the north, an alley to the east, and S. Palm Canyon Drive to the west, Royal Hawaiian Estates positioned 40 attached single-family residences in a complex symmetrical plan on one parcel. A total of twelve buildings are clustered together in groups of three or four units, with three different two- and three-bedroom floor plans of 1,500 square feet each. The combination of rectangular and L-shaped plans in these clusters creates both a varied visual appearance for the buildings and privacy for the occupants. From a planning standpoint, parking was relegated to the perimeter of the development both to acknowledge the importance of the automobile in postwar culture, but also to leave the interior gardens free for the recreational activities central to the Palm Springs lifestyle. The units overlooked “sunken recreational areas with pool and game courts.”<sup>666</sup>

Architects Wexler & Harrison used Tiki-style outriggers or “Flying sevens” (the angled beams that connect the patios and roofline), and Tiki-inspired “apexes” and clerestory windows to provide occupants with light and shade. These design elements create an expressive form of the Mid-century Modern style. Materials used by the architects include stained wood siding, concrete block, and natural rock walls in a palette of desert colors.<sup>667</sup>

In 1965 the City passed zoning changes that allowed for greater density. As a result, multi-family residential development, for either rental or sale, ran rampant in Palm Springs in the late 1960s and early 1970s. In 1969, 309 units were constructed. In 1970, 2,413 units were constructed and in 1972 another 2,000 units.<sup>668</sup> As a result, the City imposed a 120-day moratorium on building permits in December of 1972.

### **Condominium Development**

Multi-family residential development played an important role in transforming Palm Springs from a resort town to a residential community. That transformation occurred during the 1960s and 1970s, but its roots can be seen as early as 1955 when the Los Angeles Home Show featured a full-scale model unit exhibit for an “‘own-your-own’ cooperative apartment planned for the Palm Springs area.”<sup>669</sup> Although the 100-unit garden apartment complex designed by John C. Lindsay was outside the city

<sup>668</sup> Kenneth Reich, “Palm Springs Voters Approve Plan to Contain City Growth,” *Los Angeles Times*, December 4, 1972, 3.

<sup>669</sup> “A Desert Apartment,” *Los Angeles Times*, June 12, 1955, 118.

limits (between Tamarisk and Thunderbird Country Clubs), it set the stage for a new type of development that would become synonymous with Palm Springs in the coming decades. The apartments were presented as suitable for full time living or as vacation residences that could be leased when not in use. This clearly positioned Palm Springs as a second home/vacation home paradise. Between June and December of 1960 alone, six new co-op “apartment” or “home” ventures were developed in Palm Springs with another half dozen new projects just outside the city limits.<sup>670</sup> The first co-operative in the area, Desert Braemar, was built in 1955 near Tamarisk Country Club.<sup>671</sup>

By the late 1960s the vacation home trend was in full swing – especially for Angelenos. The 1969 *Los Angeles Times* article “How to Turn a Playing House into a Paying House” emphasized strategies for defraying expenses by renting out a vacation home. According to the article, “the vacation-house-for-rent concept is one of the most important developments in our recreational habits since the American family took to the road.”<sup>672</sup> Another key factor in increased demand for second homes/vacation homes in Palm Springs was the establishment of direct airline service to Palm Springs by transcontinental air carriers in December of 1967. This made the resort community more directly accessible to residents of the east coast and Midwest than ever before. And indeed, by 1967, Palm Springs was growing from a population of 20,000 in the off-season to 50,000 during the winter tourist season.<sup>673</sup>

The City of Palm Springs was the first in the state and one of the first resort communities in the nation to legalize condominiums as a new form of vacation housing.<sup>674</sup> Condominiums diverged from co-op apartment arrangements in that residences were not technically owned collectively: each unit was owned individually but common areas were subject to collective ownership. Typically homeowners’ associations were established and monthly ownership dues funded maintenance of the common areas.

The popularity of the condominium in Palm Springs hinged on an aging population of empty nesters and retirees who liberated themselves from single-family residences in the suburbs. They vacationed or took up residency in condos where upkeep and maintenance were low and amenities were built-in. Amenities included tennis courts, pools, and/or country club membership. The rise in popularity of timeshare arrangements (where a property could be shared across a consortium of “owners” lowering costs even more) contributed to the growth of condominiums in Palm Springs. As described by author and historian Lawrence Culver, “the ‘condo-ization’ of Palm Springs was quickly followed by the popularity of condominiums at new ski resorts such as Vail and Aspen.”<sup>675</sup>

<sup>670</sup> “Co-Op Living- The New Trend in the Desert,” *Palm Springs Life*, December 1960, 11-17.

<sup>671</sup> “Co-Op Living- The New Trend in the Desert,” *Palm Springs Life*, December 1960, 16.

<sup>672</sup> Dan MacMasters, “How to Turn a Playing House into a Paying House,” *Los Angeles Times*, April 20, 1969, T16.

<sup>673</sup> “Palm Springs Ponders Plan to Revitalize Desert Resort,” *Los Angeles Times*, December 24, 1967, E7.

<sup>674</sup> Lawrence Culver, *The Frontier of Leisure* (New York, NY: Oxford University Press, 2010), 193.

<sup>675</sup> Culver, *The Frontier of Leisure*, 194.

A lack of financing for the new ownership concept, however, suppressed development until 1964. In 1961, the FHA was authorized to insure mortgages on condos for 85 percent of the appraised value. Yet it wasn't until September 1963 that tax appraisal methods for condominiums were settled and developers began building condominiums in force.<sup>676</sup>

As noted by architectural historian David Gebhard, many of the condominium developments were built on the eastern side of town.<sup>677</sup> Opening the floodgates to multi-family residential housing resulted in the construction of various new building typologies: multi-story/multi-unit low- and mid-rise developments, attached homes, semi-attached homes, split-level townhomes and even the conversion of existing apartment buildings to condominium ownership.

An early condominium project in Palm Springs was an apartment conversion at the hands of local developer Roy Fey: Fey's Palm Springs Desertaire Apartments, also known as the Desert Skies Apartment Hotel (1956, Claude A. Powell) at 2290 S. Palm Canyon Drive. In 1963 Fey decided to convert the apartment building into co-operative apartments. When sales began in the summer of 1963 the price for one-bedroom units was \$14,495.<sup>678</sup> In a 1980 interview, Roy Fey claimed he was "...the first person to introduce the concept of condominium building to the area by converting Desert Skies."<sup>679</sup> This is a bit of an exaggeration as several other projects were built in 1960 specifically as condominiums, including the Royal Hawaiian Estates (1960, Wexler & Harrison; HSPB-73) at 1774 S. Palm Canyon Drive.<sup>680</sup>

## APARTMENTS

389 W. TAHQUITZ DRIVE

JOSEPH DROWN, Owner

1 Bedroom-2 baths • 2 Bedroom-2 baths

Complete kitchen with all built-ins... Front & Rear Patios... Piped-in music... Cooled by Carrier Refrigeration... Carports... Maid Service available... Tremendous closet, cupboard and storage space.

**KEN HERMAN**  
*Real Estate*

244 SOUTH PALM CANYON DRIVE • PALM SPRINGS,  
TELEPHONE 384-1572

Located on 7 acres of park-like setting only 2 1/2 blocks west of Palm Canyon Drive in the Tennis Club area... within easy walking distance to downtown shopping.

1500 square feet of home-size living space. Exceptionally spacious rooms, luxuriously furnished to the last detail... providing the ultimate in carefree, luxury living.

Advertisement for the two-story Royal Air Apartments (1958, Wexler & Harrison; demolished) for real estate mogul Joseph Drown shows the simple, elegant lines of the design and the seamless integration with the outdoors via glass window walls.

<sup>679</sup> "Roy and Bob Fey: When it Began," *Palm Springs Life*, May 1980, 55.

<sup>680</sup> Other earlier co-ops or condos include Villa de las Palmas Co-operative Apartments at 1201 N. Indian Canyon Drive, Desert Holly Co-operative Apartments (1957) at 2244 E. Tahquitz Way, The Desert Lanai (1962) at North Sunrise Way and East Tachevah Drive, and the Sandcliff Condominiums (1963; HSPB-93) in the 1800 block of South Barona Road.

The Royal Air Condominiums<sup>681</sup> (1958, Wexler & Harrison) at 389 W. Tahquitz Drive (demolished) for real estate mogul and later philanthropist Joseph Drown was another early example of the type. These elegant, two-story Mid-century Modern garden apartments featured steel-frame construction that resulted in thin wall and roof planes with walls of glass on the ground floor that opened to the outdoors. Innovative finishes included ceramic tile exterior wall panels.<sup>682</sup> The building was to be part of a larger complex on the old Mashie Golf Course property that would include swimming pools, putting greens, tennis courts, badminton, and croquet courts.

Rendering of the Mid-century Modern-style Racquet Club Garden Villas West (1959-60, William F. Cody, FAIA). The attached and stand-alone units were developed by noted developer Paul W. Trousdale. Source: *The Architecture of William F. Cody: a Desert Retrospective*.

Paul W. Trousdale, one of Southern California's most prolific developers and an early postwar developer of Palm Springs, was not to be left behind during Palm Springs' apartment-hotel-condominium boom. In the late 1950s Trousdale built the Racquet Club Cottages West (1959-60, William F. Cody; HSPB-88) as a series of attached and stand-alone units designed for "people who wish to visit Palm Springs regularly for the weekend or those who wish to make Palm Springs their permanent winter home."<sup>683</sup> The Cottages were originally designed as the final expansion of the Racquet Club and provided annually-leased accommodations for either permanent or winter residents. Cody designed 57 Mid-century Modern units on an eight-foot module utilizing four plans: "The Bachelor," "The Bedroom Suite," "The Living Room Suite," and the "Full Cottage."<sup>684</sup> All offered maintenance-free living and Racquet Club privileges. In 2014, the City of Palm Springs designated the development now known as "Racquet Club Garden Villas" as a historic district.

In 1961 Chicago-based developer Henry F. Chaddick paid Pearl McManus \$1 million for her beloved Palm Springs Tennis Club, and Chaddick's own Carnegie Construction Company was assigned to finish

<sup>681</sup> The authors of the monograph on Donald Wexler, Lauren Weiss Bricker and Sydney Williams, list the project as Royal Air Condominiums; however, ads in the *Villager* call it the "Royal Air Apartments."

<sup>682</sup> Lauren Weiss Bricker and Sydney Williams, *Steel and Shade: The Architecture of Donald Wexler* (Palm Springs Art Museum, 2011), 79.

<sup>683</sup> City of Palm Springs, "City Council Staff Report," November 20, 2013, 2.

<sup>684</sup> City of Palm Springs, "City Council Staff Report," November 20, 2013, 3.

projects started by McManus. Although the developer's initial vision for the property included a hotel, a modified version of that plan was not fully realized until the 1970s. However, in the early 1960s, Chaddick oversaw the addition of more bungalows, modifications to the clubhouse and the development of 39 condominium units, Tennis Club Estates (a.k.a., Tennis Club Condominiums; 1964-69, William F. Cody).<sup>685</sup> The latter project (built in several phases) was located south of Belardo Road and west of Patencio Road.<sup>686</sup> These changes increased the club's capacity from twenty units in McManus' day to 110 units.<sup>687</sup> All units were designed in "Mediterranean Style" and featured three-bedroom units, two-bedroom units, and fireplaces.<sup>688</sup>

Another important condominium developer in Palm Springs was William Bone (b.1943). In 1963, the twenty-year old Bone founded Sunrise Company. Seven years later the *Los Angeles Times* called him "...a highly successful Century City Entrepreneur in real estate investments and development involving subdivisions,<sup>689</sup> shopping centers and motels."<sup>690</sup> Bone's first Palm Springs project was the \$10 million, 111-unit Deep Well Ranch Condominiums (1969-72, B. A. Berkus and Associates), located on the property of the former Deep Well Guest Ranch. The development, a joint venture with Tennessee-based ALODEX Corporation, included five detached home plans and one- and two-story condominium units. All units opened onto a central park and recreation area. Berkus' designs for the project, including the Cabrillo and Riviera models, were contemporary Californian/Spanish ranch with slump-stone masonry walls, red clay tile roofs, open beam ceilings, and Spanish-inspired wooden details such as large articulated carved front doors and garage doors.<sup>691</sup>

#### Kings Point (1969)

In 1969 Robert Grundt, Canyon Country Club developer and chairman of the Board of First National Realty, along with Club Manager John B. Quigley, subdivided Kings Point, a relatively small forty-five-parcel development with forty-four units located at 1000 Murray Canyon Drive.<sup>692</sup> William Krisel was commissioned with the design. Marketing brochures for the development promote "an unsurpassed way of life; dominated by a rich climate and impressive recreational facilities."<sup>693</sup> Amenities such as the modern tennis clubhouse and private swimming pool were stressed along with Canyon Country Club membership. "A Kings Point Key," as the brochure describes, "goes a vast step further and locks out the burdensome maintenance problems such as gardening and pool care; leaving you free to enjoy the unparalleled freedom and charm unique to California's most celebrated resort, Palm Springs." The V-

<sup>685</sup> More information on this development pending further research.

<sup>693</sup> Kings Point Sales Brochure, Private Collection.

shaped design of the property enabled homes along the outside of the “V” to face the fairways of the golf course while the houses along the inside of the “V” faced the common greenbelt with pool and tennis court.

One of the architectural features of this development was the relatively low number of units and how they were allocated across two floor plans, six exterior elevation designs, and the “flipping” or reversal of those designs as laid out on the plot plan. Most of the numeric unit designations (e.g., B2R) appeared an average of just three times throughout the complex—with the net effect that each home seems unique and different and a stimulating visual cadence is created along the streetscape.

Kings Point (1964-66, William Krisel). Source: *Palm Springs Life*, “Masters of Modernism – The Butterfly Effect.”

The architectural language for Kings Point is a distinctive Mid-century Modern, post-and-beam construction with a synergistic combination of designs in concrete block, plaster, and glass. Each unit was designed to be viewed from all sides and carefully placed on the lushly landscaped tract, with rear elevations denoted as “fairway” views. Each of the six different elevation designs features a roof monitor with clerestories at the center of the building, extending back in an umbrella-like structure over the public space. Concrete block veneer is combined with expressed post-and-beam construction to make six distinctive, yet harmonious, exterior designs. Carports were integrated to emphasize the horizontality of the design down the street.

Two efficient square floor plans were available, both three-bedroom/two bath designs. Kings Point floor plans are unique for their central “garden rooms” which sit under the roof monitors, and their combination living/dining rooms open to private patios, pools and the landscaped common areas. Ceiling height is eight feet—except for the clerestory at which the height is twelve feet. A freestanding tennis club house and pool cabana are designed as Mid-century Modern pavilions using an architectural language consistent with the design of the residences.

**HISTORIC RESOURCES GROUP**

**POST-WORLD WAR II MULTI-FAMILY RESIDENTIAL DEVELOPMENT (1945-1969): ELIGIBILITY**

**Property types: Multi-family residence, including apartment house, courtyard apartment, condominium, garden apartment; Historic District**

Palm Springs has a large collection of multi-family residences and multi-family residential developments from the post-World War II era. Many of these properties are the work of significant architects, including the Rimcrest Condominiums (1967, Rose & Carlson) at 2000 Southridge Drive, Villa Hermosa (1945, Clark & Frey) at 155 Hermosa Place, and the Town & Desert Apartments (1948, Herbert W. Burns, HSPB-90) at 360 W. Arenas Road.

**Applicable Eligibility Criteria**

A multi-family residential property from this period may be eligible for historic designation under one or more of the following criteria:

CRITERIA	REASON
A/1/3 (Pattern of Development/Period) <sup>694</sup>	As an excellent example of multi-family residential development reflecting the growth of Palm Springs during the post-World War II era, and as an excellent, rare, or early example of new trends and patterns of multi-family residential development from the period; most examples identified as eligible under this criterion are larger developments, not individual apartment buildings. A multi-family property eligible under this theme must reflect a pattern of development; it cannot simply have been constructed during the period of significance. Multi-family residential properties eligible under Criterion A/1/3 may also be eligible under Criterion C/3/4.
C/3/4,5 (Architecture)	As an excellent or rare example of an architectural style from the period; as the work of a master builder, designer, artist, or architect; or as an excellent, rare, or threatened multi-family residential property type. Because there are many architecturally significant multi-family residences from this period, examples that are eligible for their architectural merit must be good or excellent examples of their style, or the work of a noted architect. Additional information about architectural styles from each period and their associated character-defining features are outlined in the Architectural Styles section.

<sup>694</sup> Note that eligibility criteria are listed in the standard format National Register/California Register/Local. Note that National Register/California Register Criterion A/1 can be applied to a single event important in history, or to an overall trend or pattern of development. The City of Palm Springs local ordinance distinguishes these into separate criteria – Criterion 1 applies to properties that are associated with a singular event; Criterion 3 applies to properties that “reflect or exemplify a particular period” in history.

CRITERIA	REASON
A/1/6 (District)	A collection of multi-family residences from this period that are linked geographically may be eligible as a historic district. Multi-family residential developments, including condominiums, which comprise multiple buildings on a single or multiple properties are also recorded as districts. In these cases, individual contributors and non-contributors are not recorded, as it is the collection of the whole that makes a multi-family property significant. Landscape and hardscape features and other amenities should also be considered when evaluating a multi-family historic district.

### Integrity Considerations

Each type of property depends on certain aspects of integrity to express its historic significance. Determining which of the aspects is most important to a particular property type requires an understanding of the property's significance and its essential physical features. The rarity of the property type should also be considered when assessing its physical integrity. In order to be eligible for listing at the federal, state, or local levels, properties and districts must retain sufficient integrity to convey their historic significance under this theme.

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
A/1/3 (Pattern of Development/Period)	A property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s). <sup>695</sup> A multi-family residential property from this period eligible under Criteria A/1/3 should retain integrity of location, design, workmanship, materials, and feeling, at a minimum, in order to reflect the important association with the city's residential development during this period. A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style. <sup>696</sup>

<sup>695</sup> *National Register Bulletin 15.*

<sup>696</sup> *National Register Bulletin 15.*

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
C/3/4,5 (Architecture)	A property important for illustrating a particular property type, architectural style or construction technique; or that represents the work of a master must retain most of the physical features that constitute that type, style, or technique. <sup>697</sup> A residential property significant under Criterion C/3/4,5 (Architecture) should retain integrity of design, workmanship, materials, and feeling, at a minimum, in order to be eligible for its architectural merit. A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.
A/1/6 (District)	In order for a multi-family historic district to be eligible for historic designation, the development as a whole must retain a strong sense of time and place, and it must retain the majority of its original design and materials, and significant landscape, hardscape, and other planning features.

#### **Post-World War II Multi-Family Residential Development (1945-1969): Registration Requirements**

To be eligible under this theme, a multi-family residential property must:

- date from the period of significance; and
- represent important patterns and trends in multi-family residential development from this period; or represent an excellent or rare example of an architectural style or method of construction; or be associated with a significant architect or designer; or
- represent an important or rare multi-family residential property type; and
- display most of the character-defining features of the property type or style; and
- retain the essential aspects of historic integrity.

To be eligible under this theme, a historic district must:

- reflect planning and design principles from the period; and
- retain significant character-defining features of the style or type, including important landscape or hardscape features; and
- retain the original layout, reflecting planning and design principles from the period; and
- retain the essential aspects of historic integrity.

<sup>697</sup> *National Register Bulletin 15.*

**THEME: TRAILER PARK/MOBILE HOME COMMUNITY DEVELOPMENT (1945-1969)**

The dire need for postwar housing in many communities changed the perceptions of trailer living after World War II. By the mid-1940s, the use of manufactured trailers for year-round living shifted from 10 percent of annual production to 90 percent.<sup>698</sup> During World War II, trailers became a popular housing solution for wartime workers at industrial plants. The industry responded quickly to the need and designed the first true house trailer: a 22-foot long, eight-foot wide trailer with a canvas top that included a kitchen and a bathroom. The U.S. Government purchased 35,000 of these units and constructed 8,500 trailer parks to hold them.

As the demand for postwar housing increased and people began to migrate to the west to live, demand increased for house trailers that could be towed by the family car and used for year-round living. Once the industry was freed from wartime materials restrictions, it responded with a number of new models using metal siding and larger bathrooms and kitchens. The development of the “Tenwide” by manufacturer Marshfield Homes was uniquely 10 feet in width and helped mark the transition from “travel trailer” to “mobile home.” As described by author Allan D. Wallis in his book “Wheel Estate,” “manufacturers no longer made trailers that could also serve as dwellings, but dwellings that happened to be mobile.”<sup>699</sup>

As described by author Lawrence Culver, “Though perhaps tainted by negative connotations elsewhere, in Palm Springs a trailer park was simply an extension of the resort’s vacation atmosphere.”<sup>700</sup> For the 1946-47 season, the *Palm Springs City Directory* listed four options: Desert Trailer Haven at 601 E. Andreas Road, Desert Trailer Village at 432 E. Andreas Road, Orchard Trailer Villa at 1862 S. Palm Canyon Drive, and the Rancho Trailer Park at 1563 S. Palm Canyon Drive.

In 1950, Palm Springs became home to the Annual Trailer Rally, organized by the director of the Palm Springs Circus, Jimmy Cooper. By 1954, the event drew over 500 trailers and 1,000 “trailerites” from Arizona, Oregon, Nevada, Florida, and California.<sup>701</sup> The weekend event included a parade of new-model trailers along Palm Canyon Drive, chuck wagon breakfasts, dinners, and other western-style parties.

Another view of this month's cover "home." Trailer sits on concrete foundation which doubles as storage space

A unit at Bing Crosby's upscale Blue Skies Village as featured in *Popular Mechanics*, July 1960, 94.

One of the most upscale trailer parks in the Coachella Valley, the 1952 Blue Skies Village (1952, William F. Cody), was developed by Bing Crosby and contained streets named for film stars. Blue Skies offered "...a bit of Hollywood aura at a decidedly downscale price."<sup>702</sup> It was also marketed as "America's most luxurious trailer park."<sup>703</sup> Blue Skies adopted the Country Club approach to trailer transportation-based accommodations with exclusive resort amenities such as clubhouse facilities and swimming pools.<sup>704</sup> Blue Skies even had maid service available.

Although Blue Skies was located in the nearby community of Cathedral City, it played a major role in the national awareness of luxury trailer parks generally and trailer living in the desert communities specifically. The travel trailer phenomenon was even immortalized on film by two seasonal Palm Springs residents, Lucille Ball and Desi Arnaz who were depicted as a honeymooning couple seeing America by trailer in 1954's *The Long, Long Trailer*. So popular was the idea, the *Los Angeles Times* had their own "Times Trailing" column and beat reporter, Jean Jacques. By 1950, the *Desert Sun* also had an ongoing column "What's Going On in the Trailer Parks" featuring events and the social comings and goings of visitors.

Realizing that the sales of travel trailers depended upon quality places to park, manufacturers formed a trade organization that provided developers with trailer park designs and issued an annual ratings guide for customers. These sites had sewer connections and utility hook-ups. Despite these regulations, some communities successfully lobbied for additional zoning restrictions to eliminate trailer developments altogether, sometimes classifying trailers as buildings that inherently did not meet local building codes.

<sup>702</sup> Lawrence Culver, *The Frontier of Leisure* (New York, NY: Oxford University Press, 2010), 193.

<sup>703</sup> Peter Moruzzi, *Palm Springs Holiday* (Salt Lake City, UT: Gibbs Smith, 2009), 134.

<sup>704</sup> Thomas E. Stinson, "Trailers Join the Country Club," *Popular Mechanics*, 94.

Other cities declared trailer parks commercial businesses and relegated them to non-residential zones, industrial areas, and along highway corridors.<sup>705</sup> In contrast, the Palm Springs area embraced the trailer as part of its culture that celebrated outdoor living and modern modes of transportation.

In opposition to the image of slum encampments projected by opponents of mobile home parks in other parts of the country, the *Villager* called Palm Springs “the jeweled showcase of mobile living.”<sup>706</sup> By 1947, the greater Palm Springs area was home to thirty-two trailer parks. Space rentals varied from a low of \$25 per month to \$100 per month. The larger parks had their own stores, cafes, barber shops, and beauty parlors. Shuffleboard courts were also popular amenities, as were horseshoe courts and even hot mineral water bathing. By the late 1940s, a seasonal population of 6,000 people was estimated to occupy the desert communities’ trailer parks.<sup>707</sup> By 1948 the largest and most merited local trailer parks by the Trailer Coach Manufacturers Association included McKinney’s (40 spaces), Orchard Trailer Park (140 spaces), Ramon Trailer Park (185 spaces), and Rancho Trailer Park (250 spaces).<sup>708</sup>

Postcard for Horizon Trailer Village at 3575 E. Palm Canyon Drive.

In 1952, the 182-unit<sup>709</sup> Horizon Trailer Village opened at 3575 E. Palm Canyon Drive.<sup>710</sup> It was featured in the *Los Angeles Times* as a model of upscale mobile home living. Horizon included a clubhouse, swimming pool, shuffleboard courts, and other amenities. The original owners were Al Olsen and Jack

<sup>709</sup> The number of units represents current spaces, not historical spaces that may have been combined over the years to accommodate larger homes.

<sup>710</sup> The Horizon Mobile Home Village website dates the founding of the park to 1958; however, *Los Angeles Times* articles reflect that it was already open by April 1954.

Colt. Significant personages known to have lived at Horizon Trailer Village included singer and actress Lillian Roth.<sup>711</sup> In 1957, Horizon Trailer Village was awarded a “Gold Star” by the Mobile Home Manufacturing Association, based on superior appearance and facilities, making it one of the top-rated parks in the nation.<sup>712</sup>

Another notable Palm Springs mobile home park from this period is the Sahara Trailer Park at 1955 Camino Real Drive. Opened in 1954, Sahara set a new standard for the upscale mobile home park in Palm Springs. The \$450,000, 30-acre project was built by Duke Belzard and Roy E. Smith on a parcel purchased from Lee Arenas, marking the first time that Indian land in Section 26 was developed by non-Agua Caliente members.<sup>713</sup> Amenities of the Sahara design included wide paved streets; a plaza with grocery store, television viewing room, shuffleboard courts, card room, dance hall, and beauty shop; and a large swimming pool. The architectural design of the common buildings was based on the architecture of the nearby Biltmore Hotel.<sup>714</sup> Sahara’s upscale status was in evidence when it was one of the venues, along with Deep Well Ranch, for the 1956 Square Dance Jamboree.<sup>715</sup>

Image of a ramada in the Sahara Trailer Park. Source: *Popular Mechanics*, July, 1960, 99.

The Sahara Trailer Park was featured nationally in *Popular Mechanics* and *National Geographic* for its distinctive new features such as the cabanas and annexes. For many of the area’s mobile homes, the ramada morphed over time into more permanent structure.<sup>716</sup> The ramada was “a kind of three-way roof, one over the patio, a higher roof over the trailer, and another to make a carport.”<sup>717</sup> The Sahara

<sup>715</sup> “Untitled,” *The Desert Sun*, April 24, 1956.

<sup>716</sup> An example of this is the Adobe House home at 215 Stone Terrace in Parkview Mobile Estates. Parkview Mobile Estates was established in 1954-55 and located at 393 Mesquite Avenue.

<sup>717</sup> “Trailer Fans Lead Blissful Relaxed Life,” *Los Angeles Times*, April 16, 1954, B1.

Trailer Park also featured in the *Palm Springs Villager* as one of the showcase communities. As at the Ramon Trailer Park, diagonal (instead of rectilinear) spaces created a more attractive community, an efficient use of land, and a more pleasant visual cadence for the streetscape. Mobile home parks were also apparently good businesses. In 1963, Roy Smith sold his one-half interest in the Sahara Trailer Park, which by then was worth over \$500,000, to Jud and Lorna Sessions, owners of the 35-acre Rancho Trailer Park.<sup>718</sup>

The home of Harlie and Helen Kugler at Sahara Park. Source: Palm Springs Historical Society.

A 1957 syndicated article in the *New York Herald Tribune* cemented Palm Springs' place in the pantheon of mobile home culture. "In the world's jazziest trailer park on the fringe of this upholstered oasis the one word you may not use," wrote the author Horace Sutton, "is 'trailer.' They are not trailers, they are 'mobile homes,' see?"<sup>719</sup> The article goes on to discuss trailers with color coordinated cars, lawns, golf carts, and evening activities.

Palm Springs trailer parks of the mid-1950s numbered 19 and included Smoke Tree Trailer Park at 151 N. El Segundo (demolished); the Prairie Schooner Trailer Lodge (a.k.a. Desert Trailer Haven) at 601 E. Andreas Road (demolished); the Springs Trailer Court at 174 N. Indian Avenue; and Fairway Mobile Estates (a.k.a. Fairways Trailer Park) at 1900 San Rafael Drive, billed as "the only trailer park in the world surrounded by a golf course."<sup>720</sup> Trailers and supplies were purveyed by "Al Rose the Trailer King" located at the Horizon Trailer Village, Murray's Trailer Sales at 68-100 Highway III, and the prewar standby, Pavny's Butane and Trailer Supply Store at 1001 S. Palm Canyon Drive.<sup>721</sup>

<sup>721</sup> *Palm Springs City Directory*, 1955, 97.

During the 1950s and 1960s, “mobile homes,” as they had become known, were growing longer and wider. During the 1950s the length grew from 38 feet, to 40 feet, then 50 feet and finally upwards to 55 feet. Then Wisconsin manufacturer Elmer Frye broke the mold with the first ten-foot wide trailer that now required special transport permits; by 1960, the “ten wide” had over 90% market share.<sup>722</sup> By 1963, the industry split into mobile homes and recreational travel trailers (later to be known as RVs).<sup>723</sup> In a 1965 national study of mobile home parks for the Trailer Coach Association, two types of parks were identified: housing-oriented parks and service-oriented parks. In housing-oriented parks, residents chose to live in a mobile home primarily because of the cost of housing, whereas in service-oriented communities, residents were more concerned with ease of upkeep and amenities such as recreational facilities and clubhouses.<sup>724</sup> Service-oriented parks, in general, appealed to more affluent retirees who could afford a second home. In keeping with its resort status, Palm Springs boasted several service-oriented communities.

A number of mobile home parks were constructed on Section 14 land, in proximity to downtown. These included Prairie Schooner, located near the current site of the Convention Center, Plaza Trailer Park across from the Plaza, Mineral Trailer Park near the mineral springs and several others.<sup>725</sup> In 1956, under fire department supervision, structures associated with the Mineral Trailer Park were burned to rid the community of “substandard structures” and make way for new development.<sup>726</sup>

In the late 1970s and early 1980s, rising Palm Springs land values and their proximity to downtown made mobile home parks targets for redevelopment. The first of the mobile home parks to be razed for commercial development was Plaza Trailer Village. In 1987, Prairie Schooner was purchased by the city and razed for commercial development. By this time, many of the residents of the parks were service workers or elderly retirees on fixed incomes. Fewer than ten mobile home parks remain in the City of Palm Springs.

<sup>723</sup> Grissim, *The Complete Buyer's Guide to Manufactured Homes and Land*, 19.

<sup>724</sup> Wallis, *Wheel Estate*, 188.

<sup>725</sup> Eventually these properties were acquired as part of city development efforts; those trailer owners who desired to be relocated were assisted in relocating to a new “park” (Sunrise Village) located on the north side of San Rafael Road. Most owners chose not to relocate and as a result several interesting post WWII trailers were demolished. Source: Marvin Roos, correspondence with project team, March 25, 2015.

**TRAILER PARK/MOBILE HOME COMMUNITY DEVELOPMENT (1945-1969): ELIGIBILITY****Property type: Historic District**

A trailer park or mobile home park is a residential community where occupants rent a space on which to site a trailer or mobile home, oriented onto a system of interior roadways. Common features typically include a community or recreation building, playground, swimming pool, sales office/manager's residence, mature landscaping, perimeter wall or fencing, and community signage. As more people took up residency in trailers, they began to be associated more with housing than as vacation vehicles towed by cars.<sup>727</sup> As a result, the design of trailers began to shift to reflect their use as permanent residences. By the mid-1950s, trailers had begun to resemble conventional homes and included features and spatial planning not previously found in earlier travel trailers. This demand gave rise to the development of "resort parks," which were often located near vacation destinations like Palm Springs and were frequently utilized by retirees as vacation homes. In Palm Springs, the trailer park/mobile home park continued to be embraced in the postwar era, continuing the tradition started in the early 20<sup>th</sup> century. Fewer than 10 parks remain in the city; of these, the Sahara Trailer Park (1955 S. Camino Real) appears potentially eligible for designation under this theme.

**Applicable Eligibility Criteria**

The Sahara Trailer Park appears eligible for historic designation as a historic district:

CRITERIA	REASON
A/1/6 (District) <sup>728</sup>	As an excellent example of a trailer park/mobile home community in Palm Springs from the postwar era. Eligible trailer parks must represent an excellent example of the type, display unique or innovative design or planning characteristics, and have distinctive and cohesive design details.

**Integrity Considerations**

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
A/1/6 (District)	In order for a trailer park/mobile home community to be eligible for designation as a historic district, it should retain its original layout, general street pattern, and planning characteristics. Original accessory buildings and amenities, including manager's office, pool, clubhouse, recreational, and other facilities should be present. An eligible trailer park/mobile home community will retain integrity of location, design, setting, materials, feeling, and association.

<sup>727</sup> "Trailers: Yoked to the Car."

<sup>728</sup> Note that eligibility criteria are listed in the standard format National Register/California Register/Local.

**Trailer Park/Mobile Home Community Development (1945-1969): Registration Requirements**

The Sahara Trailer Park is eligible:

- as an excellent example of a trailer park/mobile home community in Palm Springs from the postwar period; and
- for reflecting unique or innovative design or planning characteristics; and
- displaying distinctive and cohesive design details; and
- displaying most of the character-defining features of the property type or style; and
- retaining the essential aspects of historic integrity.

**THEME: POST-WORLD WAR II COMMERCIAL DEVELOPMENT (1945-1969)**

Aerial view of Tahquitz at Palm Canyon/Indian Canyon, 1964.  
Source: Lost Palm Springs.

Peace returned to Palm Springs just in time for the winter season of 1945-46, and so did the Hollywood movie stars and Eastern industrialists. Along with them, in ever-increasing numbers, came ordinary tourists; the growing prosperity of the postwar years and the rise of the car culture created a leisured, mobile middle class that sought, in Palm Springs, a resort lifestyle that had previously been available primarily to the very rich. This surge of visitors and seasonal residents coincided with Modernism's rise in popularity. As a result, commercial architecture in Palm Springs from this period reflected this acceptance of Modernism and expressed a wide range of Modern interpretations as it increasingly served two purposes: the need for tourist-oriented buildings for seasonal residents and visitors, and the need for practical daily services, such as banks, shops, and gas stations, for the growing population of permanent residents. Commercial development during this period consisted of both infill development in the original commercial core, and the continued northward and southward expansion of the commercial district along Palm Canyon and Indian Canyon Drives. A number of motels and other commercial services were constructed to the south of the original downtown, with a cluster of postwar commercial development along S. Palm Canyon Drive.

**Sub-Theme: Hotel and Resort Development (1945-1969)**

The post-war tourism boom prompted the development of a number of hotels, motels, apartment hotels, and inns to accommodate the growing demand. Most lodgings for visitors remained relatively small in scale; outdoor spaces to enjoy the sun, air, and scenery were key elements shaping these designs. Several of the local architects designed these for both short term and longer term occupancy. While the program for these was similar, the designs reflected the individuality and innovations of each architect.

The one-story Mid-century Modern Four Hundred apartments (1954, H.W. Burns) at 400 W. Arenas Road feature an L-shaped design oriented toward the swimming pool. Photo: Julius Shulman. Source: The J. Paul Getty Trust, Getty Research Institute. Digital photograph collection.

The Hotel Del Marcos (1946-47, 220 W. Baristo Road; HSPB-78) by William Cody was an early building that demonstrates Cody's exploration of form suited to the desert. While he was later known for his own personal interpretation of Modernism emphasizing the minimal structure allowed by materials such as steel, the Del Marcos drew from Frank Lloyd Wright's "organic" architecture by using natural stone as a major feature in walls whose angled profiles seemed to grow out of the ground. The stone was combined with wood structures.<sup>729</sup> Another local designer, Herbert Burns, was active building small vacation inns like the Town & Desert Apartments at 370 W. Arenas Road (1947; HSPB-90; now the Hideaway), a Late Moderne vacation residence with small efficiency apartments, including kitchens, for stays of several weeks or months. The units were arranged in a rough "L" shape around a central swimming pool.

Similar properties developed by Burns include the Four Hundred (1954, 400 W. Arenas Road), the Desert Hills (1955, 601 W. Arenas Road), and the Village Manor (1957, 562 W. Arenas Road; now the Orbit In; HSPB-95), all located on W. Arenas Road.<sup>730</sup> The units of the Four Hundred by Herbert Burns were also contained in a single L-shaped structure wrapped around a landscaped pool terrace, and reflected Burns' Late Moderne designs which emphasized the unity of the volume with a continuous eave canopy. Like Cody at L'Horizon, Hugh Kaptur at the Impala Lodge (1957, 555 E. San Lorenzo Road; now the Triangle Inn) used an unusual structural geometry. Steel I-beam doglegs created battered walls with glass infill.

FINAL DRAFT – FOR CITY COUNCIL APPROVAL

City of Palm Springs

Citywide Historic Context Statement & Survey Findings

HISTORIC RESOURCES GROUP

Among the many small inns and lodges built in the 1950s, several stand out for their architectural designs. L'Horizon (1952, 1050 E. Palm Canyon Drive) was designed by William Cody for film and television producer Jack Wrather and his wife, actress/producer Bonita Granville.<sup>731</sup> It was organized as a collection of duplex and triplex one-story modern bungalows around a broad landscaped greenspace and swimming pool. The Bisonte Lodge at 260 W. Vista Chino (demolished) by E. Stewart Williams was a single structure with the units set back like a sawtooth to provide each with privacy and mountain views.

L and R: L'Horizon Hotel (1952, William Cody). Photographed by Julius Shulman, 1954. Source: The J. Paul Getty Trust, Getty Research Institute. Digital photograph collection.

The late 1940s and 1950s also saw the construction of new large hotels in Palm Springs, reflecting the city's growing prominence as a vacation destination. San Francisco theater owner Samuel Levin built the glamorous 50-room Palm Springs Biltmore (1948, Fred Monhoff; demolished) in the south end of town.<sup>732</sup> The Ocotillo Lodge at 1111 E. Palm Canyon Drive (1957-58) was designed by Palmer & Krisel and built by developers George and Robert Alexander as part of their prominent entry into the Palm Springs residential market. Sensing a demand for second homes, they planned the Twin Palms housing tract (also by Palmer & Krisel), and built Ocotillo next to it to provide convenient lodging for potential homebuyers, a marketing strategy used by Palm Springs developers at least since the El Mirador was constructed in the 1920s. Besides the lobby and restaurants, the lodge included two-story motel room wings, and one-story bungalow units for longer stays. The landscaping was by noted Los Angeles

<sup>732</sup> Hess and Danish, 141.

landscape architect Garrett Eckbo.<sup>733</sup> In 1959, Irwin Schuman (who also owned the popular Chi Chi nightclub) opened the huge Riviera Hotel (1600 N. Indian Canyon Drive) at the northeast corner of N. Indian Canyon Drive and E. Vista Chino. It was the largest hotel in Palm Springs at the time, with more than 400 guest rooms arranged in multiple wings in a radial pattern around a central swimming pool.<sup>734</sup>

Continuing the trend to larger hotels, the Agua Caliente Band of Cahuilla Indians decided to develop its small, rustic mineral hot springs near the center of Palm Springs into a large bath house and hotel development. The Spa Hotel and Bath House (1959-1963; demolished) was designed by William Cody, Donald Wexler, Richard Harrison, and Philip Koenig. It was an exceptional example of Modern design and planning; a long arcade of prefabricated concrete rose from a blue ceramic tile decorative pool to connect the town center to the lobby of the bath house. Several larger motels were constructed in the 1960s, including the Tropics Motor Lodge (1964, 411 E. Palm Canyon Drive; now the Caliente Tropics), which used the popular Tiki style. A large A-frame entry reminiscent of South Pacific lodge houses served as the *porte-cochère* to the two-story motel wings around a pool terrace landscaped with tropical planting and tiki statues.

Angeles. Digital Photo Collection.

Some of the older hostelrys invested in extensive improvements to keep up with the postwar demand. Charlie Farrell was elected mayor in 1948 and soon after hired Albert Frey to expand his Racquet Club with new Modern bungalows.<sup>735</sup> The Hotel El Mirador returned to civilian operation after serving as a military hospital during the war, and in 1952 underwent a major retrofit designed by Paul R. Williams and the firm of Williams, Williams & Williams.<sup>736</sup> In 1952 Western Hotels, the owners of the Oasis Hotel, began an extensive expansion. The McCallum adobe was relocated, the original Wright-designed dining room and kitchen were dismantled,<sup>737</sup> and the Oasis Commercial Building (1953, 101-121 S. Palm Canyon; HSPB-55), designed by Williams, Williams & Williams, was constructed in their place. The hotel expanded to the west, across South Belardo Road, with a new restaurant, apartments, and bungalows, and later a multi-story guestroom building also designed by E. Stewart Williams, which now comprise the Palm Mountain Resort and Spa.<sup>738</sup>

<sup>735</sup> Colacello, "Palm Springs Weekends," 206.

<sup>736</sup> Moruzzi, 60; Williams, 195.

<sup>737</sup> Several interior features were relocated to the ACBCI Cultural museum and the Ice Cream shop at the Village Green Park. These features were not evaluated as part of the survey, as interiors are outside the scope of the project; however, the City could consider local designation.

### Sub-Theme: Retail and Entertainment Development, 1945-1969

Town & Country Center (1948, Paul R. Williams and A. Quincy Jones; HSPB-51, listed in the National Register). Photographed in 1949 by Julius Shulman. Source: The J. Paul Getty Research Institute, Los Angeles. Digital Photo Collection.

Several significant retail buildings were constructed in the years immediately after the war. The city's wealthy leisure class had always attracted exclusive shops. In 1947 Bullock's, one of Los Angeles' fashionable department stores, moved out of its boutique at the Desert Inn and into a new building by Los Angeles architects Walter Wurdeman and Welton Becket, with landscape design by Ruth Shellhorn (demolished).<sup>739</sup> It reflected the Late Moderne style the pair used the same year at Bullock's Pasadena to attract a stylish, suburban clientele. In the late 1950s Becket designed the Saks Fifth Avenue branch at 490 S. Palm Canyon Drive (altered) with highly textured walls of stone and molded concrete block.

Two other notable Los Angeles architects, Paul R. Williams and A. Quincy Jones, were hired by Pearl McCallum McManus to update her Tennis Club and design a new restaurant for the facility. Williams and Jones also collaborated on The Center (1948, 146 N. Palm Canyon Drive; listed in the National Register), also known as the Town & Country center, a two-story, Late Moderne-style collection of shops, offices, and a fashionable restaurant in the center of the block off the main retail area on Palm Canyon Dr.<sup>740</sup> The complex fronts onto both Palm Canyon and Indian Canyon Drives, and was

configured around a central landscaped courtyard, accessed from the streets by pedestrian passages. It is a rare example of a modern adaptation of the courtyard type more typically associated with Spanish and Mediterranean Revival styles.<sup>741</sup>

Robinson's (1958, Pereira and Luckman). Photograph by Julius Shulman.  
Source: The J. Paul Getty Research Institute, Los Angeles. Digital Photo Collection.

Other commercial buildings serving tourists and local residents included shops along Palm Canyon and Indian Canyon Drives. While Spanish style buildings were sometimes still built in the immediate post-war years, Modern design was featured in numerous commercial buildings throughout the center of town, many of which were designed by prominent local and regional architects. These ranged from small single- and multi-tenant retail and office buildings, such as the commercial building by William Cody at 120 W. Arenas Road, to large, free-standing department stores and mixed-use commercial buildings. There are several commercial buildings from this period designed by Wexler & Harrison, including the Welmas Building (1960, 201-267 E. Tahquitz Canyon Way); other notable examples include the Robinson's department store (1958, 333-343 S. Palm Canyon Drive; HSPB-84) by the Los Angeles firm of Pereira and Luckman. Robinson's is a pavilion structure, with a high roof made up of connected diamond-shaped trusses that appear to float above slender pipe columns strengthened by tapered stiffening fins. This structure allowed for a large column-free interior span, and a large expanse of floor to ceiling glass to reveal the store's interior to passing motorists.

<sup>741</sup> Susan Secoy Jensen, Architect, AIA, M.Arch., Palm Springs Preservation Foundation, "National Register of Historic Places Registration Form, Town & Country Center," April 2015, Section 8, 14.

The Huddle Springs restaurant (1956, William Cody; demolished). Source: Lost Palm Springs.

Numerous restaurants were added to the commercial corridors during this period as well. Mirroring the trend in suburban, car-oriented districts of Los Angeles, restaurants along Highway 111 entering and leaving the center of Palm Springs were designed in the Googie style, a Modern style using boldly expressed structural elements and signs reflecting the scale of the automobile and meant to be noticeable through the windshield of passing cars. The Huddle Springs restaurant (1956; demolished) by William Cody was one of the most sophisticated examples in the nation of this Modernist type.<sup>742</sup> Another Googie example is the Denny's coffee shop by Los Angeles architects Armét and Davis (1965, 701 E. Palm Canyon Drive), which used an extended version of the Denny's prototype design as part of a motel complex.

Another commercial type which furnished notable examples of Modern architecture in Palm Springs was the bank. Bank architecture across the nation adopted Modern design (including drive-through service) to attract customers in the economic expansion after 1945. Palm Springs boasts an extraordinary collection of custom designs by noted architects which were also, by their size, position, and design, *de facto* civic landmarks celebrating the town's wealth. Notable examples in the 1950s were the first Coachella Valley Savings & Loan (1956, 383 S. Palm Canyon Drive) and Santa Fe Federal Savings & Loan (1960, 300 S. Palm Canyon Drive; HSPB-54), both by Williams, Williams & Williams; and City National Bank (1959, 588 S. Palm Canyon Drive; HSPB-52) by the Los Angeles firm Victor Gruen Associates.

Coachella Valley Savings and Loan #2 (1961, Williams, Williams & Williams). Photographed by Julius Shulman. Source: The J. Paul Getty Research Institute, Los Angeles. Digital Photo Collection.

<sup>742</sup> Alan Hess, *Googie Redux: Ultramodern Roadside Architecture* (San Francisco, CA: Chronicle Books, 2004), 98-101.

The design of the first Coachella Valley Savings & Loan reflects the influence of the International Style. Santa Fe Federal demonstrated Stewart Williams' design evolution; where Coachella Valley emphasized its box-like volume, the Santa Fe design gives the appearance of an open pavilion. The inset walls are almost entirely glass, set between two strong planes of roof and floor. The roof extends far beyond the glass walls to provide shade, enhanced by movable aluminum screen walls on the west façade. The floor plate cantilevers beyond the foundation to make this pavilion structure appear to float. City National Bank (1959), designed by Gruen associate Rudi Baumfeld, was an exuberant expressionistic design inspired by the chapel of Notre Dame du Haut in Ronchamps, France (1954) by Le Corbusier. A large curving roof with upswept eaves was set on three solid ovoid shapes; Baumfeld adapted the Ronchamp model by opening the west side of the building with a wall of glass to provide mountain views. To his two earlier banks, E. Stewart Williams added another major and distinctive bank design for the second Coachella Valley Savings & Loan at 499 S. Palm Canyon Drive (1961; HSPB-53). The iconic design recalls Oscar Niemeyer's 1956 Alvorada Palace in Brasilia and demonstrates Williams' move beyond traditional post-and-beam construction to explore the possibilities of structural concrete.<sup>743</sup>

R: The Oasis Building (1952, Williams, Williams & Williams; HSPB-55). Source: Palm Springs Historical Society as published in *Palm Springs Life*, "Modern, Naturally."

Many office buildings were also designed by prominent local architects (often for real estate, builder, or developer clients) in the postwar era. Collectively, they demonstrate the wide use and acceptance of modern design in Palm Springs. The Oasis Building (1952, 101-121 S. Palm Canyon Drive; HSPB-55) by Williams, Williams & Williams incorporated a shaded, inset ground floor patio on Palm Canyon Drive as an entry to several small retail stores, including a Kreis Drugstore with the original interior designed by Paul R. Williams (since remodeled). The second story was a large rectangular block which seemed to

<sup>743</sup> Elizabeth Edwards Harris, Ph.D., "Dignity and Delight: Modern Banks," in Sidney Williams, ed., *An Eloquent Modernist: E. Stewart Williams, Architect* (Palm Springs, CA: Palm Springs Art Museum, 2014), 102.

float above the ground floor, and contained office space (including the Williams, Williams & Williams offices).

Other examples of Modern offices in the central commercial district include 577 Sunny Dunes by Howard Lapham; the Harold Hicks Real Estate office (1958, 1345 N. Palm Canyon) by Williams, Williams & Williams; and the Welmas Building (1959, 100 S. Indian Canyon Drive) by Wexler & Harrison. These designs often featured outdoor corridors or courtyards and open stairs in response to the climate, and decorative elements such as colorful ceramic tile. As with other building types, these Modern designs reflected a range of interpretations, from the International Style influences in the Oasis Building to the brutalist influences seen in Robert Ricciardi's Gas Company building (1969, 211 N. Sunrise Way), with its tall, concrete walls finished in a rugged hammered texture.

Esso Station (Albert Frey, 1963-65; HSPB-33). Source: Palm Springs Visitors Center, via Flickr.

With the growing car culture in the postwar era, the construction of gas and service stations – particularly along major thoroughfares – became increasingly important. Palm Springs has a collection of postwar stations that were designed by prominent local architects: Albert Frey, William Cody, and Donald Wexler each designed a gas station in the city between 1963 and 1966. The box station type that had developed in the early 1930s, with its glossy glass and porcelain enamel exterior and carefully designed lighting, was meant to attract attention and reflected the increasing importance petroleum companies placed on standardization. In the postwar years owners and architects began to vary this basic form to distinguish their establishments, incorporating contemporary design trends such as canted display windows, raked or folded plate canopies, and boomerang-shaped supports that reflected the popular interest in

aeronautics and space travel and attracted the eye of passing motorists.<sup>744</sup> Frey's Esso station (1963-65, now the Palm Springs Visitors' Center, 2901 N. Palm Canyon Drive; HSPB-33 and HSPB-37) at the north end of the city features canted concrete block walls supporting a hyperbolic paraboloid steel roof which created a wide canopy over the pump area. Situated at the corner of the main highway into town and the turnoff to the new Palm Springs Tramway, it served as a landmark to this new tourist attraction. The design of a nearby Shell station has been attributed to William Cody (1964, 2796 N. Palm Canyon Drive; HSPB-99),<sup>745</sup> which featured a high canopy of thin, tapered concrete slabs. Donald Wexler's gas station at the corner of Tahquitz Canyon Way and El Cielo Road (1966, demolished) used post-and-beam concrete construction.

Tourism, Palm Springs' main industry, spawned the development of attractions, golf courses, and more motels in the 1960s. The premier attraction was the opening of the Palm Springs Aerial Tramway, a major engineering feat. Pylons were constructed on the side of rugged and steep Mt. San Jacinto to support cable cars transporting tourists 8,500 feet from the valley floor to the alpine mountain top. Frey & Chambers designed the tramway's lower Valley Station (1963, 1 Tramway Road; HSPB-33), and Williams, Clark & Williams designed the mountain station. Both included restaurants and viewing platforms. Frey and Chambers' design reflected their technological approach by incorporating a large triangulated truss to span a natural wash; the structure's triangular shapes were expressed on the exterior of the building. In the mountaintop environment, which has snow in winter, Williams, Clark, and Williams used heavy timber post-and-beam construction, allowing for tall windows to frame the panoramic views of the valley floor.<sup>746</sup>

In October 1967 the Palm Springs Planning Collaborative, an association of many local architects including John Porter Clark, William Cody, Albert Frey, Richard Harrison, and Roger Williams under the leadership of E. Stewart Williams, presented to the City Council a master plan for the Palm Springs central business district. The tourist-oriented plan included a two-block pedestrian promenade along Palm Canyon Drive, a convention center, a performing arts center, shops, offices, restaurants, hotels, plazas, and parking, covering the area from Ramon Road in the south to Alejo Road in the north. The plan's vast scope, long-range vision, and estimated \$65,000,000 cost proved overwhelming for the city council and the plan was quickly shelved.<sup>747</sup> Although the ambitious project was abandoned, it is

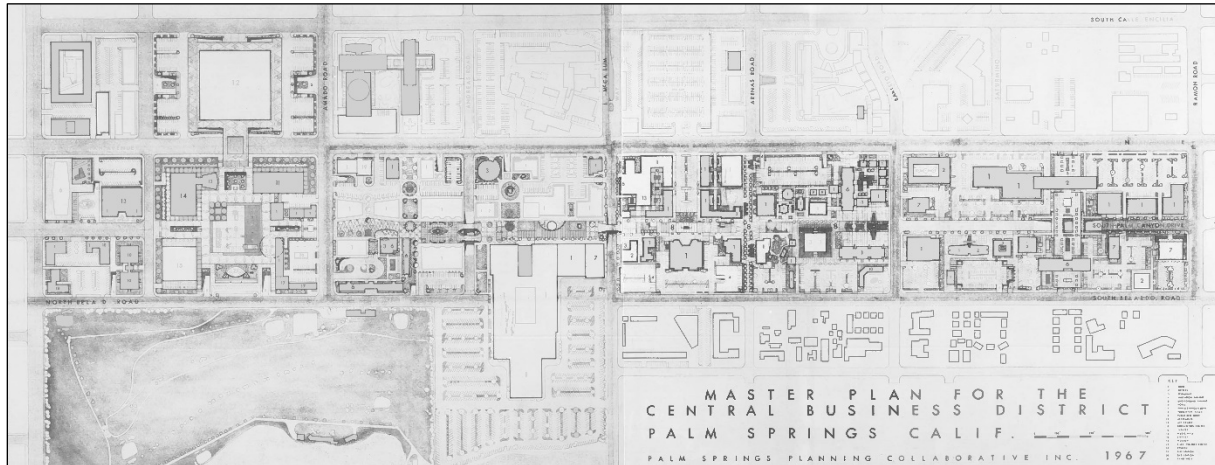

<sup>744</sup> Chad Randl, *Preservation Brief 46: The Preservation and Reuse of Historic Gas Stations* (Washington, D.C.: National Park Service, U.S. Department of the Interior, 2008), 3-4.

<sup>745</sup> This property has been attributed to architect William F. Cody. However, following consultation with the William F. Cody Papers, housed in the Special Collections Department of the Kennedy Library at California Polytechnic State University at San Luis Obispo, this attribution has not been substantiated. The property is currently undergoing a detailed historic assessment as part of a potential project review.

<sup>746</sup> The mountain station is located outside the Palm Springs city limit.

<sup>747</sup> Sidney Williams, "The Spirit of Collegiality, The Power of Eloquence," in *An Eloquent Modernist: E. Stewart Williams, Architect*, ed. Sidney Williams (Palm Springs, CA: Palm Springs Art Museum, 2014), 45-51.

noteworthy for its collaborative design by an impressive number of prominent local architects, and as a reflection of the importance of tourism in Palm Springs.<sup>748</sup>

Unrealized master plan for the central business district, 1967. Source: E. Stewart Williams Collection, Palm Springs Art Museum, as published in *An Eloquent Modernist: E. Stewart Williams, Architect*, p. 47-49.

<sup>748</sup> Per Marvin Roos correspondence May 11, 2016, though the plan was never adopted, the architects convinced several financial institutions to relocate in the south downtown area between Baristo and Ramon Roads. Several of those buildings are still used by financial institutions, while others are now serve as office space.

**Sub-theme: Las Palmas Business Historic District (1945-1969)<sup>749</sup>**

In the post-World War II era, the area that is now the Las Palmas Business Historic District continued the northward expansion of the main commercial center that started in the 1930s; however, development during this period consisted primarily of infill construction on undeveloped lots. Some simplified Spanish Colonial Revival buildings were constructed during this period, but the predominant architectural style in the district in the postwar years, as throughout Palm Springs, was Modern. The city's post-war boom of tourists and seasonal residents coincided with the rise in popularity of Modernism across the United States. This created, in Palm Springs, a perfect storm – an unusually high proportion of young architects, trained in the tenets of Modernism, who settled and practiced in Palm Springs after the war, combined with clients and developers willing to experiment with adventurous, unconventional designs. Architecture in Palm Springs from this period reflected this fortuitous convergence and expressed a wide range of Modern interpretations in the designs of residential, commercial, and institutional buildings, leaving the city with an unusually large and fine concentration of mid-20<sup>th</sup> century Modern design.

Clark & Frey Office Building (1947).

Source: The J. Paul Getty Research  
Institute, Los Angeles. Digital Photo  
Collection.

Commercial architecture in Palm Springs from this period increasingly served two purposes: the need for tourist-oriented buildings for seasonal residents and visitors, and the need for practical daily services, such as offices, banks, shops, and gas stations, for the growing population of permanent residents. In the Las Palmas Business Historic District, as throughout the city, buildings continued to be low in scale, predominantly one but occasionally two stories in height. Setbacks along N. Palm Canyon Drive are relatively consistent, with most buildings having only a minimal setback from the sidewalk. Setbacks are more varied along N. Indian Canyon Drive.

Clark & Frey designed a number of commercial buildings in the district in the late 1940s and early 1950s. These include their own office building (1947) at 875-879 N. Palm Canyon Drive, a two-story mixed-use building with retail on the ground floor and the architects' offices above; the Late Moderne-style Dollard Building (1947) at 687 N. Palm Canyon Drive; the Turonnet Building (1949) at 707-749 N. Indian Canyon Drive; and the one-story, minimalist Nichols Building (1953) at 891-895 N. Palm Canyon Drive.

<sup>749</sup> This sub-theme continues the discussion of the Las Palmas Business Historic District from the pre-World War II commercial development section. The Las Palmas Business Historic District was designated by the City in 1986. It is bounded by Alejo Road to the south, El Alameda to the north, and includes most properties fronting N. Palm Canyon and N. Indian Canyon Drives on both sides.

A noteworthy medical office building from this period is the Backstrom-Reid Building at 666 N. Palm Canyon Drive. Local developer and designer Howard Lapham constructed the two-story medical office building for Dr. Henry Reid and his business partner, Robert G. Backstrom.<sup>750</sup> The building is framed by its flat roof and end wall panels that form a continuous folded plane over the building and a *porte-cochère* that leads to the parking lot at the rear. The façade is articulated with stone veneer, decorative metal screens, and an exterior staircase leading to the second story.

The postwar tourism boom prompted the development of a number of hotels, motels, apartment hotels, and inns to accommodate the growing demand. Most lodgings for visitors remained relatively small in scale and were often oriented around a central landscaped area or pool; outdoor spaces to enjoy the sun, air, and scenery were key elements shaping these designs. Examples within the district include the Crawford Apartments, an early motor court at 855 N. Indian Canyon Drive (1945; currently the Village Inn);<sup>751</sup> and the Del Hai Mo Lodge at 641 N. Palm Canyon Drive (1952; altered).

Postcard of the Crawford Apartments.

<sup>750</sup> Historic Site Preservation Board, “Las Palmas Business Historic District Building Histories,” (undated), 19. Although some sources attribute the design of this building to Haralamb Georgescu, with whom Lapham was associated, Georgescu’s biographical information indicates that he did not begin working with Lapham until 1959, after the Backstrom-Reid building was constructed.

<sup>751</sup> Historic Site Preservation Board, “Las Palmas Business Historic District Building Histories,” undated, 11.

## POST-WORLD WAR II COMMERCIAL DEVELOPMENT (1945-1969): ELIGIBILITY

### Property Types: Commercial Building; Historic District

Examples of commercial buildings from this period may include hotels, motels, retail stores, banks, restaurants, commercial storefront buildings, and automobile-related resources including auto dealerships and drive-ins. There was a great deal of commercial development in Palm Springs in the immediate postwar period, and continuing into the 1960s. Commercial properties in Palm Springs associated with this period include the Hotel Del Marcos (1946-47, HSPB-78), the Town and Desert Apartments (1947; now the Hideaway; HSPB-90), the Town & Country Center (1948; HSPB-51), the Oasis Commercial Building (1953, HSPB-55), and the Esso station (1963-65, HSPB-33 and HSPB-37; now the Visitors Center).

### Applicable Eligibility Criteria

A commercial property from this period may be eligible for historic designation under one or more of the following criteria:

CRITERIA	REASON
A/1/3 (Pattern of Development/Period) <sup>752</sup>	As an excellent example of commercial development in Palm Springs, reflecting the City's growth in the postwar era, including the continued importance of tourism. Commercial buildings eligible under this criterion must represent a trend or pattern of development, they cannot simply have been constructed during the post-World War II era.
C/3/4,5 (Architecture)	As an excellent or rare example of an architectural style, property type, or method of construction from the period; or as the work of a noted architect. Additional information about architectural styles from each period and their associated character-defining features are outlined in the Architectural Styles chapter.
A/1/6 (District)	A collection of commercial buildings that are linked geographically may be eligible as a historic district. Potential commercial districts in Palm Springs will likely span several periods of development.

### Integrity Considerations

Each type of property depends on certain aspects of integrity to express its historic significance. Determining which of the aspects is most important to a particular property type requires an

<sup>752</sup> Note that eligibility criteria are listed in the standard format National Register/California Register/Local. Note that National Register/California Register Criterion A/1 can be applied to a single event important in history, or to an overall trend or pattern of development. The City of Palm Springs local ordinance distinguishes these into separate criteria – Criterion 1 applies to properties that are associated with a singular event; Criterion 3 applies to properties that “reflect or exemplify a particular period” in history.

understanding of the property's significance and its essential physical features. The rarity of the property type should also be considered when assessing its physical integrity. In order to be eligible for listing at the federal, state, or local levels, properties and districts must retain sufficient integrity to convey their historic significance under this theme.

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
A/1/3 (Pattern of Development/Period)	A property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s). <sup>753</sup> A commercial property from this period eligible under Criteria A/1/3 should retain integrity of location, design, workmanship, materials, and feeling, at a minimum, in order to reflect the important association with the city's commercial development during this period. A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style. <sup>754</sup> Replacement of original storefronts is a common and acceptable alteration.
C/3/4,5 (Architecture)	A property important for illustrating a particular property type, architectural style or construction technique; or that represents the work of a master must retain most of the physical features that constitute that type, style, or technique. <sup>755</sup> A commercial property significant under Criterion C/3/4,5 (Architecture) should retain integrity of design, workmanship, materials, and feeling, at a minimum, in order to be eligible for its architectural merit. A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style. Replacement of original storefronts is a common and acceptable alteration.

<sup>753</sup> *National Register Bulletin 15.*

<sup>754</sup> *National Register Bulletin 15.*

<sup>755</sup> *National Register Bulletin 15.*

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
A/1/6 (District)	In order for a historic district to be eligible for designation, the majority of the components that add to the district's historic character must possess integrity, as must the district as a whole. A contributing property must retain integrity of location, design, setting, feeling, and association to adequately convey the significance of the historic district. Some alteration to individual buildings, such as replacement of storefronts is acceptable. Eligible historic districts may span several periods of development; at this time, the only commercial historic district that has been identified in Palm Springs is the Las Palmas Business Historic District.

**Post-World War II Commercial Development (1945-1969): Registration Requirements**

To be eligible under this theme, a property must:

- date from the period of significance; and
- represent important patterns and trends in commercial development from this period; or
- represent an excellent or rare example of an architectural style, property type, or method of construction; or be associated with a significant architect or designer; and
- display most of the character-defining features of the property type or style; and
- retain the essential aspects of historic integrity.

To be eligible under this theme, a historic district must:

- retain a majority of the contributors dating from the period of significance; and
- display the original planning features of a commercial enclave or corridor, including use, setbacks, and other planning features; and
- retain the essential aspects of historic integrity.

**THEME: POST-WORLD WAR II CIVIC AND INSTITUTIONAL DEVELOPMENT (1945-1969)**

This theme explores the development of civic buildings, schools, churches, and other institutions in the decades after World War II. As Palm Springs' population grew, so did the need for civic buildings. Usually designed by local architects, they reflected the progressive symbolism of Modernism in schools, churches, fire stations, and especially in a new City Hall.

For the first few months after incorporation, the City Council met on the second floor of old Fire Station No. 1 (377 N. Palm Canyon Drive; demolished). From 1939 to 1944 Council meetings were held in the Guatiello Building (482 N. Palm Canyon Drive; demolished), and from 1944 to 1948 in the El Paseo Theater in the El Paseo Building (800 N. Palm Canyon Drive; HSPB-27). From 1938 to 1948 municipal offices were located in the Chamber of Commerce building (363 N. Palm Canyon Drive; demolished), a small bungalow built in 1919 by Dr. J.J. Kocher. In 1948 the administrative offices and City Council meetings were relocated to three buildings on the Palm Springs Air Base property that had recently been vacated by the Army Air Corps. In 1949 a 100-acre parcel of the property was deeded to the City.<sup>756</sup> The City subleased the remainder of the air base property to the Palm Springs Airport Corporation and later, in 1952, to Aero-Palm Springs, Inc. under the leadership of "Great-Grandmother Pilot" Zaddie Bunker, and the property became the new municipal airport.<sup>757</sup>

In 1952 the firm of Clark, Frey & Chambers was selected to design a new City Hall building to accommodate the growing city's administrative needs (3200 E. Tahquitz Canyon Way; HSPB-33). Various sites were considered, including Tamarisk Park and Torney General Hospital (El Mirador), before the city selected a ten-acre site within the vacated Federal land, avoiding the costs of land acquisition. On December 15, 1953 the city transferred \$300,000 from the Capital Outlay Fund to a dedicated City Hall Construction Fund to begin the process. The entire cost of the building, which totaled \$408,318, was financed through sales tax revenues, without resorting to bond issues or increased property taxes. Final working drawings were submitted on January 18, 1956 and the bid was awarded to Kretz and Wilson of Indio on February 21. Construction began on March 6, and the new City Hall was dedicated on November 8, 1957. By that time the city's permanent population was 12,225, with a seasonal increase to 45,000.<sup>758</sup>

For the design of City Hall, Clark, Frey & Chambers collaborated with Williams, Williams & Williams. The building used a Modern vocabulary to convey the symbolic role of a city hall; the main entrance to the administrative offices was defined by a large square canopy with a circular opening to the sky, while the city council chamber was given definition in a separate, attached wing marked by a freestanding *aedicula*. The windows of the office wing were shaded by deep eaves and a screen of deep tubular sections that allowed views out, but shut out direct sunlight. The City Council wing was constructed of

<sup>756</sup> "Your City Hall."

<sup>757</sup> Greer.

<sup>758</sup> "Your City Hall."

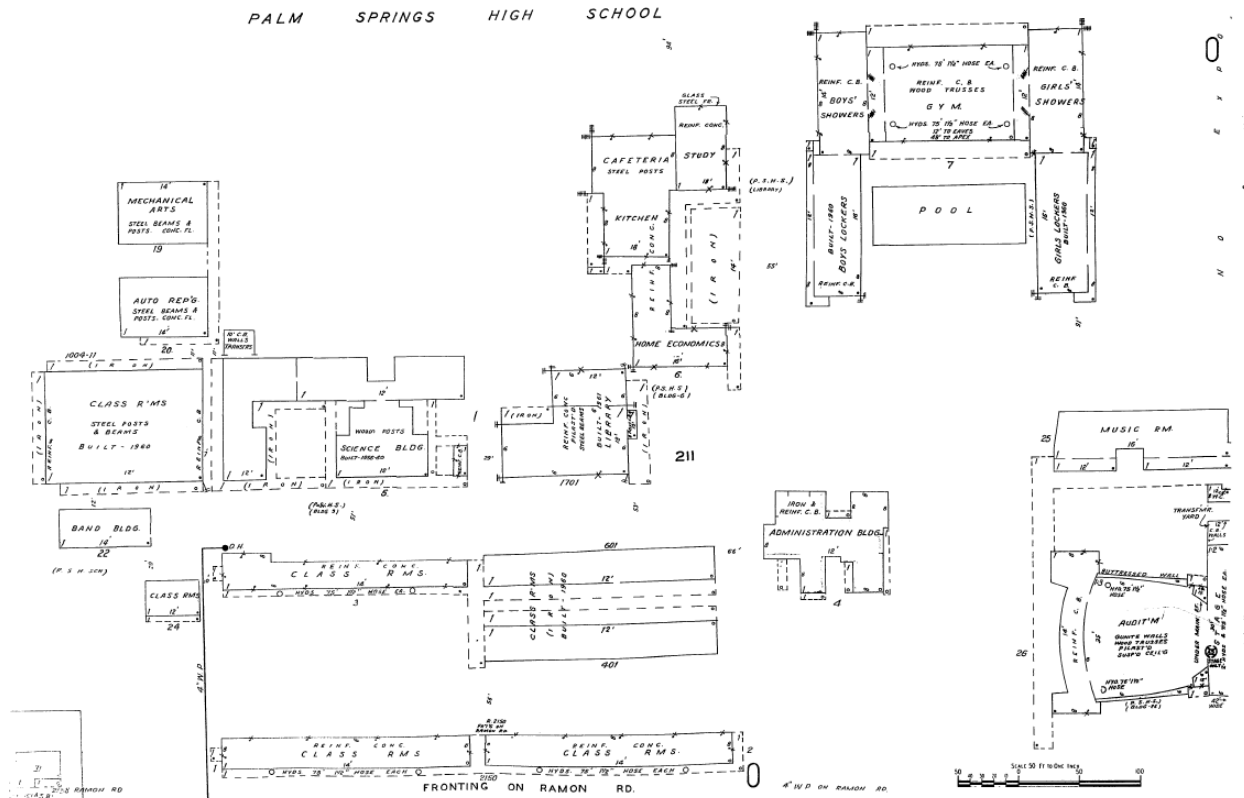

concrete block integrally tinted a rose color; the blocks were slightly offset to create a distinctive geometric pattern on the flat walls, especially when raked by sunlight.

In the 1960s a civic center was developed around the City Hall with the addition of several other civic facilities. A special election in 1961 approved the city's purchase of and improvements to the airport property. The location at the west end of Tahquitz Canyon Way created a central axis with the airport as its terminus, while Modern architecture and uniform setbacks unified the area as a civic center. The anchor and largest addition to the civic center was Donald Wexler's Palm Springs Airport (1966; front façade HSPB-70) at the end of Tahquitz Canyon Way. A major project for a local architect, the modern airport evoked the swept lines of a jet plane. Outdoor waiting rooms for the gates celebrated the weather that awaited arriving passengers. The landscape design, including the fountains, was completed by local landscape architect David Hamilton.<sup>759</sup> Also included in the civic center was the Palm Springs Police Building (1962, 3111 E. Tahquitz Canyon Way) by John Porter Clark, and the Riverside County Courthouse (1962, 3255 E. Tahquitz Canyon Way) by Williams, Clark and Williams.

Other civic facilities constructed in the postwar era to accommodate the growing population and increased need for municipal services include several fire stations: Fire Station No. 1 (1957, 277 N. Indian Canyon Drive; HSPB-39) by Frey & Chambers, and Fire Station No. 3 (1964, 590 E. Racquet Club Road) by Hugh Kaptur. Additionally, a new post office (1970, 333 E. Amado Road) was constructed as an alternative to the 1930s post office located in La Plaza.

Palm Springs also needed new school facilities in the postwar era. In the late 1950s, Palm Springs High School (2248 E. Ramon Road) added several new buildings to the campus, which was originally constructed in the Spanish style in the 1930s. These included a new auditorium (1956) and library (1958), both designed by Williams, Williams & Williams (extant). For a major expansion of the school commissioned in 1958, Wexler & Harrison, working with engineer Bernard Perlin, utilized a prefabricated steel construction system to reduce costs; the simple rectilinear shapes reinforced their Modern style. The system proved successful, and Wexler & Harrison used it in many schools. Other school facilities built to accommodate Palm Springs' growing population during the postwar era include Raymond Cree Middle School (1966, 1011 E. Vista Chino) by Donald Wexler; 1953 and 1958 additions to the Cahuilla Elementary School (833 E. Mesquite Avenue; demolished) by Wexler & Harrison (originally constructed in 1941 and designed Clark & Frey); and the Palm Springs Unified School Administration Building (1963, 333 S. Farrell Drive) by E. Stewart Williams.

<sup>759</sup> Per landscape historian Steven Keylon.

FINAL DRAFT – FOR CITY COUNCIL APPROVAL

City of Palm Springs

Citywide Historic Context Statement & Survey Findings

HISTORIC RESOURCES GROUP

Several churches and other institutional buildings were constructed in the city during this period. Temple Isaiah (commissioned in 1949, 332 W. Alejo Road; altered) by Williams, Williams & Williams accommodated a growing congregation. Clark & Frey's American Legion Post #519 (1948, 400 N. Belardo Road; HSPB-36) was a small building, but was as carefully designed using simple Modern forms as any of their work. The Palm Springs First Church of Christ Scientist (1957, 605 S. Riverside Drive) by Frey & Chambers used a collection of simple rose-tinted concrete block forms topped with gentle shed roofs. This interpretation of Modernism used simplicity and modern technological materials composed not on a strict grid, but with oblique angles. For the desert climate, direct sunlight was moderated in the main auditorium with small garden courts to filter the light. The design of St. Theresa Catholic Church (1968, 2800 E. Ramon Road) by William Cody demonstrated an expressionistic facet of his design ability. Here, Cody used thick concrete walls with a curved section to create a protected precinct; in the middle of it sat the sanctuary enclosed with glass walls, and topped by a sweeping pyramid echoing the curved section of the surrounding walls. Though modern in form and structure, the design leads the eye upward in a symbolic gesture in the same manner as traditional Gothic churches.

Other important institutions established during this period include the Moorten Botanical Gardens, which was founded in 1957 at the former Stephen H. Willard estate on South Palm Canyon Drive. Chester "Cactus Slim" Moorten, one of the original "Keystone Kops" in the Max Sennett film series, had settled in Palm Springs after contracting tuberculosis. He established a landscape sales, design, and contracting business, specializing in desert plants, in 1938. Two years later Moorten married Patricia Haliday, who had studied botany and horticulture at USC and UCLA. Together they designed and installed desert gardens for some of Palm Springs' most famous residents including Frank Sinatra, Bing Crosby, and Walt Disney. Disney also hired the Moortens to install cactus gardens in the Frontierland area of his new Anaheim amusement park. In the mid-1950s the Moortens purchased the Willard estate and in 1957 opened their botanical garden, with over 3,000 varieties of desert plants, a palm grove, and the world's first *Cactarium*.<sup>760</sup>

In 1958 the Palm Springs Desert Museum moved into its first permanent home, a new 10,000-square-foot building designed by E. Stewart Williams, and for the first time included galleries dedicated to fine arts.<sup>761</sup> The new museum was located on Tahquitz Canyon Way, just east of the Welwood Murray Memorial Library, on a parcel donated by Cornelia White in 1947. The museum building in fact wrapped around White's "Little House" of railroad ties, which had been relocated to the southwest corner of Tahquitz Canyon Way and Indian Canyon Drive in 1944.<sup>762</sup>

<sup>760</sup> Niemann, 149-150; and "Patricia Moorten Obituary," *The Desert Sun*, July 16-21, 2010, <https://obituaries.desertsun.com/obituaries/thedesertsun/obituary.aspx?n=patricia-moorten&pid=144092145> (accessed August 17, 2015).

<sup>761</sup> Palm Springs Art Museum, "About Us," <http://www.psmuseum.org/about-us/> (accessed August 2015). The museum, now the Palm Springs Art Museum, relocated to its current facility, also designed by Williams, in 1976. The old building was replaced with a commercial building.

<sup>762</sup> Niemann, 80, and Sanborn fire insurance maps, 1962.

## POST-WORLD WAR II CIVIC AND INSTITUTIONAL DEVELOPMENT (1945-1969): ELIGIBILITY

### Property Types: Civic or institutional building

Civic property types include city halls or other offices for public agencies, post offices, fire and police stations, schools, and libraries. Non-governmental institutional property types include churches, meeting halls, and buildings associated with social organizations. Example civic and institutional buildings in Palm Springs associated with this period include City Hall (1957, HSPB-33), Palm Springs International Airport (1966; front façade HSPB-70), American Legion Post #519 (1948, HSPB-36), and St. Theresa Catholic Church (1968).

### Applicable Eligibility Criteria

A civic or institutional property from this period may be eligible for historic designation under one or more of the following criteria:

CRITERIA	REASON
A/1/3 (Pattern of Development/Period) <sup>763</sup>	<p>As an excellent example of civic or institutional development from this period, representing the significant growth in Palm Springs following World War II.</p> <p><i>National Register Criteria Consideration A: Religious Properties</i></p> <p>Note that a religious property is eligible for listing in the National Register if it derives its primary significance from architectural or artistic distinction or historical importance.</p> <p>“A religious property requires justification on architectural, artistic, or historic grounds to avoid any appearance of judgment by government about the validity of any religion or belief. Historic significance for a religious property cannot be established on the merits of a religious doctrine, but rather, for architectural or artistic values or for important historic or cultural forces that the property represents. A religious property's significance under Criterion A, B, C, or D must be judged in purely secular terms. A religious group may, in some cases, be considered a cultural group whose activities are significant in areas broader than religious history.”<sup>764</sup></p>

<sup>763</sup> Note that eligibility criteria are listed in the standard format National Register/California Register/Local. Note that National Register/California Register Criterion A/1 can be applied to a single event important in history, or to an overall trend or pattern of development. The City of Palm Springs local ordinance distinguishes these into separate criteria – Criterion 1 applies to properties that are associated with a singular event; Criterion 3 applies to properties that “reflect or exemplify a particular period” in history.

<sup>764</sup> *National Register Bulletin 15.*

## FINAL DRAFT – FOR CITY COUNCIL APPROVAL

## City of Palm Springs

## Citywide Historic Context Statement & Survey Findings

### HISTORIC RESOURCES GROUP

CRITERIA	REASON
C/3/4,5 (Architecture)	As an excellent or rare example of an architectural style from the period, or as the work of a master builder, designer, artist, or architect. Additional information about architectural styles from each period and their associated character-defining features are outlined in the Architectural Styles section.

### Integrity Considerations

Each type of property depends on certain aspects of integrity to express its historic significance. Determining which of the aspects is most important to a particular property type requires an understanding of the property's significance and its essential physical features. The rarity of the property type should also be considered when assessing its physical integrity. In order to be eligible for listing at the federal, state, or local levels, a property must retain sufficient integrity to convey its historic significance under this theme.

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
A/1/3 (Pattern of Development/Period)	A property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s). <sup>765</sup> A civic or institutional property from this period eligible under Criteria A/1/3 should retain integrity of location, design, materials, feeling, and association, at a minimum, in order to reflect the important association with the city's civic and institutional development during this period.

<sup>765</sup> *National Register Bulletin 15.*

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
C/3/4,5 (Architecture)	A property important for illustrating a particular property type, architectural style or construction technique; or that represents the work of a master must retain most of the physical features that constitute that type, style, or technique. <sup>766</sup> A civic or institutional property significant under Criterion C/3/4,5 (Architecture) should retain integrity of design, workmanship, materials, and feeling, at a minimum, in order to be eligible for its architectural merit. A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.

#### **Post-World War II Civic & Institutional Development (1945-1969): Registration Requirements**

To be eligible under this theme, a property must:

- date from the period of significance; and
- reflect important civic or institutional development from the period; or
- represent an excellent example of an architectural style or property type; and
- display most of the character-defining features of the property type or style; and
- retain the essential aspects of historic integrity.

<sup>766</sup> *National Register Bulletin 15.*

**THEME: THE INFLUENCE OF THE ENTERTAINMENT INDUSTRY (1945-1969)**

Bob Hope, Frank Sinatra, and Dean Martin outside the Canyon Country Club. Photograph, 1963. Source: Los Angeles Public Library, Herald-Examiner Collection.

Palm Springs' popularity as a favorite destination for the entertainment industry continued after World War II and through the 1960s. A number of celebrities became intimately associated with the town and helped to promote its popularity and growth during this period. Among these the most prominent were Bob Hope, the town's first honorary mayor, and patron of the annual Bob Hope Golf Classic tournament (now the Humana Challenge) that has donated more than \$50 million for local nonprofits since its inception in 1960;<sup>767</sup> Frank Sinatra, whose "Rat Pack" image personified the city's post-war swank; and Dinah Shore, patron of the Colgate Dinah Shore Championship (now known as the ANA Inspiration Championship), the premier women's golf tournament and one of the Coachella Valley's biggest annual events.<sup>768</sup>

The Doll House (1032 N. Palm Canyon Drive; demolished) was an industry favorite for dinner, drinks, and dancing. It was opened in 1945 by Ethel and George L. Strebe, the brother of local theater owner Earle C. Strebe. Among the regulars who enjoyed the restaurant's famous steaks, icebox cake, and entertainment by the Guadalajara Boys were Marlene Dietrich, Doris Day, Ava Gardner and Frank Sinatra, Dick Haynes, Ida Lupino, Howard Hughes, Rosalind Russell, Elizabeth Taylor and Eddie Fisher, Jack Warner, and Daryl Zanuck. Joan Crawford once traded places with a look-alike waitress at the Doll

<sup>767</sup> Humana Challenge, "Quick Facts," *Humana Challenge*, <http://www.humanachallenge.com/Quick-Facts> (accessed January 23, 2015).

<sup>768</sup> Niemann, 166.

House, and singer Peggy Lee was allegedly “discovered” there.<sup>769</sup> The Doll House closed in 1959. In 1966 it was converted to an Italian restaurant, Sorrentino’s (a favorite of Frank Sinatra and Kirk Douglas) which closed in 2002.<sup>770</sup>

The Doll House. Source: *Palm Springs Life*, “Explore Palm Springs: Nightclubs Spruce up for 1950-51 Season.”

Several celebrities invested in Palm Springs businesses during this period. After purchasing his Old Las Palmas house in 1955 actor Alan Ladd opened a hardware store in partnership with local contractor Robert Higgins, a high school friend. The store was originally called HigginsLadd and was located at 533 South Palm Canyon Drive (demolished). Ladd himself frequently waited on customers there until his death in 1964. Ladd’s family maintained the store, later known as Alan Ladd Hardware, and in 1968 moved it to a purpose-built two-story building, the Alan Ladd Building (Kaptur-Lapham & Associates), at 500 S. Palm Canyon Drive.<sup>771</sup> The store closed in 2002 and the building, now called The 500, was remodeled in 2013.<sup>772</sup>

In 1961 Gene Autry, the “Singing Cowboy,” who had recently purchased the California Angels baseball team, bought the Holiday Inn at 4200 E. Palm Canyon Drive (altered) to house his players during spring training. Autry enlarged the hotel and changed its name first to Melody Ranch and then to the Gene Autry Hotel. Autry sold the hotel in 1992 and it was transformed into the Versailles-inspired Givenchy Spa Hotel. The Givenchy was purchased by talk show host Merv Griffin in 1998 and became the Merv Griffin Hotel and Givenchy Spa. Griffin sold the property in 2002 and in 2004 it reopened as the Parker Palm Springs.<sup>773</sup>

<sup>769</sup> Niemann, 252. See also Peter Moruzzi, *Palm Springs Holiday* (Layton, UT: Gibbs Smith, 2009), 106. There is a discrepancy in the accounts of Peggy Lee’s “discovery;” sources claim this occurred about 1941, yet current research indicates that the Doll House was opened in 1945.

<sup>770</sup> Niemann, 253.

<sup>771</sup> Morris Newman, “Modern Master: Architect Hugh Kaptur’s Designs Were among the Most Creative and Innovative of the Era,” *Palm Springs Life*, February 2014, <http://www.palmspringslife.com/Palm-Springs-Life/February-2014/Modern-Master/> (accessed January 27, 2015). The text does not mention the Alan Ladd building but it is included in accompanying photographs of Kaptur’s work. Sources disagree on whether the architect of the Ladd building was Kaptur or Lawrence Lapham.

<sup>772</sup> “The 500 Comes to Downtown Palm Springs,” *Coachella Valley News.com*, <http://www.coachellavalleynews.com/news-desk/the-500-comes-to-downtown-palm-springs> (accessed January 26, 2015).

In the postwar era, both Pearl McManus and Charlie Farrell expanded their respective tennis clubs. In 1947, Pearl McManus hired Paul R. Williams and A. Quincy Jones to remodel the Tennis Club (originally opened in 1938 at 701 W. Baristo Road), and design a new clubhouse and restaurant. The new buildings followed the irregular contours of the site, with angled glass walls looking over the rocky hillside and the swimming pool.<sup>774</sup> The original stone terraces were considered such an integral part of the club that Jones and Williams employed stacked-stone walls to continue the look inside the club. In 1948, soon after he was elected mayor of Palm Springs, Farrell hired Albert Frey to enlarge the Racquet Club with new bungalows.<sup>775</sup> Farrell became known as “Mr. Palm Springs” for his decades of work as a local businessman, city promoter, councilman, and mayor.<sup>776</sup>

<sup>775</sup> Colacello, 206.

<sup>776</sup> Niemann, 135.

As in the years before the Second World War, a number of celebrities built or purchased seasonal homes in Palm Springs in the post-war decades. While the established centrally-located neighborhoods of the Movie Colony and Old Las Palmas remained popular with the entertainment industry, in the late 1950s Vista Las Palmas, a tract of Mid-century Modern houses developed by the Alexander Construction Company immediately west of Old Las Palmas (Las Palmas Estates), began to attract celebrity residents. Other Palm Springs neighborhoods with celebrity residents included Deep Well Ranch Estates, the secluded Mesa neighborhood, Little Tuscany, and Smoke Tree Ranch. Walt Disney owned two homes at Smoke Tree Ranch (1800 South Sunrise Way), purchasing the first in 1948 and building the second in 1957. The ranch's multi-purpose room is named in his honor.<sup>777</sup> Among the most renowned celebrity homes in Palm Springs is Twin Palms (originally 1148 E. Alejo Road; now 1145 E. Via Colusa; HSPB-77), the estate of singer and actor Frank Sinatra.

<sup>777</sup> Johns, 250-251.

#### THE INFLUENCE OF THE ENTERTAINMENT INDUSTRY (1945-1969): ELIGIBILITY

##### **Property Types: Single-family Residence, Multi-family Residence, Commercial Building, Film Location, Historic District**

Starting in the early 20<sup>th</sup> century, Palm Springs was a get-away for members of the entertainment industry; this was a trend that continued after the war. Properties significant under this theme include residents and commercial establishments with specific associations with the entertainment community.

##### **Applicable Eligibility Criteria**

A property or district may be eligible for historic designation under one or more of the following criteria:

CRITERIA	REASON
A/1/1,3 (Pattern of Development/Event/Period) <sup>778</sup>	Commercial properties may be eligible under this theme for representing a known association with the Hollywood social scene. Film locations may be eligible as the site of an iconic motion picture or television production (Criterion A/1/1).
B/2/2 (Person)	<p>For its association with an important person(s) in the entertainment industry. Properties eligible under this criterion are typically those associated with a person's productive life, reflecting the time period when he or she achieved significance. Properties associated with living persons are usually not eligible for landmark designation. Sufficient time must have elapsed to assess both the person's field of endeavor and his or her contribution to that field. Note that many residences in Palm Springs significant for an association with a person in the entertainment industry are likely second homes.</p> <p>Eligibility under Criterion B for listing in the National Register of Historic Places requires that:</p> <p>"Each property associated with an important individual should be compared to other associated properties to identify those that best represent the person's historic contributions. The best representatives usually are properties associated with the person's adult or productive life. Properties associated with an individual's formative or later years may also qualify if it can be demonstrated</p>

<sup>778</sup> Note that eligibility criteria are listed in the standard format National Register/California Register/Local. Note that National Register/California Register Criterion A/1 can be applied to a single event important in history, or to an overall trend or pattern of development. The City of Palm Springs local ordinance distinguishes these into separate criteria – Criterion 1 applies to properties that are associated with a singular event; Criterion 3 applies to properties that "reflect or exemplify a particular period" in history.

CRITERIA	REASON
	<p>that the person's activities during this period were historically significant or if no properties from the person's productive years survives. Length of association is an important factor when assessing several properties with similar associations. A community or State may contain several properties eligible for associations with the same important person, if each represents a different aspect of the person's productive life.”<sup>779</sup></p> <p>Note that many of these properties may not be visible from the public right-of-way. For survey purposes, these properties have been flagged and assigned a status code indicating that additional evaluation is needed due to lack of visibility.</p>
A/1/6 (District)	A collection of residences associated with members of the entertainment industry that are linked geographically may be eligible as a historic district. Residences eligible under this theme will likely contribute to historic districts that are significant under other contexts and themes; an association with members of the entertainment industry represents one layer of an area's history.

### Integrity Considerations

Each type of property depends on certain aspects of integrity to express its historic significance. Determining which of the aspects is most important to a particular property type requires an understanding of the property's significance and its essential physical features. The rarity of the property type should also be considered when assessing its physical integrity. In order to be eligible for listing at the federal, state, or local levels, a property must retain sufficient integrity to convey its historic significance under this theme.

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
A/1/1,3 (Pattern of Development/Event/Period)	A property under this theme eligible under Criteria A/1/1,3 should retain integrity of location, design, feeling, and association.

<sup>779</sup> *National Register Bulletin 15*, Section VI: How to Apply the National Register Criteria for Evaluation.”

CRITERIA	REQUIRED ASPECTS OF HISTORIC INTEGRITY
B/2/2 (Person)	A residential property significant under Criterion B/2/2 (Person) should retain integrity of location, design, workmanship, and feeling, at a minimum, in order to convey the historic association with a significant person.
A/1/6 (District)	In order for a historic district to be eligible for designation, the majority of the components that add to the district's historic character must possess integrity, as must the district as a whole. A contributing property must retain integrity of location, design, setting, feeling, and association to adequately convey the significance of the historic district. Eligible historic districts may span several periods of development.

#### **The Influence of the Entertainment Industry (1945-1969): Registration Requirements**

To be eligible under this theme, a property must:

- date from the period of significance; and
- represent a known association with an important person or persons in the entertainment industry; for commercial properties, represent a known association with the Hollywood social scene in Palm Springs; a film location must represent an iconic location; and
- display most of the character-defining features of the property type or style; and
- retain the essential aspects of historic integrity.

To be eligible under this theme, a historic district must:

- retain a majority of the contributors dating from the period of significance; and
- retain a majority of the contributors with a known association with members of the entertainment industry; and
- retain the essential aspects of historic integrity.

## Context: Ethnic Minorities in Palm Springs

FINAL DRAFT – FOR CITY COUNCIL APPROVAL

City of Palm Springs

Citywide Historic Context Statement & Survey Findings

HISTORIC RESOURCES GROUP

## CONTEXT: ETHNIC MINORITIES IN PALM SPRINGS

### Introduction

This context about minority populations in Palm Springs was developed after the completion of the Draft Palm Springs Historic Context and Survey Update in 2016. It is meant to provide additional information about development patterns associated with people of color who lived and worked in Palm Springs. There is some overlap in the discussion of residential developments included in the main context narrative and in this chapter; the information contained here provides an additional layer of history for those areas.

### Overview

The natural wonders and favorable climate of Palm Springs lured people from varied backgrounds. In an undated manuscript (c. late 1880s), African American social reformer, abolitionist, writer, and statesman Frederick Douglass (1818-1895) visited none other than Dr. Welwood Murray, and recalled:

With the pleasant memories of the happy day spent in the Palm Canyon lulling me to sleep early in the evening ... I forgot fatigue and awoke refreshed. ... The delightful sunny atmosphere made it possible for a resident of a cold climate to remain in doors. There were trees to examine, green plants to collect. Flowers to put in the press before the welcome noonday bell called the family to enjoy the cooking of the China man [sic] presiding in the kitchen. So the work of the Indian is the laundry, who made the table linens, and that of the Irish maiden from the far-distant Massachusetts in the dining room – what else was there to desire? On the arrival of the daily mail, letters from home and the newspapers interested the residents whether they hailed from Mexico or Oregon. Racking coughs were forgotten for a time at least and life seemed worth living. At breakfast the following morning, Dr. Murray notified us that he was prepared to drive to the foot of another canyon. By lessening the walk over the arid plain he deemed the ascent easy for us.<sup>780</sup>

*Frederick Douglass, "Palm Canyon"*

Throughout the document, Douglass recounts visits to Native American homes and expresses fascination with the desert flora and fauna. Indeed, the beauty, health benefits, and topography of Palm Springs transcended the interest of any one community and, ultimately, the desert became home to a diverse population of residents.

This context maps the key social and economic drivers for communities of color and the subsequent patterns of development that emerged in the City of Palm Springs. What follows is an exploration of the residential, institutional, and commercial development patterns associated with the communities of

<sup>780</sup> Frederick Douglass, "Palm Canyon," Washington D.C., Library of Congress, 7-8.

color other than the Native American population. While the social and cultural development of African American, Latino, Chinese, Japanese, and Filipino communities are inextricably linked with the Agua Caliente Band of Cahuilla Indians, the purposeful focus here is to document the non-Native American historic context to aid with the identification of potential historic resources.

**THEME: RESIDENTIAL DEVELOPMENT ASSOCIATED WITH ETHNIC MINORITIES (c. 1900-1969)**

Residential development patterns for the communities of color in the City of Palm Springs are unique and differentiated from other established patterns of development in the village. The discussion begins with an examination of their role in the resort industry, migration and the growth of Section 14, the period of urban renewal and dispersion, and ends with the period of community outreach and housing development.

**Residential development associated with Resort Industry workers, 1900-1930**

Whether it was constructing the buildings and infrastructure or filling the service jobs that kept the resorts humming, the Latino, African American, Chinese, Japanese, and Filipino residents of Palm Springs served as the backbone of the resort industry at the beginning of the 20<sup>th</sup> century.

Chinese Cook at the Desert Inn c. 1930.  
Source: Palm Springs Historical Society.

The earliest non-Native American people of color to reside in Palm Springs were closely tied to the city pioneers. In the 1910 U.S. Census, two Chinese cooks, Sin Ham Chin and Yan Lee, are enumerated as part of Nellie Coffman's "sanitarium" staff. The township also counted four male Japanese residents: two were servants working and living in the homes of private families, and two were farm laborers.<sup>781</sup> Although no Latinos or African Americans were enumerated in the 1910 Census for Palm Springs, the greater San Geronio township was home to many Latinos who worked either for the railroad or as day laborers. Latinos became the laborers of choice for the railroads after restrictions on Chinese immigration were imposed.

<sup>781</sup> Because of the seasonal nature of the Palm Springs community, census data can be skewed. The 1910 U.S. Census was taken in Palm Springs in April and as such, reflects the presence of some 20 lodgers at Coffman's.

During the Mexican Revolution (c. 1910-1920), many families left Mexico for the Coachella Valley. According to author and archivist for the Palm Springs Historical Society, Renee Brown "...the first Mexican families in Palm Springs came to work on the construction of the road that climbed up the mountain behind the Desert Inn."<sup>782</sup> These workers set up tents on the area presently occupied by the O'Donnell Golf course.

By the 1920 census, Nellie Coffman's staff had grown. She now employed five Chinese (two cooks, a servant, and two gardeners) and the first enumerated African American resident, Augustina Williams, who was also a cook. Although the census taker for the 1920 roll did not identify addresses associated with residents, it appears that at least one Latino family and one Japanese family lived side by side with the Caucasians. They included Ernesto Palico, a cement mason, his wife Adela and their three sons. Also enumerated were J. Fujimoto and his wife, living with his business partner Rokichi Kowase and his wife, and Fusarichi Yamasaki, all involved in "market gardening."<sup>783</sup>

The 1920 Census also enumerates dozens of "Palm Springs Mission Indians," which included 60 individuals of Mexican heritage. Although it is not known from the data exactly where these people lived, they may have been among the first non-white, non-Native American residents of Section 14. Nevertheless, it is the first evidence of the development pattern of Native Americans and Latinos sharing a residential community. On June 30, 1925, the first known Mexican American infant, Pasqual Quiroz (1925-2014), was born to parents living in the makeshift structures in the early tent community near the Desert Inn.<sup>784</sup> Latinos were predominantly employed as laborers helping to construct the many new buildings in the village.

<sup>782</sup> Renee Brown, "The History of Mexican Families in the Coachella Valley," *The Desert Sun*, April 20, 2017.

<sup>783</sup> U.S. Census, 1920.

<sup>784</sup> Renee Brown, "The History of Mexican Families in the Coachella Valley," *The Desert Sun*, April 20, 2017.

L: This image was taken in front of the Desert Inn on the northwest corner of Tahquitz Drive and North Palm Canyon Drive. The building visible in the background is part of the Desert Inn that housed Filipino employees and became known as Manila. Source: Palm Springs Historical Society. R: Looking eastward at the Desert Inn showing employee dorms at rear. Source: Los Angeles Public Library.

During this period, the resorts employed large numbers of people of color, especially Asian men. In 1930, five Korean men (porters), 12 Chinese men (kitchen help), and 17 Filipinos (in a variety of service positions) were employed at the Desert Inn. The Oasis Hotel also employed several Filipinos, as did the El Mirador.<sup>785</sup> All three hotels provided housing for their employees. Employee dorms at the El Mirador were located on the southeast corner of Indian Avenue and Tachevah Drive in two separate buildings. At the Desert Inn, a number of small buildings were used to house employees, with one group designated especially for women.<sup>786</sup> One building at the Desert Inn became known as “Manila” due to the large number of Filipino residents.<sup>787</sup> The Oasis Hotel provided housing away from the resort itself in four buildings located on the east side of present-day S. Cahuilla Road between E. Tahquitz Canyon Way and W. Arenas Road.<sup>788</sup> None of these structures are extant.

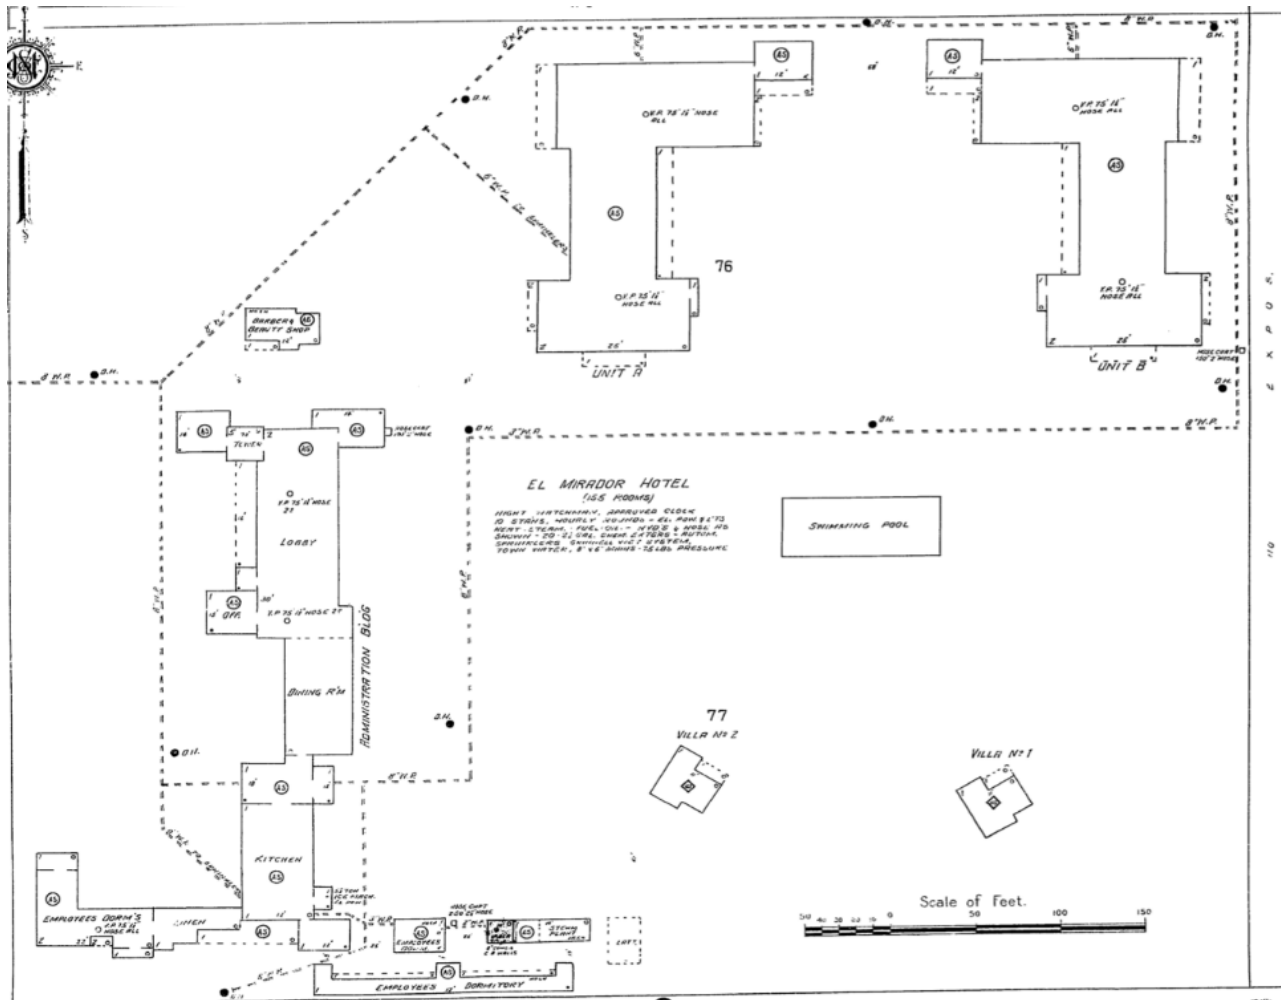

By the 1930s, the village was becoming more popular than ever as a resort destination. New hotels, restaurants, nightclubs and support services were on the rise and vacation homes in the city were increasing in popularity. Job opportunities in the service and construction industries were plentiful in Palm Springs and a steady stream of people arrived to fill those positions. Those not associated with the larger resorts with employee housing had to find convenient and affordable places to live.

<sup>785</sup> Filipinos first migrated to the Riverside area circa 1910 as agricultural labor.

<sup>786</sup> Sanborn Fire Insurance Maps, 1929.

1929 Sanborn Map of the El Mirador Hotel shows employee dorms adjacent to kitchen. Source: 1929 Sanborn Map of Palm Springs, 1.

During the 1930s, while resort life was in full swing, new development patterns also began to emerge. Taken in April, the 1930 Census reflects both the presence of minorities employed by the hotels, along with those working in households of wealthy village residents. The census shows that African Americans were employed as housemen, chauffeurs, cooks, and maids; Latinos continued to work as gardeners or construction laborers; and a small group of Japanese continued agricultural pursuits typically operating small truck farms.

#### **The Growth of Section 14, 1931-1950**

People in Texas thought of California as a dream state where you could go into your backyard and just pick dollar bills off the tree.

*Ivy Pellum Wilson, on her family's migration to Palm Springs in 1943*

During the Great Depression, when people were out of work with virtually no job prospects, many African Americans from the south and the Dust Bowl migrated westward. Fueled by vacationers from the Depression-proof entertainment industry, Palm Springs was one of the few places where there was opportunity for low-skilled workers. As a result, more people of color came to Palm Springs during this period. Unlike the three main resorts that offered dormitory living for their employees, many newcomers had no choice other than to settle on centrally located Section 14, where they could rent land from the Agua Caliente Band of Cahuilla Indians. Rental opportunities off the reservation were not offered and deed restrictions prevented the purchase of land.

Officially, Section 14 was the one square mile section bounded by Alejo Road on the north, Ramon Road on the south, Sunrise Way on the east, and Indian Canyon Avenue on the west. It was one of 51 sections of 640 acres each that belonged to the Agua Caliente Band of Cahuilla Indians under the Mission Indian Act passed by Congress in 1891. Without transportation infrastructure in the city, Section 14 was one of the only places open to settlement for people of color which provided easy proximity to jobs. The Bureau of Indian Affairs restricted the terms Native Americans could lease their plots to just five years — effectively restricting any long-term investment.

**FINAL DRAFT – FOR CITY COUNCIL APPROVAL**

**City of Palm Springs**

**Citywide Historic Context Statement & Survey Findings**

**HISTORIC RESOURCES GROUP**

Section 14 was devoid of the infrastructure and services of the city proper. Water and electricity service were limited, and natural gas service was non-existent. There were no sewers, trash pickup, or fire protection, and there were no paved roads through Section 14. The area had no formal planning. The structures built by the lessees varied in value and amenities and were scattered haphazardly across the acreage. Some residents built homes of brick, wood, or cinder blocks. Many of these homes were simple, vernacular structures that improved as money and means became available. Structure valuations in the Census ranged from as little as \$100 to as much as \$4,000.<sup>789</sup> Trailers were also commonplace. Some residents offered rooms for short-<sup>790</sup> or long-term rental.<sup>791</sup>

Ortega Home on Section 14 land built by Merced Ortega, c. 1930. Source: Palm Springs Historical Society, "We Were Here Too," 63.

A large number of Latino families moved to Section 14 in the 1930s.<sup>792</sup> Initially, they lived in tents; however, families soon began helping one another construct homes.<sup>793</sup> Many of the men were carpenters, stone-masons, or part of the construction trades. As described in *We Were Here, Too*, written by the surviving members of the early Latino community, "stick by stick, nail by nail..." they built houses.<sup>794</sup> The houses were iterative, vernacular dwellings that evolved with means and opportunity. One of the many builders, Merced Rosario Ortega (1880-1958), was a carpenter and adobe builder who found a lot of work in Palm Springs. His work was published in *Sunset* magazine in 1930. Friends and family on Section 14 asked Ortega to help them erect dwellings. By the late 1930s, a number of Latino family homes were constructed along a footpath south of unpaved Arenas and El Segundo Roads. The Julian Reyes house on Section 14 initially had a dirt floor and a palm-frond roof.<sup>795</sup> Early important

<sup>789</sup> U.S. Census 1940, "Palm Springs Section 14."

<sup>790</sup> In his oral history, former Section 14 resident Charles Jordan recalled how Louis Armstrong and his band mates had rented rooms from his aunt during a gig at one of the hotels. The many entertainers of color that frequented the resorts were not permitted to stay in the hotels.

City of Palm Springs

Citywide Historic Context Statement & Survey Findings

HISTORIC RESOURCES GROUP

A 1937 survey by the U.S. Department of the Interior concluded that approximately 1,000 buildings, shacks and tent houses occupied half of Section 14.<sup>796</sup> It can be assumed that the presence of seasonal workers added even more to that figure.<sup>797</sup> With no organized planning or zoning, buildings evolved organically on the property. The *Desert Sun* described the phenomenon as being laid out in a “haphazard” or “crazy-quilt” manner.<sup>798</sup> Other small pockets of Mexican residents included those who resided at a ranch on Ramon Road where the Desert Inn kept their horses.<sup>799</sup> Trailer camps were also present on Sections 22 and 26.

1940 Topographic map of Section 14 depicts a fraction of the structures located on the Agua Caliente Indian Reservation but shows concentration of residents on the western portion of the acreage. Note misspelling of Ramon Road as “Roman Road.” Source: U.S. Geological Survey, 1940.

<sup>799</sup> Barbara Eves, Cydronia Valdez and Vera Wall, “We Were Here, Too,” (Palm Springs, CA: Palm Springs Historical Society), 78.

During the 1930s, two leaders within the community, Refugio Salazar, a native of Mexico, and Lawrence L. Crossley, an African American, attempted to establish alternatives to Section 14 living.

The Louisiana-born Lawrence L. Crossley (1899-1962) came to Palm Springs in 1925 and worked for Prescott T. Stevens, owner of the El Mirador Hotel. Back in New Orleans, Crossley had been a musician and was “well-known in golf circles.” Crossley worked his way up from chauffeur to help Stevens design and maintain the El Mirador’s golf course during the 1920s. During the late 1930s, Crossley also built a small café (run by Mexico-born Marcus Caro) with rooms for rent on Section 14.<sup>800</sup> In the early 1940s, Crossley began marketing a “mystery tea” using an ephedra-based Native American recipe.<sup>801</sup> The Palm Springs Desert Tea Co. was a success and Crossley’s tea was sold as far away as the East Coast.<sup>802</sup>

Crossley’s business acumen was also on display in his role as the owner/watermaster of the Whitewater Mutual Water Co. (which served the north end of Palm Springs), and his ownership of the Tramview Water Co. He parlayed those investments into real estate development in Cathedral City including the Tramview Village and Eagle Canyon Trailer Village. Crossley was an advocate for better housing for Palm Springs’ African American community and was publicly acknowledged for his efforts in the early 1960s by the *Los Angeles Sentinel*.<sup>803</sup> Crossley, “a long-time confidant of the tribe,” also assisted in the development of Native American lands and was appointed as guardian for ten members of the Agua Caliente Band of Cahuilla Indians. At the marriage of his daughter Yvonne in 1953, Crossley and his wife Martha were acknowledged as one of the southland’s “distinguished families.”<sup>804</sup> Crossley died suddenly of a heart attack at the age of 62. Former Palm Springs City Council member Wally Waring paid tribute to Crossley in *The Desert Sun* for “his steadfast work for the good of the city.”<sup>805</sup>

During the early 1930s, Lawrence Crossley acquired approximately five acres of land south of Section 14, near the southwest corner of East Ramon Road and South Sunrise Way. This would become Crossley Court (a.k.a, Crossley Acres and Crossley Trailer Park). It is the first known example of land ownership by an African American in Palm Springs.

Prior to 1936, Crossley erected a house for himself and his extended family at 1543 East Ramon Road (not extant) valued at \$4,000. Over time he invited others to lease and build on the land, ultimately forming a compound. Various newspaper accounts alternately refer to the property as the “Crossley Trailer Court,” “Crossley Acres,”<sup>806</sup> and “Crossley Court.” In 1939, Albert Gauff, Crossley’s African American brother-in-law, received a building permit for a \$300 residence at the same address. In 1938,

another African American from Crossley's home state of Louisiana, Robert Rieux, received a permit to build a residence there for his family, as did Hewitt Crossley, for \$500 and \$300, respectively.<sup>807</sup> These structures may have been *ramadas* for trailers. Another Crossley brother-in-law, Lloyd Gauff, built at 1571 E. Ramon Road (not extant). The 1940 Census indicates that several Latino families lived in the compound and a U.S. Geological Service Map from the same year suggests as many as 15 structures were located there. By 1953, 37 homes had been erected on Crossley's acreage.<sup>808</sup>

In September of 1953, Lawrence Crossley sold the five-acre compound to the adjacent Ramon Trailer Park and simultaneously announced plans for "...a new subdivision two miles east of the city and a mile south of Ramon Road."<sup>809</sup>

<sup>809</sup> "Land Deal to Ease Housing Situation," *The Desert Sun*, September 14, 1953.

Refugio “Cuco” Salazar (1907-1962)<sup>810</sup> arrived in Palm Springs in the early 1920s and built a gardening and landscape business. He married his wife Grace in the mid-1920s and rose to prominence within the Latino community, becoming president of the Mexican Colony association in 1938.<sup>811</sup> In 1942, he became the owner/operator of the Pioneer Club at 178 East Andreas Road (not extant). The Pioneer Club offered food, beer and wine. It was closed by the city in 1948 citing a continuing “police problem.”<sup>812</sup>

After the closing of the Pioneer Club, Salazar returned to gardening and landscape design. Salazar lived at 1523 Ramon Road (not extant) well into the 1950s. In 1962, Salazar was killed tragically by a hit and run driver on Christmas Eve. At the time of his passing he was living at 226. S. Indian Avenue (not extant).

In August of 1938, Salazar led a movement to establish a colony of homes for Latino residents “on a 20-acre tract a short distance north of Ramon Road and about three-quarters of a mile east of the high school.”<sup>813</sup> Salazar had an option on the land and Latinos could finance their own homes. However, they needed a loan of about \$3,000 to bring water and other utilities to the property. According to *The Desert Sun*, 27 “Mexican” families from Section 14 or on the Crossley Acres property “declared they wish to build on the new tract.”<sup>814</sup> It appears that the money was never secured, as the 1940 Census shows several members of the Salazar family living on the Crossley property in the 1500 block of Ramon Road.

<sup>810</sup> Rudy Salazar, his brother, was also a notable early resident of Palm Springs involved in landscaping.

By the 1940s, there was a small number of Asian American residents in Palm Springs, most of whom did not live on Section 14. By 1940, residents included a Filipino community of fewer than 100 people,<sup>815</sup> the vast majority of whom were employed and residing at either the Desert Inn or El Mirador. Filipinos were also employed as servants for the village's wealthy residents and typically resided with them. One of the few Filipino families with other living arrangements was the family of Emilio Hilario, who resided at the Crossley Court on Ramon Road. Approximately 15 Chinese Americans were enumerated in the 1940 Census, most of whom were chefs or kitchen workers in the resorts. Two well-known chefs include D.S. Yee who started at the Desert Inn in 1921 and worked there for over 30 years while living on site;<sup>816</sup> and Frank Li, of the Cantonese Kitchen at the Hotel Luau in 1940.<sup>817</sup> The prewar Japanese community in Palm Springs was never very large and was composed primarily of domestic servants who resided with their employers. However, based on city directory information, the few Japanese businesses likely included living quarters at the rear, as was a common custom of the time.

World War II transformed Palm Springs from a tourist haven to the army headquarters for the North African Offensive, bringing army personnel and exacerbating the need for low cost housing. Nurses were housed at the hospital; however, there was no place for over 1,100 officers, soldiers, and civilian employees.<sup>818</sup> Between 1940 and 1950, the year-round population of Palm Springs increased 123 percent from 3,334 to 7,660, with a typical winter population of about 16,000 during the season.<sup>819</sup> By 1948, it was estimated that over 6,000 individuals lived on the reservation.<sup>820</sup> Only 50 were members from the Agua Caliente Band of Cahuilla Indians, the rest were African Americans, Latinos, and some Caucasians.

Filipinos continued to migrate to Palm Springs after the war, as was the case for Santos de Jesus (1902-1995). De Jesus and his wife arrived in the city in 1946, where he became a renowned bartender at the Palm Springs Tennis Club. After two years, he rose to catering manager. He left in 1950 to open his own catering business — first on Indian Avenue — and then in the Sun Center on South Palm Canyon Drive. Santos rose to the top in the local catering industry and was the caterer of choice for local society and the Hollywood elite. He was an active member in the philanthropic 100 Club.<sup>821</sup>

After World War II, overcrowding, its proximity to downtown, and rising land values raised the profile of Section 14 within the community — ushering in a new era for Palm Springs' communities of color.

### Urban Renewal, Displacement, and Dispersion, 1951-1966

The opportunities were [in the] west....We moved to a reservation...a real reservation. Because in Palm Springs there weren't many places for people of color: Mexicans, Native Americans and Blacks. We either had to live on the reservation or there was a piece of land called Crossley Tract. The majority of us lived on the Indian reservation....No mansion could have given me what I got off the reservation. The experience of people coming together and really making a community. The village concept really worked for us.<sup>822</sup>

*Charles Jordan Oral Interview, 2001*

Against the national backdrop of the civil rights movement, strained race relations, and urban renewal programs, a local movement to expand development and clean-up the Section 14 took hold. By this time, there was a wide range of structures in Section 14, from shacks to trailers to homes built in compliance with the standard building code. However, the lack of utilities remained a problem; one report cited as many as 17 families hooked up to a single electricity meter.<sup>823</sup> The lack of natural gas service meant that most families resorted to butane for cooking and heating. Water remained a significant challenge and privies were commonplace. Those living in shanties or trailers could use communal shower and restroom facilities at the center of Section 14.<sup>824</sup>

FINAL DRAFT – FOR CITY COUNCIL APPROVAL

**City of Palm Springs**

**Citywide Historic Context Statement & Survey Findings**

HISTORIC RESOURCES GROUP

In 1951, the Bureau of Indian Affairs approved a city abatement program and eviction notices were served to the residents of Section 14. In her oral history, former Section 14 resident Ivy Pellum Wilson remembers city officials meeting with the residents and telling them of their plans to redevelop the area.<sup>825</sup> Some families elected to move before they were forced to leave.

In June of 1951, Palm Springs Councilman Jerry Nathanson suggested the partially occupied veterans housing project on the Field Club grounds known as Lienau Village be rented to Section 14 residents whose homes had been condemned; however, Nathanson's plan never came to fruition. Even African American veterans were refused as renters at Lienau Village, resulting in a lawsuit by the National Association for the Advancement of Colored People (NAACP). After many delays, the Palm Springs Housing Authority cut ties with the State Housing Board and moved to dismantle and sell the buildings at Lienau Village. The final buildings were removed from Lienau Village during the summer of 1957.<sup>826</sup>

After receiving numerous complaints from employers and residents, a six-month moratorium on evictions was imposed in 1953. Inexplicably, building continued in Section 14 as evidenced by the case of Homer Manning, a janitor who rented a piece of land and constructed a home in 1955 that he later converted into a two-unit apartment building with a city permit valued at \$8,000.<sup>827</sup>

Most displaced African American residents from Section 14 moved to Banning, Beaumont, or West Garnet (about 10 miles west of Palm Springs). At least one former Section 14 resident moved her house from the reservation to a lot in West Garnet. Displaced residents often maintained their construction or service jobs in Palm Springs and made the daily commute.

Displaced Latino residents moved to Banning, San Bernardino, and Riverside. At least 32 Latino families saved for a down payment or pooled their resources and bought homes in the Veteran's Tract on the eastern edge of the city; others moved to the Dream Homes development in Cathedral City.<sup>828</sup> Racial restrictions, however, prohibited purchase by African Americans in these tracts.<sup>829</sup> Some Latinos physically moved their homes to other locations. Eugene Ramon Prieto recalled that his grandfather moved their home from Section 14 to the northwest corner of Saturnino Road and South Calle Encilia (not extant).<sup>830</sup>

<sup>830</sup> Interview with Eugene Ramon Prieto, Renee Brown, November 13, 2012.

L: Some Section 14 residents were able to relocate their houses to other locations. Source: Palm Springs Historical Society. R: Bulldozed house in Section 14 as shown in the *The Desert Sun*, March 14, 1966.

Residents who remained on Section 14 endured more than a decade of forced removals and clearances. Destruction of the condemned homes began in 1956. Evicted families were often taken in by other residents of Section 14, resulting in the doubling and tripling of occupants in the houses left on the reservation. The 1959 ruling that Native American land could be available for long-term leasing made Section 14 development opportunities even more attractive. By 1961, the population of Section 14 had decreased to around 1,000 residents.<sup>831</sup> Clearance activities continued during the early 1960s. The final clearance of Section 14 began in October of 1966, approximately one month after the Watts Riots in Los Angeles, a watershed event in race relations felt throughout the country. What had been a tightly-knit, racially-diverse community for more than 30 years was now scattered throughout the valley area.

The Palm Springs Filipino community was affected by the housing crisis as well. When resorts closed that provided housing for workers, many relocated to Banning or Cathedral City; those with means relocated to the tracts on the east side of the city.

Savvy businessmen, including Lawrence Crossley, anticipated the need for low-income housing and began developing residential tracts outside the Palm Springs city limits starting in the 1950s. However, a dearth of financial institutions willing to lend to people of color made the transition difficult. These

<sup>831</sup> Population estimates vary depending upon source material. Sources suggest as many as 1,700 families were left and as few as 500 remained.

tracts (Crossley Gardens, Desert Highland Estates, and Gateway Estates) would eventually become part of the City of Palm Springs through the annexation process.

#### The Crossley Tract (a.k.a., Crossley Gardens and Crossley Estates)

Concurrent with the sale of the Crossley Court acreage, Lawrence Crossley announced the subdivision of a new tract two miles east of Palm Springs and one mile south of Ramon Road in what was then Cathedral City. It was a 77-parcel subdivision bordered by 34<sup>th</sup> Avenue on the north, Martha Street on the south, the east side of Maguerite Street on the east, and the west side of Lawrence Street on the west.

The new subdivision would accommodate the displaced tenants of Crossley Court. Original plans called for 32 of the 37 homes from the Ramon acreage to be relocated to the new subdivision of 79 lots.<sup>832</sup> Crossley also purchased one building from Lineau Village to “provide sufficient living space for seven families.”<sup>833</sup> The Lineau Village building burned down in 1956 shortly after its relocation to the Crossley tract.

Crossley appears to have developed a partnership with the Sun-Spa Development Corporation. President of Sun-Spa Development, Al Casey, explained, “We’re particularly interested in providing immediate, low-cost housing for residents forced to move from Section 14 because of the new Indian Land Leasing Agreements.”<sup>834</sup>

Lawrence and Martha Crossley take possession of the keys to their home at 34-321 Lawrence Street. Source: *The Desert Sun*, September 19, 1958.

The Crossley Tract (which is also referenced in early press as Crossley Estates and later Crossley Gardens) consisted of a series of modest, three-bedroom, two-and-a-half-bath Minimal Traditional Style homes. Grading began in spring of 1958 and the first home was ready for occupancy by September.

<sup>832</sup> It is currently unknown how many buildings may have been moved to the Crossley Tract.

<sup>833</sup> “Land Deal to Ease Housing Situation,” *The Desert Sun*, September 14, 1953.

<sup>834</sup> “Low Cost Housing Project Announced East of Village,” *The Desert Sun*, March 27, 1958.

Amenities included paved streets, natural gas, and school bus service — all services not available at Section 14. The homes were built to F.H.A. Standards and available for down payments of \$50 with monthly payments of \$65. Ads from the period suggest that buyers were allowed to pick their lots as well as the plan. A model home was located at 34-126 Lawrence Street.<sup>835</sup> Lawrence and Martha Crossley lived at 34-321 Lawrence Street.<sup>836</sup>

In 1959, the Crossley Tract was annexed into the City of Palm Springs.<sup>837</sup> By 1961, approximately 30 homes had been built in the tract.<sup>838</sup> The project faltered after Crossley's untimely death in 1962. In late January of 1969, Crossley Gardens was hit by a flash flood that buried the tract's homes in several feet of mud and caused more than \$145,000 in residential damages and \$2.8 million in damages to the Whitewater Flood Control Channel.<sup>839</sup>

### Desert Highland Estates

Desert Highland Estates was a 281-parcel subdivision bordered by Tramview Road on the north, Las Vegas Road (present-day Rosa Parks Road) on the south, Indian Canyon Avenue on the east, and the west side of Avenida Cerca on the west. At the time of its development in 1951, the tract was outside the Palm Springs city limits. After the final evictions and razing of Section 14 in 1963, the newly displaced families often turned to friends and residents in Desert Highland Estates to take them in. Nearby Gateway Estates also became a relocation destination.

Originally subdivided by Mary Jacobs and Lilian E. Broudy, the plan of the subdivision was designed as a series of concentric ovals bisected by Granada Avenue. The majority of the parcels were 75' x 100' with irregular parcels slightly larger. The development was not an immediate success and many parcels remained undeveloped well into the early 1970s.<sup>840</sup> Newspaper accounts from the early 1960s indicate that well-known Palm Springs contractor and City Councilman Leonard Wolf may have been interested in developing homes for people of color in this area.<sup>841</sup>

For African Americans evicted from Section 14, Desert Highland Estates became the favored residential development.<sup>842</sup> In his oral history, Billy Pellum remembered a developer, Harmony Homes, who built homes for those residents, "You would buy the property and they would use the property for a loan to build the house...and then once built you were only paying about \$60 per month...You were doubling or more what it cost you to live per month at Section 14."<sup>843</sup> Banning-based Dunes (a.k.a., Dumes)<sup>844</sup> Construction Co. was the local builder of New York-headquartered Harmony Homes. Dunes Construction Co. was founded in 1958 by Gerald V. Anderson and James C. Armstrong. The company specialized in the construction of homes for working class people and built 600 residences in Riverside, San Bernardino, and Imperial Counties. The company built from a roster of simple standardized plans and plain styles.<sup>845</sup> Dunes Construction Co. also arranged for loans for many African American families through San Gregornio Bank in Banning and Sterling Savings and Loan in Riverside.<sup>846</sup> Palm Springs financial institutions would not lend to African Americans at the time.

A 1958 ad for the company in the *Desert Sun* depicted a minimal, pared-down Modern design with two-bedrooms and a carport for \$3,995.<sup>847</sup> A 1959 ad touted standard features such as aluminum windows, Birch cabinets, central hall plan, and white rock roof.<sup>848</sup>

<sup>847</sup> Advertisement, *The Desert Sun*, May 1, 1958.

<sup>848</sup> Advertisement, *The Desert Sun*, January 16, 1959.

### Gateway Estates

Gateway Estates was a 76-parcel, irregularly-shaped tract bordered by parcels to the north of Las Vegas Road on the north, a series of cul-de-sacs south of Gateway Drive on the south, Eastlake Road to the east, and Video Road to the west. F.H.A. and G.I. financing packages were available for these homes and the sales office was located at 3500 N. Palm Canyon Drive. By mid-1960, 22 permits for homes on Juan Circle, Gateway Drive, Juanita Circle, Ashley Circle, and Gladys Circle had been issued.<sup>849</sup>

Gateway Estates touted its proximity to the new Aerial Tramway. Source: "Display Ad 132," *Los Angeles Times*, January 14, 1962, D16.

In September of 1966, the City of Palm Springs annexed the "Desert Highlands" neighborhood.<sup>850</sup> The move added 1,200 residents, many of whom were African Americans evicted from Section 14.<sup>851</sup> By 1984, the "Desert Highland-Gateway Estates" neighborhood had become the heart of the African American residential community in Palm Springs.<sup>852</sup>

### Silver Top Apartments

Prior to annexation, the area north of the city was home to the Silver Top Apartments. In 1959, Louis Lenzer (1896-1977), a Long Beach jeweler-turned-real estate investor built what he originally intended to be an “own-your-own-apartment” project at 63-521 Las Vegas Road.<sup>853</sup> By 1959, the apartments were advertised for lease as “designed for the working community to live in luxury at lowest cost.”<sup>854</sup> The *Los Angeles Sentinel* reported, “...from the time [Lenzer’s] resort opened, it welcomed all visitors and citizens, regardless of race, creed and color.”<sup>855</sup>

The one-story buildings were clustered around a large heated pool. Unfurnished units were available for \$75 per month with the intent that renters would stay year around, “preferably people who work on hotel staffs, in drug stores, at department stores, school teachers, nurses and the like.”<sup>856</sup> By 1961, prices had come down to \$60 per month for an unfurnished unit. After moving to Palm Springs, African American residents Nona and Billy Pellum, a house cleaner and cook at a resort, resided at Silver Top.<sup>857</sup> Some displaced residents of Section 14 also found housing at the Silver Top.<sup>858</sup>

<sup>853</sup> Lenzer also operated a jewelry store at 398 N. Palm Canyon Drive.

<sup>854</sup> Advertisement, *The Desert Sun*, September 22, 1959.

<sup>856</sup> “Silver Top Apartments Have Unusual Situation,” *The Desert Sun*, March 24, 1959.

<sup>857</sup> Nona Pellum, Oral History, March 16, 2011, Palm Springs Historical Society.

<sup>858</sup> The property was part of the annexation of Section 32. However, in the late 1960s, the property was demolished.

### Community Outreach and Housing, 1967-1969

The late 1960s was a period of racial tension in cities across America. The deterioration of race relations at Palm Springs High School was reported by *The Desert Sun* during this period. As a result, the City of Palm Springs created a community outreach position focused primarily on the northern part of the city. In 1968, Charles Jordan (1937-2014) was appointed as Assistant to the City Manager in what was essentially a community relations position. He represented the city on issues of education and on the Palm Springs Housing Committee, and he was active in the development of Desert Highland Park.<sup>859</sup>

L: Charles Jordan, former Assistant to the City Manager in Palm Springs. Source: City of Portland. R: Groundbreaking for Seminole Gardens. Sanson, Investor; Dudley Smith, contractor. Source: *The Desert Sun*, August 22, 1968.

Jordan, a former Palm Springs High School basketball star, had lived on Section 14 before his family relocated to Banning. After earning a college scholarship and graduating from Gonzaga University, Jordan returned to Palm Springs. In 1961, Jordan was hired to become the Recreation Supervisor for the city, making him the first African American to serve in local city government. While he held this position, he lived at 63-800 Bon Air Drive in Desert Highland Estates.<sup>860</sup>

Jordan was instrumental in bringing the city its first medium-income, Federally-funded residential project, Seminole Gardens, on 10 acres at 2607 S. Linden Way (extant) in 1969. As reported in the *Desert Sun*, Jordan indicated “persons displaced as a result of the Urban Renewal Program demolition of Section 14 would have top priority on the homes.”<sup>861</sup> The \$500,000 Seminole Gardens project featured 60, two- and three-bedroom apartments on nearly three acres with heated pool, laundry and landscaped areas. Despite this investment, demand for low-income housing far exceeded supply. In 1970, Jordan relocated

<sup>859</sup> “Palm Springs Loses a Good Man,” *The Desert Sun*, July 2, 1970.

<sup>860</sup> Address corresponds to historic address, before Desert Highland Estates was annexed by the City of Palm Springs.

to Portland, Oregon where he served as Portland's first African American commissioner and long-time parks director.

**Summary: Residential Development**

In summary, residential development patterns for Palm Springs' communities of color reflected the development of one of Southern California's most popular resorts. The unique checkerboard of land ownership in the area contributed to the development of a diverse, yet segregated, community. For African Americans, Latinos, Filipinos, Chinese, and Japanese residents seeking to improve economic opportunity for themselves and their families, Palm Springs provided much coveted jobs in the pre- and post-World War II periods. Whether it was building the infrastructure or supporting the hospitality industry, communities of color made vital contributions to the city.

**THEME: RELIGIOUS, EDUCATIONAL, AND CULTURAL INSTITUTIONS ASSOCIATED WITH ETHNIC MINORITIES (c. 1917-1969)**

Palm Springs' communities of color developed their own religious, social, and cultural institutions. Meeting places for these groups included private homes as well as communal buildings. The following provides an overview of some of these significant institutions.

In addition to residences, Section 14 was home to the first place of worship in the village.<sup>862</sup> In 1911, the Agua Caliente Band of Cahuilla Indians donated land to the Catholic Church, and St. Florian Chapel, the vernacular-style adobe<sup>863</sup> structure was built there in 1917<sup>864</sup> as a mission church by the Franciscan Order. It was located at the corner of East Arenas Road and South Calle El Segundo.<sup>865</sup> After years of dormancy,<sup>866</sup> the church was to be reactivated in 1948 by Father Ramon "Raymond" Klumbis (1914-1991) as part of the first annual Feast of Our Lady of Guadalupe (a.k.a., fiesta).<sup>867</sup> Klumbis' plans were thwarted, however, when an earthquake rendered the structure uninhabitable and the mass and fiesta were moved to St. Theresa's. By August of 1949, the condemned structure was demolished and the name of the parish was changed to Our Lady of Guadalupe.

**HISTORIC RESOURCES GROUP**

As a replacement place of worship for the congregation, Father Klumbis repurposed a barracks building previously constructed as a hospital ward for Tourney Hospital. With the volunteer labor of the parishioners, many of whom were Latinos living on Section 14, the building was transformed into a church. The whole neighborhood contributed; women in the community raised the funds and the men provided the construction skills. The new church was officially dedicated on March 11, 1950. In 1951, seasonal resident Rosemary Frey gifted a marble statue of the Virgin Mary sculpted by the Italian artist Giovanni Battista Barsanti to the church as a result of being “charmed by the simple little church on the reservation.”<sup>868</sup> Father Klumbus was also responsible for the building of a playground on Section 14.

In 1952, Father Klumbis left and Father Thomas J. Flahive (1900-2000) became pastor. The growth of the parish during the 1950s resulted in the building of a larger church in 1963-64 for \$130,000.<sup>869</sup> Again, parishioners provided much of the labor. The church, located at 204 S. Calle El Segundo, remains standing today as one of the few Section 14 buildings that survived the final clearance.

<sup>868</sup> “Statue Presented to Little Church on the Reservation,” *The Desert Sun*, November 8, 1951.

<sup>869</sup> “Ready Soon,” *The Desert Sun*, December 13, 1963.

In addition to Our Lady of Guadalupe, Section 14 was also home to The Full Gospel Church (Assembly of God), and the First Baptist Church of Palm Springs. The Full Gospel Church was located at Andreas Road and Indian Avenue (present-day Indian Canyon Avenue),<sup>870</sup> next to Hatchitt's Trailer Camp; the congregation was active in the late 1930s. It was co-pastored by two women, Mrs. Ruth Williams and Mrs. E. W. Watson. In 1944, C.H. Austin took over as pastor.<sup>871</sup> By 1950, Charles L. Farmer was in charge.<sup>872</sup> In 1951, the church building was moved from its location on Section 14 to 1290 East Ramon Road (not extant) under Reverend Walter C. Hanneman.<sup>873</sup>

The First Baptist Church of Palm Springs was founded by Rev. W.P. White in 1946. Services were initially conducted in a tent. Around 1948, under the direction of Rev. T.H. Reagans, a 130-seat church was built on Section 14.<sup>874</sup> A parsonage was built in 1948.<sup>875</sup>

African American Church congregation, likely the First Baptist Church of Palm Springs on Section 14, c. 1950. Source: Palm Springs Historical Society.

In 1958, former Texan, Reverend Jeff Rollins (1918-2004) became pastor. In 1963, he announced the building of a new church seating 210 congregants in the north end of the city at 63-540 Las Vegas Road (also 588 Las Vegas Road and present-day 588 Rosa Parks Road). The expressive Modern-style church (1965, Lawrence Lapham) was designed at a cost of \$90,000. In addition to the sanctuary, the church had 17 classrooms and fellowship rooms. The built edifice appears to have deviated from the original design, likely due to budgetary considerations. The church was also later the home to the Palm Springs Child Center, providing child care for working mothers and low-income families of the

<sup>870</sup> Later, the address for the location became 216 S. Indian Avenue.

HISTORIC RESOURCES GROUP

Children of color who lived on Section 14 during the 1930s attended school at the “Americanization Room” at the corner of present-day Alejo Road and Indian Canyon Drive at the rear of Frances Stevens Elementary School. Students were mainstreamed in the 4<sup>th</sup> grade. By the late 1970s, the building had been relocated to Van Fleet Street, north of Third Street in Cathedral City (Officer David Vasquez Road and Monty Hall Drive). The school has since been demolished. High school students attended Banning High School until the creation of Palm Springs High School (1938, G. Stanley Wilson) in 1938. Although the building of a school on the reservation was discussed briefly in 1957, it never came to fruition.<sup>876</sup>

The “Americanization Room” after moving to Cathedral City as it appeared in the late 1970s. Source: *The Desert Sun*, February 15, 1977.

During the 1930s, the Latino community formed a mutual aid society known as the *Alancia* to assist families with benefits, life insurance, death benefits, and other needs.<sup>877</sup> When the *Alancia* faded, it was replaced with the more socially-oriented *La Colonia Mexicana*, also known as the Mexican Colony Club. The Club was active during annual Desert Circus Week; they sold souvenirs and food, crowned the Mexican Colony Queen, and entered a Mexican Colony float in the parade. The Colony was also active during World War II, visiting hospital patients of Mexican descent recuperating at Tourney Hospital.

In *We Were Here, Too*, the construction of a communal building on Section 14 known as “El Salon” or “the Hall” (not extant) was identified as an important gathering place.<sup>878</sup>

In 1945, Palm Springs Lions Club member Frank S. Partridge, Jr. (1893-1954)<sup>879</sup> suggested the idea of a Boys Club. Partridge was named executive director, and in 1948, the Club purchased a war surplus hospital building from Tourney Hospital and leased a parcel of land on East Andreas Road on the

<sup>879</sup> Partridge was also a well-known photographer in the Village.

reservation.<sup>880</sup> Community labor transformed the building into a clubhouse. In his oral history, Charles Jordan remembered the Boys Club as the only social institution available to young residents of Section 14.<sup>881</sup> Partridge was beloved throughout the community of Section 14 and the programs he founded continued to benefit the youth in Palm Springs for years after his passing. One hundred “underprivileged” boys between the ages of 8 and 16 years old were members of the Boy’s Club in 1954.<sup>882</sup>

L: Boys Club football team from 1955 with many players who lived on Section 14. Source: *The Desert Sun*, December 8, 1955. In 1960, the local Filipino community formed the Filipino Club under the leadership of Lawrence “Larry” Aglipay (1908-1978). With a roster of 59 members and a “potential of 200,” the community was still small relative to the Latino or African American communities.<sup>883</sup> One of the cultural events established during this period was the “Filipino Fiesta” which became an annual fundraiser benefiting St. Theresa’s Catholic Church. It featured Filipino culture, food, and entertainment. By 1965, the Filipino Community Association of Palm Springs was quite active in the community in philanthropic pursuits; they also entered a float in the Desert Circus Parade. In 1969, the Luz-Vi-Minda Association for local Filipino women was formed.<sup>884</sup>

In 1961, the Desert Improvement Committee was formed to “generally raise the status of negroes within the community.”<sup>885</sup> The organization was founded by Reverend George Scott, Jr., a Pentecostal minister affiliated with the Palm Spring Church of God and Christ; and Joseph M. Jackson, a local developer, both of whom were local activists against the forced evictions from Section 14.<sup>886</sup> Scott went on to be a provocative figure within the community, orchestrating Los Angeles television coverage for a local rezoning hearing on affordable housing.

In 1968, the Desert King Dreamers Club was founded as a women’s organization to support employment, culture, and civic progress in the desert region. The club held a number of cultural, philanthropic, and social events in the late 1960s, usually at the Palm Springs Child Development Center. Around this same time, another African American club known as the Ashanti Club was formed among students at Palm Springs High School, to promote African American history and culture.<sup>887</sup>

The American-Mexican Political Society (AMPS) was formed in 1968 at the home of its president, Frank P. Hernandez, at 4433 E. Sunny Dunes Road (extant). The group was founded as a non-violent, peaceful activist group to encourage civic-engagement among Latinos. Another important club from the 1960s was the Mexican American Youth Association (MAYA).

#### **Summary: Religious, Educational, and Cultural Institutions**

Religious, educational, and cultural institutions provided social support, fellowship opportunities, and a means of expressing cultural identity for the communities of color in Palm Springs. During times of hardship, these institutions were rallying points for the close-knit communities and a vehicle for connecting to the larger political, social, and ideological issues of the times.

**THEME: COMMERCIAL DEVELOPMENT ASSOCIATED WITH ETHNIC MINORITIES (c. 1930s-1969)**

Although most people of color in Palm Springs were employed by the resorts, a few business owners emerged during the 1930s. One of the earliest and most colorful operators in the village was Arturo Arguelles of Pedro and Arturo's (102 E. Andres Road, 122 E. Andreas Road in the 1930s; later at 203 N. Palm Canyon Drive; not extant). Started in 1936, the shop sold leather goods from Mexico.<sup>888</sup> Pedro was a straw dummy on display in the shop. For several years, Arguelles split his season between Palm Springs and Catalina.

Although several businesses operated on Section 14 (a paint and second-hand store, a general store, cafes, repair garage, markets, and a bakery), the majority of these commercial enterprises appear to have been run by Caucasians.<sup>889</sup> A notable exception was the Marcus Café (not extant) owned by Lawrence Crossley and operated by Marcus Caro (1907-1977).<sup>890</sup>

Many early Japanese Americans living in Palm Springs who were not employed as domestic workers were involved in the floriculture and produce business. Tek Nishimoto managed the produce department at the El Paseo Market in the village, and George Kurata managed the produce department at the Murray Brothers' market on Section 14 in the late 1930s. Risuke (Yoshiye) Muramatsu (1906-2000) and his wife Doris arrived in Palm Springs in 1936 and operated the Palm Springs Florist and Greenhouse at 156 S. Indian Avenue;<sup>891</sup> they employed Frank Matsushita and K.H. Yoshida. The Muramatsus spent each off-season in Los Angeles where they also operated a floral shop.<sup>892</sup> The business thrived and by October of 1941, they occupied a building at North Palm Canyon Drive and El Alameda.<sup>893</sup> After the bombing of Pearl Harbor, the Muramatsus were forced to sell their business and were incarcerated at Poston, Arizona along with approximately 200 other Japanese residents from the Coachella Valley.<sup>894</sup> After the war, Muramatsu returned to Los Angeles to rebuild but does not appear to have returned to Palm Springs.

Another prewar Japanese businessman was K. Yoshimoto who started the Chop Suey and Sukiyaki House at 415 N. Palm Canyon Drive (in the Pacific Building) in 1938. Billed by the *Desert Sun* as "One of the most charming and distinctive of Palm Spring's wide variety of eating places," by 1940 it was under the management of Hiro Uchiyama.<sup>895</sup>

<sup>888</sup> "That Amiable Hombre from Mexico," *The Desert Sun*, October 17, 1941.

<sup>889</sup> Business operators in Section 14 as of September 1938 included Joe Schreider, Murray Brotgers, Simon Abdunnur, Max Ransom, C.E. Bunker, A. Rosenbaum, Purnel Brothers, and Max Rowland.

<sup>890</sup> According to the January 12, 1945 *The Desert Sun*, the Caros purchased and managed La Hacienda Apartments at 259 South Palm Canyon.

<sup>891</sup> The 1939 Palm Springs City Directory does not list a residential address for the Muramatsus. It was common for Japanese merchants to live at the rear of their businesses during this period.

<sup>892</sup> "P.S. Florist and Greenhouse Opens Next Week," *The Desert Sun*, September 29, 1939.

<sup>893</sup> "Sole Green House in Village Opens This Week for the Season," *The Desert Sun*, October 10, 1941.

L: Advertisement for K. Yoshimoto's Chop Suey and Suki-yaki House, *Palm Springs News*, December 29, 1938. R: La Casita Restaurant, 361 East Andreas Road, 1947. Owner, Rafaela Mormolejo at tableside. Source: *The Desert Sun*, October 14, 1947.

Another restaurant entrepreneur was Rafaela Mormolejo, the co-owner and co-manager of Palm Springs' first Mexican restaurant, La Casita Café located at 361 E. Andreas Road (not extant). Opened in 1947 with her brother-in-law Manuel Villegas, the restaurant featured Mormolejo's home cooking in a café setting. As previously discussed, Refugio "Cuco" Salazar was also a relatively successful hospitality provider with his "Pioneer Club."

Aside from Lawrence Crossley, African American businessmen typically did not flourish in Palm Springs in the same way as other ethnic groups. In 1963, the *Los Angeles Sentinel* lamented "there is no negro business of any nature" and "not even a Negro barber...not to mention the absence of other professional services, negro Doctors or lawyers."<sup>896</sup>

Although the commercial development history for communities of color is relatively modest when compared to the tremendous growth of Palm Springs, these examples provided inspiration to other community residents.

<sup>896</sup> Leon H. Washington, Jr., "Wash's Wall," *Los Angeles Sentinel*, June 13, 1963, A6.

**CONCLUSION**

Communities of color made significant contributions to the history and culture of Palm Springs which is often overlooked in written histories of the city. Many of the African Americans, Latinos, and Asians came to the city to build a better life for themselves and their families. In the process, they contributed to the growth of one of the most revered resorts in Southern California, created a strong community, and withstood inequities. This chapter is meant to introduce these stories as part of the layered history of Palm Springs, and to identify potential historic resources that may have significance for an association with one of the communities of color in the city. It is anticipated that new information about these communities, along with additional information about individual properties and neighborhoods will be identified by future researchers.

Potential historic resources that are eligible under this context will typically be eligible under National Register Criterion A, California Register Criterion 1, and/or City of Palm Springs Criterion 1 for an association with events/patterns of development that have made a significant contribution to history; or National Register Criterion B, California Register Criterion 2, and/or City of Palm Springs Criterion 2 for an association with a person who has made a significant contribution to history. Individual properties and potential historic districts that are significant for an association with ethnic minority communities in Palm Springs may also be eligible under other contexts/themes associated with the development of the city.

## Architectural Styles

FINAL DRAFT – FOR CITY COUNCIL APPROVAL

HISTORIC RESOURCES GROUP

## ARCHITECTURAL STYLES & LOCAL PRACTITIONERS

### Introduction

Palm Springs has representative examples of architectural styles from each period of development. Although the city has a particularly strong collection of Modern architecture constructed after World War II, there is a rich collection of prewar buildings, representing both high style and more rustic, vernacular examples. As outlined in the registration requirements for each context/theme, buildings that are significant for the embodiment of the distinguishing features of an architectural style or method of construction and/or as a significant work of an architect or designer are evaluated under the following criterion:

C/3/4,5 (Architecture) <sup>777</sup>	As a good or excellent example of an architectural style or method of construction from the relevant period, or as the work of a master builder, designer, artist, or architect.
--	--

There is a large number of prominent architects, designers, builders, and landscape architects who worked in Palm Springs through each period of development. A list of known practitioners who designed properties in the city, along with brief biographies, are included in Appendix C.

There may be properties that are eligible for their architectural merit or as the work of an important architect that have not reached 50 years of age, which is the generally accepted threshold for assessing historic significance. A property that is less than 50 years old can be listed in the National Register of Historic Places if it meets Criteria Consideration G which states that “a property which has achieved significance within the past 50 years is eligible if it is of exceptional importance.” The California Register does not have a specific criteria consideration related to age, but the guidelines state that significant time must have passed for the development of a scholarly perspective on the potential resource. There is no age limitation for local designation of Class 1 or Class 2 structures; Class 3 structures generally must be constructed prior to 1969.<sup>778</sup>

A property that is eligible for designation as an excellent example of its architectural style retains most - though not necessarily all - of the character-defining features of the style, and continues to exhibit its historic appearance. A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.<sup>779</sup> A property important for illustrating a particular architectural style or construction technique must retain most of the physical features that constitute that style or technique.<sup>780</sup> For guidance on the proper treatment of historic resources and appropriate alterations to specific

<sup>777</sup> Note that eligibility criteria are listed in the standard format National Register/California Register/Local.

<sup>778</sup> Class 3 designation encompasses resources or structures whose significance is based on date of construction. For more information, see City of Palm Springs Municipal Code Section 8.05.

<sup>780</sup> *National Register Bulletin 15.*

architectural styles, refer to *The Secretary of the Interior's Standards for the Rehabilitation of Historic Buildings*.

The architectural character of Palm Springs reflects changes in popular taste over the course of the 20<sup>th</sup> century. Represented styles include:

- 19<sup>th</sup> Century Methods of Construction & Architectural Styles
  - Adobe Construction
  - Residential Vernacular
- Period Revival styles, including:
  - Spanish Colonial Revival
  - Mediterranean Revival
  - Pueblo Revival
  - Monterey Colonial Revival
  - English Revival
- Early Modern styles, including:
  - International Style
  - Streamline Moderne
- Minimal Traditional
- Ranch
- Regency Revival
- Modern styles of the post-World War II era, including:
  - Late Moderne
  - Mid-century Modern
  - Organic Architecture
  - Expressionist Architecture
  - New Formalism
  - Googie
  - Tiki
  - Brutalism
  - Late Modern

## 19<sup>TH</sup> CENTURY METHODS OF CONSTRUCTION & ARCHITECTURAL STYLES

### Adobe Construction

Early adobe buildings were typically small, single-story structures, with thick adobe walls, flat roofs framed with *vigas*, and usually a long covered porch supported on wood posts, called a *corredor*, along one or more sides. Adobe construction consists of thick walls composed of large sun-dried bricks, usually made from mud and straw and covered with earth plaster to protect the unfired bricks. The unreinforced adobe walls typically vary from one and one-half to six feet thick, resting on a dirt or rock foundation. Door and window openings are usually framed with heavy timber lintels, often left exposed. Adobe construction demonstrates a continuation of indigenous building traditions that were passed down from generation to generation of craftsmen. Adobe construction used locally available resources, and was appropriate for the climate in the Southwest, staying cool in the summer and warm in the winter. Following California's cession to the United States in 1850 there was a migration of settlers from the east. During this period many adobe structures were destroyed to make way for new development. Others were altered with the addition of steep gable or hipped roofs, usually clad in wood shakes but occasionally in clay tiles, and wood framed wings. Some adobes were clad in clapboard siding with Federal or Greek Revival decorative details and double hung windows to create a more Anglicized appearance. In some cases, adobes were covered with a cement plaster finish.

Adobes constructed in Palm Springs in the late 19<sup>th</sup> and early 20<sup>th</sup> centuries exhibited the elements of this later, Anglicized interpretation. They typically featured simple rectangular plans, thick adobe walls, gable roofs clad in wood shakes, wood lintels at window and door openings, wood double hung or casement windows, and *corredores* with simple wood posts along one or more sides. The few surviving examples include the McCallum Adobe (1884, HSPB-5) and the Reginald Pole adobe on the grounds of the Casa Cody Inn (1916, HSPB-59).

Character-defining features include:

- Rectangular or L-shaped plan with simply arranged interior spaces
- Thick masonry walls of adobe brick
- Simple, unadorned exteriors (often with cement plaster veneer)
- Few, small window and door openings with wood lintels
- Double hung, wood sash windows
- *Corredores* along one or more sides

The McCallum Adobe (1884, HSPB-5). Source: Palm Springs Historical Society.

City of Palm Springs

Citywide Historic Context Statement & Survey Findings

HISTORIC RESOURCES GROUP

### Residential Vernacular

The term “Residential Vernacular” is used to describe simple, utilitarian houses or cottages with little or no distinguishing stylistic features. These buildings are characterized by their simplicity and lack of any characteristics of recognizable styles. In Palm Springs, many examples are constructed of readily-available local materials, or feature details using local or salvaged materials. Most of the early buildings in Palm Springs constructed by the first settlers would fall into this designation; some were even constructed of recycled materials from previous structures. Surviving examples are extremely rare. One such is the Cornelia White House (c. 1890, HSPB-4), constructed of railroad ties salvaged from the abandoned Palmdale Railroad.

Character-defining features include:

- Simple square or rectangular form
- Gabled or hipped roof with boxed or open eaves
- Wood exterior cladding
- Simple window and door surrounds

The Cornelia White House (c. 1890, HSPB-4) is a rare surviving example of residential vernacular architecture in Palm Springs. Source: Palm Springs Historical Society.

## PERIOD REVIVAL STYLES

### Spanish Colonial Revival

The Spanish Colonial Revival style attained widespread popularity throughout Southern California following the 1915 Panama-California Exposition in San Diego, which was housed in a series of Spanish Baroque-inspired buildings designed by chief architect Bertram Grosvenor Goodhue. The style lent itself to monumental public edifices, churches, and exuberant commercial buildings and theaters, but was less suited to residential or smaller scale commercial architecture. For those, architects drew inspiration from provincial Spain, particularly the arid southern region of Andalusia, where many young American architects were diverted while World War I prevented their traditional post-graduate “grand tour” of Great Britain, France, Italy, and Germany. The resulting style was based on infinitely creative combinations of plaster, tile, wood, and iron, featuring plaster-clad volumes arranged around patios, low-pitched tile roofs, decorative details of iron, wood, and glazed ceramic tile, and a sprawling, horizontal orientation. It was a deliberate attempt to develop a “native” California architectural style and romanticize the area’s colonial past, though it drew directly from Spanish and other Mediterranean precedents and bore little resemblance to the simple missions and rustic adobe ranch houses that comprised the state’s actual colonial-era buildings.

In Palm Springs in the 1920s and 1930s the Spanish Colonial Revival style was often simplified and reduced to its most basic elements for residential, commercial, and institutional buildings. The result was a simpler, more rustic style reminiscent of traditional southwestern adobes and haciendas that was believed to be better suited to the desert climate and casual, resort lifestyle. These tended to be informal one- or two-story buildings finished in plaster, with simple rectilinear plans, low-pitched gable or hipped roofs clad in barrel tile or wood shakes, wood or steel sash windows, and little or no ornamentation. This minimalist Spanish trend continued into the post-World War II years; the city has houses and commercial buildings from the 1940s that feature red clay tile roofing and steel casement windows.

Examples of high-style Spanish Colonial Revival residential architecture in Palm Springs include The Willows (1924, HSPB-34) and *Ojo del Desierto* (1925, HSPB-19). Commercial examples include the El Paseo Building (1930, HSPB-27) and the La Plaza Center and Theatre (1936, HSPB-22). Examples of the more typical simplified Spanish Colonial Revival style include the Crawford Apartments (1945, now the Village Inn) at 855 N. Indian Canyon Drive, and the single-family residence (c. 1930) located at 545 S. Calle Santa Rosa.

Character-defining features include:

- Asymmetrical façade
- Irregular plan and horizontal massing
- Varied gable or hipped roofs with clay barrel tiles; occasionally flat roofs
- Plaster veneered exterior walls forming wide, uninterrupted expanses
- Wood-sash or steel casement or double-hung windows, typically with divided lights
- Round, pointed, or parabolic arched openings
- Arcades, colonnades, or *corredores*
- Decorative grilles of wood, wrought iron, or plaster
- Balconies, patios or towers
- Decorative terra cotta or glazed ceramic tile work

El Paseo Building (1930, HSPB-27). Source: Mott Collection, California State Library.

## Mediterranean Revival

The Mediterranean Revival style is distinguished by its eclectic mix of architectural elements from several regions around the Mediterranean Sea, including Spain, Italy, southern France, and North Africa. By the 1920s, the lines between these individual styles were frequently blurred and their distinguishing characteristics blended by architects who drew inspiration from throughout the Mediterranean region. These imaginative combinations of details from varied architectural traditions resulted in the emergence of a distinct Mediterranean Revival style. The Mediterranean Revival style is often more formal and usually more elaborately composed and ornamented than the simpler, more rustic Spanish Colonial Revival style. Typical features of the Mediterranean Revival style include arched entrance doorways with richly detailed surrounds; arcades and loggias; stairways and terraces with cast stone balustrades; and Classical decorative elements in cast stone or plaster, including architraves, stringcourses, cornices, pilasters, columns, and quoins.

There are relatively few residential examples of the Mediterranean Revival Style in Palm Springs, where houses in the 1920s and 1930s tended to be more rustic and informal. An especially fine commercial example is the Pacific Building (c. 1936, HSPB-13) at 766-798 N Palm Canyon Drive.

Character-defining features include:

- Frequently symmetrical façade
- Rectangular plan and two-story height
- Hipped roof with clay barrel tiles and wide boxed or bracketed eaves, or eave cornice
- Exterior walls veneered in smooth plaster
- Wood or steel sash casement windows, typically with divided lights; sometimes double-hung windows
- Palladian windows or other accent windows
- Arched door or window openings; elaborate door surrounds
- Arcades, colonnades, or loggias
- Terraces and stairs with metal or cast stone balustrades
- Cast stone or plaster decorative elements including architraves, stringcourses, cornices, pilasters, columns, and quoins
- Decorative grilles of wood, wrought iron, or plaster
- Balconies, patios or towers
- Decorative terra cotta or glazed ceramic tile work

### Monterey Colonial Revival

The Monterey Colonial Revival style is based upon the distinctive style of residential architecture that developed in California beginning in the 1830s, as more and more Yankee merchants and settlers arrived in Alta California and adapted the Anglo building traditions of the East Coast to local Hispanic customs. As its name implies, the style developed in and around Monterey and combined vernacular adobe construction with elements of American Federal and Greek Revival architecture, including multi-light sliding sash windows, louvered shutters, paneled doors, and Classical details executed in wood. The style's most distinguishing characteristic is a second-floor covered wood balcony, often cantilevered, extending the length of the primary façade and sometimes wrapping one or two sides as well. The best-known example of the style, and one of the earliest, is the Thomas Larkin adobe, constructed beginning in 1834 and one of the first two-story dwellings in Monterey.<sup>781</sup>

The style was revived beginning in the mid-1920s and was favored by architects and homeowners who perhaps found the fantastical Spanish and Mediterranean revivals too exotic and too different from the building traditions familiar to most Americans. The Monterey Colonial Revival style replaced adobe construction with wood framed walls veneered in smooth plaster and devoid of surface ornament, and featured second-story balconies, low-pitched gable or hipped roofs, and double-hung wood windows. Examples of the style are rare in Palm Springs, and mostly date from the height of the revival phase during the 1930s. A good local example is 421 Santa Rosa Drive (1938).

Character-defining features include:

- Usually asymmetrical façade
- Two-story height
- Rectangular or L-shaped plan
- Low-pitched hipped or side gable roofs with wood shakes or clay tiles
- Plaster-veneered exterior walls devoid of surface ornament
- Second-floor covered wood balcony, sometimes cantilevered, across primary façade and occasionally wrapping one or more sides, with simple wood posts and wood or metal railing
- Wood-sash double-hung windows, typically with divided lights
- Louvered or paneled wood shutters
- Recessed entrances with paneled wood doors

## Pueblo Revival

The Pueblo Revival was the southwestern counterpart of Mission Revival, developed concurrently with a similar intent to define an architecture suited to the region's history, climate, and lifestyle. Only a handful of architects explored this style in southern California, most prominently Robert Stacy-Judd, an architect most well-known for his promotion of Pre-Columbian revivalism.

Pueblo Revival buildings represent another attempt to create an architecture specifically suited to location and regional history, rather than relying on modes of design and construction imported from elsewhere. Like Mission Revival buildings, Pueblo Revival designs looked at precedents set by native builders and early settlers, both through indigenous traditions and as interpreted by the Spanish colonists. Later Pueblo Revival buildings may also have reflected Hollywood's fascination with and embellishment of Native American culture. Intact examples of Pueblo Revival buildings are significant for their representation of these influences. They are also significant, in Palm Springs, for their rarity.

Pueblo Revival buildings are generally residential in type, most commonly single-family residences. Their exterior walls are veneered in plaster to suggest adobe construction, an impression which is heightened by the cubic quality of the massing. Roofs are flat, with *vigas* often punctuating the parapets. Walls are unornamented and windows may be limited in surface area. Pure examples of Pueblo Revival are infrequent in Palm Springs; features associated with other styles, especially Spanish Colonial Revival, may also be present.

Well-articulated examples of the Pueblo Revival in Palm Springs are rare, and mostly occurred during the height of the revival phase in architecture during the 1930s. An example of Pueblo Revival residential architecture in Palm Springs is 1850 W. Crestview Drive (1930).

Character-defining features include:

- One or two stories
- Flat roof shielded by parapet extensions of exterior wall surfaces
- Rows of projecting *vigas* below the top of the parapet
- Cubic massing
- Plaster exterior wall cladding, simulating adobe construction
- Casement windows
- Lack of ornamentation
- May be used in conjunction with Spanish Colonial Revival, Adobe Revival, and Pre-Columbian/Mayan Revival styles

1850 W. Crestview Drive (1930).

### English Revival

The English Revival style is a sub-type of the Tudor Revival style, which is loosely based on a variety of late medieval English building traditions including Perpendicular Gothic, Tudor, Elizabethan, and Jacobean. It has its origins in the late 19<sup>th</sup>-century English Arts and Crafts movement, whose leaders drew inspiration in part from English domestic architecture of the 16<sup>th</sup> and 17<sup>th</sup> centuries because of its picturesque qualities and sympathetic relationship to the natural landscape. The earliest examples of the style appeared in the United States in large estates of the 1890s. The Tudor Revival style grew in favor after World War I and reached its peak of popularity in the 1920s and 1930s, as architects and developers adapted it to the country's rapidly growing suburban residential communities and advancements in masonry veneering techniques allowed even the most modest examples to emulate the brick and stone exteriors of English prototypes.

English Revival houses are simpler than their high-style Tudor Revival counterparts. They are typically two stories in height with steeply-pitched, multi-gable roofs usually clad in wood shakes or composition shingles. The buildings are usually rambling compositions of multiple volumes in a variety of sizes and shapes. Exterior walls are usually veneered in plaster, with brick or stone used only at the chimney or around the primary entrance. Half-timbering, if used at all, is usually limited to a primary front-facing gable if featured. Tall, narrow casement windows, sometimes with leaded diamond-shaped lights, are frequently set in horizontal groupings or projecting bays. Projecting exterior chimneys, usually brick or stone, are frequently used as prominent design features.

Character-defining features include:

- Asymmetrical façade and irregular massing
- Steeply-pitched gable roof with wood shake or composition roofing
- Plaster exterior wall cladding; decorative half-timbering or brick details are usually limited or omitted
- Tall, narrow divided-light windows, usually casement, often grouped horizontally or in bays; may have leaded diamond-shaped lights
- Prominent chimney

401 W. Merito Place (1928).

## EARLY MODERNISM

### International Style

The International Style – an architectural aesthetic that stressed rationality, machined materials, and a break with the past – emerged in Europe in the 1920s with the work of Le Corbusier in France, and Walter Gropius and Ludwig Mies van der Rohe in Germany. The United States became a stronghold of Modern architecture after the emigration of Gropius, Mies, and Marcel Breuer. Two Austrian emigrants, Richard Neutra and Rudolph Schindler, helped introduce International style modern architecture to Southern California in the 1920s. Their buildings were minimalist in concept, stressed functionalism, and (at least initially) were devoid of regional characteristics and nonessential decorative elements. In 1932, the Museum of Modern Art hosted an exhibition, titled simply "Modern Architecture," that featured the work of fifteen architects from around the world whose buildings shared a stark simplicity and vigorous functionalism. The term International Style was coined by Henry Russell Hitchcock and Philip Johnson in the accompanying exhibition catalogue.

International Style modernism made its first appearance in Palm Springs in 1934, with the construction of the Kocher-Samson Building (altered; HSPB-79) designed by New York architect A. Lawrence Kocher and his Swiss-born business partner, Albert Frey, for Kocher's brother. In response to its desert setting Frey designed the building as a cluster of cubist volumes around a series of landscaped patio courtyards. Frey traveled to Palm Springs at the end of 1934 to supervise its construction and in 1935 formed a partnership with a young California architect, John Porter Clark. Clark and Frey promoted Modern design in Palm Springs, as seen in the Guthrie House (1935-37, altered), Halberg House (1935-37, demolished), and particularly in Clark's own house (1939). One of the finest remaining examples of International Style architecture in Palm Springs is the Grace Miller house (HSPB-45) by Richard Neutra.

Character-defining features include:

- Rectangular massing
- Balance and regularity, but not symmetry
- Clear expression of form and function
- Steel frame structure used as an organizing device
- Elevation of buildings on tall piers (piloti)
- Flat roofs
- Frequent use of glass, steel, concrete, and smooth plaster
- Full-height glass curtain walls
- Horizontal bands of flush windows, often meeting at corners
- Absence of ornamentation
- Column-free interior spaces

### **Streamline Moderne**

The architecture of the Art Deco movement rejected the rigid organizational methods and classical ornamentation of the Beaux Arts style. Instead it emphasized a soaring verticality through the use of stepped towers, spires, and fluted or reeded piers, and embraced highly stylized geometric, floral and figurative motifs as decorative elements on both the exterior and interior. Ornate metalwork, especially aluminum, glazed terra cotta tiles, and bright colors were hallmarks of the style. By the mid-1930s, in the depths of the Great Depression, the highly decorated style was already viewed as garish and overwrought, and it was soon abandoned in favor of the cleaner, simpler Streamline Moderne style.

Characterized by smooth surfaces, curved corners, and sweeping horizontal lines, Streamline Moderne (also known as Art Moderne) is considered to be the first thoroughly Modern architectural style to achieve wide acceptance among the American public. Inspired by the industrial and transportation designs of the period, the style was popular throughout the United States in the late 1930s, particularly with the Federally-funded projects of the Works Progress Administration. Unlike the highly-ornamental Art Deco style, Streamline Moderne was perceived as expressing an austerity more appropriate for Depression-era architecture, although Art Deco and Streamline Moderne were not necessarily opposites. A Streamline Moderne building with a few Deco elements was not uncommon, but the prime movers behind the Streamline Moderne style such as Raymond Loewy, Walter Dorwin Teague, Gilbert Rohde, and Norman Bel Geddes all disliked Art Deco, seeing it as falsely modern.

Streamline Moderne is relatively rare in Palm Springs, where a simplified Spanish Colonial Revival style remained popular into the 1940s. Surviving examples include the Cork n' Bottle (1935-36, HSPB-31) originally Simpson's Radio and Frigidaire Company, and the Davidson House (1936, HSPB-47), known as "the Ship of the Desert," designed by Los Angeles architects Webster and Wilson.

Character-defining features include:

- Horizontal emphasis
- Asymmetrical façade
- Flat roof with coping
- Smooth plaster wall surfaces
- Curved end walls and corners
- Glass block and porthole windows
- Flat canopy over entrances
- Fluted or reeded moldings or stringcourses
- Pipe railings along exterior staircases and balconies
- Steel sash windows

(now the Cork n' Bottle, 1935-36, HSPB-31). Source: Palm Springs Historical Society.

### MINIMAL TRADITIONAL

The Minimal Traditional style is defined by a single-story configuration, simple exterior forms, and a restrained use of traditional architectural detailing. The style had its origins in the principles of the Modern movement and the requirements of the FHA and other Federal programs of the 1930s. Its open plan reflected the developer's desire for greater efficiency. Modern construction methods addressed the builder's need to reduce costs and keep homes affordable to the middle class. Conventional detailing appealed to conservative home buyers and mortgage companies. The Minimal Traditional house was immensely popular in large suburban residential developments throughout the United States during the 1940s and early 1950s. In Southern California, the style is closely associated with large-scale residential developments of the post-World War II period. Primarily associated with the detached single family house, Minimal Traditional detailing may also be applied to apartment buildings of the same period.

In Palm Springs, Minimal Traditional houses are frequently found as later infill construction in pre-World War II tracts, such as the single-family residence at 140 E Ocotillo Avenue (1947) in the Palos Verdes Tract.

Character-defining features include:

- One-story configuration
- Rectangular plan
- Medium or low-pitched hip or side-gable roof with shallow eaves
- Smooth stucco wall cladding, often with wood lap or stone veneer accents
- Wood or steel sash multi-light windows (picture, double-hung sash, casement)
- Projecting three-sided oriel
- Shallow entry porch with slender wood supports
- Wood shutters
- Lack of decorative exterior detailing

140 E Ocotillo Avenue (1947), located in the Palos Verdes Tract.

## RANCH

The Ranch style emerged from the 1930s designs of Southern California architects and designers such as Cliff May who merged modernist ideas with traditional elements of the working ranches of the American West and in particular, the rustic adobe houses of California's Spanish- and Mexican-era *ranchos*.<sup>782</sup> Early Ranch-style houses feature board-and-batten exterior cladding and low-pitch gable roofs with wood shakes. The Ranch house accommodated America's adoption of the automobile as the primary means of transportation with a two-car garage that was a prominent architectural feature on the front of the house, and a sprawling layout on a large lot.

In 1930s Palm Springs the Ranch house took on the simpler, more rustic style of traditional southwestern adobe, hacienda, and wood vernacular types that was believed to be better suited to the desert climate and casual lifestyle. These tended to be informal one-story houses finished in plaster, brick, or board-and-batten siding, with irregular or rambling plans, low-pitched tile or wood shake roofs, wide verandas, wood or steel windows, and minimal ornamentation. The Ranch-style house proved popular both before and after the war, combining as it did modernist ideas of open interior space with traditional imagery of working ranches and Spanish ranchos. Many such residences can be found in pre-war residential tracts such as Las Palmas Estates, including 365 Camino Norte and 523 Camino Sur, both constructed in 1936.

The Ranch house became increasingly popular in the post-World War II era. The architectural style embodied the mid-20<sup>th</sup> century ideal of "California living." It was more conservative than other modern residential architecture of the period, often using decorative elements based on historical forms and capitalizing on the national fascination with the "Old West." The underlying philosophy of the Ranch house was informality, outdoor living, gracious entertaining, and natural materials, making it ideally suited to Palm Springs. A common Ranch variation in Palm Springs was the Modern Ranch, which was influenced by Mid-century Modernism. Modern Ranches emphasized horizontal planes, and included modern instead of traditional stylistic details. Character-defining features included low-pitched hipped or flat roofs, prominent rectangular chimneys, recessed entryways, and wood or concrete block privacy screens. Other stylistic elements, such as flared roof ridges, decorative chinoiserie-style fretwork screens, and double doors with over-scaled round escutcheons, resulted in Japanese- or Asian-inspired variations.

Character-defining features include:

- One-story
- Sprawling L- or U-shaped plan, often with radiating wings
- Low, horizontal massing with wide street façade
- Low-pitched hipped or gable roof with open overhanging eaves and wood shakes
- Plaster, wood lap, or board-and-batten siding, often with brick or stone accents
- Divided light wood sash windows (picture, double-hung sash, diamond-pane)
- Wide, covered front porch with wood posts
- Attached garage, sometimes linked with open-sided breezeway

<sup>782</sup> Description of Ranch style architecture largely based on the scholarship of Alan Hess, including his book *Ranch House* (New York: Harry N. Abrams, Inc., 2004); and the work of Cliff May, particularly as described in Paul C. Johnson, ed., *Western Ranch Houses* (Los Angeles: Hennessey + Ingalls, 1997).

- Details such as wood shutters, attic vents in gable ends, dovecotes, extended gables, or scalloped barge boards
- Modern Ranch sub-type may feature flat or low-pitched hipped roof with composition shingle or gravel roofing; metal framed windows; wood or concrete block privacy screens

## REGENCY REVIVAL

The Regency Revival style, also known as Hollywood Regency, is seen almost exclusively in the design of single-family and multi-family residential architecture from about the mid-1930s until about 1970; most examples in Palm Springs date to the 1960s. The style references in part the architecture and design that developed in Britain in the early 19<sup>th</sup> century. Like the original Regency style, Regency Revival includes elements of Neoclassical and French Empire design; however, its attenuated classical ornament and simple surfaces reflect the influence of the Modern Movement. The style first appeared in the United States in the mid-1930s as a stripped-down version of Neoclassicism that exhibited both the influence of Streamline Moderne and the simplified yet exaggerated qualities of Hollywood film sets. Its early development was interrupted by World War II and the resulting halt of private construction. It resumed after the war with the work of architects such as John Elgin Woolf, whose designs emphasized symmetry, privacy, exaggerated entrances and prominent mansard roofs. Post-World War II Regency Revival buildings are characterized by theatrical arched entrances with an exaggerated vertical emphasis, usually positioned in projecting pavilions with high, steep roofs; symmetrical, largely blank primary façades; and eccentrically detailed, unconventionally proportioned Classical columns and ornamentation juxtaposed against large expanses of blank wall.

In Palm Springs, Regency Revival design can be found in custom residences, such as that at 2205 Yosemite (c. 1965), as well as in multi-family developments. In some cases a Regency Revival portico was tacked on to dress up an otherwise standard tract home, as at 2996 Avery Drive in Araby Estates. Designer James McNaughton was a local practitioner of the style.

Character-defining features include:

- Symmetrical façade
- Tall, steeply pitched mansard, hipped or gable roofs, especially over entrance; frequently a flat roof over remainder
- Blank wall surfaces veneered in smooth plaster; some examples may have brick veneer or wood
- Vertically exaggerated arched entrance doors, sometimes set in projecting pavilions
- Tall, narrow windows, often with arched tops
- Eccentrically detailed and unconventionally proportioned Neo-Classical features including double-height porticoes, thin columns, pediments, fluted pilasters, niches, and balconettes with iron railings
- Exaggerated applied ornament, such as large lanterns or sconces

## POST-WORLD WAR II MODERNISM

### Late Moderne

The Late Moderne style incorporates elements of both the Streamline Moderne and International styles. While the earliest examples appeared in the late 1930s, the style reached its greatest popularity in large-scale commercial and civic buildings of the late 1950s and 1960s. The Late Moderne style is frequently identified by the use of the bezeled window, where horizontal groupings of windows are outlined in a protruding, bezel-like flange, often in a material and color that contrasts with the surrounding wall surface. An example of the Late Moderne style in Palm Springs is the Dollard Building (1947) at 687 N. Palm Canyon Drive, by John Porter Clark and Albert Frey.

Character-defining features include:

- Horizontal emphasis
- Exposed concrete or cement plaster veneer
- Flat roofs
- Horizontal bands of bezeled windows, sometimes with aluminum louvers
- Operable steel sash windows (casement, awning, or hopper)
- Projecting window frames

The Dollard Building (Clark & Frey, 1947) at 687 N. Palm Canyon Drive.

### Mid-century Modern

Mid-century Modern is a term used to describe the post-World War II iteration of various Modern styles in both residential and commercial design, including the International Style. International Style architecture is characterized by geometric forms, smooth wall surfaces, and an absence of exterior decoration. Mid-century Modern represents the adaptation of these elements to the local climate, new building technologies (such as modular materials and structural systems), and to the postwar need for efficiently-built, moderately-priced homes. In Palm Springs, this often meant the use of wood post-and-beam construction. Mid-century Modernism is often characterized by a clear expression of structure and materials, large expanses of glass, and open interior plans. It was adapted to Palm Springs by the use of concrete block, perforated concrete, and other forms of wood, concrete, and metal screens to shield against the intense desert sun while allowing for air flow.

The roots of the style can be traced to early Modernists like Richard Neutra and Rudolph Schindler, whose local work inspired “second generation” Modern architects like Gregory Ain, Craig Ellwood, and Harwell Hamilton Harris, to name a few. Mid-century Modernism was adapted to Palm Springs by prominent local architects including John Porter Clark, William Cody, Albert Frey, Donald Wexler, and E. Stewart Williams, as well as Los Angeles architects such as Dan Palmer and William Krisel. These postwar architects developed an indigenous Modernism that was born from international Modernism and but matured into a fundamentally regional style, fostered in part by *Art and Architecture* magazine’s pivotal Case Study Program (1945-1966), along with specific local conditions. The style gained popularity because its use of standardized, prefabricated materials permitted quick and economical construction. It became the predominant architectural style in Palm Springs in the postwar years and is represented in almost every property type, from single-family residences to commercial buildings to gas stations.

Character-defining features include:

- One or two-story configuration
- Horizontal massing (for small-scale buildings)
- Simple geometric forms
- Expressed post-and-beam construction, in wood or steel
- Flat roof or low-pitched gable roof with wide overhanging eaves and cantilevered canopies; some examples have folded plate roofs
- Unadorned wall surfaces
- Wood, glass, plaster, concrete, steel, brick or stone used as exterior wall panels or accent materials
- Flush-mounted metal frame fixed windows and sliding doors, and clerestory windows
- Concrete, wood, or metal screens
- Little or no exterior decorative detailing
- Expressionistic/Organic subtype: sculptural forms and geometric shapes, including butterfly, A-frame, folded plate or barrel vault roofs

## Organic Architecture

Frank Lloyd Wright first used the term 'organic architecture' in an article for *Architectural Record* in August 1914.<sup>783</sup> Wright applied the word organic to "'living' structure – a structure or concept wherein features or parts are so organized in form and substance as to be, applied to purpose, integral. Everything that 'lives' is therefore organic."<sup>784</sup> Organic architecture meant a living architecture in which every composition, element, and detail was deliberately shaped for the job it was to perform. Wright stressed the unity of building, structure, furnishings, and environment in an "organic-entity, as contrasted with that former insensate aggregation of parts...One great thing instead of a quarrelling collection of so many little things."<sup>785</sup> Wright expressed his concept of Organic design through crystalline plan forms, the possibility of growth by asymmetrical addition, the relationship of composition to site and client, and the use of local materials.<sup>786</sup>

The chief concept of Organic architecture is the merging of building and nature, so that the design responds to the environment rather than imposing itself upon it. Organic architecture grew out of the site from within, employing natural shapes, complex geometries, and new building materials and technologies to unify all elements of the design – site, structure, spaces, fixtures, finishes, and furnishing - into a single harmonious unit.<sup>787</sup>

One of the most significant examples in Southern California is the Arthur Elrod House (1968) by John Lautner. The house incorporates Organic and Expressionist influences by using concrete to blend the home into its rocky cliffside site. The chief concept of Organic architecture is the merging of building and nature, so that the design responds to the environment rather than imposing itself upon it. Expressionism repudiated modern rationalism and emphasized abstraction of form to symbolically express subjective interpretation of inner experience. Both employed natural shapes, complex geometries, and new building materials and technologies. The Elrod House site, a prominent ridgeline above the city, was excavated to reveal rock outcroppings which helped to shape and define the main living area, a 60-foot diameter, split-level open space surmounted by a shallow, conical concrete dome with skylights.

Character-defining features include:

- Merging of building and nature
- Use of natural shapes and complex geometries
- Use of innovative building materials and technologies
- Unification of all elements of the design into a single harmonious unit

### Expressionist Architecture

Expressionist architecture is loosely based on the German Expressionist movement of the early twentieth century.<sup>788</sup> Expressionism is a rejection of the rationalist ideals embodied in Miesian buildings. The architecture is meant to evoke an emotional, rather than intellectual, response. Expressionism repudiated modern rationalism and emphasized abstraction of form to symbolically express subjective interpretation of inner experience. Forms were frequently inspired by natural phenomena including caves, crystals, rocks, and other organic, non-geometric forms to produce “an architecture of motion and emotion, ambiance, radicalism, and sweeping change.”<sup>789</sup> Innovative building materials such as concrete, plastics, and laminates are often incorporated in the design to achieve the artistic forms. Examples of Expressionist architecture in Palm Springs include the Arthur Elrod House (John Lautner, 1968; 2175 Southridge Drive; listed in the National Register) and St. Theresa Roman Catholic Church (William F. Cody, 1968; 2800 E Ramon Road).

Character-defining features include:

- Abstract, non-geometric forms inspired by natural phenomena
- Use of innovative building materials such as concrete, plastics, and laminates

St. Theresa Catholic Church  
(William Cody, 1968) at 2800  
E. Ramon Road.

## Googie

Googie has been described as Modernism for the masses. With its swooping lines and organic shapes, the style captured the playful exuberance of postwar America. Named for the John Lautner-designed Googie's Restaurant in Los Angeles, the style was widely employed in automobile-oriented commercial architecture of the 1950s, including coffee shops, bowling alleys, and car washes. It exaggerated the vocabulary of Mid-century Modern design to catch the eye of passing motorists with dramatic sculptural rooflines, shimmering walls of glass, abstract shapes, and prominent integral signage. Restaurants along Highway 111 entering and leaving the center of Palm Springs were designed in the Googie style. The Springs restaurant (1957; demolished) by William Cody was one of the most sophisticated examples in the nation of this Modernist type. A Denny's coffee shop by Los Angeles architects Armét and Davis (701 E. Palm Canyon Drive, now the King's Highway) used an extended version of the Denny's prototype design as part of a motel complex (now the Ace Hotel).

Character-defining features include:

- Expressive rooflines, including butterfly, folded-plate, and cantilevers
- Organic, abstract, and parabolic shapes
- Clear expression of materials, including concrete, steel, asbestos, cement, glass block, plastic, and plywood
- Large expanses of plate glass
- Thematic ornamentation, including tiki and space age motifs
- Primacy of signage, including the pervasive use of neon

L: Denny's Restaurant (Armét and Davis, 1965) at 701 E. Palm Canyon Drive.

R: Las Palmas Liquors (c. 1958) at 1595 N. Palm Canyon Drive.

## Tiki

The Tiki style is a themed architecture, loosely inspired by Polynesian precedents. It was first popularized in California the 1930s with the founding of two successful Polynesian themed restaurants, Don the Beachcomber in Hollywood and Trader Vic's in Oakland, both of which featured exotic rum-based cocktails, flaming torches, and carved wood statues. In the years after World War II the fad for Polynesian-themed kitsch was fueled in part by the stories and souvenirs of soldiers returning from service in the Pacific. It was disseminated on a much wider level by Norwegian explorer Thor Heyerdahl's sensational 1947 voyage from South America to Polynesia on a raft called Kon-Tiki, and by *Tales of the South Pacific*, James Michener's 1948 Pulitzer Prize winning collection of short stories that was adapted into the hit Broadway musical *South Pacific*. In the 1950s and 1960s the romanticized exoticism of Tiki design found its way into restaurants, bars, motels, apartment buildings, and even private homes with towering A-frame rooflines, carved wood beams, lava rock walls, and bamboo trim.

The tropical-themed style somewhat incongruously found its way to the desert environment of Palm Springs, with examples such as the Tropics Motor Lodge (1964; now the Caliente Tropics Hotel, 411 E. Palm Canyon Drive). Though often superficial and frequently kitschy, Tiki elements were sometimes highly refined and incorporated into exceptional Mid-century Modern designs such as Wexler & Harrison's Royal Hawaiian Estates (1961-1962; HSPB-73, Historic District No. 2).

Character-defining features include:

- Prominent A-frame roofs
- Flared ridge beams, eaves, and rakes
- Carved wood ridge beams and outriggers
- Lava rock veneer
- Bamboo trim
- Polynesian-themed decorative features including tiki statues, patterned panels, friezes and murals, and torches
- Tropical landscaping including palm trees

Caliente Tropics Hotel (William Cody, 1964) at 411 E. Palm Canyon Drive.

## New Formalism

New Formalism developed in the mid-1950s as a reaction to the International Style's strict vocabulary and total rejection of historical precedent. New Formalist buildings are monumental in appearance, and reference and abstract classical forms such as full-height columns, projecting cornices, and arcades. Traditional materials such as travertine, marble, or granite were used, but in a panelized, non-traditional form. In Southern California, the style was applied mainly to public and institutional buildings. On a larger urban design scale, grand axes and symmetry were used to achieve a modern monumentality. Primary in developing New Formalism were three architects: Edward Durell Stone, who melded his Beaux Arts training with the stark Modernism of his early work; Philip Johnson; and Minoru Yamasaki. All three had already achieved prominence working within the International Style and other Modernist idioms.

In Palm Springs New Formalism is best represented by E. Stewart Williams' distinctive design for the second Coachella Valley Savings & Loan (1961; HSPB #53), clearly inspired by Oscar Niemeyer's Alvorada Palace in Brasilia. It emphasizes its public role with dramatic concrete columns with curved bases, lifted above a pool of water with a string of fountains.

Character-defining features of New Formalism include:

- Symmetrical plan
- Flat rooflines with heavy overhanging cornices
- Colonnades, plazas and elevated podiums used as compositional devices
- Repeating arches and rounded openings
- Large screens of perforated concrete block, concrete, or metal

## Brutalism

In contrast to the International Style's often light and skeletal appearance, Brutalism created massive, monolithic structures that stretched the limits of concrete construction. More properly known as "New Brutalism," the name was derived from *béton brut*, the concrete casting technique that left a roughly finished surface bearing the imprint of the formwork, used by Le Corbusier in the *Unité d'Habitation*, Marseille, France (1952). One of the style's most significant American promoters was John Portman, who designed several enormous atrium hotels and office clusters known for their spectacular spatial effects, including the Bonaventure Hotel in Los Angeles. The style was particularly popular in the construction of government, educational, and financial buildings. Other well-known examples of the style in Southern California include the Salk Institute in La Jolla (1959) by Louis Kahn, and the Geisel Library at the University of California, San Diego (1969) by William Pereira.

Examples of Brutalism are rare in Palm Springs, but one distinctive example is Robert Ricciardi's Gas Company building (1969), composed of solid rectangular volumes with tall concrete walls finished in a rugged hammered texture.

Character-defining features of Brutalism include:

- Bold geometric shapes
- Sculptural façade articulation
- Exposed, roughly finished cast-in-place or pre-cast concrete construction
- Window and door openings as voids in otherwise solid volumes
- Raised plazas and base articulation

The Gas Company Building (Robert Ricciardi, 1969) at 211 N. Sunrise Way.

### Late Modern

Late Modern is a blanket term used to describe the evolution of Modern architecture from the mid-1950s through the 1970s. It is typically applied to commercial and institutional buildings. Unlike the straightforward, functionalist simplicity of International Style and Mid-century Modernism, Late Modern buildings exhibit a more deliberate sculptural quality with bold geometric volumes, uniform surfaces such as glass skin or concrete, and a sometimes exaggerated expression of structure and systems. Significant architects who produced works in the style include Marcel Breuer, Philip Johnson, Cesar Pelli, Piano and Rogers, and John Portman. A Palm Springs example from the 1960s is the Alan Ladd building at 500 S. Palm Canyon Drive.

Character-defining features include:

- Bold geometric volumes
- Large expanses of unrelieved wall surfaces
- Uniform use of cladding materials including glass, concrete, or masonry veneer
- Exaggerated expression of structure and systems
- Hooded or deeply set windows
- Little or no applied ornament

## Appendix A: Biographies of Local Practitioners

These biographies are intended to provide brief information about known architects, designers, builders, and landscape architects practicing in Palm Springs. These are not definitive histories of each practitioner. Information is derived from a variety of primary and secondary sources including the Pacific Coast Architecture Database; the AIA Historical Directories and Membership Files; finding aids for architect archives; and publications of the Palm Springs Preservation Foundation, the Palm Springs Modern Committee, the Palm Springs Historical Society, and the Cultural Landscape Foundation.

<b>Ainsworth, Robert</b> (1895-1970), AIA	
Born:	Shawano, WI
Education:	University of Michigan, B.S. Architecture (1922)
Firms:	Robert H. Ainsworth, Architect (1932-1963); Ainsworth, Angel and McClellan, AIA (1963-1966)
	Wisconsin-born architect Robert H. Ainsworth, AIA, graduated from the University of Michigan with a B.S. in Architecture in 1922. Prior to opening his own practice he worked for Chatten & Hammond in Chicago, Marston & Van Pelt in Pasadena, and was chief draftsman in the office of Wallace Neff. Ainsworth went on to establish a practice in Pasadena. Early in his career, he designed a number of large estates in period revival styles for wealthy clients in the Pasadena area. In the postwar period Ainsworth's designs shifted toward the Mid-century Modern aesthetic. In 1963, Ainsworth joined forces with Herbert W. Angel and Robert B. McClellan in the firm of Ainsworth, Angel and McClellan, AIA.
<b>Armét, Louis L.</b> (1914-1981), AIA	
Born:	St. Louis, MO
Education:	University of Southern California, B.Arch (1939)
Firms:	V.F. Ribble (1940); Laurence Test (1940-1941); Spaulding & Rex (1946-1947); Armét & Davis (1947-1972); Armét, Davis & Newlove, AIA, Inc. (1972-1981)
	Louis L. Armét, AIA, moved to Los Angeles from St. Louis when he was 13. After graduating from Los Angeles High School and Loyola University, he attended architecture school at the University of Southern California, graduating with a B.Arch. in 1939. Armét worked for the Navy Department of Design at Pearl Harbor from May 1941 to February 1943, designing warehouses and buildings for ship repair, and worked from 1943 to 1946 for the Seabees. Armét became a licensed architect in 1946. He met Eldon C. Davis while the two of them were working at the architecture firm of Spaulding and Rex. They founded Armét & Davis in 1947. They worked together until 1972 designing churches, banks, bowling alleys, schools, and more. They are best known for their many Googie-style coffee shops, including Clock's in Inglewood (1951), Norm's on South Figueroa in Los Angeles (1954), Huddle's Cloverfield in Santa Monica (1955), Pann's in Westchester (1956), and the Holiday Bowl and Coffee Shop in Los Angeles (1957).
<b>Ayers, Donald P.</b> (c. 1908-unknown)	
Born:	
Education:	University of Illinois, (c. 1925-1928)
Firms:	Ayers & Fiege (1949-c. 1970)
	Donald Port Ayers joined in partnership with Herbert F. Fiege after World War II to form Ayers & Fiege in North Hollywood, California. The firm was selected to design the second exhibition home at the 1953 Los Angeles Home Show — a post-and-beam ranch-style model dubbed "The Coronation." The firm's work included residential designs, schools for the Los Angeles Unified School District, and buildings for the Roman Catholic Archdiocese of Los Angeles.

<b>Bailey, James Van Evera (1903-1980), AIA</b>	
Born:	Portland, OR
Education:	University of Oregon (1928)
Firms:	Chief designer for C. Waldo Powers (1929-1932); Plummer, Wurdeman & Becket, (1933-1938); Wurdeman & Becket (1938-1949); Welton Becket Associates (1949-1988).
	Palm Springs-based architect James Van Evera Bailey, AIA, was born in Portland, Oregon, and earned his degree in 1928 from the University of Oregon Extension. He established a Palm Springs-based practice between 1933 and 1937. After serving in WWII, he returned to Oregon, where he established a practice and was awarded many commercial commissions. He was best known for his Nelson Equipment Co. Building (1948) and Oregon Chain Saw Corporation (1955), both in Portland. Bailey's John Grey Residence (c. 1953) in Oswego, Oregon, was profiled by Esther McCoy in a <i>Los Angeles Times</i> article presenting the best architecture of the Northwest. The Mid-century Modern style Grey Residence featured extensive use of floor-to-ceiling glass and clerestory windows.
<b>Barlow, Fred, Jr. (1902-1953), FASLA</b>	
Born:	Colorado Springs, CO
Education:	University of California, Berkeley, B.S. Landscape Design (1925)
Firms:	Bashford & Barlow (1936-1943)
	Fred Barlow, Jr., FASLA, studied landscape design at the University of California, Berkeley, graduating with a B.S. in 1925. He worked for three years for Paul Thiene before leaving in 1930 to work for Katherine Bashford. Barlow worked with Bashford consistently for thirteen years, with the exception of a two-year period in the early 1930s when he worked for the National Park Service. He became a partner in Bashford's firm in 1936, a relationship that resulted in an extensive portfolio of designs, including Harbor Hills, Aliso Village and Ramona Gardens. In 1943 Barlow opened his own practice, which he operated until his death in 1953. Notable projects include the Hollywood Park Racetrack, the Davidson Residence (Ship of the Desert) in Palm Springs, and Valencia Village. He created designs for over forty housing developments, including Baldwin Hills Village, where he lived from 1941 to 1948. He served as Vice President of the American Society of Landscape Architects from 1951 to 1953. <sup>1</sup>
<b>Bashford, Katherine Emilie (1885-1953), FASLA</b>	
Born:	Arizona
Education:	Otis Art Institute in Los Angeles; apprenticeship with Florence Yoch
Firms:	Bashford & Barlow (1936-1943)
	Katherine Bashford, FASLA, studied at Pasadena's Polytechnic High School and the Otis Art Institute in Los Angeles. She studied European gardens while traveling to Europe in the 1910s and then again in the 1920s. An apprenticeship with Florence Yoch furthered her training as a designer. In 1923 she opened her own landscape architecture practice, working on estates in Southern California. Her early projects included gardens for Harry Bauer, John Barber, and the William C. McDuffie Estate,

<sup>1</sup> "Fred Barlow, Jr.," <https://tclf.org/pioneer/fred-barlow><https://tclf.org/pioneer/fred-barlow> (accessed August 14, 2015).

	for which she won an award from the American Institute of Architects, Southern California Chapter. In 1935 Bashford participated in the National Housing Exhibition in Los Angeles. The following year Fred Barlow became a partner in her firm, a relationship that resulted in an extensive portfolio of designs, including Harbor Hills, Aliso Village and Ramona Gardens. Bashford's work was recognized repeatedly in the publication <i>California Southland</i> , for which she also wrote several articles. She was made a Fellow of the American Society of Landscape Architects in 1936, and in 1938 became the first woman to be elected ASLA Chapter President. <sup>2</sup>
<b>Baumfeld, Rudolf L. "Rudi" (1903-1988)</b>	
Born:	Vienna, Austria
Education:	Akademie der bildenden Künste (Academy of Fine Arts), Vienna, Austria (1931)
Firms:	Victor Gruen Associates
	Rudolf "Rudi" Baumfeld came to the United States from his native Austria in 1940 after designing buildings in several European countries. He joined forces with architect and planner Victor Gruen in 1943, and was an original partner in Victor Gruen Associates when it was formed in 1951. He headed several departments of the firm including design, interior design, graphics, merchandising, and store layout. Baumfeld designed Southdale in Minneapolis, Minnesota, the first two-level enclosed shopping mall in the United States. Many of his projects were in the Los Angeles area, among them the South Coast Plaza and Costa Mesa shopping centers, the Wilshire Terrace apartments, and the Tishman 615 Building. He designed more than a dozen Joseph Magnin stores in the Western states. After his retirement from Gruen Associates in 1968, Baumfeld continued as a consultant to the firm. <sup>3</sup>
<b>Becket, Welton (1902-1969), FAIA</b>	
Born:	Seattle, WA
Education:	University of Washington, B.Arch. (1927); École des Beaux Arts, Fontainebleau, France (1928)
Firms:	Chief designer for C. Waldo Powers (1929-1932); Plummer, Wurdeman & Becket, (1933-1938); Wurdeman & Becket (1930-1933; 1938-1949); Welton Becket Associates (1949-1988)
	Welton Becket, FAIA, was born in Seattle, Washington, and studied architecture at the University of Washington. He completed a year of graduate study at the École des Beaux Arts in Fontainebleau, France, and arrived in Los Angeles in 1931. In 1933, he formed a partnership with his former classmate, Walter Wurdeman, and an established Los Angeles architect, Charles F. Plummer. They specialized in small commercial buildings and residences. In 1935, the partners won a design competition for the Pan Pacific Auditorium in Los Angeles; the distinctive Streamline Moderne landmark was constructed north of the Miracle Mile district for the 1935 National Housing Exposition. After Plummer's death in 1939, the firm incorporated as Wurdeman and

<sup>2</sup> "Katherine Emilie Bashford," <https://tclf.org/pioneer/katherine-bashford><https://tclf.org/pioneer/katherine-bashford> (accessed August 14, 2015).

<sup>3</sup> "R. Baumfeld, 84, Dies; Architect and Planner," *New York Times*, March 7, 1988, <http://www.nytimes.com/1988/03/07/obituaries/r-baumfeld-84-dies-architect-and-planner.html><http://www.nytimes.com/1988/03/07/obituaries/r-baumfeld-84-dies-architect-and-planner.html>, accessed June 24, 2015.

	<p>&amp; Becket. Wurdeman and &amp; Becket's design for Bullock's Pasadena, completed in 1947, established the prototype for the postwar suburban department store. When Wurdeman died unexpectedly in 1949, Becket bought out his partner's heirs and assumed sole leadership of the firm, changing its name to Welton Becket and Associates. Headquartered in Los Angeles, the firm grew to be one of the largest in the world with more than 400 employees and offices in San Francisco, New York, Houston, and Chicago.</p> <p>In addition to Bullock's Pasadena, Becket's retail projects included some two dozen other Bullock's stores, including locations in Palm Springs, Westwood (Los Angeles), Sherman Oaks (Los Angeles), Lakewood, La Habra, and Northridge (Los Angeles); Buffum's Department Store in Santa Ana; Seibu of Los Angeles; and malls such as Fashion Island in Newport Beach. Other notable works include the circular Capitol Records tower in Hollywood, the Cinerama Dome, the Music Center in downtown Los Angeles, the Santa Monica Civic Auditorium, and the Beverly Hilton Hotel in Beverly Hills. Becket is credited with transforming the cityscape of postwar Los Angeles with his many commercial and institutional designs. He was one of the most influential architects in the development of Los Angeles, and founded a practice that became one of the nation's largest architectural firms. He died in 1969 at the age of 66.</p>
<b>Benedict, Hiram H. (1901-1984), AIA</b>	
Born:	Riverside, CA
Education:	
Firms:	Bain, Overturf, Turner and Associates
	<p>Hiram Benedict, AIA did not attend college, but worked in Los Angeles as an architectural draftsman by 1920. In 1922, Benedict was employed by George Washington Smith in Santa Barbara. By 1935 Benedict lived in Palm Springs, where he joined Gene Verge as an architectural draftsman. He returned briefly to Palm Springs after World War II and established an office for the Seattle firm of Bain, Overturf, Turner and Associates. After a few years he moved to Phoenix, where he designed the Paradise Valley Country Club (1953) and the Carl Hovgard Residence (1967) in Carefree. Benedict also designed the Ranch-style Phil Harris and Alice Faye Residence (c. 1952) at Thunderbird Country Club and the award-winning Half Moon Inn (1960) in San Diego.</p>
<b>Berkus, Barry Alan (1935-2012), AIA</b>	
Born:	Los Angeles, CA
Education:	University of Southern California
Firms:	Berkus Design Studio; B3 Architects
	<p>Barry Alan Berkus, AIA was born in Los Angeles and grew up in Pasadena. After graduating from John Muir High School he briefly studied economics at UC Santa Barbara. However, a lifelong love of drawing led him to transfer to USC's School of Architecture, where he decided to specialize in residential design. While at USC Berkus worked part time for L.C. Major, a prominent California housing designer. Major offered him a full-time job, but Berkus turned it down, left USC, and opened his own practice at age 21.</p>

	<p>One of Berkus' first major clients was William Levitt, a real estate developer often called the "Father of American suburbia." During his career, Berkus built a portfolio of 600,000 dwellings encompassing about 10,000 designs in developments across the United States, including Playa Vista in Los Angeles, Harbor View in Newport Beach, Turtle Rock Highlands and Woodbridge Landing in Irvine, and Park Imperial South in Palm Springs. Other notable projects include the Santa Barbara Maritime Museum, the Mosher Alumni House at UC Santa Barbara, residences for celebrities such as Kenny Loggins, and a temporary village for athletes competing at Lake Casitas in Ventura County during the 1984 Olympics.</p> <p>Berkus and his firms, Berkus Design Studio and B3 Architects, won numerous awards. In 1991 he was named one of the world's 100 top architects by Architectural Digest. He died of leukemia in Santa Barbara at age 77.<sup>4</sup></p>
<b>Black, Michael Allan (1937-2008), AIA</b>	
Born:	Santa Rosa, CA
Education:	University of Southern California, 1961
Firms:	
	<p>Palm Springs-based architect Michael Allan Black, AIA graduated from USC in 1961. Black is best known for his post-and-beam and shed-style modern buildings. His Palm Springs projects include residential, commercial, and institutional architecture such as the Moore Residence (1968), the Strube-Gibson Residence (1969) and the Ajalon Baptist Church (1969). In 1971 Black was appointed to the city's architectural advisory committee.</p>
<b>Black, Milton J. (1905-1970), AIA</b>	
Born:	San Diego, CA
Education:	No formal education, apprenticed with Los Angeles architects
Firms:	
	<p>Milton J. Black, AIA was born in 1905 and spent his early childhood in San Diego before relocating with his family to Los Angeles. Following his graduation from South Central's Jefferson High School Black apprenticed with local architectural firms, and by 1927 was employed as staff architect for the Hollywood building firm of J. Ross Castendyck. Black was invited that year to participate in an exhibit sponsored by the Hollywood Architects League, and was credited alongside Castendyck by <i>Architectural Digest</i> for the design and construction of a Spanish Colonial Revival-style home in the Hollywood Hills for film star Dolores del Rio. Black received his certification to practice architecture in California in 1930, the same year he designed the Delta Sigma Phi fraternity house at UCLA. In the 1930s, the architect was kept busy designing both single-family residences and apartment complexes in a variety of styles. Among his most notable projects were the Mauritania Apartments on Rossmore Avenue, a striking Streamline Moderne complex commissioned by actor Jack Haley in 1934; and the elegant French art deco complex known as Chateau Rossmore, also</p>

<sup>4</sup> Elaine Woo, "Barry Berkus dies at 77; architect of mass-market housing," *Los Angeles Times*, December 9, 2012, <http://articles.latimes.com/2012/dec/09/local/la-me-barry-berkus-20121209>, accessed June 24, 2015.

	built in 1934. During this period, the versatile architect also produced the romantic Spanish Colonial-style courtyard complex El Cadiz (Los Angeles Historic-Cultural Monument #775). Black's best-known single-family residences include the Cernitz House in Pacific Palisades and Los Feliz's Victor M. Carter Residence. The architect's most recognized project by far is the hot dog stand Tail O' the Pup. Built in 1946, the 17-foot-wide stand is the quintessential example of "programmatic" architecture, in which roadside businesses tried to catch customers' eyes with buildings shaped like animals or objects such as hats, donuts, and coffee pots. <sup>5</sup>
<b>Bray, William M. (1905-1998), AIA</b>	
Born:	Anaconda, MT
Education:	University of California, Berkeley, B.A., Art (1928)
Firms:	Theodore R. Jacobs, Architect (1930-1932); Vern Houghton, Architect (1932-1934); Arlos R. Sedgely, Architect (1934-1937); Mott Montgomery, Architect (1937-1939); Harry Haydn Whitely, Architect (1939-1942); Wurdeman & Becket, Architects (1942, 1945); William M. Bray, AIA, Architect and Associates (1949-1994)
	<p>William M. Bray, AIA earned his B.A. in art at the University of California, Berkeley in 1928. Upon graduation he worked for a series of architects including Theodore R. Jacobs, Vern Houghton, Arlos Sedgely, Mott Montgomery, and Harry Hadyn Whitely.<sup>6</sup> Bray also worked briefly as an architect for the firm of Wurdeman &amp; Becket in Los Angeles in 1942 and again in 1945.</p> <p>The Los Angeles-based Bray established his own practice in 1949, specializing in postwar tract housing developments.<sup>7</sup> By the firm's own count, Bray was responsible for over 33,500 housing units throughout Southern California and Nevada. He worked with such developers such as Mark Taper, George Ponty, Nels G. Severin, and M.J. Brock. Bray's subdivisions were characterized by a large number of plans, and his designs were most often characterized by traditional residential styles such as "Cape Cod," "Swiss Chalet," "Colonial," and "California Ranch." Bray was also known for his custom residential homes.</p> <p>Bray's work was published nationally in <i>House and Home</i> and <i>Architectural Digest</i>, and his tract housing earned numerous awards including a "Homes for Better Living Award of Merit" in 1962. In 1997, Bray was awarded the Presidential Citation from the American Institute of Architects.</p>
<b>Breed, F. Nelson (1890-1976), AIA</b>	
Born:	Hartford, CT
Education:	Massachusetts Institute of Technology, M.S. (1913)
Firms:	Breed, Fuller & Dick, F. Nelson Breed, Architect
	Franklin Nelson Breed, AIA, was born in Hartford, Connecticut in 1890. After he graduated from MIT in 1913, he worked as a draftsman in the offices of Putnam &

	Cox in Boston. Prior to establishing his own firm in 1922, he worked for Peabody, Wilson & Brown in New York. Breed's residential work was published in <i>Architecture</i> , <i>Architect</i> , <i>Architectural Forum</i> , and <i>House and Garden</i> . Notable works include the Riverside Yacht Club (1928) in Connecticut, the Douglas Burden Residence (1928) in Bedford, New York and the First Church of Christian Science (1953) in New Canaan, Connecticut.
--	---

<b>Brewster, Floyd E. (1888-1971), AIA</b>	
Born:	New York
Education:	Cornell University (1912)
Firms:	Brewster & Kennedy (1913-1917); George Washington Smith (1922-1935); Floyd E. Brewster, Architect (1936-1971)
	Floyd E. Brewster, AIA was born in New York in 1888. He studied at Cornell University, graduating in 1912, and completed post-graduate work in architecture at the same school in 1913. He opened his Lake Placid, NY firm Brewster & Kennedy later that same year. He relocated to Riverside, California in 1917 to act as head of the drawing department at Polytechnic High School. By 1918 Brewster was a practicing architect in Riverside. In 1922 he went to work for George Washington Smith. Brewster also collaborated with architect Carlton Winslow, Sr. on the Spanish Colonial Revival design of the Santa Barbara Museum of Natural History (c. 1926). In 1936 Brewster established his own practice in Santa Barbara, with some residency in Palm Springs. Brewster's work focused on the Spanish Colonial Revival and other period revival styles popular in Santa Barbara and Palm Springs. In 1936 Elias Rothman commissioned Brewster to design a \$30,000 apartment and store building in Palm Springs.

<b>Burns, Herbert W. (1897-c.1988)</b>	
Born:	
Education:	
Firms:	
	Herbert W. Burns was a Los Angeles-based contractor who relocated to Palm Springs after World War II. Burns designed and built commercial and residential buildings in Palm Springs in the postwar period. He developed a distinctive Late Moderne style that emphasized volumes and streamlined forms rather than structure, with stone-veneered walls, layered horizontal roof planes and soffits, and prominent chimneys. While Burns may be best known for his multi-family residential designs, including the Town & Desert Apartments, several of his Palm Springs homes were published in the <i>Los Angeles Times</i> including the Edith Eddy Ward/Margaret M. Ward Residence (c. 1948) and the Stuart Weiss Residence (c. 1951).

<b>Byers, John Winford (1875-1966), AIA</b>	
Born:	Grand Rapids, MI
Education:	University of Michigan, B.S. Electrical Engineering (1898); Harvard University, S.B. (1899)
Firms:	John W. Byers, AIA, Architect (1927-1954)

	<p>John Winford Byers, AIA was a self-taught architect based in Santa Monica. Byers was noted for his work with adobe and was a leader in its use as a building material in California. After receiving a degree in electrical engineering from the University of Michigan Byers did graduate work at Harvard University. He taught at the North American Academy in Montevideo, Uruguay prior to coming to Santa Monica in 1910 to chair the Romance Languages Department at Santa Monica High School. Byers also worked as a translator for Mexican workmen on construction sites, which is how he learned to build with adobe. He began his architectural career building residences for his own family and for his cousin. His first commissioned design, in 1916, was a house for W.F. Barnum, the principal at Santa Monica High School.</p> <p>Byers is best known for designing homes in the Spanish Colonial and Monterey Colonial Revival styles. When he could not obtain the curved clay roof tiles he needed for these buildings, Byers established his own workshop. In addition to roof tiles the workshop also produced decorative tile, wrought iron and woodwork. By 1926, Byers was a licensed architect. Among his clients were Norma Shearer and Irving Thalberg, Shirley Temple, Joel McCrea, Laurence "Buster" Crabbe, and King Vidor. He designed a home for Ray Bradbury, a ranch house at the Getty estate in Malibu, and the Club House at Brentwood Country Club. Byers died in Santa Monica at age 91.</p>
<b>Carlson, Harold A. (1919-1981), AIA</b>	
Born:	Seattle, WA
Education:	University of Southern California, B.Arch (1949)
Firms:	Hugh Gibbs; James R. Friend; Clarence N. Aldrich; Carlson, Middlebrook & Rose; Carlson & Middlebrook (1954)
	<p>Harold A. Carlson, AIA was born in Seattle in 1919. He graduated with a B. Arch from USC in 1949, after which he worked for Hugh Gibbs, James R. Friend, AIA, and Clarence N. Aldrich. He formed the Garden Grove-based firm Carlson &amp; Middlebrook (with Robert W. Middlebrook) in 1954. Carlson's work focused mostly on commercial commissions. He was the architect for the Desi Arnaz Hotel (1958) in Indian Wells. Carlson received awards for his residential work, including a 1960 Award of Merit from <i>American Builder</i> magazine and a Best Value award from <i>American Home</i> magazine in 1958.</p>
<b>Chamberlain, Charles G. (c.1880-1955)</b>	
Born:	Tennessee
Education:	
Firms:	
	<p>Charles G. Chamberlain relocated from Tennessee to California in 1910. In 1923 he moved to Palm Springs and became one of its pioneer builders. Notable buildings include the Welwood Murray Memorial Library, the Pacific Building, Youth Center and many homes. He died at age 75 of a heart attack.<sup>8</sup></p>
<b>Chambers, Robson Cole (1919-1999), AIA</b>	
Born:	Los Angeles, CA
Education:	University of Southern California, B.Arch (1941)

<sup>8</sup> "Pioneer Village Builder, Charles Chamberlin Dies." *Desert Sun*, Volume XXVII, Number 77, 16 May 1955.

Firms:	Myron Hunt & H.C. Chambers (1941-1946); Clark & Frey (1946-1952); Clark, Frey & Chambers (1952-1957) <sup>9</sup> ; Frey & Chambers (1957-1966)
	<p>Robson Cole Chambers, AIA, was born in Los Angeles and raised in Banning. He earned his B.Arch from the University of Southern California School of Architecture, and was awarded the AIA Medal when he graduated in 1941. During WWII, Chambers served in the U.S. Marine Corps and helped design Camp Pendleton in Oceanside. From 1941 to 1946 Chambers worked as a draftsman for Hunt &amp; Chambers in Pasadena. In 1946 he began working for Clark &amp; Frey in Palm Springs. Frey and Chambers collaborated on a residence for Chambers and his wife in 1947, and on its expansion in 1952. In 1952 Chambers became a partner in the firm, at which time the firm became Clark, Frey and Chambers. Around that time, the firm took on its largest project, the Palm Springs City Hall (1952-1957) in collaboration with Williams, Williams &amp; Williams.</p> <p>At the end of 1956 Clark left the firm to focus on non-residential work. Frey &amp; Chambers completed projects such as a second residence for Raymond Cree in Cathedral City, and Frey House II. Other noteworthy projects from this period include the Carey Residence, the North Shore Yacht Club (1958), St. Michael's-by-the-Sea Church Building in Carlsbad (1959), the Palm Springs Aerial Tramway Valley Station (1963) and the Tramway Gas Station (1965). Chambers left Palm Springs in 1966 to work as campus architect for UC Santa Barbara, where he stayed until 1980. He then retired to Borrego Springs, where he kept a small private practice until 1995, designing many local residences and the St. Barnabas Episcopal Church (1986). He returned to Santa Barbara in 1998, where he passed away in 1999.</p>
<b>Choate, Christian C. (1908-1981)</b>	
Born:	Jackson, MO
Education:	University of Southern California, B.Arch (c. 1930)
Firms:	Cliff May Homes (1953-1958), Christian Choate, Architect
	<p>Christian C. Choate studied architecture at USC, where his fourth-year project was singled out as a prize-winner. With Cliff May, Choate founded a mass-production line in 1953 called Cliff May Homes, which marketed low-cost May designs to builders around the country. As a licensed architect Choate approved and signed May's designs. Choate worked with May between 1953 and 1958. Throughout his career, Choate focused on residential work, and later designed Los Angeles homes for a celebrity clientele. Choate's solo work, which focused on the Modern Ranch Style, was featured in <i>Los Angeles Home Magazine</i>, <i>Arts &amp; Architecture</i>, and <i>Western Building</i>. A Choate design was selected by <i>House and Home Magazine</i> as one of their "20 Quality Houses for 1950." Notable works include the Rossmoor development in Long Beach (1958, collaboration with R.C. Jones), the Buhler Residence in Beverly Hills (1963), and the Malibu Antibes Apartments (1964).</p>
<b>Clark, John Porter (1905-1991), AIA</b>	
Born:	Fort Dodge, IA
Education:	Cornell University (1925-1928)

<sup>9</sup> The partnership of Clark, Frey and Chambers was dissolved at the end of 1956 (Rosa, 114).

Firms:	Marston, Van Pelt & Maybury (1923-1925, 1928-1932); Van Pelt & Lind (1932-1936); collaboration with Albert Frey (1935-1937); John Porter Clark, Architect (1937-1938); Clark & Frey (1939-1952); Clark, Frey, & Chambers (1952-1957); <sup>10</sup> John Porter Clark, Architect (1958-1991)
	John Porter Clark, AIA, worked for the firm of Marston, Van Pelt and Maybury before enrolling in the architecture program at Cornell University, from which he graduated with a Bachelor of Architecture in 1928. He moved to Pasadena to work for the architectural firm of Van Pelt & Lind. In 1932, he moved to Palm Springs and opened an office; since he wasn't yet licensed, Van Pelt & Lind allowed him to use their name for his commissions. Clark met Albert Frey, FAIA when Frey came to Palm Springs in 1934 to supervise construction of the Kocher-Samson building. From 1935 to 1937 Clark and Frey collaborated on a number of projects in Palm Springs under the name of Van Pelt & Lind. In 1939 they formed their own partnership, which would last for nearly 20 years and would permanently alter the course of architecture in the Coachella Valley. Although Clark continued to cater to those clients who still favored traditional styles, both partners promoted Modern design and experimented with new materials such as corrugated metal and plastic siding, steel framing, and concrete block, to adapt their designs to the desert climate. They are today regarded as two of the founders of the "Desert Modern" style of architecture. Their influence is seen in the number, quality, and variety of their projects, including houses, schools, a fire station, churches, shopping centers, hospitals, restaurants, hotels, and apartments. Some of the firm's most prominent works in Palm Springs include Welwood Murray Memorial Library (1940), the Hamrick House (1941), the Villa Hermosa Apartments (1945; altered), St. Paul's in the Desert (1946), Desert Hospital (1950-51; altered), and Palm Springs City Hall (1952-57, with Williams, Williams and Williams). Clark left the firm in 1957 to establish his solo practice and focus on large commercial, public, and institutional projects.
<b>Cody, Harold Bryant</b> (1887-1924)	
Born:	Bradford, PA
Education:	University of Pennsylvania (1910)
Firms:	
	Harold Bryant Cody was the son of Charles Paxton Cody, a British architect who immigrated first to Canada and then to Pennsylvania. After his graduation from the University of Pennsylvania in 1910 Harold Bryant Cody moved to Los Angeles and apprenticed at Parkinson & Bergstrom. He then worked for Myron Hunt before starting a partnership with Lester H. Hibbard. Due to health issues, Cody left the firm and moved to Palm Springs in 1920. Though he only completed a few projects in the area, Cody is recognized as the first professionally-trained architect to practice in Palm Springs.
<b>Cody, William F.</b> (1916-1978), FAIA	
Born:	Dayton, OH
Education:	University of Southern California, B.Arch (1942)

<sup>10</sup> The partnership of Clark, Frey & Chambers was dissolved at the end of 1956 (Rosa, 114).

Firms:	Heth Wharton (1935); Asa Hudson (1935); William Knowles (1942); Blanchard, Maher and Ward (1945); Marsh, Smith and Powell (1946); William F. Cody & Associates (1946 -1972)
	William F. Cody, FAIA studied at the USC School of Architecture while working for Los Angeles designer Cliff May, whose Ranch style houses were inspired by the vernacular architecture of California. From May, Cody developed a predilection for houses that were convenient, comfortable, and open to light, views, and nature. After graduating in 1942 Cody apprenticed at several firms before moving to Palm Springs in 1946. His first independent commission, for the Del Marcos Hotel in 1947, led to a number of projects at local country clubs including Thunderbird, Tamarisk, Eldorado and Seven Lakes. Because of these projects Cody is credited with the concept of the country club subdivision. His body of work also includes a wide variety of notable commercial and residential projects in Palm Springs including the Spa Bath House (with Wexler & Harrison and Philip Koenig; demolished), the adjacent Spa Hotel, the Perlberg Residence (1952), L'Horizon Hotel (1952), Shamel Residence (1961), Abernathy Residence (1962), St. Theresa's Catholic Church (1968), and the Palm Springs Library Center, (1972-1975). Cody was inducted into the College of Fellows of the AIA in 1965. <sup>11</sup>
<b>Coffey, Arthur J. (1917-1965)</b>	
Born:	Kentucky
Education:	
Firms:	
	Arthur J. Coffey was a Palm Springs contractor whose firm is often credited with the design of many of the homes he built. During the mid-1950s, Coffey was also a building inspector for the City of Palm Springs.
<b>Colcord, Gerard R. (1900-1984), AIA</b>	
Born:	St. Louis, MO
Education:	Ecole des Beaux-Arts, Fontainebleau, France
Firms:	
	Gerard Colcord, AIA, was educated in Europe and the United States before moving to Los Angeles in 1924. Throughout his career, which lasted until his death in 1984, he designed over 300 estates across Southern California. He was known as Hollywood's society architect, designing traditional homes and shying away from Modernism. He is most recognized for his Period Revival designs during a time when Modernism was gaining recognition. His "Country Colonial Farmhouse" became known as his signature style. <sup>12</sup> In Palms Springs, he adapted the Monterey Colonial style for desert living with the H.A. Sparey Residence. <sup>13</sup>
<b>Connor, Rose (1892-1970), AIA</b>	
Born:	Des Moines, IA

Education:	Académie Colarossi in Paris, France; Municipal School of Art in Birmingham, England; New York School of Fine Arts
Firms:	Soule & Murphy (1923-1926); Allen & Collens (1926); Reginald D. Johnson (1928-1929); Rose Connor, Architect (1936-1942; 1946-1970)
	<p>Architect Rose Connor, AIA is one of the earliest and most successful woman architects of the 20<sup>th</sup> century. In 1948 the AIA identified her as one of only ten women architects in California with their own practices.<sup>14</sup> Iowa-born Connor was educated at the Académie Colarossi in Paris, France, the Municipal School of Art in Birmingham, England, and the New York School of Fine Arts, where she likely began her architectural education.<sup>15</sup> Prior to establishing her own firm in Pasadena in 1937, she worked for Soule &amp; Murphy and Reginald D. Johnson. Her work consisted primarily of small residential commissions for professional women and a series of tract home developments in the post-World War II period for Yardley and for Sturtevant in Lakewood, Downey, and Anaheim.</p> <p>The Reverend Charles Fuller was Connor's most important patron. In addition to a Smoke Tree Ranch house, Fuller commissioned Connor to design two rental residences in South Pasadena (1940), three houses in South Pasadena (1941-47), the Fuller Residence (1950) in Newport Beach, and the Fuller Residence (1952) in San Marino. Connor also worked as an associate architect for the Fuller Theological Seminary (1952-53) in Pasadena with the firm of Orr, Strange and Inslee.</p> <p>Connor was admitted to the AIA in 1944, and her residential work was published in <i>Architectural Record</i> in 1948.</p>
<b>Crabtree, O.R. (b. 1920)</b>	
Born:	
Education:	
Firms:	
	<p>O.R. Crabtree was an award-winning landscape designer. Following his service in the Navy during World War II, he worked for a number of Parks and Recreation Departments in the Sacramento Valley. He oversaw the construction of four parks and playgrounds in the Sacramento area. Crabtree came to Palms Springs from Pasco, WA when he was appointed the city's Parks and Recreation director in 1957. In 1967, Crabtree was given the Trophy Award by the California Landscape Association for his work on the grounds of the W.A. Bushman Residence in Palm Springs. He was also involved in the 1974 expansion of the Palm Springs Riviera and the Deep Well Ranch condominiums.</p>
<b>Crist, A. Belden (1923-1986)</b>	
Born:	
Education:	
Firms:	

<sup>14</sup> Mary Ann Callan, "Women Succeed As Architects," *Los Angeles Times*, November 24, 1948, B1.

<sup>15</sup> Sarah Allaback, *The First American Women Architects* (Chicago, IL: University of Illinois Press, 2008), 68.

	A. Belden Crist was the son of a Los Angeles area homebuilder/contractor. Although Crist was never licensed as an architect, he had an active Palm Springs-based design firm through the 1970s.
<b>Davis, Eldon C. (1917-2011), AIA</b>	
Born:	Anacortes, WA
Education:	University of Southern California, B.Arch (1942)
Firms:	William H. Knowles, Architect (1942-1943); Spaulding & Rex (1945-1947); Armét & Davis, Inc. (1947-1972); Armét, Davis & Newlove, AIA, Inc. (1972-1991)
	Eldon C. Davis, AIA graduated from the University of Southern California with a degree in architecture. Davis worked with Army engineers, Phelps-Dodge Mines in Arizona, and the Navy Design Office on Terminal Island. Davis met Louis Logue Armét when they worked together at the architecture firm of Spaulding and Rex. They founded Armét & Davis in 1947. They worked together until 1972 designing churches, banks, bowling alleys, schools, and more. They are best known for their many Googie-style coffee shops including Clock's in Inglewood (1951), Norm's on South Figueroa in Los Angeles (1954), Huddle's Cloverfield in Santa Monica (1955), Pann's in Westchester (1956), and the Holiday Bowl and Coffee Shop in Los Angeles (1957).
<b>Denney, Carl W. (1907-2002), AIA</b>	
Born:	Philadelphia, PA
Education:	University of Southern California, B.Arch (1930)
Firms:	Carl Maston (1946); Graham Latta (1947-1950); Graham Latta & Carl Denney, Architects (1950-1955)
	Carl W. Denney, AIA was a Glendale-based architect who received his B. Arch from USC in 1930. In his early professional career he was a set designer at Universal Pictures (1930-1945). Between 1950 and 1955 he was a partner at Graham Latta & Carl Denney, Architects, after which he served as chief architect at WED (Disney) Enterprises. In addition to a house at Smoke Tree Ranch, he also designed Disney's Los Angeles home (1967). His work includes the UC Riverside Library (1950) and the Adult Recreation Center (1949) in Glendale, California, which won a local AIA award in 1950.
<b>Dodd, William J. (1862-1930), AIA</b>	
Born:	Quebec, Canada
Education:	
Firms:	William LeBaron Jenney (1880-1882); Solon S. Berman (1882-1883); McKim, Mead & White (1884-1886); Wehle and Dodd, Architects (1887-1889); Maury and Dodd, Architects, (1889-1896); Dodd and Cobb, Architects, (1896-1904); McDonald and Dodd, Architects, (1905-1913); Haenke and Dodd, Architects (1913-1915); Dodd and Richards (1916-1930)
	William James Dodd, AIA was an American architect who worked mainly in Louisville, Kentucky from 1886 to 1912 and in Los Angeles, California from 1913 until his death in 1930. Dodd was inspired by the First Chicago School of architecture, though he was also influenced by the classical aesthetic of the Beaux-Arts style. Dodd's design work included functional and decorative architectural glass and ceramics, furniture, home appliances, and literary illustration.

	Notable architectural works include the Pacific Center in downtown Los Angeles and the San Gabriel Mission Auditorium south of Pasadena. Dodd also collaborated with J. Martyn Haenke and lead architect Julia Morgan on Hearst's Los Angeles <i>Herald-Examiner</i> Building.
<b>Doty, Charles W. (1927-2011)</b>	
Born:	Minnesota
Education:	
Firms:	
	Rancho Mirage-based designer Charles W. Doty worked in the office of Walter White in the early 1950s. Doty, never licensed as an architect, occasionally collaborated with licensed architects. He is best known for his design of the Mr. and Mrs. Richard Winans Residence (c. 1956), which was published several times in the <i>Los Angeles Times</i> . Doty's projects express a clear preference for a Mid-Century Modern design aesthetic. His work includes residential and commercial buildings concentrated in the Palm Springs area. These include the Tripalong Apartments (1958) in Palm Desert, Indian Wells Country Club Homes (1959) in Indian Wells, and Vista Del Valle Clubhouse (1967) at Desert Hot Springs. Along with architect C.E. Betraun, Doty also designed the Ocean Shores Golf and Country Club (1966) in Ocean Shores, Washington.
<b>Douglas, Tom (1896-1978)</b>	
Born:	
Education:	
Firms:	
	Tom Douglas was an actor and interior designer who often worked with builders of celebrity homes. In the 1930s Douglas designed four cottages for Edmund Goulding in the Mesa neighborhood of Palm Springs. In 1940 he designed and built his own residence, also in Palm Springs. In the late 1960s and early 1970s he was the designer/decorator for the Tropicana Hotel in Las Vegas, where he designed the Superstar Theater (1973). <sup>16</sup>
<b>DuBois, Charles E. (1903-1996), AIA</b>	
Born:	Rochester, NY
Education:	University of California, Los Angeles (1921-1922); Massachusetts Institute of Technology (1922-1930, intermittently)
Firms:	Walker & Eisen (1923-1931); Gogerty & Weyl (1926-1929); Horatio W. Bishop (1929); Charles E. DuBois (1938-1982)
	Charles E. DuBois, AIA was born in Rochester, New York, and educated at UCLA and MIT. He worked in the offices of Walker & Eisen and Gogerty & Weyl. During World War II DuBois worked as a Senior Screen Set Designer at Metro-Goldwyn-Mayer studios. <sup>17</sup> After the war he specialized in Ranch-style tract housing for developers. Notable works include Hollywood Riviera Estates (1955) in Palos Verdes, Riviera Beach Estates (1955) in Torrance, and Santa Anita Estates (1955) east of

<sup>16</sup> Norma Lee Browning, "A-M's best is even better than that," *Chicago Tribune*, December 17, 1973.

<sup>17</sup> AIA Application for Membership, Charles E. DuBois, August 27, 1946, 4.

	Pasadena. He frequently collaborated with developer J. George Wright and Don-Ja-Ran Construction Company, including such projects as Fairwood Estates (1964) in Granada Hills and the Kingswood Series of Woodland West (1961) in Woodland Hills. Between 1958 and 1962, DuBois designed fifteen houses for George Alexander in Vista Las Palmas, which are a modern interpretation of a Swiss Chalet and have been nicknamed "Swiss Miss" houses. <sup>18</sup> DuBois also worked with developer Robert Fey on the Canyon Estates tract. <sup>19</sup>
<b>Eckbo, Garrett (1910-2000), FASLA</b>	
Born:	Cooperstown, NY
Education:	University of California, Berkeley, B.S. Landscape Architecture (1935) Harvard Graduate School of Design, M. Landscape Architecture (1939).
Firms:	Eckbo, Royston & Williams (1945-1958); Eckbo, Dean & Williams (1958-1967); Eckbo, Dean, Austin & Williams (1967-1992)
	Landscape architect Garrett Eckbo, FASLA, was one of the central figures in modern landscape design. Through several highly successful collaborations, Eckbo became a leading practitioner of the "California style" of landscape architecture. His first firm, Eckbo, Royston & Williams, established an office in Pasadena in 1946. They designed landscapes for several Case Study program architects. In 1958, the firm became Eckbo, Dean & Williams, and, in 1967, Eckbo, Dean, Austin & Williams (EDAW). Eckbo also spent several years as chair of the Department of Landscape Architecture at UC Berkeley. Throughout the 1950s and 1960s Eckbo designed landscapes for a number of prominent architects such as Palmer & Krisel, Wexler & Harrison, E. Stewart Williams, and William F. Cody.
<b>Eisen, Percy A. (1885-1946), AIA</b>	
Born:	San Francisco, CA
Education:	
Firms:	Eisen & Son (1905-1919); Walker & Eisen (1919-1941); Hart and Eisen (1941-1946)
	Percy A. Eisen, AIA was born in San Francisco. He and his father, architect Theodore Eisen, moved to Los Angeles in 1890. He trained as an architect in his father's office, and entered into a partnership with his father until the latter's retirement. In 1919 Eisen formed a partnership with Albert R. Walker, which lasted until 1941. A prolific firm, Walker & Eisen designed such notable buildings as the Fine Arts Building (1927) and the Oviatt Building (1925). During World War II, Eisen ended his partnership with Walker and entered into a new partnership with Eugene V. Hart. He died of a heart attack at his office in Los Angeles in 1946.
<b>Ellwood, Craig (1922-1992)</b>	
Born:	Clarendon, TX
Education:	UCLA extension, Structural Engineering (1949-1954)
Firms:	Craig Ellwood & Associates

<sup>18</sup> "Swiss Misses," *Eichler Network*, <http://www.eichlernetwork.com/article/swiss-misses?page=0,0> (accessed August 24, 2015).

<sup>19</sup> "Living in Canyon Estates Homeowners Association," *Canyon Estates Homeowners Association*, <https://community.associawebsites.com/sites/CanyonEstatesHomeownersAssn/Pages/LivingIn.aspx> (accessed August 24, 2015).

	Born Jon Nelson Burke in Clarendon, Texas, Craig Ellwood served in the Army during WWII. Although he never earned a formal degree he developed a strong interest in the application of industrial materials and techniques to architecture. He worked as a contractor and construction estimator in Los Angeles before establishing Craig Ellwood Associates in 1949. In 1951 he was invited by John Entenza, editor of <i>Arts &amp; Architecture</i> magazine, to participate in the Case Study House program. Ellwood designed three houses for the program, #16 (considered to be among the most important of postwar California homes), #17 and #18, between 1952 and 1958. As a result of the program Ellwood won commissions for the design of a number of noteworthy Modern houses throughout Los Angeles, as well as commercial buildings and the iconic Bridge Building at Art Center College of Design in Pasadena. <sup>20</sup> Ellwood died in 1992 at age 70 in his home in Italy. <sup>21</sup>
<b>Emmons, Frederick E., Jr. (1907-1999)</b>	
Born:	Olean, NY
Education:	Cornell University, B.Arch (1929)
Firms:	Frederick E. Emmons (1946-1950); Jones & Emmons (1951-1969)
	Frederick E. Emmons, Jr. was born in Olean, New York. After graduating from Cornell University with a degree in architecture in 1929, he joined the New York firm of McKim, Mead & White. He moved to Los Angeles in 1932, where he became friends with A. Quincy Jones through their mutual employment at Allied Engineers in San Pedro. During World War II, Emmons spent four years in the Navy. In 1951, Emmons and Jones founded Jones & Emmons; the partnership continued until Emmons' retirement in 1969. Jones & Emmons favored structural innovations, including lightweight post-and-beam construction with pre-assembled parts. Their work included large-scale commissions, including religious buildings, educational facilities, and civic spaces. The firm designed numerous buildings on the University of California campuses at San Diego, Santa Barbara, Irvine, and Riverside. In addition, the firm designed office, restaurant, and factory buildings throughout California. Emmons died at age 91 in Beverly Hills.
<b>Engen, Donal DeVere (1922-2004), AIA</b>	
Born:	Clark, SD
Education:	University of Southern California, B.Arch (1951)
Firms:	Ameche & Engen (1951-1956); Johnson, Engen & D'Agostino (1956-1960); Donald D. Engen (1960-1965); Kendall Construction Co. Inc. (1965)
	San Fernando-based Donal DeVere Engen, AIA earned his B.Arch from USC in 1951, after which he worked a draftsman for Earl Heitschmidt. In the early 1950s Engen formed a partnership with Bert H. Ameche (actor Don Ameche's brother), designing houses for tract developments such as Rigoletto Village (1956) in Woodland Hills. Engen was a partner in the firm of Johnson, Engen & D'Agostino from 1956 to 1960, following which he maintained a solo practice until 1965. Notable works include Kevington Homes (1967) in Thousand Oaks, Monte Viende (1969) in Camarillo, and the Buena Park Community Hospital (1959).

<b>Fickett, Edward H. (1916-1999), FAIA</b>	
Born:	Los Angeles, CA
Education:	USC School of Architecture, B.Arch. (1937); Massachusetts Institute of Technology, MA, City Planning
Firms:	Sumner Spaulding, FAIA (1935-1938); Kirby Ferguson Structural Engineer (1940-1941); Stephen A. Stepanian, AIA (1941-1942); Heusel and Fickett (1945-1949); Edward H. Fickett, Architect (1949-1999)
	Edward H. Fickett, FAIA, was an innovative Los Angeles architect who established a highly successful practice, primarily designing moderate-income houses for large-scale builder clients in postwar Southern California. He designed some 60,000 buildings over the course of his career and participated in developing housing guidelines for the Federal Housing Administration, Veterans Administration, and the Department of Housing and Urban Development. From the late 1940s through the 1960s Fickett's house designs evolved from Traditional Ranch to Modern Ranch, using simple forms that were clearly modern and designed for efficient and economical construction. A typical Fickett design features traditional ranch-style exterior detailing, an open interior plan, and a "wall of glass" that looks out onto a rear patio. In 1949 Fickett designed the 1,000-residence Sherman Park tract in the San Fernando Valley, considered the first large-scale tract of contemporary design in the Los Angeles area. He also designed many elaborate residences in Bel Air, Brentwood, and Malibu, as well as bank buildings, libraries, schools, commercial and industrial developments, and government buildings.
<b>Fiege, Herbert F. (1909-2002), AIA</b>	
Born:	Manchester, NH
Education:	University of Southern California, B. Arch. (1932)
Firms:	Ayers & Fiege (1949-c. 1970)
	Herbert F. Fiege, AIA was born in Manchester, New Hampshire, in 1909. Upon graduation from USC in 1932, Fiege worked as a draftsman in the office of Walter H. Parker and as a project manager for L.G. Scherer. During World War II Fiege was a project manager for army air base construction. After the war, he formed a partnership with Donald P. Ayers. Ayers & Fiege was selected to design the second exhibition home at the 1953 Los Angeles Home Show — a post-and-beam ranch-style model dubbed "The Coronation." The firm's work included residential designs, schools for the Los Angeles Unified School District, and buildings for the Roman Catholic Archdiocese of Los Angeles. Fiege's designs for space-saving residential details were featured in the <i>Los Angeles Times</i> during the mid-1950s.
<b>Fisher, Howard T. (1903-1979), FAIA</b>	
Born:	Chicago, IL
Education:	Harvard University, B.S. (1926); Harvard University School of Architecture (1928)
Firms:	Walter H. Kilham, Architect (1926-1927); Kendall and Kendall, Architects (1926-1927); Benjamin H. Marshall, Architect (1928-1931); Howard T. Fisher & Associates (1931-1943); General Houses, Inc. (1932-1947)
	Howard Taylor Fisher, FAIA, was born in Chicago, Illinois. He graduated from Harvard College with a B.S. degree in 1926. He attended the School of Architecture at

	<p>Harvard University from 1926 to 1928, and opened a solo architectural practice in Chicago in 1931. In 1932, he founded General Houses, Inc. in Chicago to design, sell, and build low-cost, prefabricated housing based on a coordinated system of prefabricated steel-framed modular panels: solid, small window, large window, glass, entrance door, kitchen door, double doors, and a fireplace. All panels were four feet wide and all were nine feet high, except for the fireplace panel, which was taller. A garage door panel was the same height as the other panels, but twice the width. As modules, the panels could be assembled in a wide variety of configurations to suit individual clients and specific sites. In 1965 Fisher founded the Laboratory for Computer Graphics and Spatial Analysis at the Graduate School of Design, Harvard University, serving as its director until 1968. From 1966 to 1970 he was a professor of city planning, and a research professor in cartography from 1970 until his retirement in 1975. He became a Member of the American Institute of Architects (AIA) in 1949. He was made a member of the College of Fellows of the AIA in 1974.</p>
<b>Frey, Albert (1903-1998), FAIA</b>	
Born:	Zurich, Switzerland
Education:	Technikum Winterthur (Institute of Technology, Winterthur) (1924)
Firms:	Eggericx and Verwilghen (1924-1928; 1929); Le Corbusier (1928-1929); Kocher & Frey (1930-1935; 1938); collaboration with John Porter Clark (1935-1937); Clark & Frey (1939-1952); Clark, Frey & Chambers (1952-1957); <sup>22</sup> Frey and Chambers (1957-1966); Albert Frey (1966-1980)
	<p>Albert Frey, FAIA, earned his architectural diploma at the Institute of Technology in Switzerland in 1924.<sup>23</sup> After learning about the burgeoning modern movement in Brussels, Frey moved to Belgium, and was hired by an architectural firm prominent in modernism, Eggericx and Verwilghen. There he worked on several large housing complexes designed in the modern idiom. Frey was strongly influenced by Le Corbusier's book <i>Towards a New Architecture</i> and became determined to work at the master's atelier in France. In late 1928, Frey relocated to Paris, presented his portfolio, and was hired as an architect in Le Corbusier's office.</p> <p>During the ten months of Frey's association with Le Corbusier he worked on some of the master's most influential commissions including Villa Savoye in Poissy, France and the Centrosoyus Administration Building in Moscow. Frey was responsible for many of the construction drawings for the Villa Savoye, including an unusual sliding glass door that hung from a track on the ceiling. The design was influenced by barn door track hardware that Frey discovered in the American Sweets Catalog, a catalog of off-the-shelf building products that Frey found inspirational as his ideas about modern technology and construction methods evolved.</p> <p>Having applied for a visa to work in America, where Frey believed the most innovative modern architecture was being built, he received word of its approval in the winter of 1929. Prior to Frey's emigration, he returned to the firm of Eggericx and</p>

<sup>22</sup> The partnership of Clark, Frey & Chambers was dissolved at the end of 1956 (Rosa, 114).

<sup>23</sup> Adapted from Peter Moruzzi, *The Architecture of Albert Frey*, National Register of Historic Places Multiple Property Documentation Form, March 26, 2015.

	<p>Verwilghen for ten months as their chief designer, earning sufficient funds to establish himself in America.</p> <p>Upon arrival in the United States, Frey worked first in New York, but after visiting Palm Springs in 1934, the Swiss-born architect determined to settle there. Though trained in European Modern ideas, he quickly adapted them to the desert conditions which appealed to him, arriving at a varied and original expression of Modernism.</p> <p>After establishing himself permanently in Palm Springs in the late 1930s, Frey utilized these modernist concepts as a starting point, enthusiastically experimenting with new materials and construction methods in addressing the conditions he found there. He used corrugated aluminum as exterior sheathing for walls and roofs because of its ability to reflect the sun and rapidly shed heat. Deep overhangs—and hoods for his emblematic porthole windows—were precisely calibrated to address the angle of the desert sun. Frey’s extensive use of plate glass for windows and sliding doors embraced the concept of indoor-outdoor living and captured dramatic views of the mountains and desert sands. He perfected a sandblasted terracotta-colored concrete block as a method of construction and for its distinctive aesthetic qualities. Frey had the blocks custom-made for the local environment—unpainted, fully exposed, and color tinted to complement the desert soil.</p> <p>While exploring the potential of new materials such as corrugated steel, trusses made of thin pipe, and concrete block, Frey used them to adapt his designs to the desert climate, landscape, vegetation, and colors. He also adapted flexibly to the Palm Springs culture. As an architect in a small town, he was given a wide range of buildings to design. His own house, Frey I (1941; demolished) was experimental. A small house for a bachelor, it used minimal walls and a flat roof to create living space that opened to a patio and (eventually) a pool. The vacation home Frey designed with industrial designer Raymond Loewy celebrated the modern desert lifestyle by bringing the swimming pool into the living room (HSPB-33). In contrast, the Markham house (1941) and the Lyons house (1948), two of several Frey built over the decades in Smoke Tree Ranch had to conform to the design guidelines calling for ranch style. The simple, low scale roof forms helped blend the houses into the natural landscape, as intended by the Smoke Tree Ranch planning guidelines.</p> <p>There was a clear evolution in Frey’s architecture from his early designs to those that appeared after World War II. For example, his 1934 Kocher-Samson Building (HSPB-79) lacked sufficient overhangs to deflect the harsh desert sun, and employed stucco as an exterior finish. After World War II, Frey’s designs fully addressed these shortcomings through the use of extended eaves, metal cladding, hooded porthole windows, asbestos cement-board, and fiberglass. Frey’s imaginative and original use of these construction methods and materials made his mature style distinct and immediately recognizable. The work of his partner, John Porter Clark, shared some of these characteristics such as the use of corrugated metal for exterior cladding in the projects for which he was the primary architect. Other local architects’ buildings did not appear similar to Frey’s, particularly in the choice of materials and their use.</p>
--	---

	<p>In the 1950s Albert Frey's approach to Modernism with partner John Porter Clark led to an exploration of new, light weight building technologies, including light weight composite wall panels. His houses were often raised off the ground in order to minimally disturb the desert ground. This is seen in the Carey house (1956; HSPB-33) and the Cree house II (1955-56). His exploration of materials and structures is seen in a major expansion of Frey's own house (1953, HSPB-33), where he added a turret-shaped second story with circular windows shaded by circular metal sun shades; Frey would consistently chart the sun's path in order to orient his houses, and to design their windows and overhangs and sunshades.</p> <p>Frey's architectural impact in the Coachella Valley was enormous. It is revealed in the sheer number of his built projects: houses, schools, a fire station, churches, shopping centers, hospitals, a yacht club, restaurants, hotels, and apartments; in the prominence of some of his buildings: Palm Springs City Hall, the Tramway Gas Station, the Palm Springs Aerial Tramway Valley Station, and Frey Houses I and II; and in the respect for his work as reviewed in the architectural press throughout Frey's life and, later, by scholars and architectural aficionados drawn to the Coachella Valley to celebrate Frey's design legacy.</p> <p>Albert Frey's work helped place Palm Springs on the map as a new frontier for the modern movement. As early as 1935, Frey's Kocher-Samson Building was featured in the Museum of Modern Art's exhibition "Modern Architecture in California," along with the work of Richard Neutra, R.M. Schindler, William Wurster, and A.C. Zimmerman. Frey's Cathedral City School was reviewed in <i>Progressive Architecture</i>, July 1953. Frey House I appeared in <i>California Arts and Architecture</i>, July 1945; <i>Architectural Forum</i>, May 1947; <i>House and Garden</i>, January 1948; <i>Progressive Architecture</i>, July 1948; and <i>Architectural Forum</i>, August 1950. Frey House II has been critically discussed since its completion in 1964 as documented in the many references included in this nomination. Since the mid-1990s, Frey's oeuvre has served as a catalyst in the extraordinary revival of interest in Palm Springs' modern architecture.</p>
<b>Fuller, Leland F. (1899-1962), AIA</b>	
Born:	Riverside, CA
Education:	
Firms:	
	<p>Santa Monica-based architect Leland F. Fuller, AIA, designed and built residences for wealthy clients and the Hollywood elite during the 1920s and 1930s, and worked as an art director in the motion picture industry. Fuller was a member of the AIA between 1933 and 1938. He worked in the period revival styles popular before World War II. Fuller's work was published nationally and internationally in such magazines as <i>House Beautiful</i>, <i>Architect &amp; Engineer</i>, and <i>Abitare</i>. One of his largest and best-known commissions was the Tudor Revival-style residence in Beverly Hills for Charles and Al Christie (known as "Waverly"). His own home in Santa Monica was singled out in the 1932 Better Homes in America Small House Competition and published in <i>Architect &amp; Engineer</i>. He was also nominated for six Academy Awards for his work as an art director.</p>

<b>Georgescu, Haralamb H. "Harlan" (1908-1977), AIA</b>	
Born:	Pitești, Argeș, Romania
Education:	Polytechnic Institute of Bucharest School of Architecture (1933)
Firms:	
	Haralamb H. Georgescu, AIA, graduated from the Polytechnic Institute in Bucharest in 1933 and became well known as a Modernist architect in his native Romania. In 1947 he immigrated to the United States and taught at the University of Nebraska, School of Architecture. He moved to Los Angeles in 1951. After working with three different design and architectural firms, Georgescu (who had changed his name to Harlan Georgesco) formed a partnership with James Larson in 1957. Georgescu established his own firm in 1959.
<b>Giddings, Edward P. (1929-1993), AIA</b>	
Born:	Seattle, WA
Education:	University of Washington, B.A. (1955)
Firms:	Anshen & Allen (1957-1958); Hertka & Knowles (1959-1960); Edward P. Giddings, Architect (1961-1993)
	Edward Giddings, AIA, a Newport Beach-based architect, is noted for his expressive forms and use of stone and rustic materials. Trained in architecture at the University of Washington, Giddings worked as a senior draftsman at Anshen & Allen from 1957 to 1958 and job captain at Hertka & Knowles from 1959 to 1960. He also designed and developed Club Cascadas de Baja and Ocho Cascadas in Mexico and designed several houses for wealthy clients in Southern California, including the Roy E. Klotz Residence (1970) in Newport Beach, which received a certificate of merit from the Orange County Chapter of the AIA.
<b>Hamilton, David (b. 1926), ASLA</b>	
Born:	Detroit, MI
Education:	Michigan State University, B.S. Landscape Architecture (1950)
Firms:	Palm Springs Planning Department (1950-1953); Quinton Engineers, LTD (1953-1957); Riverside County Planning Commission (1957); David Hamilton, ASLA (1960)
	David Hamilton, ASLA was trained in civil engineering and landscape architecture. After serving in the Navy during World War II Hamilton graduated from Michigan State University with a B.S. in Landscape Architecture. He first moved to Palm Springs in 1950 to work as a draftsman for the City Planning Department, and joined the ASLA a year later. In 1953 Hamilton moved to Los Angeles to work as a site planner for Quinton Engineers. Four years later he moved to Palm Desert to serve as an interim planner for the Riverside County Planning Commission, but quickly left that position to return to Palm Springs as assistant planner. Hamilton entered private practice in 1960, and quickly became known for his desert-appropriate landscape design for such projects as Meiselman's Ocotillo Palms Estates, Wexler's Professional Park, Harrison's Patencio Building, and the Palm Springs Airport. <sup>24</sup>

<sup>24</sup> Information about David Hamilton, ASLA, courtesy of Steven Keylon.

<b>Harrison, Richard Arnett (1924-1995), AIA</b>	
Born:	Los Angeles, CA
Education:	University of Southern California, B.Arch (1951)
Firms:	William F. Cody (1951-1953); Wexler & Harrison, AIA, Architects (1953-1962)
	Richard Arnett Harrison, AIA was born in Los Angeles. Harrison studied aeronautical engineering in the Navy and went on to study architecture at the University of Southern California. Harrison worked for William F. Cody from July 1951 to February 1953, where he worked with his soon-to-be partner Donald Wexler. Wexler and Harrison went on to build custom homes and several tract home developments in Palm Springs. They dissolved their partnership amicably by 1961, as Harrison preferred to concentrate on residential projects and Wexler was interested in civic projects. <sup>25</sup>
<b>Heineman, Alfred (1882-1974)</b>	
Born:	Chicago, IL
Education:	
Firms:	Arthur S. Heineman, Architect and Alfred Heineman, Associates (1909-1939)
	Alfred Heineman was born in Chicago in 1882. He moved to Pasadena in 1894 with his parents and brothers. Heineman and his brother Arthur worked independently as designers, though neither had any formal architectural training. Eventually, they went into business together. After Arthur became a registered architect, the two agreed that the name of the firm would be Arthur S. Heineman, Architect and Alfred Heineman, Associates, although by all accounts Alfred was the chief designer. The firm was a major force in the Arts and Crafts Movement in California, and is best known for its Craftsman style bungalows in Pasadena. <sup>26</sup>
<b>Heineman, Arthur (1878-1972)</b>	
Born:	Chicago, IL
Education:	
Firms:	Arthur S. Heineman, Architect and Alfred Heineman, Associates (1909-1939)
	Arthur Heineman was born in Chicago in 1878. He moved to Pasadena in 1894 with his parents and brothers. Heineman began his architectural career as a speculator interested in real estate and land development. He and his brother Alfred worked independently as designers, though neither had any formal architectural training. Heineman's first buildings date from 1905. His lack of business skills influenced his decision to go into business with his brother Herbert, a successful building contractor, in approximately 1906. Eventually, Arthur went into business with his other brother, Alfred. After Arthur became a registered architect, the two agreed that the name of the firm would be Arthur S. Heineman, Architect and Alfred Heineman, Associates, although by all accounts Alfred was the chief designer. The firm was a major force in the Arts and Crafts Movement in California, and is best known for its Craftsman style bungalows in Pasadena. <sup>27</sup>

<b>Hicks, Alvah (1884-1944)</b>	
Born:	Pennsylvania
Education:	
Firms:	
	Alvah Hicks was born in Pennsylvania in 1884 and moved to Palm Springs in 1912. A master carpenter by trade, Hicks built many of the Desert Inn buildings and oil magnate Tom O'Donnell's house above what is now the O'Donnell Golf Course. O'Donnell financed Hicks' purchase of the Whitewater Mutual Water Company from Prescott T. Stevens in the 1920s, and Hicks founded Palm Springs Water Company, as well as the first building supply store in the area, located at present-day Sunny Dunes Road and Palm Canyon Drive. Hicks also built the Ingleside Inn and several houses in the 1920s and 1930s. Many of Hicks' buildings were designed by William Charles Tanner, an "architectural artist." In the 1930s Hicks developed Little Tuscany Estates. He served on Palm Springs' first city council, and was involved in the City's incorporation in 1938.
<b>Holler, Phillip W. (1869-1942)</b>	
Born:	
Education:	
Firms:	Milwaukee Building Company, Meyer & Holler (1905-1930)
	Phillip W. Holler was a partner in the Milwaukee Building Company, a Los Angeles-based design and construction firm, in 1911. The firm was established in 1905 by Mendel Meyer and his partner Julius C. Schneider. The firm changed its name in 1922 to Meyer & Holler, although the two names were used interchangeably until 1927. Holler left the firm in 1930. The firm's early work was largely residential, frequently in the Mission Revival or Craftsman styles. The firm is best known, however, for its work on two theatres in Hollywood for Sid Grauman: the Egyptian (1922) and the Chinese (1927).
<b>Holton, H.E.</b>	
Born:	
Education:	
Firms:	H.E. Holton General Contractor
	H.E. Holton was a Los Angeles-based contractor. He built a number of homes and apartment buildings across the Los Angeles area. In the mid-1930s he promoted his building services as modern techniques that were rat-, vermin-, and termite-proof. In 1936 he worked with Los Angeles architect W. C. Pennell to build the Palm Springs Athletic Club in Palm Springs Desert Estates.
<b>Hunt, Myron (1868-1952), FAIA</b>	
Born:	Sunderland, MA
Education:	Northwestern University; Massachusetts Institute of Technology, B.S. Architecture (1893)
Firms:	Hunt & Chambers (1940-1952)

	Myron Hunt, FAIA, was born in 1868. He moved with his family to Chicago. After graduating from MIT in 1893, Hunt went to work for Hartwell & Richards. He then traveled to Europe to study Renaissance buildings. After returning to Chicago, Hunt opened his own practice. By 1903, he relocated to Pasadena, where he remained for the remainder of his life.
<b>Huntsman-Trout, Edward (1889-1974), FASLA</b>	
Born:	Ontario, Canada
Education:	University of California, Berkeley (1913); Harvard School of Landscape Architecture (1913-15)
Firms:	Fletcher Steele (1916); A.D. Taylor (1917-1922); Rodeo Land and Water Company, Los Angeles
	Edward Huntsman-Trout, FASLA was born in Ontario, Canada. After his graduation from UC Berkeley in 1913 he attended the Harvard School of Landscape Architecture, graduating in 1915. He worked in the offices of Fletcher Steele, Boston, (1916), A.D. Taylor of Cleveland, Ohio (1917-22), and Rodeo Land and Water Company, Los Angeles, before opening his own practice. He became a member of the American Society of Landscape Architects (ASLA) in 1920, and was named an ASLA Fellow in 1933. Trout's major Los Angeles area projects include the Los Angeles County Arboretum & Botanic Garden, Scripps College, and Bullocks Wilshire. In 1926, he collaborated with architect Gordon Kaufmann on the La Quinta Hotel.
<b>Jones, Archibald Quincy, Jr. (1913-1979), FAIA</b>	
Born:	Kansas City, MO
Education:	University of Washington, B.Arch. (1936)
Firms:	A. Quincy Jones (1945-1950); A. Quincy Jones & Frederick E. Emmons (1951-1969); A. Quincy Jones & Associates (1970-1979)
	Los Angeles architect A. Quincy Jones, FAIA is noted for his innovative tract house designs for moderate-income families. He became interested in architecture in high school, and went on to study at the University of Washington. After he graduated in 1936, Jones moved to Los Angeles to begin his professional career. He worked for a number of eminent Los Angeles architects, including Douglas Honnold and Paul R. Williams. Jones received his architecture certificate in 1942; the same year, he joined the Navy, and was stationed in the Pacific until 1945. He returned to Los Angeles amidst the post-war development boom. Jones taught architecture at the University of Southern California from 1951-1967 and would return to USC to serve as the Dean of the School of Fine Arts in 1975.  Jones and Frederick E. Emmons founded Jones & Emmons in 1951; the partnership continued until Emmons' retirement in 1969. Jones & Emmons utilized new building technologies that decreased costs and production time. The firm favored structural innovations including lightweight post-and-beam construction with pre-assembled parts. The work of Jones & Emmons included large-scale commissions, including religious buildings, educational facilities, and civic spaces. In addition, the firm designed office, restaurant, and factory buildings throughout California. The firm designed numerous buildings on the University of California campuses at San Diego, Santa Barbara, Irvine, and Riverside. In 1964, Jones collaborated with building magnate

	Joseph Eichler on the Balboa Highland development in the Granada Hills neighborhood of the San Fernando Valley. Jones and Emmons are estimated to have designed some 5,000 houses for Eichler. Recipients of numerous awards, the pair were named AIA Firm of the Year in 1969. He died in Los Angeles in 1979.
<b>Kaptur, Hugh M. (b. 1931), AIA</b>	
Born:	Detroit, MI
Education:	Lawrence Technical College (Michigan)
Firms:	Wexler & Harrison (1954-1957); Hugh Kaptur, AIBD (1957-1964); Ricciardi & Kaptur (1964-1967); Kaptur-Lapham & Associates (1967-1976); Kaptur & Cioffi (1982-1992)
	A Detroit native, Hugh Kaptur, AIA, attended Lawrence Technical College in Michigan, working toward a degree in engineering. In 1951, in the midst of the Korean War, Kaptur enlisted in the Marines rather than be drafted into the Army. After the war, Kaptur's father invited him to work at the General Motors styling shop in Detroit, and Kaptur and his family moved from California to Michigan, where Kaptur worked by day and attended classes at Lawrence Tech by night. However, California still held an attraction for Kaptur, and the family moved to Palm Springs in 1954. Kaptur first worked briefly for Wexler & Harrison, but was laid off during the 1957 recession. Skilled at free-hand drawing, he made artist's renderings of buildings for Wexler, Frey, and other local architects. Business picked up in 1958, when homebuilders began developing Palm Springs on a large scale, and Kaptur found himself designing post-and-beam houses. Later, after opening his own office, Kaptur was known for his easygoing personality. Kaptur served on the city's planning commission for a few months in early 1975.
<b>Kocher, Alfred Lawrence (1885-1969)</b>	
Born:	San Jose, CA
Education:	Stanford University, B.A. (1909); Pennsylvania State College, MA (1916); Massachusetts Institute of Technology; New York University
Firms:	Kocher & Frey (1930-1935)
	Alfred Lawrence Kocher was born in San Jose. He received his Bachelor's degree in history at Stanford University in 1909, and his Master's from Pennsylvania State College in 1916 before pursuing further studies at MIT and New York University. From 1912 to 1926 he taught at Pennsylvania State College, where he established a School of Architecture. In 1926 he was appointed Director of the McIntire School of Art and Architecture at the University of Virginia, and, the following year, was appointed Managing Editor of the <i>Architectural Record</i> . Kocher was a member of the Advisory Committee for Architecture for the Restoration of Williamsburg, beginning in 1928. In 1944, he was appointed editor of the Architectural Records of Colonial Williamsburg and was instrumental in the monumental task of reconstructing the colonial village. He retired from the position in 1954. From 1944 to 1959, Kocher also served as a lecturer in Fine Arts at the College of William and Mary, and as supervising architect for the restoration of Washington Irving's home in Tarrytown, New York. Kocher formed a partnership with Albert Frey in 1930. Together they designed the Aluminaire House, one of the few American buildings included in Henry-Russell Hitchcock and Philip Johnson's "Modern Architecture: International

	Exhibition" in 1932. The partnership lasted until 1935, during which they designed the Kocher-Samson Building, which brought Frey to Palm Springs for the first time.
<b>Koenig, Philip</b> (1927-1980), AIA	
Born:	Chicago, IL
Education:	University of Illinois, Champaign-Urbana, IL, B.S. Architecture (1948); Harvard University, M. Arch (1950)
Firms:	Sidney H. Morris and Associates (1950-1951); Loeb, Schlossman and Bennett, Architects (1951-1952); Phillip Koenig Architects and Engineers, Chicago, IL (1953-1961); National Properties, Incorporated, Beverly Hills, CA (1962)
	Philip Koenig, AIA was born in Chicago in 1927. He studied architecture at the University of Illinois, Champaign-Urbana, graduating with his B.S. in Architecture in 1948. He went on to earn his M.Arch from Harvard University in 1950, after which he returned to Chicago and began his career as a designer at Sidney R. Morris and Associates (1950-1951). He became a member of the AIA in 1951. Koenig then worked as a draftsman at the firm of Loeb, Schlossman and Bennett, Architects, before opening his own firm in 1953. In 1959 Koenig collaborated with architects William F. Cody, Donald Wexler, and Richard Harrison to design the Palm Springs Spa Hotel and Bath House.
<b>Korver, Otto J.</b> (1923-2000), AIA	
Born:	Breukelen, Holland
Education:	Delft Technological University, M.Arch. (1950)
Firms:	Korver-Miles, Otto J. Korver, AIA
	Dutch-born Otto Johannes Korver, AIA was a Los Angeles-based architect. After studying English at the Delft Technical University he earned his M.Arch. He came to the United States in 1951 and became a naturalized citizen in 1958. Korver was a Modernist, and designed several churches for the Church of Jesus Christ of Latter Day Saints including churches in Redlands (1962), Anaheim (1969), Placentia (1970), and Palms Springs (1961). He also designed the Carlsbad Union Church (1968), and was active in the AIA's Religious Building Committee. Notable residential work includes the Henry Jacobs Residence (1962) in Los Angeles. Korver's design for a clubhouse was featured in the April 1960 issue of <i>Arts &amp; Architecture</i> magazine.
<b>Krisel, William</b> (b. 1924), AIA	
Born:	Shanghai, China
Education:	University of Southern California, B.Arch (1949)
Firms:	Victor Gruen (1946-1949); Palmer and Krisel, A.I.A. Architects (1950-c. 1965); William Krisel, AIA (founded 1966)
	William Krisel, AIA, was born in Shanghai, China, where his father had moved the family for his work for the United States' State Department. In 1937, the family returned to California. Following his graduation from Beverly Hills High School in 1941, 16 year-old Krisel enrolled at USC's School of Architecture, but his education was interrupted by the United States' entry into World War II. During the war, Krisel worked in Army Intelligence, served as the Chinese-language interpreter for General Stillwell, and earned the Bronze Star for Valorous Service. Following the war, in 1946, Krisel returned to his studies, and graduated in 1949. While in school Krisel worked in

	<p>the offices of Paul Laszlo and Victor Gruen. Krisel obtained his architect's license in 1950, and went into partnership with Dan Saxon Palmer. Palmer and Krisel designed custom homes and commercial projects as well as Los Angeles-area tract homes. As early as 1952, Palmer &amp; Krisel's system of modular post and beam construction proved popular and effective. After years of success in Los Angeles, Palm Springs and Borrego Springs, the firm designed the Loma Palisades Apartments and a number of residential tracts throughout San Diego. By 1961, Krisel began his efforts in local high rise developments with the 24-story Kahn Building, within which the firm would house their San Diego office. Krisel studied landscape architecture under Garrett Eckbo and became a licensed landscape architect in 1954. Palmer and Krisel dissolved their partnership in the mid-1960s, and Krisel renamed the firm William Krisel, AIA.</p> <p>Krisel's experience in design and construction includes nearly every kind of structure, including high- and low-rise office and apartment buildings, shopping centers, industrial buildings, factories, schools, hospitals, religious buildings, hotels, motels, and restaurants. He is credited with over 40,000 housing units as he pioneered the use of innovative, modern design for affordable tract housing, commercial and multi-unit residential architecture. His work has garnered numerous awards for design excellence, including AIA Lifetime Achievement and "Tribal Elder" Awards, as well as the Palm Springs Lifetime Achievement Award, and recognition from ASLA, NAHB, the City of Beverly Hills, and West Los Angeles.</p>
<b>Lapham, Howard P. (1914-2008)</b>	
Born:	Oklahoma City, OK
Education:	
Firms:	
	<p>In 1954 Howard Lapham arrived in the Coachella Valley from Stamford, Connecticut. Although he was a registered designer, Lapham intended to become a builder in his new desert home. Within a year, however, he was designing residences for members of the Thunderbird Country Club and what is now known as Thunderbird Heights. A number of Lapham's buildings appeared in <i>Architectural Digest</i>, including the Hyatt von Dehn Residence (1960), the Kiewit Residence (1960), the Clarke Swanson Residence (1961), the Morrow Residence (1961), and the 1961 remodel of the Thunderbird Country Club clubhouse. He remodeled the Chi Chi nightclub in 1959, giving it a new façade. One of Lapham's largest residential projects was the Mayan-themed Cook House, known as Ichpa Mayapan, built atop Thunderbird Heights in 1970. Lapham officially retired in the 1980s, although he continued to maintain an office in Palm Springs. Lapham died at the age of 93.</p>
<b>Lapham, Lawrence A. (1935-2004)</b>	
Born:	Oklahoma City, OK
Education:	University of Oklahoma
Firms:	Kaptur-Lapham & Associates (1967-1976)
	<p>Lawrence Lapham was the son of designer-builder Howard Lapham. He served in the army from 1954 to 1957, and then attended Oklahoma City University and the University of Oklahoma. He then joined his family in Palm Springs, and began working for Hugh Kaptur. They formed a partnership in 1967. Lapham's work in</p>

	Palm Springs includes single-family residences, commercial buildings, churches, and municipal building. In 1975, Lapham was appointed to the city's planning commission, replacing Hugh Kaptur, who had recently resigned. Lapham died in 2004.
<b>Laszlo, Paul (1900-1993)</b>	
Born:	Debrecen, Hungary
Education:	Staatliche Akademie der Bilden den Künste, Stuttgart, Germany
Firms:	
	Paul Laszlo was an architect and interior designer in the United States and Europe. He was known for his spacious, ultra-modern designs for casinos, luxury stores, and celebrity residences. He was born in Hungary, and, at age 24, opened a decorating business in Vienna. Because of his Jewish heritage, Laszlo moved to Los Angeles in 1936. Laszlo served in both World Wars, fighting with the Hungarian artillery at the Italian front in World War I, and serving domestically with the United States Army in World War II. Laszlo's residential clients included Cary Grant, Elizabeth Taylor, Barbara Stanwyck, Robert Taylor, and Barbara Hutton, and he designed stores for Bullock's, Goldwater's, Robinson's, and Orbach's. His other work included banks, offices, theaters, hospitals, and most of the casinos and showrooms in Howard Hughes' Las Vegas hotels. He retired in 1991, and passed away in Santa Monica two years later.
<b>Lautner, John (1911-1994), FAIA</b>	
Born:	Marquette, MI
Education:	University of Northern Michigan, B.A. English (1933); Taliesin Fellowship in Wisconsin and Arizona (1933-1939).
Firms:	Douglas Honnold, Architect (1944-1946); John Lautner, Architect (1946-1994).
	Known mostly for his Expressionistic residential designs, John Lautner, FAIA has been called one of the 20 <sup>th</sup> century's most important American architects. Upon graduating from college, Lautner joined the first group of Taliesin Fellows, remaining an apprentice to Frank Lloyd Wright for six years. In 1937, he supervised the construction of two of Wright's projects, and two years later established his own practice in Los Angeles. His first solo project was a house for his own family, which architectural critic Henry-Russell Hitchcock called "the best house by an architect under 30 in the United States." Later Hitchcock remarked that "Lautner's work could stand comparison with that of his master." Among his best-known works are the Malin House, known as the Chemosphere (1960), and the Reiner Residence, known as Silvertop (1963), both in Los Angeles. At the time of his death in 1994, the 83-year-old Lautner was still working on several large projects. <sup>28</sup>
<b>Levitt, Harold W. (1921-2003), AIA</b>	
Born:	San Francisco, CA
Education:	Stanford University, B.A. Graphic Arts (1943); University of Southern California (1951)

<sup>28</sup> John Lautner, website ([www.johnlautner.org](http://www.johnlautner.org)). Accessed May 2007.

Firms:	Roland E. Coate (1944-1952); Burton A. Schutt (1952-1954); Harold W. Levitt & Associates, Planning-Architecture (1954-2000)
	Harold Levitt, AIA was born in San Francisco. He earned a Bachelor's degree in graphic arts at Stanford University and a degree in architecture from the University of Southern California. He started his practice in the early 1950s after working for residential designers Roland Coate and Burton Schutt. Levitt's work reflects the modern design philosophies of mid-century Los Angeles. Expansive glass surfaces, interior courtyards, and surprising entry sequences appear throughout his residential work and blur the boundary between the interior and exterior spaces. In many of his residential commissions, Levitt designed a large, solid door that appears from the street to be the entrance to the home, but leads instead to a protected courtyard. Levitt also designed notable commercial projects such as the Riviera Hotel in Las Vegas and the Academy of Motion Pictures, Arts and Sciences Building in Los Angeles. However, he is perhaps best remembered for the homes he designed for Walter Mirish, Steven Spielberg, and Lew Wasserman. He retired in 2000 and moved to Reno, Nevada. He died two years later, at age 81.
<b>Lind, George J. (1891-1963)</b>	
Born:	Rochester, MN
Education:	University of Minnesota (1910-1911); University of Michigan, B. Architectural Engineering (1917)
Firms:	Allied Architects Association (1922-1923); Pierpont & WS Davis (1923-1926); Garrett Van Pelt (1927-1935); Garrett Van Pelt & George Lind (1935-1942); George Lind, Architect (1945-1963)
	George J. Lind, AIA was born in Rochester, Minnesota, in 1891. He studied architectural engineering at the University of Michigan, graduating in 1917. In 1935, Lind entered into a partnership with Garrett Van Pelt. The firm designed many buildings throughout the Los Angeles area, and was instrumental in the development of Arcadia.
<b>Luckman, Charles (1909-1998)</b>	
Born:	Kansas City, MO
Education:	University of Illinois, Urbana-Champaign, B.S. Architecture (1931)
Firms:	Chicago master Steam Fitters, Association (1926-1927); Robert L. Pioso (1928-1929; 1930-1931); Lind & Luckman (1936-1943); Lever Brothers Company (1943-1950); Pereira & Luckman (1950-1958); Charles Luckman Associates (1958-1998)
	Charles Luckman, FAIA, studied architecture at the University of Illinois, Urbana-Champaign, graduating in 1931. During the Depression, he worked in the advertising department of the Colgate-Palmolive-Peet Company, and later advanced to sales manager of the Pepsodent Company. In 1937, he was featured on the cover of <i>Time</i> magazine. In 1946 Luckman became president of Lever Brothers and was instrumental in commissioning the company's new headquarters, Lever House (designed by Skidmore, Owings & Merrill), a major landmark in New York. An entrepreneur at heart, Luckman merged his passion for architecture with his sense of business, and acquired ambitious commissions throughout the United States. From 1950 to 1958 Luckman worked in partnership with William Pereira, specializing in

	large-scale projects such as office buildings, airports, hotels and Air Force bases, primarily in California. In 1998, Charles Luckman died at the age of 89. <sup>29</sup>
<b>Lundgren, Leonard J. (1918-2012)</b>	
Born:	Del Valle, TX
Education:	University of Texas, B.Arch (1949)
Firms:	Leonard J. Lundgren (1950-1952); Lundgren & Maurer (1953-1974); Lundgren & Associates, Architects, Inc. (1974-2012)
	<p>Leonard Lundgren, AIA was born in Del Valle, Texas, to one of Austin's original Swedish settler families. During World War II Lundgren worked with Missouri Valley Bridge &amp; Iron, where, at the age of 21, he oversaw the department that controlled materials for the shipyard which built the LST transport ships. After the war, Leonard graduated from the University of Texas with a degree in architecture. He received licenses to practice architecture in all 50 states and Mexico, as well as a National Council of Architectural Registration Boards (NCARB) certificate. Lundgren was a member of the Texas Society of Architects, American Institute of Architects, and the Texas Fine Arts Association.</p> <p>Lundgren's firm designed well over 300 hotels for Holiday Inn, Hilton, Ramada Inn, Sheraton, LaQuinta Motels, Quality Hotels, Passport Inn and Red Carpet Inn.<sup>30</sup> The bulk of Lundgren's architectural career focused on hotels, but he also designed and oversaw construction of custom residential projects, churches, Temple Beth Israel, and fraternity/sorority houses and schools throughout central Texas. Lundgren &amp; Maurer, and later Lundgren &amp; Associates, had offices in Austin, Los Angeles, and Mexico City.</p>
<b>Major, LeRoy Cluff (1915-2000)</b>	
Born:	Arizona
Education:	
Firms:	L.C. Major & Associates
	<p>L.C. Major was once called America's "tractioneer" by <i>Time</i> magazine for his creation of more than a million tract homes across the United States. Major had little formal architecture training: after a single year of drafting classes in high school he began his career in 1933 as a real estate appraiser, and worked successively for the Federal Housing Administration, the Veterans Administration and a bank. He gravitated to drafting and designing during the housing boom following World War II, and established his own firm in 1945, based over the years in Downey, Santa Ana and Orange. Beginning with the two-bedroom, one-bath bungalows prevalent in the late 1940s, Major offered builders and developers master planning, market research, cost analysis, home design, architectural renderings, color coordination, model home furnishing, landscaping, merchandising, promotion and financial counsel.</p> <p>Over the decades Major adapted to changing tastes and prospering home buyers, designing luxury custom homes, condominium complexes, and retirement housing. He also branched out into institutional buildings like convalescent homes, and</p>

	competed for contracts to build low-cost, energy-efficient housing. He served nationwide home builders and also sold plans through trade magazines to individual builders. His work earned numerous awards over the years, including several Gold Nugget awards from the Pacific Coast Builders Conference. <sup>31</sup>
<b>Marr, Clinton, Jr. (b. 1925), FAIA</b>	
Born:	Ontario, CA
Education:	University of Southern California, B.Arch (1953)
Firms:	Clinton Marr & Associates (1956)
	Born in 1925 in Ontario, California, Clinton Marr, FAIA grew up in Riverside. He joined the Navy Air Corps during World War II, after which he attended University of Southern California School of Architecture on the G.I. Bill, graduating in 1953. He was influenced most by the post-and-beam structural framing method, which he later used in the design of his own home (1960). While in school he worked part-time for Albert C. Martin and Associates in Los Angeles, and, after graduation, he worked for Clara Henry Day in Redlands and Herman Ruhnau in Riverside before opening his own office in Riverside in 1956. Marr designed an impressive number of commercial, industrial, institutional, educational, and residential buildings in Riverside. He was president of the Inland Chapter of the AIA in 1964, and was elected into the college of fellows of the AIA in 1974. <sup>32</sup> Marr's work for Security National Bank and the Pacific Telephone Co. extended out to Palm Springs and other cities. He often worked in partnership with Palm Spring architects such as E. Stewart Williams and Donald Wexler.
<b>Martin, Albert C. (1879-1960), AIA</b>	
Born:	LaSalle, IL
Education:	University of Illinois, B.S. Architecture & Engineering (1902)
Firms:	Leonard Construction Company (1904); A.F. Rosenheim, Architects (1905-1907); Albert C. Martin (1909-1945); A.C. Martin & Associates (1945-1960)
	Albert C. Martin, AIA completed his formal education in architecture and engineering at the University of Illinois in 1902. In January of 1904 Martin moved to Los Angeles to work as a superintendent of construction for Carl Leonardt & Company, a major building contractor on the West Coast. A year later he joined the staff of Alfred Rosenheim, FAIA as an engineer. During Martin's association with Rosenheim the firm designed the Second Church of Christ Scientist (1905-1910). In 1908 Martin established his own office. Although he was later recognized for his commercial buildings, during the early part of his career he worked almost exclusively for the Catholic Church. During the 1920s he designed churches, convents, parish halls, and parochial schools as far north as Fresno and as far east as Arizona. The high point in his career was Los Angeles City Hall (1928), which Martin designed alongside prominent architects John C. Austin and John Parkinson. The firm had a close relationship with the May Company, and designed a number of buildings for the

	company including the iconic May Company on Wilshire Boulevard in 1939 as well as the Crenshaw Shopping Center (1945, demolished) and the Lakewood Shopping Center (1952). <sup>33</sup>
<b>Matcham, Charles Ormrod (1903-1980), FAIA</b>	
Born:	Allentown, PA
Education:	Yale University, Ph.B. (1925), B.F.A. (1928); Fontainebleau School (1927)
Firms:	Cram and Ferguson (1925); James Gamble Rogers (1926); Roy Seldon Price (1928-1930); Jason Conway, Contractor (1930-1932); Earl T. Heitschmidt (1932-1936); Heitschmidt & Matcham, Architects (1936-1950); Charles O. Matcham, AIA, Architect (1950-1969)
	Pennsylvania-born Charles O. Matcham, FAIA earned both his Ph.B. and B.F.A. degrees from Yale University. Upon graduation, he moved to Los Angeles, where he worked in the offices of Roy Seldon Price in Beverly Hills and Earl Heitschmidt in Los Angeles. He was a frequent visitor to the Palm Springs area, and opened an office there, where he did mostly residential work. In 1940, he established a ten-year partnership with Earl Heitschmidt. In his application for Fellowship to the AIA in 1956, he described his prewar work as “gaining prominence in the trends towards ‘outdoor-indoor’ living by use of larger glass areas, shaded terraces, patios, pools etc., in contemporary adaptations of traditional styles.” Matcham was also active in promoting use of proper reinforcement of hollow cement block construction in Palm Springs, the establishment of the city’s first Building and Safety Department, and the adoption of the Uniform Building Code there (1937-1940). Matcham was active in the Southern California chapter of the AIA, serving in multiple posts annually beginning in the 1930s. In 1956 he was awarded the title of Fellow in recognition of his service to the Institute. Among his most well-known designs was Wrigley Field in Los Angeles (1925) and Robinsons Department Store (1951) in Beverly Hills. Matcham retired in 1969. He died of heart failure in 1980.
<b>Maurer, Edward J., Jr. (1921-1987)</b>	
Born:	Nyack, NY
Education:	University of Texas, B. Arch (1951)
Firms:	Lundgren & Maurer (1953-1974); Maurer Associates (1975-1977); Maurer International (1977-1983)
	Edward J. Maurer, Jr. was born in Nyack, New York, in 1921. He graduated from the University of Texas at Austin in 1951, and began practicing architecture in Austin. Two years later, Maurer contacted Leonard Lundgren about working together, and they formed the architectural firm of Lundgren & Maurer.  The firm designed a wide range of buildings, including medical centers, public buildings, retail stores, banks, office buildings, churches, schools, and residences. However, they were best known for their work in hotel design; the firm designed hundreds of hotels in the United States, Mexico, Central America, and Saudi Arabia for Holiday Inn and other hospitality chains. In 1954, Lundgren & Maurer received the AIA Award of Merit for the Pi Kappa Alpha Fraternity House in Austin.

<sup>33</sup> Teresa Grimes, “Master Architects of Commercial Architecture.”

	After his partnership with Lundgren ended in the early 1970s, Maurer formed Maurer Associates, and practiced as Maurer International between 1977 and 1983. <sup>34</sup>
<b>May, Cliff (1908-1989)</b>	
Born:	San Diego, CA
Education:	San Diego State University (1929-1931)
Firms:	
	Licensed building designer Cliff May is considered the father of the California Ranch house. Although he was not a trained architect, May designed some 18,000 tract homes and over 1,000 custom homes throughout the United States, primarily in Southern California. In the 1930s he pioneered his California Ranch house designs, which combined the western ranch house and the Spanish hacienda with elements of Modernism. May's residential designs are characterized by their unique relationship to the outdoors. Large windows and sliding glass doors effectively erase the line between indoor and outdoor spaces.
<b>McNaughton, James</b>	
Born:	
Education:	
Firms:	
	James McNaughton was an art director and set designer for early television programs in the 1950s, including <i>Pulitzer Prize Playhouse</i> and <i>The United States Steel Hour</i> . <sup>35</sup> In the 1960s and 1970s he turned to residential design and designed a number of houses in Palm Springs, primarily in the Regency Revival style. In 1968, McNaughton became a member of the Palm Springs Chapter of the National Society of Interior Designers.
<b>Meyer, Mendel (1874-1955)</b>	
Born:	Los Angeles, California
Education:	
Firms:	Milwaukee Building Company, Meyer & Holler
	Mendel Meyer was the President of the Milwaukee Building Company, a Los Angeles-based design and construction firm established in 1905 with partner Julius C. Schneider. In 1911 they were joined by Philip W. Holler. The firm changed its name in 1922 to Meyer & Holler, although the two names were used interchangeably until 1927. The firm's early work was largely residential, ranging in style from Craftsman to period revival. After World War I the company emphasized commercial work, and designed some of the most prominent buildings in Hollywood, including Grauman's Egyptian Theater (1922), the Hollywood Athletic Club (1924-26), Grauman's Chinese Theater (1927) and the Hollywood First National Bank Building (1927). Meyer retired in 1936.

<b>Miller, Robert Lee (1887-1967)</b>	
Born:	Hill, TX
Education:	
Firms:	
	Robert Lee Miller was born in Hill, Texas in 1887. After serving in World War I, Miller was trained in civil engineering, but ultimately decided to become a carpenter. In 1931 Miller he moved to Palm Springs, where he worked as a subcontractor, most often working for Alvah Hicks. Miller was a skilled woodworker, and designed many of the detailed exposed wood trusses in the city's early mansions. With no formal training, Miller studied the Spanish styles by observing existing adobes and pattern books.
<b>Monhoff, Frederick (1897-1975), AIA</b>	
Born:	New York, NY
Education:	University of California, Berkeley, B.A. (1921), B.S. (1922); University of California Los Angeles, M.A. (1942)
Firms:	Frederick Monhoff
	Frederick Monhoff, AIA, was born in New York City in 1897. During his childhood his family moved to Los Angeles. After serving in the Navy in World War I Monhoff returned to California, where he graduated from UC Berkeley with a Masters in Art in 1921. A painter, printmaker, lecturer, and architect, Monhoff taught at the Otis Art Institute for twenty-four years, and, later, at the Pasadena Art Institute. He also lectured for the UCLA Extension, and was a design architect for the Los Angeles County Architectural Divisions. Monhoff began traveling to New Mexico in the late 1920s. During his visits to Santa Fe, he used a portion of the basement of the Museum of New Mexico as a studio, sharing an etching press with Willard Nash, Will Shuster, and others.  Monhoff's art affiliations included memberships in the California Society of Printmakers and the Chicago Society of Etchers. Public collections holding his work include the Library of Congress, Los Angeles County Museum, Brooklyn Museum, M.H. de Young Memorial Museum, Museum of New Mexico and the National Museum of American Art. <sup>36</sup>
<b>Montgomery, Ross G. (c. 1888-1969), AIA</b>	
Born:	Ohio
Education:	
Firms:	Montgomery and Montgomery Architects; Ross G. Montgomery, Architect
	Ross Gordon Montgomery, AIA, was an architect working in Los Angeles in the early 20 <sup>th</sup> century. By 1919, his residential work was being featured in the <i>Los Angeles Times</i> and his commissions began to grow in size and scale. Preferring to work in the popular period revival styles, Montgomery's designs were typically in the Spanish Colonial Revival style. Known primarily for his educational and religious buildings, he received widespread acclaim for his design for the Marymount School for Girls (1931)

<sup>36</sup> "Frederick Monhoff Biography," *The Annex Gallery*,

<https://www.annexgalleries.com/artists/biography/1629/Monhoff/Frederick> (accessed August 26, 2015).

	in Westwood. Montgomery also led the restoration of the Santa Barbara Mission after the earthquake of 1925. He also designed a number of buildings for the Catholic Archdiocese such as St. John's Seminary (1939) at Camarillo and the Montecito Catholic Church (1940). His work appeared in several issues of <i>Architectural Digest</i> .
<b>Moyer, John P. (1919-1984), AIBD</b>	
Born:	Tennessee
Education:	
Firms:	
	John P. "Jack" Moyer, AIBD, was a designer and contractor who moved to Palm Desert in 1952. By 1957, Moyer had become a well-known designer of custom-built desert homes. He was best known for his Mid-century Modern "Spider House" in Pinyon Crest, California, which was featured in <i>Architectural Digest</i> , and his hacienda-style La Quinta home which was featured in the <i>Los Angeles Times</i> . He designed several residences and commercial buildings throughout the desert communities, including the Gayle Building (1959) in the 100 block of East Palm Canyon Drive.
<b>Neff, E. Wallace (1895-1982), FAIA</b>	
Born:	La Mirada, CA
Education:	Massachusetts Institute of Technology (1916-1918)
Firms:	Wallace Neff, Architect (1921-1975)
	<p>California architect Wallace Neff, FAIA, is part of the California School of architects and is recognized for his skillful adaptation of the Mediterranean idiom to the local landscape. Neff developed an interest in architecture at an early age. He was raised in Altadena but moved to Europe in 1904, where he lived until the start of World War I, when he moved back to Altadena. After moving back to the United States Neff studied architecture under Ralph Adams Cram at MIT. He later returned to California and apprenticed himself to Santa Barbara architect George Washington Smith. In 1922 Neff moved to Pasadena, where he maintained a home and office throughout his career.</p> <p>Neff is largely known for his elegant estates built throughout the Los Angeles area in the 1920s. Most notably, Neff designed "Pickfair," the Beverly Hills home of Mary Pickford and Douglas Fairbanks. Also concerned with housing for ordinary Americans, Neff pioneered the inexpensive, mass-produced "bubble" or Airform house design. The first of these experimental structures was constructed in Pasadena for Neff's brother Andrew, founder of Pasadena Symphony, and has been called "Pasadena's most unusual building." Wallace Neff retired in 1975, and died in 1982.</p>
<b>Neutra, Richard (1892-1970), FAIA</b>	
Born:	Vienna, Austria
Education:	<i>Technische Hochschule</i> Vienna (1917); University of Zurich
Firms:	Richard J. Neutra (1926-1949); Neutra & Alexander (1949-1958); Neutra & Neutra (1955-1970).
	Richard Neutra was born in Vienna, Austria, in 1892. He graduated from the <i>Technische Hochschule</i> in Vienna in 1917. After World War I, Neutra moved to Switzerland and then to Germany, before joining the office of Erich Mendelsohn in

	<p>Berlin in 1921. In 1923, Neutra immigrated to the United States by way of Chicago along with fellow Austrian architect Rudolph Schindler. Together, they are credited with bringing European Modernism to America. Neutra worked with Frank Lloyd Wright, and followed him to Los Angeles in the early 1920s. After collaborating with Schindler for several years, Neutra established his own practice in 1926. The Lovell "Health" House (1927-29), widely recognized as one of the most important houses of the 20<sup>th</sup> century, came very early in his career. It is praised for its use of concrete and for being the first completely steel-framed residence in the United States.</p> <p>Over the following decades Neutra refined his style and material palette. His earlier houses were generally conceived as a series of interlocking minimal boxes. In later works these boxes dissolve into a series of planes and lines dynamically sliding past each other in three-dimensional collages, as in the Sorrells House (1956-57). Neutra was also responsible for several large public commissions, either individually or in partnership with other architects. These included the Corona School in Bell (1935), Channel Heights Community in San Pedro (1941-42), Eagle Rock Park Clubhouse (1953), and the Los Angeles County Hall of Records (1962, with Robert Alexander, Honnold &amp; Rex, and Herman Light). Between 1949 and 1958 Neutra worked in partnership with Robert Alexander. Other notable projects include the VDL Research House in Silverlake (1933), the Kaufmann House in Palm Springs (1946), and the Perkins House in Pasadena (1955).</p>
<b>Northman, Edith Mortensen (1893-1956), AIA</b>	
Born:	Copenhagen, Denmark
Education:	Studio School of Arts, Atelier of Frede Aamodt, Copenhagen; University of Southern California (1927-1930)
Firms:	E.R. Whellon (1918-1919); H.J. Knauer (1920-1921); C.J. Smale (1921-1926); Edith M. Northman (1930-1956)
	<p>Edith Mortensen Northman, AIA was born in Copenhagen, Denmark in 1893. She studied for two years at the Studio School of Arts, in the atelier of Frede Aamodt in Copenhagen before coming to the United States with her family in 1914. The Northman family first settled in Brigham City, Utah, where Northman worked as a librarian from 1917 to 1918 before deciding to become an architect. In 1918 the family moved to Salt Lake City, and Northman became a draftsman in the office of architect E.R. Wheelon. In 1920 Northman moved to Southern California where she worked briefly for Los Angeles architect Henry J. Knauer before leaving to work for the firm of Clarence J. Smale, where she served as chief draftsman. In 1926, Northman left Smale to open her own firm. She took additional architecture courses at the University of Southern California from 1927 to 1930, and became a licensed architect in 1931.</p> <p>In the late 1920s and 1930s Northman's firm was responsible for the design of more than 100 buildings in Southern California. Commissions included single- and multi-family residences, religious buildings, and commercial buildings, including a series of fifty gas stations for the Union Oil Company. In 1937, Northman designed the Emanuel Danish Evangelical Lutheran Church in Los Angeles (Los Angeles Historic-Cultural Monument #578). Other prominent commissions include the</p>

	<p>Schwartz Bath House in Boyle Heights, the Villa Sevilla apartment building in West Hollywood (contributor to the N. Harper Avenue West National Register Historic District), the Patio del Moro in West Hollywood (listed in the National Register), and the Normandie Mar Apartment Hotel in Fresno.</p> <p>During World War II Northman worked for the U.S. Army Corps of Engineers in Seattle. After the war, she returned to Los Angeles, and specialized in large apartment buildings in Los Angeles and Palm Springs. Northman was a member of the AIA from 1945 to 1953. She died in Salt Lake City in 1956.</p>
<b>Ormsby, Philip G. (c. 1911-unknown )</b>	
Born:	
Education:	Pasadena Junior College, University of Southern California, B.Arch
Firms:	Philip G. Ormsby-Lloyd Steffgen, Architects
	Philip G. Ormsby grew up in Pasadena, CA. He developed an interest in architecture as an adolescent. After graduating from Pasadena Junior College, Ormsby transferred to USC, where he graduated with a degree in architecture. Ormsby was on the tennis team at both of these schools. His interest in tennis was part of the reason Ormsby later relocated to Palm Springs to work as an architect and manage the Racquet Club.
<b>Outcault, John F. (1927-1998), AIA</b>	
Born:	Chicago, IL
Education:	University of Southern California, B.Arch (1952)
Firms:	John F. Outcault, Architect, AIA
	John Filer Outcault, AIA, was a Palm Desert-based architect. After obtaining his degree from USC, Outcault worked as a draftsman in the New York office of Alfred Easton Poor before becoming a draftsman in the office of Clark & Frey. Outcault's work included residential, commercial, and institutional buildings throughout the Coachella Valley. He is best known for his residence for Virgil Pinkley (1960) in Palm Desert, Sea View School (1967) in Salton City, and the Indio Civic Center (1967-1968) in Indio.
<b>Palmer, Dan Saxon (1920-2007), AIA</b>	
Born:	Budapest, Hungary
Education:	New York University, B.Arch (1942)
Firms:	Morris Lapidus; Victor Gruen; Palmer and Krisel (1950-c. 1965)
	Dan Saxon Palmer, AIA, was born in Budapest, Hungary, and moved to New York with his family at age 2. After earning a B.Arch from New York University in 1942, Palmer served in the Army Corps of Engineers as a mapmaker, draftsman and photographer in England and France. He then worked for architects Morris Lapidus in New York and Victor Gruen in Los Angeles, and, in 1950, formed a Los Angeles-based partnership with William Krisel, who also had worked at Gruen's office. Beginning in 1950, Palmer and Krisel designed contemporary houses with post-and-beam construction, open floor plans in which the living room, dining room and kitchen flow together, lots of glass and clean, simple lines inside and out. In the early 1950s, they won a commission for their first major housing tract, Corbin Palms, in the western San Fernando Valley.

	By 1955, Palmer was overseeing work in Orange and Ventura counties, Krisel in San Diego and Riverside counties. George Alexander, Harlan Lee and other developers built more than 20,000 houses designed by Palmer and Krisel in Southern California, Arizona, Nevada, Texas and Florida by the end of the 1950s. Palmer and Krisel collaborated on projects in the Los Angeles area until dissolving their partnership in the mid-1960s. Palmer continued designing tract homes and also commercial developments, including the City National Bank building (1968) on Pershing Square in downtown Los Angeles. He died in Santa Monica at age 86. <sup>37</sup>
<b>Palmer, George Vincent (1902-1975)</b>	
Born:	Toronto, Canada
Education:	University of Toronto (1919-20); University of Southern California, B. Arch (1924); M.S. Civil Engineering (1928)
Firms:	Vincent Palmer, Architect (1925-1975)
	Vincent Palmer was born in Toronto in 1920. He received his B.Arch from USC in 1924, followed four years later by his M.S. in Civil Engineering from the same school. Throughout the 1920s Palmer designed homes in the popular period revival styles. In 1934 he established Palmer Steel Building Inc. and began building cellular steel panel houses. Palmer was a member of the AIA from 1941 until 1958, and became President of the California Council of Architects in 1947.
<b>Patton, Ross</b>	
Born:	
Education:	
Firms:	
	Ross Patton was a Palm Desert-based contractor. With his partner Albert Wild, Patton built residential developments and commercial buildings in Palm Springs and Palm Desert.
<b>Pennell, Woodbury Clement (1883-1951)</b>	
Born:	Portland, ME
Education:	
Firms:	John C. Austin
	Los Angeles-based architect W.C. Pennell was a long-time associate of architect John C. Austin. By 1936, Pennell established his own practice, working in the popular styles of the day. In 1935, Pennell developed a prototype of an affordable home as a demonstration home for Lakewood Village. Later commissions included several schools, theaters, and supermarkets.
<b>Pereira, William (1909-1985), FAIA</b>	
Born:	Chicago, IL
Education:	University of Illinois, School of Architecture, B.S. Architecture (1930)

<sup>37</sup> Claire Noland, "Dan Saxon Palmer, 86; architect of 1950s' Modernist tract homes," *Los Angeles Times*, <http://articles.latimes.com/2007/jan/29/local/me-palmer29><http://articles.latimes.com/2007/jan/29/local/me-palmer29>, accessed June 24, 2015.

Firms:	Mayo & Mayo (1929); Holabird & Root (1930-1931); William L. Pereira (1931-1950); Pereira & Luckman (1950-1958); William L. Pereira & Associates (1959-1985)
	Architect William L. Pereira, FAIA is known for his corporate, industrial, and institutional architecture, as well as for his large-scale master plans. Pereira established his private practice in 1931, launching a prolific career that would span five decades. In the 1950s Pereira established a partnership with Charles Luckman. Their work was frequently published in professional journals, particularly in John Entenza's influential <i>Arts &amp; Architecture</i> magazine. In 1958 Luckman left the practice, leaving Pereira as the sole principal for the firm. Notable projects include the USC Master Plan (1960); the Los Angeles County Museum of Art (1964); the Central Library building at UC San Diego (1965); the UC Irvine Master Plan (1965); the Transamerica Tower in San Francisco (1973); and the Los Angeles International Airport Master Plan (1967-1984). Pereira was a professor at USC from 1949 to 1957, and continued working as an architect until his death in 1985 at the age of 76.
<b>Powell, Claude A. (1909-1972)</b>	
Born:	
Education:	
Firms:	
	Palm Springs-based Claude A. Powell is best known for his Mission Revival-style Blessed Sacrament Catholic Church (1948) in Twentynine Palms. In 1940, Powell was an artist for an advertising agency in Los Angeles. By 1948, Powell was a draftsman in the office of H.W. Burns.
<b>Purcell, William Gray (1880-1965), FAIA</b>	
Born:	Oak Park, IL
Education:	Cornell University, School of Architecture (1903)
Firms:	Purcell & Feick (1907-1910); Purcell, Feick & Elmslie (1910-1912); Purcell & Elmslie (1912-1921); Purcell & Bailey
	William Gray Purcell, FAIA was a Prairie School architect. Purcell enjoyed a highly successful partnership with George Grant Elmslie, with offices in Minneapolis, Chicago, and Portland. Purcell & Elmslie became one of the most commissioned firms among the Prairie School architects, second only to Frank Lloyd Wright, and is credited with designing some of the finest Prairie School buildings in America. Following the dissolution of his partnership with Elmslie, Purcell continued his own practice in Portland, Oregon. In 1930, Purcell was diagnosed with advanced tuberculosis, and moved to a sanatorium in Banning. He continued to support American architecture for another thirty years, largely through his writings. In 1963 Purcell was nominated to the College of Fellows of the American Institute of Architects. He died in 1965.
<b>Ricciardi, Robert H. (b. 1935), AIA</b>	
Born:	Los Angeles, CA
Education:	University of California, Berkeley B.Arch (1959)
Firms:	Welton Becket & Associates; Clarence Mayhew; William F. Cody; Don Wexler; Robert H. Ricciardi (founded 1963)

	Robert Ricciardi, AIA was born in Los Angeles in 1935. He studied architecture at UC Berkeley, receiving his degree in 1959. He received his architect's license in 1962. Little is known about his life or career.
<b>Richards, William (1873-1945)</b>	
Born:	Dewsbury, England
Education:	Cambridge University, B.A.
Firms:	Dodd & Richards (1915-1930); William Richards, Architect (1930-1945)
	William Richards was born in Dewsbury, England in 1873. He studied at Queens College in Cambridge and began to practice architecture. He immigrated to Los Angeles in 1912. In 1915 he formed a partnership with William J. Dodd, which lasted until Dodd's death in 1930. Richards then maintained a solo practice until his death at age 74.
<b>Ring, Jonathan (1878-1963)</b>	
Born:	Philadelphia, PA
Education:	Pennsylvania Museum and School of Industrial Art; University of Pennsylvania (1905)
Firms:	
	Jonathan Ring studied architecture both at the Pennsylvania Museum and School of Industrial Art and at the University of Pennsylvania, from which he graduated in 1905. In later years, Ring maintained offices both in New York City and in West Orange, New Jersey. By 1934 Ring was located in Pasadena, California.
<b>Rissman, Homer (1927-2001)</b>	
Born:	Chicago, IL
Education:	
Firms:	Rissman & Rissman, Associates
	Homer Rissman and his brother Marshall W. Rissman, AIA were partners in the Los Angeles-based firm of Rissman & Rissman. The firm, which was established in 1960, appears to have specialized in hospitality and hotel commissions. The firm is best known for the Frontier Hotel (1967) and Circus-Circus Hotel (1968) in Las Vegas. Other works include a series of Holiday Inns in Santa Monica, Los Angeles and Riverside in the Mid-Century Modern style.
<b>Rose, LeRoy (1927-1996)</b>	
Born:	Ellenville, New York
Education:	Los Angeles City College, A.A. Math (1950); Cal Poly San Luis Obispo, B.S. Architectural Engineering (1955)
Firms:	John Badgley (1953-1954); Decker Holdgredge (1954-1955); Killingsworth, Brady, & Smith (1955-1956); Carlson & Middlebrook (1956-1996)
	Anaheim-based LeRoy Rose was born in Ellenville, New York. He received his A.A. degree in math from Los Angeles City College in 1950, and his B.S. in architectural engineering from Cal Poly San Luis Obispo in 1955; he attended UCLA for one year. <sup>38</sup> From 1955-1956 Rose worked as a draftsman in the office of Killingsworth,

<sup>38</sup> *American Architect's Directory*, 1970, 779.

	Brady and Smith. He then went to work for Carlson & Middlebrook in Garden Grove and by 1959 he had risen to partner in that office. Between 1964 and 1969 he maintained the firm of Rose & Fears. Rose is best known for his commercial works: Garden Grove Federal Savings and Loan (1961) in Garden Grove, the Uncle John Pancake Houses (1961) in Garden Grove, Anaheim General Hospital (1964), and the Garber and Sokoloff Office Building (1967) in Fullerton. He also designed the Orange County Hall of Administration (1978, LeRoy Rose & Associates), and several multi-family residential condominium projects, including a Las Vegas, Nevada project for Larwin Multi-Housing Corporation in 1973. <sup>39</sup> During the 1980s, Rose established an office in Palm Springs, where he designed a new entry for Parc Andreas (1987, LeRoy Rose and Mark McBride Hileman & Associates).
<b>Sabin, Henry Palmer</b> (1892-1956)	
Born:	Janesville, WI
Education:	Massachusetts Institute of Technology, B.S. Architecture (1915); M.S. Architecture (1916)
Firms:	York & Sawyer, New York (1920-1924); Allied Architects (1924-1927); Reginald Johnson (1927-1928); Palmer Sabin, Architect (1928-1956)
	Architect Henry Palmer Sabin, AIA, began his professional career in the office of the New York architecture firm of York & Sawyer, where he specialized in hospital design. Sabin came to Southern California in 1924 and joined Allied Architects, for whom he designed the Los Angeles County Hospital. After a brief time working for Reginald Johnson, Sabin established his own practice in 1928. Notable works include Huntington School in San Marino (1935) and Loma Alta Elementary School in Altadena (1951).
<b>Sackley, Stan Alan</b> (1937-2001), FAIA	
Born:	Los Angeles County, CA
Education:	University of Southern California, B.Arch (1961)
Firms:	Sackley & Light
	Stan Sackley, FAIA, graduated from USC with his B.Arch. in 1961. In the early 1960s, prior to forming his own firm, Sackley partnered with Herman Charles Light, FAIA (1911-1971). Sackley was never licensed as an architect but maintained a successful design firm in Palm Springs. He received national press coverage when his home for James Hollowell when was featured as a "Playboy Pad" in the April 1966 issue of <i>Playboy</i> . Sackley is best known for his speculative Mid-century Modern homes along Caliente Drive. <sup>40</sup> By June 1986 Sackley was retired from practice.
<b>Schindler, Rudolph M.</b> (1887-1953)	
Born:	Vienna, Austria
Education:	Bau-(Architektur) Schule of the Vienna Polytechnic Institute (1906-1911); Vienna Academy of Fine Arts (1910-1913)

<sup>39</sup> In 1979, Rose was convicted along with former Orange County Supervisor Ralph Diedrich for a 1974 conspiracy case involving the removal of development restrictions on Anaheim Hills land and sentenced to prison. "Judge Lightens Rose Term in Bribery Case," *Los Angeles Times*, October 8, 1982, OC\_A1.

<sup>40</sup> Although some sources associate him with apprenticeship at Taliesin, email exchanges with Taliesin West archivist Margo Stipe indicate Sackley does not appear on any official Taliesin apprentice lists.

Firms:	Frank Lloyd Wright
	<p>Rudolph M. Schindler was born in Vienna and educated at the <i>Bau-(Architektur)schule</i> of the <i>k.k. Technische Hochschule</i> (Polytechnic Institute) from 1906 to 1911. Before he finished his degree Schindler enrolled in the <i>k.k. Akademie der bildenden Künste</i> (Academy of Fine Arts). In 1914 Schindler went to Chicago, hoping to work for Frank Lloyd Wright. In 1918 Wright finally hired Schindler to work on the Imperial Hotel, leaving Schindler in charge of his office during his travels to Japan. Wright sent Schindler to Los Angeles in 1920 to supervise construction of his most important American commission of the time, the Hollyhock house for oil heiress Aline Barnsdall. After a visit to Yosemite in October 1921 Schindler decided to stay in Los Angeles and build his own house and studio at Kings Road.</p> <p>Schindler called his form of modern architecture “space architecture,” which focused on the design of interior space. He produced a body of work that embodies his spatial ideas, built almost entirely in Southern California. Starting with his own Kings Road house, a concrete and redwood structure that combined a site plan showing a radical integration of interior and exterior spaces with an equally radical social program of four adults living as equals, Schindler designed around 500 projects, of which about 150 were built. These were largely single-family houses, although there were some apartments, small commercial buildings and a single church.</p> <p>After early experiments with concrete, including the How house (1925) and the Lovell Beach House (1923–1926), proved too expensive, Schindler developed ways to make inexpensive modern architecture out of cheap materials—stucco and plaster over wood frame—in what he called his “plaster skin” designs of the 1930s and early 1940s. Notable examples include the Oliver (1933–1934), Walker (1935), and Wilson (1935–1939) houses. He continued to experiment with materials and roof forms, using roofing as siding in the de Keyser house (1935) and trying out gable roof forms in a number of projects. After World War II he employed his “Schindler Frame” construction which further adapted the wood frame to accommodate his ideals of interior spatial continuity, in works such as the Kallis house (1946) with its sloping roofs and walls, and in several houses in which he used translucent colored fiberglass to achieve “color atmosphere,” including the Janson (1948–1949), Tischler (1949–1950) and Skolnick (1950–1952) houses.</p> <p>Schindler died in 1953.</p>
<b>Schuler, James</b>	
Born:	
Education:	
Firms:	James Schuler & Associates
	Little is known about the Garden Grove–based firm James Schuler & Associates. In 1964 the firm was responsible for the design of the Jolly Roger Apartments in Paramount, CA.
<b>Sheets, Millard Owen (1907-1989)</b>	
Born:	Pomona, CA

Education:	Chouinard Art Institute
Firms:	
	<p>Millard Sheets was a native California artist who grew up in the Pomona Valley near Los Angeles. While still a teenager, his watercolors were accepted for exhibition in the annual California Water Color Society shows and, by nineteen, he was elected into the Society. He attended the Chouinard Art Institute, and was hired to teach watercolor painting there before he graduated. By the early 1930s Sheets was exhibiting works in Paris, New York, Pittsburgh, Chicago, Houston, St. Louis, San Antonio, San Francisco, Washington D.C., Baltimore, and many other cities throughout the United States. At home in Los Angeles he was recognized as the leading figure in, and driving force behind, the California Style watercolor movement.</p> <p>During World War II Sheets worked as an artist-correspondent for <i>Life</i> magazine and the United States Army Air Forces in India and Burma. Many of his works from this period document the scenes that he witnessed of famine, war, and death. This experience also affected his postwar art for a number of years. After the 1950s his style changed again, this time featuring brighter colors and often depicting subjects from his travels around the world.</p> <p>Sheets taught at the Chouinard Art Institute, Otis Art Institute, and Scripps College, among other institutions, and was director of the art exhibition at the Los Angeles County Fair for many years. During the Great Depression he worked with Edward Bruce to hire artists for the Public Works of Art project, and, in 1946, he served as a president of the California Water Color Society. In later years, he worked as an architect, illustrator, muralist, and printmaker, and judged art exhibitions. Beginning in 1952, Sheets designed the buildings and mosaics for dozens of branch offices of Home Savings of America throughout California, and coordinated contributions from other artists. Outside of California he was commissioned for artwork at the Detroit Public Library, the Mayo Clinic, the dome of the National Shrine in Washington, D.C., the University of Notre Dame Library, the Hilton Hotel in Honolulu, and Mercantile National Bank in Dallas.</p> <p>In 1953, Sheets was appointed Director of Otis Art Institute (later named Otis College of Art and Design). Under his leadership the school's academic programs were restructured to offer both BFA and MFA degrees. He also created a ceramics department, and built a ceramics building and gallery, library, and studio wing. By the time Sheets left Otis in 1960, the look and direction of the college had changed dramatically.</p>
<b>Shellhorn, Ruth (1909-2006), FASLA</b>	
Born:	Pasadena, CA
Education:	Oregon State College (1927-1930); Cornell University, College of Architecture, B.Arch, B. Landscape Architecture (2005) (attended 1930-1933)
Firms:	Ruth P. Shellhorn, Landscape Architect (1933-1990)
	Ruth Patricia Shellhorn, FASLA, was a prominent Los Angeles landscape architect. Unable to afford her final year at Cornell University, she left in 1933 without a degree. Despite this, Shellhorn established her own firm in South Pasadena later that

	year. In 1945 Shellhorn was hired by the Bullock's department store chain as consulting landscape architect for their Pasadena store (with Carl McElvy), designed by the Los Angeles architectural firm Wurdeman & Becket. Bullock's hired her to design the landscaping at most of its future stores and manage the maintenance of the chain's landscaping, which she did through 1978. She was also responsible for landscaping the Fashion Square shopping centers, anchored by Bullock's stores, at Santa Ana, Sherman Oaks, La Habra, and Del Amo in Torrance. Shellhorn is perhaps best known as a member of the original Disneyland design team, responsible for the central areas of pedestrian traffic in the theme park. She remained in private practice until her retirement in 1990. In 2005, Cornell University granted Shellhorn a Bachelor of Landscape Architecture degree and a Bachelor of Architecture Degree.
<b>Siple, Allen G. (1900-1973), FAIA</b>	
Born:	Otsego, MI
Education:	Albion College (1918-1920); University of Southern California (1923)
Firms:	Allen G. Siple, AIA, Architect (1930-1972)
	Michigan-born architect Allen G. Siple, FAIA, was born in Otsego, Michigan, in 1900. He attended the USC School of Architecture, graduating in 1923. Siple's practice was primarily residential in nature, and his designs were published in the <i>Los Angeles Times</i> , <i>House Beautiful</i> , and <i>Architectural Digest</i> . He was noted for his development of a method of "reinforced stone masonry that meets the difficult and stringent seismic requirements of the California Code." <sup>41</sup> Notable works include the Albert O. Farmer Residence (1954, Trousdale Estates, Beverly Hills), the Webb School Dining Hall and Dormitories (1961-62) in Claremont, and the Richard M. Nixon Residence (1962, Trousdale Estates, Beverly Hills).
	Siple was inducted into the American Institute of Architect's College of Fellows in 1969 for his contributions to the built environment and his service to the profession for his writing/editing of the <i>Southern California Chapter Bulletin</i> . Under his oversight, the <i>Bulletin</i> became a force for national dialogue.
<b>Smith, Gared N. (b. 1925), AIA</b>	
Born:	Los Angeles, CA
Education:	University of Oregon, B.Arch (1951)
Firms:	Earl Heitschmidt & Riley & Levanas; Levanas & Smith, Associates; Gared N. Smith, Architect (founded 1961)
	Gared Smith, AIA, was born in Los Angeles in 1925. He served in the Navy as an electrician from 1943 until 1946. After being discharged, Smith studied architecture at the University of Oregon, earning a B.Arch in 1951. Smith then worked as a draftsman for Earl Heitschmidt before joining the firm of Raymond Levanas and eventually become a partner. In 1961 Smith left the partnership to start his own practice.
<b>Steffgen, Lloyd A. (1896-1960), AIA</b>	

<sup>41</sup> Allen G. Siple Fellowship Nomination Form, August 29, 1962. The system was similar to slip-form concrete construction methods, except local canyon stone was laid up on both wall faces and the void was filled with concrete in two foot-lifts.

Born:	
Education:	
Firms:	Philip G. Ormsby-Lloyd Steffgen, Architects
	Lloyd A. Steffgen, AIA, was born in California in 1896. Little is known of his life or career. Steffgen was a set architect for the motion picture industry in the 1940s and became a member of the AIA in 1946. He died in Los Angeles in 1960.
<b>Stepanian, Stephen A. (1911-2007), AIA</b>	
Born:	Columbus, OH
Education:	Ohio State University, B.Arch (1933)
Firms:	C, Raimond Johnson, AIA (1934); Plummer, Wurdeman & Becket (1934-1939); Wurdeman & Becket (1939-1940); Stephen A. Stepanian, AIA (1940-2007)
	Beverly Hills-based Stephen A. Stepanian, AIA received his B.Arch from the College of Engineering at Ohio State University in 1933. He started his career in 1934 as a set designer for Metro Goldwyn Mayer studios. In 1934 he joined the Los Angeles architectural firm Plummer, Wurdeman & Becket, where he stayed until 1940, rising through the ranks from Junior to Senior to Chief Draftsman. In 1940 he established his own practice. <sup>42</sup> During World War II he served in the Army and designed several defense housing projects. <sup>43</sup> After his work with Trousdale at Tahquitz River Estates, Stepanian went on to design traditional homes for developers, such as the “American Country” home for the luxury Royal Oaks development in Encino in the San Fernando Valley. Stepanian was also known for his custom homes, including the Bob Hope Residence in Los Angeles (1952). His work was published in <i>House Beautiful</i> and <i>Architectural Digest</i> .
<b>Tanner, William Charles (1876-1960)</b>	
Born:	Meadford, Canada
Education:	
Firms:	William Charles Tanner (1921-1924); George Vincent Palmer (1924-1959)
	William Charles Tanner was born in Meadford, Canada, in 1876, and immigrated with his family to the United States, settling in Elgin, Illinois. Tanner studied art in Chicago (1903-1908), Boston (1908-1909), New York (1909-1911), Paris and Giverny, France (1911-1914). At age 38, Tanner relocated to Riverside, California. To supplement his income as an artist and art teacher, in 1921 Tanner opened an architectural practice in Riverside, although he was never licensed as an architect. In 1924, Tanner moved to Hollywood, where he worked as a draftsman in the office of architect G. Vincent Palmer.  Notable projects in Palm Springs include the Carrie Birge Residence (now the Ingleside Inn, 1922, HSPB-25), George Roberson House (now Le Vallauris Restaurant, 1924, HSPB-21), the O'Donnell House (“Ojo del Desierto,” 1925, HSPB-19), and the First Community Church (HSPB-11). Tanner died in Santa Monica at age 83. <sup>44</sup>

<sup>42</sup> Stephen A. Stepanian, AIA Application for Membership,” August 24, 1944, 2-3.

<sup>43</sup> *AIA American Architects Directory*, 1956, 534.

<sup>44</sup> Patrick McGrew, draft National Register Nomination, the Thomas O'Donnell Residence, July 10, 2010.

<b>Thoryk, Paul T. (b. 1941), AIA</b>	
Born:	San Diego, CA
Education:	California Polytechnic State University, San Luis Obispo (1956)
Firms:	
	Paul Thoryk, AIA, was born in San Diego in 1941. He developed an interest in architecture while working with his father, a stoneworker. After graduating from Cal Poly San Luis Obispo in 1956 Thoryk traveled to Europe and was influenced by the pedestrian-oriented architecture he saw there.
<b>Tomson, Tommy (1900-1986)</b>	
Born:	Zanesville, OH
Education:	
Firms:	
	Born in Zanesville, Ohio, with the given name Golden Sands, Tommy Tomson arrived in Los Angeles in the 1920s. Noticeable for his markedly good looks, Tomson originally intended to go into show business. When a screen test did not result in a studio contract, he switched career paths and became a self-taught landscape architect. In the midst of the Great Depression, and with little background, he obtained his first major commission, the Santa Anita Racetrack (1934). In addition to Los Angeles Union Station and the Pan-Pacific Auditorium, Tomson designed landscapes for countless residences. He also designed the landscape for the largest of Los Angeles' garden apartments, Park La Brea, in 1942. In 1946, with his brothers-in-law Cliff and Randall Henderson, Tomson founded the city of Palm Desert, creating the city's overall site plan and street layout, along with landscapes for the Shadow Mountain Club and many private residences. <sup>45</sup>
<b>Van Camp, Donald B. (1909-1993)</b>	
Born:	Nevada
Education:	Pasadena Junior College
Firms:	
	Donald B. Van Camp was born in Nevada in 1909, and grew up in Pasadena, California. He was educated as a draftsman at Pasadena Junior College. In 1940, Van Camp moved to the Cathedral City area, and opened a painting and construction shop. In 1947 Van Camp settled in Yucca Valley, where he designed and built houses. Emphasizing light, color, desert views and economy of construction, his earliest homes were of adobe block construction. In the mid-1950s he moved to Redlands, and ultimately relocated to the Las Vegas area.
<b>Van de Goes, Henry C. (1892-unknown)</b>	
Born:	Holland
Education:	Ecole des Beaux Arts, Netherlands
Firms:	

<sup>45</sup> "Tommy Tomson," <https://tclf.org/pioneer/tommy-tomson><https://tclf.org/pioneer/tommy-tomson> (accessed August 2015).

	Henry Charles Van der Goes studied architecture at the Ecole des Beaux Arts in the Netherlands. He then traveled extensively in western Europe before immigrating to the United States. He gained experience in architecture and engineering in the Midwest and California, including the design and construction of industrial and office buildings, schools, colleges, churches, apartments, hospitals and bridges. In 1933 he resided in Burbank, California, and became a naturalized citizen. He entered state service for California in 1936, transferred to the Division of Highways in 1941, and to the Office of the Bridge Department in 1943. He retired in 1954 as an associate architectural draftsman. <sup>46</sup>
<b>Van Pelt, Garrett, Jr. (1879-1972), FAIA</b>	
Born:	Milwaukee, WI
Education:	Chicago Art Institute, School of Architecture
Firms:	Marston & Van Pelt (1914-1923); Marston, Van Pelt & Maybury (1923-1927); Van Pelt & Lind (1928-1941); Van Pelt (1941-1970)
	Garrett Van Pelt Jr., FAIA began his architectural career in a highly successful partnership with Pasadena architects Sylvanus Marston and Edgar Maybury. The firm had more influence in Pasadena during the 1920s than any other, designing many of the city's Mediterranean-style commercial and civic structures, including the American Legion Building and several branches of the Pasadena Public Library. In 1928 Van Pelt entered into a partnership with George Lind. The firm designed many buildings throughout the Los Angeles area, and was instrumental in the development of Arcadia. Van Pelt was known for his versatility, designing residential, civic, and ecclesiastical buildings in a variety of architectural styles. He became a member of the American Institute of Architects in 1943, was inducted into the College of Fellows of the AIA in 1964. He retired in 1970 in Santa Barbara, and died in 1972.
<b>Walker, Albert R. (1881-1958), AIA</b>	
Born:	Sonoma, CA
Education:	Brown University
Firms:	Hebbard and Gill; Parkinson and Bergstrum; A.F. Rosenheim, Hunt and Gill; Walker and Vawter (1910-1919); Walker & Eisen (1919-1941)
	Albert Walker, AIA was born in Sonoma, California in 1881. He studied at Brown University for one year, returning to California to work for Hebbard and Gill in San Diego after he graduated. After a year in San Diego, he moved to Los Angeles to work with Parkinson and Bergstrum, and later, with A.F. Rosenheim, Hunt and Grey. In 1909, Walker established his own practice, and in 1910, formed a partnership with John Terrell Vawter. Shortly after World War I, Walker formed a partnership with Percy A. Eisen, which lasted until 1941. Together, Walker and Eisen designed the Ardmore Apartments in Los Angeles, the Hollywood Plaza Hotel, the Beverly Wilshire Hotel in Beverly Hills, the El Mirador Hotel in Palm Springs, the Edwards and Wildey Building and the Fine Arts Building (Signal Oil Building) in Los Angeles, the Bay Cities Guaranty Building in Santa Monica, and the Texaco Building in Los Angeles. Walker died in 1958.

<sup>46</sup> "Retirements From Service," *California Highways and Public Works*, May-June, 1954, 61.

<b>Walker, Rodney (1910-1986)</b>	
Born:	Salt Lake City, UT
Education:	Pasadena City College, Engineering (1928-1929); UCLA, Architecture (1932-1933)
Firms:	Rodney Walker, Builder
	Los Angeles-based Rodney A. Walker was a designer-contractor. After studying engineering and architecture, he worked in the office of R.M. Schindler in 1938. During World War II he worked as a draftsman in the engineering department of Douglas Aircraft Company. Walker was one of the architects selected by John Entenza to participate in the Case Study House Program. His best-known works are Case Study House #16 (1947) and Case Study House #18 (1947-1948). In addition to <i>Arts &amp; Architecture</i> , Walker's work was featured in many national magazines, including a 38-page spread for his own home in a 1952 issue of <i>House Beautiful</i> . Walker relocated to Ojai in 1956, where he built several homes. He retired from architectural practice in 1971.
<b>Webster, Erle F. (1893-1971), AIA</b>	
Born:	Paris, TX
Education:	
Firms:	Webster and Wilson, Architects (1930-1936)
	Erle Webster was born in Paris, Texas, in 1893. He was a Los Angeles-based artist and architect. In 1930, he formed a partnership with Adrian Wilson, which lasted until 1936. Webster died in Santa Cruz, California, in 1971.
<b>Wexler, Donald A. (1926-2015), FAIA</b>	
Born:	Sioux Falls, SD
Education:	University of Minnesota, B.Arch (1950)
Firms:	Richard Neutra (1950-1951); William F. Cody (1951-1953); Wexler & Harrison, AIA, Architects (1953-1962); Donald A. Wexler & Associates (1963-1968); Donald A. Wexler Associates (1969-2002)
	Donald Wexler, FAIA graduated from the University of Minnesota School of Architecture in 1950. He moved to Los Angeles and worked as a draftsman for Richard Neutra before moving to Palm Springs, where he worked for William F. Cody. In 1953, Wexler formed a partnership with Richard Harrison, his coworker in Cody's office. Wexler and Harrison explored the possibilities of steel construction in classroom projects for the Palm Springs Unified School District (1958) and the Calcor Steel Homes project (1962). They also designed residential developments such as the Polynesian-themed Royal Hawaiian Estates (1960). After dissolving the partnership, Wexler continued to develop his distinctive personal style with post-and-beam houses in wood and steel, as well as major civic and institutional projects including the Palm Springs Municipal Airport (1965) and Desert Hospital (1969-84).
<b>Wheeler, Richard (1917-1990), AIA</b>	
Born:	San Diego, CA
Education:	San Diego State College (1935-1938); University of California, Berkeley, B.A (1941)
Firms:	EL Freeland, Arch. Eng. (1941-1942); W. H. Wheeler, Architect (1944-1947); Richard George Wheeler, Architect (1947-1989)

	Richard George Wheeler, AIA, was born in 1917 in San Diego, California, the son of architect William Henry Wheeler. Following his graduation from San Diego High School in 1935, Richard attended San Diego State College for three years before transferring to UC Berkeley, from which he graduated in 1941. After he graduated he taught night classes in architecture at UC Berkeley. Upon the United States' entry into World War II, Wheeler applied for and received a commission in the Navy, which came through in May 1942. After the war, Wheeler returned to worked for his father at Wheeler & McGowan, Architects and Engineers, but after he received his architectural license in 1947, he opened his own practice. He began with primarily residential commissions, but diversified rapidly, partly owing to his relationship with Legler Benbough, for whom he designed several medical buildings. Wheeler died in 1990. <sup>47</sup>
<b>White, Walter S. (1917-2002)</b>	
Born:	
Education:	
Firms:	Harwell H. Harris (1937); Rudolf Schindler (1937-1938); Allen Rouff (1938-1939); Win E. Wilson (1939-1942); Clark & Frey (1947-1948)
	Walter S. White was born in 1917. Between 1933 and 1936 he attended San Bernardino High School. He worked for Harwell H. Harris for six months, followed by an eight-month term in Rudolf Schindler's Los Angeles office, a six-month term with Allen Rouff, and, finally, a two year and six month term with Win E. Wilson. In Wilson's office, White helped plan and design prefabricated war housing with a skin-stressed plywood panel system. For the remainder of World War II, White was employed by Douglas Aircraft in El Segundo, California, working on machine tool design. In 1947 White moved from Los Angeles to Palm Springs, where he worked for Clark & Frey before embarking on his own practice as a designer and contractor in Colorado Springs, Colorado. He continued to work as a contractor in Colorado Springs until 1967 when he obtained his architecture license. White then returned to California, where he worked throughout the 1970s and 1980s. He designed residences, ski lodges, commercial buildings, churches, club houses, and condominiums. Of the approximately 300 residences he designed, he built about fifteen percent of them himself. In addition to designing houses, White devoted much of his career to the research and development of the Solar Heat Exchanger Window Wall and the "Hyperbolic Paraboloid Roof Structure and Method of Constructing Thereof," both of which he patented, in 1975 and 1996, respectively. White died in 2002, at the age of 85. <sup>48</sup>
<b>Whittemore, Hal C. (b. 1920), AIA</b>	
Born:	Ann Arbor, MI
Education:	University of Michigan, B.Arch. (1951)
Firms:	Whittemore & Pittam, Hal C. Whittemore, AIA & Associates

<sup>47</sup> Adapted from "Richard George Wheeler," *Modern San Diego*, <http://www.modernsandiego.com/Wheeler.html> (accessed August 27, 2015)

<sup>48</sup> Finding Aid for Walter S. White Papers, [http://www.oac.cdlib.org/findaid/ark:/13030/c8k35t0n/entire\\_text/](http://www.oac.cdlib.org/findaid/ark:/13030/c8k35t0n/entire_text/) (accessed May 20, 2015).

	Hal Case Whittemore, AIA was a Los Angeles-based architect who specialized in church architecture. During World War II Whittemore served in the aviation division of the US Navy. After the war he attended the University of Michigan, where he studied architecture. After graduation he moved to California and set up practice in 1955. Between 1960 and 1962 he formed a brief partnership with Judson Wright Pittam, AIA. Whittemore is best known for the Bel Air Presbyterian Church (1961), for which he received a Merit Award from the National Conference on Church Architecture. Other works include La Tijera United Methodist Church (1958), Presbyterian Church of Pacific Palisades (1961), Trinity United Presbyterian Church (1968) in Santa Ana, and the North Valley YMCA (1969). In 1962 Whittemore's design for the "Skychalet," a do-it-yourself A-frame kit home, was featured at the 1962 Los Angeles Home Show and covered generously in the <i>Los Angeles Times</i> .
<b>Wild, Albert "Duke" (1924-1987)</b>	
Born:	California
Education:	
Firms:	
	Albert "Duke" Wild was born in California in 1924. He formed a partnership with architect Ross Patton, acting as the contractor in their Palm Desert-based design-build firm.
<b>Wilkinson, Marshall P. (1892-1969)</b>	
Born:	California
Education:	
Firms:	Frank P. Meline Company (1917-1920); Marshall P. Wilkinson (1920-c. 1950)
	Marshall P. Wilkinson was born in 1892. He worked his way up from draftsman to contractor to architect over the course of his career. Although he left behind many buildings throughout the Los Angeles region, little is known about Wilkinson's early years or training. He was based in Hollywood for much of his professional life, acting as a draftsman in 1915, and, in 1917, a superintendent of construction for the Frank P. Meline Company. By 1920 Wilkinson had opened his own office on Hollywood Boulevard, providing design, construction, and engineering services. During this period he also worked as a builder for other architects and designers. His practice was diverse, encompassing single- and multi-family residential properties, commercial structures, and industrial buildings, including facilities related to motion picture production. Wilkinson's work was covered several times in the <i>Los Angeles Times</i> , <i>Architectural Record</i> , and <i>Architectural Digest</i> . Wilkinson continued to practice into the 1940s and was joined by his son, Marshall P. Wilkinson, Jr., also an architect. Wilkinson, Sr., died in 1969 at the age of 77.
<b>Williams, Emerson Stewart (1909-2005), FAIA</b>	
Born:	Dayton, OH
Education:	Cornell University, B.Arch (1933); University of Pennsylvania, M.Arch (1934)
Firms:	Raymond Loewy (1939-1941); Schenck & Williams (1941-1943); Harry J. Williams (1946-1949); Williams, Williams, & Williams (1949-1957); Williams, Clark & Williams (1957-1988); E. Stewart Williams, AIA, Architect (1988-2005)

	E. Stewart Williams, FAIA, was the son of Dayton, Ohio architect Harry Williams, who designed the offices of the National Cash Register Company in Dayton, as well as the Plaza shopping center and Carnell Building in Palm Springs for National Cash Register heiress Julia Carnell. The younger Williams studied architecture at Cornell University and the University of Pennsylvania, then taught for several years at Bard College in New York. In the late 1930s he worked for designer Raymond Loewy, and during World War II designed ships for the US Navy. After the war Williams relocated to Palms Springs and formed a partnership with his father, who had settled there in 1942, and his brother Roger. He later collaborated with John Porter Clark. One of Stewart Williams' first commissions in Palm Springs was a residence for Frank Sinatra (1947) that used natural and industrial materials to create a structure that combined the Modern aesthetic with the colors and textures of the desert. Williams designed a number of notable residences in Palm Springs including the Edris House (1954), the Williams Residence (1956), and the Sutter House (1958), as well as important institutional and commercial projects such as Temple Isaiah (1949), the Oasis Office Building (1953), Coachella Valley Savings and Loan (1955 and 1961), Santa Fe Federal Savings and Loan (1961), and the Palm Springs Desert Museum (1976). Williams died in Palm Springs in 2005. <sup>49</sup>
<b>Williams, Hugh Roger</b> (1912-1990), AIA	
Born:	Dayton, OH
Education:	
Firms:	Williams, Williams, & Williams (1946-1957)
	Born in Dayton, Ohio, H. Roger Williams, AIA, was the son of Harry Williams, an architect known for designing the Dayton offices of National Cash Register.
<b>Williams, Harry J.</b> (1880-1957), AIA	
Born:	
Education:	Cornell University, B.Arch (1903)
Firms:	Schenck & Williams; Williams, Williams, and Williams (1946-1957)
	<p>Harry J. Williams, AIA, was born in 1880. He attended Cornell University and formed a partnership with former classmate Harry I. Schenck soon after his graduation in 1903. Schenck &amp; Williams became one of the most prominent architectural practices in Dayton, Ohio. The firm's projects included the Hawthorn Hill home for Orville Wright and his sister and father, the Dayton Young Men's Christian Association Building, the Engineers Club of Dayton building, and the Dayton offices of National Cash Register.</p> <p>During the Great Depression, the firm was left with little work. In 1934, they were hired by Julia Paterson Carnell to design the Carnell Building (196 N. Palm Canyon Drive; HSPB-11) and La Plaza and the Plaza Theatre (1936; HSPB-22) in Palm Springs, California. In 1943, Harry Williams moved his family to the Palm Springs area, and established an architecture office in La Plaza. After World War II he was joined in practice by his sons E. Stewart and Roger, both of whom had, like their</p>

<sup>49</sup> Elaine Woo, "E. Stewart Williams, 95; Defined Sleek, Warm Style of Desert Architecture," *Los Angeles Times*, October 13, 2005, <http://articles.latimes.com/2005/oct/13/local/me-williams13>

	father, studied architecture at Cornell. The firm of Williams, Williams and Williams designed a number of prominent Modern buildings in the city, including the first iteration of the Palm Springs Aerial Tramway (with Clark & Frey, 1949), the master plan (1955) and several buildings at Palm Springs High School, and Palm Springs City Hall (with Clark, Frey and Chambers, 1955). After Harry's death in 1957, the brothers continued in practice as Williams and Williams.
<b>Williams, Paul R. (1894-1989), FAIA</b>	
Born:	Los Angeles, CA
Education:	Los Angeles School of Art and Design; Beaux-Arts Institute of Design; USC (1916-1919)
Firms:	Reginald Johnson (1914-1917); Arthur Kelly (1917-1921); John C. Austin (1921-1924); Paul R. Williams, Architect & Consultant (1925-1974)
	<p>Paul Revere Williams, FAIA, had a long and prolific career, from about 1915 until his retirement in 1974. A Los Angeles native, he studied at the Los Angeles School of Art and Design, the Los Angeles branch of the New York Beaux Arts Institute of Design, and the University of Southern California. While pursuing his education he worked successively for local architects Reginald Johnson and Arthur Kelly. In 1921 Williams obtained his license, becoming the first African-American licensed architect west of the Mississippi. He worked as Chief Draftsman for John C. Austin from 1921 until 1924. In the early 1920s he won three consecutive competitions for the design of small homes, which became the foundation for his own practice, started in 1922 while still working for Austin. Williams' first substantial commission was the 1931 E.L. Cord mansion in Beverly Hills, which led to many other large-scale residential commissions in the early 1930s. His work was particularly popular with the Hollywood celebrities and wealthy socialites who at that time were relocating to the western suburbs of Bel-Air, Beverly Hills, and Brentwood. Williams' client list included such luminaries as Jay Paley, Otto Preminger, Lon Chaney, and Bill "Bojangles" Robinson. In later years as the scope and geography of his work began to expand, Williams designed residences for Lucille Ball, Frank Sinatra, Walter Winchell, and Zsa Gabor. Williams became well-known for his modern interpretations of the period revival styles that were popular at the time, and for a perfectionism and attention to detail that did not waiver regardless of the size of the commission. In the 1940s he published two books on "the Small House" and developed more modest residential designs that incorporated Modern elements such as open floor plans, large expanses of glass, and integrated patio and garden spaces.</p> <p>Williams also won numerous commissions for prominent commercial and institutional work, including the 28<sup>th</sup> Street YMCA (1926), Angelus Funeral Home (1934), the Saks Fifth Avenue building in Beverly Hills (1939), the Arrowhead Springs Hotel (1940), the Golden State Mutual Life Insurance Building (1949) and the Pearl Harbor Memorial in Honolulu (1953). He worked as an architect for the United States Navy during World War II and served on multiple municipal and state commissions. Williams co-designed the first federally-funded public housing project of the postwar era, Langston Terrace in Washington, D. C., with fellow African-American architect Hilyard Robinson. In 1957, Williams became the first African-American member of</p>

	the American Institute of Architects' College of Fellows. He retired in 1974, and died in 1980 at the age of 85.
<b>Wilson, Adrian J. (1898-1988), FAIA</b>	
Born:	Excelsior Springs, MO
Education:	Washington University in St. Louis, School of Architecture, (1917-1919)
Firms:	J.O. Bradley (1919-1920); L.H. Wilson Co. (1920-1921); Deluxe Building Company (1921-1923); Myron Hunt (1923-1924); William Richards (1924-1932); Webster and Wilson, Architects (1932-1941); Adrian Wilson and Associates (1942-1973)
	Adrian Wilson, FAIA was born in Excelsior Springs, Missouri, in 1898. In his four-decade career, Wilson was the architect of record for Schoenberg Center at USC, the Los Angeles County Courthouse, and the 1942 Pueblo del Rio Public Housing project in Vernon. With Paul R. Williams and other colleagues, Wilson was involved with the Los Angeles Criminal Courts and the Hall of Administration buildings, as well as the Anaheim, Las Vegas and Honolulu convention centers. <sup>50</sup> He died in 1988 at the age of 90.
<b>Wilson, G. Stanley (1879-1958), AIA</b>	
Born:	Bournemouth, England
Education:	International Correspondence School (1923)
Firms:	Benton and Wilson, Architects; Wilson and Bever, Architects; G. Stanley Wilson, Architect (1909-1958)
	G. Stanley Wilson, AIA, was born in Bournemouth, England, in 1879. He moved to Riverside with his family in 1895, and began his career as a carpenter six years later. In 1909, Wilson opened his own office, and worked on the Mission Inn under architect Myron Hunt. He obtained his architect's license in 1923 from the International Correspondence School, and began to practice as an architect. Notable projects include the Park Avenue Baptist Church, Simmons Mortuary, the Aurea Vista Hotel, Palm Elementary School, the J.R. Willis Building, the Riverside City College Quadrangle, Grant Elementary School, St. Francis de Sales Catholic Church Convent and School, and All Saints Episcopal Church. <sup>51</sup>
<b>Wong, Joseph B. (1921-2011), AIA</b>	
Born:	Clifton, AZ
Education:	University of California, Berkeley, B. Arch
Firms:	Wong and Hall; Wong Associates
	Phoenix-based Joseph B. Wong, AIA received his B.Arch from the University of California, Berkeley. Wong practiced briefly in California, then moved to Scottsdale, Arizona where he partnered with William Hall. When Hall returned to California to practice in 1954, Wong established his own firm. Ultimately, Wong was licensed in California, Arizona and Nevada, and produced over 550 residential, commercial and

	institutional buildings working in a range of styles from Mid-Century Modern to Spanish Colonial Revival to Vernacular Western ranch. Notable works include the Carefree Inn (1963) and the Carefree Sundial (1959) in Carefree, Arizona.
<b>Woolf, John Elgin (1908-1980)</b>	
Born:	Atlanta, GA
Education:	Georgia Institute of Technology (1929)
Firms:	
	Architect John Elgin "Jack" Woolf began his professional career in Los Angeles at the end of the 1930s, developing a successful practice with his distinctive interpretation of the Regency Revival style (sometimes called "Hollywood Regency"). In his residential designs Woolf emphasized the entrance, the mansard roof, symmetry and privacy. He developed an affluent clientele, designing Beverly Hills mansions for the Hollywood elite including Mae West and Ira Gershwin. Woolf also designed several small office buildings in West Hollywood, including his own studio and office at 8450 Melrose Place (1946-1947).
<b>Wright, Frank Lloyd, Jr. (1890-1978)</b>	
Born:	Oak Park, IL
Education:	University of Wisconsin, Madison
Firms:	Olmsted Brothers; William J. Dodd; Irving Gill; Frank Lloyd Wright
	<p>Frank Lloyd Wright, Jr., commonly known as Lloyd Wright, was an American architect and landscape architect, active primarily in Los Angeles and Southern California. He briefly attended the University of Wisconsin in Madison, before leaving for a job at the Boston-based landscape architecture firm of the Olmsted Brothers. Specializing in botany and horticulture, he continued to pursue the interrelation of landscape and buildings through his life. He settled in Southern California in approximately 1911, when the Olmsteds sent him to assist with the landscape design of the 1915 Panama-California Exposition in San Diego.</p> <p>Wright then worked with architects William J. Dodd and Irving Gill. Beginning in 1919 Wright Sr. delegated some of the responsibilities of designing and supervising construction of the Hollyhock House to Wright Jr. and Rudolf Schindler. The following year, Wright began his independent career. In 1922, he was a production designer at Paramount Studios. He also designed and built a number of houses in the Hollywood and Los Feliz districts of Los Angeles in the mid- to late 1920s. Notable works include the Taggart House, the John Sowden House, the Lloyd Wright Residence, the second and third band shells at the Hollywood Bowl, and the Wayfarers Chapel. Lloyd Wright died in 1978 in Santa Monica, California.</p>
<b>Wright, Millard R. (1901-1984)</b>	
Born:	Colorado
Education:	
Firms:	
	Millard Wright was a Palm Springs-based landscape designer. Throughout the 1930s he did gardening work for some of the largest estates in Palm Springs. One of the common features of Wright's designs was the use of citrus trees and date palms.

<b>Wurdeman, Walter C. (1903-1949), AIA</b>	
Born:	Milwaukee, Wisconsin
Education:	University of Washington, B.Arch (1926)
Firms:	Bebb & Gould (1926-1927); Coolidge & Carlson (1927-1928); Parker, Thomas & Rice (1928-1929); Charles Plummer (1929-1930); Plummer, Wurdeman & Becket, (1933-1938); Wurdeman & Becket (1930-1933; 1938-1949)
	Walter Wurdeman, AIA was born in Milwaukee, Wisconsin in 1903. He studied architecture at the University of Washington and graduated in 1926, after which he apprenticed with the Seattle firm Bebb & Gould and collaborated on the design of the Seattle Art Museum. He then worked for the Boston-based firms Coolidge & Carlson and Parker, Thomas & Rice before moving to Los Angeles to work for Charles Plummer. In 1930 Wurdeman formed a Seattle-based partnership with his former University of Washington classmate Welton Becket. The firm moved to Los Angeles in 1933 and architect Charles Plummer joined the firm as a partner. The Moderne Pan-Pacific Auditorium brought them local fame. Subsequent commissions included residences for James Cagney, Robert Montgomery, and other celebrities. After Plummer died in 1938, Wurdeman and Becket continued their partnership. The firm was responsible for several Bullock's stores and corporate headquarters. After Wurdeman's death in 1949 Becket carried on the practice alone.
<b>Zook, Harold B. (b. 1920), AIA</b>	
Born:	Chicago, IL
Education:	Cornell University, B.Arch. (1941)
Firms:	Clark & Frey, Palm Springs (1946-1947); Bissner & Zook (1947-1948); Harold B. Zook (1948)
	Harold B. Zook, AIA was born in Chicago in 1920, the son of noted Chicago-area architect R. Harold Zook. The younger Zook studied architecture at Cornell University, graduating in 1941, after which he began working at his father's firm. In 1946 he moved to Palm Springs, where he worked for Clark & Frey. In 1947, Zook moved to Pasadena, where he briefly partnered with Harold J. Bissner before starting his own firm in 1948. He worked in Pasadena until 1962, when he moved his office to Corona Del Mar.

## Appendix B: Overview of Tract Development

Following is an overview of select residential subdivisions that were recorded in Palm Springs from the 1920s through the 1960s; this was developed for reference by the project team and is outside of the required scope of services for the project. This information was compiled to provide background information on the residential development of Palm Springs in order to understand the evolution of neighborhoods in the city and evaluate potential historic districts. It is not intended to be an exhaustive history of each tract, which is more detailed information than is typically required in a citywide historic context statement. For some tracts little information exists, but any detail about a tract that was uncovered as part of this study is included to aid future researchers. The subdivisions are listed chronologically by the date they were initially recorded.

<b>NAME</b>	Vista Acres	Map # 1
<b>DATE</b>	1923	
<b>DEVELOPER</b>	Prescott T. Stevens	
<b>BOUNDARY</b>	Tachevah Drive to the north, Tamarisk Road to the south, N. Indian Canyon to the west, and N. Via Miraleste to the east.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	The transition from resort to residential development began in earnest in 1923. In January of that year, Prescott T. Stevens developed Vista Acres, a twenty-seven parcel subdivision west of Palm Canyon Drive along W. Chino Drive. This was quickly followed in March by the subdivision of Las Hacienditas, immediately to the south of El Mirador, developed by Dr. J.J. Kocher.

<b>DEVELOPER</b>	Pearl McCallum McManus	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>Nowhere in the village is Pearl McCallum McManus' influence more readily felt than in her Tahquitz Park tracts.<sup>1</sup> Between 1910 and 1923, McManus developed her father's ranch into a community of restaurants, shops, hotels, small inns, clubs, churches, condominiums and private residences. She sold lots only after careful examination had been made of both the buyer and their intended plans, and even after the sale, maintained a controlling hand, having first exacted a promise that any structure built</p> <p>In March of 1923, McManus subdivided Tahquitz Park Tract #2. McManus built herself a Mediterranean villa-inspired home, "The Pink House" at 281 S. Tahquitz Drive (demolished) that was a noted local landmark.<sup>2</sup> However, building was generally slow in both developments. To boost sales at the tract, McManus and her husband built a speculative house known as "The Tahquitz Park Demonstration House" (a.k.a., Tahquitz House) (1937-38, Charles O. Matcham) on Valmonte del Norte. Interiors were furnished by Barker Brothers "in the soft subtle shades of desert color."<sup>3</sup> The Minimal Traditional-style house was featured in the November 1938 issue of <i>Arts + Architecture</i> magazine along with ads by the McManus Realty Co. for its sale.</p>

<b>NAME</b>	Palm Canyon Mesa	Map # 4
<b>DATE</b>	1924	
<b>DEVELOPER</b>	Edmond T. Fulford	
<b>BOUNDARY</b>	Bordered on the east by S. Palm Canyon Drive and includes Ridge Road to the north, Crestview Drive to the west, and Camino Descanso to the south.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>Palm Canyon Mesa (a.k.a. Tahquitz Desert Estates)<sup>4</sup> is a development nestled in the foothills of the southern end of the city. The subdivision was the vision of Edmond T. Fulford (1890-1936), the founder of the successful Builders Supply Company in Palm Springs. Fulford and his wife Marion took up residency in the desert in 1921.</p> <p>Palm Canyon Mesa was planned as a self-contained community accessed through a common main entrance.<sup>5</sup> The development was created in two phases: phase one included 172 parcels in 1924, followed by an additional 71 parcels to the south in 1927. Development in Palm Canyon Mesa was not instantaneous; Sanborn maps from 1929 show that just ten homes had been constructed in the development by that time; however, development continued in the 1930s and 1940s.<sup>6</sup> A gate for the community still stands at the corner of South Palm Canyon Drive and El Portal.</p>	

<sup>4</sup> The *Palm Springs Limelight* of December 26, 1936, the *San Bernardino County Sun* of April 7, 1936, and the *Los Angeles Times* of April 7, 1936 refer to the Edmond T Fulford and Edmund Goulding estate on Ridge Road as being in “the former Tahquitz Desert Estates.”

<sup>5</sup> Howard Johns, *Palm Springs Confidential* (Fort Lee, NJ: Barricade Books, 2004), 233.

<sup>6</sup> In 1934, two hillside streets adjacent to Palm Canyon Mesa No. 2 Tract were developed as “Palm Canyon Estates” by Los Angeles real estate man, Herbert W. Stanton and his son Forrest O. Stanton, a building contractor. Forest O. Stanton built a house for himself and his wife at 2097 Camino Barranca.

<b>NAME</b>	Merito Vista	Map # 6
<b>DATE</b>	1925	
<b>DEVELOPER</b>	Prescott T. Stevens	
<b>BOUNDARY</b>	N Via Monte Vista to the north, parcels to the north of N Palm Canyon Drive to the south, east side of W Crescent Drive to the west, and generally the west side of W Via Lola to the east.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>Prescott T. Stevens (1846-1932) was ultimately Palm Springs' largest pre-World War II residential real estate developer. Stevens, a successful Colorado cattle rancher, relocated with his wife Frances to California in 1912 to seek refuge from her respiratory problems. They first settled in Hollywood, where he invested in Hollywood real estate, then moved to Palm Springs for the better air. By 1920, Stevens had purchased a large amount of land north of downtown Palm Springs. He also bought several thousand acres from the Southern Pacific Railroad to the east and the north of the village to ensure a steady supply of water for his holdings. He bought shares in the original Palm Valley Water Company and then formed the Whitewater Mutual Water Company and the Palm Springs Water Company. With his colleague Alvah Hicks, a carpenter and nascent homebuilder, they subdivided many of Palm Spring's earliest developments: the Merito Vista tract (1925), Las Palmas Estates (1926), and Palm Springs Estates (1927). Recognizing the best way to sell homes was through tourism, Stevens, Hicks and other developers built the legendary El Mirador Hotel in 1927. Before long, Stevens was convincing tourists to trade up to home ownership.</p> <p>Merito Vista was advertised for its "natural beauty," its status as a playground for the wealthy, and its subdivision into "small estate parcels" for those who "...do not necessarily care to erect pretentious homes here."<sup>11</sup> Indeed the parcel sizes for the 125 lots in Merito Vista are narrow and deep. However, the design of the subdivision deviates from a basic grid pattern to include curving and rounded streets evocative of the suburban residential community plans of Frederick Law Olmsted.<sup>12</sup> Merito Vista was a success as it reportedly "...practically sold out during the first season."<sup>13</sup> Sanborn maps from 1929 reveal that sales may have been brisk, but building was far slower; just twelve parcels in the development had structures associated with them by 1929.<sup>14</sup> Homes in Merito Vista were chiefly Spanish Colonial Revival, or early iterations of the California Ranch style. More than twenty of them were reportedly built by carpenter turned general contractor, Alvah Hicks, who developed a reputation for quality building. Often these houses were built on speculation, then quickly sold.<sup>15</sup> Often, homeowners purchased multiple parcels for their estates, contributing to relatively low-density development. Even as late as 1952, aerial photographs show significant numbers of undeveloped parcels within the tract.</p>	

<sup>11</sup> "Display Ad 109," *Los Angeles Times*, February 7, 1926.

<sup>12</sup> Olmsted was America's pre-eminent landscape designer in the late 19<sup>th</sup> century. He designed the Columbian Exposition of 1893, New York's Central Park and the improvements to the White House grounds of 1902.

<b>NAME</b>	Las Palmas Estates	Map #7
<b>DATE</b>	1926	
<b>DEVELOPER</b>	Prescott T. Stevens	
<b>BOUNDARY</b>	Palm Canyon Drive on the east, Stevens Road on the north, Via Monte Vista on the west, and Via Lola on the south.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>On the heels of his success with Merito Vista, Prescott T. Stevens immediately began subdividing a large parcel of land directly to the north which he called Las Palmas Estates. Las Palmas Estates is bordered by Palm Canyon Drive on the east, Stevens Road on the north, Via Monte Vista on the west, and Via Lola on the south. Under the name Evans-Lee Corporation of Los Angeles the land was purchased for \$150,000 and subdivided into 165 parcels of one-fourth to one-third acre.<sup>17</sup></p> <p>Once again a layout of gently curving streets evoking Olmsted's ideas for gracious neighborhood development was employed. The large lots and groups of native palms made it a sentimental favorite of local developer Raymond Cree (1875-1967).<sup>18</sup> Warm weather, recreational amenities, and good schools were featured selling points in advertisements to Los Angeles residents. The tract also boasted "underground utilities and [an] abundance of meterless irrigation water."<sup>19</sup> With ads pronouncing "A Home in Palm Springs is Well within Your Means," Stevens marketed the accessibility of these homes.<sup>20</sup> Hollywood celebrities, Los Angeles businessmen and Eastern and Midwestern snowbirds soon were building homes in Las Palmas Estates. As a result, the tract was referred to by Los Angeles society columnist Joan Winchell as "The Belvedere section of Palm Springs."<sup>21</sup></p>	

<sup>16</sup> Evans-Lee was a big Los Angeles Developer; however more research is needed to confirm the relationship with Stevens and Cree.

<sup>17</sup> "Desert Acres Jump to \$1500," *Los Angeles Times*, April 25, 1926, E7.

<sup>18</sup> In the Riverside Community Book, Cree called it "His crowning achievement." Often, the owners, developers, builders, and realtors played multiple roles in multiple developments. For example, someone might be the owner on one tract, the real estate agent on another, or in cases of multiple builders, just build the houses independent of any ownership. In this case, Prescott T. Stevens is listed on the tract map, the *Los Angeles Times* mentions the Evans-Lee Corporation, and Cree is quoted in the Riverside Community Book.

<sup>19</sup> "Fine Homes Rise in Las Palmas," *Palm Springs News*, December 17, 1936, 6.

<sup>20</sup> "Display Ad 41," *Los Angeles Times*, December 19, 1930, B2.

<sup>21</sup> "Joan Winchell," *Los Angeles Times*, January 21, 1958, A1.

Ellis L. Jackson STATE OF CALIFORNIA  
Notary Public in and for the County of Maricopa

<b>NAME</b>	Palm Springs Estates	Map # 8
<b>DATE</b>	1927	
<b>DEVELOPER</b>	Prescott T. Stevens	
<b>BOUNDARY</b>	Tamarisk Road to the north, Via Miraleste to the east, Indian Avenue (present-day Indian Canyon Drive) on the west, and the lots just south of Via Colusa on the south.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>In 1927, Prescott T. Stevens subdivided a large parcel of land – this time east of Indian Canyon Drive. The smallest of the Stevens subdivisions to date, the curving streets of Palm Springs Estates held just eighty-three lots. To support tourism and residential sales, Stevens built a golf course near the El Mirador hotel, as well as a landing strip to bring visitors by air to the desert community. The Great Depression was hard on Stevens, however. The golf course closed, the hotel was sold, and he died in 1932. Ultimately, Palm Springs Estates would become part of the larger area associated with residences of Hollywood stars known as “The Movie Colony.”<sup>22</sup></p> <p>By 1939, Palm Springs Estates was well populated with vacation homeowners from Los Angeles, the East, Midwest, and Pacific Northwest. The neighborhood was popular with members of the Los Angeles social circles featured in the <i>Los Angeles Times</i> and frequently included wives of wealthy businessmen.<sup>23</sup> Residences from the prewar period in Palm Springs Estates were dominated by the Spanish Colonial Revival and other period revival styles, with postwar infill development in Mid-century Modern and Minimal Traditional styles. Architecturally significant residences within this subdivision include the William T. Walker Residence (Charles O. Matcham) at 635 Via Valmonte.</p> <p>Subsequent phases were subdivided in 1928 and 1936.</p>	

<sup>22</sup> The “Movie Colony” was not a tract development, rather a neighborhood name that developed to describe the high concentration of Hollywood personages residing in the area around the El Mirador Hotel. According to *Palm Springs Confidential* author Howard Johns (page 133), the area is located “east of Indian Canyon Drive and extends from Tamarisk Road south to Alejo Road and east all the way to Sunrise Way. It includes the area just north of Tachevah Road known as El Mirador and Ruth Hardy Park between Via Miraleste and Avenida Caballeros.” For purposes of this report, tract names are used to discuss development patterns and “Movie Colony” is used when referring to the broader social history of the area.

<b>NAME</b>	Vista Santa Rosa	Map # 9
<b>DATE</b>	1927	
<b>DEVELOPER</b>	Raymond Cree	
<b>BOUNDARY</b>	Ramon Road on the north, S. Indian Canyon on the west, Calle Palo Fierro on the east, Camino Parocela west of Calle Encilia, and the south side of Calle Rock east of Calle Encilia.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>In 1927 Cree subdivided the Vista Santa Rosa tract into 131 parcels measuring 60 x100 feet each.<sup>24</sup> Vista Santa Rosa is bordered by Ramon Road on the north, S. Indian Canyon on the west, Calle Palo Fierro on the east, Camino Parocela west of Calle Encilia, and the south side of Calle Rock east of Calle Encilia.</p> <p>The tract was built on land owned by the pioneering McKinney family who lived there until their house burned in 1925 and they relocated. The McKinney Court, which dated back to around 1916 and which lasted into the 1960s, was located directly to the south of the tract at 634 South Palm Canyon Drive. With the exception of Camino Parocela (Paracelo), the streets in Vista Santa Rosa were each given a “Calle” street name. All street names remain as they appeared on the 1929 Sanborn map with the exception of Calle Abronia Aurita, which has been shortened to Calle Abronia.</p> <p>Cree described the venture: “One day Nellie Coffman dropped by [my] office and wondered why [I] couldn’t develop a subdivision for the town’s working people.”<sup>25</sup> “Well, we did,” recalled Cree, “and before we knew it, we were selling to people with lots of money who built nice homes.”<sup>26</sup> Lots were priced from \$300 to \$500. Cree’s partner in the Vista Santa Rosa tract was John R.E. Chaffey (1901-1976),<sup>27</sup> an investor in Smoke Tree Ranch as well as developer of the 1934 La Rambla tract (phases one through six) at the southeast corner of Tachevah Drive and Avenida Caballeros. Chaffey was also the founding publisher of the <i>Palm Springs Limelight</i>. By February of 1937 lots in the tract were almost entirely sold out and eleven homes were under construction.<sup>28</sup> A review of the 1940 U.S. Census shows the Vista Santa Rosa tract sparsely populated mostly with the middle-class residents of the city. The houses were primarily modest bungalows.</p> <p>At least one of the houses in the Vista Santa Rosa tract was experimental in its construction method. The Lee Humbard Residence (1936, Van Evera Bailey) was built with the Van Guilder System of hollow concrete blocks. The system was deemed desert appropriate by the architect for its economy, fire resistance and insulating properties.<sup>29</sup></p> <p>The most prominent structure in Vista Santa Rosa was the Mira Monte Apartment-Hotel located at 235 East Ramon Road at the southeastern corner of Ramon and Indian Canyon Drive. The Spanish-styled Mira Monte was built in 1928 by Ralph Pomeroy and</p>	

<sup>24</sup> The tract map for this development does not list Cree as an owner, however, various sources indicate Cree was the developer behind this early residential neighborhood.

#### HISTORIC RESOURCES GROUP

is credited as being an early design of Paul R. Williams. Aside from Paul R. Williams' Mira Monte, few structures in the Vista Santa Rosa tract have known architectural designers. While most of the designers are presently unknown, several of the homes in Vista Santa Rosa were built using unusual materials including the 1932 "Cobblestone Cottage" at 514 Calle Ajo and the Yankwich duplex residence at 522-524 Calle Encilia that was built using the Morterless Block Unit process in 1936.

Appointed to the Federal bench in 1935 by President Franklin D. Roosevelt, Judge Leon R. Yankwich was one of Vista Santa Rosa's most notable residents. Another judge, Wilbur F. Downs, a justice of the Long Beach Municipal Court, was also a resident during the same period. Other notable Vista Santa Rosa residents have included pioneering village building contractor Reg C. Jones; famed Palm Springs artist Paul Grimm; pioneer nurseryman Clarence C. "C.C." Neel; actress Virginia Rogers Laurel, former wife of comedian Stan Laurel; golf pro and realtor Mike Flavin; Emma Hathaway, former owner of the Los Arboles Apartment-Hotel; Lou Billington, owner of the Araby Stables and longtime manager of the Desert Inn Garage, Professor Ward B. Kindy of Stanford University; "Orchid King" Albert H. Burki; Dory Hart, owner-trainer of Gold Crown, the "King of the Palominos;" and the city's second treasurer, John Sprague Jr., among others. The Vista Santa Rosa tract was also the setting for both the first location of Neel's Nursery as well as the original location of the Chester "Cactus Slim" Moorten Cactus Museum. Both structures associated with these ventures are still extant in the tract.

<b>NAME</b>	Palos Verdes Tract	Map # 10
<b>DATE</b>	1928	
<b>DEVELOPER</b>	Harriet Dowie Cody and Reta McDowie	
<b>BOUNDARY</b>	South side of E. Mesquite Drive on the north, north side of Morongo Road on the south, east side of S Palm Canyon Drive on the west, up to the 200 block of E. Mesquite Drive and Morongo Road on the east.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>The Palos Verdes Tract was initially subdivided by Harriet Dowie Cody and Reta McDowie with Prescott T. Stevens as mortgage holder. The subdivision was developed in three phases. The first series of 43 parcels between Mesquite Avenue and Palos Verde Avenue were the narrowest at only 60 feet wide. The second and third phases included wider parcels of 75 feet lending themselves to larger homes with more street frontage. Harriet Dowie Cody (1885-1954) was the wife of architect Harold Bryant Cody. Harold Bryant Cody had respiratory ailments, so the couple moved to Palm Springs in 1916 for the favorable climate. In the 1920s, Harriet began to engage in profitable Palm Springs real estate deals and eventually used the money to build an inn, Casa Cody, at 175 South Cahuilla Road (HSPB-59).<sup>30</sup></p>

<b>NAME</b>	Smoke Tree Ranch	Map # 11
<b>DATE</b>	1931	
<b>DEVELOPER</b>	L. Mac Blankenhorn	
<b>BOUNDARY</b>	Anza Trail to the north, San Jacinto Trail to the south, East Road to the east, West Road to the west	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>Smoke Tree Ranch is a 375-acre resort and housing development located at 1800 South Sunrise Way. Smoke Tree Ranch was one of the few subdivisions developed in Palm Springs during the Great Depression. Originally developed as a dude ranch resort,<sup>31</sup> the “guest ranch” was started in 1930 by L. Mac Blankenhorn and named after the characteristic trees that dot the landscape.<sup>32</sup> A syndicate of investors including C.F. Doyle, developer George Alexander, Nicholas Harrison, architect Garrett Van Pelt, Jr. (1879-1972), and Blankenhorn purchased the property for \$500,000 and invested another \$100,000 into improvements.<sup>33</sup> Blankenhorn was a successful Pasadena-based realtor/investor during the 1920s.</p> <p>In 1887, prior to its incarnation as a guest ranch, a group of land promoters selected the site for a city called Palmdale, which was connected to the Southern Pacific Railroad by a narrow gauge railway. Residents were to grow “melons, grapes and citrus in the mineral rich soil” with water provided by a stone-lined irrigation ditch.<sup>34</sup> The Ranch still contains adobe ruins from this early period of development. A dig at the site in 1983 yielded artifacts that dated fruit packing activity to 1895. Drought combined with a shutdown of Native American-controlled water caused the Palmdale dream to collapse shortly before the turn of the 20<sup>th</sup> century. The railway tracks were taken up and the adobe cannibalized and/or abandoned.<sup>35</sup></p> <p>Early advertisements for the guest ranch emphasized an exclusivity that continues to this day: “Designed for those wishing to escape from the turmoil of weekend resorts...introductions or satisfactory references are required.”<sup>36</sup> The ranch featured cottages, stables, and a school for grades two through eight. Three school buildings and a playground were located along the western border of the ranch. Facilities included the Ranch Rodeo Field, stables, and the pool. The ranch house building contained two dining rooms, kitchen, lobby, and storerooms. There were 15 cottages for guests, two buildings for servant’s quarters, and a twenty-car garage. These buildings were designed by Pasadena-based architect Garrett Van Pelt, Jr. (1879-1972).<sup>37</sup></p> <p>In 1936, Fred and Mazie Belle Markham (operating as the Mardo Corporation) bought Smoke Tree Ranch. Whereas Blankenhorn and his syndicate of investors may have been overextended at Smoke Tree Ranch, Markham was able to bring financial stability to the</p>	

<sup>31</sup> Dude ranch development is discussed under the Commercial Development context.

#### HISTORIC RESOURCES GROUP

venture. With the help of local educator and real estate investor, Raymond Cree, Markham subdivided the ranch into parcels for single-family residences.<sup>38</sup> This occurred in three phases: 52 parcels in the northern portion of the ranch in 1936; 30 parcels in spring of 1937; and 24 parcels in summer of 1937.

Under the Markhams, the guest ranch did not advertise or seek publicity. The Smoke Tree way of life (for guest ranch patrons as well as homeowners who are historically known as “Colonists”) was simple without the need to impress as, “most who have come here have been every place, seen everything and done most things.”<sup>39</sup> The gated community also provided hotel-like amenities, including meals in the clubhouse restaurant, a pool, tennis courts, and maid service; “care of property by a capable all-year organization and innumerable services the lack of which makes the ownership of a resort property a burden.”<sup>40</sup> During incorporation discussions for the city of Palm Springs in 1936, Charles F. Doyle, Vice President of Mardo Corporation, protested against the inclusion of Smoke Tree Ranch within the proposed city boundaries. In 1945, the Markhams sold the entire Ranch operation to the Colony as a group. Colonists retained ownership of their homes and home sites.

Of the approximately 400 acres, 300 acres were devoted to the home sites for the Colonists and twenty acres for the guest ranch. The remaining land was leased for the present-day Smoke Tree Village Shopping Center at the corner of East Palm Canyon Drive and La Verne Way, and for the stables at the southern end of the property. Smoke Tree Ranch purposefully maintained a rustic atmosphere. Homes were required to be one story and sit apart on large lots with no large lawns or non-native shade trees.<sup>41</sup> They were to be built in a traditional Ranch style with a pitched shingle roof.<sup>42</sup> Streets were intentionally left as dirt roads groomed by a sprinkler wagon and scraper. There were no street signs, and instead roads were indicated with rock markers. The compound was originally encircled by barbed-wire fencing. Prior to 1946, there were no private pools at Smoke Tree Ranch. Instead, colonists used the communal pool area which became a focal point of social activity.<sup>43</sup> The pool and tennis courts were designed by architect Harold J. Spielman.<sup>44</sup>

In his book *The Frontier of Leisure*, historian Lawrence Culver identifies Smoke Tree Ranch as looking unlike much of Palm Springs architecture of the time and having a seminal influence on Ranch-style architecture in California and across America. “They were clear early examples of the ranch house—the domestic architectural style that would carpet the floor of the San Fernando Valley after World War II,” writes Culver, “and appear in every community in the United States in the 1950s and 1960s.”<sup>45</sup>

### HISTORIC RESOURCES GROUP

	<p>The first house in Smoke Tree Ranch was built by Ted and Isabel Slocum.<sup>46</sup> Residents of Smoke Tree Ranch tended to be wealthy industrialists such as the Weyerhaeuser family (of the Washington-based forestry and paper company), King Gillette (of safety razor fame), and Milo Bekins (Bekins Moving and Storage).<sup>47</sup> Another prominent resident was the Reverend Charles E. Fuller,<sup>48</sup> whose house was constructed in 1940-41 and designed by Rose Connor.<sup>49</sup> The Fuller Residence and studio are of adobe construction, reflecting the resurgence of adobe as a contemporary building material in the 1920s and 1930s as advocated by Southern California architects such as John Byers and Clarence Cullimore, Sr. The thermal properties and western heritage of adobe made it a logical choice for Smoke Tree Ranch.</p> <p>One of Smoke Tree Ranch's most famous residents was Walt Disney. Disney purchased his first Smoke Tree Ranch home in 1948.<sup>50</sup> In 1954, Disney sold the home to raise money for the creation of Disneyland in Anaheim. According to a 1977 interview with Smoke Tree's Vice President Brad Poncher, Disney's "studio set designers were responsible for the design of some of the ranch's guest cottages."<sup>51</sup> The Disney's purchased their second Smoke Tree Ranch home in 1957, two years after Disneyland opened and Disney's movie and television empire was well established.</p> <p>Many Smoke Tree Ranch homes were built by the noted local Modernist architect Albert Frey.<sup>52</sup> Frey's preference for modern architecture is evident in the houses he designed at Smoke Tree, where his eye for proportion and simplicity created elegant modern ranch houses. Frey's design for the Lyons Residence (1948, Clark and Frey) was, in fact, deemed "too modern" and the architect was banned from building there for almost three years.<sup>53</sup> Between 1941 and 1983, Albert Frey designed houses and additions for 30 Smoke Tree Ranch residences. Examples include the Markham Residence (1941; 1950), the Overly Residence (1941, 1947, 1948, 1983), Gilmore Residence (1944, 1947, 1956, 1966, 1977), Turner Residence (1948, 1956, 1986), and the Armstrong Residence (1964). Frey also designed additions to the Administration and Dining Room Building (1967) and was responsible for further work on the Smoke Tree Ranch Office in 1983.</p> <p>Other architects known to have worked in the Smoke Tree Ranch development include William Cody, Harold B. Zook, Allen G. Siple, E. Stewart Williams, and Wallace Neff. Siple designed the Paul Trousdale Residence c. 1950, which was featured in <i>House Beautiful</i> magazine.<sup>54</sup> Neff designed the Smoke Tree Ranch home for Mr. and Mrs.</p>

# SMOKE TREE RANCH

Being  
A Subdivision of the South One  
Half of Lot 10 as shown on a map of the Palm  
Valley Colony Lands on file in the office of the County  
Recorder of San Diego County, Calif., in Book 14 of Maps at Page 632.

DAVIDSON & FULMOR, Engineers.  
RIVERSIDE, CALIFORNIA.  
SCALE 1"=100'. JANUARY 1931.

We hereby certify that we are the owners of or interested in the land included within the subdivision shown on the attached map consisting of one (1) block, that we are the only persons whose consent is necessary to pass a clear title to said land, and we hereby consent to the making of said map and subdivision as shown within the colored border line and we hereby dedicate to private use lots A-B-C-D.

Cyrus Helling

RESOLVED: That the within map be and hereby is adopted as the official map of Smoke Tree Ranch; that the County Clerk is hereby authorized and directed to file said map by signing his name thereto as County Clerk and in behalf of the County of Riverside and to enter the official seal of said County thereon.

I hereby certify that the foregoing resolution was adopted by the Board of Supervisors of the County of Riverside this 16th day of November, 1931.

I hereby certify that there are no taxes or unpaid taxes against any portion of the land included within the subdivision shown on the attached map, except those taxes which are not yet payable, dated this 16th day of Nov. 1931. Estimated taxes for 1932 are \$1,000.

County Auditor

I hereby certify that a bond has been filed with and accepted by the Board of Supervisors as guarantying the payment of taxes due and not yet payable as required by Chapter 837 of the Laws of 1929. Dated this 16th day of Nov. 1931.

County Auditor

I hereby certify that I am a Licensed Land Surveyor of the State of California and that this map correctly represents a survey made under my supervision in January 1931; that all the monuments shown hereon actually exist and their positions are correctly shown.

Davidson

I hereby certify that this plat is as approved by the Riverside County Planning Commission at its meeting held on the 12th day of Nov. 1931 with the proviso that said approval shall become null and void 30 days from the date of this certificate unless this plat shall have been filed for record in the office of the County Recorder on or before the expiration of said 30 days. Dated this 16th day of Nov. 1931.

<b>NAME</b>	Indian Trail Tract	Map # 12
<b>DATE</b>	1933	
<b>DEVELOPER</b>	Pearl and Austin McManus	
<b>BOUNDARY</b>	This three-street subdivision consists of the east side of Calle Palo Fierro, Indian Trail, and Vista del Oro between Ramon Road and Sunny Dunes Road.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>Indian Trail (a.k.a. Desert Trails Tract in news accounts of 1936)<sup>56</sup> was subdivided by Pearl McManus and husband Austin McManus into 90 parcels. The tract map for the development shows the design of a bridle path on the median along Indian Trail and large frontage lots along the street. Pearl McManus was a lifelong horsewoman who was a member of the Desert Riders, and incorporating a bridle path into the development was consistent with her vision of the Palm Springs lifestyle.</p> <p>The initial marketing by McManus Realty declared that “Sunshine and health await you at Indian Trail tract.” The McManuses endeavored to bring distinction to the tract not only through its palm-lined main thoroughfare but also in the siting of the corner properties, with houses built in a “boomerang” layout, stretching across the lots. The McManuses would follow this same design pattern more than a decade later with their Tahquitz River Estates tract, located to the south. Most development in Indian Trail occurred in the years leading up to World War II with Spanish Colonial architecture predominant. Original lot prices in 1936 ranged from \$550-\$950. Several homes in the tract were designed by major Palm Springs architects of the 1930s, including Lee Miller; Brewster &amp; Benedict; and W.C. Pennell, as well as at least one design by prominent Los Angeles architectural designers Meyer &amp; Holler.</p> <p>In its first decade, the tract became something of a mini movie colony with an impressive list of important Hollywood figures owning or leasing winter homes in Indian Trail. Cartoonist Hal Forrest; novelist and screenwriter Leslie Charteris, creator of the popular <i>The Saint</i> novels; three-time Academy Award-nominated cinematographer Ray Binger; radio star Cal Pearce; producer/director John M. Stahl; <i>Easter Parade</i> director Charles “Chuck” Walters; and 20<sup>th</sup> Century Fox chief Joseph M. Schenck, all lived within a block of each other on Indian Trail. In 1936, McManus had contractor/civil engineer Lee Miller construct what is now referred to as the “Casablanca Adobe” (HSPB-68), a vernacular-style adobe home that was occupied in the 1940s by the <i>Casablanca</i> screenwriter Howard E. Koch.</p> <p>While Hollywood was well represented in the tract, so too were important figures in other fields including landscape artist Bathasar Kundert; Winfield and Grace Song Line, experts on Korean and Asian culture and affairs; and Tracy B. Williams, noted designer of Winton automobile and boat motors; among others. The tract was also home to prominent members of the local community such as the Village Pharmacy’s Harry Brott; optometrist Dexter Blau; O’Donnell golf pro George Howard Jr. and, architect Howard P. Lapham.</p>

<b>NAME</b>	La Rambla	Map # 13
<b>DATE</b>	1934	
<b>DEVELOPER</b>	John R. Chaffey	
<b>BOUNDARY</b>	Tachevah Drive on the North, Tamarisk on the south, Hermosa Drive on the east, and Avenida Caballeros on the west.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>In Palm Springs, the lines between selling agents and owner/developers were often blurred. Local real estate agent John R. Chaffey (who had partnered with Raymond Cree in the development of the Vista Santa Rosa tract) developed La Rambla (1934-36, 1945). It was developed in six small phases totaling more than 70 parcels. Chaffey experimented with different parcel sizes and frontages in the different phases, with larger frontage lots appearing in later phases. Such lots were often more accommodating of the Ranch-style homes popular in the Palm Springs area.</p>

<b>NAME</b>	Desert Sands	Map # 15
<b>DATE</b>	1935	
<b>DEVELOPER</b>	Edmond F. Lindop	
<b>BOUNDARY</b>	Tachevah Drive on the north, Tamarisk Road on the south, Sunrise Way on the east, and Hermosa Drive on the west; there is a large parcel in the northeast corner that is not included in the subdivision.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>One of the most interesting tract developments of the mid-1930s is that of Desert Sands (1935-36). It was developed by real estate broker Edmond F. Lindop (1901-1968), who was also a distributor for General Houses, Inc., a company specializing in prefabricated steel houses. General Houses was a pioneer in the production of prefabricated houses, which were designed by Chicago-based architect Howard T. Fisher. The company received national media attention in 1932, and a prototype steel house was exhibited at the 1933 Chicago World's Fair. Originally from Chicago, Lindop worked in real estate there and may have become aware of the work of Howard T. Fisher in that capacity.</p> <p>Desert Sands is a 104-parcel development subdivided in three phases. Initially, Lindop envisioned the tract as traditionally constructed homes. To ensure high architectural standards, Lindop formed a review board for Desert Sands by which all designs had to be approved. The board consisted of Lindop himself, Hollywood architect William C. Rich,<sup>57</sup> and local designer/builder Van Evera Bailey.</p> <p>In 1935, Lindop erected a Ranch-style tract sales office at the corner of Hermosa Avenue and Tamarisk Road. He commissioned Van Evera Bailey to design and build a Model Home (1935, Van Evera Bailey), and then enlarge it six months later.<sup>58</sup> In late 1935 he constructed a speculative home in the "Bavarian style" and in early 1936 began construction on a "New England Colonial" type home fashioned in plan as a "Maltese cross" where each wing was designed as an entity: den, bunk room, fireplace, and dinette.<sup>59</sup> Around this time, Lindop expanded his firm's services to include architectural design services and general contracting (headed by Myron H. Lewis). These services were also made available to homebuyers not purchasing in the Desert Sands tract.<sup>60</sup></p> <p>By Spring of 1936, lots in the first unit were nearly sold out. In October of 1936, Lindop was appointed the California Distributor for General Houses, Inc. and in November of 1936, Lindop erected a General Houses steel house in the subdivision at 1320 Tamarisk Road (1936, General Houses, Inc.). Advertised as "The House That Science Built" the public was invited to observe the unique building process. The house had a steel framework with panels of compressed asbestos composition on the exterior, sheet aluminum insulation and plywood panel on the interior wall.<sup>61</sup> Sales rhetoric advised buyers that due to this construction technique, space equivalent to an extra room was</p>	

<sup>57</sup> This name may have been altered by OCR scanning of original materials. This may be the Pasadena-based architect William Richards (1871-1945).

	<p>retained vs. standard construction methods. Notably, the house was also an all-electric home and “the first house of [General Houses, Inc.] to be erected in California.”<sup>62</sup></p> <p>In attempt to appeal to a wider market, by January 1937, Lindop was featuring another architecturally unique home in the tract known as the “Pink Oasis” on Verbena Drive with its distinctive octagon-shaped living room for Fred C. Baker.<sup>63</sup> By April of that same year, Lindop was featuring a “modern-ranch style all-gas home” located on San Jacinto Way between Hermosa Drive and Paseo De Anza.<sup>64</sup> Lindop’s construction of model homes supported by an extensive local advertising campaign served him well. Lots sold quickly.</p>

<b>NAME</b>	El Mirador Estates	Map # 16
<b>DATE</b>	1935	
<b>DEVELOPER</b>	Sallie Stevens Nichols and Culver Nichols	
<b>BOUNDARY</b>	Mel Avenue to the north, Tachevah Drive to the south, N Via Miraleste to the west	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>Following the Depression-era demise of the golf course at El Mirador, El Mirador Estates (1935-36) was subdivided by Prescott Stevens' daughter Sallie Stevens Nichols and her realtor husband Culver Nichols, along with local developer Ernest Off.<sup>65</sup> These large parcels continued the elite residential development agenda for the area around the El Mirador Hotel. Given its prime location and large parcels, the tract quickly became home to prominent villagers who built architecturally significant homes. These include the James V. Guthrie Residence (1935, Clark &amp; Frey; altered) at 666 Mel Avenue; Frey House #1 (1940, Clark &amp; Frey; demolished); the Halberg Residence (1936, Clark &amp; Frey) at 723 E. Vereda del Sur; the Williams Residence (1956, E. Stewart Williams; demolished) at 1250 Paseo El Mirador; and the Sieroty Residence (1941, Clark &amp; Frey) at 695 E. Vereda del Sur.</p>	

<sup>65</sup> The golf course was developed by Prescott T. Stevens. The Great Depression was hard on Stevens, however. The golf course closed, the hotel was sold, and he died in 1932.

<b>NAME</b>	Racquet Club Colony	Map # 18
<b>DATE</b>	1935	
<b>DEVELOPER</b>	Walter N. Marks	
<b>BOUNDARY</b>	40 acres immediately north of the Racquet Club	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>A small but notable subdivision, the Racquet Club Colony was developed beginning in 1935 on a forty acre tract of land located directly to the north of the Racquet Club. The developer of the tract was Walter N. Marks of Beverly Hills. Marks was heavily involved in Southern California real estate development for decades and was, along with his wife Doris, actively involved with the desert community and a major figure in the creation of the Palm Springs Desert (Art) Museum, among other civic and charitable endeavors.</p> <p>Marks was also an avid tennis player and one of the original founding members of the Racquet Club. He was the third person to sign up for club membership just behind actors Paul Lukas and Charles Butterworth. Shortly after the club's opening, Marks purchased the property to the north and laid out streets in a grid. The main thoroughfare was Santa Catalina Road and Marks had an ornamental gateway constructed at the tract entrance just off Indian Canyon Drive.</p> <p>Marks took an active hand in the tract's development, and the first eight houses were built under his supervision. The first three were for his friends and fellow Racquet Club members, Paul Lukas, Charles Butterworth, and I. Rubin. The three houses were built together along what was originally known as La Puesta Del Sol (presently Puerta del Sol) and were each designed by Los Angeles architect John P. Pedersen and built by Harvey Maclean. For his own home on Santa Catalina Road, Marks engaged a major architect, Roland E. Coate, who designed a white-roofed Bermuda-style home, fronted by a gracefully curving wall. The home bore stylistic similarities to another Bermuda-style residence the architect designed around the same time for actor Gary Cooper in the Brentwood Highlands in Los Angeles. The tract was advertised as having generous three-quarter acre lots and the Marks-built homes were sold complete and completely furnished with interior decoration by Mrs. Thelma Wertheimer, owner of the Colonial House Hotel. The tract's development slowed during the war years, but resumed in the late 1940s. Although there are a few exceptions, most homes built in the tract were constructed by 1952.</p>

<b>NAME</b>	Little Tuscany	Map # 19
<b>DATE</b>	1936	
<b>DEVELOPER</b>	Alvah Hicks	
<b>BOUNDARY</b>	Phase I: Chino Canyon Road, Lombardy Road and Panorama Road, Vista Drive, W. Cielo Drive, Tuscan Road, and Leonard Road west of Via Monte Vista. Phase II: Western most portions of Chino Canyon Road and West Cielo Drive.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>Builder and real estate developer Alvah Hicks (1884-1944) worked extensively with Prescott T. Stevens during the 1920s to develop residential neighborhoods in Palm Springs. However, in summer of 1936, Hicks decided to create a subdivision of his own, "Little Tuscany," in a short rocky wash in the north end of Palm Springs. Hicks gave the area the name Little Tuscany, "because it reminded him of the Tuscan Hills of Italy."<sup>66</sup> In total, it included sixty-two large, irregularly-shaped parcels, the first forty of which were subdivided by Hicks and his wife Teresa (Tess) Hicks in 1936-37.</p> <p>In 1938, Bullock's department store furnished a "Demonstration House"<sup>67</sup> in Little Tuscany (1937-38, Brewster and Benedict) that was featured in <i>California Arts + Architecture</i> and promoted in the <i>Los Angeles Times</i>. The original Ranch-style home, located at 1725 Tuscan Road was a showcase for Hicks, the former carpenter turned homebuilder.</p> <p>The second phase of Little Tuscany, including the western most portions of Chino Canyon Road and West Cielo Drive, were developed in 1948, by Harold Hicks (1909-1997) and Caroline Hicks, the couple's son and daughter-in-law. Harold carried on the prominence of the Hicks name in Palm Springs by being active in insurance and real estate. While some construction in Little Tuscany took place before World War II, the majority of homes were constructed after the war. Common styles include Mid-century Modern and Hollywood Regency.</p>	

<sup>66</sup> "Sand Traps and Sun Lure Outdoor Types to Desert," *Los Angeles Times*, February 26, 1967, J1.

<sup>67</sup> No documentation verifies the location of the Demonstration House, but it may be the property listed as "vacant" in the 1938-39 Palm Springs City Directory at 926 Panorama Road.

Approved by the Riverside County Planning Commission, in accordance with the requirements of law, in duly authorized meeting held this 13th day of June, 1936.

By Asst. Sec. 1 Secretary

The County of Riverside, State of California, by and through its duly authorized officials, hereby approves said final map as the official map of LITTLE TUSCANY, but the streets as shown on said map are not accepted as public streets.

COUNTY OF RIVERSIDE, STATE OF CALIFORNIA.

By J. P. Carson  
Chairman of the Board of Supervisors.

Affest  
O.S. CLAYTON,  
County Clerk and Ex-officio Clerk of the Board of Supervisors.

By J. P. Carson Deputy.

I hereby certify that according to the records of this office, as of this date, there are no liens against the real property shown on the annexed map for unpaid state, county, municipal or local taxes or special assessments collected as taxes, except taxes and special assessments not yet payable which are estimated at \$50.00.

R. T. Hicks Dated this 12th day of June, 1936.  
By Blanche H. Hester R. T. HICKS,  
County Auditor of Riverside County,  
State of California.

I hereby certify that a bond in the sum of \$25.00 has been executed and filed with the Board of Supervisors of the County of Riverside, State of California, conditioned on the payment of all taxes, State, County, Municipal or local and all special assessments collected as taxes, which at the time of the filing of the annexed map with the County Recorder are a lien against said property, but not yet payable, and said bond has been duly approved by said Board of Supervisors.

Dated this 12th day of June, 1936.  
O.S. CLAYTON,  
County Clerk and Ex-officio Clerk of the Board of Supervisors.

By A. J. Livingston Deputy.

MB 22/87

<b>NAME</b>	Palm Highlands Tract	Map # 20
<b>DATE</b>	1936	
<b>DEVELOPER</b>	Robert Ransom	
<b>BOUNDARY</b>	Located in the elbow of the bend at South Palm Canyon Drive, the irregularly-shaped tract is bordered by Tahquitz Avenue to the north, East Palm Canyon Drive and Avenida Moraga to the south, Calle Palo Fierro to the east, and Via Soledad to the west.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>Just to the south of the Palos Verdes tract, the thirty-acre Palm Highlands Tract was subdivided in 1936. The entrance to the neighborhood was planned at Via Entrada and Palm Canyon. Palm Highlands was developed by Robert Ransom (1896-1959), a local realtor who had relocated from Los Angeles to Palm Springs in the early 1930s. Parcels in this 30-acre tract were small for Palm Springs, with most measuring 70 x 100 feet deep. Property for the tract initially went on sale on November 27, 1937. The property was sold “cafeteria style” where the price appeared on staked signs on each lot. Prospective purchasers were to take the sign to the salesman and “make his own deal.”<sup>68</sup> By 1939, Ransom had decided that a model home strategy might be better than sales gimmicks, and constructed the restrained Modern Ranch-styled Palm Highlands Estates Model Home (1939, Milton Black).<sup>69</sup></p> <p>By 1940, the tract was marketed as a “residential and residential-income subdivision” with new selling agents.<sup>70</sup> This push appears to have been only marginally successful in that the Palm Springs City Directory for 1946-47 shows only seventeen residents within the tract (most of whom are local to Palm Springs and not seasonal visitors). However, six homes are listed as “under construction,” many of which were located on Avenida Ortega. A late 1940s real estate ad for the tract indicates the ongoing struggle with the availability of an “entire block in the Palm Highlands Tract zoned for bungalow courts. Room for over thirty units. Worth over \$25,000. Will take \$16,500 for quick sale.”<sup>71</sup> Homes in Palm Highlands tend to be modest period revival or minimal traditional houses.</p>	

<sup>68</sup> “Palm Highlands Sales Start,” *Palm Springs News*, November 25, 1937, 3.

<sup>69</sup> Los Angeles based architect Milton J. Black (1905-1970) is most commonly associated with Streamline Modern style homes and apartments in the Hollywood and Los Feliz neighborhoods of Los Angeles, but he was also concerned with economical housing solutions for people of moderate means. Black is known for having designed the programmatic hot dog for Los Angeles’ Tail O’ the Pup (1946). Black’s residential work was published many times in *California Arts + Architecture* magazine during the 1930s. His work also frequently appeared in *Architectural Digest* in the 1920s.

<sup>70</sup> “Two Beverly Hills Buildings Sold,” *Los Angeles Times*, March 3, 1940, A10.

<sup>71</sup> *Palm Springs Villager*, no date.

<b>NAME</b>	Palm Springs Desert Estates	Map # 21
<b>DATE</b>	1936	
<b>DEVELOPER</b>	Mason Case and Company	
<b>BOUNDARY</b>	Phase I: Cabrillo Road to the north, Cortez Road to the south, Zanjero Road to the east and Anza Road on the west. Not realized – only four residences constructed by 1939.	
<b>ARCHITECT</b>	W.C. Pennell	
<b>DEVELOPMENT HISTORY</b>	<p>In March of 1936, page one of the <i>Palm Springs News</i> announced plans for “the largest single land development ever carried out in Palm Springs.” Palm Springs Desert Estates. The planned one-hundred acre project adjoined the Racquet club on the east. The initial subdivision for this project consisted of the 18-parcel Palm Springs Desert Estates Tract bordered by Cabrillo Road to the north, Cortez Road to the south, Zanjero Road to the east and Anza Road on the west.</p> <p>Developed by Mason Case and Company, the company established an office in the Carnell building and assembled a team of architects, engineers, contractors and sales agents. Mason Case (1880-1948) was associated with numerous land projects including reclamation projects and residential developments in San Francisco and Los Angeles, including developments in Redwood City and South Gate. For this project, Case established a working relationship with architect W. C. Pennell with the intention of constructing “modern bungalows”.<sup>72</sup> H.E. Holton was selected to be contractor.</p> <p>For reasons that are unknown at this time, the vision for Palm Springs Desert Estates was never fully realized and by 1939 only four residences had been constructed: 260 Cortez Road, 280 Cortez Road, 216 Cabrillo Road, and 261 Cabrillo Road.</p>

<b>NAME</b>	Palm Springs Palisades (Part of the Tennis Club Neighborhood)	Map # 24
<b>DATE</b>	1937	
<b>DEVELOPER</b>	Frank Meline Company	
<b>BOUNDARY</b>	Palisades Drive, just north of Tahquitz Park	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	In 1937, the Palm Springs Land & Development Company purchased this hillside subdivision. The subdivision was about a mile in length and was later subdivided into 12 lots by the Frank Meline Company. In the late 1950s and early 1960s, Palisades Drive became the project site of two well-known architects, Albert Frey and Hugh Kaptur. They had completed three houses in the sub-division.

<b>NAME</b>	Warm Sands Park	Map # 27
<b>DATE</b>	1945	
<b>DEVELOPER</b>	None listed	
<b>BOUNDARY</b>	Ramon Road to the north, Sunny Dunes Road to the south, Warm Sands Drive to the east, and Warm Sands Tract on the west.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	Located directly adjacent to the Warm Sands Tract, the Warm Sands Park was subdivided in 1945. The tract consists of single- and multi-family residences located along Warm Sands Drive, Warm Sands Place, Camino Parocela, Parocela Place, the south side of Ramon Road, and the north side of Sunny Dunes Road.	

<b>NAME</b>	Desert Palms Estates	Map # 28
<b>DATE</b>	1946	
<b>DEVELOPER</b>	Paul Belding and Russell Garner	
<b>BOUNDARY</b>	Alejo Road on the north, Amado Road on the south, Sunset Way on the east, and Fountain Drive on the west.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>In addition to entry-level homes for GIs, developers also rapidly began extending the city's offerings of custom home developments in the immediate postwar era. In 1946, two enterprising postwar investors subdivided Desert Palms Estates, a 122-parcel development of custom homes. Paul B. Belding (1912-1968), head of an airplane parts manufacturing company during World War II, and his partner, prominent Los Angeles attorney Russell D. Garner (1904-1993) shaped the tract by taking a page from the book of Prescott T. Stevens. The development, a series of gently curving streets, was entered via Desert Palms Drive. Belding and Garner established sales office in Los Angeles to lure people in the market for second homes.<sup>78</sup> Desert Palms Estates was unusual in that it required that "building plans must be approved by architectural committee."<sup>79</sup></p> <p>Around 1950 Meiselman approached architect William F. Cody to design a series of three-bedroom, two-bathroom houses for a cluster of parcels within the Desert Palms Estates tract. Surviving plans and plot plans indicate what appear to have been two plans and three elevations for each plan for a total of six designs. They appear to be bordered by Park Drive to the north, McManus Drive on the south, Sunset Way to the east, and other tract parcels to the west.<sup>80</sup> Existing archival documentation for this tract is incomplete. Based upon a comparison of Cody plot plans and elevations with extant structures, these houses are located at 2284 E. Desert Palms Drive, 2285 E. Desert Palms Drive, 2296 E. Desert Palms Drive, 369 Sunset Way, 2191 E. Park Drive, 2223 E. Park Drive, 2285 E. Park Drive, and 2295 E. Park Drive. Building permits for East Desert Palms Drive were issued to Cody in 1951 according to the <i>Desert Sun</i>. The large number of plans and elevations suggest that additional parcels beyond the documented eight may have been included.</p>

<b>NAME</b>	Desert Tract	Map # 29
<b>DATE</b>	1946	
<b>DEVELOPER</b>	Desert View Corporation	
<b>BOUNDARY</b>	Ramon Road to the north, Sunny Dunes Road to the south, El Placer Road to the east, and El Cielo Road to the west.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>The largest of the developments from the 1940s were found in what would colloquially become known as “The Veterans’ Tract” – the area located south of the airport and east of Farrell Drive north of Demuth Park.<sup>81</sup> The Veterans Tract area was actually composed of several tracts. Among them the 96-parcel Desert Tract (1946), the 200-parcel Vista Del Cielo Tract (1946), and the 54-parcel Val Vista Tract (1947). Developers involved in these ventures saw potential in the traditionally less desirable real estate on the eastern side of town.<sup>82</sup> These parcels were more exposed to the wind and the elements than the areas sheltered by the mountains. At the Desert Tract, Los Angeles-based Desert View Corporation wasted no time. By March, construction was immediately started on 22 new houses of which 15 were for public sale.<sup>83</sup> Desert View Corporation was headed by W.C. Bannerman, H.H. Hees, David Bixler and Jack Showers. Bannerman was an established developer in the Bixby Knolls area of Long Beach where he developed nearly 500 residential units.</p>	

<sup>81</sup> There is no actual “Veteran’s Tract” as subdivided with Riverside County. The colloquial reference takes its name from the burst of new development in the area among several tracts that were designed to cater to the needs of returning GIs.

<sup>82</sup> This area was near the town dump at Ramon Road and Gene Autry Trail.

<sup>83</sup> “22 Homes Are Started at Tract Near Port,” *Desert Sun*, March 15, 1946, 4.

My Commission Expires 3-25-50

Notary Public in and for the County of Los Angeles, State of California

I hereby certify that I have examined the within map, that the subdivision shown thereon is substantially the same as it appeared on the tentative map or approved alteration thereof, that all provisions of state law and local ordinances have been complied with and I am satisfied that said map is technically correct.

G.F. Brindson  
City Engineer

I hereby certify that according to the records of this office as of this date there are no liens against the property shown on this map for unpaid State, County, or Municipal taxes or special assessments collected as taxes except for taxes and special assessments now owing but not yet payable which are estimated at \$400.00.

Dated this 11th day of April 1946.

R.T. Hicks  
County Auditor, Riverside County, California

I hereby certify that a bond in the sum of \$1400.00 has been executed, filed with and approved by the Board of Supervisors of the County of Riverside, State of California, conditioned upon the payment of all taxes, State, County, Municipal or local and all special assessments collected or taxes, which at the time of filing this map with the County Recorder are a lien against the property shown hereon, but are not yet payable. Dated this 16th day of Sept. 1946.

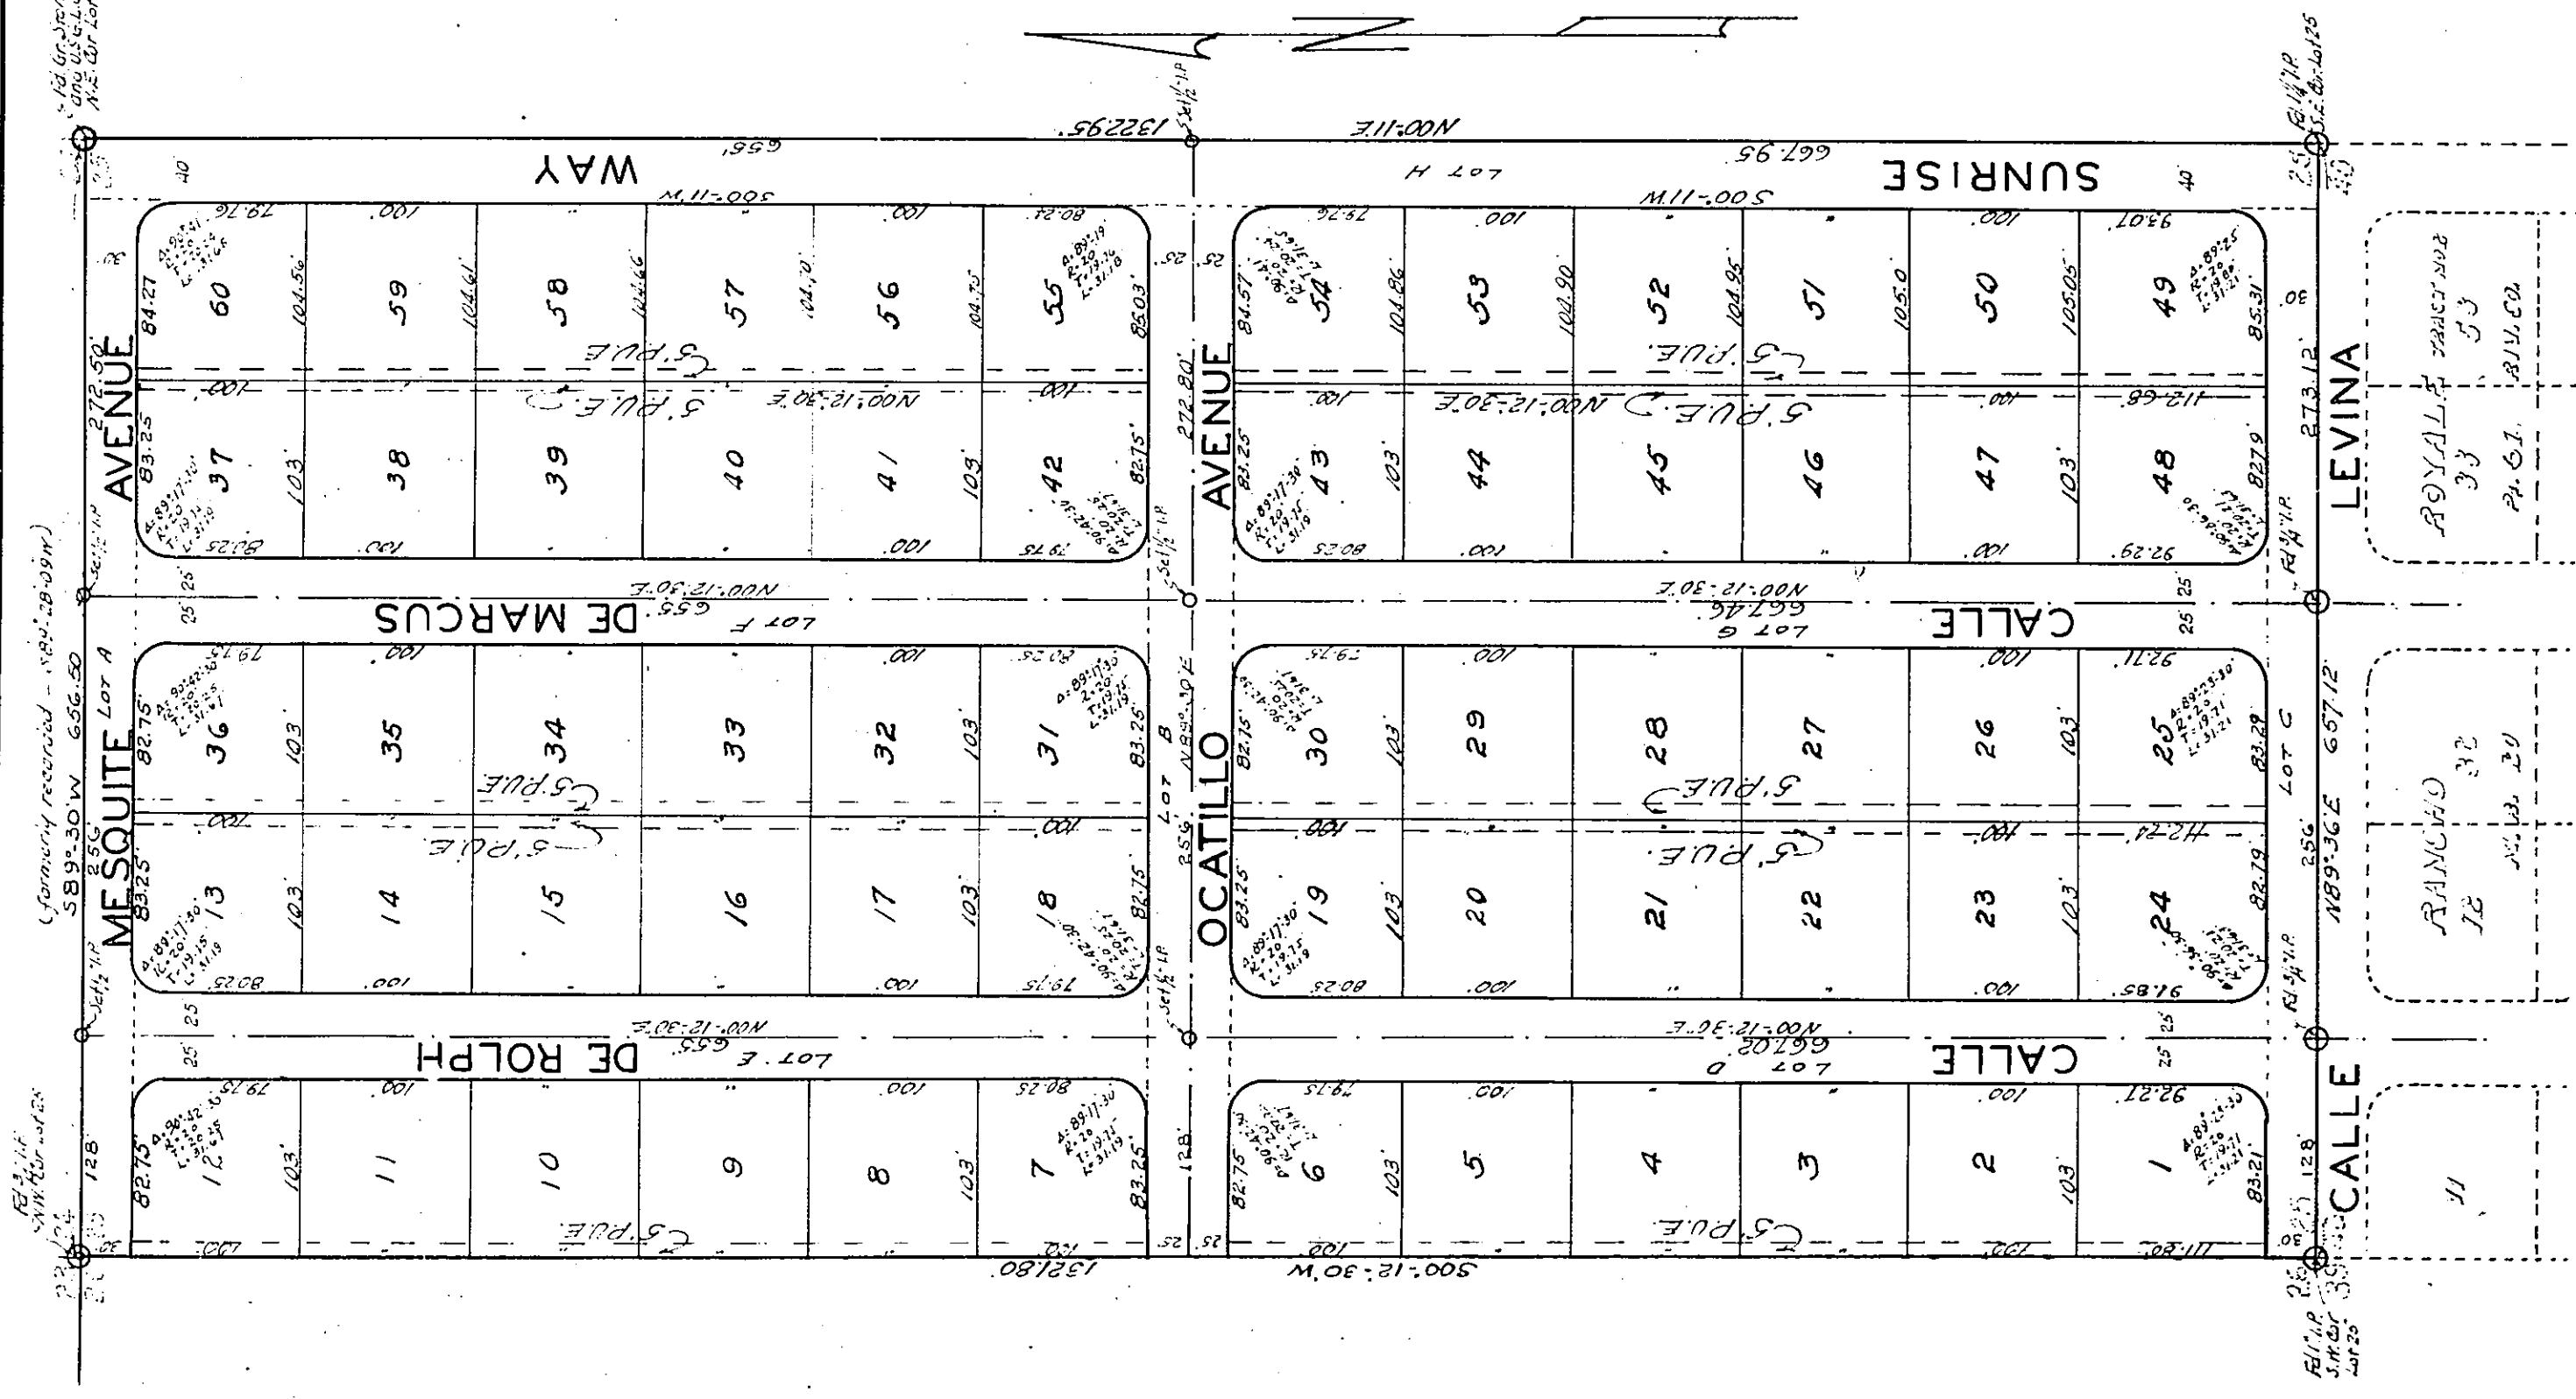

GORDON A. DOWNE  
County Clerk

I hereby certify that I am a Licensed Land Surveyor of the State of California; that this map correctly represents a survey made under my supervision in February 1946; that all monuments shown hereon actually exist and that their positions are correctly shown and are sufficient to enable the survey to be readily retraced.

W. J. Fennell  
LICENSED LAND SURVEYOR No. 2444

This is to certify that the within annexed map was duly approved by the City Planning Commission of the City of Palm Springs, at its regular meeting held on the 3rd day of March 1946.

W. J. Fennell  
Secretary  
Palm Springs City Planning Commission

George J. Montez  
City Engineer R.E. 6720

I hereby certify that I have examined the within map, that the subdivision shown hereon is substantially the same as it appeared on the tentative map or approved alterations thereof, that all requirements of State Law and local ordinance have been complied with, and I am satisfied that said map is technically correct.  
Dated November 10, 1949

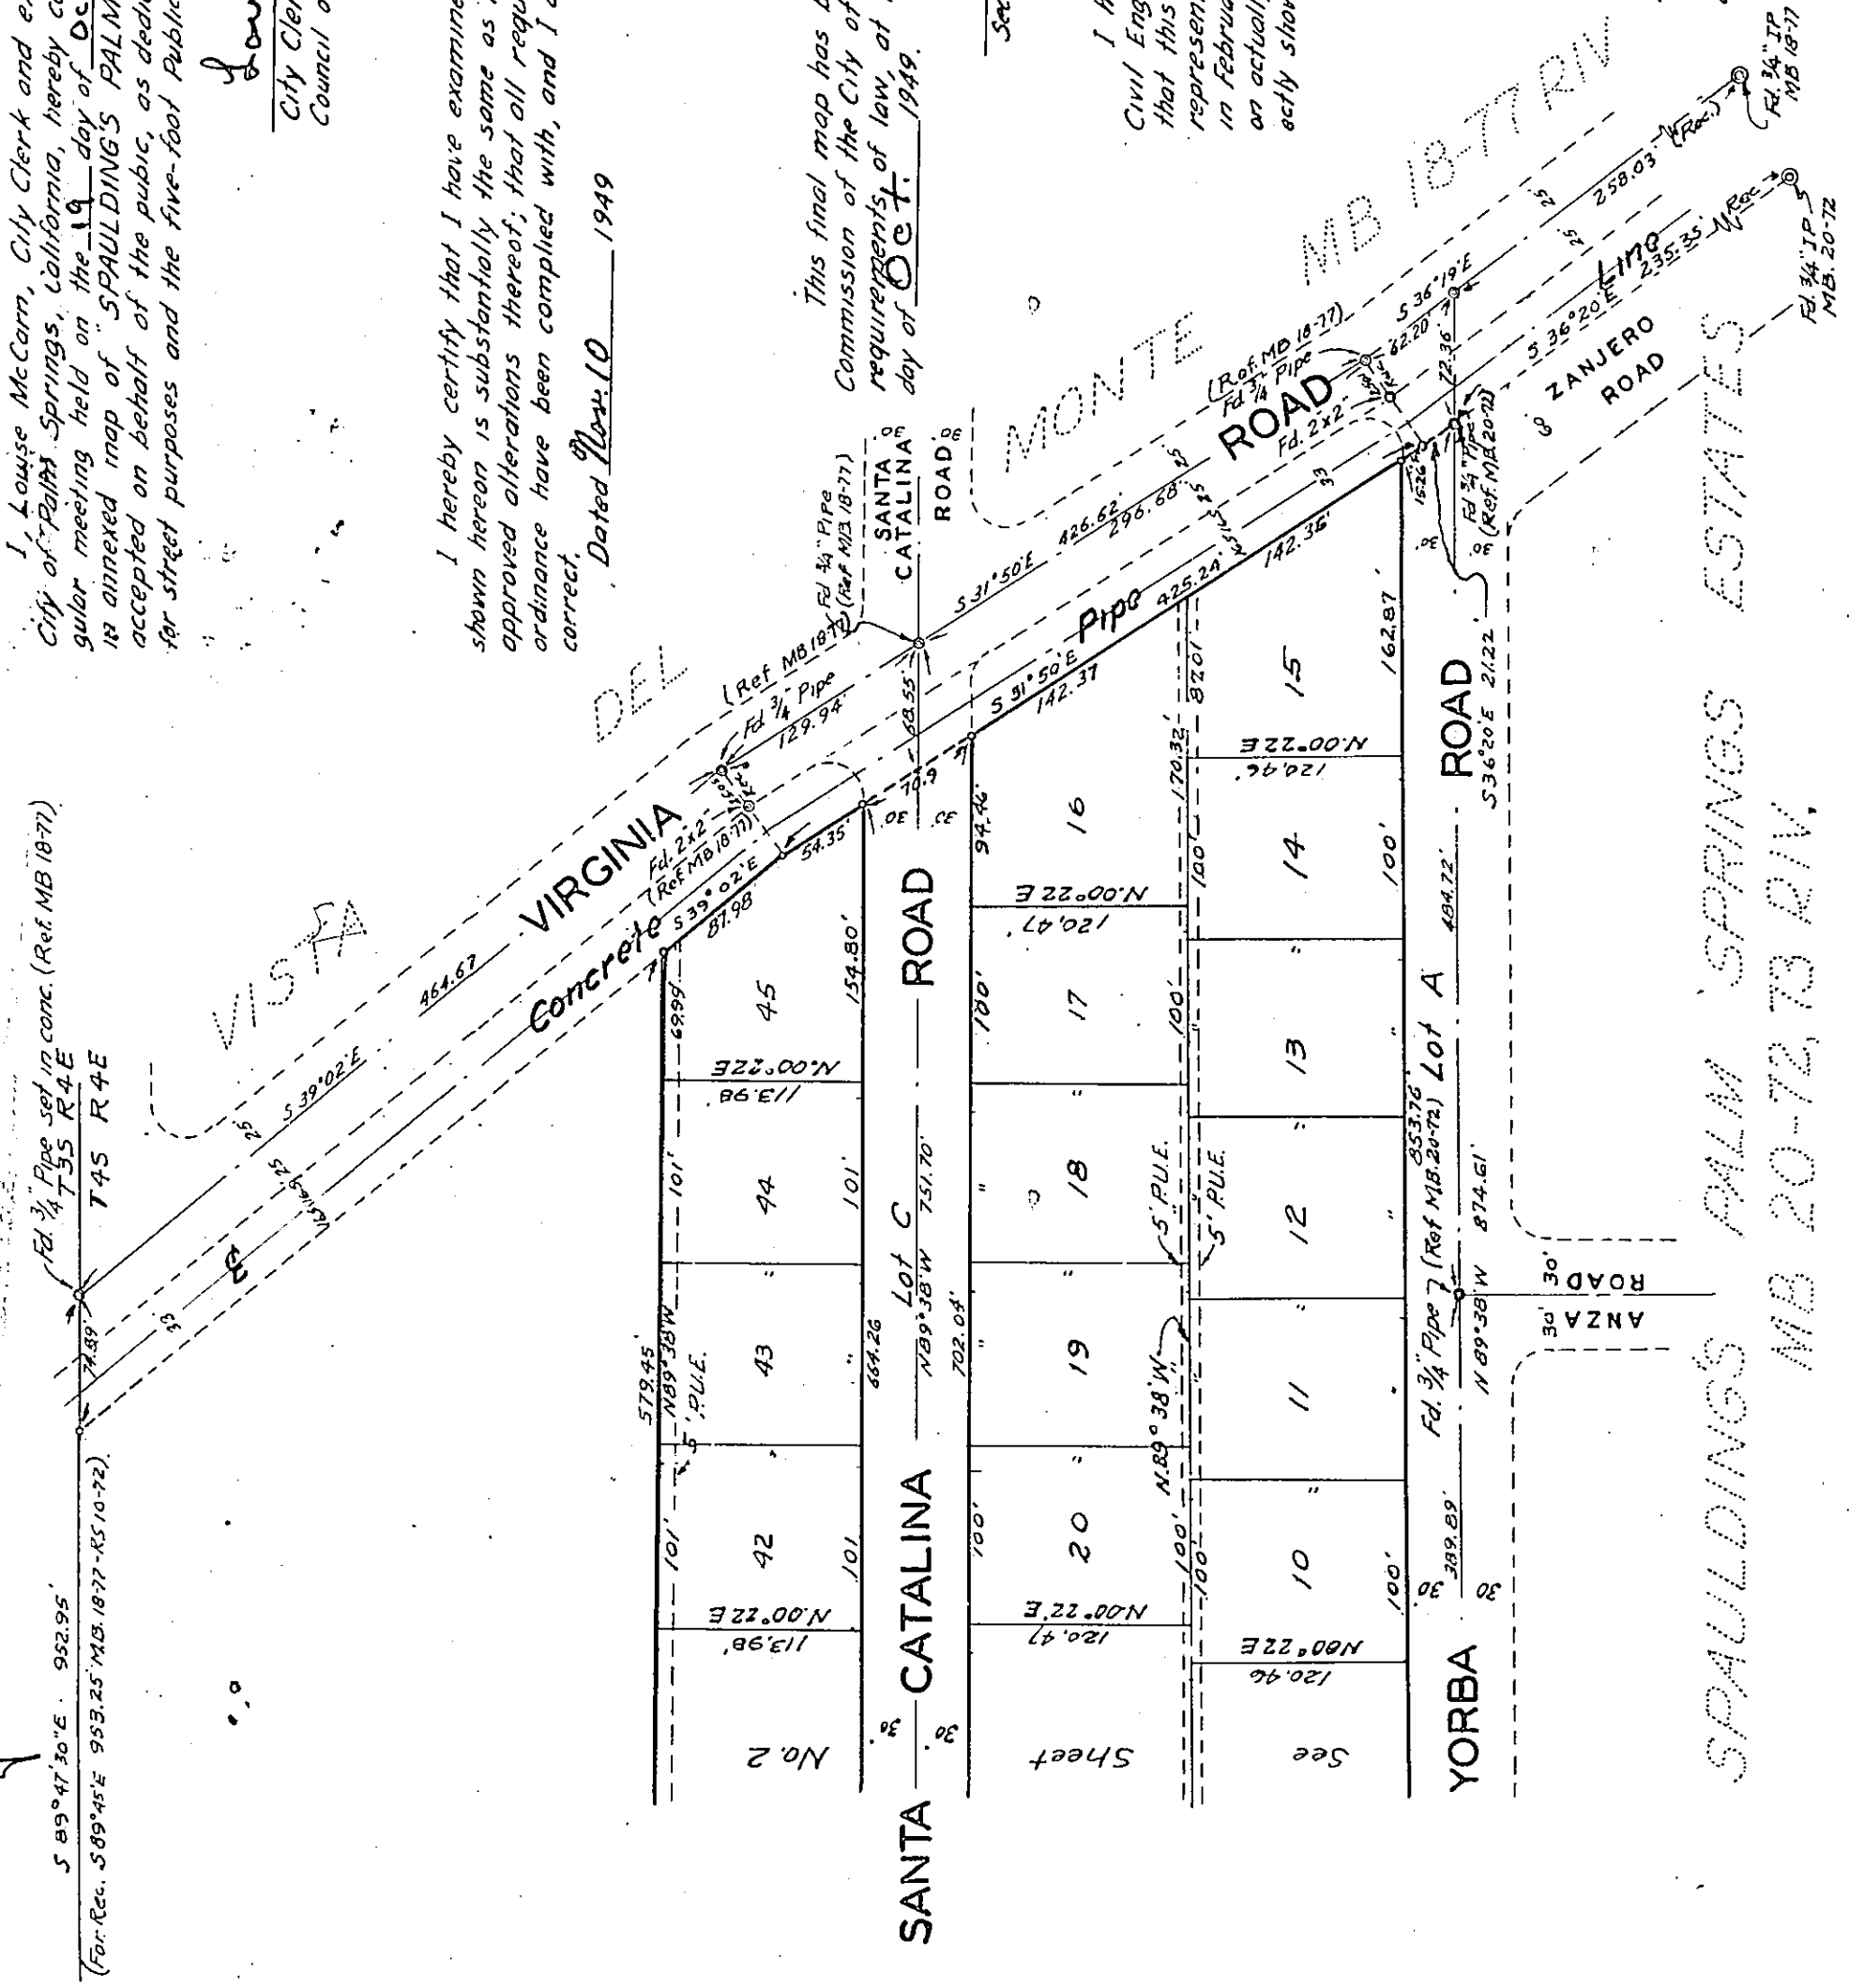

This final map has been approved by the City Planning Commission of the City of Palm Springs, in accordance with requirements of law, at its regular meeting held on the 12 day of Oct., 1949.

Harold O. Bracy  
Secretary, Palm Springs Planning Commission

I hereby certify that I am a Registered Civil Engineer of the State of California, and that this map, consisting of two (2) sheets, correctly represents a survey made under my supervision in February 1949, that all monuments shown hereon actually exist, and that their positions are correctly shown.

J. J. Davidson

<b>NAME</b>	San Jacinto Estates	Map # 33
<b>DATE</b>	1946	
<b>DEVELOPER</b>	Elliot Bank and Harold Licker	
<b>BOUNDARY</b>	Tahquitz Canyon Way (previously McCallum Way) to the north, Baristo Road to the south, Sunset Way to the east, and Sunrise Way to the west.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	San Jacinto Estates (1946) featured curving streets with a prominent entrance. Located southeast of present-day Tahquitz Road (previously McCallum Way) and Sunrise Way, the 77-parcel subdivision was developed by Elliot M. Bank and attorney Harold H. Licker of New Jersey. However, the venture appears to have been less than successful as ads appear in the <i>Los Angeles Times</i> in 1949 for parcels at “liquidation pricing.” <sup>88</sup>

<b>NAME</b>	Vista Del Cielo	Map # 34
<b>DATE</b>	1946	
<b>DEVELOPER</b>	Sunny Dunes Development Corporation	
<b>BOUNDARY</b>	Ramon Road and Sunny Dunes Road to the north, Mesquite Avenue to the south, Calle Santa Cruz and Avenida Evelita to the east, and Placer Road to the west	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>The largest of the developments from the 1940s were found in what would colloquially become known as “The Veterans’ Tract” – the area located south of the airport and east of Farrell Drive north of Demuth Park.<sup>89</sup> The Veterans Tract area was actually composed of several tracts. Among them the 96-parcel Desert Tract (1946), the 200-parcel Vista Del Cielo Tract (1946), and the 54-parcel Val Vista Tract (1947). Developers involved in these ventures saw potential in the traditionally less desirable real estate on the eastern side of town.<sup>90</sup> These parcels were more exposed to the wind and the elements than the areas sheltered by the mountains.</p> <p>At the Vista Del Cielo tract, over 200 modest six-room homes designed to appeal to returning GIs who qualified for loans through the GI Bill were built by R.H. Grant Construction Company. Among the investors in Vista Del Cielo (referred to sometimes as the Sunny Dunes Development Corporation) were Henry Lockwood and John W. Williams. Lockwood was a local lawyer for the Mt. San Jacinto Winter Park Authority promoting the development of the Palm Springs Aerial Tramway project. John W. Williams was a long-time resident/developer who owned the pre-war Mira Monte Apartments (demolished) and also invested in the nearby Val Vista tract.</p>	

<sup>89</sup> There is no actual “Veteran’s Tract” as subdivided with Riverside County. The colloquial reference takes its name from the burst of new development in the area among several tracts that were designed to cater to the needs of returning GIs.

<sup>90</sup> This area was near the town dump at Ramon Road and Gene Autry Trail.

I, Louise McCann, City Clerk and ex-officio Clerk of the City Council of the City of Palm Springs, State of California, hereby certify that the said City Council at its regular meeting held on the 18th day of October, 1946, duly approved the within annexed map of Vista Del Cielo No. 3, and accepted on behalf of the public, as dedicated to public use, Lots 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, inclusive and also offer for dedication to public use for the construction and maintenance of public utilities the 5th Public Utility Easements shown on the map as 5th PUE. In Witness Whereof, I hereunto set my hand and affix the official seal of the City of Palm Springs this 11th day of October 1946.

Louise McCann  
City Clerk and ex-officio Clerk of the City Council of the City of Palm Springs, State of California.

I hereby certify that the annexed map was duly approved by the City Planning Commission of the City of Palm Springs at its regular meeting held on the 18th day of October 1946.

Robert J. Davis  
Secretary, Palm Springs City Planning Commission

I hereby certify that I have examined the within map, that the subdivision thereon is substantially the same as it appeared on the tentative map or approved alteration thereof, that all provisions of the State law and local ordinances have been complied with and I am satisfied that said map is technically correct.

J. J. Davis  
City Engineer

I hereby certify that according to the records of this office as of this date, there are no liens against the property shown on this map for unpaid State, County or Municipal taxes or special assessments collected by the City of Palm Springs, except taxes now due but not yet payable, which are estimated to be \$1,200.00.

R. T. Hicks  
County Auditor, Riverside County  
Dated this 19th day of October 1946

I hereby certify that I am a Licensed Land Surveyor of the State of California; that this map consisting of one (1) sheet correctly represents a survey made under my supervision in June, 1946, that all monuments shown hereon actually exist and their positions are correctly shown and are sufficient to enable the survey to be retraced.

Edna Paulsen  
Licensed Land Surveyor No. 2344

I hereby certify that a band in the sum of \$1,200.00 has been filed with the Board of Supervisors of the County of Riverside, State of California, conditioned upon the payment of all taxes, State, County, Municipal local and all special assessments assessed as taxes, which, at the time of filing this map with the County Recorder, are a lien against the property, but not yet payable, that said band has been duly approved by the Board of Supervisors. Given A. Requena, County Clerk and ex-officio Clerk of the Board of Supervisors. County of Riverside, State of California. Dated this 12th day of October 1946.

A. Requena  
County Clerk and ex-officio Clerk of the Board of Supervisors

STATE OF CALIFORNIA } S.S.  
COUNTY OF RIVERSIDE }  
On this 18th day of October 1946 before me, Barth M. Gable, a Notary Public in and for the County of Riverside, State of California, personally appeared J. E. Kullian and James J. Kullian known to me to be the Vice President and Secretary of the Bank of America, National Trust and Savings Association, a corporation that executed the within instrument and known to me to be the persons who executed the within instrument on behalf of the corporation therein named and acknowledged to me that such corporation executed the same.

Witness my hand and seal the day and year in this certificate first above written.

<b>NAME</b>	Tahquitz River Estates	Map # 35
<b>DATE</b>	1947	
<b>DEVELOPER</b>	Paul Trousdale	
<b>BOUNDARY</b>	Sunny Dunes Road on the north, Calle Palos Fierro on the west, Mesquite Avenue on the south, and Sunrise Way on the east.	
<b>ARCHITECT</b>	Allen G. Siple and Stephen A. Stepanian, architects; Edward Huntsman-Trout, landscape architect	
<b>DEVELOPMENT HISTORY</b>	<p>In response to the need for postwar housing, well-known developer Paul Trousdale teamed up with Pearl McCallum McManus on a Palm Springs development. In a 1948 interview, McManus remembered, “When I built the Oasis Hotel I had dreams of a project like Trousdale’s...Frank [sic] Lloyd Wright had drawn plans...very modern.”<sup>91</sup> As previously discussed, these plans never came to fruition; however, McManus clearly saw in Trousdale a man of similar vision. By this time, Trousdale had already built over 1,700 tract homes in Southern California. At the time, Tahquitz River Estates was the largest and most ambitious standardized tract housing development that had been attempted in Palm Springs; it was also the first large postwar development of tract homes by a major developer.</p> <p>In 1947, Trousdale subdivided the land into 213 one-hundred-foot wide parcels averaging 10,000 square feet each. In 1948, he added another forty-nine parcels to the far western end of the subdivision in a second unit. “Outdoor living” was promoted including patios, and mountain and garden vistas. Another featured amenity was the location adjacent to schools and shopping centers.<sup>92</sup> The fact that they were architect-designed homes also featured prominently in the marketing materials.</p> <p>The first part of the project was to construct the Tahquitz Creek Channel storm drain, which divided the development from east to west. On September 22, 1947 the first earthmovers appeared and the \$100,000 flood channel project began. Pearl and Austin McManus were photographed on the earthmover and the picture appeared on the front page of the next day’s <i>Desert Sun</i>.<sup>93</sup> At some point, the McManuses sold their interests in the project to Trousdale.<sup>94</sup></p> <p>Trousdale engaged architects Allen G. Siple and Stephen A. Stepanian to design eight models with two- and three-bedroom floor plans. Edward Huntsman-Trout, a frequent collaborator with Trousdale, was brought on as landscape architect.<sup>95</sup> Each house was completely landscaped, and owners had the choice of including a pool designed by Huntsman-Trout. According to the <i>Desert Sun</i> and the sales brochure, “the models were designed so that each home would be situated on the lot in such a way that it allowed for complete privacy while enjoying the pool.”<sup>96</sup></p>	

<sup>91</sup> Interview of Pearl McManus To Melba Bennett, April 26, 1948, Clippings Files, Palm Springs Historical Society.

#### HISTORIC RESOURCES GROUP

	<p>Eight different floor plans were created for the two-bedroom, two bathroom models and two floor plans for the three-bedroom, two bathroom homes. Each plan makes the most of its outdoor space by featuring large lanais and/or porches with large expanses of glass to the backyards and the desert vistas beyond. Breezeways were also common features on these plans, "...a fashionable, convenient addition nearly doubles the size appearance of your home." Each model also featured a large fireplace.</p> <p>As described in the sales brochure, eighteen different exterior designs created "a unique and personalized pattern of deliquescent charm."<sup>97</sup> Variety in tract home styles within a subdivision was a reaction to the Levittown model of postwar America that were decried for their relentless cookie-cutter streetscapes. Renderings from the sales brochure for Tahquitz River Estates show the design of the houses to be Contemporary Ranch-style with restrained facades of stucco, Tropic-Kolor cement block, and vertical wood siding. The houses featured steel reinforced concrete slabs and heat reflecting roofs. As described by Allen G. Siple's sponsor for AIA Fellowship, noted architect A. Quincy Jones, "the houses of masonry and heavy timber in the planned community of Tahquitz River Estates provide[d] comfortable living in the desert with an unusually high degree of protection against the hot, windy days and cold, windy nights."<sup>98</sup> The sales brochure went a step further claiming that the houses were designed to be "earthquake proof."<sup>99</sup> While the supporting evidence for this claim remains a mystery, Siple's ongoing interest in building science and seismic protection are consistent with this idea. Lots in Tahquitz River Estates were landscaped with native desert plants including athel tamarisks, cottonwoods, and palms.<sup>100</sup></p> <p>By March of 1948, half of the first unit of 72 homes had been sold.<sup>101</sup> By August, the first unit was completely sold out. In 1949, two new model homes were added. The subdivision received national acclaim when the March 1950 issue of <i>House Beautiful</i> featured a Tahquitz River Estates model home.</p> <p>A 1949 <i>Los Angeles Times</i> ad for Trousdale and Associates featured the Palm Springs development of Tahquitz Canyon Estates with a valuation at \$1,500,000, which was the second smallest of the organization's holdings. Trousdale would later embark on two of his best-known developments: Baldwin Hills Estates in Los Angeles and Trousdale Estates in Beverly Hills. By the end of 1949, Trousdale's involvement with the subdivision appears to have waned. In November of 1949, Henry S. Reid, Russell Wade, and Walter Morrison formed a company to construct FHA-qualifying residences for returning GIs on the north side of the channel in Tahquitz River Estates.<sup>102</sup> Morrison, a seasoned San Fernando Valley contractor partnered with local doctor Reid on the project. Another developer, Carl Bohne, completely took over the project from Trousdale by April of 1950.<sup>103</sup></p>

<b>NAME</b>	Val Vista	Map # 36
<b>DATE</b>	1947	
<b>DEVELOPER</b>		
<b>BOUNDARY</b>	Ramon Road to the north, Sunny Dunes Road to the south, Paseo Dorotea to the east, and Avenida Evelita to the west	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>The largest of the developments from the 1940s were found in what would colloquially become known as “The Veterans’ Tract” – the area located south of the airport and east of Farrell Drive north of Demuth Park.<sup>104</sup> The Veterans Tract area was actually composed of several tracts. Among them the 96-parcel Desert Tract (1946), the 200-parcel Vista Del Cielo Tract (1946), and the 54-parcel Val Vista Tract (1947). Developers involved in these ventures saw potential in the traditionally less desirable real estate on the eastern side of town.<sup>105</sup> These parcels were more exposed to the wind and the elements than the areas sheltered by the mountains. One of the investors in Val Vista was John W. Williams, a long-time resident/developer who owned the pre-war Mira Monte Apartments (demolished) and also invested in the nearby Vista Del Cielo tract.</p>	

<sup>104</sup> There is no actual “Veteran’s Tract” as subdivided with Riverside County. The colloquial reference takes its name from the burst of new development in the area among several tracts that were designed to cater to the needs of returning GIs.

<sup>105</sup> This area was near the town dump at Ramon Road and Gene Autry Trail.

## Citywide Historic Context Statement & Survey Findings

HISTORIC RESOURCES GROUP

<b>NAME</b>	Venable Tract	Map # 37
<b>DATE</b>	1947	
<b>DEVELOPER</b>	Reginald and Fay Bainter Venable	
<b>BOUNDARY</b>	Mesquite Road to the north, Morongo to the South, Via Grande Boulevard (present-day S. Camino Real) to the east, and the Palos Verdes Tract to the west.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>Proving that post-war real estate development in Palm Springs was not just for the professional developers, the 35-parcel Venable Tract was subdivided in February of 1947 by Commander Reginald Venable and his wife, actress Fay Bainter Venable (1893-1968). It is located adjacent to the prewar Palos Verdes Tract (1929).</p> <p>The Venable Tract was marketed from the beginning using Bainter's association with Hollywood. The three-time Academy Award nominee won Best Supporting Actress for "Jezebel" in 1938. "This tract is owned and being developed by a famous stage and screen star," reads an early advertisement for the tract in the <i>Palm Springs Villager</i>.<sup>106</sup> During the 1940s and 1950s, Bainter worked extensively in television theatre including <i>Lux Video Theater</i> (1950-55), <i>Robert Montgomery Presents</i> (1952-55), and <i>Kraft Theater</i> (1956). She received her final Academy Award nomination for <i>The Children's Hour</i> (1961).</p> <p>The Venable Tract boasted large lot sizes of 120 x135 feet and its prime location "...adjoining the new Biltmore Hotel property, Deep Well Guest ranch...and the new Cahuilla School"<sup>107</sup> in the "close-in South"<sup>108</sup> were key selling points. Lots were offered for custom home development or speculation. According to ads in the <i>Villager</i>, sales and improvement of the lots were slow. The hefty price tag of \$3,250 may have been a factor. In 1948, Bainter built a "beautiful model house" at 679 Palo Verde Avenue<sup>109</sup> to draw interest in the property with the promise that "several new houses are planned for the fall."<sup>110</sup> In 1953, real estate ads suggested lots were still available for speculative builders.<sup>111</sup></p> <p>Before turning to real estate, U.S. Navy Lieutenant Commander Reginald Venable (1890-1964) enjoyed an illustrious military career.</p>

BOOK 8

CBBMB 21/93

<b>NAME</b>	Lilliana Gardens	Map # 38
<b>DATE</b>	1948	
<b>DEVELOPER</b>	Sam Martin and Lillian Zalud	
<b>BOUNDARY</b>	Sixteen parcels around Lilliana Drive.	
<b>ARCHITECT</b>	William F. Cody	
<b>DEVELOPMENT HISTORY</b>	<p>In 1948, Sam Martin Zalud and his wife Lillian subdivided a small six-acre tract west of South Palm Canyon Drive known as Lilliana Gardens. Composed of sixteen parcels around Lilliana Drive, the Zaluds engaged local architect William F. Cody to design the houses on spec and advertised the subdivision as Cody-designed. Early plans called for fifteen homes surrounding a community park on a central parcel.<sup>112</sup> In April of 1951, the model house was open for viewing and additional houses were under construction;<sup>113</sup> the model house was located at 250 Lilliana Drive.<sup>114</sup> According to architectural historians Lauren Weiss Bricker and Sydney Williams, two homes in Lilliana Gardens were designed by Wexler &amp; Harrison (the firm of Donald Wexler and Richard Harrison): 210 and 231 Lilliana Drive, for local contractor Joe Pauling [sic] in 1954.<sup>115</sup> Wexler &amp; Harrison both worked in Cody's office prior to forming their own firm.</p>	

<sup>112</sup> "Display Ad 37," *Los Angeles Times*, May 23, 1951, B3.

<sup>113</sup> "Ad for Lillian Gardens," *Palm Springs Villager*, March 1951, 37.

<sup>114</sup> Riverside County Land Information website lists the construction date for this house as 1952, although documentation shows it was open for visitation in 1951.

<sup>115</sup> Possibly the same person as Joe Pawling the designer?

STATE OF CALIFORNIA } S.S.  
COUNTY OF RIVERSIDE }

On this 1st day of March 1948 before me, the undersigned, a Notary Public in and for the County of Riverside, State of California, residing therein, duly commissioned and sworn personally appeared William J. Gaudin and Gordon A. Pequegnat, known to me to be the persons whose names are subscribed to the within instrument, and they acknowledged to me that they executed the same.

In WITNESS WHEREOF, I have hereunto set my hand and affixed my official seal the day and year in this certificate first above written.

Frederic C. Johnson  
Notary Public in and for the County of  
Riverside, State of California

I hereby certify that the annexed map was duly approved by the Planning Commission of the City of Palm Springs at its regular meeting held on the 22nd day of June 1948.

Harold O. Prosser  
Secretary, Palm Springs City Planning Commission

I, Louise McCom, City Clerk and ex-officio Clerk of the City Council of the City of Palm Springs, California, hereby certify that said City Council, at its regular meeting held on the 30th day of June 1948, duly approved the annexed map of Lilliana Gardens and accepted on behalf of the public for purposes set forth in the offer of dedication, Lots A to F inclusive and the 5-foot Public Utility easement.

In Witness Whereof, I have hereunto set my hand and affixed the seal of the City of Palm Springs this 1st day of July 1948.

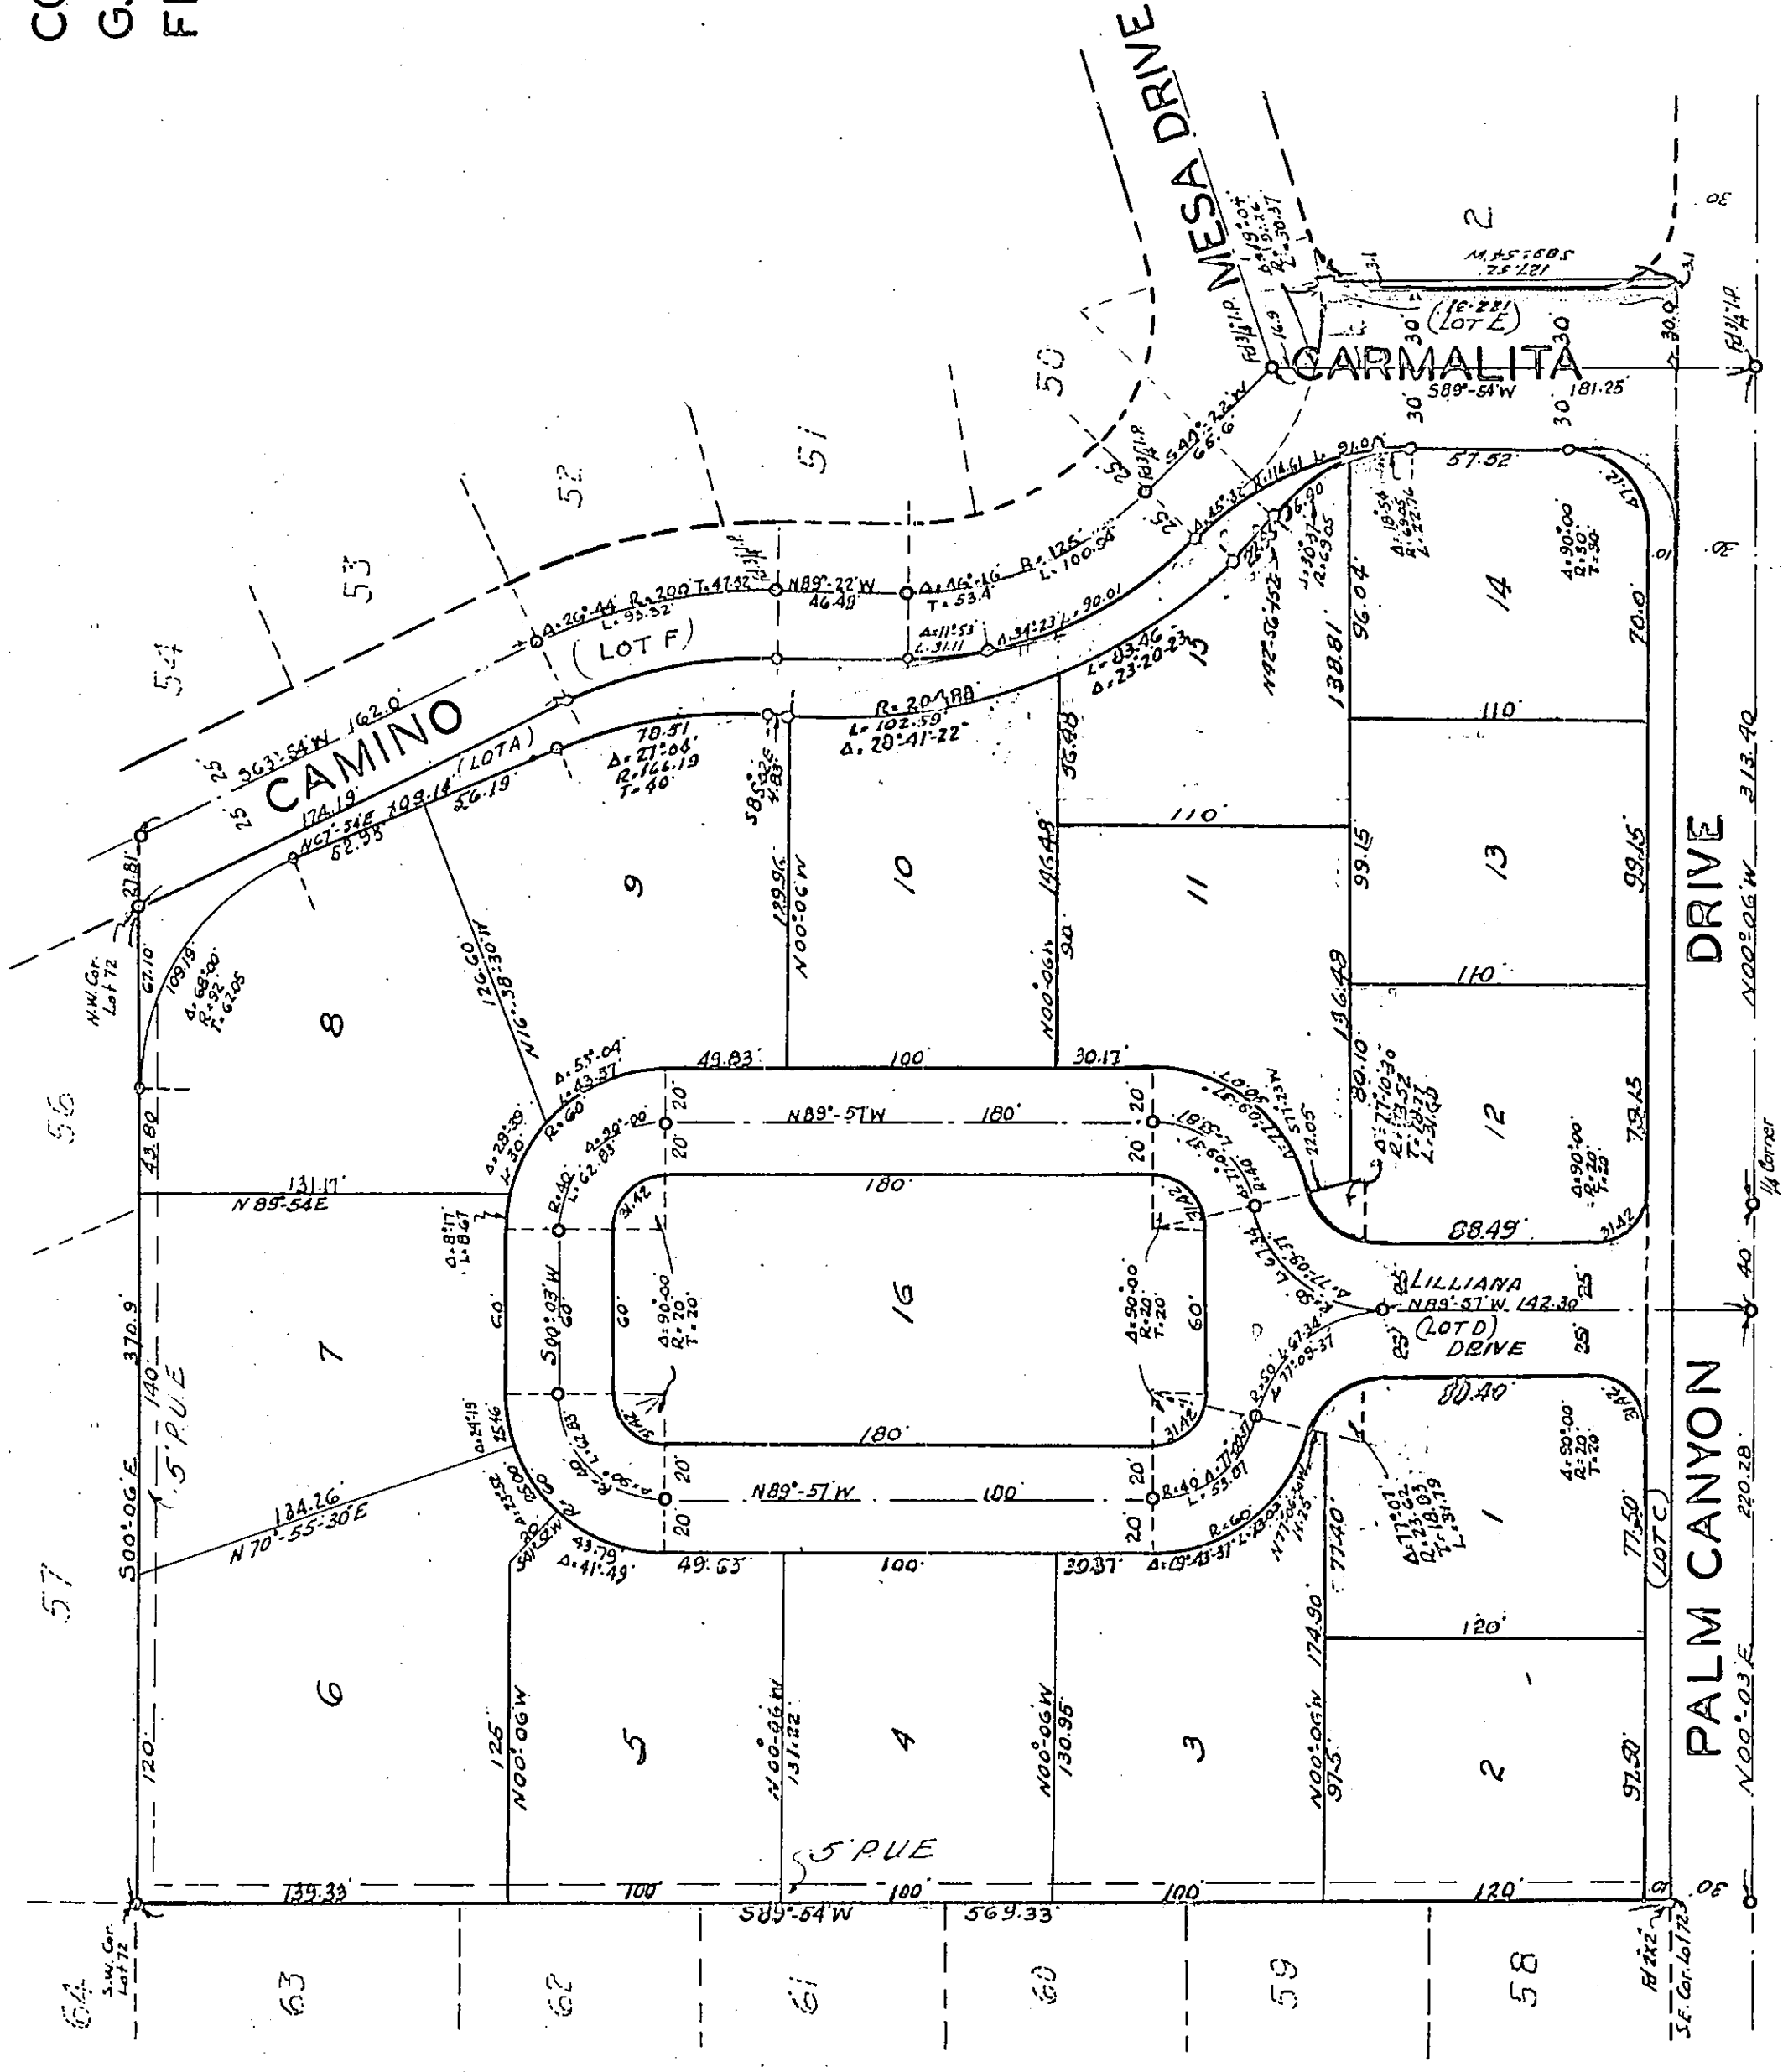

Louise McCom  
City Clerk and ex-officio Clerk of the City Council  
of the City of Palm Springs, California

I hereby certify that I have examined the within map; that the subdivision shown thereon is substantially the same as it appeared on the tentative map or approved alteration thereof; that all provisions of State law and local ordinances have been complied with and I am satisfied that said map is technically correct.

I hereby certify that I am a Licensed Land Surveyor of the State of California; that this map correctly represents a survey made under my supervision during February 1948; that all the monuments shown hereon actually exist and their positions are correctly shown and are sufficient to enable the survey to be readily retraced.

W. J. Gaudin  
Licensed Land Surveyor No. 2344

NOTE: Bearings are derived from the center line of Palm Canyon Drive as shown on map of Palm Canyon Mesa Tract No. 2, M.B. 16, Page 41 & 42. 0 denotes 1/2" x 3/8" iron pipe set. 2" x 2" x 16' Redwood stakes set at all corners.

<b>NAME</b>	Deep Well Ranch Estates	Map # 40
<b>DATE</b>	1951	
<b>DEVELOPER</b>	William Grant	
<b>BOUNDARY</b>	Mesquite Avenue to the north, the east side of Sagebrush Road to the east, Primavera Drive to the west, and the south side of Deep Well Road to the south with an extension at Palm Tree Drive on the southern end of the development.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>Deep Well Ranch Estates (also known as Deep Well Estates, Deep Well Colony Estates, or Deepwell Ranch Estates) had its origins in the Deep Well Ranch and guest ranch.<sup>118</sup> After unsuccessful farming efforts in the early 20<sup>th</sup> century by two previous owners, Henry Parsons (a scientist and authority on rubber) purchased the property in 1926. He drilled a well and found water close to the surface. After drilling further he found water again at 630 feet and the property became known as Deep Well Ranch.</p> <p>In 1928, Pearson sold the Ranch to Charles Doyle who converted an old apricot shed and ranch house to guest accommodations and called it Deep Well Guest Ranch. In 1929, Doyle sold the property to Major and Mrs. Everett and Everett's brother-in-law, Carol Smith. They significantly improved the property when, in 1930, they engaged architect Paul Williams (1894-1980) to design hacienda-type buildings around patios. In the Fall of 1931, Frank and Melba Bennett of Beverly Hills bought the property along with Phil Boyd (local banker and first mayor of Palm Springs) and operated the guest ranch for sixteen years.</p> <p>By 1951, residential subdivisions were beginning to encroach on the land around the Deep Well Guest Ranch and it became clear that there was money to be made in real estate. William Grant, a local builder for the Rancho Royale, Sun View Estates (immediately adjacent to Deep Well Ranch estates just east of Sagebrush Road), and Thunderbird Ranch and Country Club developments, purchased a significant portion of Deep Well Ranch and subdivided it for custom-home development that became Deep Well Ranch Estates.</p> <p>The 231-parcel development was subdivided in ten units between 1951 and 1955. The earliest unit was developed by Grant; however, the subsequent units were developed in conjunction with Harry A. Dart and his wife Gladys M. Dart of Dart Properties. Lots south of Mesquite Avenue were subdivided in 1952, and the majority of the area was subdivided by 1953. In June of 1963, the remaining 22-acre Deep Well Guest Ranch was sold to a Los Angeles syndicate with the intent to make it "an exclusive sportsman's club."<sup>119</sup> In 1969, the former guest ranch property was transformed into condominiums by another developer.</p> <p>According to an article in the <i>Villager</i>, "One enters from the Palm Springs-Indio Highway over a beautiful new divided roadway, landscaped and decorated at the attractive</p>	

<sup>118</sup> The early development of Deep Well as a dude and guest ranch is discussed in the theme "Commercial Development between the Wars (1919-1941)" in the "Palm Springs between the Wars" context.

<sup>119</sup> "Palm Springs Ranch Sold," *Los Angeles Times*, June 16, 1963, N7.

HISTORIC RESOURCES GROUP

	<p>entrance.”<sup>120</sup> Grant formed an architectural review committee for Deep Well Ranch Estates that included architects Cliff May and Phil Boyd. The ensuing long, low, one-story houses were a mixture of Spanish Colonial Revival, Ranch, and Mid-century Modern styles.</p> <p>Deep Well Ranch Estates attracted its share of prominent residents and significant architecture. Architect Hugh Kaptur remembers designing several homes in the Deep Well Ranch Estates prior to becoming a licensed architect.<sup>121</sup> Deep Well homes by E. Stewart Williams include the 1958 Theodore Sutter House at 1207 S. Calle De Maria (with interiors by Arthur Elrod); and the Leo Koerner Residence (1955) at 1275 S. Calle Maria.<sup>122</sup> Wexler &amp; Harrison built a residence at 1344 S. Calle De Maria, and the William Bogess House at 1366 S. Calle de Maria (with interiors by Arthur Elrod). Designer and builder A. Belden Crist built his home at 1366 S. Paseo de Marcia (1958), and Michael Black designed a residence at 1430 S. Calle De Maria (1967). Stan Sackley designed several residences in Deep Well, including 1131 S. Driftwood Drive (1955); 1475 S. Paseo De Marcia (1955); and the James M. Hollowell Residence at 1325 Sagebrush Road (1965), which was featured in <i>Playboy</i> magazine as a “Playboy Pad.”</p> <p>Deep Well Ranch Estates tended to attract postwar professionals and newly retired industrialists. Examples include the residences of retired Innes Shoe Corporation executive Nat Burkett, who lived at 1346 S. Paseo de Marcia in 1958; Edward Kadlac, a retired executive from Du Pont Corporation, at 1411 S. Paseo De Marcia; and Abe L. Levin, a retired food executive, who lived at 1076 Deepwell Road in the 1960s. A significant number of local developers, realtors, and contractors lived in the neighborhood as well, including Leo Baker, Paul Keil, Herman C. Newman, and W.G. Hercules. Mr. and Mrs. Roy Fey lived at 1120 S. Calle de Maria. A large number of local hoteliers also resided at Deep Well. Deep Well residences were the focal point of an active social scene in the postwar period – the frequent sites of parties and charity events hosted by the socially prominent wives of Deep Well residents.</p> <p>During the mid-1960s, film comedian Jerry Lewis lived at 1349 Sagebrush Road. In 1967 Oscar-winning actor William Holden established his permanent residence at 1323 S. Driftwood Drive. Two homes in Deep Well Ranch Estates are associated with the pianist Liberace. The first at 1516 Manzanita Avenue is where the performer lived circa 1957. The second, at 1106 Driftwood Drive was built for his beloved mother, Frances. Noted television actor/producer Jack Webb lived at 1255 S. Manzanita Avenue next door to his first wife, actress Julie London at 1297 S. Manzanita Avenue.<sup>123</sup></p>

<b>NAME</b>	Ranch Club Estates / Desert Park Estates	Map # 42
<b>DATE</b>	1955	
<b>DEVELOPER</b>	Noel B. Clarke	
<b>BOUNDARY</b>	Joyce Drive on the north, Vista Chino on the south, the golf course and Whitewater Club Drive on the east, and Sunrise Way on the west; southwest portion of the development was bordered by Racquet Club Drive to the north and N. Farrell Drive to the east.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>In 1955, developer Noel B. Clarke (1896-1964) embarked on the most ambitious postwar tract development ever undertaken in Palm Springs: Ranch Club Estates. The 500-acre development was in the flats of northeast Palm Springs. Developed in twelve phases between February of 1955 and November of 1958 under tract maps bearing the names Desert Park Estates (numbers 1 through 12), the southwest portion of the development employed a street pattern evocative of the earlier Prescott T. Stevens developments like Las Palmas Estates and Merito Vista in which gently curving streets were favored over a rigorous grid pattern. The final five phases (numbers 7 through 12) abandoned the curving street pattern in favor of a more efficient grid.</p> <p>Developer Noel Clarke was a hospitality man turned developer. Having owned clubs in southern Orange County in the 1920s, he invested in Walnut Estates, which was located near Encino and was one of the first San Fernando Valley suburban housing developments. Clarke and his wife Joyce then turned their talents to the desert playground and took over the Ranch Club in 1955. Given the popularity of the club, they began to market the surrounding new subdivision (platted Desert Park Estates) as Ranch Club Estates. By 1961, they turned the basic nine-room hotel-club operation<sup>126</sup> into Ranch Club enterprises: the Ranch Club Hotel of more than 250 rooms, the Ranch Country Club (the 18-hole golf course designed by Joe Caldwell in the north east section of the city),<sup>127</sup> and Ranch Club Estates, the homes near the golf course built by Clarke's Ranch Construction Company.<sup>128</sup></p> <p>In 1957, Ranch Construction Company foreman Tom Sills approached a young Hugh Kaptur to design the home plans. In the documentary <i>Quiet Elegance: The Architecture of Hugh Kaptur</i>, Kaptur remembers, "I filled the void for builders who didn't want to spend thousands of dollars for plans. They were using draftsmen or building designers. I started doing work for contractors...that's how I came to do houses out at Ranch Club Estates." Five designs were created: the "Spur," "Lariat," "Saddle," "Prairie," and "Sombrero." The Mid-century Modern designs abstracted adobe and indigenous architecture to create solid expressionistic forms with a variety of rooflines. The homes were noted for masonry at the center of the façade designed to, in Kaptur's own words, "anchor the designs to the earth."<sup>129</sup></p> <p>The development was envisioned to include between 800-1,000 homes. But sales were slow, and by 1961 only 250 homes had been built. Instead of building the homes in clusters and creating neighborhoods, the homes were built "scattershot" around the development in hopes that it would increase the value of the undeveloped lots.<sup>130</sup></p>	

<sup>126</sup> Located at Paseo El Mirador and Sunrise Way.

<sup>127</sup> The Ranch Country Club Board of Directors also included Bob Kelley, broadcaster for the Los Angeles Rams; Raymond Parkhurst, a Hughes Aircraft executive; movie producer Bob Waterfield; local attorney Arthur Crowley; Gerald Sanborn, mayor of Palm Springs; and Joe Kirkwood, golf professional.

<sup>128</sup> Joan Winchell, "Real Whingdinger at Palm Springs," *Los Angeles Times*, February 3, 1961, A7.

<sup>129</sup> John C. Brown, *Quiet Elegance: The Architecture of Hugh Kaptur*, CD-ROM (This N' That Films, 2014).

<sup>130</sup> Brown, *Quiet Elegance: The Architecture of Hugh Kaptur*.

#### FINAL DRAFT-FOR CITY COUNCIL APPROVAL

## City of Palm Springs

## Citywide Historic Context Statement & Survey Findings

#### HISTORIC RESOURCES GROUP

	Unfortunately, this was not a successful strategy. In February of 1964, Clarke died of a heart attack after a year of illness. <sup>131</sup> In 1967, Clarke's widow Joyce sold the Ranch Club proper and it was ultimately razed. The Ranch Construction Company went bankrupt and the undeveloped properties were sold to other developers who built more tract homes in the 1970s and 1980s.

NO. 7 MB 36/16

<b>NAME</b>	Sunmor Estates	Map # 43
<b>DATE</b>	1955	
<b>DEVELOPER</b>	A.R. Simon and Merrill Brown	
<b>BOUNDARY</b>	Eastern portion of Playmor Avenue and Livmor Avenue, Morsun Circle, and Arline Drive.	
<b>ARCHITECT</b>	Wexler & Harrison	
<b>DEVELOPMENT HISTORY</b>	<p>During WWII, the area now occupied by Sunmor Estates was part of the Palm Springs Army Airfield as a site for several “Tie Down” or hardstand stations for aircraft.<sup>132</sup> In 1955 the local Sands Realty and Development Corporation consisting of Abram Robert (A.R.) Simon and Merrill Brown subdivided the first phase of Sunmor Estates, a 55-parcel tract including the eastern portion of Plaimor Avenue and Livmor Avenue, Morsun Circle, and Arline Drive.<sup>133</sup> Simon was a realtor in the city and Brown was a Judge in the Indio Superior Court.<sup>134</sup></p> <p>The vision for Sunmor Estates appears to have been much larger than the reality. <i>The Los Angeles Times</i> reports the venture as a “\$50 million project.”<sup>135</sup> The July-August issue of the <i>Villager</i> describes the development as 213 acres, and the tract map refers to the area as “Sunmor Estates No. 1;” however, no subsequent tracts were ever registered. A 1955 <i>Villager</i> advertisement identifies areas of planned future construction north of Tahquitz Canyon (formerly McCallum Way) almost as far west as Sunrise Way; and south of Tahquitz Canyon as far south as Ramon Road. Yet only the initial twenty acres were built out, and Simon’s plan to follow the initial 55 homes with 100 more was never realized.<sup>136</sup> Sunmor Estates was notable for its paved streets and rolled curbs, which were not standard in Palm Springs developments subdivided before the war.</p> <p>Sunmor Estates was envisioned by A.R. Simon as part of a combination residential and commercial development with a modern, \$10,000,000, 22-acre landscaped pedestrian mall and shopping center at Tahquitz Canyon and Farrell Drive.<sup>137</sup></p> <p>Local builder Robert “Bob” Higgins was engaged to build “a neighborhood of affordable modernist tract homes.”<sup>138</sup> Sunmor Estates included two-, three-, and four-bedroom plans.<sup>139</sup> According to the <i>Palm Springs Villager</i>, Wexler &amp; Harrison designed the Mid-century Modern-style homes.<sup>140</sup> The post-and beam homes featured colored rock roofs, extra-wide overhangs, large expanses of glass and sliding glass doors, and large covered patios.<sup>141</sup></p> <p>Although Sunmor Estates was clearly envisioned as a series of tract homes, ads tout the houses as “individually designed and decorated.”<sup>142</sup> Ads also suggest that the developers were willing to sell unimproved property in the subdivision. In 1957, the Sunmor Estates property was sold to fellow developers George and Robert Alexander of the Alexander</p>	

<sup>132</sup> Historic Site Preservation Board #40 Plaque.

<sup>133</sup> Although Sunmor Estates is often colloquially referred to as including The Alexander Company houses developed as the Enchanted Homes tract, this sub-theme refers only to the original Sunmor Estates homes.

<sup>134</sup> Judge Merrill Brown would later be one of three judges criticized for the handling of Agua Caliente lands in the late 1960s, “Equal Rights for Agua Caliente Indians Asked,” *Los Angeles Times*, June 1, 1968, B1.

<sup>135</sup> “Palm Springs Home Project,” *Los Angeles Times*, June 26, 1955, F15.

<sup>136</sup> “Palm Springs Home Project,” *Los Angeles Times*, June 25, 1955, F15.

<sup>137</sup> “Center Planned at Resort City,” *Los Angeles Times*, August 17, 1958, F12.

<sup>138</sup> Sunmor Neighborhood, [www.sunmorestates.com/#!about/cjn9](http://www.sunmorestates.com/#!about/cjn9) (accessed December 5, 2014).

<sup>139</sup> Additional research is needed to confirm the number of models, plans, and layout of the development.

<sup>140</sup> *Palm Springs Villager*, July-August, 1955.

<sup>141</sup> “Sunmor Estates Advertisement,” *Palm Springs Villager*, October, 1955, 4.

<sup>142</sup> Sunmor Estates Advertisement, *Palm Springs Villager*, September, 1955, 9.

	Construction Company; the property became part of the Alexander's adjacent Enchanted Homes development (subdivided in 1957). <sup>143</sup>
--	---

---

<sup>143</sup> In his book *The Alexanders*, James R. Harlan refers to the Alexander development here as Sunmor Estates, rather than its official tract name Enchanted Homes. There is currently no evidence that the Alexanders ever marketed them under the Sunmor name. The reason for the sale is currently unknown. Simon may have decided that he preferred commercial instead of residential development, or he may have needed the cash to fund new projects. Simon expanded the nearby commercial shopping center in 1964, creating the first air-conditioned mall with an ice skating rink in Southern California. "Shopping Centers Showing Surge," *Los Angeles Times*, January 19, 1964, K1.

ENCHANTED  
HOMES

NOT PART OF DEVELOPMENT

<b>NAME</b>	Twin Palms Estates	Map # 44
<b>DATE</b>	1955	
<b>DEVELOPER</b>	Alexander Construction Company	
<b>BOUNDARY</b>	Irregular boundary: south side of E. Twin Palms Drive and La Jolla Road on the north, intersection of S. La Verne Way and S. Camino Real on the south, west side of Via Aguila between La Jolla Road and S. La Verne Way on the east	
<b>ARCHITECT</b>	Palmer & Krisel	
<b>DEVELOPMENT HISTORY</b>	<p>The first Alexander Construction Company residential development in Palm Springs was Twin Palms Estates (a.k.a. Smoke Tree Valley Estates, El Camino Estates, and Royal Desert Estates). Twin Palms Estates was subdivided in 1955; the homes were constructed between 1957 and 1958 and designed by Palmer &amp; Krisel. Krisel also served as the landscape architect for the development.<sup>144</sup> Sited on 10,000-square-foot lots and assembled on 40 x 40 foot concrete pads, the tract of more than ninety homes was built in three phases: the first two in the Twin Palms Estates I and II tracts and the third comprised 19 houses in the middle of the adjacent El Camino Tract in 1957.<sup>145</sup> Two variations (plans A and B) were offered of essentially one square floor plan with a utility core at the center; exterior options included several Mid-century Modern designs with different rooflines (butterfly, gable, and flat). This provided construction efficiency, the appearance of individuality for the buyer, and an engaging visual cadence for the streetscape.<sup>146</sup></p> <p>Twin Palms received national recognition in the architectural trade press. It was lauded by <i>Progressive Architecture</i> in March of 1958 for artfully addressing the profession's issues with much postwar tract home design by flipping the plans, and using variations in orientation and fenestration to "...consciously minimize the tract look."<sup>147</sup> The square floor plan was key to Palmer &amp; Krisel's economical work for the Alexanders in Palm Springs. After visiting a concrete tradesman, Krisel learned that a flat slab with only four corners would be the least expensive to construct. Although his Los Angeles designs were rectangles, Krisel remembers, "'When I went to Palm Springs they became squares. Square was more efficient than a rectangle because it encompassed more square footage with the least amount of perimeter with four corners."<sup>148</sup></p>	

<sup>144</sup> Krisel studied landscape architecture under Garrett Eckbo and became a licensed landscape architect in 1954.

<sup>145</sup> This number comes from the Harlan book and appears to include a branch of another tract.

<sup>146</sup> Sian Winship, "Quality and Quantity: Architects Working for Developers in Southern California, 1960-1973 (MHP Thesis, University of Southern California, 2011), 192. This technique was a classic feature of Palmer & Krisel-designed developments, including Midland La Mirada (1955) in Fullerton, California that won the National Association of Home Builders Award (NAHB) of Merit in January 1956, as well as awards from the Home Building Institute and *American Builder* magazine.

<b>NAME</b>	Crossley Tract	Map # 45
<b>DATE</b>	1956	
<b>DEVELOPER</b>	Lawrence Crossley	
<b>BOUNDARY</b>	34 <sup>th</sup> Avenue to the north, Martha Street to the south, the west side of Lawrence Street to the west, and the east side of Marguerite Street on to the east.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>This twenty-acre tract was subdivided by Palm Springs' first African-American resident, Lawrence Crossley (1899-1962). It was located in an area that was east of the city limits at the time of its subdivision. It was bordered by 34<sup>th</sup> Avenue to the north, Martha Street to the south, the west side of Lawrence Street to the west, and the east side of Marguerite Street on to the east. The 77-parcel development was composed of a series of modest Minimal Traditional-style homes.</p> <p>Crossley intended the subdivision to be for African-American families who were largely barred from living in other Palm Springs developments by racial restrictions. African Americans had migrated to Palm Springs in earnest during the mid-1940s when the oil fields of Texas offered little promise. Those who came primarily found work as domestic servants.<sup>149</sup></p> <p>As a result of these restrictions, prior to the subdivision of the Crossley tract, African-Americans and Mexican Americans all lived in Section 14 (also known as "the reservation") "...in a cluster of unpaved streets, jumbled shacks, no street lights and outside toilets."<sup>150</sup> When "the reservation" was closed by the city and county health department in the early 1960s, African-Americans in Palm Springs migrated to outlying areas such as the Desert Highland Estates Tract (1951) north of the city where homes were relatively inexpensive and the Federal Housing Authority (FHA) offered low-interest loans.<sup>151</sup> The area was not annexed into Palm Springs until the mid-1960s. By 1984, Desert Highland Estates and nearby Gateway Estates (1960) had become the heart of the African-American residential community in Palm Springs.<sup>152</sup></p>

<b>NAME</b>	Palm Lane	Map # 48
<b>DATE</b>	1956	
<b>DEVELOPER</b>	Jack Meiselman	
<b>BOUNDARY</b>	Amado Road on the north, the south side of Andreas Road on the south, Sunset Way on the east, and the west side of Michelle Road on the west.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>In June of 1956, Meiselman established two subdivisions in Palm Springs. The first, Karlisa Cove, was a small seven-parcel tract of homes in the Karlisa Cove cul-de-sac off Paseo de Caroleta in the area popularly known as the Veterans Tract. The second, Palm Lane, was a 49-parcel subdivision bordered by Amado Road on the north, the south side of Andreas Road on the south, Sunset Way on the east, and the west side of Michelle Road on the west. These houses were three- or four-bedroom, two-bathroom plans with “spacious living rooms with fireplace, glass sliding doors leading to patio and pool areas, and Youngstown engineered kitchens...” priced at \$23,200.<sup>153</sup> Meiselman also allowed Palm Lane buyers to customize their homes in terms of plans and colors. The model home, located at 2247 East Amado Road, was lauded by the <i>Desert Sun</i> for its “desert contemporary design...refreshing in that it favors quiet and comfortable elegance instead of flashy gimmicks.”<sup>154</sup> A second model home was opened at 227 Sunset Way<sup>155</sup> in June of 1957.<sup>156</sup> By 1959, 217 Michelle Road was the model home on display.<sup>157</sup></p> <p>Although it is currently unknown what designer may have been associated with the first phase of Palm Lane, phase two of the tract was designed by John P. Moyer. These designs eschewed wood facia in favor of rust-proof metal. Other model homes were opened in 1958 at 2281 E. Andreas Road and 225 Sunset Way.<sup>158</sup></p>

<b>DEVELOPMENT HISTORY</b>	<p>During the 1950s, residential development in Palm Springs continued to expand eastward and southward. Like other locations in Southern California, it was a period in which large developers dominated the scene; among them were William Grant, Noel B. Clarke, A. R. Simon, George and Robert Alexander, Roy Fey, and Jack Meiselman. However, a series of small developers still flourished. Examples included Roy W. Burton's Burton Tract (1957); auto salesman-turned-real estate developer Sam Janis who subdivided Janis' Hilltop Estates (1958); and David M. Benjamin (1894-1987), who developed the El Mirador Park tract (1946) and Mountain View Estates (1956).</p>

<b>NAME</b>	Ramon Rise Estates	Map # 50
<b>DATE</b>	1956	
<b>DEVELOPER</b>	The Alexander Construction Co. and George R. Goldberg and Maurice Horner, Jr.	
<b>BOUNDARY</b>	Ramon Road to the north, Sunny Dunes Road to the south, Cielo Road to the east, and Compadre Drive to the west.	
<b>ARCHITECT</b>	Palmer & Krisel	
<b>DEVELOPMENT HISTORY</b>	<p>Ramon Rise Estates (1956-58, Palmer &amp; Krisel) consisted of a 106-parcel development. The tract was subdivided by George R. Goldberg and Maurice Horner, Jr.<sup>159</sup> Goldberg, a Los Angeles-based real estate man, appears to have sold some of the parcels to the Alexander Construction Company. This includes 16 parcels at the north end of Roxbury, Bedford, Beverly and Canon Drives, Compadre Road and Cielo Road. Company partner Joe C. Dunas handled the project and turned initially to Palmer &amp; Krisel for designs. After the preparation of floor plans, plot plans and elevations, Dunas engaged with other designers to prepare the working drawings.<sup>160</sup></p> <p>According to the <i>Desert Sun</i>, the original developer of Ramon Rise, George E. Goldberg who formed Ramon Rise Enterprises, partnered with Jack Meiselman in 1956 to construct a number of homes in the subdivision which were marketed as “Ramon Rise Estates.”<sup>161</sup> Included among these were homes at 602, 630, 654, 676 and 688 Canon Drive and 603, 631, 655, 677, 689 and 695 Cielo Drive.<sup>162</sup> In 1957, Goldberg unsuccessfully petitioned city council for the rezoning of the parcels on the south side of Ramon Road from residential to commercial.<sup>163</sup></p>	

<sup>159</sup> Tract map for this subdivision is illegible. The name may be Maurice Homer, Jr.

RAMON-RISE ENTERPRISES INC.

By John J. Greubler President

By Maxwell S. Homes Jr. Secretary

STATE OF ILLINOIS } S.S.  
COUNTY OF COOK }

On this 10th day of October 1956 before me, James Frank, a Notary Public in and for said County and State, residing therein and duly commissioned and sworn, personally appeared John J. Greubler and Maxwell S. Homes Jr. who being known to me to be the President and Secretary of RAMON-RISE ENTERPRISES INC., the corporation that executed the within instrument, and known to me to be the persons who executed the same on behalf of the corporation herein named and they acknowledged to me that such corporation executed the same.

My Commission expires Nov. 27, 1958

James Frank  
Notary Public in and for the  
County of Cook, State of  
Illinois

I, Louise McCann, City Clerk and ex-officio Clerk of the City Council of the City of Palm Springs, State of California, hereby certify that said City Council at its regular meeting held on the 10th day of October 1956, duly approved the annexed map of RAMON-RISE ESTATES and accepted on behalf of the Public the foregoing dedications.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed the official seal of the City of Palm Springs.

Dated Oct 4 1956

Louise McCann  
City Clerk and ex-officio Clerk  
of the City Council of the  
City of Palm Springs.

I hereby certify that the annexed map was duly approved by the Planning Commission of the City of Palm Springs at its regular meeting held on the 10th day of Sept. 1956.

W. J. Foster  
Secretary

I hereby certify that, according to the records of this office as of this date, there are no liens against the property shown on the annexed map for unpaid State, County, Municipal, or local taxes or Special Assessments collected as taxes.

Dated this 29 day of October 1956.

V. M. HYDE

County Tax Collector

By W. J. Foster Deputy

Thereby certify that a bond in the sum of \$10,000 has been executed and filed with and approved by the Board of Supervisors of Riverside County, State of California, conditioned upon the payment of all taxes, State, County, Municipal, or local and/or Special Assessments collected as taxes, which at the time of filing of this map with the County Recorder are a lien against said property or not yet payable.

Dated this 10 day of October 1956.

G. A. PEQUEGNAT  
County Clerk and ex-officio  
Clerk of the Board of Supervisors

By W. J. Foster Deputy

I hereby certify that I have examined the annexed map; that the subdivision shown thereon is substantially the same as that appeared on the tentative map or approved alterations thereof; that all provisions of State law and local ordinances have been complied with and I am satisfied that said map is technically correct.

Frank J. Hamesch  
City Engineer R/S 1630

I hereby certify that I am a Licensed Land Surveyor of the State of California; that this map correctly represents a survey made under my supervision during my term of office from April 1956 to the present; that all monuments shown hereon actually exist or have been in place on or before April 1956, and their positions are correctly shown.

<b>NAME</b>	Vista Las Palmas	Map # 51
<b>DATE</b>	1956	
<b>DEVELOPER</b>	Alexander Construction Company	
<b>BOUNDARY</b>	North side of Via Las Palmas to the north, the south side of Regal Drive to the south, Via Monte Vista to the east, and Rose Avenue to the West.	
<b>ARCHITECT</b>	Charles DuBois; Palmer & Krisel	
<b>DEVELOPMENT HISTORY</b>	<p>In December of 1956, the Alexanders subdivided the first phase of Vista Las Palmas (1956-59). This included the area bordered by properties fronting the north side of Via Las Palmas to the north, properties fronting the south side of Regal Drive to the south, Via Monte Vista to the east, and Rose Avenue to the West. Because of its central location and adjacency to Las Palmas Estates, this development targeted a more upscale clientele than Twin Palms.</p> <p>Vista Las Palmas was developed in three phases and these phases appear to be loosely tied to their architectural heritage. The first phase, in 1956, is the northern portion of the development from the north side of Via Las Palmas to the south side of Camino del Sur. Many of these designs are attributed to architect Charles E. DuBois. Phase II includes Rose Avenue and the southwestern bend of Abrigo Road with houses all attributed to Palmer &amp; Krisel. Phase III was subdivided in 1959 and included Fairview, Tuxedo, and Cornet Circles along with Regal Drive; these houses are also attributed to Palmer &amp; Krisel.<sup>164</sup></p> <p>The three-bedroom plus maid's room designs for the Palmer &amp; Krisel-designed homes in Vista Las Palmas included three rectangular floor plans and three versions of each plan.<sup>165</sup> One design included "...a striking porte-cochere option."<sup>166</sup> Placement of the carport on these designs varied from street-facing to set at a right angle to the residence, contributing to a distinctive visual architectural cadence for this neighborhood. The designs feature long, low Mid-century Modern lines with varying rooflines of the butterfly, low-pitch, and folded plate. The model home was located at the corner of Via Las Palmas and Via Monte Vista. A second model home was located at 1215 Via Paraiso.<sup>167</sup></p> <p>The DuBois-designed homes in Vista Las Palmas featured "floorplans with the living rooms angled at forty-five degrees and complementary stone walls likewise extended at that angle."<sup>168</sup> DuBois is credited with the design of the "Swiss-Miss" houses that are dotted throughout Vista Las Palmas. These designs feature a distinctive A-frame roofline that projects above the rooflines of the surrounding houses. Based on the marketing materials, the steeply pitched A-frame elements which some have interpreted as alpine, may in fact draw more inspiration from Tiki or Polynesian architecture.</p>	

<sup>164</sup> Inexplicably, the tract map for Las Palmas Number 3 predates the map for Las Palmas Number 2.

<sup>165</sup> The rectangular floor plans for Vista Las Palmas did not accommodate the rotation of the plans as Palmer & Krisel did in their designs for Twin Palms.

<sup>166</sup> James R. Harlan, *The Alexanders: A Desert Legacy*, Palm Springs Preservation Foundation, 2011, 32.

<sup>167</sup> A handwritten note by William Krisel in the Vista Las Palmas files at the Getty Research Institute indicates that "the Las Palmas Model Home was moved to Twin Palms." Another letter from William Krisel to Paul and Michael dated October 17, 2006 indicates the new address was 922 E. Anza Road. Source: Flatfile 86.

<sup>168</sup> Harlan, *The Alexanders: A Desert Legacy*, 34.

On this 23<sup>rd</sup> day of Feb, 1960, before me, the undersigned, a Notary Public in and for said County and State, personally appeared ROBERT ALEXANDER, known to me to be the Attorney in Fact of Las Palmas Estates, a partnership, the partnership that executed the within instrument and known to me to be the person who executed the same on behalf of the partnership herein named, and they acknowledged to me that such partnership executed the same.

WITNESS my hand and official seal

Barley Henry  
Notary Public in and for said County and State

I, MARY G. RINGWALD, City Clerk and ex-officio Clerk of the City Council of the City of Palm Springs, State of California, hereby certify that said City Council at its regular meeting held on the 24<sup>th</sup> day of Feb, 1960, duly approved the annexed map of VISTA LAS PALMAS NO. 2 and accepted on behalf of the public the foregoing dedications.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed the official seal of the City of Palm Springs this 26<sup>th</sup> day of Feb, 1960.

DE Barley Henry  
City Clerk and ex-officio Clerk of the City Council of the City of Palm Springs.

I hereby certify that the annexed map was duly approved by the Planning Commission of the City of Palm Springs at its regular meeting held on the 17<sup>th</sup> day of Feb, 1960.

W.D. Foster  
Secretary

I hereby certify that according to the records of this office as of this date there are no liens against the property shown on the annexed map for unpaid State, County, Municipal or local taxes or special assessments collected as taxes, except taxes and special assessments now alien but not yet payable, which are estimated at \$1500.00.

Dated this 14 day of March, 1960.

by John St. John Deputy

DOTINA M. BOUER  
County Tax Collector

I hereby certify that I have examined the annexed map, that the subdivision shown thereon is substantially the same as it appeared on the tentative map or approved alterations thereof, that all provisions of State Law and local ordinances have been complied with and I am satisfied that said map is technically correct.

Philip Adams  
City Engineer R.E. 8821

I hereby certify that I am a Licensed Land Surveyor of the State of California, that this map correctly represents a survey made under my direction during February 1960, that all monuments shown hereon actually exist or will be in place on or before December 30, 1960, and their positions are correctly shown.

G.K. Sanborn  
L.S. 2344

I hereby certify that a bond in the sum of \$1500.00 has been executed and filed with and approved by the Board of Supervisors of the County of Riverside, State of California, conditioned upon the payment of all taxes, State, County, Municipal or local and all special assessments collected as taxes, which at the time of filing of this map with the County Recorder, are a lien against the property, but not yet payable.

Dated this 21 day of March, 1960.

G.A. PEQUEGNAT  
County Clerk and ex-officio clerk of the Board of Supervisors

by R.P. Ratty Deputy

<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>During the 1950s, residential development in Palm Springs continued to expand eastward and southward. Like other locations in Southern California, it was a period in which large developers dominated the scene; among them were William Grant, Noel B. Clarke, A. R. Simon, George and Robert Alexander, Roy Fey, and Jack Meiselman. However, a series of small developers still flourished. Examples included Roy W. Burton's Burton Tract (1957); auto salesman-turned-real estate developer Sam Janis who subdivided Janis' Hilltop Estates (1958); and David M. Benjamin (1894-1987), who developed the El Mirador Park tract (1946) and Mountain View Estates (1956).</p>

<b>NAME</b>	Enchanted Homes	Map # 53
<b>DATE</b>	1957-58	
<b>DEVELOPER</b>	Alexander Construction Company	
<b>BOUNDARY</b>	Eastern part of Sunset Way, Burton Way, Orchid Tree Lane, Monterey Road, and Farrell Drive between Amado Road and Andreas Road, along with a series of cul-de-sacs: Jill Circle, Lyn Circle, Leslie Circle, Helena Circle, and the western part of Easmor Circle.	
<b>ARCHITECT</b>	Richard R. Leitch	
<b>DEVELOPMENT HISTORY</b>	<p>The Enchanted Homes tract is located within the former Sunmor Estates which the Alexanders purchased from Sunmor developer A.R. Simon. It included three phases of Alexander development between December 1957 and February 1958. Although sources have attributed these homes to Palmer and Krisel,<sup>169</sup> the <i>Desert Sun</i> attributes phases two and three of this development to Richard R. Leitch (1922-2008)<sup>170</sup> Krisel recalls designing the preliminary drawings for the homes, but Alexander Company executive Joe Dunas later removed him from the project.<sup>171</sup> According to Krisel, the project was turned over to architect Anton Dalu (who was working in the Palm Springs area at the time as documented by the <i>Los Angeles Times</i>). Dalu's involvement cannot be verified at this time. A model home for the development was located at 2866 Livmore Avenue.</p> <p>The Enchanted Homes tract featured a single 1,200 square foot, three bedroom/two bathroom floor plan with an open kitchen designed by Palmer &amp; Krisel.<sup>172</sup> These Mid-century Modern style post-and-beam homes also featured multiple roof designs (flat, shed, butterfly, and low-pitch gable) and exterior materials such as stone and concrete block.</p> <p>Phase one included the parcels along Andres Road and the four cul-de-sacs plus parcels to the east of Easmor Circle and along Farrell Drive north of Andreas Road. Phase two is bordered by Amado Road on the north, Andreas Road to the south, Farrell Drive to the east and Orchid Tree Lane to the West. Phase three is bordered by Amado Road on the north, Andreas Road on the South, Orchid Tree Lane on the east and Sunset Way on the west.</p>

<b>BOUNDARY</b>		
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>During the 1950s, residential development in Palm Springs continued to expand eastward and southward. Like other locations in Southern California, it was a period in which large developers dominated the scene; among them were William Grant, Noel B. Clarke, A. R. Simon, George and Robert Alexander, Roy Fey, and Jack Meiselman. However, a series of small developers still flourished. Examples included Roy W. Burton's Burton Tract (1957); auto salesman-turned-real estate developer Sam Janis who subdivided Janis' Hilltop Estates (1958); and David M. Benjamin (1894-1987), who developed the El Mirador Park tract (1946) and Mountain View Estates (1956).</p>

<b>NAME</b>	Chino Palms Estates	Map # 55
<b>DATE</b>	1958	
<b>DEVELOPER</b>	Jack Meiselman	
<b>BOUNDARY</b>	Phase I: south of Via Escuela; Phase II: east side of via Miraleste, all of Berne Street, and all of Jacques Street.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>In 1958-59, Meiselman embarked on the largest of his developments, Chino Palms Estates. This eighty-five parcel development consists of two tangential property areas. The first, developed in 1958, is south of Via Escuela. The second, developed in 1959, consists of the east side of via Miraleste, all of Berne Street, and all of Jacques Street. The second phase is composed of smaller parcels than the first (100 x 100 feet versus 125 x 150 feet in phase one). In February of 1959, Meiselman purchased a 10-acre parcel adjacent to the second phase of Chino Palms Estates from Julian Smith.<sup>173</sup> Thirty additional homes were built on this parcel.</p> <p>Chino Palms Estates houses were available in 2-bedroom+den or 3 bedroom, 2 bathroom plans. Air conditioning was featured as a key selling point. Model homes for the development included 1820 N. Via Miraleste, 1830 N. Via Miraleste, and 2295 N. Via Miraleste.</p>

CHINO PALMS  
ESTATES, NO. 1  
M.B. 34-66

<b>NAME</b>	Palm Springs Golf Club	Map # 56
<b>DATE</b>	1958	
<b>DEVELOPER</b>	Westview Development Corporation	
<b>BOUNDARY</b>	Cherry Hills Drive to the north, Waverly Drive to the south, Bob O Link Lane to the east and Broadmoor Drive to the west	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>One of the early residential golf communities in Palm Springs, the Palm Springs Golf Club (a.k.a. Palm Springs Municipal Golf Course and the Tahquitz Creek Golf Resort), dates back to 1958 (although it was not fully realized until the 1970s). The vision for the \$15,000,000 project included residential areas bordering the fairways of the golf course, a hotel and a shopping center. The 332-acre parcel along Highway 111 had been purchased in 1956 from Pearl McManus by the Palm Springs Capital Company (a holding company for the Palm Springs Turf Club) as a site for a horse-racing track.<sup>174</sup> At the time it was east of the Palm Springs city limits. When the California Horse Racing Board refused to grant the Turf Club a license in 1957, the holding company changed plans and partnered with Morton B. Zuckerman, President of the Westview Development Corporation, to turn it into a residential golf community. Zuckerman was a noted residential and commercial developer from Chicago. Frank Bogert was executive vice president of the Westview Development Corporation. For the housing development, Westview turned initially to architect William M. Bray (1905-1998) for the design of 350 units. Between 1961 and 1965,<sup>175</sup> Westview constructed the houses along Broadmoor Drive, Brentwood Drive, Bob O Link Drive and Cherry Hills Drive, Menlo Circle, and Oswego Circle.<sup>176</sup></p> <p>The vision for the development included the eighteen-hole championship golf course (1958-59, Lawrence Hughes), 240 single-family residences, plus 300 “garden cottages” that would feature swimming pools, and recreation and sports facilities. Owners were to automatically become members in the private country club.<sup>177</sup> Ads in the <i>Palm Springs Villager</i> not only touted these amenities, they featured a green map of the course and integrated home sites. Increasingly, however, the development began to face financial difficulties and, on July 1, 1959, Westview turned over control of the course to the City of Palm Springs and it became a public course.<sup>178</sup></p>	

<sup>174</sup> “Land Sold for Race Track,” *Los Angeles Times*, January 18, 1956, 25.

<sup>175</sup> Pending confirmation of dates.

<sup>176</sup> The project team is in contact with the architect’s son, Roger Bray, to locate historic material on the plans for these houses.

<sup>177</sup> “Huge Development Set for Palm Springs Area,” *Los Angeles Times*, July 27, 1958, F8.

<sup>178</sup> “In Black and White,” *Corona Daily Independent*, April 21, 1959, 6.

County Clerk and ex-officio Clerk  
of the Board of Supervisors.  
By Chas. J. Patten Deputy

By Chas. J. Patten  
Chairman of the Board of Supervisors.

I hereby certify that according to the records of this office as of  
this date, there are no liens against the property shown on the  
annexed map consisting of two sheets, for unpaid State, County,  
Municipal or local taxes or Special Assessments collected as taxes,  
except taxes and special assessments now a lien but not yet payable  
which are estimated at \$ 700.00.  
Dated this 30 day of April 1959.  
DONNA M. BOUER  
COUNTY TAX COLLECTOR  
by M. J. Corbitt Deputy  
I hereby certify that I have examined the annex map consisting of  
two sheets; that the subdivision shown thereon is substantially the  
same as it appeared on the tentative map or approved alterations  
thereof; that all provisions of State law and local ordinances have  
been complied with and I am satisfied that said map is technically  
correct. Dated this 22 day of April 1959.

By G.C. Keith Deputy County Surveyor

I hereby certify that I am a Licensed Land Surveyor of the State of  
California; that this map correctly represents a survey made under  
my supervision during October 1958, that all monuments shown thereon  
actually exist and their positions are correctly shown.

G.K. Sanborn  
Licensed Land Surveyor No. 2344

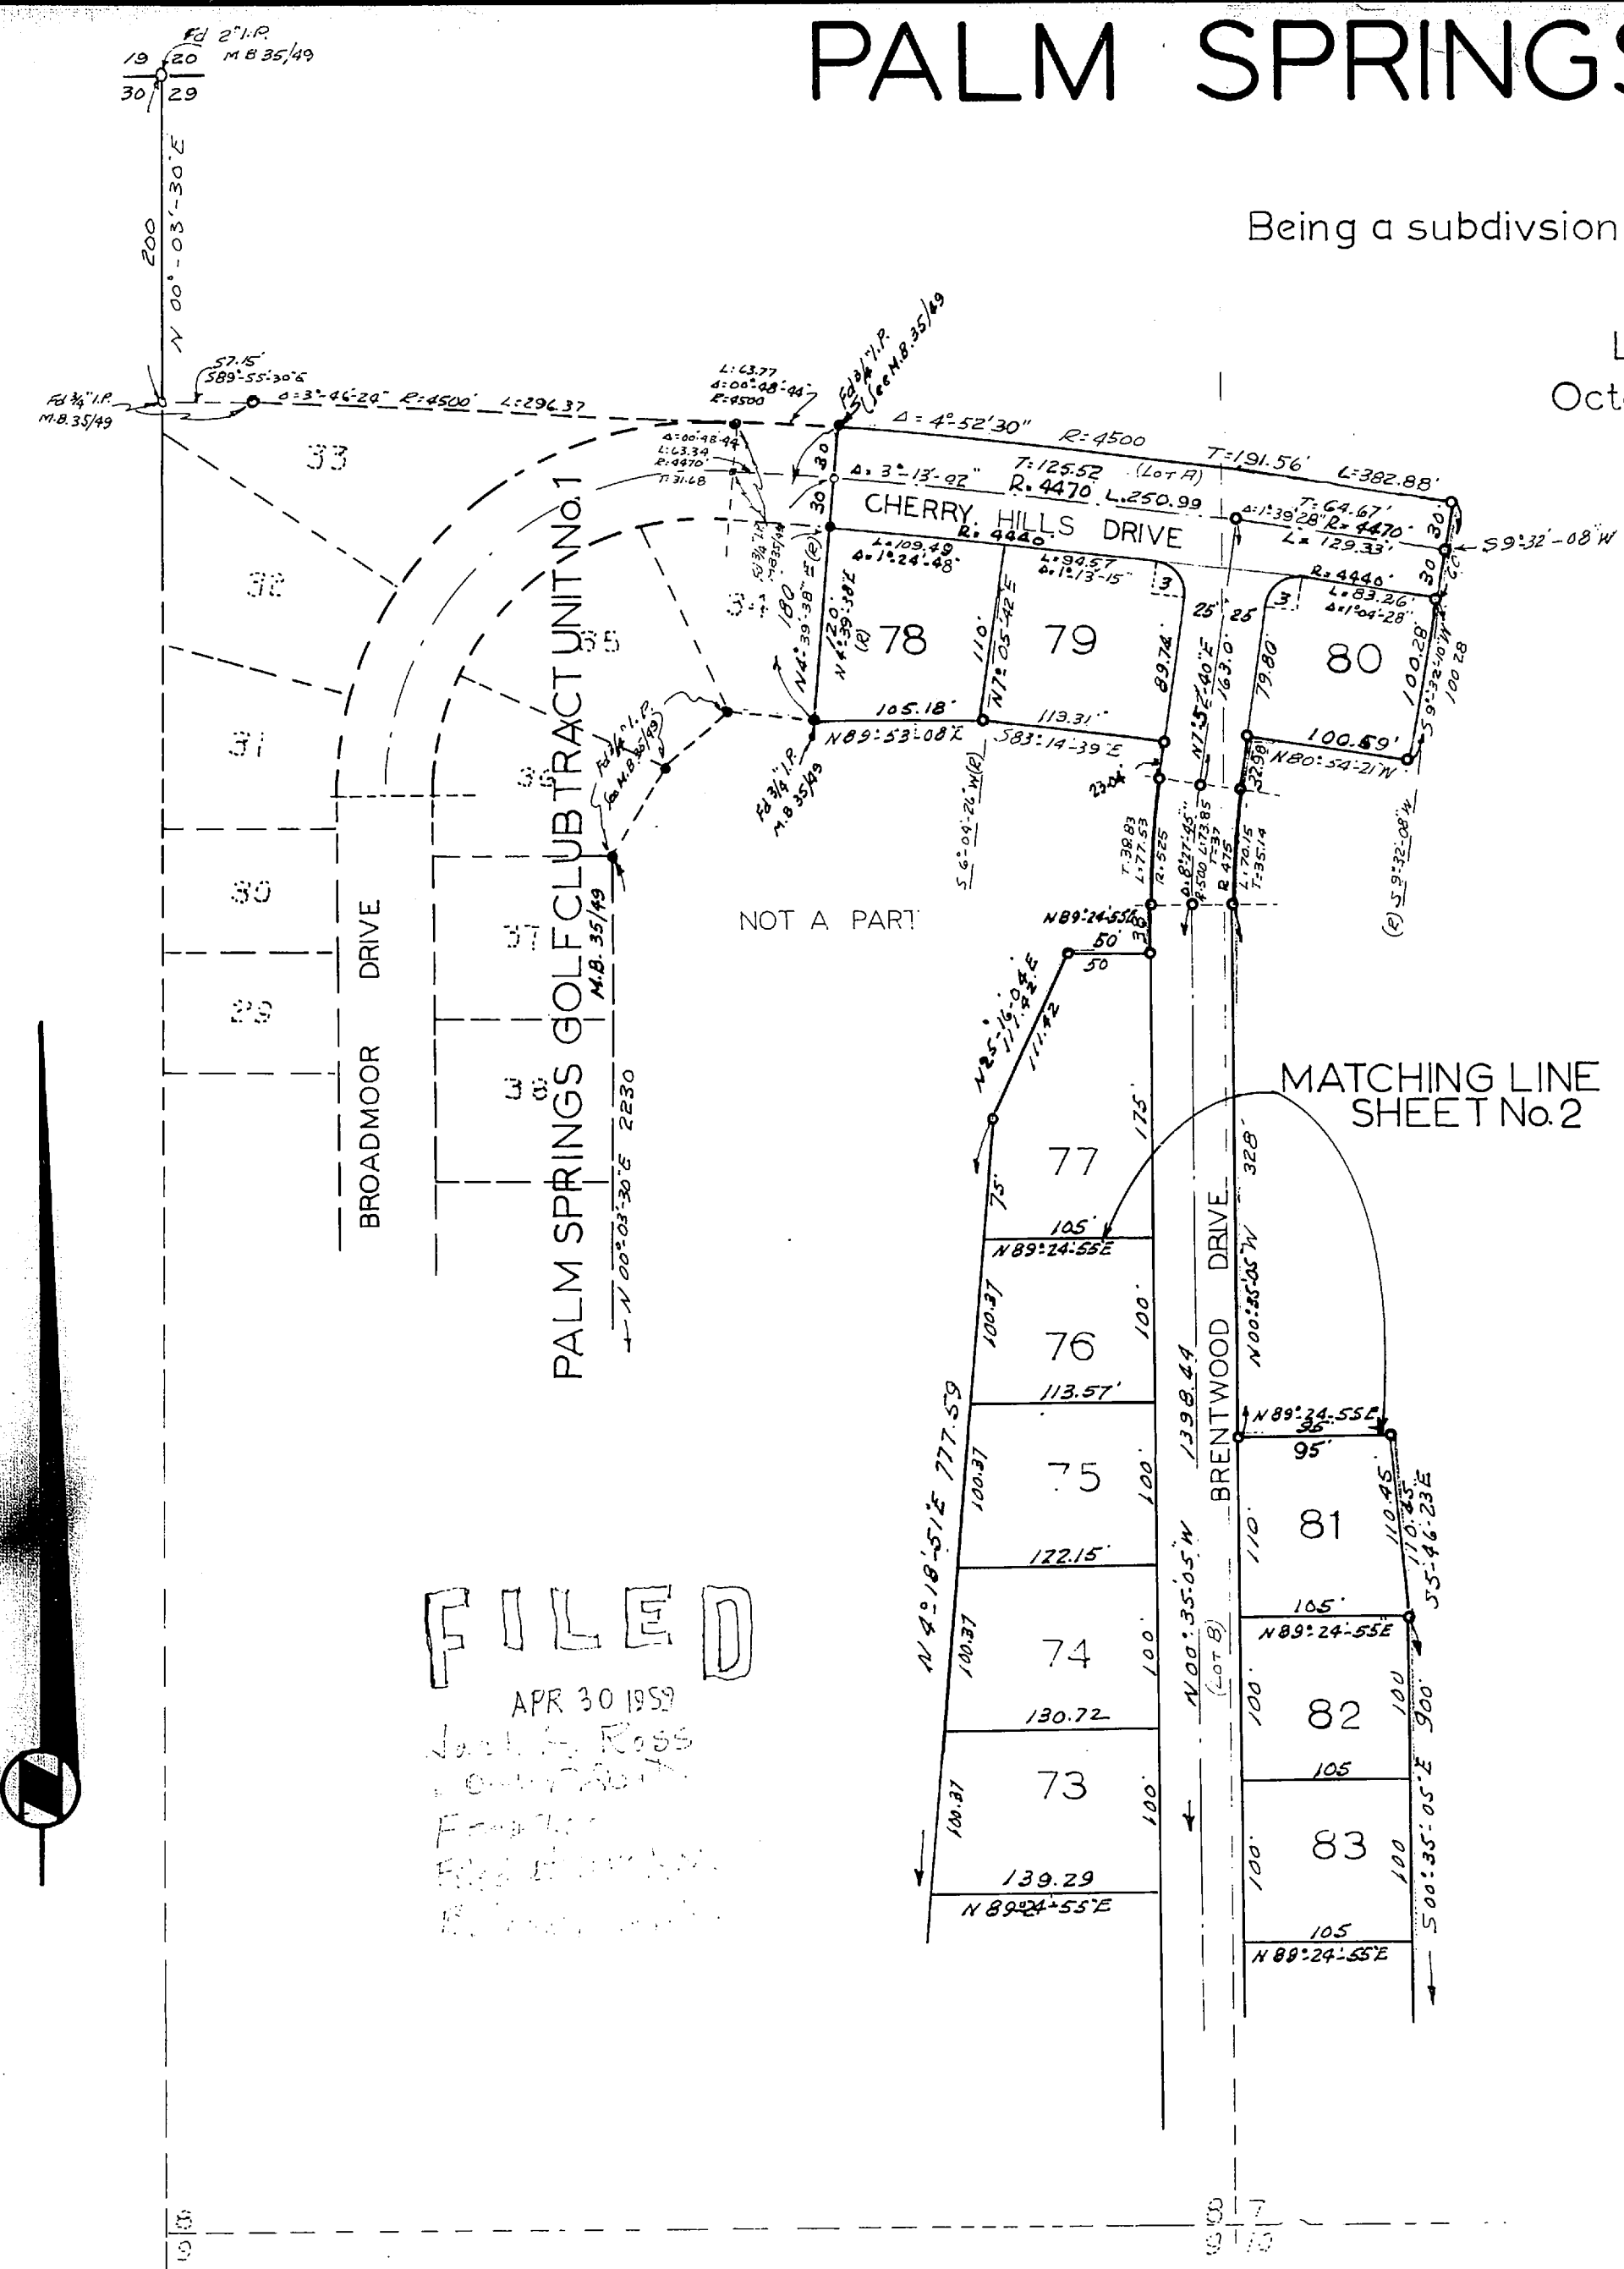

NOTE:-  
This subdivision covers portions of Lots 7-8-9-10-23-24 of  
Section 29, T.4 S.R.5 E., Palm Valley Colony Lands as Recorded in  
Map Book 14, Page 652, Records of San Diego County, California.

NOTE:-  
All utilities to be underground and in streets.  
Building setback line to be 25 feet from front Property Line.

NOTE:-  
Bearings are derived from the center line of Waverly Drive  
(S 70°-00' E) as shown on map of Palm Springs Golf Club Tract  
Unit No.1, M.B. 35/49 Riverside County Records.  
o Denotes 3/4" iron pipes set unless otherwise shown tagged L.S.2344.  
2x2" Redwood stakes set at all lot corners, tagged L.S.2344.

I hereby certify that a bond in the sum of \$ 700.00 has been executed and filed  
with the approved by the Board of Supervisors of the County of Riverside, State of  
California, conditioned upon the payments of all taxes, State, County, Municipal or  
local and all special assessments collected as taxes, which at the time of filing  
of this map with the County Recorder are a lien against the property, but not  
yet payable. Dated this 27 day of April 1959.

NOTE—

This subdivision covers portions of Lots 6, 7, 10 & 11 of Section 29 T.4 S., R.5 E., PALM VALLEY COLONY LANDS as Recorded in Map Book 14, Page 652, of the Records of San Diego County, California.

<b>NAME</b>	Racquet Club Road Estates	Map # 57
<b>DATE</b>	1958	
<b>DEVELOPER</b>	Alexander Construction Company	
<b>BOUNDARY</b>	Francis Drive to the north, the south side of Glen Circle and Via Escuela to the south, Avenida Caballeros south of Racquet Club Road, and Aurora Drive north of Racquet Club Road; the western boundary extends almost to Indian Canyon Drive.	
<b>ARCHITECT</b>	Palmer & Krisel	
<b>DEVELOPMENT HISTORY</b>	<p>Racquet Club Road Estates (1958-61, Palmer &amp; Krisel) was by far the largest Palm Springs development by the Alexanders. It was developed in six phases and was bordered by Francis Drive to the north, the properties fronting the south side of Glen Circle and Via Escuela to the south, Avenida Caballeros south of Racquet Club Road, and Aurora Drive north of Racquet Club Road; the western boundary extends almost to Indian Canyon Drive. At the outset of the project, the Alexanders constructed a storage warehouse on West San Rafael Drive at North Puerta del Sol (designed by Palmer &amp; Krisel). The warehouse was a key factor in the success of the Alexanders' operation: to avoid delays, subcontractors were required to store all construction materials there before construction began.</p> <p>The irregularly-shaped development (punctuated by Victoria Park and a school) was first developed at the northwest end, then the southeast, then the southwest, and finishing in the summer of 1960 to the northeast – just in time for the beginning of the 1960-61 season. In May of 1958, the Alexanders purchased a forty-acre site from the Bureau of Indian Affairs “near the Racquet Club” which may have been the portion of the development east of Victoria Park School.<sup>179</sup> The design employed a series of streets and cul-de-sacs of 100-foot wide lots. Once again, the Alexanders turned to Palmer &amp; Krisel for Mid-century Modern post-and-beam designs. In the sales brochure, they were billed as the “nationally famous architectural firm of Palmer &amp; Krisel.”<sup>180</sup> Of course, proximity to the legendary Racquet Club and views of the mountains were also key selling points.</p> <p>Using the super-efficient square plan, Krisel devoted the full expanse of the rear of the plan to living and dining space and moved the kitchen to the center of the plan. According to author James Harlan, two basic floor plans were used at the development and two additional plans were experimented with and abandoned.<sup>181</sup> A later marketing brochure for the development shows a plan with a kitchen now integrated into the living-dining space at the rear of the plan.</p> <p>Five different rooflines (butterfly, gable, low-pitch gable, side-gable, and flat) incorporated a carport and breezeway, creating a series of long, low horizontal façades along the street. Clerestory windows captured mountain views to the west. Palmer &amp; Krisel laid out the specific combinations of floor plan and roofline on each parcel to maximize privacy and views, and to maintain an engaging visual architectural cadence.</p>

#### FINAL DRAFT-FOR CITY COUNCIL APPROVAL

## City of Palm Springs

## Citywide Historic Context Statement & Survey Findings

	<p>Model homes for the development included 325 Francis Drive and 289 Racquet Club Road (Palmer &amp; Krisel architects, interiors by Arthur Elrod, landscape design by Don Crabtree). Sales were brisk and a marketing brochure for later phases of the development read, "Here your neighbors will number among them world famous personalities in the entertainment, business and professional world – people who have complete freedom of choice."<sup>182</sup></p> <p>Racquet Club Road Estates received national attention in the architectural trade press with a feature in the June 1961 issue of <i>House and Home</i>. The development also earned several awards, including the National Home Builders Association Award of Merit in 1961.</p>

G. K. Sanborn  
Licensed Land Surveyor No. 2344

I hereby certify that a bond in the sum of \$5,000 has been executed and filed with me approved by the Board of Supervisors of the County of Riverside, State of California, conditioned upon the payment of all taxes, State, County, Municipal or local and all special assessments collected as taxes or special assessments with this map with the County Recorder are a lien against the property but not yet payable.

Dated this 27th day of September 1959.

By Donna M. Bouer Deputy  
County Clerk and ex-officio clerk of the Board of Supervisors

I hereby certify that according to the records of this office as of this date there are no liens against the property shown on the annexed map for unpaid State, County, Municipal or local taxes or special assessments collected as taxes, except taxes and special assessments collected as taxes but not yet payable.

Dated this 27th day of September 1959.

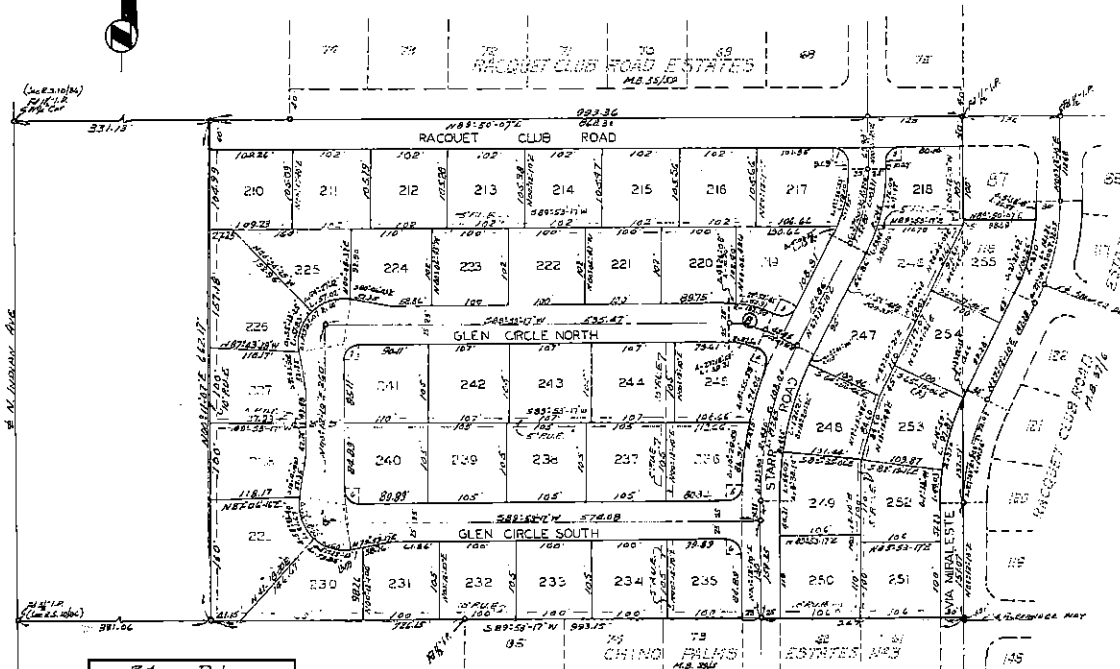

By Donna M. Bouer Deputy  
County Tax Collector

<b>NAME</b>	Alejo Palms	Map # 58
<b>DATE</b>	1959	
<b>DEVELOPER</b>	Jack Meiselman	
<b>BOUNDARY</b>	Amado Road to the north, Andreas Road to the south, Farrell Drive to the east, and Sunset Way to the west	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>In August of 1959, Meiselman purchased 20 acres in Section 14 from the Bureau of Indian Affairs and developed the area known as Alejo Palms Estates (1959, John P. “Jack” Moyer), a 57-parcel development boarded by Tamarisk Road on the north, Alejo Road on the south, Juanita Drive on the east, and the west side of Monterey Road on the west. These three-bedroom, two-bath plus family room designs were modeled on the successful Chino Palms Estates plans and were marketed for their quality construction, for being “worry-free,” and as the only Palm Springs housing development with concrete driveways.<sup>183</sup> Model homes for the development were located at 505 Monterey Road, 506 Monterey Road, and 584 Farrell Drive.<sup>184</sup> 506 Monterey Road contained a series of murals by John Morris<sup>185</sup> that were advertised to the public to increase viewing.<sup>186</sup></p>

<sup>184</sup> Advertisement, “Ask the Man Who Owns One,” *Palm Springs Life*, Pictorial Issue, 1960.

<sup>185</sup> John Morris (1920-1991) was a Palm Springs-based painter in the Impressionist style who was known as “The Picasso of Palm Springs.” He was an official combat artist during WWII. In 1957 he established an art center in Palm Springs. In 1967, he gave up teaching to devote his time to painting. His work is included in the collection of the Museum of Modern Art, the Vatican, and the *Galleries Ensemble*, Rome.

<b>NAME</b>	El Rancho Vista Estates	Map # 60
<b>DATE</b>	1960	
<b>DEVELOPER</b>	Roy Fey	
<b>BOUNDARY</b>	Vista Chino on the north, Chia Road on the south, North Gene Autry Trail on the east, and Avenida Fey on the west.	
<b>ARCHITECT</b>	Wexler & Harrison	
<b>DEVELOPMENT HISTORY</b>	<p>In 1960 Roy Fey, one of Palm Springs' most prolific developers and builders, looked eastward from the village and established the tract that would become El Rancho Vista Estates (1960-61, Wexler &amp; Harrison). The "Barbara Tract" as it is officially known on the maps, was developed in three quick, successive phases from north to south and included a street named after the developer himself, Avenida Fey. The development consisted of 92 parcels bordered by Vista Chino on the north, Chia Road on the south, North Gene Autry Trail on the east, and Avenida Fey on the west.<sup>189</sup> El Rancho Vista Estates sat virtually isolated in the northeastern part of Palm Springs.</p> <p>Seeing the potential of the Alexander Construction Company's use of modern architecture in housing tracts, Fey engaged the local architecture firm Wexler &amp; Harrison to design homes in El Rancho Vista Estates; the subdivision was the first single-family tract residential development by Donald Wexler and Richard Harrison in Palm Springs.<sup>190</sup> Similar to the Alexander developments, the architects used a variety of rooflines throughout the curved streets of El Rancho Vista Estates, including gable, butterfly, and flat to give the neighborhood a dynamic architectural cadence. Variations in concrete block patterns were also used to give each house an individual look.</p> <p>Three basic floor plans included three-bedroom, two bath and two-bedroom, two bath versions plus family rooms that were priced at \$16,995.<sup>191</sup> Moreover, buyers received a "golfing membership in the nearby Ranch Club at no additional cost."<sup>192</sup> A furnished model home was located at 3200 East Vista Chino—likely the present-day parcel located at the southwest corner of Vista Chino and Via Roberto Miguel. These homes were marketed to Los Angeles residents as part of the "Balanced Power Homes" program by the Southern California Gas Company that positioned the combined use of gas and electric power as less expensive than "All Electric Homes" that were popular in Southern California during the period.<sup>193</sup></p>	

<sup>189</sup> The adjacent parcels in the tract (780 along Chia Road and the southern cul-de-sac of Avenida Fey North) were subdivided in 1979 by Canadian-based Fairport Corporation and were not part of the original El Rancho Vista Estates.

<sup>190</sup> Fey, Wexler, and Harrison would continue to collaborate on projects over the years, including five speculative houses for Fey in the Caballeros Estates tract (1960) at 615, 681 and 755 Avenida Caballeros and 620 and 641 N. Camino Real. Fey also engaged the architects to design the clubhouse at Canyon Country Club (1961).

UNIT #1 19600

UNIT #2 19600

UNIT #3 19601

<b>NAME</b>	Golden Vista Estates	Map # 61
<b>DATE</b>	1960	
<b>DEVELOPER</b>	Alexander Construction Company	
<b>BOUNDARY</b>	W. Lures on the north, the south side of Leisure Way on the south, Via Monte Vista to the east, and Rose to the west.	
<b>ARCHITECT</b>	Palmer & Krisel	
<b>DEVELOPMENT HISTORY</b>	<p>In a new variant on the “resort stay to home sales” recipe, the Alexanders purchased the Desert Inn in 1950. In 1960, to promote their new residential venture, Golden Vista Estates, they erected a model home on the grounds of the Desert Inn.<sup>194</sup> Golden Vista Estates (1960, Palmer &amp; Krisel) expanded the Vista Las Palmas offerings to the south. Here the developers offered three floor plans: two modified versions of the Twin Palms plan and a larger four-bedroom, three bath plan that included a courtyard at the entryway.<sup>195</sup> New roof designs included an “innovative folded plate roof and a quirky barrel roof.”<sup>196</sup> A second model home for the tract was constructed at 963 Via Monte Vista.</p>	

<sup>194</sup> According to James R. Harlan, the model home was moved in 1961 to the Corner of Anza Drive and Joshua Tree Place.

Filed by City Clerk

SURON GTEE - LTC.

We hereby certify that we are the owners of the land included within the subdivision shown on the annexed map; that we are the only persons whose interests are affected by the map; and we hereby consent to the making and recording of said map and subdivision as shown within the colored border line, and we have by offer for dedication to public use and for the construction and maintenance of public utilities the five (5) foot Public Utility Easements shown on the map as 5' P.U.E., and the five (5) foot Drainage Easement as noted.

EASTWOOD ESTATES, A Partnership LAND TITLE COMPANY OF RIVERSIDE COUNTY, Trustee

William Alexander

Attorney-in-fact

STATE OF CALIFORNIA } S.S.

COUNTY OF LOS ANGELES

On this 21st day of December, 1956, before me, Thomas W. Dierke, a Notary Public in and for said County of State, personally appeared William Alexander, known to me to be the Attorney-in-fact of Eastwood Estates, a partnership, the partnership that executed the within instrument and known to me to be the persons who executed the same on behalf of the partnership, and they acknowledged to me that such partnership executed the same.

In Witness Whereof, I have hereunto set my name and affixed my official seal the day and year in this certificate first above written.

Thomas W. Dierke  
Notary Public in and for the County of Los Angeles, California.

I, Louise H. Carr, City Clerk and ex-officio clerk of the City Council of the City of Palm Springs, State of California, hereby certify that said City Council at its regular meeting held on the 11th day of September, 1956, approved the annexed map of Vista Las Palmas and accepted the foregoing declaration on behalf of the public.

In Witness Whereof, I have hereunto set my hand and affixed the official seal of the City of Palm Springs the day of September, 1956.

Louise H. Carr  
City Clerk and ex-officio clerk of the City Council of the City of Palm Springs

I hereby certify that the annexed map was duly approved by the Planning Commission of the City of Palm Springs at its regular meeting held on the 22nd day of September, 1956.

William Alexander  
Secretary

I hereby certify that I have examined the annexed map; that the subdivision shown thereon is substantially the same as it appears on the tentative map or the approved alterations thereof; that all provisions of State law and local ordinances have been complied with and I am satisfied that said map is technically correct.

Frank B. Thompson  
City Engineer

I hereby certify that I am a Licensed Land Surveyor of the State of California; that this map correctly represents a survey made under my supervision during August 1956; that all monuments shown thereon actually exist or will be in place on or before December 1st, 1956, and their positions are correctly shown.

G.K. Sanborn  
Licensed Land Surveyor 2264

I hereby certify that according to the records of this office or of this clerk there are no liens against the property shown on the annexed map for unpaid State, County, Municipal or local taxes or Special assessments collected or taxes, exceptable and special assessments levied or taxes.

Dated December 21, 1956. V.M. Hyde, Tax Collector

William Alexander Deputy

I hereby certify that a bond in the sum of \$10,000.00 has been executed and filed with and approved by the Board of Supervisors of Riverside County, State of California, conditioned upon the payment of all taxes, State, County, Municipal or local and all Special assessments collected or taxes, which at the time of filing of this map with the County Recorder are a lien against said property but not yet payable.

G.K. Sanborn  
County Clerk and ex-officio clerk of the Board of Supervisors

William Alexander Deputy

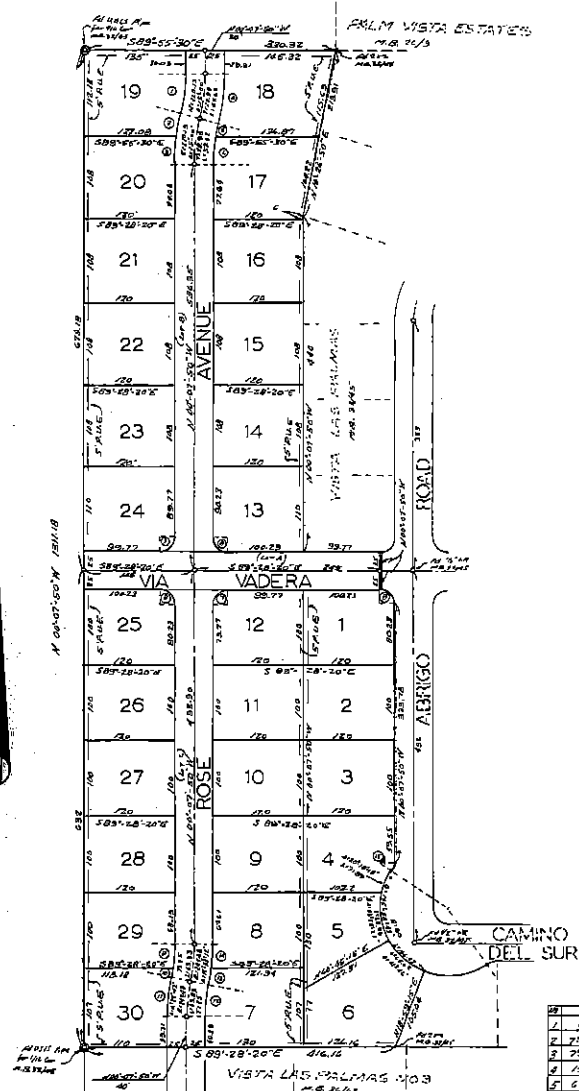

STATE OF CALIFORNIA } S.S.  
COUNTY OF RIVERSIDE

On this 20th day of December, 1956, before me, the undersigned, a Notary Public in and for said County and State, personally appeared William Alexander, known to me to be the Attorney-in-fact of the Corporation that executed the within instrument and known to me to be the persons who executed the same on behalf of the Corporation therein named, and acknowledged to me that such Corporation executed the same.

WITNESS my hand and official seal.

Thomas W. Dierke

<b>NAME</b>	Canyon Country Club	Map # 62
<b>DATE</b>	1961	
<b>DEVELOPER</b>	Golf Club Company Sales	
<b>BOUNDARY</b>		
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>The 368-parcel subdivision Canyon Country Club (1961-1965)<sup>197</sup> was developed by the Golf Club Sales Company. The clubhouse (designed by Wexler &amp; Harrison) opened on New Year's Eve 1961. It is located on Agua Caliente land and cost \$50 million. The Canyon Country Club was the culmination of efforts by Andrew Catapano and Harold M. Simon of the Palm Canyon Country Club, Inc. after years of complicated negotiations with the tribe. Ultimately, it was the largest Indian land lease in American history.<sup>198</sup></p> <p>The Golf Club Sales Company was a subsidiary of the New York-based First National Realty &amp; Construction Corporation owned by Robert Grundt. Grundt started out building residential developments on Long Island shortly after the war; he built the business to a publically held corporation and by 1963 had developed more than 4,000 apartments in fourteen buildings in Manhattan.<sup>199</sup> Grundt was a long-time winter resident of Palm Springs. In 1963, Grundt established a West Coast office in Los Angeles and began developing high rise apartment buildings along the Wilshire corridor in the Westwood neighborhood of Los Angeles, and in Phoenix, Arizona. Grundt described the process for Canyon Country Club:</p> <p style="padding-left: 40px;">Our introduction to Southern California in Palm Springs was one of the most fascinating and challenging experiences in my career. We were finally successful in arranging the first utilized lease on property owned by the Agua Caliente Indians...it was owned by no less than twenty five families and it took more than a year of negotiations before we finally concluded all the details of the master lease—which was about three inches thick....<sup>200</sup></p> <p>The custom home development was built in four phases: after the initial 168 parcels within the golf course were subdivided, parcels along the perimeter streets were subdivided annually in 1963, 1964, and 1965. To create interest in the subdivision, a "Plaza of Model Homes" was built, comprising the eight residences on Bonita Circle.<sup>201</sup> Homes in the subdivision (along Caliente Road) were designed by Stan Sackley; designs for the 1963 homes along Yosemite Drive are attributed to contractor A. Belden Crist.<sup>202</sup></p> <p>Initially, due to its remote location, Canyon Country Club had a difficult time drawing members. However, a partnership with the Palm Springs Racquet Club helped boost its popularity and draw celebrities and politicians. Famous people associated with the club include Walt Disney, who purchased properties along the second hole of the course and</p>	

<sup>197</sup> The original name of the club was "Wind Free" but it was quickly changed to Canyon Country Club.

<b>NAME</b>	Golf Club Estates	Map # 63
<b>DATE</b>	1961	
<b>DEVELOPER</b>	Alexander Construction Company	
<b>BOUNDARY</b>	North side of Par Drive to the north, the south side of Eagle Way to the south, the east side of Birdie Way to the east, and Bogie Road to the west.	
<b>ARCHITECT</b>	L.C. Major and Associates	
<b>DEVELOPMENT HISTORY</b>	<p>In the early 1960s, the Alexanders embraced the new trend of golf course-based residential development. To capitalize on general proximity to the Palm Springs Golf Club (a.k.a. Palm Springs Municipal Golf Course and the site of present-day Tahquitz Creek Golf Resort), in April of 1961 the Alexanders subdivided Golf Club Estates (1963-64, L.C. Major and Associates). Marketed as “accessible to the greens by golf cart,” ads also refer to Palm Springs as “the nation’s winter golf capital.”<sup>204</sup></p> <p>The development comprised 52 homes. Construction followed the familiar pattern of one three-bedroom floor plan and seven different designs for the exterior. Photographs indicate the plan may be the same as that used for Araby Estates. Designs for Golf Club Estates were modest, contemporary Ranch style, often with decorative concrete block fencing.<sup>205</sup></p>

Notary Public in and for said County and State.

I hereby certify that the annexed map of Tract No. 2159 was duly approved by the Planning Commission of the City of Palm Springs at its regular meeting held on the 1st day of March, 1961.

Philip Adams, City Clerk and ex-officio clerk of the City Council of the City of Palm Springs, State of California, hereby certify that said City Council at its regular meeting held on the 1st day of March, 1961, duly approved the annexed map of Tract No. 2159 and accept on behalf of the public the foregoing dedications.  
IN WITNESS WHEREOF, I have hereunto set my hand and affixed the official seal of the City of Palm Springs.

Philip Adams, City Clerk and ex-officio clerk of the City Council of the City of Palm Springs.

I hereby certify that I have examined the annexed map, that the subdivision shown thereon is substantially the same as it appeared on the tentative map or approved alterations thereof, that all provisions of State Law and local ordinance have been complied with and I am satisfied that said map is technically correct.

Philip Adams, City Engineer, R.E. 8821

I hereby certify that a bond in the sum of \$500.00 has been executed and filed with and approved by the Board of Supervisors of the County of Riverside, State of California, conditioned upon the payment of all taxes, State, County, Municipal or local and all special assessments collected as taxes, which are estimated at \$500.00.  
Dated this 23rd day of February, 1961.  
b. Philp Adams, Deputy.

Donna M. Bouer, County Tax Collector

I hereby certify that a bond in the sum of \$500.00 has been executed and filed with and approved by the Board of Supervisors of the County of Riverside, State of California, conditioned upon the payment of all taxes, State, County, Municipal or local and all special assessments collected as taxes, which are estimated at \$500.00.  
Dated this 23rd day of February, 1961.  
G. A. PEQUEGNAT, County Clerk and ex-officio clerk of the Board of Supervisors.

by ma Kella, Deputy.

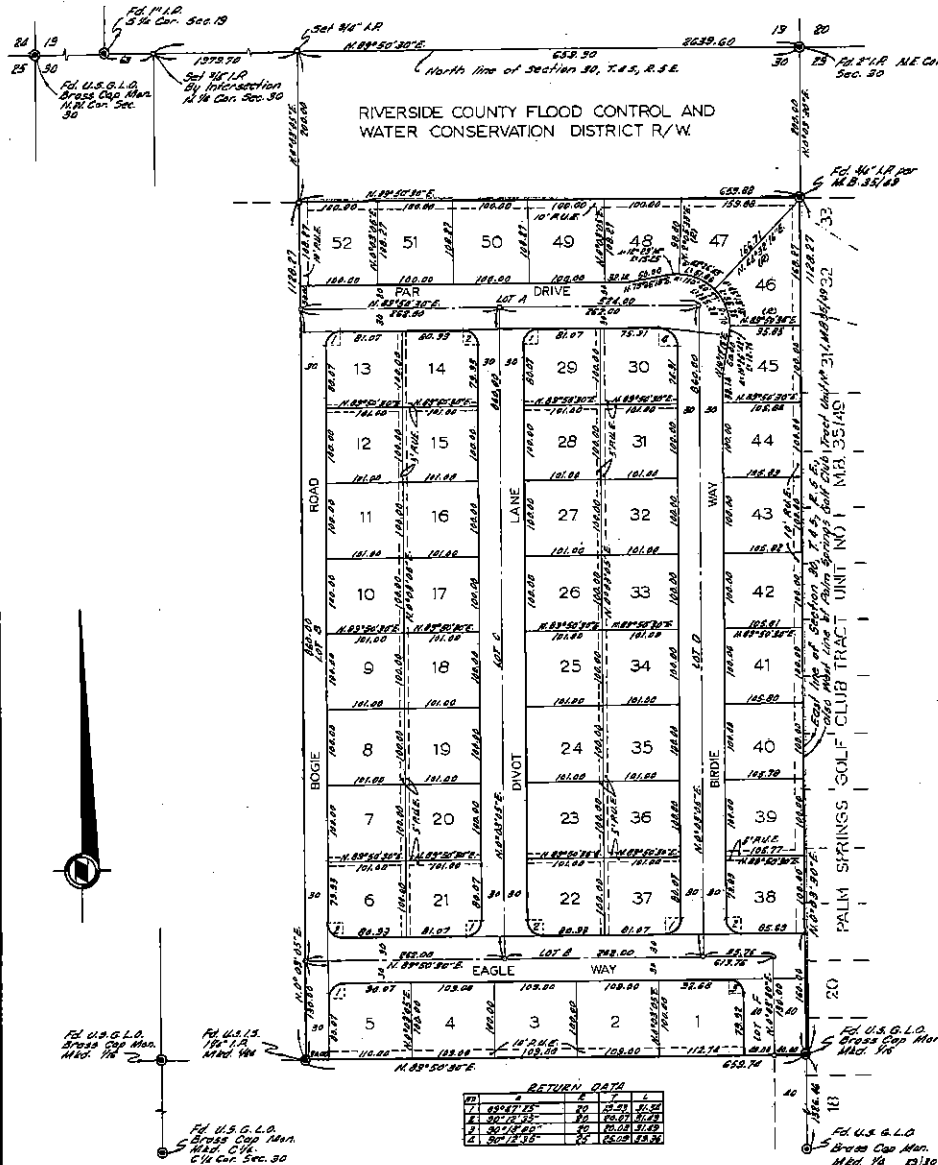

I hereby certify that I am a Licensed Land Surveyor of the State of California, that this map correctly represents a survey made under my direction during February 1961, that all monuments shown hereon actually exist or will be in place within one year after date of recording of this map.

<b>NAME</b>	Calcor Prefabricated Homes/Steel Development Houses	Map # 64
<b>DATE</b>	1961	
<b>DEVELOPER</b>	Alexander Construction Company	
<b>BOUNDARY</b>		
<b>ARCHITECT</b>	Donald Wexler	
<b>DEVELOPMENT HISTORY</b>	<p>In 1962, noted Palm Springs developers George and Robert Alexander made a foray into steel housing development. Local architect Donald Wexler approached the Alexanders with the idea for using the Calcor steel wall system he had been introduced to by Bernard Perlin, a Calcor engineer. The Alexanders decided to work with Wexler to develop seven parcels with forty-eight designated lots in the 1961 tract north of their Racquet Club subdivision with steel tract housing. As a result, the Steel Development Houses, also known as the Calcor Prefabricated Homes and Alexander Steel Homes, project was born in partnership with the Columbia-Geneva Division of U.S. Steel and Calcor (a.k.a., Rheem Manufacturing Company) of Huntington Park, California. The 1,400 square foot homes were priced at \$13,000-\$17,000 plus the cost of the land.<sup>206</sup> Landscape architecture was by David Hamilton.</p> <p>Architecturally, the use of steel freed interior walls from being load bearing and enabled an open plan. A 9 x 36 foot central core contained the kitchen and bathrooms, however the rest of the plan was flexible. Composed primarily of steel and glass, the houses feature eight-foot high glass sliding doors and stationary panels and the designs are quintessentially Mid-century Modern in style. The houses were designed with three different rooflines (flat roof, raised with clerestory, and a zig-zag folded roof plate) to give the identical pre-fabricated house development an interesting visual architectural cadence from the street.</p> <p>With the use of the Calcor system, the homes utilized a unique combination of factory prefabrication and on-site assembly or “a factory in the field.”<sup>207</sup> The cores were prefabricated in the factory at the same time that concrete slabs were poured to a steel template. Non-load bearing walls came in large sections and were bolted into the concrete slab foundation. The result was a practical construction process that required only three days to complete.</p> <p>The Alexanders planned to develop 35 of the lots with steel housing.<sup>208</sup> The first three of the seven model homes were started in late 1961 and opened to the public in March of 1962;<sup>209</sup> the remaining four houses were constructed in phase two.<sup>210</sup> During the construction of the second phase, Calcor was purchased by a larger firm and the price of steel was raised. According to Donald Wexler, “The Alexanders wouldn’t have any of it – they refused to pay more...someone had to be the pioneer. They were very powerful and</p>

<b>NAME</b>	New Riviera	Map # 65
<b>DATE</b>	1961	
<b>DEVELOPER</b>	Alexander Construction Company	
<b>BOUNDARY</b>	San Rafael Road to the north, Simms Road to the south, the east side of Starr Road to the east, Indian Canyon Way to the west	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>When further development of the steel houses were nixed due to increased cost, the Alexanders turned to selling off the rest of the subdivision with more traditional designs. This development, known as New Riviera Gardens (a.k.a., Riviera Gardens and Riviera Gardens Estates). Although the tract had been subdivided in 1961, the steel house project delayed construction in New Riviera Gardens until 1963-64.</p> <p>Referred to as “Sunshine Homes” in advertising, the homes were conventional ranch-style in design and the model was located at 370 Simms Road.<sup>213</sup> New Riviera Gardens was unique among Alexander developments in that it offered a common pool and recreation area – the Riviera Gardens Recreation Club. Usage of the pool and cabana area were limited to residents of Riviera Gardens and ownership was held by all “owner members.”<sup>214</sup> It featured “the nation’s first prefabricated pool house, manufactured by Anthony Pools, Inc., South Gate.”<sup>215</sup> The cabana, roof sections of which were constructed of colored fiberglass, contained a dressing room. The new amenity proved popular as New Riviera Gardens was sold out by July of 1965.<sup>216</sup></p>

 By Jack A. Ross County Recorder  
William W. Balogh Deputy

This survey delineated hereon is not a subdivision as defined by Section 11535 of the Business and Professions Code in that the following conditions exist:

1. The parcel of land contains less than 5 acres.
2. The parcel of land abuts dedicated streets or highways.
3. Street openings or widenings not required by the governing body in dividing the land into lots.
4. The lot design was approved by the governing body (City Council) of the City of Palm Springs at the regular meeting held on the 13th day of October 1960.
5. All parcels shown on this map are for the purpose of defining an area of occupancy, and all said parcels have an unrestricted right of access to a dedicated public street.

<b>NAME</b>	Green Fairway Estates	Map # 70
<b>DATE</b>	1964	
<b>DEVELOPER</b>	Alexander Construction Company	
<b>BOUNDARY</b>	Easternmost streets of the Palm Springs Golf Club subdivision: Pebble Beach Drive and Lakeside Drive.	
<b>ARCHITECT</b>	Wexler & Harrison	
<b>DEVELOPMENT HISTORY</b>	<p>In early 1964, Robert and George Alexander subdivided the easternmost streets of the Palm Springs Golf Club subdivision: Pebble Beach Drive and Lakeside Drive.<sup>228</sup> Their development consisted of 55 parcels that they named “Green Fairway Estates.” In marketing materials and advertising, the Alexanders turned the lack of exclusivity associated with being on a public (vs. private) golf course into a selling point: “because it is a municipal course, there are no membership charges – only low green fees when you play.”<sup>229</sup> Other selling points included “golf-course living...with a golf course as your backyard,” a “bi-functional floor plan” with “quiet areas separated from active living area,” and oversized garages to accommodate an electric golf cart.<sup>230</sup></p> <p>For the design of these homes, the Alexanders worked with Wexler &amp; Harrison, who designed a three-bedroom and a four-bedroom plan along with nine different exterior designs. In plan, the designs are identical and divided into two distinct pavilions: one public and one private linked by a central entry. The four-bedroom plan includes the simple addition of another bedroom and bathroom completing the square of the public pavilion.</p> <p>Six of the nine exterior designs reflect a simple Mid-Century Modern style (Gleneagles, St. Cloud, Wentworth, Hague, Maracaibo, and St. Andrews plans); there were three more “exotic” designs that evoke resort destinations (the Hawaiian-influenced Belhi and Royal Singapore models, as well as the eclectic Southwestern/Tunisian style Capilano). With such a high ratio of designs to developed units (6:1), the streets of Green Fairway Estates resembled a custom home development instead of a standardized tract. According to Wexler, it was his architectural partner Richard Harrison who “provided the tropical touch.”<sup>231</sup> The designs also prominently feature stone masonry accents.</p>	

<sup>228</sup> Green Fairway Estates was one of the last subdivisions built by the Alexanders before their tragic death in a plane crash in November of 1964.

<b>DATE</b>	1964	
<b>DEVELOPER</b>	Johnny Dawson	
<b>BOUNDARY</b>	4100 E. Seven Lakes Drive	
<b>ARCHITECT</b>	Richard Harrison	
<b>DEVELOPMENT HISTORY</b>	<p>One of the most distinguished residential golf communities in the city of Palm Springs was Seven Lakes Country Club Estates (1964, Richard Harrison) at 4100 E. Seven Lakes Drive. A Johnny Dawson-owned and built venture, this self-contained, multi-million dollar development consisted of 400 condominium units on 120 acres built around an 18-hole course. The attached buildings are Mid-century Modern in style; they are low profile, rectilinear, flat-roofed buildings placed at angles throughout the course to capture views of putting greens, mountains, and the course's namesake seven lakes. The units were available in one-bedroom and two-bedroom models. Images of Velma Dawson's residence (interior designer, artist, creator of <i>Howdy Doody</i> and wife of the developer Johnny Dawson) were published in <i>House Beautiful</i>. Seven Lakes Country Club Estates also contained a clubhouse (1965, William F. Cody), restaurant, and a swimming pool and sauna for each group of condominiums.</p>

On this 30 day of July 1968 before me the undersigned, a Notary Public in and for said County and State, personally appeared Ione Pete Mendez known to me to be the Guardian of the Estate of Lois Marie Pete, and known to me to be the person whose name is subscribed to the within instrument and acknowledged that she executed the same as such Guardian.

Witness my hand and official seal.

Kathryn K. Greaves  
Notary Public in and for  
said County and State

My Commission expires

<b>NAME</b>	Smoke Canyon Estates	Map # 72
<b>DATE</b>	1964	
<b>DEVELOPER</b>	R.M. Myer and Victor Koozin	
<b>BOUNDARY</b>	Caliente Drive to the north, the southern side of Madrona Drive to the south, Cadiz Circle to the east, and Canyon Country Club to the south. It also included the east and west sides of Toledo Avenue to the south, Sierra Way to Madrona and is inclusive of Chico Drive, Tulare Drive, Lobo Way, Maricopa Drive, Bolero Circle, Concha Circle, Cabildo Circle, Toledo Circle, Cadiz Circle and Ledo Circle.	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>Smoke Canyon Estates (Tract 2812 and Tract 3137) was subdivided in 1964 by two San Fernando Valley-based developers, R. M. Myer and Victor T. Koozin. Tract 2812, subdivided and developed first, was a 55-parcel tract. The 100-parcel Tract 3137 was subdivided in early 1965. As described by the developers, the area was “transformed into a lush and beautiful landscape” through the planting of 2,200 palm trees, 4,500 specimen olive trees, and hundreds of shrubs and flowers.<sup>232</sup> The neighborhoods were also populated with large desert boulders and Colorado River stone to simulate dry riverbeds on front lawns.</p> <p>Smoke Canyon Estates consisted of five four-bedroom, three bathroom floor plans and 22 elevations with a variety of rooflines including flat, gabled, and shed. The high number of elevations for the 155-unit development contributed to neighborhood’s appearance as custom homes. Home features included a step-down wet-bar, outdoor built-in barbecue, Roman tub in master bath and private, and enclosed front patios. In 1965, the sales office was located at 1449 Madrona Drive. By 1965, it was located at 1911 Cadiz Circle.</p> <p>R. “Mike” Myers (1914-2007) and Victor T. Koozin (b. 1914) were active real estate developers in the Encino area of the San Fernando Valley during the early 1960s.<sup>233</sup> Projects included the rezoning and development of seven acres of Ventura Boulevard near Louise Avenue as well as the development of a professional building. Myers’ residential development activities included apartment houses in Los Angeles. Myers and Koozin were both active in the Encino Chamber of Commerce, with Myers serving as its president in 1962. Koozin, the son of Russian immigrants, came to America in 1923 and settled in Seattle, Washington. In 1940, he relocated to Los Angeles as an aircraft engineer.<sup>234</sup></p>	

<sup>232</sup> “Palm Springs Tract ‘Transforms’ Desert,” *Los Angeles Times*, June 26, 1966, L19.

<sup>233</sup> The development of TR2812 was handled under the corporate name of Sunrise Estates, Inc., of which Myers and Koozin were president and secretary, respectively. This is not to be confused with the Sunrise Estates development marketed as such by the Alexander Construction Company farther to the north in Palm Springs.

<sup>234</sup> U.S. Census, 1940.

<b>NAME</b>	Southridge Estates	Map # 74
<b>DATE</b>	1965	
<b>DEVELOPER</b>	E. Allan Petty, Richard E. Rahn, William Anable	
<b>BOUNDARY</b>	Southridge Drive, just south of E Palm Canyon Drive	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>During the 1960s, Southern California residential development turned to the hillsides. As flat, convenient parcels became scarcer and engineering advances made hillside development more feasible and economical, developers increasingly looked to the hills for property. The views associated with hillside properties also made these sites more desirable for homebuilders and buyers. Southridge Estates capitalized on these trends to create an exclusive neighborhood for an elite group of Palm Springs residences. On land sold to them by realtor Russell Wade, developers E. Allan Petty, Richard E. Rahn, and William Anable established the twenty-two parcel tract (Tract 2928) in January of 1965. A burgeoning Palm Springs population had made the traditional privacy afforded the wealthy and famous residents of Palm Springs harder to manage. As a result, the guard-gated Southridge Estates appealed to those residents seeking maximum privacy.</p> <p>Advertisements for the community, which appeared exclusively in local media like the <i>Palm Springs Villager</i>, touted the “view of Palm Springs and the Coachella Valley unequaled anywhere in the desert...underground utilities, A-1 engineering of the streets and lots and proper deed restrictions.”<sup>236</sup> The first home constructed in Southridge was the Max Stoffel Residence (1961-62, Ross Patton and Duke Wild). According to the <i>Desert Sun</i>, Patton and Wild, general contractors, were “appointed by owners Richard Rahm, Alan Petty and William Anable to design and build Southridge Homes.”<sup>237</sup></p>

I hereby certify that I am a Registered Civil Engineer of the State of California; that this map, consisting of two (2) sheets correctly represents a survey made under my supervision in July, 1966; that all monuments shown herein actually exist or will be in place within one year of recording of this map, and their positions are correctly shown and are sufficient to enable the survey to be retraced and that the survey is true and complete as shown.

Frank Hamerschlag  
Registered Civil Engineer No 8630

**OWNER'S CERTIFICATE**

We hereby certify that we are the owners of the land included within the subdivision shown on the annexed map, that we are the only persons whose consent is necessary to give a clear title to said land, that we hereby consent to the making of this map and subdivision as shown within the blue border line, and that we are retained as private streets for the benefit of all the lot owners within the subdivision, their respective licensees, visitors, tenants, and servants, and successive owners of lots shown on said map within said subdivision and their respective licensees, visitors, tenants and servants, and SOUTHRIDGE DEVELOPMENT COMPANY, a limited partnership, we hereby dedicate to the City of Palm Springs for public use a right-of-way from the 21st Street to the 22nd Street, 10 feet wide, shown on the annexed map, and recognizing the fact that the steep slopes existing within the area designated will have such trail, from time to time and from place to place, to be located beyond the boundaries indicated and unnecessarily difficult to presently delineate, we do hereby agree that at no time will we act to interfere with the use of said trail for its intended purposes.

<b>NAME</b>	Orchid Tree Lane	Map # 75
<b>DATE</b>	1966	
<b>DEVELOPER</b>	Howard P. Lapham	
<b>BOUNDARY</b>	Orchid Tree Lane between Alejo Road and Amado Road	
<b>ARCHITECT</b>		
<b>DEVELOPMENT HISTORY</b>	<p>In 1966 noted local designer Howard P. Lapham (1905-2008) subdivided a single street of single-family residences on Orchid Tree Lane between Alejo Road and Amado Road.<sup>238</sup> Orchid Tree Lane Estates consisted of 22 parcels of three- and four-bedroom, two- and three-bathroom plans with family room.<sup>239</sup> These “All-Electric Homes” were marketed as part of Southern California Edison’s initiative to encourage electricity-driven living during the 1960s and featured in their advertising in 1967-68. Orchid Tree Lane Estates homes featured all-electric kitchens and air conditioning.</p> <p>The exact number of original elevation designs is currently unknown, however, the homes were marketed in ads as “individually styled.”<sup>240</sup> The Mid-Century Modern, post-and-beam model home – the “Patio Home” – was located at 314 Orchid Tree Lane.</p>	

<sup>238</sup> Pending additional research to confirm whether Lapham also provided the designs for the residences in the subdivision, and whether they were custom or tract homes.

COUNTY CLERK AND EX-OFFICIO  
CLERK OF BOARD OF SUPERVISORS

<b>NAME</b>	Canyon Estates	Map # 76
<b>DATE</b>	1969	
<b>DEVELOPER</b>	Roy Fey	
<b>BOUNDARY</b>	Sierra Way to the north, Via Estrella to the south, Toledo Avenue to the east, and Caliente Drive to the west.	
<b>ARCHITECT</b>	Charles E. DuBois	
<b>DEVELOPMENT HISTORY</b>	<p>Noted Palm Springs developer Roy Fey capitalized on the trend of residential golf course communities with Canyon Estates (1969-1972, Charles E. DuBois). The \$21 million joint venture included the Wallace Moir Group, Roy Fey Construction Co., and the Great-West Life Assurance Company of Canada.<sup>241</sup> The development included the construction of a 9-hole, 3-par executive golf course (designed by Frank Hughes), tennis courts, clubhouse, eleven swimming and therapeutic pools, and landscaped medians. Residential options included attached condominium units on the fairway as well as off-course lots for custom homes.<sup>242</sup></p> <p>The 173 condominium units consisted of attached, semi-attached, and stand-alone units. Designs included a two-bedroom, two bath and a three-bedroom, two bath model with a choice of six floor plans. They were developed in six units from the southern portion of the development northward.<sup>243</sup> The units are attached at the carport for maximum privacy. Two basic exterior designs dominate the development with variations in stone and masonry to differentiate one design from the other. Five masonry types are featured: lava stone, grey flagstone, a cream-colored flagstone, large slump brick, and brick. These treatments reflected the development's four exterior styles: Spanish, Polynesian, Contemporary and Desert Contemporary.<sup>244</sup> Each design featured a raised flat-roofed or gabled clerestory window section that provided interior light, views to the mountains and an interesting visual cadence to the neighborhood. Model homes for Canyon Estates were located on the south side of Canyon Estates Drive at the entrance to the development.<sup>245</sup></p> <p>As part of Canyon Estates, Fey also offered a limited number of "executive homes." Although not directly adjacent to the fairways, these three-, four-, or five-bedroom single-family residences offered all the amenities of Canyon Estates membership with walled lots for added privacy. These homes were on land directly adjacent to the Canyon Estates Condominiums to the north and east (Tracts 3137 and 2812). Two models for this part of the development still stand at 1937 Toledo Avenue (1970) and 1596 Canyon Estates Drive (1974).<sup>246</sup> The concept of the executive home merges condominium-style amenities with the single-family residence. The owner enjoyed all the advantages of condominium ownership including exterior maintenance and upkeep for the structure as well as the use of the nearby clubhouse, gymnasium, golf course, and tennis courts for payment of a monthly fee.</p>	

<sup>241</sup> "Moir Group Record Set During 1969," *Los Angeles Times*, April 12, 1970.

<sup>242</sup> Ad for Roy Fey's Canyon Estates, undated, [www.pscanyonestates.com/history/](http://www.pscanyonestates.com/history/) (accessed November 2014).

<sup>243</sup> The number of units is inconsistent with newspaper information that suggests that by June of 1975, 246 of the constructed 254 condominiums had been purchased.

<sup>244</sup> "New Residential Complex in Palm Springs," *The Desert Sun*, April 30, 1970, 14.

<sup>245</sup> Canyon Estates Ad, *Palm Springs Life*, December 1969, 30.

<sup>246</sup> The architect(s) of these residences is unknown at this time.

#### FINAL DRAFT-FOR CITY COUNCIL APPROVAL

## City of Palm Springs

## Citywide Historic Context Statement & Survey Findings

	In 1975, Fey expanded the development of his executive homes even further to include 26 homes in the area north of Laverne Way as Canyon Vista Estates (Tract 6839). The model home featured in advertising still stands at 1642 La Verne Way (1976). <sup>247</sup>

# Appendix C & D: Survey Findings

## OVERVIEW

The survey findings summarized here and included in the Access-based database prepared as part of this project include:

- Updated evaluations for properties that were listed in the 2014 City Historic Resources Database.
- Identification of additional properties that appear eligible for listing at the federal, state, or local levels based on the contexts and themes developed in the historic context statement; many of these are not visible from the public right-of-way, but are flagged for their potential significance pending an evaluation of historic integrity.
- Identification of potential historic districts.
- Identification of potential planning districts, which do not retain sufficient integrity for historic designation, but which may warrant special consideration in the local planning process.

The field team conducted a reconnaissance or “windshield” survey of the entire city; however, in general only those properties that appear eligible for historic designation were documented in the database. All properties and neighborhoods that were documented as part of this project were observed and photographed from the public right-of-way. A considerable obstacle in Palm Springs is that many potentially significant properties are not visible from the street. Those properties that are not fully visible, but for which there is a known historic association, were documented in the database with all available information. There are several significant subdivisions and neighborhoods, including Southridge Estates and Smoke Tree Ranch, which are not included in the survey findings as those neighborhoods are not accessible to the public. Those areas should be included in future studies, if possible.

## California Historical Resources Status Codes

Each property has been assigned the appropriate California Historical Resource Status Codes (“Status Code”) in the database. These codes are used by the California State Office of Historic Preservation to reflect designations or eligibility for the National Register of Historic Places, the California Register of Historical Resources, and for local designation.

A list of all status codes established by the California Office of Historic Preservation is included below. In general, the status codes applied by HRG in this survey are as follows:

- **1S:** Individual property listed in National Register (NR) by the Keeper. Listed in the California Register (CR).
- **2S:** Individual property determined eligible for the NR by the Keeper. Listed in the CR.
- **3S:** Appears eligible for NR as an individual property through survey evaluation.

FINAL DRAFT – FOR CITY COUNCIL APPROVAL

**City of Palm Springs**

**Citywide Historic Context Statement & Survey Findings**

HISTORIC RESOURCES GROUP

- **3D:** Appears eligible for NR as a contributor to a NR eligible district through survey evaluation.
- **3B:** Appears eligible for NR both individually and as a contributor to a NR eligible district through survey evaluation.
- **3CS:** Appears eligible for CR as an individual property through survey evaluation.
- **3CD:** Appears eligible for CR as a contributor to a CR eligible district through a survey evaluation.
- **3CB:** Appears eligible for CR both individually and as a contributor to a CR eligible district through a survey evaluation.
- **5S3:** Appears to be individually eligible for local listing or designation through survey evaluation.
- **5D3:** Appears to be a contributor to a district that appears eligible for local listing or designation through survey evaluation.
- **5B:** Locally significant both individually (listed, eligible, or appears eligible) and as a contributor to a district that is locally listed, designated, determined eligible or appears eligible through survey evaluation.
- **6L:** Determined ineligible for local listing or designation through local government review process; may warrant special consideration in local planning.
- **6Z:** Found ineligible for local designation through survey evaluation.
- **7R:** Identified in reconnaissance level survey: not evaluated. (This was used for properties that are not visible from the public right-of-way and therefore need additional information in order to complete the evaluation.)

#### INDIVIDUALLY SIGNIFICANT PROPERTIES

The list of properties evaluated as individually eligible for historic landmark designation is representative of all periods of development in Palm Springs, but is largely composed of residential buildings constructed between the 1930s and 1969. These include intact examples of early residences that are scattered throughout pre-World War II subdivisions in the city, along with notable examples of early- and mid-20<sup>th</sup> century architectural styles, many of which were designed by prominent local architects.

Commercial properties found individually eligible for historic landmark designation represent a range of development periods, building types, and architectural styles. These properties document the growth of the tourism industry in the region, as well as local businesses serving the commercial needs of the community. Many of the earliest extant commercial properties are clustered in the City's central business district; many of the prominent early examples have already been designated individually or as part of the Las Palmas Business Historic District. Properties developed along the commercial corridor created by Palm Canyon and Indian Canyon Drives, including a number of roadside lodging properties, represent the increasing importance of automobile travel during the 20<sup>th</sup> century. A small number of civic or institutional properties from both the pre- and post-World War II periods were also found to be individually eligible for historic designation.

A list of individual properties that were evaluated as part of this survey (and are therefore documented in the database) is included in the list in Appendix C.

**HISTORIC AND PLANNING DISTRICTS**

The survey identified nine potential historic districts that meet the registration requirements for listing at the federal, state, or local levels. For each district, individual properties were evaluated as contributors or non-contributors based on whether they were constructed during the period of significance, and whether they retain sufficient historic integrity to convey their significance as part of the district. The identified historic districts are:

1. Caballeros Estates
2. Deep Well Ranch
3. El Rancho Vista
4. Las Palmas Summit
5. Racquet Club Road Estates
6. Sunmor / Enchanted Homes
7. Twin Palms
8. Vista Las Palmas
9. Vista Santa Rosa

In addition, there are four pre-World War II subdivisions that do not retain sufficient integrity for designation as historic districts but represent an early period of the city's residential development and contain important features that should be considered for local planning purposes. For these potential planning districts, standard practice is not to identify contributors and non-contributors; instead, the overall character of the neighborhood and any important planning features are described for future consideration. The identified planning districts are:

1. Indian Trail
2. Las Palmas Estates
3. Merito Vista
4. Movie Colony

Documentation of the potential historic and planning districts is included in Appendix D.

**1 Properties listed in the National Register (NR) or the California Register (CR)**

- 1D Contributor to a district or multiple resource property listed in NR by the Keeper. Listed in the CR.
- 1S Individual property listed in NR by the Keeper. Listed in the CR.
- 1CD Listed in the CR as a contributor to a district or multiple resource property by the SHRC
- 1CS Listed in the CR as individual property by the SHRC.
- 1CL Automatically listed in the California Register – Includes State Historical Landmarks 770 and above and Points of Historical Interest nominated after December 1997 and recommended for listing by the SHRC.

**2 Properties determined eligible for listing in the National Register (NR) or the California Register (CR)**

- 2B Determined eligible for NR as an individual property and as a contributor to an eligible district in a federal regulatory process. Listed in the CR.
- 2D Contributor to a district determined eligible for NR by the Keeper. Listed in the CR.
- 2D2 Contributor to a district determined eligible for NR by consensus through Section 106 process. Listed in the CR.
- 2D3 Contributor to a district determined eligible for NR by Part I Tax Certification. Listed in the CR.
- 2D4 Contributor to a district determined eligible for NR pursuant to Section 106 without review by SHPO. Listed in the CR.
- 2S Individual property determined eligible for NR by the Keeper. Listed in the CR.
- 2S2 Individual property determined eligible for NR by a consensus through Section 106 process. Listed in the CR.
- 2S3 Individual property determined eligible for NR by Part I Tax Certification. Listed in the CR.
- 2S4 Individual property determined eligible for NR pursuant to Section 106 without review by SHPO. Listed in the CR.
- 2CB Determined eligible for CR as an individual property and as a contributor to an eligible district by the SHRC.
- 2CD Contributor to a district determined eligible for listing in the CR by the SHRC.
- 2CS Individual property determined eligible for listing in the CR by the SHRC.

**3 Appears eligible for National Register (NR) or California Register (CR) through Survey Evaluation**

- 3B Appears eligible for NR both individually and as a contributor to a NR eligible district through survey evaluation.
- 3D Appears eligible for NR as a contributor to a NR eligible district through survey evaluation.
- 3S Appears eligible for NR as an individual property through survey evaluation.
- 3CB Appears eligible for CR both individually and as a contributor to a CR eligible district through a survey evaluation.
- 3CD Appears eligible for CR as a contributor to a CR eligible district through a survey evaluation.
- 3CS Appears eligible for CR as an individual property through survey evaluation.

**4 Appears eligible for National Register (NR) or California Register (CR) through other evaluation**

- 4CM Master List - State Owned Properties – PRC §5024.

**5 Properties Recognized as Historically Significant by Local Government**

- 5D1 Contributor to a district that is listed or designated locally.
- 5D2 Contributor to a district that is eligible for local listing or designation.
- 5D3 Appears to be a contributor to a district that appears eligible for local listing or designation through survey evaluation.
- 5S1 Individual property that is listed or designated locally.
- 5S2 Individual property that is eligible for local listing or designation.
- 5S3 Appears to be individually eligible for local listing or designation through survey evaluation.
- 5B Locally significant both individually (listed, eligible, or appears eligible) and as a contributor to a district that is locally listed, designated, determined eligible or appears eligible through survey evaluation.

**6 Not Eligible for Listing or Designation as specified**

- 6C Determined ineligible for or removed from California Register by SHRC.
- 6J Landmarks or Points of Interest found ineligible for designation by SHRC.
- 6L Determined ineligible for local listing or designation through local government review process; may warrant special consideration in local planning.
- 6T Determined ineligible for NR through Part I Tax Certification process.
- 6U Determined ineligible for NR pursuant to Section 106 without review by SHPO.
- 6W Removed from NR by the Keeper.
- 6X Determined ineligible for the NR by SHRC or Keeper.
- 6Y Determined ineligible for NR by consensus through Section 106 process – Not evaluated for CR or Local Listing.
- 6Z Found ineligible for NR, CR or Local designation through survey evaluation.

**7 Not Evaluated for National Register (NR) or California Register (CR) or Needs Revaluation**

- 7J Received by OHP for evaluation or action but not yet evaluated.
- 7K Resubmitted to OHP for action but not reevaluated.
- 7L State Historical Landmarks 1-769 and Points of Historical Interest designated prior to January 1998 – Needs to be reevaluated using current standards.
- 7M Submitted to OHP but not evaluated - referred to NPS.
- 7N Needs to be reevaluated (Formerly NR Status Code 4)
- 7N1 Needs to be reevaluated (Formerly NR SC4) – may become eligible for NR w/restoration or when meets other specific conditions.
- 7R Identified in Reconnaissance Level Survey: Not evaluated.
- 7W Submitted to OHP for action – withdrawn.

277	E	Alejo	Rd	1965	Yes		5S3	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). It is significant as a good example of Mid-century Modern multi-family residential architecture. It exhibits quality of design and distinctive features, including the flat roof with cantilevered canopies, concrete and metal screens, and decorative fascia.	As a result of increased demand for housing, post-World War II multi-family residential development in Palm Springs took a variety of forms including garden apartments, large low-rise multi-building communities (including early condominium projects), split-level attached townhomes, and attached and semi-attached residences in clusters as small as two and as many as eight. In virtually every configuration, the focus of the design was around the pool (or pools as the scale of the developments increased). Numerous examples from the postwar period are associated with significant architects, designers, or developers. The 57-unit Villa Alejo is a Mid-century Modern-style building on a 2 3/4-acre site containing one- and two-bedroom units and four 3,000 square foot penthouses. The square-shaped plan wrapped around landscaped grounds with mineral pool, gymnasium, putting green, paddle tennis, ping pong, shuffle board, and other recreational facilities. Decks and patios of the units open onto the interior courtyard. Villa Alejo was developed by Meyer and Koozin.
1148	E	Alejo	Rd	1947		77	5S1	Designated, did not re-evaluate. (HSPB-77).	
1555	E	Alejo	Rd	1965	Yes		5S3	This property is significant as an excellent example of Late Modern/Expressionist ecclesiastical architecture by noted Southern California church designer Hal C. Whittemore. It features quality of design and distinctive details including bold geometric volumes, concrete wall planes with overlapping edges, and a leaded, stained glass wall.	The population growth in Palm Springs accelerated in the 1950s, bringing a demand for civic and institutional necessities such as schools, religious buildings, libraries, museums, a city hall and police headquarters, as well as offices, stores, and housing. Usually designed by local architects, these buildings often reflected the progressive symbolism of Modernism. United Methodist Church was designed by architect Hal C. Whittemore. Hal Case Whittemore was a Los Angeles-based architect who specialized in church architecture. During World War II, Whittemore served in the aviation division of the US Navy. After the war, he attended the University of Michigan, where he studied architecture. After graduation, he moved to California and set up practice in 1955. Between 1960 and 1962, he formed a brief partnership with Judson Wright Pittam, AIA. Whittemore is best known for the Bel Air Presbyterian Church (1961), for which he received a Merit Award from the National Conference on Church Architecture. Other works include La Tijera United Methodist Church (1958), Presbyterian Church of Pacific Palisades (1961), Trinity United Presbyterian Church (1968) in Santa Ana, and the North Valley YMCA (1969). In 1962, Whittemore’s design for the “Skychalet,” a do-it-yourself A-frame kit home, was featured at the 1962 Los Angeles Home Show and covered generously in the Los Angeles Times. For the United Methodist Church, J.B. Thompson created the cast metal cross in the reflecting pool; the stained glass window was created by Jos Maes Stained Glass. (Source: umpcs.org)
151	W	Alejo	Rd	1930		15	5S1	Designated, did not re-evaluate (HSPB-15).	Designed by Albert Martin, architect of Los Angeles City Hall. The land was purchased from the Southern Pacific Railroad. John F. Kennedy attended mass here when visiting Palm Springs. In addition to JFK, New York mayor James J. Walker also worshipped here during his 1931 stay at The Willows.
421	W	Alejo	Rd	1930			5S3	This property is significant as the former gate lodge to Ojo del Desierto. Ojo del Desierto (HSPB-19 and listed in the National Register of Historic Places) was the winter home of oilman Thomas O’Donnell, a Desert Inn regular, and his wife Dr. Winnifred Willis Jenney. Constructed in 1925 on the hillside above the Desert Inn, Ojo del Desierto was designed by William Charles Tanner, who was simultaneously working on the Desert Inn, and built by Alvah Hicks on land that had been owned by Nellie Coffman. It is also significant as the headquarters of the Committee of Twenty-Five, an important local institution that has been housed in the gatehouse since 1948.	Built as the gate lodge to the Thomas A. O'Donnell Estate, Ojo Del Desierto, the lodge was occupied from 1927 (or earlier) until 1946 by John Kline and his family. A close friend and former chauffeur of Mr. O'Donnell, Kline became the manager of the Desert Golf Course, which he superintended for decades until his death at 77 in 1958. In 1948, the gate lodge was converted into a private club, The Committee of Twenty-Five, which continues to lease the property. The Committee of Twenty-Five's member did, and continues to, include some of the foremost members of the desert community as well as figures of national and international prominence. The Committee of Twenty-Five has hosted presidents Eisenhower, Nixon, and Ford as well as educators, actors, scientists, corporate leaders, political figures, military, and aviation giants. Senator Joe McCarthy; General Jimmy Doolittle; aviatrix Jackie Cochran; Ambassador Walter Annenberg; Merv Griffin; Arnold Palmer; T. Boone Pickens, among others, have all been guests of the Committee of Twenty-Five. (via Steve Vaught) Note: Alejo Road was known as North Street until 1930.

447	W	Alejo	Rd	1925		19	5S1	Designated, did not re-evaluate (HSPB-19 and listed in the National Register of Historic Places).	William Charles Tanner was an artist and draftsman based first in Riverside and then Hollywood, who was not a licensed architect but who managed to secure some of the most important projects in Palm Springs in the 1920s, including the revamped Desert Inn andOjo del Desierto (“Eye of the Desert”). Ojo del Desierto (HSPB-19 and listed in the National Register of Historic Places), the winter home of oilman Thomas O’Donnell, a Desert Inn regular, and his wife Dr. Winnifred Willis Jenney, is one of the best examples of the Spanish and Mediterranean Revival in Palm Springs. Constructed in 1925 on the hillside above the Desert Inn, Ojo del Desierto was designed by Tanner, who was simultaneously working on the Desert Inn, and built by Alvah Hicks on land that had been owned by Nellie Coffman. The house was built of reinforced concrete, clad in plaster to resemble adobe, and topped with a clay tile roof. Cantilevered wood balconies shield the house from the sun, and French doors open to tiled patios and a large stone terrace with a commanding view over the city. The interior features tile floors, hooded fireplaces, exposed wood trusses, wrought iron balconies, and Mudejar-style paneled wood doors.

385		Alta Vista	Rd	1938			7R	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). The main house may be significant as an example of pre-World War II residential development, representing an important period of growth and development in the city. The 1950 guest house may be significant as the work of prominent local architect Albert Frey. However, the property is not visible from the public right-of-way; therefore, the evaluation could not be completed.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. In addition to the resort-related development for the entertainers and the neighborhoods where the wealthy industrialists started constructing their winter homes, the city has a collection of early residential neighborhoods that developed to accommodate the growing permanent settlement. This property is located in Palm Canyon Mesa (a.k.a. Tahquitz Desert Estates), a significant early development nestled in the foothills of the southern end of the city, developed by Edmond T. Fulford in 1924. Albert Frey, FAIA, earned his architectural diploma at the Institute of Technology in Switzerland in 1924. He relocated to Paris in 1928 and worked briefly for Le Corbusier before emigrating to the United States in 1930. There he formed a partnership with New York architect A. Lawrence Kocher. Although their collaboration produced only four buildings, they co-authored many articles on modern design, urban planning, and technology, and published several experimental projects for low-cost prefabricated housing. In 1934 Frey traveled to Palm Springs to supervise construction of a Modern mixed-use building for Kocher’s brother, Dr. J.J. Kocher, and eventually established himself there permanently. Always working within the precepts of the Modern movement, Frey enthusiastically experimented with new materials such as corrugated steel, trusses made of thin pipe, and concrete block, to adapt his designs to the desert climate, landscape, vegetation, and colors. He worked in partnership with local architect John Porter Clark from 1939 to 1957, and with Robson Chambers from 1959 to 1966. Frey’s architectural impact in the Coachella Valley was enormous. It is revealed in the sheer number of his built projects, including houses, schools, a fire station, churches, shopping centers, hospitals, a yacht club, restaurants, hotels, and apartments; in the prominence of some of his buildings, such as Palm Springs City Hall, the Tramway Gas Station, the Palm Springs Aerial Tramway Valley Station, and Frey Houses I and II; and in the respect for his work as reviewed in the architectural press throughout Frey’s life and, later, by scholars and architectural aficionados drawn to the Coachella Valley to celebrate Frey’s design legacy.

1070	E	Apache	Rd	1957		74	5S1	Designated, did not re-evaluate (HSPB-74).	In addition to its individual designation, this property is a contributor to the potential Twin Palms Estates Historic District. The Twin Palms Estates Historic District is eligible for listing in the National Register, the California Register, and as a local historic district. It is significant under Criterion A/1/3 for its association with residential development in the City of Palm Springs in the postwar era, reflecting an important period of growth in the city. It is the first residential development in Palm Springs by the Alexander Construction Company. It is significant under Criterion C/3/4,5 as an excellent and intact collection of Mid-century Modern residential architecture designed by prominent architects Palmer & Krisel. William Krisel also served as the landscape architect for the project.

1750	S	Araby	Dr	1960			5S3	Park Imperial South is significant as an example of post-World War II multi-family residential development, representing the early adoption of the condominium type in a resort location; and as an example of a Mid-century Modern garden apartment designed by noted architect Barry Berkus, reflecting design and planning principles from the period.	Park Imperial South (1960, B. A. Berkus and Associates) was developed by the Trudy Richards Company (the father and son developer team of Jack Weiss and Rickard L. Weiss). Advertised as a “resort home” in a “country club community,” Park Imperial South represented the Trudy Richards Company’s venture into condominium development along with its sister Palm Springs development, Park Imperial North. Exclusivity was a hallmark of Park Imperial marketing, emphasizing that the “private garden, swimming pool and lounging areas...may be used only by the owners of the individual residences and their invited guests.” As with other developments of the time, the “maintenance free” aspect and “virtually complete hotel service (maid, linen, clean up)” clearly positioned Park Imperial South for the resort home market. Further, the tax benefits of homeownership, “including use for rental income or business purposes,” emphasized the economic benefits of such an investment. For the design of Park Imperial South and North, the Weisses turned to young architect Barry Berkus. In Park Imperial South, the architect clustered units in groupings of three or four units around a central landscaped garden. Each two-bedroom+den/two-bathroom floor plan was designed for entertaining with a large living room, bar, enclosed private patio, and a garden dining court. Floor to ceiling glass windows and sliding doors looked out to the garden, while clerestory windows allowed for light and privacy. The Mid-century Modern style, post-and-beam units featured long low-lines, folded plate rooflines, and concrete block. In the design, Berkus also incorporated the emerging technology of “stress skin panels” with sheer properties permitting greater expanses of glass to be used. The last of the Park Imperial South units were completed in December of 1961. Architect Barry Alan Berkus (1935-2012) was born in Los Angeles and grew up in Pasadena, where his father ran a furniture store. After graduating from John Muir High School, he briefly studied economics at UC Santa Barbara. However, a lifelong love of drawing led him to transfer to USC’s School of Architecture, where he decided to specialize in residential design. While at USC, Berkus worked part time for L.C. Major, a prominent California housing designer. Major offered him a full-time job, but Berkus turned it down, left USC, and opened his own practice at age 21. One of Berkus’ first major clients was William Levitt, a real estate developer often called the “Father of American suburbia.” During his career, Berkus built a portfolio of 600,000 dwellings encompassing about 10,000 designs in developments across the United States, including Playa Vista in Los Angeles, Harbor View in Newport Beach, Turtle Rock Highlands, and Woodbridge Landing in Irvine.
1881	S	Araby	Dr	1972			5S3	This property is significant as an example of a post-World War II hotel, reflecting the growth of the tourism industry during the postwar era; and as an excellent example of Mid-century Modern commercial architecture and the garden apartment type. It reflects design and planning principles from the period, including the clustered organization around shared central garden with lush landscaping, flat roofs with wide overhanging eaves and cantilevered canopies; single light steel casement windows;and slumpstone party walls and exterior chimneys.	As a result of increased demand for tourist accommodations and housing, post-World War II commercial hotel/multi-family residential development in Palm Springs took a variety of forms including garden apartments, large low-rise multi-building communities (including early condominium projects), split-level attached townhomes, and attached and semi-attached residences in clusters as small as two and as many as eight. In virtually every configuration, the focus of the design was around the pool (or pools as the scale of the developments increased). Numerous examples from the postwar period are associated with significant architects, designers, or developers. CoCo Cabana (also known as Coco Cabana and Co Co Cabana) was originally constructed by Los Angeles businessman Skipper Baumgarten (1946-2008) in 1959 as a hotel. Baumgarten amassed considerable wealth in the surety bond business. His associated companies included Surety Associates Holding Company (of which he was president) and its subsidiary American Contractors Indemnity Corporation. Baumgarten was also a holder of a number of land investments including the 1983 sale of Pacific Telephone Co-workers camp to the state of California to house prison inmates. Coco Cabana consists of 31 units; in plan, the attached units are in a U-shaped configuration anchored at the southern section of the parcel with additional attached units at the center of the parcel. Walls for each unit angle slightly to provide some privacy, a necessity given the large amount of shared walls between the units. All units open onto a lushly landscaped garden area with recreational facilities including the pool and two tennis courts. The Mid-century Modern-style complex featured six floorplans of two-bedroom/two-bath and one-bedroom/one-bath plans. The simple, flat-roofed designs eliminated windows on the front facades in favor of views towards the interior gardens. Many units also had private patios enclosed by lush landscaping with mature citrus trees. Palm trees dotted the landscape throughout the property. In 1978, Coco Cabana was converted from a hotel into condominiums with the assistance of Fey’s Canyon Estates Realty. CoCo Cabana appears to have functioned as an apartment hotel well into the 1980s.
2045	S	Araby	Dr	1950			7R	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). This property may be significant as an example of pre-World War II residential development in Palm Springs, reflecting an important period of growth and transition in the city. However, it is not fully visible from the public right-of-way; therefore, additional information about its integrity is needed to complete the evaluation.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. In addition to the resort-related development for the entertainers and the neighborhoods where the wealthy industrialists started constructing their winter homes, the city has a collection of early residential neighborhoods that developed to accommodate the growing permanent settlement. This property is located in the Araby tract. In 1925, H.W. Otis and Son, owners/sub-dividers began marketing and selling “Our Occidental Araby at Palm Springs.” The 138-parcel tract of irregularly-shaped lots were intended for the development of a community that was "artistic and charming."

ADDRESS	DIR	STREET	SUFFIX	YEAR BUILT PER COUNTY/C ITY	AGUA CALIENTE INDIAN RESERVATION	HSPB NO.	2016 HRG LOCAL STATUS CODE	Statement of Significance	Notes
2275	S	Araby	Dr	1950			7R	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). It was constructed in 1926, making it one of the earliest residences in the Araby Tract. Although there appears to be a large addition, the original building is still evident. If it can be confirmed that the property is adobe construction, then due to rarity of the type, it would be eligible for historic designation.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. In addition to the resort-related development for the entertainers and the neighborhoods where the wealthy industrialists started constructing their winter homes, the city has a collection of early residential neighborhoods that developed to accommodate the growing permanent settlement. This property is located in the Araby tract. In 1925, H.W. Otis and Son, owners/sub-dividers began marketing and selling “Our Occidental Araby at Palm Springs.” The 138-parcel tract of irregularly-shaped lots were intended for the development of a community that was "artistic and charming." The house may represent a rare local example of adobe construction. Adobe construction demonstrates a continuation of indigenous building traditions that were passed down from generation to generation of craftsmen. Adobe construction used locally available resources, and was appropriate for the climate in the Southwest, staying cool in the summer and warm in the winter.
2350	S	Araby	Dr	1926			5S3	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). It is significant as an example of pre-World War II residential development, reflecting an important period of growth and transition in the city; and as the work of master builder Lee Miller.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. In addition to the resort-related development for the entertainers and the neighborhoods where the wealthy industrialists started constructing their winter homes, the city has a collection of early residential neighborhoods that developed to accommodate the growing permanent settlement. This property is located in the Araby tract. In 1925, H.W. Otis and Son, owners/sub-dividers began marketing and selling “Our Occidental Araby at Palm Springs.” The 138-parcel tract of irregularly-shaped lots were intended for the development of a community that was "artistic and charming." There are stone features on many residences in the neighborhood, including stone walls scattered throughout. This was the first house to be built in Araby Hills. It has been attributed to prominent local building Robert Lee Miller. Miller was born in Hill, Texas in 1887. After serving in World War I, Miller was trained in civil engineering, but ultimately decided to become a carpenter. In 1931, Miller moved to Palm Springs, where he worked as a subcontractor, most often working for Alvah Hicks. Miller was a skilled woodworker, and designed many of the elaborated exposed wood detailed trusses in the city’s early mansions. With no formal training, Miller studied the Spanish style through observing existing adobes and pattern books.
2500	S	Araby	Dr	1930			6L	This property is a remnant of the compound of rock houses built by Lee Miller. It is significant as an example of early residential development, and as a rare example of stone construction by master builder Lee Miller, reflecting the tradition of using local/found construction materials. There may not be sufficient historic fabric remaining for historic designation of the property; however, these remnant features warrant special consideration in the local planning process.	Adjacent to the Araby Tract, R. Lee Miller owned twenty acres of desert hillside. Miller, a civil engineer/contractor built a compound of rock houses known as “Hopi Village” in the 1920s. The distinctive, round stone R. Lee Miller Residence (c. 1925) and stone “Casa Contenta, Perle Wheeler Martin” Residence (c. 1933) were among them. Wheeler resided in the “Araby rock house” well into the late 1930s. Four extant rock structures located at the end of the present-day private drive at 2540 S. Araby Drive match historic images of the Miller Residence and the Wheeler Martin Residence. Robert Lee Miller was born in Hill, Texas in 1887. After serving in World War I, Miller was trained in civil engineering, but ultimately decided to become a carpenter. In 1931, Miller moved to Palm Springs, where he worked as a subcontractor, most often working for Alvah Hicks. After serving in World War I, Miller was trained in civil engineering, but ultimately decided to become a carpenter. In 1931, Miller moved to Palm Springs, where he worked as a subcontractor, most often working for Alvah Hicks. Miller was a skilled woodworker, and designed many of the elaborated exposed wood detailed trusses in the city’s early mansions. With no formal training, Miller studied the Spanish styles through observing existing adobes and pattern books.

ADDRESS	DIR	STREET	SUFFIX	YEAR BUILT PER COUNTY/C ITY	AGUA CALIENTE INDIAN RESERVATION	HSPB NO.	2016 HRG LOCAL STATUS CODE	Statement of Significance	Notes
210	E	Arenas	Rd		Yes		553	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). This property is significant as a cluster of Mid-century Modern style commercial buildings designed by prominent local architect Donald Wexler as a cohesive unit. They are significant as a grouping, and exhibit distinctive features including flat roofs with prominent precast channel slab concrete roofs, similar to those employed by Wexler & Harrison at the 1960 Pitt & Rosin building (105 S. Indian Canyon).	This property is erroneously listed in the City Historic Resources Database as 200 E. Arenas, which is a commercial building that has been altered (not eligible). This evaluation is for the buildings at 210-302 E Arenas Rd; 200 N Indian Canyon Dr; and 305-321 E Arenas Rd. A post-World War II surge of visitors and seasonal residents coincided with Modernism’s rise in popularity. As a result, commercial architecture in Palm Springs from this period reflected the acceptance of Modernism and expressed a wide range of Modern interpretations as it increasingly served two purposes: the need for tourist-oriented buildings for seasonal visitors, and the need for practical daily services, such as banks, shops, and gas stations for the growing population of permanent residents. Commercial development during this period consisted of both infill development in the original commercial core, and the continued northward and southward expansion of the commercial district along Palm Canyon and Indian Canyon Drives. Many commercial buildings, ranging from small, single- or multi-tenant office and retail buildings to large department stores, were designed by prominent architects of the period. This group of commercial buildings has been attributed to Donald Wexler, but it is not included in the project list in Steel and Shade: The Architecture of Donald Wexler. Donald Wexler, FAIA (1926-2015) graduated from the University of Minnesota School of Architecture in 1950. He moved to Los Angeles and worked as a draftsman for Richard Neutra before moving to Palm Springs, where he worked for William F. Cody. In 1953 Wexler formed a partnership with Richard Harrison, his co-worker in Cody’s office. Wexler and Harrison explored the possibilities of steel construction in classroom projects for the Palm Springs Unified School District (1958) and the Calcor Steel Homes project (1962). They also designed residential developments such as the Polynesian-themed Royal Hawaiian Estates (1960). After dissolving the partnership Wexler continued to develop his distinctive personal style with post-and-beam houses in wood and steel, as well as major civic and institutional projects including the Palm Springs Municipal Airport (1965) and Desert Hospital (1969-84).
200	W	Arenas	Rd	1947			553	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). It is significant as an example of post-World War II hotel development along Arenas Road, reflecting the growth of the tourism industry in the postwar era; it is one of several examples in this area designed by Los Angeles-based contractor/builder Herbert W. Burns.	A post-World War II surge of visitors and seasonal residents coincided with Modernism’s rise in popularity. As a result, commercial architecture in Palm Springs from this period reflected the acceptance of Modernism and expressed a wide range of Modern interpretations as it increasingly served two purposes: the need for tourist-oriented buildings for seasonal visitors, and the need for practical daily services, such as banks, shops, and gas stations, for the growing population of permanent residents. The post-World War II tourism boom prompted the development of a number of hotels, motels, apartment hotels, and inns to accommodate the growing demand. Most lodgings for visitors remained relatively small in scale; outdoor spaces to enjoy the sun, air, and scenery were key elements shaping these designs. There is a small enclave of properties developed by Herbert Burns along Arenas Road; these include the Four Hundred (1954, 400 W. Arenas Road), the Desert Hills (1955, 601 W. Arenas Road), the Village Manor (1957, 562 W. Arenas Road; now the Orbit In), all located on W. Arenas Road, and the Town & Desert Apartments at 370 W. Arenas Road (1947; now the Hideaway). Herbert W. Burns was a Los Angeles-based contractor-builder who relocated to Palm Springs after World War II to carry out his design/build work. Burns designed commercial and residential buildings in Palm Springs in the postwar period. Burns may be best known for his multi-family residential designs, including the Town & Desert Apartments. However, several of his Palm Springs homes were published in the Los Angeles Times including the Edith Eddy Ward/Margaret M. Ward Residence (c. 1948) and the Stuart Weiss Residence (c. 1951).
330	W	Arenas	Rd	1936 (330); 1916 (338)		59	551	Designated, did not re-evaluate (HPSB-59).	330 W Arenas: Originally two duplex apartment structures built for Francis Crocker on the grounds of the old Reginald Pole Adobe, which he had purchased in 1935. Together, Crocker turned the combined structures into the El Rincon Apartments. 338 W Arenas: One of the oldest extant houses in Palm Springs, the Reginald Pole Adobe, which is now a part of the Casa Cody Inn complex, was built in 1916 and designed by pioneer architect Harold Cody. Reginald Pole was a well known poet/playwright/lecturer with many famous friends, some of whom came to visit him at his winter home including Charles Chaplin and Madame Alla Nazimova. During the construction of the Oasis Hotel, the adobe was taken over by architect Frank Lloyd Wright Jr. It is not clear if Wright owned the adobe or merely rented it but it became known locally from that point forward as the "Frank Lloyd Wright Adobe." Opera and film star Lawrence Tibbett had an unusual history with the house. As a young man, unknown in the theatrical world, he helped build the house, digging the basement and mixing adobe for the bricks. Decades later, he would reside in the adobe after achieving fame in the grand opera and Hollywood. In 1935, the house was purchased by Francis Crocker, who incorporated it into his El Rincon Apartments property @ Cahuilla and Arenas. Still later, both properties became a part of the Casa Cody Inn. (via Steve Vaught)
370	W	Arenas	Rd	1947		90	551	Designated, did not re-evaluate (HSPB-90).	The post-World War II tourism boom prompted the development of a number of hotels, motels, apartment hotels, and inns to accommodate the growing demand. Most lodgings for visitors remained relatively small in scale; outdoor spaces to enjoy the sun, air, and scenery were key elements shaping these designs. There is a small enclave of properties developed by Herbert Burns along Arenas Road; these include the Four Hundred (1954, 400 W. Arenas Road), the Desert Hills (1955, 601 W. 400	W	Arenas	Rd	1956			5S3	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). It is significant as an example of post-World War II hotel development along Arenas Road, reflecting the growth of the tourism industry in the postwar era; and as a good example of Mid-century Modern commercial architecture. It is one of several examples in this area designed by Los Angeles-based contractor/builder Herbert W. Burns.	A post-World War II surge of visitors and seasonal residents coincided with Modernism’s rise in popularity. As a result, commercial architecture in Palm Springs from this period reflected the acceptance of Modernism and expressed a wide range of Modern interpretations as it increasingly served two purposes: the need for tourist-oriented buildings for seasonal visitors, and the need for practical daily services, such as banks, shops, and gas stations, for the growing population of permanent residents. The post-World War II tourism boom prompted the development of a number of hotels, motels, apartment hotels, and inns to accommodate the growing demand. Most lodgings for visitors remained relatively small in scale; outdoor spaces to enjoy the sun, air, and scenery were key elements shaping these designs. There is a small enclave of properties developed by Herbert Burns along Arenas Road; these include the Four Hundred (1954, 400 W. Arenas Road), the Desert Hills (1955, 601 W. Arenas Road), the Village Manor (1957, 562 W. Arenas Road; now the Orbit In), all located on W. Arenas Road, and the Town & Desert Apartments at 370 W. Arenas Road (1947; now the Hideaway). Herbert W. Burns was a Los Angeles-based contractor-builder who relocated to Palm Springs after World War II to carry out his design/build work. Burns designed commercial and residential buildings in Palm Springs in the postwar period. Burns may be best known for his multi-family residential designs, including the Town & Desert Apartments. However, several of his Palm Springs homes were published in the Los Angeles Times including the Edith Eddy Ward/Margaret M. Ward Residence (c. 1948) and the Stuart Weiss Residence (c. 1951).
458	W	Arenas	Rd				7R	This property may be significant as an example of pre-World War II residential development, representing an important period of growth and transition in the city; and for its association with important early pioneer John Chaffey. However it is not fully visible from the public right-of-way; therefore, additional information about its integrity is needed to complete the evaluation.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs through the 1920s, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. The 1930s saw Palm Springs blossom, as increasing numbers of celebrities made it their winter weekend getaway, and more development sprang up to house and entertain them. The popularity of Palm Springs with the Depression-proof movie industry surely provided more economic stability for real estate than in most other cities in the United States, and new subdivision development resumed in earnest in the mid-1930s. Now part of the Andalusian Court Inn, this property was originally the residence of pioneer real estate developer John R.E. Chaffey, who resided in the home from at least 1929 to 1942. The 1929 Sanborn shows two dwellings on the property: 458 W Arenas and what is now 460 W Arenas. By 1949, the property was converted to the El Poco Lodge, and in 1950, additional structures were added to the property. (via Steve Vaught)
529	W	Arenas	Rd	1931			5S3	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). The property represents pre-World War II residential development in Palm Springs, representing an important period of growth and transition in the city. Although it has been altered, it still conveys its historic association and therefore remains eligible for historic designation.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs through the 1920s, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. The 1930s saw Palm Springs blossom, as increasing numbers of celebrities made it their winter weekend getaway, and more development sprang up to house and entertain them. The popularity of Palm Springs with the Depression-proof movie industry surely provided more economic stability for real estate than in most other cities in the United States, and new subdivision development resumed in earnest in the mid-1930s. This property is located in the Tahquitz Park tract. In March of 1923, Pearl McCallum McManus, daughter of early Palm Springs settler John Guthrie McCallum, subdivided Tahquitz Park (colloquially known as the Tennis Club neighborhood). McManus built a Mediterranean villa-inspired home, “The Pink House” at 281 S. Tahquitz Drive (demolished) that was a noted local landmark. This property was built as a speculative house by Pearl and Austin McManus and used as a guest cottage. The McManuses built a number of speculative houses throughout their various subdivisions, and often used them as rental properties before they were sold. In the mid-1930s, the house was occupied by screenwriter Humphrey Pearson who adapted The Ruggles of Red Gap (1935) to the screen. He also wrote the screenplay for Palm Springs (1936), which starred Frances Langford and newcomer David Niven.
544	W	Arenas	Rd	1946			5S3	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). It is significant as an example of pre-World War II residential development, representing an important period of growth and transition in the city.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs through the 1920s, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. McManus built a Mediterranean villa-inspired home, “The Pink House” at 281 S. Tahquitz Drive (demolished) that was a noted local landmark. Richard F. Outcault Jr. was the son of legendary cartoonist Richard F. Outcault Sr., considered father of the modern comic strip and best remembered for "The Yellow Kid" and "Buster Brown" cartoons. Young Outcault and his sister Mary Jane were the inspiration for the Buster Brown comics. After giving his children a brindle bull terrier named "Tige," the senior Outcault was so amused by their antics he began drawing a cartoon based on them. Outcault Jr. was the model for "Buster Brown," Mary Jane became "Mary Jane" and Tige was "Tige." During the 1930s, Outcault Jr. became an important figure in village life. He formed a partnership with his brother-in-law Frank J. Pershing, relative of another famous figure, Gen. John J. Pershing, and together they built the Town House Apartment-Hotel on Belardo. Outcault was active in civic affairs, serving on the newly-incorporated city's first Planning Commission. He was also a member of the Chamber of Commerce and was a founder of the Palm Springs chapter of the Boy Scouts. His sons, Dick and John, were popular villagers as well with the boys even writing a column for the Desert Sun during their high school years. John Outcault became an architect and was responsible for numerous designs in Palm Desert. (via Steve Vaught)

296	E	Avenida Granada			Yes		5S3	Canyon View Estates is significant as an example of post-World War II multi-family residential development, representing the early adoption of the condominium type in a resort location; and as an excellent example of a Mid-century Modern garden apartment designed by prominent architects Palmer & Krisel, reflecting planning and design principles from the period.	Canyon View Estates was developed by well-known Palm Springs developer Roy Fey of Feybor, Inc. The irregularly-shaped development is bordered by San Jose Road on the north, the north side of Avenida Granada on the south, the west side of Calle Palo Fierro on the east, and Sky View Drive and South Palm Canyon Drive on the west. The 164-unit development was marketed as “Luxurious, carefree desert living in a beautifully-designed country like setting. Condominium living amid park-like gardens, expansive lawns and emerald putting greens.” The location near Canyon Country Club in the “fashionable south end” was also a selling point. Fey commissioned prominent architects Palmer & Krisel to design the development, and William Krisel was responsible for the design. Krisel remembers, “[Fey] was, of course, thinking of a multi-story apartment building, but I immediately said I didn’t think that was appropriate. I thought phasing from single-family homes to condos should be a gradual step where it really was a single-story building with your own individual front door and your own terrace and parking space, but there would be common recreational facilities.” Fey did not advertise the pedigree of his architects, preferring to build his own brand. “Prestige homes for people of prestige, who appreciate the very best. Spacious and fully carpeted, these homes are replete with custom cabinetry, all electric kitchens, private patios, individual carports and services areas—specifically developed by Roy Fey for those that enjoy carefree gracious living among gracious friends.” The architect’s original choice of materials included varied types of concrete block, stucco and glass. According to Krisel, Fey added stone veneers to the mix at the time of construction. The development was subdivided in six phases starting in 1961, with the first phase being the self-contained parcel bordered by San Jose Road on the north, Canyon Vista Drive on the south, Sierra Madre Drive on the east and Skyview Drive on the west. The first units were constructed in 1962. This early development would set the architectural agenda for the development but not the planning agenda. The first twenty-eight units were developed in cluster groups of two and four units, however, they were arranged in a typical circular plan with the pool at center and all units facing views of the lushly landscaped grounds. The remaining five phases were developed north to south. This time, however, the units were laid out using an innovative perimeter and cul-de-sac design which offered the opportunity for more units, greater privacy of those units, and a dynamic visual cadence of diagonal vistas within the interior landscaped areas. Each of these five phases/clusters also included their own private pool areas. Three of the additional five phases began in 1963, with phase four in 1964-1965, and a final phase in 1967.

888	N	Avenida Palmas		1951			7R	This property may be significant as an example of Mid-century Modern residential architecture designed by prominent architect William F. Cody. However, it is not fully visible from the public right-of-way; therefore additional information about its integrity is required to complete the evaluation.	The growing prosperity of the post-World War II years and the rise of the car culture contributed to a rapid increase in Palm Springs’ seasonal and permanent population, coinciding with the peak of Modernism’s popularity. This created a demand for both mass-produced and custom housing that afforded architects and developers the opportunity to explore and develop a wide range of architectural types and ideas, sometimes influenced by sophisticated global design trends. These conditions and the architects' talents led to the development of an exceptional group of Modern buildings which later came to be identified as "Palm Springs Modernism" or "The Palm Springs School." William F. Cody, FAIA, trained in progressive Modernism at the USC School of Architecture and graduated in 1942. During his time at USC, Cody worked with Cliff May. Following his graduation from USC, Cody apprenticed at several California firms, moving to Palm Springs in 1946. Cody was first employed as staff architect for the Desert Inn Hotel before setting out on his own to design the Del Marcos Hotel (1947). A subsequent project, the conversion of the 1936 Thunderbird Ranch to Thunderbird Country Club, led to design commissions for clubhouses at Tamarisk, Eldorado, Seven Lakes and seven other country clubs in the area. Cody’s career included a wide variety of commercial and residential projects. Notable works in Palm Springs include the Spa Bath House (along with Wexler & Harrison and Phillip Koenig), and the adjacent Spa Hotel, the Perlberg Residence (1952), Shamel Residence (1961), Abernathy Residence (1962), and the L’Horizon Hotel (1952), St. Theresa’s Catholic Church (1968), and the Palm Springs Library Center, (1972-1975). Cody was inducted into the College of Fellows of the AIA in 1965. At the Perlberg House, Cody explored simple forms with flat or gently sloping shed roofs that reduced the dimensions of column and roof structures to a minimum, creating a light profile.
928	N	Avenida Palmas		1930		75	5S1	Designated, did not re-evaluate (HSPB-75).	
953	N	Avenida Palmas		1933			5S3	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). It is significant as an example of pre-World War II residential development in Palm Springs, when important figures in film, finance, and business flocked to the desert in the winter, helping to cement the village's reputation as one of the nation's top winter resort destinations. This property is not fully visible from the public right-of-way; comparison of aerial photographs and the 1962 Sanborn map reveal that the original footprint of the primary residence is present on the site; garage and pool house added.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. In addition to the resort-related development for the entertainers and the neighborhoods where the wealthy industrialists started constructing their winter homes, the city has a collection of early residential neighborhoods that developed to accommodate the growing permanent settlement. Individual examples of these early residences remain scattered throughout the pre-World War II subdivisions. This property is located in the Las Hacienditas Tract subdivided in 1923 by Dr. J.J. Kocher. Las Hacienditas is now part of the area known as the "Movie Colony." The “Movie Colony” was not a tract development, rather a neighborhood name that developed later to describe the high concentration of Hollywood personages residing in the area around the El Mirador Hotel.
982	N	Avenida Palmas		1930		67	5S1	Designated, did not re-evaluate (HSPB-67).	
485	E	Avenida Palmera		1941			5S3	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). This property is significant as an example of pre-World War II residential development in Palm Springs, reflecting an important period of growth and transition in the city.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. The 1930s saw Palm Springs blossom, as increasing numbers celebrities made it their winter weekend getaway, and more development sprang up to house and entertain them. The popularity of Palm Springs with the Depression-proof movie industry surely provided more economic stability for real estate than in most other cities in the United States, and new subdivision development resumed in earnest in the mid-1930s. In 1936, Palm Highlands was developed by Robert Ransom, a local realtor who had relocated from Los Angeles to Palm Springs in the early 1930s.
828	N	Avenida Palos Verdes		1932			5S3	This property is significant as an example of pre-World War II residential development in Palm Springs, when important figures in film, finance, and business continued to flock to the desert in the winter, helping to cement the village's reputation as one of the nation's top winter resort destinations. It is also significant as a rare local example of Monterey Colonial Revival-style residential architecture. It exhibits quality of design and distinctive features, including its brick veneered exterior walls, cantilevered balcony with decorative wrought iron supports, and recessed entrance with paneled wood door and sidelights.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. In addition to the resort-related development for the entertainers and the neighborhoods where the wealthy industrialists started constructing their winter homes, the city has a collection of early residential neighborhoods that developed to accommodate the growing permanent settlement. Individual examples of these early residences remain scattered throughout the pre-World War II subdivisions. This property is located in the Las Hacienditas Tract subdivided in 1923 by Dr. J.J. Kocher. Las Hacienditas is now part of the area known as the "Movie Colony." The “Movie Colony” was not a tract development, rather a neighborhood name that developed later to describe the high concentration of Hollywood personages residing in the area around the El Mirador Hotel. The Monterey Colonial Revival style is based upon the distinctive style of residential architecture that developed in California beginning in the 1830s, as more and more Yankee merchants and settlers arrived in Alta California and adapted the Anglo building traditions of the East Coast to local Hispanic customs. As its name implies, the style developed in and around Monterey and combined vernacular adobe construction with elements of American Federal and Greek Revival architecture, including multi-light sliding sash windows, louvered shutters, paneled doors, and Classical details executed in wood. The style’s most distinguishing characteristic is a second-floor covered wood balcony, often cantilevered, extending the length of the primary façade and sometimes wrapping one or two sides as well. The earliest known owner of this property is Mrs. Isabella Knapp (likely mother to J.B. Knapp of Union Carbide Co.), who lived here in 1939. She used Allison and Allison to build her Bel Air Home in the 1930s (LA Times 3/23/30). In late 1948, Ray and Ada Dodge of Dodge Manufacturing (trophies) purchased the house (Desert Sun 12/3/48). Dodge made additions in 1948 and 1949 (Desert Sun) and an additional sun porch in 1949. Charles Becker (president of Franklin Life Insurance) purchased the home in 1953. There is a 1960 alteration to the property by William Cody noted in the Cody Archive. The house was purchased in 1962 by Louise and Troy Post, a financier.

ADDRESS	DIR	STREET	SUFFIX	YEAR BUILT PER COUNTY/C ITY	AGUA CALIENTE INDIAN RESERVATION	HSPB NO.	2016 HRG LOCAL STATUS CODE	Statement of Significance	Notes
225	W	Baristo	Rd	1947		78	5S1	Designated, did not re-evaluate (HSPB-78).	In 1949 the hotel earned Cody a Creative Mention award from the Southern California Chapter of the American Institute of Architects as an example of new resort hotel architecture.
701	W	Baristo	Rd	1937			5S3	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). It is significant as an important recreational facility established in the pre-World War II era by Pearl McManus. New buildings constructed after World War II are significant as examples of Mid-century Modern architecture by several prominent architects of the period.	In addition to new hotels and resorts, the rapid increase in tourism in Palm Springs between the World Wars fueled additional commercial development, including shops, restaurants, theaters, and office buildings to serve the growing populations of both seasonal and permanent residents. Pearl McManus opened a Tennis Club at the south end of town in 1937 on a boulder-strewn hillside at the west end of Baristo Road. The original building, altered and expanded in 1947 with a design by Paul R. Williams and A. Quincy Jones, was modeled after a monastery on the Amalfi coast. The club included an elegant oval swimming pool on a stone terrace, flanked by palm trees. The buildings were renovated in 2001-2002. It was published in Architectural Digest, Volume XI No. 4 in 1946, and Progressive Architecture, November, 1947.
1802	S	Barona	Rd	1964			5S3	This property is significant as a good example of a Mid-century Modern garden apartment complex, reflecting design and planning principles from the period.	As a result of increased demand for housing, post-World War II multi-family residential development in Palm Springs took a variety of forms including garden apartments, large low-rise multi-building communities (including early condominium projects), split-level attached townhomes, and attached and semi-attached residences in clusters as small as two and as many as eight. In virtually every configuration, the focus of the design was around the pool (or pools as the scale of the developments increased). Numerous examples from the postwar period are associated with significant architects, designers, or developers. Garden Villas East was developed beginning in 1964. That year, the western half of the parcel was developed with 42 attached units clustered in groups of three or six units per building as Garden Villa. Half of the units were arranged in a circular pattern on the northern half of the parcel, and half in a circle on the southern half of the parcel. This allowed each two- or three-bedroom unit to open up into the enclosed garden area and one of two private swimming pools and cabanas. Decorative concrete block walls on the street-facing façades contrasted with the volumetric Mid-century Modern design of Garden Villa and provide privacy patios for residents and shield the units from parking facilities that were integrated into the perimeters of the overall plan. Period post and frosted-globe light posts dotted the richly landscaped grounds. In 1966, the eastern parcel of the tract for Garden Villa was developed as Sandcliff in a design mirroring the original plan and architecture. 1965 advertisements in the Los Angeles Times confirm this moniker for the western part of Garden Villa, as does existing signage from the period at the complex. The units at Garden Villa continued to be marketed under that name in Los Angeles Times ads well into 1966. Ads touted a Garden Villa lifestyle that would help buyers “live 10 years longer.” A furnished model was available for viewing by prospective buyers at 1828 Barona Drive.
301	N	Belardo	Rd	1927			5S3	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). It is significant as an early golf course in Palm Springs associated with prominent resident Thomas O'Donnell.	Thomas A. O'Donnell, an oilman who moved to Palm Springs in the mid-1920s, and built the O'Donnell Golf Club soon after. He purchased the land on which the golf course is now situated in two parcels, in May and December 1925. He planned and built the golf course, which includes nine holes with two tee positions for each hole. In 1944, after operating the golf course for over fifteen years, O'Donnell organized the O'Donnell Golf Club as a private, nonprofit club. From the 1930s to the 1960s, the Palm Springs Invitational Golf Championship was played at O’Donnell Golf Club. Many highly respected former PGA Tour Pros played in the tournament, including Ken Venturi, Al Geiberger, Gene Littler, Billy, Butch & Craig Harmon, Harvie Ward, and George Archer. Many celebrities were members of O’Donnell, including William and "Mousie" Powell, Bob and Dolores Hope, Kirk and Joel Douglas, William Holden, and Clark Gable. (Source Palm Springs Life) The O’Donnell Golf Course opened to the public c. 1954. (Desert Sun advertisement, April 29, 1954)
400	N	Belardo	Rd	1948		36	5S1	Designated, did not re-evaluate (HSPB-36).	
591	N	Belardo	Rd	1930	Yes		7R	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). It is significant as an example of pre-world War II residential development in Palm Springs, reflecting an important period of growth and transition. It may also be significant as an example of Spanish Colonial Revival residential architecture. The majority of the primary facade is not visible from the public right-of-way; therefore, additional information about its integrity is needed to complete the evaluation.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. In addition to the resort-related development for the entertainers and the neighborhoods where the wealthy industrialists started constructing their winter homes, the city has a collection of early residential neighborhoods that developed to accommodate the growing permanent settlement. Individual examples of these early residences remain scattered throughout the pre-World War II subdivisions. This property is located in the Vista Acres tract. In January 1923, Prescott T. Stevens developed Vista Acres, a twenty-seven parcel subdivision west of Palm Canyon Drive along W. Chino Drive. Per the City of Palm Springs' list of potential resources (Citywide Historic Resources Database) this property was associated with Spencer Kellogg. This appears to be incorrect, as Kellogg was associated with 535 Belardo Road starting in 1926. There is reference to John Porter Clark as the architect of this property (potentially of a later addition), but this has not been confirmed.
261	S	Belardo	Rd	1934, 1938		72	5S1	Designated, did not re-evaluate (HSPB-72).	The Albert Frey-designed portion of the site (261/263) has been demolished, per comparison of the Sanborn maps and aerial photographs. Belardo Road was Palm Ave until 1930. (via Steve Vaught)

ADDRESS	DIR	STREET	SUFFIX	YEAR BUILT PER COUNTY/C ITY	AGUA CALIENTE INDIAN RESERVATION	HSPB NO.	2016 HRG LOCAL STATUS CODE	Statement of Significance	Notes
359	S	Belardo	Rd				5S3	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). It is significant as an example of early tourist accommodations in Palm Springs, reflecting the importance of tourism in Palm Springs during the pre-World War II era. Many of these properties were developed to house seasonal residents, and were sometimes referred to as "apartment-hotels." Many early hotels in Palm Springs have been demolished to accommodate new development, and therefore extant early examples are rare. It is not fully visible from the public right-of-way; therefore additional information about its integrity is needed to complete the evaluation. Aerial maps confirm that buildings from the 1930s are extant on the property.	In the years following World War I, Palm Springs was transformed into an exclusive winter resort for the wealthy. Commercial development during this period included facilities that catered to the tourist and seasonal community, along with a growing number of commercial establishments to serve the permanent residents. Broad development patterns in the inter-wars period include the continued emphasis on tourism and tourist-related resources. In the desert environment a simplified, rustic interpretation of the popular Spanish Colonial Revival style was believed to be the appropriate style for the climate and lifestyle, for both residential and commercial buildings. This entry covers what is now 359-415 S. Belardo Road, which is part of the Viceroy complex. The Town House and Bungalows (359 S. Belardo, c. 1936) was incorrectly identified as 369 S. Belardo Road in the City Historic Resources Database. In 1973, additional units were added to the north of the original property. Comparison of aerial photographs and the 1962 Sanborn map confirm that the original configuration is still intact. The Estrella Villas (413 S Belardo Road, c. 1936) was built by by Harry A. Fischbeck, a pioneer Hollywood cinematographer from 1914 until his retirement in 1940. Perhaps because of Fischbeck’s long association with Hollywood, the Estrella Villas had many guests from the film industry including Judy Garland, Bing and Dixie Crosby, and William Darling, among many others. In 1940, Geneva Fischbeck and her son Jack Gorham, the manager of the Estrella Villas, installed a large paddock pool in the center of the court. The Town House and Bungalows and the Estrella Villas are now part of the Viceroy Hotel complex. (via Steve Vaught)
1897	E	Belding	Dr	1959			5S3	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). It is significant as an example of Mid-century Modern residential architecture designed by noted architect Hugh Kaptur as his own residence. It exhibits quality of design and distinctive features including its flat roof with overhanging eaves and cantilevered canopies, exposed wood beams and vigas, and clerestory windows.	The growing prosperity of the post-World War II years and the rise of the car culture contributed to a rapid increase in Palm Springs’ seasonal and permanent population, coinciding with the peak of Modernism’s popularity. This created a demand for both mass-produced and custom housing that afforded architects and developers the opportunity to explore and develop a wide range of architectural types and ideas, sometimes influenced by sophisticated global design trends. These conditions and the architects’ talents led to the development of an exceptional group of Modern buildings which later came to be identified as "Palm Springs Modernism" or "The Palm Springs School." A Detroit native, Hugh Kaptur, AIA, attended Lawrence Technical College in Michigan, working toward a degree in engineering. After serving in the Marines during the Korean War, Kaptur moved to Palm Springs in 1954. He first worked briefly for Wexler & Harrison. Skilled at free-hand drawing, he made artist’s renderings of buildings for Wexler, Albert Frey, and other local architects. Beginning in the late 1950s, during a period of rapid large-scale development in Palm Springs, Kaptur designed a number of notable post-and-beam houses and commercial projects that display his unique aesthetic.
2290	S	Bisnaga	Ave	1925			5S3	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). This property is significant as an example of pre-World War II residential development in Palm Springs, reflecting an important period of growth and transition in the city; and as the work of noted local builder Lee Miller.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. In addition to the resort-related development for the entertainers and the neighborhoods where the wealthy industrialists started constructing their winter homes, the city has a collection of early residential neighborhoods that developed to accommodate the growing permanent settlement. This property is located in the Araby tract. In 1925, H.W. Otis and Son, owners/sub-dividers began marketing and selling “Our Occidental Araby at Palm Springs.” The 138-parcel tract of irregularly-shaped lots were intended for the development of a community that was "artistic and charming." Robert Lee Miller was born in Hill, Texas in 1887. After serving in World War I, Miller was trained in civil engineering, but ultimately decided to become a carpenter. In 1931, Miller moved to Palm Springs, where he worked as a subcontractor, most often working for Alvah Hicks. Miller was a skilled woodworker, and designed many of the elaborated exposed wood detailed trusses in the city’s early mansions. With no formal training, Miller studied the Spanish style through observing existing adobes and pattern books.
1014	E	Buena Vista	Dr	1936			5S3	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). This property is significant as an example of pre-World War II residential development in Palm Springs, when important figures in film, finance, and business flocked to the desert in the winter, helping to cement the village's reputation as one of the nation's top winter resort destinations.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs through the 1920s, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. The 1930s saw Palm Springs blossom, as increasing numbers of celebrities made it their winter weekend getaway, and more development sprang up to house and entertain them. The popularity of Palm Springs with the Depression-proof movie industry surely provided more economic stability for real estate than in most other cities in the United States, and new subdivision development resumed in earnest in the mid-1930s. This property is located in the La Rambla tract, subdivided by local real estate agent John R. Chaffey (1934-36/1945). Chaffey experimented with different parcel sizes and frontages in the different phases, with larger frontage lots appearing in later phases. Such lots were often more accommodating of the Ranch-style homes popular in the Palm Springs area. Bob Hope purchased this La Rambla home in 1941. He and his wife lived here until 1946, when they purchased another home on El Alameda.
1338	E	Buena Vista	Dr	1938			5S3	This property is significant as an example of pre-World War II residential development in Palm Springs, when important figures in film, finance, and business continued to flock to the desert in the winter, helping to cement the village's reputation as one of the nation's top winter resort destinations.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. ADDRESS	DIR	STREET	SUFFIX	YEAR BUILT PER COUNTY/C ITY	AGUA CALIENTE INDIAN RESERVATION	HSPB NO.	2016 HRG LOCAL STATUS CODE	Statement of Significance	Notes
1050	N	Cahuilla	Rd	1934	Yes		7R	This property appears significant as an example of pre-World War II residential development in Palm Springs, when important figures in film, finance, and business flocked to the desert in the winter, helping to cement the village's reputation as one of the nation's top winter resort destinations. It may also be significant as an example of Spanish Colonial Revival architecture. The property is not fully visible from the public right-of-way; therefore, additional information about its integrity is needed to complete the evaluation.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. In addition to the resort-related development for the entertainers and the neighborhoods where the wealthy industrialists started constructing their winter homes, the city has a collection of early residential neighborhoods that developed to accommodate the growing permanent settlement. This property is located in the Merito Vista tract, an important early tract that was advertised for its “natural beauty,” its status as a playground for the wealthy, and its subdivision into “small estate parcels” for those who “...do not necessarily care to erect pretentious homes here.”
175	S	Cahuilla	Rd	1910/1933 /1936		59	5S1	Designated, did not re-evaluate (HSPB-59).	Notes on existing information: No extant part of Casa Cody is a former stable; prior information that there are former stables converted to guest rooms is inaccurate. Each of the existing structures can be traced to a specific period, including buildings later folded into the complex (see the 1929 Sanborn). Casa Cody contains the only fragment of the 1887 Whitewater Ditch (incorrectly identified as the Tahquitz Ditch in some sources). The historic stone walls were built by Nellie Coffman. The oldest structure on the grounds are not the Olympic bungalows but the old adobe, which was built in 1916. It was the Apache Apartments not the Apache Lodge (Orchid Tree) that was added to the complex. Also, it should be noted that Francis Crocker's El Rincon Apartments, which had been designed by John Porter Clark, were added to the property as well as the Winters residence. (via Steve Vaught)
200	S	Cahuilla	Rd	1950			7R	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). It is significant as an example of a post-World War II Ranch-style hotel, reflecting the growth of the tourism industry during the postwar era. The property is not fully visible from the public right-of-way; therefore, additional information about its integrity is needed to complete the evaluation.	A post-World War II surge of visitors and seasonal residents coincided with Modernism’s rise in popularity. As a result, commercial architecture in Palm Springs from this period reflected the acceptance of Modernism and expressed a wide range of Modern interpretations as it increasingly served two purposes: the need for tourist-oriented buildings for seasonal visitors, and the need for practical daily services, such as banks, shops, and gas stations, for the growing population of permanent residents. Commercial development during this period consisted of both infill development in the original commercial core, and the continued northward and southward expansion of the commercial district along Palm Canyon and Indian Canyon Drives. Many commercial buildings, ranging from small, single- or multi-tenant office and retail buildings to large department stores, were designed by prominent architects of the period. The post-World War II tourism boom prompted the development of a number of hotels, motels, apartment hotels, and inns to accommodate the growing demand. Most lodgings for visitors remained relatively small in scale; outdoor spaces to enjoy the sun, air, and scenery were key elements shaping these designs.
227	S	Cahuilla	Rd	1937			7R	This property appears significant as an example of pre-World War II residential development in Palm Springs, reflecting an important period of growth and transition in the city. However, it is not fully visible from the public right-of-way; therefore, additional information about its integrity is needed to complete the evaluation.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. In addition to the resort-related development for the entertainers and the neighborhoods where the wealthy industrialists started constructing their winter homes, the city has a collection of early residential neighborhoods that developed to accommodate the growing permanent settlement. Individual examples of these early residences remain scattered throughout the pre-World War II subdivisions.
284	S	Cahuilla	Rd	1936		23	5S1	Designated, did not re-evaluate (HSPB-23).

314	S	Cahuilla	Rd	1940			5S3	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). It is significant as an example of pre-World War II institutional development in Palm Springs; and as the work of John Porter Clark and landscape architect Katherine Bashford.	Mrs. Warren Pinney, wife of Palm Springs’ city clerk and manager of the El Mirador Hotel, invited sixty women to attend a luncheon on December 10, 1938, to discuss the formation of a women’s club. At the luncheon, a nominating committee was named to develop by-laws and a list of officers for the next meeting, two days later. On December 12, 1938, Nellie Coffman invited the potential womens’ club to lunch at the Desert Inn. Seventy-three women signed as charter members of the Palm Springs Woman’s Club at this lunch, and their first official meeting was held on December 19, 1938. The Woman’s Club completed its incorporation in 1939, affiliated with the Federation of Women’s Clubs, but chose to become an independent organization in 1953. Land for the clubhouse at 314 S. Cahuilla Road was donated by Pearl McManus, and John Porter Clark donated his services to design the building. The plans were accepted at the March 20, 1939 meeting. \$12,000 was raised for construction, and contractors Wilson and Sorum won the bid to build the clubhouse. Construction commenced in mid-April, and was completed on November 17, 1939. The building consists of an auditorium with a stage, a large walled patio, sun lounge, entrance hall, dressing rooms, and kitchen. Landscape architect Katherine Bashford designed a “far-reaching plan for planting,” which was executed by landscape gardener Millard Wright. John Porter Clark, AIA, studied architecture at Cornell University, and then moved to Pasadena to work for the architectural firm of Van Pelt & Lind. In 1932, he established the firm’s office in Palm Springs and designed a number of local buildings for them. Clark met Albert Frey, FAIA when Frey came to Palm Springs in 1934 to supervise construction of the Kocher-Samson building. From 1935 to 1937 Clark and Frey collaborated on a number of projects in Palm Springs under the name and license of Van Pelt & Lind. In 1939 they formed their own partnership, which would last for nearly 20 years and would permanently alter the course of architecture in the Coachella Valley. Although Clark continued to cater to those clients who still favored traditional styles, both partners promoted Modern design and experimented with new materials such as corrugated metal and plastic siding, steel framing, and concrete block, to adapt their designs to the desert climate. They are today regarded as two of the founders of the “Desert Modern” style of architecture. Their influence is seen in the number, quality, and variety of their projects, including houses, schools, a fire station, churches, shopping centers, hospitals, restaurants, hotels, and apartments. Landscape architect Katherine Bashford studied at Pasadena’s Polytechnic High School and the Otis Art Institute in Los Angeles. Traveling to Europe in the 1910s and then again in the 1920s, she studied European gardens. An apprenticeship with Florence Yoch furthered her training as a designer, and in 1923 she opened her own landscape architecture practice, working on estates in Southern California. Her early projects included gardens for Harry Bauer, John Barber, and the William C. McDuffie Estate, for which she won an award from the American Institute of Architects, Southern California Chapter. In 1935, Bashford participated in the National Housing Exhibition in Los Angeles. The following year, Fred Barlow became a partner in her firm, a relationship that resulted in an extensive portfolio of designs, including Harbor Hills, Aliso Village and Ramona Gardens. Bashford’s work was recognized repeatedly in the publication California Southland, for which she also wrote several articles. She was made a Fellow of the American Society of Landscape Architects in 1936, and in 1938 became the first woman to be elected ASLA Chapter President. Architect Herbert Burns redecorated the Woman’s Club interiors (via Steven Keylon).
344	S	Cahuilla	Rd	c. 1930		69	5S1	Designated, did not re-evaluate (HSPB-69).	City has this listed at 339 Cahuilla. Notable guests include William "Hopalong Cassidy" Boyd and William Demarest. George Brown, who owned La Serena from 1951-1954, was a former head of publicity at Paramount studios. (per Steve Vaught) Cahuilla Rd was known as Orange Ave prior to 1930.
2280		Cahuilla Hills	Dr	1953			5S3	This property is significant as a good example of Mid-century Modern residential architecture. It exhibits quality of design and distinctive features including its dramatic hillside siting with carport below, canted window wall, and clerestory windows.	The growing prosperity of the post-World War II years and the rise of the car culture contributed to a rapid increase in Palm Springs’ seasonal and permanent population, coinciding with the peak of Modernism’s popularity. This created a demand for both mass-produced and custom housing that afforded architects and developers the opportunity to explore and develop a wide range of architectural types and ideas, sometimes influenced by sophisticated global design trends. These conditions and the architects' talents led to the development of an exceptional group of Modern buildings which later came to be identified as "Palm Springs Modernism" or "The Palm Springs School."

502		Calle Abronia		1929			5S3	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). It is significant as an example of pre-World War II residential development, representing a significant period of growth and transition in the city.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts. In the 1920s, business tycoons, industrialists, and other wealthy businessmen, along with the Hollywood elite, discovered the desert and began to transform Palm Springs into an international resort. While the movie stars primarily stayed at the resort hotels when visiting Palm Springs, other wealthy residents and seasonal visitors started building architect-designed estates and drawing increased attention to the growing resort town. In addition to the resort-related development for the entertainers and the neighborhoods where the wealthy industrialists started constructing their winter homes, the city has a collection of early residential neighborhoods that developed to accommodate the growing permanent settlement. In 1927, former Riverside County educator turned real estate investor Raymond Cree (1875-1967) subdivided the Vista Santa Rosa tract into 131 60 x100 foot parcels. The tract was built on land owned by the pioneering McKinney family who lived there until their house burned in 1925 and they relocated. With the exception of Camino Parocela (Paracelo), the streets in Vista Santa Rosa were each given a “Calle” street name. Clarence C. "C.C." & Bern B. Neel purchased the property in 1939 from Vanderburg Johnstone & the estate of Kate Alberta Johnstone. The purchase involved two adjoining residences, 603 East Camino Ramon and 503 Camino Palo Fierro. The property became both home to the Neels as well as the Neel’s Nursery (until the Nursery was relocated to 330 North Indian Avenue). (Desert Sun 7/21/1939) (Historic addresses: 603 East Camino Ramon Road and 603 East Ramon Road)

The tract was built on land owned by the pioneering McKinney family who lived there until their house burned in 1925 and they relocated. With the exception of Camino Parocela (Paracelo), the streets in Vista Santa Rosa were each given a “Calle” street name. This property was constructed for George and Winnie Oliver, who were well-known villagers and proprietors of several local businesses including Desert Valet Dry Cleaners at 235 North Palm Canyon Drive; Oliver’s Malt Shop at 282 North Palm Canyon Drive; and the Gift Corral. Oliver was one of the signers of the petition for incorporation in 1937 and was active for years in the local Lion’s Club. The Oliver family lived at 537 Calle Abronia from at least as early as 1936 until Winnie’s death at 75 in 1969. Her obituary stated she had been a desert resident for 63 years. (Historic address: 537 Calle Abronia Aurita) (Sources include Palm Springs News; Desert Sun; etc.) (via Steve Vaught)
564		Calle Abronia		1928			7R	This property was re-evaluated during the 2015 survey as part of an update to the City of Palm Springs’ list of potential historic resources (Citywide Historic Resource Database). It may be significant as an example of early residential development, representing a significant period of growth and transition in the city. However, it is not fully visible from the public right-of-way; therefore additional information about its integrity is required to complete the evaluation.	The first residential subdivisions were recorded in the early 1920s on tracts largely concentrated on land immediately surrounding the existing village and the resorts.
