Telephone DNumbers 2-8311.
ANNIVERSARY

This issue marks the beginning of another year of publication of The Architect & Engineer—Vol. 192, No. 1.

Each issue of The Architect & Engineer magazine during the past forty-seven years has been devoted to the architectural and engineering profession, to the contracting business, and to the construction industry. Each issue has recorded an account of development in the West's vast construction industry—of residential, commercial, industrial, highway, and engineering progress. Each issue has also chronicled the advance in architectural design, the progress in engineering skill, the development of construction methods and know-how, and the tremendous advancement that has been made since the turn of the century in building and construction materials.

Architect & Engineer magazine has championed the architect, engineer, contractor, and building material manufacturer with the public—endeavoring with each issue to further the best interests of the construction industry with the public in general and those in government service who have been charged with the responsibility of public works development.

We are proud of our function in serving these factors which are so vital to the growth and prosperity of the West, and we feel this is a fitting time to pledge anew our determination to further serve those we directly, and indirectly, represent throughout the great fields of architectural, engineering, contracting and construction industry effort.

"The future of our profession and our people is today's challenge:"—Glenn Stanton, American Institute of Architects, President.

YOU'VE JUST STARTED

With the November election fast becoming history, many voters feel they have done their duty and can afford to forget about political problems for a while. They think that selecting a new Congress and a new President will solve everything automatically.

Such is not the case.

All of the problems aired during the campaign—plus a great many more—are still with us.

Instead of indulging in a general let-down, the American people now have an opportunity to improve their government by directing their energies and using their influence to see that national problems are solved.

This could, and would, happen if more persons were to realize that issues at stake in the election were more important than the men who ran for office; that the election did not really solve any issues; that it remains for the men elected to Congress and to President Eisenhower to work out the right solutions.

It is not hard to see where the citizen can be active and most effective in the months ahead as the new budget and other important issues are considered by Congress.

First, government spending must be reduced. One way in which President Eisenhower can save money is to clamp down on the waste and extravagance that has been exposed in Washington. Economy will not come easy to the new administration unless all the people pitch in and help.

You can do your part by asking less of the federal government and by doing more things which you used to do for yourself.

Second, the Eisenhower administration will inherit a tremendous and costly system of benefits and subsidies—farms, veterans, colleges, aged persons, dependent children, the blind, the unemployed and many others. All of these programs are desirable, of course, but the job is to decide which of them can properly be turned back to the States, so that the size and the expense of federal government can be cut.

Third, Communism is as much with us today as it was a week before the election. And people in Europe want just as much aid from the United States today as they did yesterday.

The people who went to the polls last November performed one major requirement of good citizenship, but there is more to be done. Are you ready for the task that lies ahead?

Socialism, or so-called "parlor pinks", is in reality junior grade communism looking for a promotion.

A DUBIOUS HONOR

By the time President Harry Truman leaves office on January 20th, his administration will have collected 59 percent of all the federal taxes collected in American history, spent 45 percent of all the federal money spent in American history, and added $33-billion to the national debt.

One President, and his administration, has collected since April 12, 1945, nearly $33-billion more in federal taxes than all other presidents combined in the 163-year history of the nation, including Franklin D. Roosevelt who wasn't a piker when it came to taxing the American public.
CLAY BRICK and Architectural Skill Combine to make a Firehouse A THING OF BEAUTY

Friendly neighborhood acceptance is usually a major problem in site selection for a Firehouse. Colorful Clay Brick plus good design gives the structure a handsome appearance... that “substantial look” that blends in with nice surroundings—wins friendly acceptance. Neighbors know too that in years to come Clay Brick will stay that way indefinitely. And taxpayers need no reminding that Clay Brick requires no painting, entails practically no upkeep. Firehouse or schoolhouse, factory or store—whatever you’re planning—consider the exceptional qualities of Clay Brick.

POTTERY EXHIBIT AT DeYOUNG MEMORIAL MUSEUM BY SANDERS

An exhibition of Pottery by Herbert Sanders is currently being shown at the M. H. DeYoung Memorial Museum in Golden Gate Park, San Francisco.

Dr. Sanders, a member of the teaching staff at San Jose State College, has exhibited throughout the United States and has work in a number of American Museum collections including the Metropolitan Art Museum, the Syracuse Museum of Fine Arts, and the University of California Decorative Arts Collection. He is also the winner of a number of awards in the field of ceramics.

NORTHWEST CRAFTSMEN EXHIBIT AT UNIVERSITY OF WASHINGTON

A juried exhibition will be held March 8 through April 8, by Northwest Craftsmen in the Henry Gallery at the University of Washington, Seattle. The event is being sponsored by the Henry Gallery, Lambda Rho Alumnae, The Seattle Clay Club, and the Seattle Weavers’ Guild.

The exhibition is designed to encourage original contemporary design through competitive exhibition and will include ceramics and ceramic sculpture, jewelry, enamel work, metal work, wooden containers and tableware, woven textiles, decorated fabrics, and lamps.

M. H. deYOUNG MEMORIAL MUSEUM

The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, under the direction of Walter Heil, starts the new year with a group of special exhibitions in a number of art fields.

EXHIBITIONS: Retrospective Exhibition of Paintings by Jack Levine; Fifty Contemporary Portraits—Photographs by Sanford H. Roth; Paintings by Claude Venard; Angkor—Photographs by Ernest G. Rathenau; Models of Inventions by Leonardo Da Vinci; and Pottery by Herbert Sanders.

CITY OF PARIS

The Rotunda Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan, has arranged an Exhibition of recent paintings featuring a Commedia Dell’Arte Sequence by Angna Enters and an exhibit of Ceramic Sculpture (See Page 31).

THE BONES OF THE HOUSE
TWIN PEAKS SITE OF
MODERN RESIDENCE
SAN FRANCISCO, CALIFORNIA

Architects: BOLTON WHITE
JACK HERMANN

Landscape Architects: ECKBO, ROYSTON & WILLIAMS
Location and Site:
Steep lot on North slope of Twin Peaks, East of Sutro Forest. Sweeping view to the northwest, north and northeast encompassing area from Point Reyes to Oakland Bay Bridge, with views of ocean, city and San Francisco Bay.
Site demanded ample glass areas on two sides, i.e. North (at front for view) and South (at rear, for admitting sunlight). East and West sides are virtually blank walls. Shape of house in form of ell, with projection to rear along West side to form a sunny terrace at rear, sheltered from westerly winds.

Although Living Room is along front (North Side) it also looks across stair hall to South terrace and high stair window and light stair construction. This enables one in Living Room to look upward into terraced garden at rear.

Entrance is from downhill side, necessitating a stair up to the first floor level. This stair is along East side, up to an entrance platform from which one turns right and enters into Stair hall. Garage (2 car) is at street level, below first floor and was excavated into earth bank and retained with concrete walls. Also at this level is extra space intended to be converted, when desired, into servants
Second Floor Interior—Showing stairway to upper floor, paved exterior living area, and landscaped area beyond low fence. Glass extends from ground to second floor roof.
M O D E R N  R E S I D E N C E  . . .

room and Bath. This also contains Laundry and heating equipment and is reached from Garage, or from Kitchen by exterior covered stairway along West side of house.

Main floor (1st floor) contains reception and Stair hall, Living Room, Dining Room and Kitchen. Living Room and Dining Room work together as one space, although representing two distinct spaces.

Living Room view windows have balcony outside to facilitate window washing, as well as to cut off view from Living Room down into the street below, or vice versa, and to direct one's view outward horizontally instead.

Second floor originally contained 3 bedrooms and two baths, but an additional small bedroom and brief bath were later added above entrance, over space which was formerly used as a sun deck. The South and East elevations of the house were, perhaps, more interesting, architecturally, before this addition was made.

Exterior Materials: Stock Redwood V rustic laid vertically and with stock 1/4 round battens set in Vs to produce textural quality. This material was given a dark stain in anticipation of the inevitable dark weathering that it would eventually reach in such an exposed location.

Trim is off white, as are all sash and doors.

Interior: plastered, smooth coat, and painted. tween hall and Living Room, natural oak. This is Fireplace wall and portions of dividing case echoed in heavy oak treads of Stairway. Fireplace facing and hearth, travertine marble.

Heating, forced warm air.

House constructed 1940. Cost—under $10,000!!

MR. and MRS. NILS B. HULT
HILLSIDE HOME
ONE OF OREGON'S FINEST
EUGENE, OREGON

ARCHITECT: CLARE K. HAMLIN
GENERAL CONTRACTOR: CARL J. RATH

By ARTHUR W. PRIAULX
On the slopes of Old Baldy, in the Bailey Hill district west of Eugene, Architect Clare K. Hamlin has created for Mr. and Mrs. Nils B. Hult one of Oregon’s most distinctive homes.

Western hospitality and informality have been achieved in this casual, ranch-type home which rests gracefully in a semi-circular floor plan on a bench which has been carved out of a hill. Built on the lower edge of a forty acre wooded hillside, the lovely home commands a breath-taking view of the upper Willamette valley and the Coast and Cascade mountain ranges from its 200-foot high vantage point above the valley floor.

The problem of Architect Hamlin was to utilize the spacious property so as to avoid a closed-in effect, to give the feeling of height, which a built-up berm in front accentuates, and to provide seclusion for the Hult family of four daughters.

The home site was carved out of the side of the gently rising hillside, and the slope of the upper banks was softened and cut back in two sections to provide a background for the central outdoor living area which contains a 20 by 40 foot modern swimming pool. A low cement retaining wall, which slopes away gradually from the garage and guest room, provided a grass terrace above the level of the center court. Shrubs and grass cover the man-made slope above.

Principal feature of the unusual home is a solarium which serves as a circulation, play and recreation area and from which most rooms open as cul-de-sacs. The solarium occupies a large portion of the floor space on the inner curve of the home. It is made up of 48 feet of sliding glass, which can be opened to provide 24 feet of open air. During the summer months sliding plastic screens are installed to close openings to insects and dust. The solarium opens onto an inner garden court which contains the swimming pool and lawn lounging area.

A covered cement walkway extends the full length of the solarium and beneath an arcade areaway which follows the retaining wall and encloses the garden court. The low, gable-type roof of the home extends outward to shelter the walkway and the arcade covering is a shed-type roof. A surface of concrete product base, built up with gray-red crushed rock, forms the roof covering.
Solarium ends in a panelled hallway which serves the sleeping rooms. Nearly every room has private outdoor entrance. Twin bedrooms occupy widened area at end of main house plan.

BELOW: View of breezeway indicates how architect "closed-in" some of the outdoors for inside living comfort.
An earth color scheme of greyed greens, reds and browns helps blend the home into its surroundings.

The floor plan is open type on a concrete slab and the entire building is heated with radiant heat supplemented by an additional ventilation system. All floors are covered with a composition material, except the living room and bedrooms which have wall-to-wall carpeting. The home is single story.

You get an idea of the easy informality of the home and the feeling of spaciousness when you step into the entrance. You look across the living room through the solarium glass wall directly into the garden court. A low wardrobe case separates the entry from the living room. Two striking features of the living room attract your attention. Dominant in this open living space is a fireplace wall with a 22-foot raised hearth which provides additional seating space. The other distinctive attraction is the view provided of the valley through large plate glass windows set in metal mouldings and stops. Living room ceiling is sloped, following the slant of the roof and a clerestory lighting installation facing south gives plenty of light but eliminates glare. The openness of the living space is broken by a series of fir screens and glass panels and cabinets of birch wood. One entire side of the living area becomes the solarium.

Another cul-de-sac is the dining area adjoining the living room and separated by an open grillwork screen of fir lumber. Here is another room with a sweeping view of the valley, but to give a feeling of privacy, Architect Hamlin has masked the expansive plate glass window with a sliding grill built of fir, eight inches deep. This grill serves as a decorative partial wall and is used to display art objects and china pieces.

One of the most interesting sections is the kitchen and family room, which also opens off the solarium. A fireplace with a raised hearth, hooded with brick and copper, has been built at the angle intersection where two walls meet and lends an informal atmosphere to this part of the home where the entire family spends much of its time. Here has been built all the usual modern kitchen conveniences, ample storage space for dishes, food and utensils. A breakfast dining area is separated from the kitchen proper with a curved counter.

*View of gourd shaped swimming pool and the adjacent grassy area as seen from sweeping, curvacious arcade.*
It's like living out-doors in this distinctive home. In summer time the sliding glass doors open up to join the central living rooms with the spacious lounging area.

This clerestory break in the low roof line is effective. The openness of the house where the solarium faces the inner court is shown from this viewpoint.
Glass walls on two sides give the Hults a view of the Cascade Mountain range as well as the Willamette Valley from this end of the home. A utility room flows around behind the fireplace as the home angles to meet the garage.

Walls of the living, dining and kitchen areas are finished in vertical Western red cedar panels of random widths to which has been applied a dull lacquer to bring out the natural wood. Exterior walls of the home are rough sawn Western red cedar and are finished with special creosote stain to retain the natural cedar coloring.

The master bedroom adjoins the living area and has its own terrace with outside entrance off from a cement walkway which extends along the entire front of the home overlooking the valley. This bedroom is located at the outer curve of the home and a glass window wall affords another view of vast distances. A bath and two dressing rooms serve this bedroom. A guest bedroom with bath has a beautiful picture window and also features view and privacy. Both rooms open off from a short hallway extending along the home from the solarium.

Two identical dormitory type bedrooms at the extreme west end of the home provide the four Hult daughters with a little home of their own. Each room has a double walk-in closet equipped with sliding doors, and the storage facilities for clothes have been arranged to raise as the girls grow. Each bedroom is separated by a low case which gives each girl a semi-private area of her own. A large bath with dressing room for four girls connects the two bedrooms. A feature of these rooms is a wall of full plate glass windows which extend from floor to ceiling and follow the slope of

This corner fireplace adds a touch of New England to the kitchen and family room. Solarium begins here at right of fireplace and utility room is cleverly hidden to the left.
HILLSIDE HOME . . .

the gabled roof. The entire end of the home is glass and gives the young ladies a splendid view of woods and nearby farms in the valley.

Still another guest room is a completely separate unit from the home, connected only by a breezeway. It is located in the section of the home which contains the two-car garage and two-space carport as well as a storage room for wood, tools and supplies. This guest room contains a large shower and bath room and dressing room which serves the swimmers to eliminate tracking water into the home from the pool. The garage is equipped with electrically operated doors.

All bedrooms are finished in West Coast vertical, random-width panels and they, too, have been done with a dull lacquer to retain the golden yellow of the wood.

An Arizona flagstone planter and a partially exposed exterior wall of the living room fireplace breaks the low line of the home on its outer circumference just to the right of the entry way. Arizona flagstone was used for the entire fireplace and hearth in the living area, but brick was used in the kitchen fireplace. Approach to the home and turn around for cars has been black topped.

A feature of the covered arcade which is supported by four-by-four fir posts are cutouts in the terrace paving snug up against the retaining wall intended for flowers or shrubs. The robin's egg blue kidney-shaped swimming pool is attractive in its setting of green.

On the upper end of the hill property, the wants of four horse-minded Hult daughters have been satisfied with a four-stall horse barn with tack

Living area is a cul-de-sac off the solarium. Here is the gracious, unaffected room where guests and family are at ease and where they can almost reach out and touch the friendly outdoors. Clerestory lighting breaks down shadows and eliminates dull spots along room's center.
room and hay storage. This building follows the style of the home with cedar siding on a fir frame.

Architect Hamlin has created a very satisfactory informal home in a very unusual setting. Here the architect designed a hill to fit the home, and inversely, a home to fit the hill. While the hill has been fashioned out to make an extensive bench to accommodate the sweep of this single-story structure, all the cement slab has been cast upon solid earth. Earth removed became part of the berm which will ultimately be covered with native shrubs as will also the portion of the hill above the home cut away in the operation. A grass terrace extends along the valley side.

Most impressive effect of this home is the manner in which Hamlin has captured the illusion of depth and size by means of solarium walls and large view windows. You have the feeling that a roof has been put over the outdoors, yet there is an intimacy and coziness about the home of Mr. and Mrs. Hult which develops a friendliness and warmth as you step into any door. Here is a home where a family can live and where friends can be entertained without stress or strain.

The over-all length of the Hult home is 165 feet. The living room is 20 by 30 feet in size. The dining room measures 12 by 12 feet and is easily expandable into solarium area for large groups. Master bedroom, including dressing rooms and bath takes up a 44 by 18 foot space. The guest bedrooms are 12 by 18 and 12 by 16 feet. The girls' bedrooms are identical, 14 by 20 feet. The kitchen area including breakfast nook and family room measures 22 by 20 feet. The solarium runs along 48 feet of the home and varies in width from six feet to ten feet.

One of children’s room, part of two identical twin-bedrooms where the family’s four daughters sleep, study and play. Each room enters onto grounds and is a self-contained living unit. Full glass walls face on expansive lawns.
LOOKING AT PROGRESSIVE ARCHITECTURE AMONG AUSTRALIA'S HOMES

By GEORGE FARWELL

Some 25 years ago an architect from the United States challenged the universal Australian habit of designing houses with high-pitched roofs.

Why, he asked, should a warm and sunny climate follow a style which European countries had evolved largely to deal with snow? Why have steep gables, pseudo-Elizabethan half-timbers or the meaningless embellishments of the stucco and wrought-iron villas known as "Spanish Missions" in the early 1920's. House design in general had respectfully followed the conventions, usually im-

Modern home at Killara, northern suburb of Sydney, designed by T. O'Mahoney. Top view shows site on outcrop of sandstone rock. Any room may be entered from terrace. Below—Living room with two walls of plate glass give pleasant view of tree-lined road outside.
HARRY SEIDLER designed this home on a narrow sloping site between other houses at Northbridge. Large ground floor cement platform surrounds house.

ported from Britain with little regard for the different climatic conditions and social needs of the southern continent.

The American architect was Walter Burley Griffin, disciple of Frank Lloyd Wright, who had been such a profound influence in the United States. Griffin settled in Australia after winning a world-wide competition in 1912 with his plan for the national capital, Canberra.

The flat roofs he set on his unorthodox sandstone houses in 1930 at Castlecrag, a northern Sydney suburb, aroused much controversy, even if they delighted the colony of artists who settled there. His style was rather too romantic and individual to attract much of a following, but it was a pointer

MODERN RANCH-HOUSE at New Merigal, near Gilgandra, New South Wales, was designed by Sydney architects Fowell, Mansfield & Maclurcan for the hot summer condition prevailing on the Western Plains. Featured is the broad veranda, wide eaves, shutters on bedroom windows exposed to direct sunlight, cross-ventilation inside and walls and ceiling insulated against heat.

JANUARY, 1953
ed its peak elsewhere during the 20's and 30's. As in Europe, such four-square, functional and almost machine-like houses were a reaction against the over-decorative styles once so popular in all the capital cities. Others, more flexible in their design, evinced a pleasant sense of light and color.

There can be no question that, but for the war and later material shortages, housing of this kind would have developed more quickly, since most of the architects had begun practice before that time. The leading men in New South Wales, Sydney Ancher, Arthur Baldwinson, Walter Bunning and T. O'Mahony had toured Europe with the aid of travelling scholarships back in the mid-30's. They found themselves extremely stimulated by the new techniques they saw, and returned to Australia full of enthusiasm.

Since the war it appeared as if these architects were arriving at similar answers to their problems. Their designs show an inherent simplicity, the avoidance of any ornamentation for its own sake, the paring down of design of essentials. The dominant expression is in terms of long, low lines, simple shapes and outlines, plenty of glass and a skilful adaptation to natural features.

The accent is on open-air living.

As Harry Seidler, one of the younger members of the "New Architecture" movement, has expressed it: "There are few countries in the world that are blessed with such mild conditions. Except for some short periods during the winter, heating is unnecessary in New South Wales. Why do we insist on such closed-in buildings? We can have glass..."
walls, from floor to ceiling and wall to wall, without experiencing any discomfort. This will flood our interiors with healthy sunlight and open them up so that they literally include the garden and bring the outdoors inside. Small rooms will immediately look twice their size."

Certainly his houses have a New Look. Seidler, who was born in Vienna, became a Canadian citizen, studied at Cambridge, England, and the University of Manitoba, then won a scholarship to Harvard and did post-graduate work under Professor Walter Gropius, by whom he was deeply influenced.

Typical of his work is one house at Turramurra, an outer Sydney suburb, surrounded by a densely timbered area. An almost square, box-like structure, it has a hollow rectangle at one end and an open well scooped out of the centre. The land slopes downward from the house level, a movement he has dramatised by the use of a long rising ramp leading to the entrance. The living room has a full glass wall, giving a wide view of the bush landscape. Linking this with the bedrooms is an open-roofed terrace, its main wall decorated with an abstract mural painted by Seidler himself.

Some critics have found such designs too calculated and geometric. Local Government authorities who have control over buildings in their area protested for other reasons. On one occasion, for instance, he had to fight a law case before he could gain acceptance for a complete wall of plate glass. In many areas building regulations decree

SEATTLE WOMEN'S GROUP FORM ORGANIZE FOR A.I.A. MEET

In anticipation of the national convention of The American Institute of Architects which will be held in Seattle next June 16-19, a group of wives of A.I.A. architects in the Seattle area, have formed an organization for the purpose of assisting in convention arrangements.

Mrs. Waldo B. Christenson, has been chosen president and will be assisted by a committee including Mrs. John S. Detlie, first vice-president; Mrs. Charles T. Pearson, second vice-president; Mrs. John T. Jacobsen, secretary; and Mrs. Leonard W. Bindon, treasurer.

BASEBOARD HEATING PROGRAM PRESENTED PRODUCERS COUNCIL

Baseboard heating, and advanced system for providing indoor warmth, is the subject of a one-hour program, supplemented by visual aids, which is being prepared for Producers' Council presentation to architects and builders. The project is part of a program in cooperation with The American Institute of Architects to exchange information and improve building and building products.

SEATTLE ARCHITECTS NAMED TO NATIONAL AIA COMMITTEE

William J. Bain, member of the Washington State Chapter of the A.I.A., has been named a member of the Jury of Fellows of The American Institute of Architects, according to a recent announcement.

Named with Bain to serve on AIA committees were: Stephen H. Richardson, Committee on Accounting Methods and Office Practice; Paul H. Kirk, Committee on Chapter Affairs; Waldo B. Christenson, Committee on Convention Planning and Nominating Committee, 1953; Marvin R. Patterson, Committee on Membership; Paul Thirty, Committee on Education; John T. Kerby Croadser, President, 3518 McCorriston St., Honolulu, T. H.; George J. Wimmerly, Secretary, 315 Royal Hawaiian Ave., Honolulu, T. H.

CALIFORNIA COUNCIL OF ARCHITECTS
William Koblik, President, 2223-15th St., Sacramento; Donald Beach Kirby, Secretary, 461 Market St., San Francisco; Frederick A. Chase, Exec. Soc'y, 3723-A Wilshire Blvd., Room 206, Los Angeles.

ALLIED ARCHITECTURAL ORGANIZATIONS
San Francisco Architectural Club:  
Joseph Esoma, President; Frank S. Gernert, Vice-President; Russell W. Punnell, Treasurer; Frank L. Barnes, Secretary. Club Quarters, 527 Howard St., San Francisco.

Producers' Council—Southern California Chapter:  
Bert Taylor, President, Pittsburgh Plate Glass Company; G. Robert Roden, Jr., Vice-President, Truscon Steel Company; Malcolm G. Lowe, Secretary, Natural Gas Equipment Inc.; Richard Seaman, Treasurer, W. P. Fuller & Company; Vern Batsel, National Director, Gladding Mcbean & Co.

Producers’ Council—Northern California Chapter (See Special Page)

JANUARY 1953

SOUTHERN CALIFORNIA CHAPTER

Norman J. Schlossman of Chicago, second vice-president of The American Institute of Architects, was a guest of honor at the Annual Meeting on January 13, taking part in the installation of the new Chapter officers which included:

Henry L. Wright, President; Ulysses Floyd Rible, Vice-President; Cornelius M. Deasy, Secretary; Savo M. Stositch, Hugh E. Davis, & Kenneth Johnson, Kemper-Nanland and Chas. E. Fry, Directors.

President Wright has served as a director of the Chapter for two years and is currently chairman of the schoolhouse planning committee of the California Council of Architects.

The January meeting heard Carlton B. Tibbetts, President of the Los Angeles Steel Casting Company and former president of the Los Angeles Chamber of Commerce, discuss the subject of "A NEW LOOK AT CITY GOVERNMENT." Annual reports were made and plans for the future announced by newly elected officers.

SAN DIEGO CHAPTER

Glenn Stanton, Portland, Oregon, architect and president of the AIA, spoke at the January meeting, outlining a number of institutional activities which were of great importance to the architectural profession.

Annual reports were submitted and Donal Hord was presented with the Certificate of Honorary Associateship. Election of officers for the ensuing year will be announced next month.

EAST BAY CHAPTER

Charles O. Matcham, Regional Director of the AIA was the principal guest of honor at the January meeting and participated in election of officers to serve for the ensuing year. Newly elected officers will be announced next month.
NUCLEAR ENGINEERS WILL SPEAK AT CORROSION MEET

Four prominent additions to the list of speakers for the Corrosion Short Course to be conducted on the Berkeley campus of the University of California have been announced.

Dr. C. R. Breden of the Reactor Engineering Division, Argonne National Laboratories, will speak on corrosion of stainless steel.

Dr. J. E. Draley, corrosion researcher with the Metallurgy Division of the Argonne Laboratories, will discuss corrosion of aluminum.

Dr. Leo F. Epstein of the General Electric Atomic Power Laboratory at Schenectady, will talk on corrosion by liquid metals; and

Dr. Earl T. Hayes, chief of the Physical Metallurgy Branch for Region II of the Bureau of Mines will speak.

ENGINEER TELLS OF EUROPEAN TRIP

Ralph E. Phillips, Los Angeles professional engineer, spoke at the December meeting of the Southern California Chapter of the American Society of Heating and Ventilating Engineers, on his "observations" during a recent trip to Europe.

He discussed engineering advances in Europe and related his personal experiences with European engineers, industrialists, and business executives.

GEORGE SEDGWICK ELECTED PRESIDENT OF ENGINEERS

George Arthur Sedwick was elected president of the Structural Engineers Association of Northern California, at the annual meeting held in December. Sedwick was born in San Francisco, attended the Oakland Public Schools and the University of California, where he received his degree of B.S. in 1927, and is a licensed structural engineer. From 1928 to 1940 he was with the State of California, serving in various engineering positions with the Division of Architecture, the Bridge Department and Board of State Harbor Commissioners in San Francisco.

From 1940 to 1946, he was engaged in engineer-
ing work on the Panama Canal, the Canal Project in Canada, and with several structural engineering firms. From 1946 to date, he has been in charge of structural engineering design with W. P. Day & Associates, Architects and Engineers of San Francisco, who designed the new San Francisco Air Port Building which involved some unique structural and foundation problems.

The other officers elected to serve during 1953 were: Michael V. Pregoff, vice-president, John M. Sardis, secretary, William K. Cloud, treasurer, Robert P. Moffett, assistant secretary and assistant treasurer, with the following directors: Robert D. Daiton, Robert D. Dewell, William H. Ellison, John J. Gould and J. Albert Paquette.

STRUCTURAL ENGINEERS ASSOCIATION NORTHERN CALIFORNIA

C. Henning Vagtborg of the Vagtborg Lift Slab Corporation of Los Angeles, spoke before the January meeting on the subject "Lift Slab Method of Design and Construction."

Vagtborg described many phases of "lift slab" construction, illustrating his remarks with pictures of various construction where the method was used.

INDUSTRIAL ENGINEERING TALKS OPEN TO LOS ANGELES PUBLIC

The Lecture-Forum Series on Industrial Engineering and Management, comprising eleven lectures to be held alternate Wednesdays starting January 7 in the University Business Administration and Economics Building, Los Angeles, will be open to the public.

The series is sponsored by the U.C.L.A. School of Business Administration and College of Engineering.

THOMAS BARON RECEIVES 1952 CHEMICAL ENGINEERING AWARD

Thomas Baron, Shell Development Company, Emeryville, California, was chosen by the American Institute of Chemical Engineers to receive the 1952 Junior Award in Chemical Engineering, in company with L. G. Alexander of Oak Ridge National Laboratory.

Selection of Baron and Alexander was made on the basis of their collaborative study entitled, "Momentum, Mass and Heat Transfer in Free Jets."

Award was made at a recent meeting of the American Institute of Chemical Engineers in Cleveland, Ohio.

REGIONAL ENGINEERING SYMPOSIUM AT SAINT MARY'S COLLEGE

The Federal Civil Defense Administration, Region VIII, will hold an Engineering Symposium at Saint Mary's College, on February 5-6-7, Region (See Page 31)
CHRISTMAS JINX—1952

The Peacock Court and the Room of the Dons at the Mark Hopkins Hotel in San Francisco was the scene of the Annual Christmas Jinx on December 4 by the San Francisco Chapter of the Producers’ Council.

Cocktails were served to the 530 members and guests from 6:00 until 7:30 p.m. followed by a very fine dinner.

The entire evening was one in which every member of the Producers’ Council can be proud.

Credit for the success of this affair goes to all the participants, but particularly to President Al West, and to Roly MacNichol, who was chairman of the Jinx.

Particular appreciation should go to the men whose names appear year after year in the Producers’ Council events and who, in effect, form the core of the Producers’ Council and make it possible for the other members who do not take such an active part to reap the harvest of their efforts.

We think credit should go to the Mark Hopkins Hotel for the fine way in which the dining room was arranged and the manner in which the dinner was served.

The Council was honored at the Jinx by the presence of two of the original founding members of the Producers’ Council, Mr. Fred Meyer, architect, and Mr. Ray Kingsland, of the Otis Elevator Company. These gentlemen remarked of the tremendous strides taken by the Producers’ Council since its founding in San Francisco twenty-three years ago. It was their opinion that this Christmas Jinx of 1952 was the finest event and social gathering that the local Chapter has ever conducted.

In reminiscing, they remarked about their first Christmas Jinx put on by the Producers’ Council in the Engineers’ Club in December of 1930. The total attendance of members and guests was about 50 and a ticket sold for $1.50. The Jinx consisted of an evening dinner and a skit written by Mr. Abe Appleton, A.I.A. and Mr. Harris Allen, A.I.A. and enacted by the Council members.

Fine music is always enjoyed and the Producers’ Council Quartet gave its usual sterling performance. This Quartet has become as much a part of the Annual Christmas Jinx as the play itself and its inclusion should never be overlooked.

We were extremely fortunate in having Mr. F. Bourn Hayne, architect, take the part of narrator, as there is no better person in either the architects’ or Producers’ ranks who could better fill the part.

This affair further points out the fine relationship existing between the Profession and Industry and we feel that every member should take it upon himself to assist in and continue these fine events.
VIII comprises the states of Arizona, Nevada, Utah and California.

Conference discussions will include such subjects as "The Architect and Engineer in Civil Defense", "Restoration of Facilities", "Streets and Highways", "Utilities", "Urban Analysis", "Engineering Equipment Stockpile".

AMERICAN SOCIETY OF SPECTROGRAPHERS MEET

The American Association of Spectrographers will hold a symposium on "Emission Spectroscopic Determination of Metals in Non-Metallic Samples," in Chicago, Ill., on May 1, 1953.

Scheduled for discussion on the program are papers dealing with the field of petroleum, geology, agriculture, pharmacy, biology, and ceramics. Complete information relative to the conference may be secured from J. P. Pagliassotti, Chm. Symposium Committee, c/o Standard Oil Company, Box 431, Whiting, Ind.

NEWS & COMMENT ON ART

by Miriam Hoffman.

The exhibition of work by Angna Enters has recently been shown in London, New York, and Southern California.

SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, will open the new year with a January schedule of events including:

EXHIBITIONS: New Works by Oskar Fischinger; Paintings by Ward Lockwood, Henry Rasmussen, and Yehoshua Kovarsky; the Charles Stafford Duncan Memorial Exhibition; Children's Finger Paintings; and a special display from the Albert M. Bender Collection.

An exhibition at the Parkmerced branch will be a group of Latin American Paintings and works from the Rental Gallery.

SPECIAL EVENTS: Include Lecture tours on Sunday afternoon's at 3 p.m.; the Lecture Series each Monday evening at 8 o'clock; and Art discussions each Wednesday at 8 p.m. Special classes in Art will resume during January and include Art for the Layman (Tuesday mornings), Sketch Club and Painting Classes (Friday evenings), and the Children's Classes (Saturday mornings).

SAN FRANCISCO MUSEUM TELEVISION SERIES

The San Francisco Museum of Art has announced a group of programs relating to the subject of "art" which will be incorporated in a special television series entitled "The Home Inside and Out."

On Sunday January 25, the program will be devoted to "What Makes a Good House?" and will feature the relationship between client and architect; February 8, the program will be devoted to "What Makes a Good Garden"; February 22, the subject will be "What Makes a Good Room," and on Sunday, March 8 the program will feature "Remodeling or Enlarging a House."

The programs are televised over Station KRON-TV, Channel 4, San Francisco at 11 o'clock in the morning.

CLAY BRICK AND TILE PRODUCERS SEE EVEN BETTER YEAR IN 1953

Modernized production and handling methods, as well as the research program conducted by the Structural Clay Products Institute, are being re-
reflected in greater use of clay brick, according to Robert Harrington, manager of the Clay Brick & Tile Association of Northern California.

"Based on the consistent growth of the industry during the past year and the general bright outlook for construction, the Clay Brick & Tile producers are looking forward to an even better year in 1953," Harrington stated.

Construction participation in defense, industrial and institutional fields seems likely to continue at better than average rate, he said. Increased productivity and the recently developed 6-inch "Through-Wall" clay brick are expected to reduce overall construction costs sufficiently to enable clay brick to compete with frame construction for home building. It was estimated that over 5,000 homes will be built with "SCR brick" in 1953.

W. S. Stanley, of Remillard-Dandini Company, Oakland, is President, and Harrington manages the office which is the trade association of the brick and structural tile in Northern California and affiliated nationally with the Structural Clay Products Institute. The staff works actively to collect information on masonry construction from both the field and drafting board, locally and nationally through Structural Clay Products Institute.

The manufacturers' part in the training and encouragement of bricklaying apprentices is handled through this office. Special attention is given to field techniques used in reinforced grouted brick masonry construction. All brick masonry (other than veneer) used in California schools, for instance, is reinforced. "One of the highest types of California construction can be seen in the school system," Harrington continued, "where maximum safety for human life is combined with most economical design." "This is accomplished by having optimum architecture, engineering construction and inspection," Harrington said that the Association is always equipped to assist anyone with information on current techniques of school design and construction in brick. The reinforcing of brick masonry is indicated on an increasing number of major industrial structures as well, where high earthquake and blast resistance is combined with brick characteristics.

This information, such as design details, test data, wall cost data, specifications, text books and literature, is provided without obligation to all parts of the building industry. The staff also maintains both technical and promotional photographic files, presents programs before technical groups and service clubs, and represents the brick and tile industry in all building code work.

ARCHITECT NAMED TO CELOTEX DIRECTORS

N. A. Owings, of Skidmore, Owings & Merrill, architect and engineering firm with offices in San Francisco, New York, Portland and Chicago, has been elected a member of the board of directors of Celotex Corp.

HOSPITAL CONSTRUCTION PROGRAM FOR ALASKA EXTENDS BID PERIOD

The multi-million dollar hospital construction proposal by the Alaska District Engineer has been extended for bid opening to January 30, at Seattle.

Program includes a seven-story, 400-bed, hospital with penthouse to be located at Elmendorf Air Force Base. Will cover 55,000 sq. ft., and of reinforced concrete and concrete masonry wall construction.

UNIVERSITY OF CALIFORNIA CORROSION SHORT COURSE

A five-day short course in corrosion will be held at the University of California, Berkeley, on February 26. Speakers from industrial and governmental laboratories and academic institutions will cover basic corrosion science theory and application of corrosion mitigation measures.
AUSTRALIAN HOMES
(From Page 23)
that structures must conform to certain minimum standards and be of stone or brick exclusively. Architects concede that such regulations are valid when aimed at jerry-builders, but protest at the way council inspectors have sometimes interfered in questions of esthetics. Of course, resistance to change is an universal factor, but prejudices on the part of both public and officialdom is giving way to the acceptance of new ideas in Australia.

Curiously enough, popular recognition of what has come to be termed the "New Architecture" was achieved not through private homes but hospitals. Architects like Stephenson and Turner, of Sydney, sent their men overseas before the war to study, then began building ultra-modern hospitals, and later factories.

One of the leading firms of architects to apply new and organic forms to public buildings was Fowell, Mansfield and Maclurcan, specialising in factories, office buildings and churches of extremely modern design. Among the best examples of private homes built by this firm are several sheep station homesteads. In the past such homesteads—out on the Western Plains of New South Wales, for instance—had no means of keeping their interiors cool. Summer temperatures out there frequently rise to 110°F. or more. The traditional homestead relied mainly on shady verandahs with sloping roofs to shut out the sun. Fowell, Mansfield and Maclurcan improved on this by the use of cross-ventilation, broadened the verandahs, introduced movable glass screens and doors, and insulated walls and ceilings by means of glass-wool fibre.

T. O'Mahony is another progressive architect with reservations about the modern trend towards glass houses, feeling that its use can be too mechanically applied. "Certainly it should be used when there is a reason for it," he said. "A special view, for example. But it is important to take into account the angle of the sun. You need to keep the direct rays out of rooms in summertime, admitting them only in winter when the sun is in a different part of the sky. This can be achieved by the use of overhanging roofs. It seems to me that in this design a type of Australian architecture is beginning to emerge. There is at least a tendency towards a character, if not yet a national style."

A house designed by O'Mahony makes skilful use of the terrain. He built it on a steep slope, high above street level, overlooking a narrow neck of Sydney Harbour at Cammeray, close to where many small yachts are moored. It was the site of an old quarry filled with earth and rubble, despite being in a closely settled area. To give it access he had to build a flight of stone steps, followed by a second steep flight made of timber with a slender, white-painted balustrade. Designed during the war, when building regulations allowed no more than 12½ squares, the house gives the impression of being much larger, because of the long, shallow living room which extends along almost the whole frontage. The house again has a floor to ceiling glass wall at the front with cream-full-length curtains, French windows and a long balcony. The interior has been treated in a very simple manner, with ceilings and walls in pastel shades. The high, plied-foundation, cantilever construction, while woodwork and slender balustrade give this house a sense of extreme lightness and grace.

O'Mahony is a versatile architect, for he has designed hospitals, churches, ecclesiastical colleges, schools and factories. Like his confrere, Arthur Baldwinson who now also works in Sydney, he gained his training at the Gordon Institute of Technology in Geelong, Victoria, then won a Robert & Ada Haddon Travelling Scholarship, awarded by the Royal Victorian Institute of Architects in 1937. He visited Great Britain, Scandinavia, Italy and the United States, where he had charge of the Australian pavilion at the New York World's Fair 1933. Baldwinson, who was subjected to much the same influences, spent five years abroad and worked with Gropius before the creator of the famous Bauhaus left Britain for the United States.

The effect of travelling scholarships such as these cannot be over-estimated, for they brought Australian architects into touch with overseas trends more directly than had ever been done before.

There is the case of Sydney Ancher, who was awarded a scholarship by the New South Wales Board of Architects in 1930, spent five years in London and on the Continent, then returned home to become one of the most imaginative architects in Australia. One of his best designs, a streamlined and roomy bungalow in Killara, Sydney, won the Sulman Prize for 1945. (The Sulman Prize is a prestige award granted annually by the Trustees of the New South Wales Art Gallery for the best mural or piece of architecture).

This house, as well as another he designed on the opposite side of the road, cleverly exploited some unusual landscape features. The first was

---

GOOD LIGHTING...as important as your most important too!

CHECK YOUR OFFICE LIGHTING
Take a good look at your General Office. Here are workers trained at great expense to use precision "tools"—typesetters, calculators, business machines of many types. Their ability to get the most from these "tools"—to make full use of this training and experience—is dependent upon good illumination.

Smoot-Holman efficient lighting helps eliminate costly mistakes, lost time and eye fatigue.

There is a Smoot-Holman fixture to meet every need and there is no finer lighting equipment made in the West. For the solution to your lighting problem, see your Smoot-Holman Lighting Engineer.
built on two blocks of land, with a 100 foot frontage and a pronounced slope down through trees towards a creek. Again, because of wartime restrictions, he was limited to 12½ squares (a square is only 100 square feet), though this has since been extended by the completion of a gaily furnished sunroom. In effect, the house is only one room wide, with the big living room, kitchen, laundry, study and two of the three bedrooms looking across a flagged terrace and ornamental garden to the creek. From the sunlit terrace the house presents an almost unbroken line of glass from floor to ceiling, some 80 feet long and gracefully surmounted by a pitched roof of grey slate. Wide eaves protect the rooms from direct sun in summer-time, but allow them to be lit up in winter.

The second house is literally built on top of a huge and curving outcrop of sandstone rock. Not only does this provide an excellent foundation, but gives the house a striking individuality. The bold lines of its concrete walls, white painted balustrade, wide sun verandah and curtained glass walls make a strong contrast with the rough brown surface of the rock.

It is so designed that from the terrace you can go directly in and out of any room. The interior is conventionally planned, except that the kitchen overlooks the tree-lined main road, so that the housewife does not feel shut away from the life around her.

Despite these bold outlines and somewhat bare walls, Ancher points out that his houses are really quite conventional. All he has done is to simplify their design, refine them and prune away non-essentials. In a word, he has streamlined them.

In some cases there has been a tendency for an architect with advanced ideas to over-emphasise the value of new forms, attempting to apply them too mechanically, without regard for interior comfort. Perhaps the best explanation of the modern architect's problems came from Arthur Baldwinson.

"We now take functionalism for granted," he said. "The austerity of early 'now' architecture has been whittled down and humanised. Such designs are still functional, but they spread warmth as well. My own method of work, for instance, is first of all to discuss what my client has in mind and the background of his way of living. I do this before getting down to plans at all. I want to know if the living room is to be used for social parties; if the housewife is wrapped up in the kitchen and wants her life to revolve around that, or whether she wants to spend as little time there as possible. I take notes of all these things, and list my facts before getting down to drawing.

"It is not quite true to say I work from the inside outwards. That is an over-simplification. To my mind the idea is to create both from the outside and the inside. It is a complex business to turn out really satisfying work. The best architects' work may look very simple. It will be based on a simple, geometrical idea. But like Picasso's paintings, shall we say, it needs a great deal of initial thought. The too severe, mechanical approach is not at all satisfying. Today we have mastered the use of the new materials at our disposal. Functionalism is now taken for granted, and the architect is turning towards questions of aesthetics, indirectly expressing his own personality."

Without question the best of Baldwinson's work has this individuality. One house he has built on a high plateau overlooking the Pacific Ocean at Narrabeen, some 15 miles from Sydney, reveals the influence of Alvar Aalto, the Finnish architect. It is also perfectly adapted to its setting. Trees surround it on all sides, screening nearby houses. It gains the utmost advantage from the sun, which shines on the wide concrete verandah.

The house is set on concrete pillars, some ten feet above the ground, with space beneath it for car, kiddies playground, laundry and storage. The laundry, in fact, is contained in the house's brick foundation core, which is carried up through the building to provide the living room fireplace and chimney. The upper storey is designed in two distinct units. One consists of three bedrooms, bathroom and shower room; the other of a large L-shaped living room running the full length of the house, except for the kitchen which occupies one rear corner. Much of the furniture is built in. The front wall, overlooking the sea, is almost all glass, giving on to the verandah, where the occupants can dine out, even in winter. The outer walls are of dark oiled weatherboard. Comparatively inexpensive when it was built, it is now the home of the artist and really utilises the magnificent scenery out of doors.

One of Sydney's show places is a luxury out-of-town house at Newport, on the Palm Beach Peninsula some 20 miles north of the city. It was designed by Bunning and Madden.

The land slopes fairly steeply down to a small beach at the edge of Pittwater, a wide stretch of land-locked water much frequented by yachtsmen and fishermen. Little excavation was needed, except where stone steps were set in the hillside. The design of both house and front lawn follows the curve of the beach. Chief materials used were Hawkesbury River sandstone, which gives the curving walls a somewhat rough-hewn appearance, offset by white woodwork, balustrades on upper and lower verandahs and spiral connecting staircase. Sitting in deck chairs on the shaded upper verandah, one has something of the feeling of being on board a yacht. The entire upper storey consists of tastefully decorated and furnished living room and dining room. This is on a level with the road behind. The three bedrooms and offices are on the lower storey.

This is a house expertly designed for the max-
maximum of comfort and of dignity, and yet to bring you close to the sunlight way out.

Walter Bunning, senior partner of this firm, has given many years of thought to creating essentially Australian homes. He has a strong sense of history, and has written an excellent account of Australia’s architecture, from the early days up to the present, in his book “Homes in the Sun.” He, too, was awarded a travelling scholarship before the war, sponsored by the New South Wales Board of Architects. After touring Europe and the United States, he worked on the construction of the British and Irish pavilions at the New York World’s Fair, then took a post-graduate course in town planning at the London Polytechnic.

A country home designed by Bunning and Madden in north western New South Wales may well become a model for station homestead design, even if it is too expensive for many to follow. Emu Park, a sheep property near Warren, some 400 miles from Sydney, is situated on a level and open plain. It is extremely hot in summer. The house was built, therefore, with the idea of allowing as much air to circulate as possible. Very long and low, it has two wings, both running east and west, linked by an open covered way. Vertical glass louvres allow the air to pass freely through, and an elaborate system of cross-ventilation has been worked out. In the main wing, the roof has an overhang of five feet on the northern side.

The living room and dining room are placed at the centre of this wing, with sliding glass doors on the southern side. Between these two wings is a tiled terrace enclosing a lawn and flower garden. The house is well-insulated and also protected on the weather side from the dust storms of the summer.

The slender pillars sustaining the covered way for cars at the wide glass front doors deepen the effect of the long, low clean lines of this homestead.

This style of house is as well adapted to its setting as anything that has been designed in the hot climates of South America or the Orient. It is also a radical departure from the traditional outback home.

As Walter Bunning has expressed it: “The influence on Australian architecture until the present century has been continually English, with slight modifications to suit the climate. During this century the Spanish and Italian note has been dominant in domestic design, while American influence is clearly reflected in commercial buildings. Sound Contemporary design introduced by young architects who have travelled in Europe, Britain and America, and who favour developing an aesthetic suitable to the varied climate and character of the country, has not yet become generally accepted. But it is certain that this continent will take considerable cultural strides.”

The new movement is gaining ground today. It is significant that the work of students at the university of Sydney, the New South Wales University of Technology and the several architectural schools in Victoria is almost entirely in line with that being done by leading architects in the modern vein. The developing pattern of Australian culture, which is also gaining strength from the large number of European migrants, can be expected to help produce a soundly based indigenous style of architecture before long.
HOUSING RESEARCH. By Housing and Home Finance Agency, Washington, D. C. A series of 3 Construction Aid: (1) Plumbing Fixtures Arrangement, Price 15 cents; (2) Roof Gutter’s, Price 10 cents; and (3) House and Site United. Plumbing Fixture Arrangement is a guide to simplified design of plumbing fixture arrangements to conserve critical metals and manpower, and reduces installation and operational costs. It has a number of drawings and covers a wide range of installations.

Roof Gutters is a guide to the use of alternate materials to conserve critical metals and reduce costs in roof gutter construction. Contains drawings and tables. House and Site United is a guide to the elimination of waste in manpower and materials and to obtain a better product at reduced cost through proper planning of the house and site. The booklet contains a number of “Do’s” and “Don’ts” and has plans and drawings illustrating text.

This book is designed to be of value to members of the Civil Defense services and to everyone concerned with the protection of persons and property in time of war.

The author, Carlton Wallace, is an Associate Fellow of the Institute of Civil Defense, and presentation of the material is arranged alphabetically, group indexed, reference indexed. It contains 16 illustrations and 160 pages.

This book is by the same author of WAYS WITH WATERCOLORS and offers a companion publication containing valuable information on how to paint such important landscape components as trees, roads, puddles, rain and fog. It shows the solution of difficult problems encountered in detail.

Sixteen paintings in full color plus many sepia tone gravure studies are used successfully to show the fundamentals of good composition, value arrangement, balance, rhythm and pattern of design. Basic brush strokes for tree paintings are clearly illustrated, and separate chapters are devoted to painting forests and different types of trees.

A valuable book for art students, landscape architects, interior decorators, commercial artists, amateur painters and others.

NEW CATALOGUES AVAILABLE

Any of the catalogues or folders described here may be obtained by forwarding your request as indicated in the coupon below to the office of the Architect & Engineer. Merely mark the items you want and clip or paste the coupon to your letterhead.

438. PORCELAIN ENAMEL CURTAIN WALL MATERIAL. A technical bulletin describing “Seaporclad”, new porcelain enamel curtain wall material, has been issued by the manufacturer, Seaporcel Metals, Inc. “Seaporclad” panels are of sandwich construction with skins of diversified metals laminated under high pressure to fire-resistant, thermal and sound insulating cores. The product is available with two faces of porcelain enamelled steel or with one porcelain side and an opposite skin of another sheet metal material. Panels can be used to provide a single interior-exterior wall, as a veneer, ashlar, permanent or removable partition. The two-color booklet outlines the properties of the new insulated panels, provides seven detail drawings showing possible installation methods and describes its use in the construction of a hospital and a school building. A.I.A., 17 A, 8 pages, 11/52.

439. HOLLOW CORE FLOOR SLABS FOR HEATING SYSTEMS. A new folder on “The Flexcore Split System of Warm Air Panel Heating” features two systems that utilize the hollow cores of Flexcore precast concrete slabs to combine the benefits of both circulated air and radiant panel heating. The folder illustrates both the single-duct and counterflow systems with two-color diagrams of air flow and installation details. Additional diagrams detail suggested baseboard installations for the Flexcore Company, Inc. A.I.A., 4 X, 6 pages, 10/52.
440. SURFACE MOUNTING FLUORESCENT LUMINAIRES. A series of two- and three-lamp fluorescent luminaires for surface mounting are illustrated and described in two-color catalog. Designed for single or continuous mounting, these units are available with either louver or diffusing glass shielding, with or without luminous side panels. The catalog lists detailed specifications on these direct-type luminaires, with dimensioned drawings of the top and end views for two- and three-lamp use. For each basic fixture type, the candelepower distribution curve is given for glass or louver shielding. Coefficients of utilization are also included. A.I.A., 31-P2. 8 pp. 5-50. 11/52.

441. HOME DRAINAGE BULLETIN. An informative and useful illustrated bulletin, explaining proper installation of perforated drain tile, for basement and foundation drainage as well as sanitary septic tank disposal systems is now available. It has been prepared by the Bowerston Slate Company, drainage material specialists, of Bowerston, Ohio. The bulletin entitled “New Drain Tile for Homes,” includes diagrams of home drainage plans and an effective septic tank disposal system. 4 pages, illus., 5/52.

442. STEEL FRAMES FOR SLIDING GLASS DOORWALLS. Los Angeles—A new approach to the problem of presenting essential information on horizontal sliding glass doorwalls and windows to architects and builders is contained in two brochures just released by Steelbilt, Inc. All full scale installation details have been omitted and only isometric drawings of engineering features and construction details are included. The primary objective of the literature is to enable the reader to easily evaluate the product and its adaptability to specific design and construction problems. Full scale installation details are available in a separate portfolio containing loose leaf sheets for tracings. A.I.A., 16-E, 10 pages, illus., 10/52.

443. DOUBLE HUNG WINDOWS. A new folder has just been published covering four points of protection against wind and rain. Features of a new extruded aluminum sill on all FLEET-LITE double, double hung windows according to the manufacturers, Fleet of America, Inc. A KOROSEAL lip along the entire bottom edge of the storm sash and interior sash seals the space between the sash and sill. Pile Mohair weatherstripping on the vertical surfaces of the sill as shown in the drawing contacts the inside edge of the sash for a snug fit to block wind-blow and rain, snow or dust. 10 pages, illus., 11/52.

444. SPECIAL PURPOSE STEELS. “Special purpose steels for architectural beauty and permanence” is the title of a new booklet recently published by Armco Steel Corporation. It covers such metals as stainless steels, porcelain enameling iron; Zincgrip and Zincgrip-Paintgrip sheets. The booklet describes the various types, properties and finishes of these metals, illustrates many applications, and gives specifications. P.O. 1352, 8 pages illus., 9/52.

445. SPACESAVERS. A new brochure has been published by New Castle Products describing Modernfold Doors and their Spacersaver qualities. Curved walls and flexible room units are shown with details. Complete description of the possibilities for solving modern space problems opens a new design freedom for architects. Many utilizations of these flexible folding type doors are shown with adaptations and possibilities for use as temporary walls easily moved about within the room. A.I.A., 16-J, 8 pages, illus., 10/52.

ARCHITECT AND ENGINEER

JANUARY, 1953 37
OREGONIAN WILL HEAD LUMBER MANUFACTURERS

Ralph R. Macartney, manager of the Weyer-haeuser Timber Co., Klamath Falls, Oregon, has been elected president of the National Lumber Manufacturers Association, at that organization’s annual meeting.

Other officers named to serve with Macartney included J. R. Bemis, president of the Ozan Lumber Co., Prescott, Arizona, vice-president.

DALLAS YOUNG ELECTED PRESIDENT CONTRACTORS

Dallas Young, vice-president and one of the founders of the contracting firm of MacDonald, Young & Nelson, Inc., was elected president of the Northern California Chapter of the Associated General Contractors of America, Inc., at the organization’s 34th Annual meeting in San Francisco, early in December.

Young has been active in AGC affairs, serving as chairman of the Membership Committee; member of the Finance, Legislative, and Building Committees; and vice chairman of the Labor Committee.

ROMER SHAWHAN SPEAKER ON BEAUX ARTS PROGRAM

Romer Shawhan, A.I.A., managing director of the Marble Institute of America, spoke before the senior class of the Department of Architecture at Western Reserve College, Cleveland, Ohio, on the subject “The Renaissance of Marble in the Home”, and “The Economy of Marble in Commercial Buildings”.

The program was a preliminary to the annual Beaux Arts Institute of Design Judgment which this year will feature a hospital to be located in the center of a residential area in a city of 80,000. Author of the exercise is Charles H. McCauley, A.I.A., of Birmingham, Alabama.

FRANK W. CORTRIGHT RESIGNS FROM NATIONAL ASSOCIATION HOME BUILDERS

Frank W. Cortright, executive vice-president of the National Association of Home Builders, will relinquish his position on March 1st and will take on a new assignment as special consultant to the association.

Cortright has been recovering from a serious illness which incapacitated him during most of 1952, and in tendering his resignation said it “unwise to attempt to continue at the same pace as during the past 11 years.”

The association voted him a lifetime membership on the Executive Committee along with a three year contract in his new position.

PIioneer AIRCRAFT ENGINEER HONORED

Sir Geoffrey de Havilland, world-famed aircraft designer, was presented with the Daniel Guggen-heim medal at the annual banquet of The American Society of Mechanical Engineers, recently held in Chicago.

PAUL F. KEIM AT U.C. — Paul Keim of Knappen Tippetts Abbott Engineering Co. has been appoint- ed a Prof. in the Civil Engineering Department, University of California at Berkeley, and will teach a course to young engineers relating to contracts, specifications and human relations including the relationship of the engineer, owner, contractor, materialman, etc.
ARCHITECT AND ENGINEER

ESTIMATOR'S GUIDE
BUILDING AND CONSTRUCTION MATERIALS

PRICES GIVEN ARE FIGURING PRICES AND ARE MADE UP FROM AVERAGE QUOTATIONS FURNISHED BY MATERIAL HOUSES TO SAN FRANCISCO CONTRACTORS. 3% SALES TAX ON ALL MATERIALS BUT NOT LABOR

All prices and wages quoted are for San Francisco and the Bay District. There may be slight fluctuation of prices in the interior and southern part of the state. Freight charges, at least, must be added in figuring country work.

BONDS—Performance or Performance plus Labor and Material Bond(s), $10 per $1000 on contract price. Labor & Material Bond(s) only, $5.00 per $1000 on contract price.

BRICKWORK—MASONRY—
Common Brick—Per M. laid—$150.00 up (according to class of work).
Face Brick—Per M. laid—$200.00 up (according to class of work).
Brick Steps—$3.00 and up.
Common Brick Veneer on Frame Bldgs.—Approx. $1.20 and up (according to class of work).
Face Brick Veneer on Frame Bldgs.—Approx. $2.00 and up (according to class of work).
Common Brick—$35.00 per M. (traffic loads, delivered).
Face Brick—$101.00 to $106.00 per M., traffic loads delivered.

Glazed Structural Units—Walls Erected—
Clear Glazed—4 x 6 1/2 Furring—$2.00 per sq. ft.
4 x 6 1/2 x 6 Partition—$1.75 per sq. ft.
4 x 6 1/2 x 6 Double Faced—$3.00 per sq. ft.
For colored glass—$5.00 per sq. ft.

Manhole Brick $15.00 per M. — F.O.B. Pittsburgh.
Fire Brick—Per M.—$111.00 to $147.00.
Ceiling—Approx. $150.00 per M. Paving—$75.00.

BUILDING PAPER & FELTS
1 ply per 1000 ft. roll—$1.30
2 ply per 1000 ft. roll—$2.75
3 ply per 1000 ft. roll—$4.70
Brownskin, Standard 500 ft. roll—$8.50
Steelraft, reinforced, 500 ft. roll—$12.50

Shingling Papers—
Asphalt shingling, 15-lb. roll—$2.70
30-lb. roll—$3.70

Dampcourse, 216 ft. roll—$2.95
Blue plasterboard, 62 lb. roll—$1.50

Felt Papers—
Deadening felt, 16 lb., 50 ft. roll—$4.30
Deadening felt, 52 lb. asphalt roofing, 15 lbs.
Asphalt roofing, 30 lbs.
Asphalt roofing, 60 lbs.

Roofing Papers—
Standard Grade, 108-lb. roll, Light—$5.00
Smooth Surface, Medium—$7.00
M. S. Extra Heavy—$9.50

BUILDING HARDWARE—
Sash cord, No. 7—$7.65 per 100 ft.
Sash cord, No. 6—$8.50 per 100 ft.
Sash cord, No. 5—$9.30 per 100 ft.
Sash cord, No. 8—$3.35 per 100 ft.
Sash weights, cast iron—$100.00 per ton.
1-ton lots, per 100 lbs. $1.75
Less than 1-ton lots, per 100 lbs. $2.45

Nails—
Galvanized—$1.05
1 lb. spikes—$1.45
10 lb. Knot lock sets—$1.60
Butif, dull brass plated on steel, 3½ x 3½—$2.25

CONCRETE AGGREGATES—
The following prices are to Contractors unless otherwise shown. Carried lots only.

CONCRETE READY-MIX—
Delivered in 4-yr. loads—
Per cubic yard—$1.80
1-1/2 Mix—$1.70
1-1/2 Mix—$1.60
1 Mix—$1.50

Curing Compound, curing drums, per gal., per ru. | $1.00

CONCRETE BLOCKS—
Haydite—Salt $1.15

tile

DAMP-PROOFING and Waterproofing—
Two-coat work, $9.00 per square. Membrane waterproofing—4 layers of saturated felt, $10.00 per square. Hot coating work, $15.00 per square. Medusa Waterproofing, $3.50 per lb. San Francisco Warehouse.

TRICOSAL concrete waterproofing, 60 c. cubc. and up.

ELECTRIC WIRING—
$15 to $25 per 100 ft. conduit work (including switches).
Knob and tube average $6.00 per 100 ft.

ELEVATORS—
Prices vary according to capacity, speed and type. Consult elevator companies.
Average cost of installing a slow speed automatic passenger elevator in small four story apartment building, including entrance doors, about $9,500.00.

EXCAVATION—
Sand, $1.00 per cubic yard.
Clay or shale, $1.50 per cubic yard.
Trucks, $3.00 to $4.50 per day.

Above figures are an average without water. Steam shovel work in large quantities, less; hard material, such as rock, will run considerably more.

FIRE ESCAPES—
Ten-foot galvanized iron balcony, with stair, $250 installed on new buildings.
$300 on old buildings.

FLOORS—
Asphalt Tile, ½ in. gauge 18c to 36c per sq. ft.
Composition Floors, such as Magnesite 40c to $1.25 per sq. ft.
Linoleum, standard gauge, sq. yd.—$2.75
 Mastipave—$1.50 per sq. yard.
Battleship Linoleum—½", $3.00 sq. yd.
Terazzo Floors—$2.00 per sq. ft.
Terazzo Steps—$2.50 per lin. ft.

Mastic Wear Coat—according to type—20c to 35c.

Hardwood Flooring—
Oak Floor—$1.50—$3.00

Prefinished Oak Flooring—
Prime Standard $2.50.
1½ x 2½ $3.00
1½ x 3½ $3.00
1½ x 4½ $3.00
1½ x 5½ $3.00

Unfinished Maple Flooring—
2½ x 2½ First Grade. $3.75
2½ x 3½ First Grade. $3.50
2½ x 4½ First Grade. $3.50
2½ x 6½ First Grade. $3.75

2½ x 3½ 2nd Grade. $3.50
2½ x 4½ 2nd Grade. $3.00
2½ x 6½ 2nd Grade. $3.50

Floor Laying Wage $2.45.

GLASS—
Single Strength Window Glass—$2.20 per 100 sq. ft.
Double Strength Window Glass—$2.40 per 100 sq. ft.
Plate Glass, ¼ polished to 75—$1.60 per 100 sq. ft.
75 to 130—$1.24 per 100 sq. ft.
13½ in. in. Wire Plate Glass—2½ per 100 sq. ft.
½ in. Wire Glass—$0.70 per 100 sq. ft.
¼ in. Obscure Glass—$0.60 per 100 sq. ft.
¼ in. Obscure Glass, 2½ per 100 sq. ft.
½ in. Heat Absorbing Obscure—$0.70 per 100 sq. ft.
½ in. Heat Absorbing Deco—$0.80 per 100 sq. ft.
½ in. Ribbed—$0.80 per 100 sq. ft.
½ in. Ribbed, 2½ per 100 sq. ft.
½ in. Rough—$0.40 per 100 sq. ft.
½ in. Rough, 2½ per 100 sq. ft.

Glazing of any additional ¼ in. to ½ per 100 sq. ft.
Glass Blocks, set in place—$3.50 per 100 sq. ft.

HEATING—
Furnaces—Gas Fired
Floor Furnace, 25,000 B.T.U. $31.50
35,000 B.T.U. $37.00
45,000 B.T.U. $40.50

Automatic Control, 20 B.T.U. $2.75

BUILDING INDUSTRY CONFERENCE BOARD ANNUAL ACHIEVEMENT AWARD

The Annual Achievement Award of the Building Industry Conference Board of San Francisco, was given to James B. Black, president of the Pacific Gas & Electric Company for 1952.

Made for the most outstanding achievement in the industry, following nomination by Board members, this year’s selection represents the results of a special committee survey of all candidates. Chairman of the Com-

JAMES B. BLACK
President, PG&E

The Building Industry Conference Board is comprised of representatives of: Northern California Chapter, American Institute of Architects, Producers Council of Northern California, San Francisco Section the American Society of Civil Engineers, Building Owners and Managers Association of San Francisco, Structural Engineers Association of Northern California, Associated Home Builders of San Francisco, Inc., Central California Chapter of American Society of Heating and Ventilating Engineers, San Francisco Federal Savings and Loan Association, Consulting Engineers Association of California, and the Association of Landscape Architects.

FOUNDATION FOR METAL RESEARCH
AMERICAN SOCIETY FOR METALS

In recognition of the grave shortage of engineering students in the United States and the urgent importance of metals research to the security of the free world, the American Society for Metals recently established an initial fund of $650,000 for the establishment of a Foundation for Education and Research.

Objective of the new Foundation will be the advancement and dissemination of scientific knowledge, particularly with respect to the technology of metals, for the use and benefit of the public at large, either through education and research, or through the support of educational and research activities in established organizations and institutions.

HOBBYWOOD JUNIOR COMBINATION SCREEN and METAL SASH DOOR

A VENTILATING SCREEN DOOR A SASH DOOR A PERMANENT OUTSIDE DOOR ALL 3 IN 1!

GENERAL CONTRACTOR: Barrington & Botke, Santa Paula.

ADDITION TO HOSPITAL BUILDING. Hawthorne, Los Angeles County, Board of Direc- tors of the Hawthorne Community Hospital, owner. 25,267 sq. ft., 42 beds, surgical facilities, $425,000. ARCHITECT: Merrill Baird, Glendale. 3 story, type 1 reinforced concrete construction, built-up composition roofing, asphalt tile and terrazzo floors, plaster walls, acoustical tile ceilings, steel sash, air conditioning, I elevator, ceramic tile, laminated counter tops. GENERAL CONTRACTOR: Steel Bros. Alhambra.

VETERANS MEMORIAL BUILDING. Nevada City, Nevada County, County of Nevada, owner. $56,000. ARCHITECT: George Sellon, Sacramento. Frame & stucco construction. GENERAL CONTRACTOR: Da Rosa-Ribag, Inc. Dutch Flat.

Built-in telephone facilities mean happier clients for you

That's why so many building plans today include built-in telephone facilities. Clients like the idea of having conduit for concealed telephone wiring, and extra telephone outlets conveniently located to take care of future telephone installations and changes. Modern homes are hardly complete without the low-in-cost, high-in-satisfaction advantages of planned telephone facilities.

Just call Pacific Telephone's Free Architects and Builders service. They'll be glad to help you plan telephone facilities for better living tomorrow in the homes you are building today.

Put built-in telephone facilities in your plans

Pacific Telephone
SANTA MONICA
HOSPITAL
Plans for construction of a $1,000,000 addition to the Santa Monica Hospital have been announced with architects A. R. Waldron & W. C. Kallmes and C. A. Klingerman, commissioned to design plans and specifications.

The addition will be a 3-story wing with the first two floors bed area and the third floor devoted to operating and surgical sections.

SERVICE BUILDING
FOR SAN LEANDRO
Architect Edw. D. Cerruti of Oakland, has been authorized by the Alameda County Board of Supervisors, to draft plans for the addition of a kitchen and warehouse service building to the Fairmont Hospital in San Leandro.

Cost of the 2-story reinforced concrete and structural steel building is estimated at $1,200,000.

SWIMMING POOL
FOR SACRAMENTO
The City of Sacramento is completing plans for the construction of a swimming pool and bath house building to be built in South Side Park, Sacramento, which will be ready for use by early spring.

Harry J. Devine, Sacramento, is the architect.

PUBLIC HEALTH
BUILDINGS UC
The Board of Regents of the University of California recently authorized the architectural firm of Masten & Hard of San Francisco, to draft plans and specifications for a new School of Public Health building to be built on the Berkeley campus at an estimated cost of $1,125,000.

The structure will be of three and six story, reinforced concrete construction.

SAN FRANCISCO
FIRE HOUSES
Bonds have been issued in the amount of $4,750,000 to finance the reconstruction and construction of fire houses throughout the City of San Francisco.

Approximately 19 new fire houses will be built and some 23 existing buildings will be modernized and rebuilt.

RESTAURANT
IN PARADISE
Architects Thomas F. Durrant and James A. Murphy of Chico, recently designed a restaurant building to be built at Paradise, Butte county.

The building will be 1-story instruction and will cost about $20,980.

KERN COUNTY
HOSPITAL
Architect C. B. Allred and W. J. Thomas, draftsmen, of Bakersfield have been selected by the Kern County board of supervisors to determine the amount of property necessary to rehabilitate buildings at the Kern County Hospital which were damaged during the recent earthquakes.

MASONIC LODGE
BUILDING
The Fourier Masonic Hall Association of Fairfax has announced construction of a new Masonic Lodge Building for Kentfield.

in Marin county.

Estimated cost of the 1 and 2 story frame and stucco building is $60,000 according to Forrest Gist, Architect for the project.

NEW ELEMENTARY
SCHOOL FOR PIXLEY
Architects Cotts & Meitz of Fresno, are designing a new Elementary School Building for the Pixley Elementary School District, Tulare county.

The new building will include 14-classrooms, administration facilities, two-kindergarten, multi-purpose rooms, domestic science rooms, and toilet rooms, and will cost approximately $568,795.

COUNTY HOSPITAL
ADDITION
The architectural firm of Masten & Hard, San Francisco, are architects for a 2-story frame and reinforced concrete foundation and floor, addition being built to the Contra Costa County Hospital.

Approximately $35,500 is being spent on the project.

NEW HIGH SCHOOL
GYMNASIUM
The Board of the Utah Union High School District, recently started construction of a new $284,000 Gymnasium Building at the Utah High School, which will be of frame and stucco construction.

Architect C. A. Cauthins, Jr., of Santa Rosa, is the architect.

LOW RENT HOUSING
SAN FRANCISCO
The Housing Authority of the City and County of San Francisco has announced the selection of architects Paul A. Ryan and John M. Lee, San Francisco, to design a new $1,200,000 3-story reinforced concrete structure and to be completed at the Hunts Point district.

Approximately $1,300,000 will be spent on the project.

STOCKTON PLANS
NEW LIBRARY
The City of Stockton has commissioned architect Peter L. Salo of Stockton, to design a new Library Building to be built on Oak street.

The new building will contain 80,000 sq. ft. be of reinforced concrete construction, and will cost an estimated $1,465,000.

NEW JR. HIGH
FOR FRESNO
The Fresno Board of Education completed plans recently for construction of a new $1,300,000 3-story High School in Fresno.

Costing approximately $1,300,000 the new school will include 12-classrooms, administration, music, art, science, floor and clothing rooms, wood and metal shops, and gymnasium and toilet rooms.

Franklin & Simpson of Fresno are the architects.

SAN MATEO BUILDER
ELECTED PRESIDENT
San Mateo county B. & K. Builders have elected Frank Lappe, of San Mateo, president succeeding A. F. Meitz.

The new president is formerly an attorney and member of the Contra Costa County Bar.

ELECTED PRESIDENT
SACRAMENTO BUILDERS
Richard Montgomery, a builder of Sacramento and northern Carrionia, has been elected president of the Associated Home Builders of Sacramento for the year 1953.

The organization has as its purpose the advancement of the interests of building and construction business in the State of California.

STANLEY WORKS NAMES
SALES REPRESENTATIVE
The Associated Home Builders of Sacramento have announced the appointment of Joe D. Sall, of Sacramento, as Manager of Sales.

The newly formed sales division is to be located in the Associated Home Builders Building.
WASHINGTON, D.C., Delaware and Maryland. Jones will cover the territory previously handled by Carl S. Bauman, who was appointed to the position of assistant general sales manager of The Stanley Works in July 1952.

ARCHITECT SELECTED

Architect L. F. Richards of Santa Clara, has been selected by the Santa Clara Elementary School District to draft plans and specifications for the construction of a new Intermediate School in Santa Clara at an estimated cost of $400,000.

Richards is also designing two new firehouse buildings for the City of Santa Clara.

NEW MANAGER FOR MARIN BUILDERS

Carl Brown, assistant to the executive president of the Associated Home Builders of Northern California, has been appointed secretary-manager of the Marin Builders Association of San Rafael.

Brown has been closely identified with the construction industry since his graduation from College of the Pacific, and for many years was the head of his own firm.

LANDSCAPE COURSE FOR GARDENERS

Two new courses in landscape gardening are being offered in the spring semester on the Davis campus of U.C., according to Robert B. Deering, chairman of the department of landscape gardening.

Principles and practices in the use of decorative plant materials will be taught, including plant materials for interiors, and plant materials in garden design.

ARCHITECT SELECTED

The Board of Supervisors of Yuba county recently selected architect Russell G. Delappo of Berkeley, to draft plans and specifications for the construction of a new Detention Home.

The new building will be built in Marysville, with work to start in the immediate future.

WORK STARTS ON RESEARCH UNIT

Construction on the $826,000 Cancer Research Unit, which will be a 4-story wing on the $20,000,000 Medical Center on the Los Angeles campus of the University of California, was started recently with completion of the unit scheduled for January of 1954.

Architect for the 20,000 sq.ft. addition is Welton Becket & Associates of Los Angeles.

NAMED TECHNICAL STAFF DIRECTOR

Raymond A. Steezer has been named Director of the newly formed Technical Staff of American Radiator & Standard Sanitary Corp., according to an announcement by Theodore E. Mueller, president.

Steezer has been serving as general supervisor of factories for American-Standard affiliates in Europe, and has been associated with the firm since 1924 in a variety of manufacturing positions.

ARCHITECT SELECTED

Architect Henry H. Gutterson of San Francisco, has been commissioned by the First Church of Christ Scientist of Santa Rosa (Calif.) to design plans and specifications for a new Church to be built in Santa Rosa.

NOW TO CUT TAXES

There is a lot in the air about federal tax reduction these days. Needless to say, everybody—or nearly everybody—is much in favor of something definite being done to lessen the “tax take”.

Still, major tax reductions will depend on major reductions in spending, and that will take a lot of doing by everybody, not just the federal administration.

Communities, groups, and individuals will have to break the habit of running to the federal treasury whenever they want some kind of a new project. And it is interesting, and encouraging, to note that some never did get out of the truly American habit of paying their own way as they went along, rather than seeking federal assistance.

Cutting federal taxes by reducing federal spending is not going to be easily accomplished, and remember YOU are the one that will bring such a situation about, if it is done.

"The Chapters are the grass roots of the Institute, offering the best possible opportunities for recruitment, counseling, and public relations"—Dr. Edwin S. Bardell.

MEASURING PROGRESS

All of us like from time to time to look back over the years and see whether or not we as individuals are making progress. As citizens, we are all interested too in whether or not the country as a whole is making progress toward improved living conditions.

We are all interested in finding out whether, if we are progressing as individuals or as a nation, we might not increase our rate of progress. Particularly, we all want to know whether our feet are firmly planted on the highroad to a better future or whether we are merely running faster and faster on a treadmill in order to stay in the same place.

Last year the American economy turned out goods and services with a gross national product value of somewhere near $340-billion. In 1939 the gross national product value was $91-billion.

At first glance, one might conclude that with an increase of three and three-quarters in gross national product value during the past twelve or thirteen years the American people are three and three-quarters times more prosperous now. But the facts are quite different for three reasons: 1) since 1939, the government plays as a consumer of goods and services has vastly expanded; 2) we have had a great inflation of prices; 3) the population has increased rapidly.

The vast expansion in the share of government take of goods and services, at current prices, is about 5.7 times, and much of the great rise during recent years has not represented increased living standards because of rising prices. Although gross national product value is the figure most widely used, it is not a very good measure of changes in human well-being, for it includes government purchases as well as private consumer purchases. Most government spending today is in military items which do not directly improve consumers’ living standards. People can not eat jet planes nor dress in parachutes.

A better measure of economic well being is total “personal consumption expenditures”. This figure reflects the durable and nondurable goods and services upon which consumers actually spend the bulk of their incomes. Since rising living standards are measured in terms of goods and services, account must be taken of the fact that the dollar is worth less than pre-war and that the population has increased over twenty-five million people.

Thus in spite of the tremendous and unprecedented scientific and technical advances of the past few years individual economic well-being has not progressed as it should and is, as a matter of fact, only half that of earlier years.

Bridal bouquets, corsages and other floral displays utilize about 8,000 tons of florist wire annually, according to an estimate by one wire manufacturer to the American Iron & Steel Institute.

MODERNIZATION ON A PLAN

Getting the advice of a good architect has become a generally accepted procedure for the average American who builds a new home.

Years later when the house needs some remodeling, the same home owner may be inclined to proceed without a proper plan in his modernization program. He does not seem to realize that to get the most for his modernization dollar in value and comfort, as in the initial construction, he should proceed according to an established plan.

Modernization may call for a picture window, new siding, additional floor space, altering partitions, another full or partial floor, a new roof, sidewall insulation, and a host of other possibilities.

There are so many important factors that enter into the consideration of any modernization plan that the saddest policy to follow is one of trial and error. The desired results is to consult with an architect—it is the most satisfactory, and the most economical.
Porcelain ENAMEL VENEER

THE PROBLEM: To create, in modern, functional simplicity, a new look on large external areas of a building originally keyed to the ornate moods of 1907.

THE SPECIFICATION: PORCELAIN ENAMEL VENEER for paneling, canopy facia and identification.

THE LOGIC: This medium offers complete design freedom and an almost infinite array of timeless, locked-in colors. When you create in PORCELAIN ENAMEL VENEER, your intent will be expressed with unfading exactness for generations.

WRITE TODAY for detailed information—and specify Porcelain Enamel Veneer, inside and out.
M. H. deYOUNG MEMORIAL MUSEUM

The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, under the direction of Walter Heil, announces the following schedule of exhibits and special events for the month of February:

EXHIBITIONS—Valentines of Past Times, from the Collection of Eugene E. Thurston; Paintings by Joseph Floch; Four American Painters — William Brice, Robert Chuey, Channing Peake and Howard Warshaw; American Institute of Architects 1953 Honor Awards showing the outstanding works of Bay Area architects since 1933; and Angkor, a group of Photographs by Ernest G. Rathenau.

SPECIAL EVENTS will include Painting for Pleasure and Exercises in Perception for adults each Saturday morning. Painting Workshop each Thursday and Saturday afternoons. The Classes for Children are held Thursday and Friday afternoons, and on Saturday mornings.

PRESENTING LECTURE SERIES ON IDEAS BEHIND CONTEMPORARY ART

Ernest Mundt, director of the California School of Fine Arts, San Francisco, is presenting a series of weekly lectures on the subject "Ideas Behind Contemporary Art."

The lectures are offered under auspices of the Women’s Auxiliary of the San Francisco Art As-
... NEWS and COMMENT ON ART

sociation, and covers the entire realm of fine arts in Western Europe and America from the Classic Revival in 1890 to the present day.

CITY OF PARIS
The Rotunda Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan, is presenting an Exhibition of Paintings with Clay by Joy Cain; a number of Oils by Amy Fleming and a group of Watercolors by Richard Stephens during February.

The special display of Pictures For The Month will feature a group of Oils and Watercolors by Wayne Thiebaud.

SAN FRANCISCO MUSEUM OF ART
The San Francisco Museum of Art, War Memorial Building, Civic Center, is offering the following special exhibitions and events during February:

EXHIBITIONS: The 72nd Annual Painting and Sculpture Exhibition of the San Francisco Art Association; Marsden Hartley Retrospective Exhibition; Photographs by Berenice Abbott; Tools for Gardening; How To Read A Photograph; and Selections for the Museum Collections.

The exhibition at the Parkmerced Branch will comprise a special group selected from the Rental Gallery.

SPECIAL EVENTS include Lecture Tours each Sunday at 3 p.m.; Discussions on Art each Wednesday evening at 8 o'clock; Workshop Classes Thursday mornings, 10 to noon; and Classes in Art for the Layman on Tuesday at 10 a.m., Friday evenings at 7:30, and Saturday mornings.

The Art In Your Life series, being presented over TV every other Sunday at 11 a.m., will feature "What Makes a Good Garden" on Feb. 8th, and "What Makes a Good Room?" on Feb. 22nd.

SAN FRANCISCO ART ASSOCIATION ELECTS OFFICERS FOR NEW YEAR
Francis V. Keestling, Jr., was re-elected president of the San Francisco Art Association at the recent annual meeting of the organization.

Other officers elected included F. Paschal Gallot, George D. Hart, Mrs. Clarence Lindner, Charles Kendrick, and F. M. McAuliffe. David Park, Bay area painter, was an Artist Representative on the Board as was Nell Sinton.

LES FAUVES EXHIBITION PLANNED FOR SPRING
Brayton Wilbur, president of the San Francisco Museum of Art, announced recently plans had been completed for the Museum's major exhibition of the spring season — "Les Fauves." The exhibition will be open to the public beginning March 13.

The term Les fauves is credited to a French critic, who at the famous Autumn Salon of 1905 in Paris, remarked on the startling work of a group of mostly unknown and young painters surrounding a classic type piece of sculpture: "Donatello au milieu des fauves!" The expression was so apt that it is used now as an identification of the pictures.

ANNUAL PAINTING AND SCULPTURE PRIZE WINNERS ARE ANNOUNCED

"VALENTINES OF THE PAST"
(From the Thurston Collection)

About 1850

Several hundred English and American valentines, dating from 1807 to the 1890's, including hand made, and epitomizing the sentiments of the period, are being exhibited during February.
PIONEERS MEMORIAL HOSPITAL

ON THE MOJAVE DESERT

BRAWLEY, CALIFORNIA

ARCHITECTS: WALKER,
KALIONZES and
KLINGERTMAN

COST $15,000 PER BED
A completely airtight, air-conditioned hospital... this was the order that Walker, Kalonzes and Klingerman of Los Angeles received to build the Pioneers Memorial Hospital on the Mojave Desert three miles south of Brawley in Imperial County. The building was constructed at a maximum cost of $15,000 per bed.

Although prices in Imperial Valley was approximately 20% higher than elsewhere, the two-story 88-bed hospital was built at a lower per-bed cost than the average hospital today. Not long after its completion, it won the Modern Hospital of the Month award given by the Modern Hospital Publishing Company.

Windows were a problem in architectural skill as the building had to be completely air tight and air conditioned. Wind storms blew fine sand at the rate of 45 miles per hour into every crack and crevice. The land on which the Pioneers Memorial Hospital was constructed originally had been used for agricultural purposes and loose soil conditions prevailed on the site. With a temperature range from 21 degrees in the winter to 121 degrees in the summer and a humidity of 80 or 90, it was essential that all rooms be sealed and that no residual deposits of silt from the Old Salton Sea be permitted to blow in.

To accomplish this aluminum horizontal sliding windows were used, which incorporate a stainless steel weatherstrip spring, set in continuous strips around the entire perimeter of the sash. Once the windows were installed the glass was protected by hung louvers so that no solar heat or sky glare could invade the room.

By minimizing the untoward climatic conditions the windows made the desert hospital as comfortable and safe as one in the very heart of a metropolis. Adjacent is a nurses' home with accommodations for 28 people.

EXTERIOR:

Specially designed windows were used to seal in air conditioning, give visual access to outdoors, and prevent dust of nearby Salton Sea from drifting in during strong gusts of wind.

Photos by Lowenthall
NEW VETERANS HOSPITALS

By DR. W. SCHWEISHEIMER

The modern veterans hospitals which have been built in the United States during the last few years, or which are being built, present the most interesting as well as varied architectural aspects. They have not been planned according to a single scheme and consequently are as multiform as the American country is.

Veterans Administration currently is operating 150 hospitals and more are under construction. The total bed capacity of the 150 hospitals in operation was almost 116,000 beds. Though the hospitals are architecturally different, they have, of course, facilities and departments which are the same in all hospitals.

A typical modern veterans hospital is the new $10,000,000 Veterans Administration Hospital in
Shreveport, Louisiana. The 10-story main hospital building towers 150 feet into the air. Clustered around it are a heating plant, nurses’ home, attendants building, two duplex apartments and a single residence for staff quarters.

The hospital employs 550 people. The medical staff includes 30 full-time doctors and 95 nurses. Part-time medical and consultant services are provided by leading doctors and specialists from the Shreveport area. The hospital has a capacity of 450 beds. Private rooms are available for seriously-ill veterans. Wards for the less seriously ill range from 2 to 16 beds.

One interesting innovation is a system of vacuum pipes with outlets at every bed so that much medical equipment which formerly was hand-operated may be plugged into the vacuum sockets for automatic functioning. Beds, generally, are grouped as follows: 262 beds for general medical patients; 36 beds for surgical cases; 72 beds for neurosis patients; 72 beds for psychiatric patients; 10 beds for isolation.

One wing in the main building is occupied by V-A out-patient clinics. These clinics give more than 120,000 examinations and treatments a year for veterans whose ailments do not require hospitalization. The surgical wing on the third floor is the only air-conditioned section of the hospital. Eight large operating rooms are lined with specially-treated glass and insulated floor to prevent operating room explosions. Two smaller operating rooms are located in the out-patient clinic.

Medical conference and lecture rooms are included in the main building.

A great volume of medical charts and records is constantly shuttling back and forth between files, clinics, conference rooms and wards in a modern hospital. To handle this traffic rapidly and efficiently, V-A has installed a system of pneumatic tubes in the Shreveport hospital. Thirty-one stations throughout the hospital are connected by tubes with a central record room. A doctor’s request for records on a patient can be answered almost instantly.

Three teletype machines are connected to a national network so that the Shreveport Hospital can communicate instantly with headquarters in Washington, area medical officers in St. Louis, the Dis-

and S. P. Marraccini

GENERAL CONTRACTOR: HOWARD J. WHITE, Inc.
The San Mateo County Sanatorium is located off Edgewood Road outside the limits of Redwood City. Construction started in the spring of 1950 and was completed in the spring of 1952.

Structure is reinforced concrete, including ground, first, second and third floors and penthouse structures.

The building was designed primarily for the treatment of tuberculosis patients, though thought was given to the possibility that this disease may at some time be greatly reduced or entirely eliminated. The plan has, therefore, been developed to allow for simple conversion to more general hospital needs.

The ground floor is devoted primarily to service facilities. Boiler Room, Maintenance Shop, Mechanical and Electrical Equipment Rooms, Locker Rooms and Toilets for employees, Laundry Collection and Laundry Sterilization, Storage Areas and Housekeeping Supplies comprise the large part of this floor. A Morgue and Autopsy Room is also at this level with a separate entrance screened from view of the rest of the Hospital.

The main hospital entrance is at the first floor level. A separate one story wing provides public waiting space, toilets for the public, manager's and business office space. Extending in a southerly direction from the core of the building is the
Administrative section. Here are located the various offices for the staff, with the Doctors' entrance at the end of the wing leading to the existing Residence Building. Contained in this wing are also the admitting Examining Rooms, Viewing Room, Laboratory and Pharmacy.

The corresponding wing on this floor contains occupational and physical therapy suites, classrooms and libraries—all important in the modern treatment and rehabilitation of patients suffering from this particular disease. Nurses' lockers and resident rooms are also contained in this wing.
The core of the building at this floor leads to the staff and help dining rooms, the central kitchens and ancillary service and storage elements.

From the central lounge on this floor, a gallery leads to a separate assembly room building, used for religious services, meetings, entertainments, social functions, etc. Simple stage productions are possible as well as projection of films.

The basic theory of centralized services and complete visual control of nursing areas is seen in the second floor plan. All service areas necessary for patient care are concentrated around the
SANATORIUM – San Mateo . . .

SECOND FLOOR PLAN

OPERATING ROOM . . .
THIRD FLOOR PLAN

TRAY MAKE-UP CONVEYOR LEADING TO TRAY AREA IN MAIN KITCHEN
central nurses station. The nurse on duty at this station has a clear view of all bedroom doors, the day room, and elevator and stair entrances. Charting and medicine preparation rooms are directly off this station.

Serving pantries nearby receive prepared trays from the kitchen below by means of automatic tray lifts and are delivered to the patients within a minute or two after leaving the make-up tray belt in the kitchen. The second floor nursing units being devoted to female patients, a beauty shop is provided for visiting specialists. The floor above has similar barber shop facilities for male patients.

Identical nursing units of twenty-five beds each extend in both directions from the central nurses station. Rooms are somewhat larger than normal in consideration of length of stay, space for visitors, and accommodations for patients personal property. Specially designed bedside tables provide adequate space within easy reach for a variety of personal possessions. All rooms will accommodate two patients.

A patients' call system is provided for direct conversation between patient and nurse on duty, greatly reducing the work of the nurse and providing reassurance for the patient. A four channel central radio system is available to each patient as well as controls to connect to central phonograph recordings or assembly room entertainment.

Each nursing wing contains its own Utility Rooms, Bath and Shower Rooms and Sputum Rooms.

Each patient bedroom contains stainless steel recessed lavatories and built in individual wardrobes. Between each pair of rooms, toilets are provided and dental basins.

The stem wing on the second floor contains all the medical facilities and surgical suite. Medical facilities are grouped on one side of double corridor plan, surgical on the other, with commonly used X-ray and Fluoroscopic Facilities between. In the surgical section are found a Recovery Room, Sterile and Unsterile Storage, Central Sterile and Operating Room Suite. This surgical area is expandable to provide enlarged facilities in the event of the conversion of the hospital to more general hospital use.

The medical side of this wing contains pneu-
thorax room, eye, ear, nose, throat and dental treatment rooms. The patients' waiting room here serves both these medical facilities and the X-ray Department in the center of the wing.

The third floor duplicates many of the nursing features of the second floor, with the addition of four wards of four beds each with common bath and toilet facilities and separate day room. This section of the hospital is adaptable to future expansion by taking in the present walking deck and continuing out over the future surgical department expansion at the second floor level.

At roof level, more walking decks are provided as well as pantry facilities served by dumbwaiter from the main kitchen.

Equipment of the hospital throughout has been planned for the most efficient possible use of personnel. In addition to the aforementioned delivery of trays to upper floor serving pantries, down travel tray lifts are provided for delivering pre-rinsed soiled dishes to the central dish washing room on the first floor. There, conveyor belts carry trays to sorting area and automatic dishwashing, glass washing and sterilization machines. Dumbwaiter service is provided to all floor pantries as well as the tray lifts. Soiled linen chutes and rubbish chutes discharge to collection centers at Ground Floor. The grouping of all services at the central core reduce personnel traffic to a minimum.

Materials throughout have been selected for minimum maintenance and long life. Window sills and stools are heavy gauge aluminited aluminum. All toilet rooms, utility rooms, sputum rooms, gown rooms and surgery areas have glazed ceramic tile walls or wainscots and terrazzo floors. (The Surgery areas have conductive terrazzo floors to provide safe conditions for the use of certain explosive types of anaesthetic gases.) All external wall angles in traffic areas have large radius extruded aluminum corner beads to protect them from damage from wheeled traffic. Kitchen, pantry and dishwashing areas have walls of glazed structural clay tile and floors of quarry tile. Floors throughout the rest of the building are of resilient tile. Ceilings throughout most of the building are mineral acoustical tile, with cement asbestos type perforated acoustical panels in wet and service areas.

(See Page 38)
NEW OPERATING BASES OF THE

SOUTHERN CALIFORNIA GAS CO.

ARCHITECTS: ALLISON and RIBLE
The three projects for a public utility company, described and pictured here, are interesting examples of the fulfillment of a rigid building program for each project established by the client. The programs required, within the limits of a fixed appropriation, simple, straightforward buildings without ornamentation, maximum usable area and economy of construction, operation and maintenance. The client was keenly aware of the advantages of employing an experienced architect to attain the best results possible under such programs.

LOCKER ROOM

is equipped with complete and modern facilities including individual steel lockers, showers, and toilets for employees.
SOUTHERN CALIFORNIA GAS CO.

These three projects, operating bases for the field forces of the Southern California Gas Company, were designed by Allison and Rible, Architects, of Los Angeles. The Van Nuys base serves the western area of Los Angeles County; the Alhambra base serves the eastern area; the Hawthorne Avenue base in Redondo Beach, which is now under construction, will serve the southern area.

Each base supplies all the routine needs of the field forces and contains office areas, conference room, shower and locked spaces, storerooms, garage and auto repair shops, gasoline and oil tanks and pumps, truck sheds and outside equipment storage facilities. The sites, completely fenced and paved, also provide adequate parking areas for employees and equipment.

The Van Nuys base has exterior walls of reinforced concrete blocks. The other two bases have walls of reinforced modular size brick. The architectural treatment provides a harmonizing link between the three bases.

Generous roof overhangs and exterior sun louvres furnish effective protection from sun heat and glare at the Van Nuys base where temperatures are normally higher.

Framing is of structural steel and wood combined. Roofing is composition and gravel and flashings are of galvanized sheet metal. Windows are of projected type steel with screens and venetian blinds.

Office partitions are movable wood partitions glazed with patterned glass. Masonry of exterior walls is exposed on the inside and painted. Ceilings are covered with acoustical tile in the office portions. Ceilings are plastered and walls and floors in shower and toilet areas are tiled. Showers have partitions of marble; toilet partitions are of factory enameled steel.

Office floors are covered with asphalt tile. Chalkboards, projection screens and darkening shades in the conference room are planned for group instruction of personnel.

Doors in office portion are of flush wood solid-core construction. Doors to automobile service areas are of wood overhead lift type.

Heating is by forced air. Lighting fixtures are incandescent.

Complete facilities for servicing the Company trucks are provided. The gasoline island, covered with aluminum and glazed, contains pumps, and air and water hoses.

Hydraulic lift at platform affords ease in lifting heavy equipment to truck and platform level.

Materials throughout have been selected for economy in maintenance. Colors used are in keeping with the practical, industrial character of the buildings.

HOSPITAL ROOM TEMPERATURE
AN AID TO RECOVERY

By DARELL BOYD HARMON
Austin, Texas

Temperature of hospital rooms can be as important to the patient's recovery as it is to his comfort, delegates to the American Hospital Association's 54th annual convention in Philadelphia were told recently.

Dr. Darell Boyd Harmon, of Austin, Texas, a nationally known psychophysicist, pointed out that scientifically proper room temperatures can strongly support normal therapeutic procedures in a patient's recovery. Speaking at a luncheon-meeting, Dr. Harmon told some 200 hospital administrators, architects, consultants and public health officials
that "comfort is only one of many temperature factors affecting the patient's well-being."

Actually, Dr. Harmon continued, there are three distinct stages in a typical non-surgical patient's hospitalization that require precise room temperature regulation. These, he said, were the acute infection stage, the beginning of recovery and, lastly, the convalescent stage.

"Once infection sets in," Dr. Harmon explained, "the body, through Nature, attacks. This is done by increasing the metabolic rate — or in other words, by inducing fever to 'burn-up' the germ invaders. To obtain the most biological advantages from a fever it must be kept within known limits for the particular infection — an operation requiring careful room temperature regulation. A cool room, for instance, will draw too much heat away from the patient's body — with possible fatal results. On the other hand, a room too hot will bottle the fever up within the patient, causing it to reach dangerous degrees. For each infection there is a safe, known temperature level and the room temperature should be regulated to support this level."

After the infection crises has passed the Texas psychophysicist said that a more moderate temperature was desirable until, finally during the convalescent stage, a still cooler temperature should be maintained.

The actual room temperature range from the infection to the convalescing period is about 15 degrees, Dr. Harmon pointed out. The ratio might be 80°, to 72° to 65° from start to finish.

He said that comparable patterns could be related to surgery as well as non-infectious and non-surgical diseases.

NEW HOSPITAL PLANNING BOOK

Just published by American-Standard is an attractive, new book of plumbing fixtures for Hospital Planning.

Designed to help hospital administrators, architects, engineers, and plumbers in the selection of plumbing fixtures and fittings for modern hospitals, this up-to-date manual is most conveniently arranged.

Divided into two main parts, Sections A and B, the book includes in the first section floor plans of the different departments of a typical hospital. The obstetrical, pediatric, and surgical sections are shown, for example, as are the administration division, laundry, kitchen, and various treatment rooms. Developed by the U. S. Public Health Service as a guide for efficient hospital planning, the floor plans indicate the fixture requirements of the individual hospital departments.

Section B shows various plumbing fixtures like lavatories, special hospital-type sinks, baths, water closets, and therapeutic equipment in a wide variety of units. A full description is included with each fixture and fitting, giving the sizes available, type of support, and other pertinent information.

Especially handy to use, this catalogue is arranged so that the floor plan pages in Section A refer to specific pages in the second section for a selection of the particular fixtures recommended.

Its smart-looking light brown cover featuring a Caduceus emblem placed on the cross of service helps make this catalogue an attractive addition to a reference library.

LONG BEACH ARCHITECTURAL DESIGN CONTEST ANNOUNCED

Announcement has been made of the 1953 Architectural Design Contest, sponsored by the Community Planning Committee of the Long Beach Junior Chamber of Commerce.

Purpose of the contest is to bring long over-due recognition to the architects who do work for the city, by stimulation of public interest in an appreciation of the functions of architecture in relation to surrounding building.

The contest has been divided into two major considerations, 1) Classifications which include a) Residences—contemporary and period, b) Commercial—remodel and new, c) Churches and d) Public Buildings. Classification 2) incorporates a consideration of a) Location, b) Contest Entry, and c) rules for submission of material.

Judges of the contest will be three architects selected from the Los Angeles Chapter of the A.I.A.

ARCHITECTURAL FIRM ENLARGES ASSOCIATES

Ernest J. Kump, A.I.A. architect of San Francisco, recently announced the formation of a partnership with James D. Fessenden, A.I.A. architect and Delp W. Johnson, A.I.A. architect.

The firm will continue under the name of Kump Associates and will maintain offices at 576 Sacramento Street, San Francisco.

ARCHITECT SELECTED FOR SHOPPING CENTER

Albert C. Martin & Associates, Los Angeles architects, have been appointed official architects for site planning and development of Lakewood Center and Lakewood Park commercial developments. Martin & Associates did the original site planning for the 154 acre development.

FEBRUARY, 1953
To the layman admirer, there is little to indicate that Bank of America’s strikingly handsome and dynamically modern 12th and K Street Branch in Sacramento is not an entirely new building.

Yet, the changeover from the comparatively drab structure that formerly stood there was accomplished without major construction in eleven months time, on a moderate budget and while banking went on as usual. Excellent architectural design, and extensively utilizing architectural porcelain enamel veneer, made this possible.

Architects of the Capital Company, Bank Planning Division, used handsome and unique horizontal louvres and paneling to cover large window areas of the building’s two upper floors. The job leaves no evidence that these floors are devoted to
housing automobiles of guests of Sacramento's famed Senator Hotel.

In addition, paneling was used in re-creating the street level facade of the building and to create facsimile gold-fronted, brown side-shadowed letters that spell "Bank Of America" on both street sides of the building. The parapet cap of the building is fully grouted with plastic type Portland Cement to make a structurally sound unit capable of sustaining scaffolding.

The highly decorative louvres and paneling are finished in buff, as are the street floor panels. Remainder of the upper story area is stucco, done in complementary buff and sprayed with glistening mica flakes.

The upper story area was furred out with metal studs, lath and plaster to create a plane surface. On the street floor level, time and cost were reduced by the use of metal strips to correct surface irregularities. Costly and time consuming cutting or filling was thus avoided.

During this same period, and while the bank continued to serve customers, the interior also underwent alteration. The banking area was 100% enlarged. All new bank equipment and new vaults were installed, along with mechanical refrigeration air conditioning.

A lacquer comprised of multi-colored aggregates in solution—which sprayed from a common

(See Page 47)

Originally remodeled when taken over by the Bank of America in 1928 and subsequently enlarged in 1933, this is how the building appeared until its rejuvenation. Basically of brick, the building once housed a model "T" Ford auto agency.

East Bay Chapter:
Chester H. Treichel, President; Malcolm D. Reynolds, Vice-President; John E. Lloyd, Secretary; Roger Lee, Treasurer. Secretary’s Office 1171 Solano Ave., Albany, California.

NORTHERN CALIFORNIA CHAPTER
The first of the 1953 scheduled meetings was devoted to Membership with three outstanding national architects taking part in the program.

Pietro Belluschi, F.A.I.A., Dean of the College of Architecture at the Massachusetts Institute of Technology, was the principal speaker and ap-
with the Southern California Chapter of the Producers' Council, with 1953 officers of the Southern California Chapter A.I.A being the guests of honor.

Henry L. Wright, President, announced the following Committee Directors: Kenneth Johnson, Charles Light and Kemper Nomland. Committee Chairmen included Program, Robert Field; By-Laws, John J. Landon; Membership, Winston Condes; Investment Advisory, George Allison; Legal, Ben O'Connor; Collaboration with National Association of Home Builders, Edward Fickett; Ethics and Practice, Whiting Thompson; Architectural Exhibits, Morris Verger; Fellowship, Eugene Weston; Education, Van Lee Schmidt.

IDAHO CHAPTER

The annual meeting of the Idaho Chapter A.I.A. was recently held in Boise, with the following officers named to serve during the ensuing year:

Frederick C. Hummel of the firm of Hummel, Hummel & Jones, architects in Boise, President; Jack Woodmansee, was elected Vice-president; and Jedd Jones, III, named Secretary-Treasurer.

Offices of the secretary of the Chapter are maintained at 1324 Idaho Street in Boise.

PASADENA CHAPTER

Dr. Paul E. Webb, principal of the Los Angeles High School, was the principal speaker at the February meeting. He recently returned from Japan where he reorganized the Japanese school system for the U.S. Government, and his comments were illustrated with many colored slides.

Committee Chairmen appointed by President Robert E. Langdon, Jr., to serve during 1953 include: Coordinating Director, Van Livingston; Producers' Council—Southern California Chapter: Bert Taylor, President, Pittsburgh Plate Glass Company; G. Robert Foden, Jr., Vice-President, Truscon Steel Company; Malcolm G. Lowe, Secretary, Natural Gas Equipment Inc.; Richard Seaman, Treasurer, W. P. Fuller & Company; Van Boegel, National Director, Gladding-McBean & Co.; Producers' Council—Northern California Chapter (See Special Page)
STRUCTURAL ENGINEERS ASSOCIATION OF NORTHERN CALIFORNIA

The February meeting was a joint meeting with the American Welding Society specially arranged to hear Van Rensselaer P. Saxe, Consulting Engineer of Baltimore, Md., speak on the subject of “Welded Structures.” Saxe is well known for many articles on welded structures and is the originator of the Saxe Welded Erection System.

Saxe illustrated his talk with numerous color slides showing many phases of general design, simplicity and economy, safety, practicability, universal use, and speed of fabrication and repair.

NEW OFFICERS (Left to right)—Harold P. King, 1952 President; Ben Benioff, 1953 President; William T. Wright, Vice-President; and C. M. Corbit, Jr., re-elected Secretary-Treasurer.

Spier, Treasurer; and Rear Admiral C. A. Trexel, CEC, USN (Ret); Capt. Cushing Phillips, CEC, USN; Capt. H. F. Ransford, CEC, USN; Clyde Bentley; Lt. Col. James D. Strong, Cj. USA; and J. G. Wright directors.

members of the American Society of Civil Engineers, and Structural Engineers Association of Northern California, were elected at the recent annual meeting of the organization.

Mrs. Edward F. McKeon was chosen President; Mrs. Arthur B. Smith, Jr., Vice-President; Mrs. Leslie Graham, Treasurer; Mrs. Victor Sandner, Secretary; and Mrs. G. A. Sedgwick, Mrs. J. R. Guptill, Mrs. Eric Moorehead, Mrs. Arnold Olitt, Mrs. A. C. Horner, and Mrs. E. W. Paddock were named to the Board of Directors.

AMERICAN SOCIETY OF CIVIL ENGINEERS—LOS ANGELES

The Los Angeles Junior Forum of the American Society of Civil Engineers, one of the oldest and most active group of its kind, recently installed officers for the ensuing year.

Jack Howe, retiring president, pins traditional presidential badge on new president Dick Gerke, with vice-president Hal Hallidin (right) and Hugh Macdonald, sec.-treas., indicating approval.

Richard C. Gerke, Sales Engineer with the fabricated structural steel division of Bethlehem Pacific Steel Corp., was named president. Harold A. Hallidin with the architect-engineer firm of Daniel, Mann, Johnson and Mendenhall, was elected vice-president, and Hugh C. Macdonald, representative of the Associated Brick Manufacturers of Southern California was chosen secretary-treasurer.

UNIVERSITY OF CALIFORNIA OFFERS EXTENSION COURSE IN ENGINEERING

The University Extension, University of California, is offering a spring course in Design of Small Buildings for Lateral Forces, to include design of one- and two-story industrial and commercial buildings to resist wind earthquake forces, under the instruction of Henry J. Degenkolb, Structural Engineer with the firm of John J. Gould, Consulting Engineers, San Francisco.

"Advanced Soil Mechanics with Application in Highway Engineering," including consideration of foundations of buildings and bridges; stability of buildings; design of foundations, and soil mechanics.

FEBRUARY, 1953
COUNCIL ACTIVITIES

For the past year, the executive committee has felt that there is an excellent opportunity to expand the activities and coverage of the Producers’ Council. Part of this expansion is concerned with the presentation of our various informational programs to the northern California Chapters of the A.I.A.

These Chapters of the A.I.A. are at present seeking programs from building material manufacturers for presentation at their meetings.

Actually this is a golden opportunity for the members of the Producers’ Council to carry the message of their individual products to the architects of the East Bay and Valley Chapters, and it will give us the opportunity to greatly strengthen the position of the Producers’ Council in the eyes of all of the Northern California Chapters which go to make up the California Council of Architects.

The reasons for this, of course, are obvious and this program should have the backing of everyone in the Council.

Herb Duncan, Chairman of the Educational Committee, will need the assistance and co-operation of all of the member companies in making these programs available and conducting the actual presentations. Many of the members of the Producers’ Council are traveling up and down the Valley at various times and by means of a little forethought and planning, we are sure that these Valley meetings could be attended not only by the company making the presentation, but also by other representatives who are in the area.

We are sure that our schedules are not so rigid that they cannot be moved up or postponed one or two days so that our dates to be out of town could be arranged to coincide with the date of a particular presentation at one of the Valley Chapters.

This would not only be of assistance to the individual making the presentation, but would present a fine opportunity for some good fellowship among the Council Members.

1953 PROGRAMS

On January 12 the Gladding, McBean Co. presented a fine new film entitled “For Now and Forever.” Mr. Ray Brown is to be congratulated for getting our informational meetings off to such a fine start for this year, and we are sure that the programs to follow will be equally well done.

All programs are being screened for composition and presentation with the thought of improving our informational meetings.

The schedule for the year is as follows:

February 2, W. P. Fuller & Company.
March 2, Natural Gas Equipment, Inc.
April 6, American Lumber & Treating Co.
April 29, Armstrong Cork Company (Dinner Meeting).
May 1, Table Top Exhibit.
June 1, Golf Tournament.
July 6, Reynolds Metals Company.
August, unassigned.
September, United States Plywood Corp.
October, unassigned.
November, unassigned.
December, annual Christmas Jinks.
WITH THE ENGINEERS
(From Page 33)

earth dams and deep cuts; pressure on retaining walls, etc., will also be given with Dimitri P. Krynine, instructor.

A third course in "Analysis of Indeterminate Structures" is being given by Richard J. Woodward, partner of Clyde & Associates, Foundation Engineers, Oakland and Berkeley, as instructor. Instruction will include solution of rigid rectangular, box or gabled frames, and of rings and sewers; and arches by the conventional arch method.

STRUCTURAL ENGINEERS ASSOCIATION OF CALIFORNIA

The organization recently went on record as opposing legislation proposed in the California State Legislature, and sponsored by the Delano Chamber of Commerce, which would create a Division of Architecture in the Department of Education with the responsibility of furnishing plans and specification and supervision of public school buildings.

A similar measure was defeated four years ago, according to a report from John J. Gould, Chairman of the Legislative Committee of the SEAC.

SOCIETY OF AMERICAN MILITARY ENGINEERS—San Francisco

Prof. Robert J. Kerner, Sather Professor of History and Director of the Institute of Slavic Studies at the University of California, spoke at the February meeting on the subject "Time's on the Side of Moscow."

Prof. Kerner has written many books on European conditions and factors and is a recognized authority on the subject.

Plans are underway for the March meeting in the Presidio Officers Club to be a dance.

A.I.A. ACTIVITIES
(From Page 31)

grams, Bob Cook; Construction Industry, Ken Gordon; Coordinating Director Scott Quintin for Governmental Relations, Broe Freeman; Practice of Architecture, George Cannon. Coordinating Director Burt Romberger for Public Relations, Culver Heaton; Exhibits, Gene Fickes; Information Please, Burt Romberger. Coordinating Director Bonnie Bonnall for Education and Registration, Dorothy and Wilbur Harrison, co-chairmen; and Membership, Don Neptune.

The chapter has launched a five-point program for 1953 which includes 1) Maintain the reputation of the architectural profession, 2) Improve education and broaden horizons, 3) help Junior associates to become licensed, 4) enlarge public relations program, and 5) take advantage of cooperation offered by the Womens' Architectural League.

SAN FERNANDO VALLEY CHAPTER

Martin Snell has been elected president of the San Fernando Valley Chapter of the A.I.A. for 1953.

Named to serve with Snell as officers of the chapter were Alec Murrey, Director; Henry Withey, Director; Robert Stacey-Judd, Treasurer and Albert Hawk, Secretary.

UNIVERSITY OF COLORADO

The department of Architecture and Architectural Engineering of the University of Colorado, Boulder, is conducting a School Plant Planning Workshop during the second term of the 1953 Summer Session, according to Thomas L. Hansen, A.I.A. Head of the Department.

The course is to consist of lectures and seminars devoted to school plant design in relation to educational programs, to meet the needs of superintendents, principals, members of school boards, and others interested in school building programs.

One or two field trips are scheduled to Denver and others in the immediate vicinity of Boulder.

STOP WATER DAMAGE!

Specify Thompson's WATER SEAL for Waterproof Protection of all porous materials • It penetrates • Is transparent • Leaves no film • Locks out moisture • Lasts for years • Proved by performance. Will cover 200-400 sq. ft. to gal., depending on porosity of material. Specified by architects and used by contractors all over the West. Has State of California approval.

Write or phone for proof of performance and specification material.

Manufacturer
BY-CHEMICAL PRODUCTS CO.
1355 Market St., San Francisco • King City • Los Angeles
to review recently constructed school buildings. Programs will be supplemented by lectures given by visiting practicing architects, representatives of building material manufacturers associated with the Producers’ Council of America.

The course will begin on July 27th and extend thru August 14th. For complete information write Professor Thomas L. Hansen, A.I.A., Head of the Department of Architecture and Architecture Engineering of the University of Colorado at Boulder.

UNIVERSITY OF SOUTHERN CALIFORNIA

Seventy-five students of the School of Architecture at the University of Southern California recently completed and reported to city officials their studies of detailed city-planning research for the cities of Fontana and Rialto.

Under the direction of Prof. Simon Eisner, the project included research, maps showing land-use inventories and population distribution, together with personal interviews with various key city officials.

CALIFORNIA COUNCIL OF ARCHITECTS

John J. Landon, Los Angeles architect and past president of the Southern California Chapter A.I.A., and Ulysses Floyd Rible, Los Angeles architect, have been elected delegates-at-large to the California Council of Architects.

Also named to serve as members of the Council are Henry L. Wright, president, and Charles E. Fry, immediate past president of the Chapter.

OREGON CHAPTER

Francis Jacobberger, F.A.I.A., was the main speaker at the January meeting, held in the City of Portland.

Mary Alice Hutchins, chairman of the Exhibitions Committee, reported excellent progress in plans for the A.I.A. Show to be staged in February at the Auditorium of Meier & Frank Company. More than forty registrations for space had been received.

NEW MEMBERS: Robert Bernard Martin, Corporate Member. Raymond A. Case, and Donald Harry Lindgren, Associate Members; and Elton V. Kern, and John M. Amundson, Junior Associates.

STATE POLYTECHNIC COLLEGE HOLD OPEN HOUSE

Open house will be observed at the California State Polytechnic College, San Luis Obispo, in April, with a public showing of “educational progress.”

MODEL HOTEL AND MODEL QUEEN—Architectural Engineering students at the California State Polytechnic College show a student project, model hotel building, to Cecilia Fava, Sacramento State College co-ed. Students Jack Knighthouse, Roy Chan and George Dansmore participate in welcome to Queen Cecilia who will reign over all-male Cal Poly student body during Poly Royal in April.

Engineering, agricultural and liberal arts exhibits will engulf the campus with twenty-eight major departments of the college taking part. Highlight of the annual event is a two-day livestock show in which agricultural students will exhibit their project beef, sheep, swine, poultry and dairy stock.

All “Poly Royal” events are open to the public.
This year’s show has been dedicated to J. I. Thompson, member of the California State Bureau of Agricultural Education Since 1931.

LOS ANGELES ARCHITECTURAL MEMORIAL LIBRARY FORMED

A memorial for the late Mrs. Robert Alexander has been established in the Library of Architecture and Allied Arts of Los Angeles, according to a recent announcement.

The memorial will be used for the purchase of books for the library.

Mrs. Alexander served as librarian for the past two years, during which time she greatly augmented the services of the library and made it one of the most outstanding in the nation.

WOMEN’S ARCHITECTURAL LEAGUE OF SOUTHERN CALIFORNIA

Otto S. Snoffer, public relations representative of the Los Angeles Department of Water and Power, was the principal speaker at the February meeting of the Women's Architectural League of Los Angeles.

A motion picture film entitled “Twin Titans” was shown.

SOUTHERN CALIFORNIA HOME SHOW GETS NEW PRESIDENT

Frank E. Hess, leading figure in the development of Southern California, has been named president of the Construction Industries Exposition and Home Show for 1953.

Four new vice presidents were also appointed, including Vern R. Huck, D. J. Missimer, Howard Dyer, and Donald Reed.

BERT TAYLOR RESIGNS

Bert Taylor, president of the Southern California Chapter of the Producers Council, Inc., has resigned to accept a position with a large national firm in Dallas, Texas.

MOASIC TILE COMPANY MAKES APPOINTMENTS

J. A. Falconer, associated with the Mosaic Tile Company for the past fifteen years, has been named General Manager in charge of manufacturing and administration of the firm’s west coast factories and warehouses, according to Thomas B. Jordan, Western Manager.

Other Mosaic personnel changes include appointment of Louis Grossman as salesman in the Jordan Tile Manufacturing Company Corona plant; Frank Dyer, recently in charge of the tile setting school at West Coast University, appointed to the Hollywood Showroom and Warehouse, and Mike Adams, a recent graduate of the University of Oregon, has been appointed a salesman.
SANATORIUM - SAN MATEO
(From Page 21)

Cabinet work is hardwood. Counter tops in work areas are stainless steel, as are sinks and built-in lavatories. All flush hardwood doors where wheeled traffic may pass are fitted with steel edge guards.

The architectural concrete exterior of the building has been finished with a cement type paint. Brick has been used for warmth of appearance for the reinforced walls of the entrance wing, as well as for panels between columns below windows at the first floor level. Sash throughout are steel, combination casement and hopper type. Entrance doors and glazed walls of entrance wing are Satin alumilite finish aluminum.

Adequate parking areas have been provided on the grounds for public staff, and service employees, and various entries for deliveries, morgue, employees, staff, nurses and general public have been carefully segregated.

This hospital as built is considered the most advanced building of its type in existence. The most up to date care of tubercular patients has been provided for. Two years of preliminary study and research preceded the development of the program and the final design. Studies were made of all existing facilities of this type, and the leading experts in the field throughout the country were consulted. This background, in conjunction with close cooperation of the Health Department authorities of San Mateo County made possible a hospital which assures the very best and most advanced type of treatment with the desirable minimum of personnel to operate the facility and economic operation over the years.

The hospital was planned for a normal capacity of one hundred beds, but is easily capable of handling 120 beds within their original building. With minimum revisions to the building, the capacity can easily be increased in an emergency to 150 beds or over with no structural change.

The contract price for construction and fixed equipment, exclusive of Radiographic equipment was $1,331,550. Total area is 77,544 square feet.

ALASKA ARMY CONSTRUCTION GAINS 1953 MOMENTUM

The Corps of Engineers for the Alaska District, recently announced a schedule of two-hundred and sixty-four Alaska defense construction projects will be submitted to competitive bidding before next April.

Bid opening dates are now proposed as firm on one-hundred and thirty-seven of the jobs. Total value of the program is $240 million dollars.

KRAFTILE PRESIDENT PREDICTS BUILDING INCREASES AHEAD

C. W. Kraft, president of Kraftile Company, Niles, California, is looking forward to the largest year in his company’s history during 1953, and predicts an increase in sales of 35 per cent.

The anticipated increase is in line with one enjoyed by the entire industry, Mr. Kraft pointed out. He continued:

"The unique chemical properties of structural wall units, one of the youngest of all clay products, have increased its use three-fold in the past ten years. Chemical plants, dairies, breweries, printing plants, industrial and institution buildings now are being designed with interior walls of structural wall units for sanitation, cleanliness, easy, low-cost maintenance and many special purposes offered by no other building material.

"Wall units should not be confused with ordinary wall tile, which is less than one-half inch thick and does not support its own weight. This relatively new material, developed in the past two decades, is a structural unit usually at least 4 inches thick. It holds its own weight and that of ceilings, roofs, joists or other loads placed on it.

"Used in industry, its special values have been established by research and by experience. It aids in humidity control, since moisture condenses and runs off its surface. In factories processing textiles,
drugs, chemicals and foodstuffs, it helps control lint, dust and dirt, and does not absorb acid fumes or odors. Bacterial growth is prevented on the walls in meat packing plants and research laboratories.

"Usable shop space need not be left idle to provide for cumbersome cleaning and painting equipment required with other types of wall finishes.

"Installation and modernization of shower rooms, and locker rooms for employees is an example of one of the market factors that is increasing demand for structural wall units. Even more important is the rapidly growing trend toward in-plant feeding facilities for employees. The number of employee cafeterias, restaurants or lunchrooms has increased tremendously in recent years and we believe even more will be installed within the next few years."

STRUCTURAL CONCRETE ASSOCIATION HOLDS ORGANIZATION MEETING

E. S. McKittrick of Alhambra, California, has been elected president of the Structural Concrete Association at the organization’s recent inaugural meeting.

William J. Moran and Harold Roach, both prominent leaders in the construction industry in Southern California, were chosen vice-presidents. Robert G. Swan, was named secretary, and Corwin Wickersham, elected treasurer.

The organization was formed to provide a source of mutual assistance to members in technical and legal problems arising in the design and construction of structural concrete projects.

PRODUCERS COUNCIL OF SOUTHERN CALIFORNIA

G. Robert Roden, Jr., vice-president of the Producers Council, Southern California Chapter, has been named president of the organization and will serve for the balance of the fiscal year.

He succeeds Bert Taylor, who resigned and is moving to Dallas, Texas, where he has accepted a position as national sales manager for the Universal Corporation.

ERROR

A recent issue of ARCHITECT & ENGINEER stated that Frank Lloyd Wright was a "F.A.I.A." This was an error as architect Frank Lloyd Wright is not a member of The American Institute of Architects, and can not therefore be a "Fellow."
BOOK REVIEWS

PAMPHLETS AND CATALOGUES

As part of its continuing research on plumbing systems, the HHFA sponsored tests by the National Bureau of Standards of several disposal units now in common use. Tests were run and observations made to: study the pressure and flow conditions in the fixture drains as they are affected by the use of food-waste disposal units; determine the minimum rate of flow of water required for efficient transportation of solids in the drain; determine the effect of the units on siphonage sinks; and determine the ability of the units to grind various types of food waste.

The tests conclude that food waste disposal units, when properly used, do not have harmful effects on plumbing systems, water consumption, and drainage pipes.

A comprehensive analysis of the methods by which prefabricated houses are sold, sponsored by the HHFA's Division of Housing Research and prepared under contract with Cornell University.

The 58-page study is divided into two parts. Section I, "Existing Marketing Practices," concentrates on retailing aspects with description of retail outlets—size, type and other criteria; Retailer-Customer relations, covering dealer's activities in selling, advertising and sales promotion; General Problems of the Retailer—and development, building codes, labor relations; and Retailer-Manufacturer Relations.

Section II, stresses importance of planning marketing programs—analysis of national and local markets, product, channels of distribution, sales policies, finance policies, and erection and service policies.

NEW CATALOGUES AVAILABLE

Any of the catalogues or folders described here may be obtained by forwarding your request as indicated in the coupon below to the office of the Architect & Engineer. Merely mark the items you want and clip or paste the coupon to your letterhead.

446. DUMBWAITER AND ELEVATOR CATALOG. A newly revised catalog with illustrations and description of electric and manually operated dumbwaiters, dumbwaiter doors, elevators, residence lifts and stair-travelers. Also contains dumbwaiter specifications and dimensioned layouts for electric and manual dumbwaiters and electric sidewalk elevators. Sodgwick Machine Works, Inc., 90 Eighth Avenue, New York 11, N. Y.

447. KITCHEN HOSTESS BREAKFAST NOOKS. A complete line of ready built breakfast nooks has been designed for easy installation in the kitchen by Bianco Mfg. Co. The line will be marketed nationally under the registered name Kitchen Hostess. Distributors and dealers are now being appointed. A catalog, completely illustrated, in color, describing the various styles of Kitchen Hostess Nooks and suggesting kitchen layouts is just off the press. Bianco Mfg. Co., St. Louis 4, Mo.

448. HARDBOARD SIDING. "Masconite Siding" is the title of a four-page illustrated bulletin which describes in detail the approved methods of application. Sketches and tabulated data provide full information on preparation, shadow strips, nails, corner treatments and finishing. They are available free by writing Masonite Corporation, 111 West Washington St., Chicago 2, III.

449. CONCRETE CURING PAPERS. A folder covering the qualities of two reinforced, reusable papers for concrete curing is available from the Angler Corporation. Those two papers, Burt-lamat and Protect-lamat, are described and the uses outlined with a chart showing the properties each has for waterproofing, wet strength, shrink-proof, shrink-resistance, reinforcement reusability. For copies of the folder write Angler-Pacific Corp., 55 New Montgomery St., San Francisco.
450. ADHESIVES TO SET CLAY TILE. The use of adhesives in installing clay floor and wall tile in commercial, industrial, institutional and home construction is given industry-wide rec-ognition by clay tile manufacturers in a specification now be- ing released by the Tile Council of America to architects and tile contractors throughout the nation. A commercial standard for water-resistant organic adhesives used in such work was issued in July by the U. S. Department of Commerce. Clay tile can be installed with adhesives in both new construction and remodeling work. This method can often reduce installation time and cost, eliminate some of the weight and mass of the completed work and cut down the muss and fuss in remodeling, according to experienced installers. In new building, adhesives are particularly suited to dry wall construction. A.I.A. 25A; Tile Council of America, 10 East 40th Street, New York 16, N. Y.

451. FIBERGLAS ROOF INSULATION. A new folder on Fiberglass roof insulation has been published by Owens-Corning Fiberglas Corporation. At first glance the folder appears to be of standard 8 1/2 by 11-inch size but actually it opens up to a huge 33 by 25-inch sheet that has more than 40 photographs of outstanding installations of Fiberglas roof insulation through-out the United States. Under the photographs are listed 350 more outstanding jobs along with the names of architects, gen-eral contractors and roofing contractors. Fiberglas roof insula-tion is used in industrial plants, schools, stores and shopping centers, hospitals and public buildings. Data concerning thermal conductance and application specifications also are included in the folder. Owens-Corning Fiberglas Corp., Toledo 1, Ohio.

452. MOVABLE STEEL PARTITIONS. A new colorfully illustrated 8-page brochure is now available which describes, with photographs and detailed drawings, flush and semi-flush type partitions, panel and industrial type partitions, Mobillwalls, Mobilitals and Mobilacorens, and wainscot for complete steel interiors. Included, too, is descriptive data on steel-tile acoustic ceiling. Detailed drawings illustrate basic types of each of these Mobillwall steel partitions and give complete informa-tion on how movable steel partitions can be used to increase efficiency and enhance the appearance of offices, factories, laboratories, hospitals, schools and government buildings. A.I.A. 35-H-6, Mobillwalls Brochure, Virginia Metal Products Corp., 1112 First National Bank Building, Pittsburgh, Penna.

453. COLORBESTOS SIDING SHEETS. A new eight-page brochure in full color has just been published containing com-plete information, illustrations, and data on "Colorbestos Siding Sheets," the new building material developed by Johns-Manville which, for the first time, combines pattern and color in a large size asbestos sheet for the exterior of houses. Using short text and many colored photographs, this brochure shows how Color-bestos is being used by architects and builders to meet the modern trend in house design. Close-up pictures show the seven strong colors and vertical ribbed pattern of the material. Sev-eral completed houses are illustrated together with details showing how Colorbestos is handled around the doors, win-dows, pipe ends, outlets, and similar places. A.I.A. 12-F-1. The brochure, which is entitled, "Colorbestos Siding Sheets," is available by writing to Johns-Manville, 22 East 40th Street, New York 16, New York.

454. GAS HEATERS. A complete revision of literature to in-clude new designs and data of its line of gas heaters has been prepared by Reznor Manufacturing Company of Mercer, Pennsyl-vania. Heading the list is a 20-page general catalog, No. GN-52, in which the Reznor line is classified into four types of heaters which it manufactures. This factual general catalog gets into the "meat" of the subject with a minimum of selling copy. A.I.A. 30-C-43 and 30-B-1. Reznor Manufacturing Company, Mercer, Penna.

BUILDING

VETERANS’ HOSPITALS

(From Page 13)

District Office in Dallas and other V-A installations. By plugging in various circuits, teletype conferences between doctors and officials in different cities may be arranged.

More than 50 fire alarm stations and fire hoses are provided. Automatic sprinkler protection has been installed in dangerous areas and enclosed stair wells with fireproof steel doors give safe exits for patients and staff members.

The four channel radio system is piped through a control panel in the radio room where a radio information specialist operates four long-range receivers, two built-in phonograph turn tables and a microphone for news and announcements. The programs distributed on the four radio channels are closely supervised by the medical staff so that inappropriate entertainment will not be piped to certain wards to the detriment of the patients.

Another of these modern V-A hospitals is that in Omaha, Nebraska. Beds are provided for 486 patients, of which 89 are for psychiatric patients. Clinics in this building include facilities for out-patients with 13 examining rooms; pharmacy; a dental unit with five chairs; X-ray department with three X-ray rooms, one deep therapy and superficial therapy; orthopedic brace shop; research laboratory; laboratories for chemistry, bacteriology and animal operating, etc.; medical illustration laboratories where drawings and photos used for medical education are prepared; medical rehabilitation which provides physiotherapy and occupational therapy. The operating suite contains seven major and one minor operating room.

Utility shops are located within the main building and a separate building is provided for garage and laundry and one for boiler house. Living quarters for interns and residents are located within the main building. Separate quarters buildings are provided for the manager, for staff, nurses and attendants.

NEWS & COMMENT ON ART

(From Page 9)

shown at the San Francisco Museum of Art during February, is featuring some 200 works selected by the juries for exhibition.

Prize winners in this year’s event include: Ernest Briggs, the $300 Anne Bremer Memorial Prize for Painting; Hugh Townley, the $300 San Francisco Art Association Emanuel Walter Purchase prize; John Haley, the $250 San Francisco Art Association Prize for Painting; Robert Neuman, the $100 Artists’ Council Prize; Dick Sears, the $75 Artists’ Council Prize; Theodore Polos, $100 William L. Gerstle Memorial Prize for Composition in Painting.

Kyle Morris, $100 Henry F. Swift Award in Memory of Helen Forbes; Charles Griffin Farr, $100 Bank of America Prize for Painting; Lundy Siegrest, $100 Anglo-California National Bank Prize for Painting; Leonard Edmundson, $100 Bank of California Prize for Painting; Zygmund Sazevich, $100 Crocker First National Bank Prize for Sculpture; Robert C. Thomas, $100 American Trust Company Prize for Sculpture; Horst B. Trave, $100 San Francisco Bank Prize for Painting; Stefan A. Novak, $75 Wells Fargo and Union Trust Company Prize for Sculpture; Bart Perry, $100 Schwabacher-Frey Company Prize; William W. Underhill, $50 Edgar Walter Memorial Prize for Sculpture.

The Jury of Selection for Painting comprised James McCray, Chairman, Erie Loran, Alexander Nepote, Dorr Bothwell and Emiko Nakano. The Jury of Awards included McCray, Loran and Nepote. The Jury for Sculpture was Adaline Kent, Chairman, Gurdon Woods and Jeremy Anderson.

ARCHITECT APPOINTED

George Edson Danforth, on the architecture staff at the Illinois Institute of Technology in Chicago, has been appointed professor of architecture at Western Reserve University, according to a recent announcement by John S. Millis, president.
CONCRETE AGGREGATES—
The following prices quoted to Contractors unless otherwise shown. Carload lots only.

- Bunker - Del'd per ton per ton
  - Gravel, all sizes $2.44 $2.90
  - Top Sand 3.33
  - Concrete Mix 3.06
  - Crushed Rock, ¾" to 1½" 2.38 2.90
  - Crushed Rock, 1½" to 2½" 2.38 2.90
  - Roofing Gravel 2.81 2.70
  - River Sand 2.50 3.00
  - Sandips (Nos. 1 & 2) 3.56 3.94
  - Olympia (Nos. 1 & 2) 3.56 3.88

- Common (all brands, paper sacks) Per Sack, small quantity (paper) $1.05
  - Carload lots, in bulk per bbl. 1.55
  - Cash discount on carload lots, 10c. e bbl., 10th Frx., less than carload lots $4.00 per bbl., a bbl., warehouse or delivered.
  - Cash discount 2% on f.o.l.

- Trinity White
  - 1 to 100 sacks, $3.30 sack
  - 101 to 250 sacks
  - 251 and over

- Madusa White
  - Bbl. carload lots

CONCRETE READY-MIX—
Delivered in 4-yard loads.
Per cubic yard 1-3 Mix... $9.50
1-4 Mix... 10.15
1-6 Mix... 10.70
1-5 Mix... 11.40
Curing Compound, cold, drums, per gal. 1.03

CONCRETE BLOCKS—
Haydite Gallon
- 4x8x16 inches, each $1.19 1.89
- 6x8x16 inches, each 2.23
- 6x16x16 inches, each 2.77
- 12x24x16 inches, each 3.80
- 24x24x16 inches, each 5.60

Haydite Aggregates
- 4½ inch to 2½ inch, per cu. yd... $2.75
- 2½ inch to 8 inch, per cu. yd... 7.75
- No. 6 to 8 inch, per cu. yd... 7.75

DAMPPROOFING and Waterproofing—
Two-coat work, $9.00 per square.
Membrane waterproofing—4 layers of saturated felt, $10.00 per square.
Hot coating work, $5.00 per square.
Medusa Waterproofing, $3.50 per lb. San Francisco Warehouse.
Trical concrete waterproofing, 60c a cubic yd, end up.

ELECTRIC WIRING—$15 to $20 per outlet for conduit work (including switches).
Knob and tube average $6.00 per outlet.

ELEVATORS—
Prices vary according to capacity, speed and type. Consult elevator companies. Average cost of installing a slow speed automatic passenger elevator in small four story apartment building, including entrance doors, about $9,500.00.

EXCAVATION—
Sand, $1.00; clay or shale, $1.50 per yard.
Trucks, $1.50 per day.
Above figures are average without water. Steam shovel work in large quantities, less; hard material, such as rock, will run considerably more.

* & Day Hour. ** Hour Day.

*** Before C.I.S.C for 15c increase.**

Prepared and compiled by:
**CENTRAL CALIFORNIA CHAPTER, ASSOCIATED GENERAL CONTRACTORS OF AMERICA, with the assistance and cooperation of secretaries of General Contractors Associations and Builders’ Exchanges of Northern California; and the above information for southern California is furnished by the Labor Relations Department of the Southern California Chapter, ASSOCIATED GENERAL CONTRACTORS OF AMERICA**
PEAK VOLUME OF BUSINESS WAS ESTABLISHED DURING PAST YEAR

The construction industry established a new peak of over $42-billion in volume during 1952, and may well exceed this figure by $1-billion in 1953, according to Harold R. Berlin, vice-president of Johns-Manville Corp.

Berlin, general manager of the company’s building products division, pointed out recently that construction is now second to “defense” as the nation’s leading industry.

“A significant development in the home building industry is its dependence on ‘internal migration’ and mobility of people to a greater degree than on family formation for its most dynamic impulses.

“The mass exodus from cities to suburbs in 168 standard metropolitan areas during the period from 1940-1950, was some 9,200,000.”

In making his analysis of the construction industry, Berlin, divided 1952 into four major divisions: 1) Private new residential, with an expenditure of $11-billion representing 1,100,000 new homes; 2) Private Non-Residential, about $10.7-billion; 3) Public, with $10.6-billion in governmental, and 4) Modernization with about $10-billion being spent in this classification.

BANK OF AMERICA BRANCH
(From Page 29)

source, break upon the surface being finished—was used on interior walls. The result is an effective motile of attractive pastels. This point substance dries in less than two hours. Ink, oil and other foreign matter can be wiped off with a damp cloth. The interior ceiling is of acoustic tile.

Entirely new window treatment on the bank level floor was enhanced by use of extruded aluminum sills.

Creating “new looks” for banking institutions is not a novelty for the Capital Company. They have utilized modern architectural trends and materials in redesigning Central Bank Branches in Oakland and San Leandro and a Bank of America Branch at Fresno.

But at Sacramento, the entirely new character so rapidly and economically given to a building basically of brick—which once housed a Model ‘T’ Ford Agency—will stand as a particular tribute to designers and builders . . . to the Bank of America and to the city.
CONSTRUCTION CONTRACTS AWARDED AND MISCELLANEOUS PERSONNEL DATA

SANITARY SEWER SYSTEM, Sewage treatment Plant, Salida, Stanislaus County, Salida Sanitary District, owner. $185,112. ENGINEER: Lawrence Adams, Modesto. Treatment plant, reinforced concrete construction Imhoff tank, oxidation ponds, beds, inlet channel gate structures, etc. GENERAL CONTRACTOR: McGuire & Hester, Oakland.

LIVERMORE HIGH PLANS ADDITION, The Livermore Joint Union High School District are completing plans for the addition of 6 classrooms, a library and toilet rooms to the present High School building in Livermore. Cost of the reinforced concrete, frame and stucco building is estimated at $200,000. John G. Warnacke, San Francisco, is the architect.

LOW RENT HOUSING PROJECT AT FRESNO, The Housing Authority of the City of Fresno recently announced plans for the construction of a 150-dwelling unit and community center building as part of the rental housing program for the city, at an estimated cost of $1,200,000. Robert W. Stevens, and Benjamin F. Lippold, both of Fresno, are the architects for the work.

LOW RENT HOUSING PROJECTS, Redrock, Yolo, Knights Landing & Esparto, Yolo County. Housing Authority of the City of Yolo, owner, are completing plans for the construction of 120 units, low-rent housing, $603,040. ARCHITECT: J. P. Miller, Berkeley. 1 story, duplex & 3 bedroom, frame construction, GENERAL CONTRACTOR: Williams & Burrows, Burlingame; Lewis Bailey Co., Burlingame.

ARCHITECT AND ENGINEER
DEFENSE TRAILER HOUSING PROJECT, 29 Palms, California. Public Housing Admin-
istration, owner. 250 trailer sites, utility connections, storage building and laundry
building, $226,000. ARCHITECT: J. Dewey Harnish, Ontario. Site and utility
improvements, paving roads, and irrigation. GENERAL CONTRACTOR: Campbell
Construction & Equipment Co., San Francisco.

AUDITORIUM AND CAFETERIA BUILDING, Dr. James Hogan Junior High School, Val-
lejo, Solano County, Vallejo Unified School District, owner. 3,000 seat auditorium
and cafeteria. ARCHITECT: Harry J. Devine, Sacramento. Reinforced concrete
and frame construction. GENERAL CONTRACTOR: Herbert A. Crocker Co., San
Rafael.

WAR BUILDING “B,” San Leandro, Alvo-
meda County, County of Alameda, owner. 160 beds and emergency unit, $1,049,330.
ARCHITECT: Will G. Corlet & A. W. Anderson & Winfield "Hyde" Assoc., Oakland. 3
story, reinforced concrete construction, tile roof, steel sash, 2 elevators, asphalt tile &
inlinoleum floors. GENERAL CONTRACTOR: W. H. Wipheropp Co., Oakland.

NEW FORT MILLER JUNIOR HIGH
SCHOOL, Fresno, Fresno County. Fresno
Board of Education, owner. 12 classrooms,
administration, music and science, food and
clothing, wood and metal shops, gymna-
sium, combination auditorium and cafeteria,
library and toilet rooms, $1,103,225. AR-
CHITECT: Franklin & Simpson. Frame and
stucco, concrete floors, radiant heating, as-
phalt tile floors, acoustical tile ceilings.
GENERAL CONTRACTOR: Clarence Ward
Construction Co., Fresno.

ELEMENTARY SCHOOL, Holbrook, Arizona.
Navajo Co. Board of Supervisors, owner. 1
story, 10 classrooms, nurses room, teach-
ers room, boiler room, multi-purpose room,
toilets, kitchen, offices, $169,233. ARCHIT-
CHTPECTOR: Leslie & Mahoney, Phoenix. Brick
construction, rigid asbestos shingles, asphalt
tile, hot water heat, insulation, plaster,
sheet metal, steel sash, acoustical tile.
GENERAL CONTRACTOR: Borst Construc-
tion Co., Phoenix.

CAPWELLS DEPARTMENT STORE BLDG.,
Walnut Creek, Contra Costa County, Mc-
Donald Products Co., owner. 2 story, 100,-
000 sq. ft., $1,000,000. ARCHITECT: Welton
Beckett & Assoc., Los Angeles. Reinforced
contcrete construction, escalators, elevators,
air conditioning system. GENERAL CON-
TRACTOR: Dinwiddie Construction Co., San
Francisco.

EXHIBITION BUILDING. TWO ANIMAL
EXHIBIT BUILDINGS—San Jose, Santa Clara
County, County of Santa Clara, owner. $15,028.
ARCHITECT: Pylay & Williamstrat-
ter. Concrete block and laminated wood
arches, and transite roof. GENERAL CON-
TRACTOR: Geo. Bianchi, San Jose.

CHEMICAL PROCESSING PLANT, Richland,
Washington. U. S. Atomic Energy Commis-
sion, owner. $40,000,000. ARCHITECT:
ENGINEER: Vitro Corp. of America, New
York City. Construction covers 2 year pe-
riod. GENERAL CONTRACTOR: Blaw-
Knox Co. Chemical Division, Pittsburgh, Pa.

LOW RENT HOUSING PROJECT, Gonzales,
Monterey County. Housing Authority of the
County of Monterey, owner. 20 units, $165,-
500. ARCHITECT: Butner, Holm & Water-
man, Salinas. Frame and stucco construc-
tion. GENERAL CONTRACTOR: Richards
Construction Co., Studio City.

WAREHOUSE & OFFICE, San Francisco.
John M. Stahl, owner. 1 story and mezza-
nine, 175 x 183, office mezzanine, 40 x 175,

$160,000. ARCHITECT: Warter, Bernardi
& Emmons, San Francisco. Reinforced con-
tcrete, tilt-up construction, structural con-
crete frame, steel sash, composition roofing.
GENERAL CONTRACTOR: Midstate Build-
ers, San Francisco.

COUNTY JAIL ADDITION. Madera, Madera
County. Madera County Board of Super-
visors, owner. 2 story and basement, 6,378
sq. ft., $165,267. ARCHITECT: Horn &
Morland, Fresno. Reinforced concrete to
replace condemned portion of existing jail
demolition of obseous portion. GEN-
ERAL CONTRACTOR: R. W. Brown Con-
struction Co., Madera.

BLOOMFIELD ELEMENTARY SCHOOL A-
DITION. Arcata, Humboldt County. Arcata
Elementary School District, owner. 6 class-
rooms, administration, kindergarden, multi-
purpose, kitchen and toilet rooms, $245,675.
ARCHITECT: Frank T. Georgeson, Eureka.
Frame construction. GENERAL CONTRACT-
TOR: C. S. Phillips, Petaluma.

HAMILTON ELEMENTARY SCHOOL A-
DITION. Campbell, Santa Clara County.
Campbell Union Elementary School District,
owner. 10 classrooms and toilet rooms.
ARCHITECT: Higgins & Root, San Jose.
Frame and stucco construction. GENERAL
CONTRACTOR: Merritt & North, San Jose.

DAVID X. MARKS MEN’S RESIDENCE HALL,
Los Angeles, Los Angeles County. University of Southern California, owner. 3
story, house 50 students, 14,920 sq. ft.,
lounge fireplace, dining room, kitchen, of-
cis, library, rooms housing students, base-
ment, playroom, laundry facilities, $250,-
000. ARCHITECT: J. E. Stanton and William
F. Blockwell, Los Angeles. Reinforced con-
tcrete and brick construction, stone trim,
wood sash, cement block, plaster partitions,
built-up roof, radiant and forced air heat-
ing, multiple showers. GENERAL CON-

CAFETERIA BUILDING, Culver City, Los
Angeles County. Culver City Unified School
District, owner. 25,300 sq. ft., $356,600.
ARCHITECT: Daniel, Mann, Johnson & Men-
denhall, Los Angeles. Frame and stucco,
composition roofing, wood beams, brick
veneer work, steel sash, cement slab, as-
phalt tile floors, acoustical work, terrazzo
work. GENERAL CONTRACTOR: Beckner
Construction Co., Los Angeles.

BLUE LAKE ELEMENTARY SCHOOL, Blue
Lake, Humboldt County. Blue Lake Union
Elementary School District, owner. 9 class-
rooms, administration, multi-purpose, kinder-
garden, kitchen and toilet rooms, $316,000.
ARCHITECT: Frank T. Georgeson, Eureka.
Frame and stucco construction. GENERAL
CONTRACTOR: Ausland & Dodson, Grants
Pass, Ore.

OFFICE BUILDING, Phoenix, Arizona. Dr.
J. N. Harber, owner, 100 x 135 ft., 2 story,
$250,000. ARCHITECT: Weaver & Drover,
Phoenix. Concrete lift, slab type construc-
tion, slab roofing and floors, air condition-
ing, insulation, composition roofing, steel
metal, steel sash, tile work, gas fired heat-
ing. GENERAL CONTRACTOR: Kitchell-
Phillips Constructors, Inc.

HOUSING PROJECT. Live Oaks, Sutter
County, Housing Authority of The County of
Sutter, owner. 50 units, $214,994. ARCHI-
TECT: J. O. Milano, Berkeley. 15 du-
plexes, 1 story, 2, 3 & 4 bedrooms, wood
and frame construction. GENERAL CON-
TRACTOR: Arthur J. Anderson & Jay Bailey
Construction Co., Woodland.

Built-in telephone facilities will add an "extra" touch to your building plans

It's so easy to make planned telephone facilities a part of your building plans. And clients will appreciate the extra finish that built-in conduit for concealed wiring and conveniently located telephone outlets lend to their home. The cost of installing such facilities is surprisingly low ... and it costs nothing to make them a part of your building plans.

Just call Pacific Telephone's free Architects and Builders service. They'll be glad to help you plan telephone facilities for better living tomorrow in the homes you build today.

Put built-in telephone facilities in your plans

Pacific Telephone
OFFERS COURSE IN LIGHT CONSTRUCTION

San Jose State College is offering a course in light building construction in the winter quarters designed by Ralph J. Smith, head of the engineering department. The courses will be concerned with production and cost control methods used in mass production of housing and the attendant problem of community land planning, site selection, financing, design, and incorporation of technological advances in building operations.

IN THE NEWS

NAMED TO PLUMBING RESEARCH COMMITTEE

Robert A. Wood, Chief of Engineering Division of the City and County of Los Angeles, has been named a member of the Committee on Plumbing Research of the Building Research Advisory Board, Washington, D.C. He will serve as a member of the BRAB’s Committee on Plumbing Problems of War or Disaster is Stephen L. Smoot, Sec.-Treas. Western Plumbing Officials Association of Los Angeles. The committee is undertaking to coordinate and finance a plumbing research program designed to meet the nation’s need in an all out mobilization.

COMMERCIAL STANDARD ON WOOD SHINGLES

Commercial Standard bulletin CS31-52, covering wood shingles is available for distribution according to the Commodity Standards Division of the Office of Industry and Commerce, U. S. Department of Commerce.

COMMERCIAL STANDARD ON WOOD SHINGLES

Shingles covered by this standard are Western red cedar; Tidewater red cypress; California Redwood. Report covers minimum specifications for the highest commercial grade of sawn wood shingles in grades 1. Also covers length, width, thickness, grain, color, packing, and grading tolerances.

MEDICAL PROJECT FOR SAN FERNANDO VALLEY

A development combining a general hospital and medical building with private offices for doctors and representing a cost of $2,000,000, is scheduled for construction on a site on Van Nuys Blvd. in the San Fernando Valley.

The project, offering the facilities of a medical center, is being designed by Archi-

ARCHITECT FOR COMMUNITY HOSPITAL

Architects Stone & Mulloy of San Francisco have been commissioned by the Shafter-Wasco Community Hospital District, Kern county, to draw plans and specifications for the construction of a new Community Hospital to be built in Shafter.

BONDS ARE APPROVED

Voters of the Sequoia Hospital District of San Mateo county, recently approved issuance of $800,000 in bonds with funds to be used in the construction of an addition to the Sequoia Hospital in Redwood City.

ARCHITECT SELECTED

Architect Ernest L. McCoy of Bakersfield has been selected by the Richland Elementary School District board to draft plans and specifications for the construction of a new Elementary School in Shafter, Kern country.

FEDERAL FUNDS FOR HIGH SCHOOL

The Vallejo Unified School District has been notified that some $800,000 of federal funds have been allocated for the construction of a new Junior High School in the Chabot Housing Project near Vallejo.

BUILDING MATERIALS READIED

A three-day conference to discuss the vast range of basic materials available to manufacturers will be held in New York City on June 16-18, and will supplement the 1st Exposition of Basic Materials for Industry scheduled for the Grand Central Palace, June 15-19.

The combined events will provide the first clearing house of information ever attempted for the entire field of materials for hard goods manufacturing.

Simplified Practice Recommendation

Simplified Practice Recommendation R3-52, covering the Metal Lath and Metal Plastering Accessories, are available through the Commodity Standards Division of the Office of Industry and Commerce, U. S. Department of Commerce, Washington, D.C.

The recommendation covers various types of metal lath, expanded and sheet, and various metal plastering accessories, giving

HOSPITAL BONDS APPROVED

Voters of the Menlo Park Elementary School District approved a school bond issue of $200,000 recently with funds to be used for the construction of an addition to the Oaknoll Elementary School building in Menlo Park, San Mateo county.

The study will include site improvements, utilities and fire protection.

STEEL FIRM BUYS ROEBLING’S SONS

A wholly-owned subsidiary of the Colorado Fuel & Iron Corp. has contracted for the purchase of the manufacturing business, plants and inventories of John A. Roebling’s Sons Company, according to a recent announcement by Charles Allen, Jr., chairman of the Board of the CFI and Charles R. Tyson, president of Roebling.

The Roebling business will be operated as a subsidiary of the CFI under the Roebling name.
weight per sq. yd. and sheet size for several kinds of metal lath, and essential information such as size, weight, gage, and length for various kinds of plastering accessories such as channels, corner beads, cornerite, strip lath and similar items. The revision brings the recommendation into line with current practice as to nomenclature, packaging, weight tolerances, and other details. Basic purpose has been to maintain the unit weights of metal lath, and this has not been changed.

SCHOOL BONDS VOTED

Voters of the San Carlos Elementary School District, San Mateo county, recently approved $575,000 in school bonds, with funds to be used in constructing a new Elementary School and making additions to present school buildings.

NEW VAC-ON ELECTRIC SWITCH IS ANNOUNCED

A new, inexpensive vacuum switch that shuts off power when liquid supply runs dry has been announced by JAYCON Associates of Minneapolis, Minn.

Designed for use with electric motors and gasoline engines, the VAC-ON switch has many uses as a circuit-breaker or control, and also serves as a warning control where operating conditions depend on a vacuum. Switch is mounted on the suction line and wired to supply power—when suction falls below a predetermined pressure switch automatically cuts off motor or engine.

Complete details, prices, from JAYCON, 404 N. Washington Ave., Minneapolis, Minn.

NEWSPAPER BUILDS
NEW PRINTING PLANT

The Monterey Peninsula Herald, Monterey California, has awarded a contract for the construction of a new 1-story, with mezzanine, concrete block and structural building in the City of Monterey at a cost of $229,000.

The new building has been designed for the uses of a newspaper publishing business by architects Wurster, Bernardi & Emmons of San Francisco, and will be one of the outstanding type of buildings housing a newspaper on the West Coast.

SCHOOL OF PUBLIC
HEALTH BUILDING

The Board of Regents of the U.C., recently announced work would start in the immediate future on the construction of a new School of Public Health Building on the Berkeley campus.

Construction will include a combination three and six story, reinforced concrete building, estimated to cost $1,125,000.

Masten & Hurd, architectural firm of San Francisco, are designing the building.

MORE HIGHWAYS NEEDED

A vivid realization of the need for immediate construction of many miles of new highway throughout the nation is obtained by considering that if every motor vehicle owner went out for a ride some Sunday afternoon, there would be a passenger car or truck every twelve yards on every paved street and highway in the nation. A recent study of automobile usage and driver habits shows 1952 ended with a total motor vehicle registration of 53,363,000 vehicles and a total of hard surface road mileage of 356,211 miles.

There is little wonder that in the more concentrated population areas, every day and almost every hour of every day, highway traffic is reaching the bumper-to-bumper category. Accidents are increasing at an alarming rate, causing insurance rates to rise, and time consuming traffic jams and delays are presenting an ever growing problem to traffic engineers, planners, and public highway users.

Highway users are becoming more and more aware of the seriousness of the situation; traffic jams cost millions of dollars in wasted time, and since it is estimated there will be sixty-five and one-half million cars and trucks registered throughout the nation by 1960, there is little chance that today’s acute highway problems will diminish any.

The only answer is a rapidly expanded national highway system with a planned program including parking, and intermediate freeway facilities. The time to start such a program should not be delayed.

The public weighs the value of a profession by what it produces.

ONE OF YOUR ASSETS!

Has it ever occurred to you that in addition to your professional and technical knowledge; the good will your office has developed through satisfactory service to clients; the time and effort you expend in support of local, regional and national professional association activities; and a host of other personal considerations pertaining to the direct conduct of your professional endeavor, that there are "allied" activities vitally important to the success of your business and profession.

One of these "allied" interests which works tirelessly day-in and day-out, month-in and month-out, and year-in and year-out for the development of your profession is ARCHITECT & ENGINEER magazine. There is not a single issue published containing specific news and information about you and your profession, that is not distributed to potential clients. The "story" of your business and profession is constantly heralded among prospective users of your service—without one cent cost to you.

Much of the valuable service ARCHITECT & ENGINEER magazine renders to you and your office is because of a close relationship between you and the public—being a "regional" magazine, it is possible to publish a great many "localized" news items that would otherwise never be done. No attempt is made to compete with national publications in presentation of featured articles, however, no national publication presents your efforts in detail comparable to ARCHITECT & ENGINEER magazine.

A recent governmental survey shows that running one’s own business is "a hazardous way to make a living," and that fifty per cent of business ventures started between 1946 and 1951 failed, and in some categories only twenty-one per cent reached a fifth birthday. Perhaps a number of failures would not have occurred had the principals involved been aided and supported by "allied" interests.

ARCHITECT & ENGINEER magazine is this year observing its forty-sixth year of continuous publication—nearly a half century of promotion for your profession and your business interests . . . truly, "one of your assets."

* * *

HOW LONG PROSPERITY?

Times are booming.

People are earning more than ever before in America's history.

Almost everybody who can work has a job.

The big question is—how long will this prosperity last? A good many economists look for prosperity to last through the year, unless there are major developments in foreign affairs, or radical departures in the current defense spending, but, even then the experts feel that no major recession looms.

Some economists believe the present boom can not last—that we are in for another "bust."

Others take the position that depressions are not inevitable and that business and government have learned a lot since the "thirties" about licking the boom and bust theory.

Government and forward-looking management, working together, can resist almost any factors which might otherwise become a national problem.
SOME EXCELLENT POINTS ON

Public Relations For Architects

“PRESS RELATIONS IN PASADENA”

By CULVER HEATON, Architect
Chairman, Public Relations Committee,
Pasadena Chapter, A.I.A.

PART I

When the Public Relations Committee of the Pasadena Chapter set out to improve its relations with the local newspaper it learned all of its lessons the hard way. This article is prepared with the hope that other chapters may be able to save themselves some bruises.

In the geometry of press relations the following was found true:

**Axiom No. 1**
The Lord and Editors do help those who help themselves.

**Conversely**
The Lord and Editors do not like those who are trying to get in the paper when the item is not newsworthy.

**Axiom No. 2**
Editors do not realize that architecture is the most newsworthy of all the arts.

**Conversely**
Architects do not realize that architecture is the most newsworthy of the arts.

**EDITORIAL NOTE**—This article on Public Relations, as applied to the architectural profession, and the subsequent part which will appear next month, was written by Culver Heaton, one of Southern California’s most prominent architects and a resident of Pasadena, for publication in THE JOURNAL OF The American Institute of Architects. Permission to reproduce this splendid article in ARCHITECT & ENGINEER magazine has been granted by the A.I.A., and every architect and every person interested in the practice of architecture should read this Pasadena report by Architect Heaton.—The EDITOR.

Axiom No. 3
Editors are interested in Building a Better Pasadena.

Conversely (But the Editors are not aware that) architects are interested in Building a Better Pasadena.

**THEOREM**

If both Editor and Architect are interested in Building a Better Pasadena, and if architects have outstanding newsworthy material, then the two will make a good team.

1. To prove this theorem it is first necessary for the architect to take the chip off his shoulder. The world (or the Editor) does not owe him a living, and it is further apparent that the burden of proof falls upon the architect.

2. Berating the Editor, when he fails to credit the architect at the dedication of a new building, only increases the antagonism.

3. Since nothing was achieved in the past by opposing, the Committee decided that it would be a good idea to get on the team and work with the Editor.

4. There are as many Sidewalk Superintendents as there are Monday-Morning Quarterbacks, and as soon as the Architects were on the team the Editor was surprised to find that they were a valu...

(See Page 25)
SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, is offering the following calendar of events for the month of March:

EXHIBITIONS: The 72nd Annual Painting and Sculpture Exhibition of the San Francisco Art Association; Contemporary Color Lithographs, an exhibit of the American Federation of Arts; How To Read a Photograph; Les Fauves; Marsden Hartley Retrospective Exhibition; Tools for Gardening; Prints by Henri Matisse; and special showing in the Rental Gallery.

Landscapes of the Bay Area will highlight the exhibition at the Parkmerced Branch, together with A Study of Les Fauves.

SPECIAL EVENTS will include Concerts, Folk Dance, Photochrome Club, panel on "Let’s Build a House" Lecture Tours, and Workshop Classes which include "Art for the Layman," "Sketch Club," "Painting Classes," and the "Children’s Class."

CITY OF PARIS

The Rotunda Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan, is presenting the 11th Annual Pacific Coast Textile Exhibition of Hand Woven and Hand Printed Fabrics during March. The exhibit comprises the work of thirty-four designers.

Recent Prints by Dorr Bothwell will feature the Pictures of The Month display.

MURALS FOR CONTEMPORARY ARCHITECTURE

Of particular interest to Southern California architects is the show of Joseph Young, muralist and mosaic worker recently returned from Europe, which is currently being shown at the Falk-Raboff Gallery, 9020 Beverly Boulevard.

Winner of three major national art awards, Young has impressed eastern art critics as one of America’s most promising muralists. His present exhibition features encaustics done on Japanese paper.

M. H. deYOUNG MEMORIAL MUSEUM

The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, under the direction of Walter Heil, features an outstanding group of exhibits for March.

EXHIBITS: Paintings by Joseph Floch; Four American Painters, William Brice, Robert Chuey, Canning Peake, and Howard Warshaw; American Institute of Architects 1935 Honor Awards. A pres-
DESIGN OF WELDED STRUCTURES

DESCRIBED BY VAN RENSSELAER SAXE

TO STRUCTURAL ENGINEERS ASSOCIATION—Southern California

By DON WILTSE, Executive Secretary

Members and guests of the Structural Engineers Association of Southern California, recently heard Van Rensselaer P. Saxe, Consulting Engineer of Baltimore, Maryland, discuss the subject of "Design of Welded Structures."

Saxe retired as president of the Standard Concrete Steel Company to open offices as a Consulting Engineer in 1920. His first welded structure was designed and constructed in 1928. In the following years his office designed and supervised construction of over 1200 welded structures of all types, and his discussion in Los Angeles was well illustrated with slides taken during the construction of many of these projects.

Among the points discussed by Saxe were the savings in steel which could result from a welded design maintaining comparable erection times with usually a lower cost, and the simplicity of design of welded structures.

Early experimental work developed a field assembly system of seats and clips which eliminated much shop handling by eliminating the necessity for punching operations, and allowed the welding application of both seats and clips to be done on skids outside the shop by a layout man and a welder working together. In 1929 this method was first used on a substantial structure, the Chesapeake Building at Loch Raven School in Maryland, in preference to an alternate riveted design.

The system has been under constant improvement since this time, and recently the first automatic adjustable connection clip was introduced for the erection of multiple story buildings. This new clip permits an adjustment of 1/4" in making connections of beams to column flanges, and helps to overcome difficulties resulting from column variations from a true straight condition, caused by tolerances permitted in mill-rolled columns.

Saxe feels that the simplicity of welded connections can result in a minimum 5% saving in tonnage on many jobs. The Sun Papers Publishing Plant in Baltimore required 2214 tons of steel on the welded design used, against an estimated 2550 tons for a riveted alternate design. Welded design saved an estimated 337 tons on the Veterans Hospital in Minneapolis—and good construction time was made under adverse conditions involving snow and even a cyclone!

Welding lends itself quite readily to use where the principles of continuous design are applied to a steel frame building. The savings resulting from use of beams of smaller section than would be required for simple beam moments include not only a lighter dead load due to the steel, but less fire proofing and other similar items.

Saxe indicates that the design of welded struct-

CONSULTING ENGINEER DISCUSSES
SAN FRANCISCO BUILDING SITES

"Every building site presents a different situation to the foundation engineer, and every foundation a new problem in stability and settlement analysis," Charles H. Lee, San Francisco consulting engineer, said recently in reviewing the city's geologic situation.

Addressing the Spring Convention of the American Society of Civil Engineers, in the Fairmont Hotel, Lee said:

"Not alone are there hills high above general level, but below the surface are deep buried valleys and canyons. Surrounding all are steep submerged slopes leading to the depths of the Bay of San Francisco, the Golden Gate and the Pacific Ocean."

Pressure for downtown office space "has led to the erection of tall buildings having great load concentration," said Lee. He said that "this area is located astride the original bay shore line in the transition zone between estuary muds and soft alluvial deposits of sand, sandy clay and clay. He added that "the variable subsoils within this area present a serious foundation problem involving both individual buildings and other existing buildings in the vicinity."

With the full occupation of the flatter land, said

MARCH, 1953
SOUTHERN CALIFORNIA PRODUCERS COUNCIL
JOINT MEETING WITH AIA ARCHITECTS

A joint meeting of the Southern California Chapters of The American Institute of Architects and the Producers Council, Southern California, recently honored 1953 officers and directors of the AIA

Among those taking part were: Left to right, Cornelius Deasy, Secretary, A.I.A.; Vern Boget, Gladding McBean & Co., National Director of the Producers' Council; Rex Thompson, Undersheriff of Los Angeles County, guest speaker of the occasion; Bob Roden, Truscon Steel Company, acting President of the Producers' Council, Southern California; Henry L. Wright, President, A.I.A.; Charles O. Matcham, Regional Director, A.I.A.; and Mrs. Herman Charles Light, President of the Women's Architectural League.

BONUS LIGHT FROM GROUND REFLECTIONS
AND LUMEN METHOD FOR CALCULATING
DAYLIGHT FOR INTERIORS

Two papers dealing with efficient daylighting of schools, hospitals, offices, and industrial areas, summarizing research at Southern Methodist University, Dallas, were presented before the Illuminating Engineering Society recently in Chicago.

R. L. Biesele, Jr., an international authority on school daylighting, as research professor of engineering at SMU during the last two years has conducted research which led to development of a new method for daylighting design and prediction of daylight for interiors. In these studies he had a quarter-size model school classroom and the largest artificial sky now in use for experimental purposes.

J. W. Griffith, research associate at SMU, discussed the "bonus light" or contribution of daylight reflected from ground areas into a building through large window areas.

On the basis of more than 400 tests conducted by his research staff, Mr. Biesele arrived at a formula similar to the Harrison-Anderson equations for artificial lighting, enabling an architect to work out average, minimum and maximum daylighting for a given room, under specified sun, sky and ground conditions.

Initial graphic presentation of results were worked out for clear glass so that coefficients may be adjusted for the transmission factor of the glazing materials and allowances made for obstruction of daylight by muntins, Mullions, mortar joints and sash. Glass companies now furnish accurate data on light transmission of various types of glazing.

"We call this the lumen method of daylighting design," explained Mr. Biesele. "It is relatively simple, employing a technique already familiar to engineers and architects. It points the way to construction of tables for many types of window con-

(See Page 33)
RECREATION CENTER

GOLDEN GATE PLAYGROUND

Oakland, California

REYNOLDS & CHAMBERLAIN, ARCHITECTS

Construction of the new $165,000 Golden Gate Playground and Recreation Center at 62nd street and San Pablo Avenue in Oakland, now well under way, is timed for dedication and public opening late this spring.

Long in the planning stage by the Oakland Recreation Commission, actual construction was delayed for a considerable time by federal control of critical materials, although funds for project development were authorized in the city's 1944 Bond Election issue.

The play area has been enlarged from its original design to three and one-half acres by the elimination of one block of 62nd Street, which had separated the old playground from the Golden Gate Junior High School. The plans as shown above, include a turfed baseball diamond (1); a turfed and night-lighted soft-ball field (2); a junior area of play equipment, a tot-lot, horseshoe and handball and shuffleboard courts, all lighted. Approximately 22,000 sq. ft. of the outdoor recreation area will be paved.

The one story clubhouse (4) is of contemporary design with flat roof, wide overhangings and extensive glass areas. Exterior is of concrete block veneer and stucco with beamed pergola and porches. The structure has a recreation-social hall 32 ft. by 48 ft. with exposed beam ceiling; a 15 ft. by 22 ft. card room with acoustical ceiling and a

NEW UNIVERSITY-WESTWOOD BRANCH

Citizens National Trust and Savings Bank

WEST LOS ANGELES, CALIFORNIA

ARCHITECTS
STILES CLEMENTS

ENGINEERS
Officers Platform
On the main floor has unobstructed view of customer area and yet is secluded.

BELOW—General View
Of the main lobby, general banking facilities at right and rear left; officers platform fore-front at left. Stairway leads to mezzanine where employee facilities are located.
The Citizens National Trust and Savings Bank of Los Angeles, officially opened the doors of its new University-Westwood Branch recently. The completely air conditioned structure, of concrete, glass and stone, was designed by Stiles Clements, Architects-Engineers, to offer modern and complete banking services for West Los Angeles patrons, in comfortable and convenient surroundings.

The building itself is reinforced concrete with a full concrete basement and first floor. The mezzanine is framed in wood and supported by a steel truss. Surmounting the mezzanine area is the air conditioning equipment room. The roof of the building is of wood construction supported on clear span wood bowstring trusses which give a clear spacious feeling to the main floor and leaves it uncluttered by awkward columns.

An elevator gives easy customer access from the first floor to the basement with its safe deposit vault and escrow department. The basement is a large work room with a record vault and adjoining locker and toilet facilities for the employees, working therein.

The main floor is devoted entirely to serving the customer and is entered from the street through a two story wall of glass. This wall of glass with a draw drape of gauze, gives an inviting view to the passerby of the cool and pleasant interior, lush
interior planting and carpeted waiting area. Even the natural light in this spacious room has been carefully controlled by a bank of vertical louvers along the westerly side of the building. The main floor also contains the building’s third vault.

Across the rear bay of the first floor is a mezzanine, which contains lockers and toilet rooms for the first floor employees. Here too, is an attractive employee’s lounge, with a complete kitchen unit.

The Architects have also given careful thought to the exterior treatment with regards to texture and contrast by relieving the severeness of plain concrete with strong vertical louvers, large expanses of glass and greenstone, and luxuriant planting. Yet these materials have been handled in such a way as to retain the more formal and solid look usually associated with banking institutions. Even the Citizen’s signs have been very carefully worked into the overall design.

It is with such a building as this, thoughtfully and carefully conceived and executed, that Citizens National Bank hopes to continue its phenomenal growth in serving the Southern California area.

A Rare Setting — Nestled Among Group of Ancient Oaks.

SHERWOOD FOREST THEME MOTOR COURT

TOWN CHALET

LONGVIEW, WASHINGTON

OWNERS: MR. AND MRS. JOHN R. ERICKSON

ARCHITECT:

LAWRENCE B. RICE
When Architect Lawrence B. Rice designed the Town Chalet motor court at Longview, Washington, he came up with a novel solution to an old problem. Owners Mr. and Mrs. John R. Erickson wanted the structure to echo the environment of a rare setting in a grove of ancient oaks. They wanted western woods used wherever possible.

In industrial Longview where chemical fumes and salt air have caused some problems with exterior paint, Architect Rice decided to do away

**RUSTIC, woody flavor is emphasized in this court yard view of the Town Chalet. This is but one wing. Balcony lends privacy to each unit.**
A BACHELOR STYLE UNIT

Another attractive type of an apartment is the "Bachelor". It does not have the accordion folding wall. Note the spaciousness.

SIDING of hemlock on the inner court of the building is two-inch tongue and groove. Used vertically in lower floor and horizontally on the second floor.
Compact Apartment for Transients

Is streamlined, yet a complete living unit, like a home condensed. Sliding accordion door permits separation of sleeping and living space.

with painted walls. To accomplish this he built the structure out of two by six, tongue-and-groove hemlock which had been treated with salts. For contrast, the lower portion of two rear walls have been finished with half by four inch cedar siding laid vertically.

The salts-treated hemlock at first had a yellow tint and this is gradually turning to a darker copper tinted yellow with soft autumn browns. The cedar siding has been stained to retain the natural color of this western wood. A bright green trim around windows and on barge boards sets off the unusual structure which appears to blend in with its Sherwood forest setting. Neither the treated hemlock nor the stained cedar will ever have to be painted.

Architect Rice solved other problems in this off-the-beaten path design job. To utilize a triangular-

Contrast in two-story wall developed by use of stained cedar siding on first floor and golden-yellow hemlock, treated with salts, for the second level. Both finishes are permanent and will need no repainting.
shaped piece of ground 319 by 277 by 249 feet, he laid out the building on a flattened out V pattern, which follows closely along two sides of the triangle and well to the back to allow a maximum off-street parking for all guests.

Town Chalet is a combination owner’s home of five spacious and well conceived rooms and a 12-unit apartment motel. Economy in this $70,000 building was achieved by building the twelve units identical in size and furnishings on a 20 by 20 foot module.

A touch of the Monterey is the two-story balcony treatment of the apartment section of the structure. Second floor apartments, identical in design and floor plan to the lower level, are reached by a stairway which goes up from the inside of the courtyard.

Each apartment has a living room, bedroom, kitchenette and bath with shower. A plastic door separation folds back to throw bedroom and living room together into one space, or can be used as a wall when occupants desire the privacy of two rooms. The kitchenette is equipped with stove and refrigerator.

Bane of many two-story hotels and apartment buildings is noise, especially from the floors above. The architect has gone to elaborate pains to eliminate noise from any direction and has built an apartment unit which provides a maximum of quiet for the guests.

On the first floor apartments, ceilings are of acoustical tile. Sidewalls have been insulated with fibre-glass batts between the studs. The sheetrock walls were put on with furring nails
which hold the sheetrock away from the studs a fraction of an inch to prevent sound transmission from the studs. In the apartments above the same precautions have been taken with sidewalls. The floor above is built up of three-quarter by one inch cross joists laid on the regular joists, then a subfloor of three-quarter-inch plywood and over this has been laid asphalt tile except in the living room where a carpeting covers the floor. Carpeting has also been used in the living rooms in the first floor apartments. A cement slab carries the entire structure and over this asphalt tile has been laid.

The ceilings of the second floor apartments are exposed two-inch decking with a V pattern showing from the bottom side and six by twelve-inch exposed fir beams. These have been finished with a clear stain to retain the natural color and grain of the wood which makes an effective western tone for the upper apartments.

The roof is made up of a moisture barrier layer of two-inch insulation board laid on the fir decking and then a three-ply built up asphalt roofing has been applied.

The effect of this well-insulated roof has been to eliminate any penetration of summer heat into the second floor apartments.

The structure is electrically heated with four unit heaters located at proper places in each apartment. Each apartment has been individually decorated with its own color scheme, and wall colors run from delicate pastels to bright and exciting shades. On the lower floor, wall paper has been used in some of the apartments to get variety.

All windows are trimp set steel casement sash which provide ideal cross ventilation, for any of the windows may be opened.

Mr. and Mrs. Erickson traveled one entire year throughout the United States to discover what the ideal motor court apartment should contain. Into the four hundred square feet of floor space of each apartment they have combined all the best features of hundreds of apartments. They decided each unit should be completely equipped with kitchenette as well as other telescoped home features. The separation door wall gives space when needed and also privacy.

One feature the Ericksons decided must be included in their project was a utility room where guests could do their own washing. A tiny laundry with washer and dryer is one of the most popular attractions at Town Chalet.

A large central domestic hot water heating system with circulating pump insures each guest has plenty of hot water. Utility and linen rooms have been built on each floor.

Two studio type apartments, with separation

(See Page 31)

This Unit is standard for the second floor. Note exposed beams, with V-ceiling exposed and hemlock walls to match western theme. A clear stain retains the natural color and grain of the wood.
THE NEW

ATKINS STORE

MODERNIZATION OF BUILDING

SAN MATEO, CALIFORNIA

BURKE,
ARCHITECTS: KOBBER and
NICOLAIS

GENERAL CONTRACTOR: MATTOCK CONST. CO.
The problem presented to the architectural firm of Burke, Kober & Nicolais of Los Angeles, by the owners of this particular property in the City of San Mateo, was to try and solve the problem of converting a gasoline service station site on one of the city’s main downtown corners and an adjoining old concrete building that was originally designed for and had been used for a number of years as a combination garage and bus depot, and a small connecting retail store into a modern, single unit, attractive men’s and women’s apparel establishment that would add to the attractiveness of the area and be a stimulation to general business activity.

This modernization project had to be accomplished without the construction of any additional building to fill in the old service station corner lot, as the owners did not wish to make any new additions or launch a major new construction program at the time. After a thorough study of the situation, including the relationship of the site to retail trade in downtown San Mateo and the type of remodeled structure which would offer a maximum in customer appeal for the occupant, the architects conceived the novel idea of projecting the show windows of the remodeled building outward into the filling station area and then supplemented these with a detached exterior merchandise show window island which is located between the main part of the building and the sidewalk. It was believed by all concerned that such an unusual use of the “open-area”, embellished with appropriate landscaping of plants and shrubbery, together with seasonal floral displays if desired, could convert the otherwise unattractive and bare concrete paved corner into an interesting architectural approach to a new retail store. Also that such a program would contribute favorably to the general attractiveness of site and serve as a stimulation of business in the area.

The detached “island” show window affords an individual display of merchandise in a manner appealing to foot and street traffic, and allows for a close inspection of men’s and women’s apparel items in a leisurely, “window-shopping” manner. Timely items and seasonable merchandise can be emphasized in this individual show-window, irrespective and without relation to any items which may be shown in the store’s general display windows, thereby affording a greater flexibility to merchandising effort of the store.

The architects found that it would not be necessary to make many major alterations to the existing concrete building to accomplish the desired result. The side street openings, previously used for entry and exit of automobiles and large commercial passenger buses, were easily converted into attractive, modern, show window spaces.
which were particularly attractive because of their spaciousness and close proximity to pedestrian traffic on the sidewalks. The customer entrance to the redesigned building faces towards the open area of the previous service station, and is readily recognized by both sidewalk and street traffic that passes the busy intersection daily. This entrance, accomplished by cutting a hole in the side of the old building, is featured by a projecting roof which is supported on ornamental, painted metal.

To present an attractive appearance to the public and in order to offer individuality among adjacent buildings and surrounding area, the face of the building was painted a rich brown which is contrasted with a white trim and letters of the sign designating the name of the store. To offer another item of distinctiveness the architects selected stonework for use on the lower portion of the patio facade. This also adds a desired textured surface.

The spacious merchandise display windows have been designed with use of redwood in a driftwood finish which not only harmonizes with the Mustang Brown color of the building, but forms a background which is attractive to the overall window display area.

Because of the acute sun problem which existed at certain seasons in the year and were a major factor in the orientation of the building, plus the problems of the unique isolated display windows where the conventional awnings were extremely difficult to apply, the glass used in the display windows contains a gold tint. This use of slightly colored glass not only solves the problem of excessive sunlight, but also adds an attractiveness to the building in daytime and at night when overhead, indirect lighting is used to light-up the displays.

Flagstone has been used as an exterior facing on the lower portion of the building and around the base of the merchandise display windows.

On the interior the problem was to make use of the existing physical conditions of the old building which for the most part was just a building shell with exposed trusses. The utility use of the re-

Auxiliary use of lights in display case, fully carpeted floor, and a partial wall covering of paper.

Scientific lighting combines large overhead center fixture in this display area together with ceiling spot-lights and hidden lights in mirror areas.
EXTERIOR of remodeled building emphasizes simplicity together with attractive window display appeal and lighting of store interior.

BELOW: Store interior offers spaciousness for convenience of merchandise display, plenty of overhead lighting and open-design entrance.
The New ATKINS STORE

The following firms, participants in the remodeling of the building, have display advertisements in this issue:
Mattock Construction Co., General Contractors; N. E. Andersen, Masonry Contractor; Izmirian, Heating, Sheet Metal & Roofing; A. Von Poppel, Lathing & Plastering Contractor; H. E. Casey Co., Concrete & Cement Finishing.

modeled building as a modern store where latest merchandising methods were to be employed necessitated the separation of the interior into individual men’s and women’s stores with both units readily accessible from the one entrance.

The interior design intention, therefore, was to create small intimate units within the two major classifications. These individual divisions to serve the needs of shoe, hats, sportswear and numerous women’s departments. Each were to be separately treated but tied together with a general color trend and with a unity of decorative wood of mahogany with a definite grey filler. Illustrations shown on these pages indicate how thoroughly this was accomplished by the architect.

The women’s shop is carpeted, wall-to-wall, in a Sphinx grey color. The walls have been done in a honeysuckle yellow, while in the coat and suit department the walls have been covered with a special paper in a modern flower design. The furniture is upholstered in coarse textured fabrics and the merchandising background of the interiors are of a bronze cairn green color.

wallpaper. Carpeting of the clothing department is in a Desert Green base and as a pleasing contrast a Sun Bright yellow has been used for the coarse textured furniture fabrics.

The shoe department is uniquely featured with an overall latticed canopy which has been done in an Adobe Green color, and in keeping with the main design specially made shoe chairs have been provided which have been manufactured in mahogany to match the decorative wood used throughout the entire show department.

Considerable attention has been given to lighting because of the nature of the building. For the most part it has been concentrated on proper use of louvered units which are square in shape, and a combination of incandescent and fluorescent lighting to meet particular lighting needs in specialized areas of the store.

A striking contrast of lighting, however, is in the women's shop where Swedish modern chandeliers have been used. These fixtures are accented by use in the main body with a Spice Coral color.

The completed project is an outstanding example of modern conversion of an otherwise limited type commercial building into an up-to-the-minute retail store that blends in perfectly with surrounding structures and is in keeping with the trends of the community.

able ally, and had endless vital news copy that interested the community.

5. **Therefore,** with their differences resolved, both the Editor and Architects worked together to make Pasadena a better place to live.

**Objective to be Achieved**

The Committee decided that it hoped to achieve the following through its newspaper activities:

1. Acquaint the general public with the meaning of the term “Architect.”
2. Establish in the public mind that the A.I.A. represents the highest of ethical and professional standards.
3. Illustrate the Architects’ part in making Pasadena a better place in which to live.
4. Emphasize that the Architect is a financial necessity to a project as well as decorative asset.
5. By constant repetition establish the fact that the employment of an Architect is normal, rather than exceptional, practice.

These objectives are rather numerous, but our program has many facets and not all of the objectives are involved in each release.

**Rules of the Game**

Before you can get on a team it is best to know the rules of the game. The gentlemen of the press have a code that must not be violated. Five of the main points are listed.

1. **Consistency**—Do not promise material that you cannot deliver. The paper is carefully proportioned between advertising and news copy, and the Editor must be able to plan on having the copy regularly before the deadline. At this point a word of warning: That which is everyone’s responsibility is apt not to get done. For each undertaking have one individual entirely responsible, not the entire committee.

2. **Loyalty**—Do not try to exploit every paper in town. Do not release to competitive papers. We have found our loyalty more than repaid by cooperation from the publisher.

3. **Public Interest**—All material must be keyed to public interest, and not to the Architect’s ego. The Architect’s object is to make his town a better place in which to live, and all releases should show how the Architects have an indispensable part in accomplishing this end.

4. **Pictures**—Never have more than three persons in a picture. Do not all look at the camera, but look at a logical center of interest. Present the picture using 8” x 10” glossy prints taken by a staff photographer, or a commercial photographer that knows his business.

5. **Text**—Be brief and to the point, and expect the material to be rewritten. Determine the reporter’s style and present the information accordingly. Use the term “Architect” in the first sentence. Refer to the individual as “Architect John Doe,” thus emphasizing the profession rather than the individual.

**Material Available**

The material which Architects have available for editors is limited only by the Architects’ interest.

(See Page 35)

**ARCHITECTURAL EXHIBIT AT DeYOUNG MEMORIAL MUSEUM**

A review of outstanding buildings constructed in the San Francisco Bay Area during the past twenty years is being currently exhibited at the M. H. DeYoung Memorial Museum, in Golden Gate Park.

The work represents sixteen Awards of Honor and twenty-seven Awards of Merit received by Bay Area members of The American Institute of Architects for architectural design, and according to Jury of Awards the exhibit is indicative of the fact that “this region is known the world over as a focal point in the evolution of contemporary architecture.”

**SOUTHERN CALIFORNIA ARCHITECTS NAMED COUNCIL DELEGATES AT LARGE**

John J. Landon, Whiting Thompson and William G. Balch, members of the Southern California Chapter AIA have been named delegates-at-large to the California Council of Architects.

Henry L. Wright, Chapter president and Charles E. Frye, immediate past president will also serve as delegates.

**ENGINEER GIVEN AMERICAN CONCRETE INSTITUTE AWARD**

F. Thomas Collins, consulting engineer of San Gabriel, California, was recently awarded the American Concrete Institute Construction Practice Award for his paper entitled “Tilt-up Construction in Western United States.”

The award was established in 1944 by the ACI to recognize the man on the job for his resourcefulness in translating design into a completed structure.
Oregon Chapter:
Lloyd Keefe, City Planning Director for Portland, was the principal speaker at the February meeting held in Portland on the 17th.
Keefe presented the latest proposal for the relief of traffic and reclamation of declining downtown areas, and illustrated his talk with charts, graphs, figures and sketches.

Maurice J. Sullivan, Treasurer

Arizona Chapter:
Richard Drover, President; Lew Place (Tucson), Vice-President; Martin J, Young, Jr. (Mesa), Secretary; Fred O. Knipe (Tucson), Treasurer; and Richard Drover, Fred Weaver and Ed Kowalik (Phoenix), and Martin Roy Young, Jr. (Mesa), and Gordon Luepeke (Tucson), Executive Board members.

Coast Valleys Chapter:
Kurt Gross, President; Harold Ahlfield, Vice-President; Frank C. Tresider, Secretary, Jerome Knauer, Treasurer; Directors, Hollis Logue and Gifford Soby, Offices, 85 S. 3rd St., San Jose.

Central Valley of California:
John W. Bamberg, President; Nicholas Tomich, Vice-President; Albert E. Thomas, Secretary; Ted de Well, Treasurer; Gordon Stafford, Director, Alternate to CCA, Salinas, Barreto; Sec. Office 718 Alhambra Blvd., Sacramento.

Colorado Chapter:
James M. Hunter, President, 2049 Broadway, Boulder; Casper F. Higgen, Secretary, 1689 Grant Street, Denver S.

East Bay Chapter:
Chester H. Treichel, President; Malcolm D. Reynolds, Vice-President; John E. Lloyd, Secretary; Roger Los, Treasurer, Secretary's Office 1171 Solano Ave., Albany, California.

The annual Producers' Council Parade of Products was held the middle part of February at the Multnomah Hotel, with an exceptionally large number of new materials and products being shown.

NEW MEMBERS. Recent new members include: Wilbert P. Lei; John W. Foster; and Charles Gilman Davis, all Corporate Members.

WOMENS ARCHITECTURAL LEAGUE
OF PASADENA

Mrs. A. C. Zimmerman, President of the Pasadena Women's Architectural League and Secretary-treasurer of the Central Committee of Women's Architectural Leagues of California, recently conferred with Mrs. Lew Place of Tucson, Arizona, relative to the possibilities of organizing a Chapter of the Women's Architectural League in Arizona. Purpose of the Women's Architectural League is the unification and advancement of architecture and the stimulation of greater public understanding of the profession's aims and its capacity to be of service to the community.

1953 A.I.A. CONVENTION
SEATTLE

Chairman Waldo Christenson of the Washington State Chapter, A.I.A., has announced the appointment of two new 1953 A.I.A. Convention committee men. Robert Durham will serve as head of the Transportation Committee, and Robert B. Price will head the Tacoma activities.

Other members of a general steering committee include: Waldo B. Christenson, Chairman; William J. Bain, Hospitality; Roger Gotteland, Foreign Guests; Victor N. J. Jones, Reservations; Hugo W. Osterman, Finance; J. Lister Holmes, Exhibitions;
George W. Stoddard, Special Events; John T. Jacobsen, Products Exhibit; James J. Chiacelli, Arts & Crafts; Wendell Lovett, Student Activities; J. Emil Anderson, Architectural Guild; B. Marcus Prileca, Special Entertainment; John S. Dellie, Decorations & Motifs; Paul Thiry, Fellows; and Robert H. Dietz, Secretary.

**SAN DIEGO CHAPTER**

The regular February meeting was held at the Barbara Worth Country Club in El Centro, California, with El Centro architect Frank Hyde and Terry Whittington serving as hosts. Both are members of the San Diego Chapter and have an enviable record of attendance at San Diego meetings.

Considerable discussion was given to the Del Amo Chamber of Commerce in activity in connection with two measures introduced at the current session of the California State Legislature which relate to the practice of architecture in California.

Don Campbell has been named California Council of Architects, Convention Chairman.

**NORTHERN CALIFORNIA CHAPTER**

The Honor Awards Program, sponsored by the three Bay Area Chapters of The American Institute of Architects, was presented with a gala Awards Dinner at the M. H. de Young Memorial Museum, San Francisco, on February 26th.

Principal speaker was Richard J. Neutra, F.A.I.A., Chairman of the Honor Award Jury, and presentation of awards was made by Douglas Haskell, A.I.A. The Honor Award Jury was comprised of Pietro Belluschi, Richard J. Neutra, and Edward D. Stone, all nationally famous architects.

**WASHINGTON STATE CHAPTER**

Paul Thiry, President; John S. Dellie, 1st Vice-President; Robert H. Wohlbe, 2nd Vice-President; Robert H. Dietz, Secretary; and Edwin L. Turner, Treasurer. Alice Gregory, Executive Secretary, 437 Central Building, Seattle 4.

**SPOKANE CHAPTER**

B. K. Ruehl, President; Victor L. Wulf, 1st Vice-President; Philip Keene, 2nd Vice-President; Laurence G. Evanoff, Secretary, and Carroll Martell, Treasurer. Office 515 American Legion Bldg., Spokane, Washington.

**TACOMA SOCIETY**

E. N. Duigan, President; P. G. Eds. Vice-President; Lyle Swedberg, Secretary-Treasurer.

**HAWAII CHAPTER**

Kennet Onodera, President, 3618 McCarron St., Honolulu, T. H.; George J. Wimberly, Secretary, 351 Royal Hawaiian Ave., Honolulu, T. H.

**CALIFORNIA COUNCIL OF ARCHITECTS**

William Koblak, President, 2523 11th St., Sacramento; Donald Beach Kirby, Secretary, 461 Market St., San Francisco; Frederick A. Chase, Exec. Sec'y., 3733 A Whipple Blvd., Room 206, Los Angeles.

**ALLIED ARCHITECTURAL ORGANIZATIONS**

San Francisco Architectural Club: Joseph Scemena, President; Frank S. Gerner, Vice-President; Russell W. Fonnell, Treasurer; Frank L. Boretti, Secretary. Club Quarters: 507 Howard St., San Francisco.

Producers’ Council—Southern California Chapter: Bert Taylor, President, Pittsburgh Plate Glass Company; G. Robert Boden, Jr., Vice-President, Truscon Steel Company; Malcolm G. Lowy, Secretary, Natural Gas Equipment Inc.; Richard Seaman, Treasurer, W. P. Fuller & Company; Vern Begeg, National Director, Gladstone McBean & Co.

Producers’ Council—Northern California Chapter (See Special Page)

The Awards of Honor included:

For houses under 1500 square feet: The Mrs. P. K. Gilman house, Kent Woodlands, designed by George T. Rockrise; the E. B. Wienand house, San Francisco.

(See Page 32)

**SPECIFY THE GARAGE DOOR DESIGNED FOR TODAY’S WIDER CARS! STRAND 9’ ALL-STEEL GARAGE DOORS**

Help your clients beat the high cost of banded-up fenders!

- **NEW BEAUTY** — Horizontal-line styling!
- **EXTRA DURABILITY** — Rugged-all-steel, Galvannealed for rust protection.
- **LOW INSTALLATION COST** — One-piece door leaf; no field assembly. Hardware is factory assembled.

quakes, engineers from the Department of Building and Safety visited both cities and obtained first hand information on the effects of the shocks on buildings. The results of these studies were graphically shown with colored slides.

The Report of the Special Committee on Welding Practice has been released and covers a thorough study on the subject with special attention being given to Specifications, Drawings and the Check List.

FEMINEERS

The "Femineers", wives of members of the American Society of Civil Engineers, and Structural Engineers Association of Northern California, were told many of the intricacies of landscaping and gardening by John Aitkin at the regular February meeting, held in the Elks Club, San Francisco.

Aitkin is associated with the McDonnell Nursery of Oakland and Walnut Creek.

Mrs. August E. Waegemann, was in charge of reservations for the meeting.

SOCIETY OF AMERICAN MILITARY ENGINEERS—SAN FRANCISCO POST

"Communist Military Indoctrination in Korea" was the subject of an address by Major General Hayden L. Boatin at the March meeting in San Francisco.

Major General Boatin was former commander of the prisoner of war camps at Korea, and many of his experiences in conduct of these camps were related at the meeting, which was held jointly with the American Society of Civil Engineers, San Francisco Section.

ENGINEERS HOLD LEGISLATIVE DINNER IN SACRAMENTO

A "Get acquainted with your legislators" dinner was held in the Sutter Club in Sacramento this month in conjunction with the current legislative session now in progress.

The meeting was sponsored by the Structural Engineers Association of Southern California and the Legislative Committee members plus a number of others, flew to Sacramento from Los Angeles via chartered airplane.

Arrangements were in charge of Joe Sheffet.
UNIVERSITY OF CALIFORNIA
MATERIALS COURSE

It has long been the hope of the Education Committee within the Producers’ Council that one of the leading Universities would include a materials course in their curriculum for architectural students. This hope is about to be realized as the University of California at Berkeley is programming a fully accredited Materials Course. The instructor for this course will be Mr. Leonard Michaels who recently came to this country from his architectural practice in England.

Even though we had nothing to do with the actual programming of this course, it will afford us a splendid opportunity to reach the young under-graduate architects at the University.

The Department of Architecture at U. C. is looking to us for our assistance and particularly in the forming of a Materials Library. We have been requested to supply motion pictures, slides and as many samples of our products as we can. A circular letter will be issued by Herb Duncan, Chairman of the Education Committee that will explain what is desired and to whom the samples should be sent.

Herb also reports that although he does not have a 100 per cent reply to his request regarding the programs the Council members would be willing to put on in the outlying Chapters of the A. I. A., he has received replies which include at least one manufacturer of all the various types of equipment that are represented in the Producers’ Council.

Herb is planning to release a list of the type of films, talks and programs that are available. This list will be distributed to the various A. I. A. Chapters who can select the length and type of program they care to hear at their meetings.

COUNCIL TALKS

We have had an opportunity during the past few months to present talks on the founding of the Producers’ Council and its activities in the building industry.

During the latter part of January, Mr. Clark Wayland of Western Asbestos Company, presented such a talk to the annual meeting of the Associated General Contractors at the St. Francis Hotel.

On February 27 and 28 Mr. Jim Christie of the Zurn Manufacturing Company of Los Angeles, presented a talk on the founding of the Council and its principles to the yearly meeting of the California Council of Architects at the Statler Hotel in Los Angeles.

On February 10 President Al West talked to the meeting of the Coast Valley Chapter in San Jose.

All of these talks covered briefly the facts that the Council is a part of the A. I. A. and that it was originally founded at the request of the A. I. A. It is thought that by presenting the facts of our founding and present relationships with the profession, that we can strengthen our hand with the younger architects coming along in the profession, especially the Valley Chapters where the Producers’ Council has not been active in the past. The Council, of course, has always wanted to extend their coverage to these territories outside the Bay Area but it has simply been an impossibility due to a lack in man power.

As we now have about 77 member companies, it will be possible to divide the burden of these responsibilities and do a very fine job.
TOWN CHALET — Longview
(From Page 17)

wall eliminated, have been built at each end of the upper floor level.

The balcony not only gives a pleasing distinction to Town Chalet, but it serves the second floor apartments both economically and functionally. The balcony roof is merely an extension of the regular roof, and the balcony is protected with a cedar fence set diagonally and topped with a fir hand railing. The balcony provides ready access to any apartment, but being outside the building it does not have to be heated, nor does it take up enclosed space in the building which a hallway would occupy.

The exterior of the structure has several striking and unusual features. A row of decorative posts, of three-by-twelve inch fir, set perpendicular to the slope of the roof, which is away from the courtyard, break the severe lines of the building. A plastic screen has been used two stories high at the inside break of the building to shut off the wind from the open stairway.

Method of application of the hemlock by Architect Rice on the walls facing the courtyard is rather interesting. Along the lower half of the wall the two-by-six hemlock has been laid vertically, directly on the studs, using nailing blocks. Sheathing has been eliminated by using the two inch thickness. On the upper half of the wall the hemlock has been laid horizontally to give variety.

On the two rear walls, the lower half is covered with cedar siding, which has been laid vertically over sheathing. The treated hemlock was used on the upper half and here, too, it was laid horizontally.

The over-all result is a typically northwestern design, which is ideal for a Sherwood forest setting, unbelievably, right in the center of Longview. The effect of the yellows, golds, light and soft browns and forest green colors is altogether charming. Even the birch doors have been left in their natural grain, having been treated only with clear lacquer.

Within a year or two, when the cedar wall assumes its permanent shade, its dark brown native color will form a striking contrast with the gold and green-yellow tints of the treated hemlock on the upper story.

A tiny basement serves as a furniture repair and storage room as well as providing space for the hot water heating system and the electric panels.

The Erickson apartment is actually a separate five-room home which has been built in such a manner that the courtyard of the Town Chalet can be seen from either the living room or the kitchen.

Although connected with the apartment structure, its brick veneer siding sets it off from the rest of the project. The Erickson home rests on a concrete slab which has been covered with an asphalt tile floor, with carpeting in the living room.

This apartment contains living room, dining room, kitchen, two bedrooms and bath. Probably the most interesting feature is the effective way in which Architect Rice has used segregation screens of cabinet work and diffused glass in place of walls to serve as a break between rooms. It is an open-plan design with illusion of expanse built up by eliminating firm walls.

Ericksons can convert their motor court from a transient into a permanent resident project without problems. Anticipating such a possibility, because the Town Chalet is off main-traveled highways, the apartments were made completely self-contained, and suitable for either permanent or transient type guests. Telephone wiring has been installed in each apartment, and the installation of a telephone for a guest staying any length of time requires only the insertion of a jack.

Architect Rice has created a sound, workable idea in his full scale module of a motor court apartment. Cost has been held down in this struc-
ture by building identical units. Yet, by clever application of available color schemes and decoration plans, none of the apartments have the appearance of being cast in the same mold. Use of wall paper on some walls is also an effective medium of breaking the mold.

Space utilization, without sacrifice of free moving room or any unsatisfactory telescoping of facilities or creature comforts, is apparent in the Town Chalet apartments. Very noticeable is the impression made on a visitor as he drives into the courtyard. There is a country club feel to the building, and it carries into the apartments. All this has been attained on an economy budget, which makes the accomplished result all the more remarkable.

A.I.A. ACTIVITIES

(From Page 27)

For houses over 1500 square feet: The William Foster house, Orinda, by Henry Hill and the Charles G. Sawyer house, Carmel, by Anshen and Allen.

Photographs of the winning entries and of 108 other structures in the finals were put on exhibit at the de Young Museum and will remain at the museum for a month.

WASHINGTON STATE CHAPTER

Thirty-nine new members were welcomed at the March 5th meeting as part of a program which included the showing of two motion pictures on new techniques of construction and a general "review" of the architectural profession.

One of the motion pictures was devoted to the lift slab technique of concrete construction, and the other was devoted to consideration of the tilt-up slab technique. Both methods have received a great deal of attention in the building trades and architectural profession.

Considerable attention was devoted to items dealing with the 1953 A.I.A. Convention to be held in Seattle, June 16-19.

PASADENA CHAPTER

The regular March meeting was a joint meeting with the Producers' Council and the annual display of product materials in the form of a "quiz show" the theme of which was "Know Your Materials". Special awards were given those who could describe the greatest number of "products".

The first Honorary Associateship has been presented to Assemblyman A. I. Stewart. The award was made by President Bob Langdon in appreciation of Stewarts "contributions to the public welfare over a period covering many years." Stewart served as a member of the Board of Directors of Pasadena for more than twenty-four years and as director of the Professional and Vocational Standards department of the State of California helped to establish California's high standards in the
licensing and practice of members of various professions and vocations.

NEW MEMBERS. Ernie Wilson, Ed Davies and Chester Sorensen are recent Chapter Members.

ELECTED PRESIDENT WOMEN'S ARCHITECTURAL LEAGUE

Mrs. Herman Charles Light has been elected president of the Women's Architectural League of California for the year 1953. She succeeds Mrs. Henry L. Wright who now heads the WAL Central Committee.

Other newly elected officers include: Mrs. C. Day Woodford, vice president; Mrs. Arthur Gallion, corresponding secretary; Mrs. W. Glenn Balch, recording secretary, and Mrs. Stanley R. Gould, treasurer.

SOUTHERN CALIFORNIA CHAPTER

C. Haines Finnell, Director of Public Relations for the Union Oil Company of California, and vice chairman of the national Oil Industry Information Committee of the American Petroleum Institute, and chairman of the Public Relations Sub-committee of the Western Oil and Gas Association, spoke at the March meeting on the subject of "Public Relations."

Nominees for delegates to the Seattle A.I.A. Convention to be held in June were proposed.

SAN FRANCISCO ARCHITECTURAL CLUB

The 1953 Architectural Seminar is being offered by the San Francisco Architectural Club, Inc., 507 Howard Street, with courses in "Structural Engineering for Architects," and the Architectural Design Atelier (for members only).

The structural engineering program offers a four-semester, two-year course designed to prepare students for the structural section of the examination of the California State Board of Architectural Examiners. Each semester will consist of a minimum of fifteen class meetings, one each week.

The second semester will cover: graphic statics, stresses in trusses for vertical and lateral loads, design of steel trusses, design of timber trusses, details of connections, timber connections and welded connections. The third semester will offer: reinforced concrete, materials and mixes; continuous structures; slabs, beams, and columns; flat slabs; and retaining walls.

The fourth semester will cover such subjects as foundations, soil pressures, spread footings, combined footings, pile footings, lateral forces, design for wind and earthquake forces.

The course is under the general supervision of George A. Sedgwick, Structural Engineer. Assisting him are Clyde E. Bentley, Consulting Engineer; Leo E. Dwyer, Mechanical Engineer; Felix Rosen-thal, M.A.; Michael J. Sweeney, Architect, Specifications Writer; Clyde F. Trudell, Architect; George A. Downs, A.I.A., Architect; Michael Goodman, A.I.A. Architect; and William Corlett, A.I.A., Architect.

BONUS LIGHT

(From Page 6)

struction or design.

"This new method takes into account the exact behavior of interreflections and ground reflections, in spaces such as classrooms, offices, hospitals, small industrial spaces, and similar areas where reflected light is important."

As an example, Mr. Biesele worked out in detail a complete problem in seven steps showing the daylight delivered to the work plane in a typical room under stated conditions.

In his discussion of "The Importance of Ground Reflection in Daylighting" Mr. Griffith concluded that "light from below the horizon is bonus light. It is a dividend from something whose only cost is good design practice."

Griffith reported on extensive studies made at SMU showing how strategic location of concrete parking areas, sidewalks, light colored school playground areas, and even the horizontal louvers of

Edison's First Successful

IS YOUR LIGHTING OBSOLETE?

Recent surveys indicate that less than 25% of all lighting installations are adequate, based on present day standards. Present high salaries and competitive markets call for strictest economy and proper illumination may increase production or sales up to 50%. SMOOT-HOLMAN'S line of luminaires: incandescent, fluorescent and slimline may economically suit your lighting problem.
Venetian blinds may be used to pass indirect lighting into the far corners of a room.

He said in some conditions of sun and ground there may be more light entering vertical windows from below than from the sky.

Tests have shown that ground reflections from grass fields and lawns run 18 to 23 per cent, dead grass 28 to 32 per cent, fresh snow 100 per cent, old snow 59 per cent, concrete 55 per cent, macadam 18 per cent and gravel from 15 to 35 per cent.

It was explained that ground light reaches the work plane by interreflection from upper walls and ceilings and, therefore, may improve the uniformity of illumination and the brightness ratios by producing more light on work areas farthest from the windows than is received directly from the sky. Maximum input of daylight from ground and sky is achieved by large window areas of clear glass. Data from the studies will enable engineers and architects to more closely evaluate daylighting requirements and results.

SAN FRANCISCO BUILDING SITES
(From Page 5)
Lee, there developed a demand for the steeper hill slopes for residential and institutional sites.

"These areas," the speaker went on, "present a problem of stability, arising from the necessity of disturbing the natural slope by cutting and filling. Where proper precautions have not been taken, disastrous slides have resulted. The economic development of these areas to provide safety and stability is one of the difficult current foundation problems."

Reaching back into far ages for Nature's engineering of the area, Lee said:

"It is probable the flooding of the Bay of San Francisco resulted from the rise of the ocean level which occurred with the melting of the great continental ice fields at the end of the last glacial advance. This occurred some 15,000 or 25,000 years ago and produced a rise in ocean level variously estimated at about 330 feet. There may also have been minor crustal movements.

"With the original mouth of the great river at the west of the Golden Gate, as seems probable, the effect of the 330-feet rise was to flood the valley of San Francisco Bay and all its tributary stream systems to the present bay level. The valley thus was drowned by salt water invasion and became a trap for most of the sediments discharged into it by tributary streams."

Lee is Chairman of Soils Mechanics and Foundations Committee of the San Francisco Section of the American Society of Civil Engineers.

GOLDEN GATE PLAYGROUND
(From Page 7)
well equipped kitchen. A large room opens onto an enclosed terrace with barbecue grill and dining tables at one end and ping-pong tables at the other. These ping-pong tables are an innovation of the recreation department and are made entirely of steel which needs no painting and stands up well under the heaviest usage. The director's office overlooks all play areas. Floors throughout are of asphalt tile and wall finishes are of masonry, plywood or plaster as use demands. All lighting fixtures are of modern design.

A 400 sq. ft. locker room adjoining the baseball field houses showers, wash rooms, and team lockers. It is constructed of 16 inch concrete blocks.

The backstops for the baseball and softball diamonds are constructed of vertical grain Douglas Fir with special designed movable wings of chain link fencing to control foul balls. These wings are placed seven feet above the ground.

Basketball backstop boards are of waterproof
plywood with adjustable brackets, another new design inaugurated by the Recreation Department. Bleachers are unique in that they use a 14 inch diameter rear column which eliminates the need for lateral bracing. This design gives a very rigid construction and will be a boon and time saver to clean-up and maintenance of the grounds.

ARCHITECT - PRESS RELATIONS
(From Page 25)

genuity and the amount of effort they are willing to expend. Six of the major fields are listed below.

1. Preliminary Designs—Anything new is news, particularly when it is building a better community. When the Architect presents the pictures and write-up, including a credit line, he will find the newspaper grateful and cooperative. The article should cite the architectural problem and its interesting solution, thus making the public more observant and appreciative when the building is completed. When this task is left to the owner, in all probability the credit line will be forgotten and the write-up will cover the cost of the building and little more. The omission of the credit is then the Architect’s fault by default, and not the editor’s. When the owner employs an advertising agency the Architect should volunteer his help, which will be accepted since the writer will need help on the nomenclature. In return for this help he will be glad to include proper credits after the Architect has explained its importance. Do not be timid.

2. During Construction—This field has barely been touched. In items the Architect considers commonplace, the Editor finds a wealth of interest to his thousands of Sidewalk-Superintendent readers. The possibilities are endless—an interesting camera angle of a pile-driver at work; a crane lifting a steeple onto a tower; a steeple-jack attaching the cross; a lift-slab or till-up job; any interesting excavation equipment; the installation of floor pans for warm-air radiant heating job is good for a story relating it to the Roman Baths. Anything that is unusual or interesting to the general public the newspapers want and will depend on you to call it to their attention. All such stories show the indispensable part the Architect plays in the community.

3. Completed Work—The opening of any public or business building is of vital interest to the newspaper, since it will doubtless result in advertising. The Architect should offer his services in preparing the write-up as outlined under Preliminary Designs and if the owner has special advertising for the opening, additional news copy will be required to fill out the page. Advertising agents consider that Architects add prestige to projects, and will often do an article on the Architect for the project.

(To Be Concluded Next Month)
glass block has been increased by the addition of a fibrous glass screen sealed in the block, creating a double cavity. This screen not only gives a better insulating characteristic to the block \( U = 0.43 \), but offers better daylighting control by diffusing the light. The screen in addition to the daylighting block’s internal prisms and Soft-Lite Edge assure evenly diffused daylight from a panel of uniform illumination. The Pittsburgh Corning SKYTROL Glass Block is designed to relieve the common problems associated with daylighting construction.

457. SWIMMING POOL CONSTRUCTION PORTFOLIO. A complete construction portfolio (A.I.A. file 35F-2) is now available to architects and builders. It is published by Landon Inc., a California swimming pool engineering and equipment firm. The portfolio includes bulletin B-1 "How To Build a Swimming Pool", "Public Pool Bulletin C-1", and engineered typical plans for form poured, gunite and concrete block pools. The kit also includes a Landon Equipment Catalog, cost estimating forms and price list order forms. The portfolio is available to architects, builders and building material dealers without charge. Write Landon Inc., 5220 Sepulveda Boulevard, Van Nuys, California.

458. NEW PLASTIMENT BOOKLET. The theory and practice of obtaining a good concrete is the subject of a new booklet, "Plastiment Concrete Densifier," published by Sika Chemical Corporation, of Passaic, New Jersey. Beginning with the gel mechanics of cement-water reaction, the booklet discusses the factors affecting cement hydration and basic quality of concrete, and how these factors can be controlled to reduce cracking and increase concrete hardness and impermeability. The booklet covers 8 pages of engineering information, illustrated with drawings, tests, photographs and descriptions of outstanding engineering projects constructed with Plastiment concrete. A.I.A. File No. 7, 8 pages illus., 2/10/52.

459. ENGINEERING TEST REPORT ON INSULATED PIPE. Durant Insulated Pipe Company offers a 6-page report on insulated testing made on D. I. P. The bulletin contains data on methods, temperature recording and results of recent tests made by an independent engineering firm to determine (1) temperatures developed in and near D. I. P. conduit buried 48” underground, and (2) effects of water and high temperature on D. I. P. casing. Copies are available from the Western Division at Palo Alto, California, or from the Eastern Division (Durant Insulated Corporation at Williamstown, N. J.

460. GYPSUM LATH AND SHEATHING. Two new illustrated pamphlets dealing with gypsum lath and gypsum sheathing have been prepared by the Gypsum Association and may be obtained on request from the Association. The pamphlets describe the uses, physical properties and recommended methods of installation of these fireproof materials. Also included are detailed architectural specifications. Requests for the free pamphlets should be addressed to the Gypsum Association, 80 North Wacker Dr., Chicago 6, III.

461. ADVANCEMENTS IN WOOD RESEARCH. Developments in timber engineering and research that enable architects and engineers to use lumber more advantageously with resulting economy in time, material and labor, are described in the new 32-page booklet, "Advancements in Wood Research and Timber Engineering", just issued by Timber Engineering Company, affiliate of National Lumber Manufacturers Association. The colorful new booklet is a profusely illustrated, comprehensive story of Tec’s overall activities in timber engineering, timber connector sales, and wood research. A copy is available on request to Timber Engineering Company, 1319 - 18th Street, N. W., Washington 6, D. C.

462. SELECTION AID MANUAL FOR AIR DIFFUSERS. A new 64-page Selection Manual No. 45, 1953, containing comprehensive technical data for simplifying choice of proper air diffusers in air conditioning systems has been announced by Anemostat Corporation of America, 10 East 39th Street, New York, N. Y. In its third revised edition, the Anemostat Manual contains a complete new section on Duct Take-off Design. Generously illustrated with photographs, tables on performance data, and case examples, the manual shows how proper locations and correct number of required units are determined.
NEWS & COMMENT ON ART
(From Page 4)
entation of outstanding works of Bay Area Architects since 1933.
Paintings, Drawings and Gouaches by Henry Koerner, and Early American Silver, from the Mark Bortman Collection.

TERMINATION OF BENDER GRANTS IN ART
The Board of Trustees of the Albert M. Bender Memorial Fund recently announced termination of the Grants-in-Aid in the fields of painting, literature, and photography.
The residuum of the Trust Fund has been given to the San Francisco Art Association and will be known as the Albert M. Bender Revolving Fund.

CALIFORNIA SCHOOL OF FINE ARTS
A Film Seminar which includes the screening and analysis of important motion pictures no longer available to the general public, is being offered by the California School of Fine Arts, 800 Chestnut Street, San Francisco.
Two sessions are planned, the first will start the latter part of February, and the second will start on April 24, and will be held each Friday evening for a period of nine weeks.
Classes are under the direction of Robert Katz, former assistant chief of Production Planning International Motion Picture Division of the United States Department of State, and formerly deputy chief of Long Range Operations of the Office of War Information.

CALIFORNIA PAINTERS EXHIBIT de YOUNG MEMORIAL MUSEUM
William Brice, Robert Chue, Channing Peake and Howard Warsaw, four of California’s outstanding artists, have an exhibit of twenty-eight paintings at the M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco.
The exhibition was organized by the Frank Perls Gallery in Beverly Hills and represents the artists’ works during the last five years.

BOOK DISPLAY AT CALIFORNIA SCHOOL OF FINE ARTS
An exhibition of books designed by J. B. Goetz, production manager of the University of California Press in Berkeley, is being exhibited at the California School of Fine Arts, 800 Chestnut Street, San Francisco.
Books by Goetz have won awards in the Fifty Best Books of the Year annual competition, in the Western Book Show, the Jacket Designers’ Guild competition and in national competitions for text book designing.

FESTIVAL OF CONTEMPORARY ART UNIVERSITY OF OREGON
The art presented in the current Festival of Contemporary Art at the University of Oregon, under the direction of Bertram E. Jessup, Associate Professor of Philosophy, is not just an exhibition of art which happens to have been produced in our time, but is an exhibition of art which could not have been produced at any other time.
The program includes a wide variety of selection in the fields of visual arts, dance, music, literature and aesthetics, drama, and motion picture. Exhibits and events are held in various halls and auditoriums at the University.

CONTRACTORS IN MIAMI STUDY NATION’S NEEDS
General contractors of the nation attending the 34th Annual Convention of The Associated General Contractors of America in Miami this month, will focus their attention sharply on the twin task of carrying forward defense construction and an expanded program of civilian projects.
More than 80 per cent of the contract construction work in this country is performed annually by A.G.C.’s more than 6200 members.

**Your clients will like the "extra" finish of built-in telephone facilities**

You can make planned telephone facilities a part of your building plans so easily. And the popularity of conduit for concealed telephone wiring and conveniently located telephone outlets shows that clients like the extra finish they give to a new home. Appealing, too, is the fact that planned facilities allow them to change the position of their telephone, or add a new instrument later without maring the beauty of their home with exposed wiring.

Just call Pacific Telephone’s free Architects and Builders service. They’ll be glad to help you plan for better living tomorrow in the homes you are building today.

**Put built-in telephone facilities in your plans**

Pacific Telephone
IN THE NEWS

SCHOOL AUDITORIUM AND CAFETERIA

The Vallejo Unified School District is building a $471,650 auditorium and cafeteria to be used in conjunction with the Dr. James Hogan Junior High School in Vallejo. Frank J. Devine of Sacramento is the architect.

LOW RENT HOUSING PROJECT FOR S.F.

The Housing Authority of the City and County of San Francisco recently announced the construction of a 172 unit low rent housing project to be built in the Potrero Terrace Annex district of the city. Twenty-three buildings are included in the project which will cost an estimated $517,777.

Ward & Boles of San Francisco are the architects.

ENGINE TESTING PLANT AT SACRAMENTO

The director of procurement of the Sacramento Air Material Area, recently announced the construction of a high power conventional reciprocating engine test facilities at the McClellan Air Force Base near Sacramento.

Cost of the project will approximate $1,885,952, according to air force officials.

REBUILD HIGH SCHOOL DESTROYED BY FIRE

Restoration of the Willis Union High School, which was considerably damaged by fire recently, has been started according to school district officials.

Among facilities to be rebuilt currently are classrooms, auditorium, shops and a bank room.

Clarence Feliciano, Santa Rosa, is the architect.

NEW ARMORY FOR FRESNO

The Corps of Engineers, U.S. Army, San Francisco headquarters has announced the immediate construction of a 600-man Armory Building to be built in Fresno, at a cost of $822,813.

Construction will include concrete ramp, vehicle storage shed, sanitary sewer system, drainage system, paving and sidewalks.

COUNTY FAIR EXHIBIT BLDG.

The Santa Clara County Fair board has authorized the construction of three new exhibit buildings at the fair grounds in San Jose, at a cost of $685,000. One of the buildings will be a general exhibit structure while the other two will be designed for use by livestock.

C. J. Ryland of Monterey is the architect.

MARINE CORPS TRAINING CENTER

The new Marine Corps Artillery Training Center at Twentyfifth Point, designed by Neptune & Gregory, Architects and Engineers, is one of the major construction projects in the state. California represents an expenditure of $3,169,800.

Planned to house 3,000 additional men, the project includes 76 barracks for 4,000 men, a hospital, administration building, and other buildings. Construction will be completed in 18 months, according to plans.

regimental and command buildings, post exchange and various other service facilities.

It is the first of the first complete military installations on the West Coast where pre-cast concrete has been used extensively.

SANTA PAULA HAS NEW SCHOOL UNIT

The new first school to be built in Santa Paula during the past 26 years was dedicated recently when the new Glen City school plant was opened for grammar school use.

The new school consists of classrooms, and a combination cafeteria and auditorium. Robert Raymond of Santa Paula is the architect.

SCHOOL ADDITION AT ARACIA

The Arcata Elementary School District (Humboldt county) is constructing a $243,675 addition to the Bloomingfield Elementary School in Arcata, consisting of 6-classrooms, administration offices, kindergarten, multipurpose facilities, and kitchen and toilets. Frank T. Georgeason of Eureka is the architect.

FAIR GROUNDS SITE FOR COURT BUILDING

The Board of Supervisors of Kern county have decided to utilize the County Fair Grounds for the site for construction of a new Courts Building.

The new building will be a 1-story, steel, steel roof and concrete floors and will contain 24,000 sq. ft. of floor area devoted to courthouse, court clerk office, offices of the district attorney and a law library. Cost is estimated at $150,000.

Robert N. Eddy of Bakersfield is the architect.

VICTORY GENERAL HOSPITAL FOR SAN FERNANDO VALLEY

Architects Reiner C. Nelson and Gene E. Moffat, Los Angeles, have designed the new Victory General Hospital which is to be built in North Hollywood in the immediate future for a group of San Fernando Valley doctors at an estimated cost of $425,000.

The hospital will contain 25,000 sq. ft. of area and facilities for 30 beds and a clinic. Facilities will also be available for emergency cases.

RANCH TYPE HOMES FOR LOS ANGELES

Construction of 51 homes in Rolling Meadows, Los Angeles county, will feature the ranch type, plus a sprinkling of "Bermuda type," and will sell for $18,500 to $19,500. All homes will be 3-bedroom with double garage.

James R. Friend, Architect of San Pedro and Long Beach, is the architect for the project.

NEW BUILDINGS FOR SAN FRANCISCO AIRPORT

Another important addition to San Francisco's Municipal Airport, near South San Francisco, will be the construction of a group of six warehouses and shop buildings for United Air Lines. More than 214,000 sq. ft. of additional space will be added to present United Air facilities at the airport with completion of the new buildings.

ELECTRONIC SHOP FOR VALEJO

The U.S. Navy, Department of Public Works, has announced the construction of a new Electric-Electronics Shop building in Vallejo at the Mare Island Naval Shipyard. The new building will provide space for five story wings, with adjacent structures with a total floor space of 350,000 sq. It will cost an estimated $4,800,000.

S. D. Peugh, San Francisco, is the architect.

ELECTROLYTIC SCHOOL FOR NEVADA CITY

Trustees of the Nevada City (Calif.) Elementary School District have authorized the architectural firm of Kolbik & Fisher of Sacramento, to draft plans and specifications for the construction of an addition to the Elementary School in Nevada City.

DEPARTMENT STORE FOR SAN MATEO

Mary's Department Store, San Francisco, has announced plans to construct a new 2-story and basement department store building in the Hillsdale Shopping Center near San Mateo. The building will contain 200,000 sq. ft. of floor space and will represent a modern trend in architectural design.

WALNUT CREEK GETS
NEW STORE BUILDING
The Broadway Shopping Center, near Walnut Creek in Contra Costa County, will
soon have the addition of a $1,000,000 department store, according to an announce-
ment by the Macdonald Products Company of San Francisco, who have stated the
completed building would be occupied by Capwell's Department Store of Oakland.
The new building will be 2-story in height and will contain 100,000 sq. ft. of floor
space; escalators, air conditioning, etc.

NEW TEMPLE FOR
SACRAMENTO
A new Temple for B'Nau Israel is being
built in Sacramento, according to a recent
announcement. Cost of the building is
$175,000.
The firm of Koblik & Fisher of Sacramento,
are the architects.

ADDITION TO
COUNTY JAIL
A 2-story and basement addition is being
built on the Madera County Court House
which will serve as an addition to the
county jail. It is of reinforced concrete con-
struction and will contain 6,378 sq. ft.

Horn & Mortland of Fresno are the archi-
pects. Cost of the project will be about
$116,000.

GOLF HOUSE
PLANNED
The North Ridge Country Club of Car-
michael, near Sacramento, has announced
plans for the construction of a new Golf
Club House in the immediate future.

Architects Francia & Mullen of Sacra-
mento have been selected to design the
building.

RODEO GROUNDS
FOR LOS BANOS
The Merced County Livestock Association of Los Banos, Merced county, has an-
nounced plans for the construction of a race
track, grandstand, and Rodeo Grounds at
the Fairgrounds in Los Banos.

C. J. Ryland of Monterey is the architect.

NEW HIGH SCHOOL
FOR WESTWOOD
The Westwood Unified School District re-
cently announced plans for the construc-
tion of a new $1,100,000 High School Building in
Westwood, Lassen County, consisting of a
1-story reinforced concrete and structural
steel structure containing 48,000 sq. ft.

Architect Clayton Kants of Redding is de-
signing the new building.

APRIL 1953
"... helping to keep the business cycle on an even keel..."

HARRY B. HIGGINS
President, Pittsburgh Plate Glass Company

"The employees of Pittsburgh Plate Glass Company since 1946, have purchased $9,488,510 in United States Savings Bonds through the Payroll Savings Plan. This accumulation of assets will be of inestimable value in helping to keep the business cycle on an even keel by maintaining purchasing power for the future."

Payroll Savings—the plan that protects—pays the employer triple benefits:

- it makes a good employee a better one—a serious saver with a definite plan for personal security.
- as enrollment on the plan goes to 60%, 70% employee participation, productivity increases, absenteeism decreases and accident records go down.
- and as Mr. Higgins points out, the systematic purchase of Defense Bonds through the Payroll Savings Plan is building a tremendous reserve of purchasing power.

Let's point up the third employer benefit with a few figures:

- On September 30, 1951, individuals held Series E Bonds totaling $34.6 Billion—more than $4.6 greater than on V-J Day.
- During the five calendar years (1946-1950) Defense Bonds sales provided:
  - Cash to retire $3 Billion A-D Savings Bonds (maturi-
    ing Series).
  - Cash to meet $24 Billion redemptions of E, F and G Bonds.
  - $6 Billion (after providing cash for the payments enum-
    erated above) that the U.S. Treasury could use to pay off bank-held debt.

And the figures are getting better every day—between January 1, 1951 and November 1, 1951, 1,200,000 em-
ployed men and women joined the Payroll Savings Plan.

If the employee participation on your Payroll Savings Plan is less than 60%, phone, wire or write to Savings Bond Division, U.S. Treasury Department, Suite 700, Washington Building, Washington, D.C. Your State Director will be glad to show you how you can participate in the triple benefits of the Payroll Savings Plan.

NATIONAL A.I.A. CONVENTION

Indications are that the Seattle Chapter of the A.I.A. is hard at work in preparation for the annual convention of The American Institute of Architects which is scheduled to be held in Seattle during June.

The theme of this year's meeting is "New Country—New Architecture" a most appropriate basis for viewing the architectural profession throughout the West where unshackled with generations of tradition, custom and use, architects have been free to use their initiative in creating architectural precedent.

Results of this freedom are evidenced by the growing public interest in all parts of America and many foreign countries in "Western Architecture and Western Living". The "Ranch type home" is appearing in almost every nook and corner of the country and western influences are being felt in national architectural thinking.

The June conference will bring architects to the West Coast from all parts of the world. Many of these visitors will take advantage of the opportunity while in "the west" to view first hand much of the construction they have been reading about. Western architects, western architecture and western construction will go "on parade" in June.

Andrew Jackson, "Old Hickory", was the first president to have a bathtub installed in the White House.

TAX CUTS

There is a lot of debate these days about whether tax cuts should precede or follow a balanced Federal budget. One of the clearest statements on this problem comes from the National City Bank of New York.

According to officials of the bank "Despite the tendency in much of the current discussion to put expenditure reduction and tax reduction in separate compartments, in reality they are mutually interdependent. Certainly no sound basis exists for tax reduction unless expenditures are drastically reduced. On the other hand, much of the necessary incentive to carry through on expenditure reductions will be lost unless such reductions are going to be reflected in tax cuts pretty promptly.

"The ideal procedure is to have the two move along together. Some individuals may feel it necessary to keep the pressure on reducing expenditures by not letting tax reduction go ahead too fast. Others may feel that by demanding tax reduc-

tion they are bringing pressure for reduction of expenditures ... hence, there is the risk of getting people lined up in opposing camps when essentially they are working for the same end. The danger is in each side getting 'frozen in' with fixed ideas while the situation is still fluid."

Personal income of Americans has more than tripled since '39—BUT, Uncle Sam's tax take is 21 times what it was in '39.

NEW COMPETITION

There is a new kind of competition among American business that makes monopoly almost impossible—the creature of science.

In the construction industry alone during the past few years there has been a tremendous development of "new products" and new application of old products. It is becoming more and more impossible, and unprofitable, for apparent monopolies to exist in the construction industry. Often the so-called "monopolist" loses a part of the market he is trying to control to a "substitute" product which has been created in some commercial research plant.

Steel, aluminum, magnesium, titanium, laminated wood, plastics and many other items used in the construction of almost any type of structure, are in a strong competitive market. Let the price, or quality, of one product fail to satisfy customers and very quickly a substitute will be found and there goes your monopoly.

Advertising plays an important part in this cycle and manufacturers of building materials and products who are reluctant to place their products on the pedestal of public inspection through advertising are soon forgotten.

Money spent for advertising actually reduces the cost of consumer goods as advertising creates a volume of sales sufficient to lower production costs.

PLANE PROGRESS

Mundy I. Peale, chairman of the board of governors of the Aircraft Industries Association and President of Republic Aviation Corp., believes every American citizen should interest himself in the matter of the allotment in the 1954 Federal budget for research and development of new military aircraft.

With the globe shrunken to a few hours air travel from almost any given point, the concern of Peale is well founded.

APRIL, 1953
SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, offers the following special exhibits and events during April.

EXHIBITIONS: Les Fauves; Rental Gallery; Etchings by John Marin; Four Sculptors of the West; Retrospective Exhibition of Paintings and Drawings by Gifford Beal; Contemporary Japanese Prints and Pottery; Prints by Henri Matisse from 1925-1952; and Seven Designers, winners in the recent National Competition.

The Parkmerced Branch offers "A Study of the Fauves," through April 15th; and "How To Read a Photograph."

SPECIAL EVENTS include a special group of Concerts, Lecture Tours, Discussions in Art, and Classes in Art including "Art for the Layman," "Sketch Club," Painting Classes, and Children's Classes. Adult and Children classes in Painting are also being held at the Parkmerced Branch.

ADVERTISING ART AND DESIGN CLASSES OFFERED

In recognition of San Francisco's growing importance as a center for national advertising and industrial design, the California School of Fine Arts has established a department of Design for Industry, integrated with the full curriculum of the school.

The course offers full professional training based upon highest academic standards for those seeking a career in these related fields.

Faculty includes Glenn Grohe, cover designer and magazine illustrator; Paul Forster, illustrator and commercial artist; Dorr Bothwell, design developer; Joe Wallace, advanced advertising layout; Edmond Gross, designer and commercial artist; M. Halberstadt, commercial and industrial photographer; Squire Knowles, advertising art and industrial design; Chuck Wertiman, lettering for commercial art; Baldassare Armato, lettering, and others.

CITY OF PARIS ART GALLERY

The Rotunda Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan, presents a Memorial Exhibition and Sale of Paintings and Sketches by Nelson Poole early in April. Paintings of India by Frieda Hauswirth Das, Oils by Fay Morgan Taylor, and Oils and Casine by Ralph Cornell Seigle will be on special exhibit all during the month.

Pictures of the Month will feature a select group of Distinctive Prints by Robert Gilberg.

SOME EXCELLENT POINTS ON

Public Relations
For Architects

"PRESS RELATIONS IN PASADENA"

By CULVER HEATON, Architect
Chairman, Public Relations Committee,
Pasadena Chapter, A.I.A.

PART II

4. A.I.A. Activities—Conventions and meetings should always be written from the public’s point of view: "Architects Study Effect of Earthquake," etc. Not just a list of architects attending. Always apply this subject to your own community: "Architects Consider New Pasadena Ordinance to Reduce Hazard in Quake . . ."

5. Women’s Architectural League—This is one department where the Editor likes names, but even so, the releases should be slanted to community betterment, and photographs should stress architecture—”Women’s Architectural League Plans Tour of Greene and Greene Homes.”

6. Special Projects—The first project undertaken was a weekly column in the Sunday paper, “So You’re Going To Build?” It consists of 300 to 500 words on any phase of building, and always illustrates the importance of the Architect. It has been going for over two years and has developed a large reading audience. To date two architects have done the writing, each continuing for one year. This material is now being used by several other chapters in California.

The Education Committee of the Pasadena Chapter did a great deal of research and catalogued the one hundred best architectural examples constructed between 1900 and 1950. Photographs and descriptive material were prepared, together with maps which divided the examples into nine logical tours by areas. This work was completed for a brochure to be distributed by the Chamber of Commerce, but certain technical difficulties arose. As a second project the Public Relations Committee edited this material into nine successive feature articles for the Sunday paper which were enthusiastically received by the Editor. On each Sunday afternoon there was a continuous flow of traffic on the route of the tour. At the completion of the series, the staff of the newspaper expressed

Note: Part I, which appeared in the March issue of Architect and Engineer, dealt with the objectives to be obtained by a public relations program, the "rules of the game" and the material available. The article offers an exceptionally sound approach to any professional-public-press program.—ED.
sincere regret that the feature was not a continuing one.

At the present time the Committee is launched on a new project, this time at the request of the management of the newspaper. The present Sunday Real Estate Section is gradually to be transformed to a major section featuring the "Home and Interiors." The key story is an illustrated visit to a home designed by an Architect.

Advertising

The new program with the press brought the Public Relations Committee such fine results that it was apparent that the newspaper was a logical medium. Keeping the "Objectives" already listed in mind, we decided really to get on the team and experiment with paid advertising. (I wish to emphasize that the idea of paid advertising was originated by the Chapter, not the newspaper.) The fact that the Chapter feels this program is worthwhile is apparent, since we continue to expend $1,000 per year for this purpose. Part of these funds come from the regular budget, part from special contributions from the architects, and the balance from paid advertising in our Chapter monthly bulletin. All newspaper advertising is on a profession-wide level; individuals are never mentioned.

On special occasions such as the Community Chest, or Red Cross campaigns, we have daily advertisements which read,

"Always interested in 'Building' a Better Pasadena, the Pasadena Chapter of The A.I.A. urges you to contribute generously to the Community Chest."

In September of each year an Art Fair is held in Pasadena's Civic Plaza. The Chapter always has a prominent booth and runs advertisements in the paper urging people to attend the Art Fair. Thus you can see that we are continually seeking opportunities to repeat "A.I.A.," so that it will become as well known as LS/MFT.

Results (To Architects)

As a result of this program with the Pasadena Star-News, the word "Architect" has become a household term that is used and properly pronounced by the entire community. The term "artist's sketch" has disappeared from the press and has been replaced by "Architect John Doe's drawing."

In keeping the Committee's records we have long since stopped recording the number of times that the word "Architect" appeared. The graph shows the number of news articles each quarter dealing with Architects. These do not include the paid advertising. It is interesting to observe the increase shown after we were "on the team." Also indicated is the point at which the management of the Star-News recognized our newsworthiness by requesting our Committee to assist in the development of the new Sunday feature on architecturally designed homes, I feel that a high point in our press relations was achieved when the Star-News of its own accord took space from the political campaign and the Korean situation to write an outstanding editorial on the contributions of the late Myron Hunt, F.A.I.A., in Building a Better Pasadena.

Results (To the Newspaper)

As a result of the architects' pioneering in the field, other organizations have seen the logic of public relations and have started a program of paid advertising. Among these are the Building Contractors' Association, Plumbing Contractors' Association, Plastering Contractors' Association, and numerous other organizations.

The Star-News has also gained the Chapter as a valuable ally who furnishes a large volume of interesting news copy and feature articles.

SHARP COMPETITION AHEAD FOR CONSTRUCTION INDUSTRY ACCORDING TO A.G.C.

Ushered in by the removal of government controls and the general availability of materials, a period of abundant work characterized by intense competition, sharp bidding and lower prices for completed construction jobs is at hand for the construction industry, according to a national survey by The Associated General Contractors of America.

Prices of materials are expected to be relatively stable with increases in some lines, and there is evidence that labor's demand for wage raises, including fringe benefits in some areas, will be strongly resisted by employers, it was reported.

The survey, covering prospects for the next six months, was made among the association's 80 national directors and 122 chapters throughout the country and Alaska, representing more than 6,200 member-firms of A.G.C. who annually perform more than 80 per cent of the contract construction in the nation as well as a large volume of work.
overseas.

**Greater Volume Seen**

Member-firms of the association engage in all types of construction, such as industrial, commercial, institutional and residential building; highway, street and airport construction and other types of earth-moving and paving operations; and heavy engineering work such as dams, waterworks and sewers, pipelines, dredging, canals, bridges and docks.

The survey, made by telegraph, indicated strongly that the amount of work coming on the market for the next six months of 1953 would be greater than in the comparable period last year for all three general classifications of construction — building, highway and heavy — which the association considers to be all inclusive.

This was considered highly significant in view of the fact that an all-time record of $42.3 billion in total construction including maintenance and repair operations was put in place by the industry in 1952. The survey findings support official forecasts of a new peak of $44 billion for the industry in 1953.

"Intensely Intense"

Almost without exception — the actual ratio was 93 per cent — respondents to the survey, reported a sharp rise in competition, characterized by some as the greatest they had ever experienced. Many of the respondents said it was the most severe since 1940. One contractor from the Midwest expressed himself thus: "Intensity of competition is intensely intense and no fun or profit on a market such as this.

Another Midwest contractor reported: "Competition has been terrific. Building jobs in this area so far have gone at cost or less." A builder in the Middle Atlantic area wired: "Competition extremely keen. Builders reducing prices to alarming and distressingly low limits." One reply from this region was terse: "Competition terrific." This work came from the Southwest: "Competition more intense in this area than ever before. Work has been going cheap the first part of year."

Other replies were equally emphatic, using such adjectives as "vicious," "rough," "terrible," "keen," "discouraging," "heavy," "tight," etc., to describe the competitive situation in their areas.

**Key to Paradox**

The apparent paradox — more work but also more competition per job — was interpreted by A.G.C. officials as a sign that more and more contractors were returning to the market who had not been bidding formerly because of uncertainties caused by controls — uncertainties which translated themselves into costly on-the-job delays for the contractor.

Contractors were being encouraged to bid, A.G.C. spokesmen said, by substantial assurance that they could now proceed on job schedules at a pace set by themselves for maximum efficiency and economy. They were apparently bidding on many jobs simultaneously, it was believed, and "loading up" on projects which they were able to complete in rapid-fire order with newly-developed techniques and equipment.

Highway and heavy engineering projects especially lend themselves to mechanization on a large scale and the introduction of new machines in these fields in recent years as well as new speed techniques developed in other branches of construction during World War II under the pressure of the heavy volume of defense work have greatly increased the capacity of the industry, A.G.C. officials said.

They also cited the general feeling of optimism among contractors fostered by forecasts of a record year and the belief that a better business climate now prevailed in the country, as an additional factor beckoning contractors to increased activity.

**Highways to Lead**

The greatest increase was foreseen in highway construction according to the survey, with 86 per cent of the respondents stating that work in this category of construction would be at the same high volume or greater than in the comparable period of 1952. Sixty-two per cent of the respondents said highway construction would be greater, 24 per cent said it would be the same and 14 per cent said it would be less.

Fifty-four per cent said building activity would be greater in the next six months of this year than in the comparable months of 1952, while 24 per cent said it would be at the same level; giving a total of 78 per cent of the respondents who forecast a volume in this branch of construction higher or equal to the same period last year.

In the field of heavy construction, 64 per cent said it would be greater or the same. This was made up of 41 per cent who forecast a greater volume of heavy construction and 24 per cent who anticipated a volume equal to the 1952 period. Thirty-five per cent looked for a decline in heavy construction.

With the exception of an estimated decline in heavy construction in the Middle Atlantic and Southwestern States, the story foretold by the survey of gains in all three categories of construction activity was a uniform one throughout the country. The Southwest showed the greatest conservatism in its predictions while all the replies from New England predicted gains without exception. The South, Midwest and Pacific Coast areas showed the greatest optimism.

(See page 36)
Los Angeles in its growth, promotes the expansion of nearby communities as well. Rosemead is such a suburban area—fifteen miles east of the big city. A community of moderate, comfortable homes, slowly losing its early character as a poultry and orchard section, Rosemead’s school population required this addition of the Encinita School.

ARCHITECTS & ENGINEERS
MARSH, SMITH & POWELL

ROSEMEAD, CALIFORNIA
COURT VIEW
Exposed overhead beam projection offers protection to students using walk-way during adverse weather conditions.

Photos by Julius Shulman

SITE: — A community park, a new high school, and the Encinita School occupy a super block on the westerly edge of the community. The school site of 7.7 acres is supplemented by the park with its paved, open air roller skating court.

PLAN:— The typical California finger plan has proved to be successful. The intimate, quiet patios are landscaped and give a beauty to the classroom surroundings that recalls the approach to the school from the street. Five parallel classroom wings are connected at the east by the main Communicating Shelter, and at the west end, they lead directly to the playground.

CLASSROOMS:— A word might be said about the classrooms. They are the typical 32' x 30' California plan. The section, however, is different. Recognizing the difficulty of getting good daylight into the interior of 30' wide rooms, these classrooms employ a high and low window method of day lighting. An alcove on the north side of each room is approximately 10' deep and 7'-6" in height. The balance of the room is 12' high and is daylighted by two clerestories, thus giving quite a uniform light from three sources.

KINDERGARTENS: — The double kindergarten has the added feature, by means of a folding partition, of being usable as a small auditorium. This use is only temporary until the new cafeteria auditorium is built.

PLAYGROUND AREA . . . activities and noise minimized in classrooms.
ONE OF EUGENE, OREGON, GROWTH SCHOOLS . . . Complete in itself.

GROWTH SCHOOL
AN ANSWER TO
COMMUNITY EXPANSION
EUGENE, OREGON

ARCHITECT: CLARE K. HAMLIN

By ARTHUR W. PRIAULX
ADAMS GROWTH SCHOOL . . . showing completed and projected portions.

The most significant contribution to school planning and design in the post-war era. That is what some school authorities are calling the collaboration of Architect Clare K. Hamlin and City School Superintendent Clarence Hines, both of Eugene, Oregon.

Oregon's second largest city, like most Pacific slope communities, has had unprecedented growth. Population has nearly doubled since the war. Stress pains and problems of all sorts have been created by this expansion. Hard hit has been Eugene's school system. Buildings were inadequate and sorely over-taxed. Worst of all, a tidal wave of primary students—vanguard of the war-baby crop—engulfed the city's school system.

School building needs were lop-sided, heavy to primary grades. But, the problem would progress as these war-babies stepped along in school. Need for school rooms for advanced grades could be postponed.

Clarence Hines thought of the newlyweds with their "starter home." Why not a "starter school" or a "growth school" as he prefers to call his invention? He took his problem to Architect Hamlin.

Hines told Hamlin the school system was close to its bonded debt limit. What was needed were four growth schools which could be added to each year from a serial tax levy which would raise $250,000 a year for five years.

Hamlin designed identical master plans for two schools and variations for the other two, with the floor plan of the completed school in the shape of a three-fingered hand.

Started in July, 1949, was the central core of the Adams Street School and the Harris Street School. They contained a general purpose room, which doubled as auditorium, recreation room and lunch room. Adjoining was a cafeteria and kitchen. Also in the central core was the heating plant, two administrative rooms for office and principal, a toilet bank and four classrooms, all identical. The two schools are built on almost identical sloping hills.

ONE SIDE OF SCHOOL

COVERED ARCADE: Shelters children when they travel from central heart of structure to either wing.

to allow for two levels. A lower level in the administrative section contains first aid room and teacher's rest room and lounging room.

The palm of the hand is the main block of the building, built of masonry with brick fingers. The fingers extending parallel from the core contain the classrooms and are frame construction.

The schools have grown every year. In 1950, the second unit was added. It consisted of two more classrooms plus a toilet bank and janitor's room, which formed the start of the upper finger or wing.

In 1951 two more classrooms were added on the upper wing and in 1952 two more were projected on the same finger with the addition of another toilet bank. Planned for 1953 are two more classrooms, to be added to the four in center finger. The first four classrooms built in 1949 formed the first unit of the center wing or finger. In 1954 another arcade will be built and the third wing started parallel to the center finger and to its right down the hill. Additions of two classrooms a year are planned until 1956. But, these are minimum plans and if the school population continues to grow, the fingers can be extended.

A basic plan has been followed throughout the unusual structures. Each classroom is identical—

Core of school from lower level. Play field opens directly into first aid room. Final wing of school will connect with core by covered arcade.
30 by 36 feet in size. All rooms are entered from a single-loaded corridor which parallels the classrooms along each wing. Each room has an exit into the corridor and also an exit into a play and outdoor classroom area. These areas are separated from those of adjoining rooms by a screened shoulder-high wooden mask to give teaching privacy.

Similar to the Harris and Adams schools are two other growth schools also designed by Architect Hamlin. Both are located outside the city limits of Eugene in the fast-growing suburban districts, but are a part of the Eugene city school system. The Washington grade school was started in 1950 and has been increased each year since then. The Howard grade school follows pretty much the basic plan of the other three and has been expanded each year under a carefully worked out plan to care for advancing grades.

The growth schools are being built at a cost of about $8.50 a square foot—low by most present-day standards. Actually, the state average in Oregon per school room for construction costs today is $17,000. Hines figures to get a completed 18-room growth school house built over an eight-year period for about $14,800. Here’s the way it works out. His core unit with 10 classrooms (including first four built in 1949 and two each for next three years) has cost $172,000. That means an average of $17,200 a classroom. But, the next eight
rooms will cost only $96,000. So, the average cost per classroom will be $14,800 when the 18-room school house is completed.

Hines doesn't take any credit for inventing the novel financing and design problems solved in the growth schools. He says this type of school building program is realistic and practical. By paying for each growth section each year, bonding costs are saved. So is depreciation on unused portion of building erected and the rooms for the advanced grades remain idle for several years until the students grew into them. It would be like buying two cars and letting one sit in the garage and eat itself away in depreciation, he says.

Equally as important as the financing problems solved are the human and student equations answered. The school authorities were able to say to each parent of a beginning first, second or third grader first enrolled at either of the four schools: "Your child will not have to change schools. He will be able to complete his full six years of elementary training in the school where he first enrolls."

Students graduate to a junior high school after six years in the elementary grades, Superintendent Hines points out, so the growth schools serve the young students until they are ready for the next highest ranking school.

The child thus has less feeling of insecurity which arises when he changes schools before
Tables and benches erected by pulling down from wall. Auditorium serves school and communities for variety of uses.

Graduation. Miss Glendora Burbank, principal at Adams Street School, believes the growth school will develop its own particular teaching philosophy. She likes the idea of eliminating insecurity, of contributing to a student's stability, and she thinks her school has developed a rather striking esprit de corps among the students not usually found in the grade level. She would like to see the covered play area or gymnasium built at the same time as the central core in future growth schools, rather than the last unit to be constructed. Pupils who attend these growth schools during the growth period lose out on this important aspect of school life—indoor play space during winter months—under the present order of completion of school facilities.

So successful has the growth school plan been that now the city and adjoining county schools are using the idea to enlarge older schools. Growth sections of uniformly designed school rooms are added in wings or fingers just the same as the original growth buildings.

Architect Hamlin developed a basic classroom which could be added to a wing with the least possible inconvenience to the students and teacher in the room nearest the addition.

The classroom rests on a concrete slab covered with asphalt tile. The fingers containing the class-

rooms are frame, studded walls. A V-joint, horizontal Douglas fir panelling covers the walls in the entire teaching space. Wood was used by Architect Hamlin because it will take the beating administered by countless students, and the maintenance is low. The exterior of each classroom wing has been finished in cedar siding stained to eliminate maintenance and upkeep costs.

Heating is a combination of radiant hot water coils along the wall at floor level and forced-air fanned coils higher in the walls.

Bilateral lighting gives almost perfect diffusion. High windows in nine-foot bays form one solid

AUDITORIUM

Multi-purpose room; hot dishes served from counter kitchen at left rear.
Tables and benches fold into wall. Collapsible stage also.
wall of light and a high clerestory installation on
the opposite wall above the single-loaded corridors
add to uniformity of light admission into the room.
Window glass is 3/16 inch sheet crystal.

Artificial light is provided by indirect concentric
ring type of incandescent lights hung down pend-
ant style with the light reflected back against the
bright ceiling of acoustical tile.

A built-up composition asbestos felt roof is laid
over the roof surface of shiplap and is supported
by two-by-fourteen inch fir joists laid on thirteen
and one-half inch centers. To provide adequate
insulation from heat and cold, a rigid one inch
layer of modern-type insulation material was laid
directly on the solid shiplap roof deck and then
covered with the asbestos roofing. Every detail of
design has been adapted to enable easy expan-
sion with a minimum of expense. Electric wiring
along the corridors can be reached with a mini-
mum of trouble. It has been placed in an inverted
trough. When the cover is removed, the various
supply conduits are easily gotten at for servicing.

All corridors as well as classrooms have been
finished with horizontal Douglas fir panelling with
a tight V-joint. Natural color of wood has been
retained by use of a clear rez finish throughout.

These long corridors get plenty of rough usage and
fir was installed to withstand the constant wear.

The auditorium and all-purpose room has been
cleverly designed to provide for easy transforma-
tion from cafeteria to gymnasium to auditorium.
Tables can be pulled out from the wall, so can the
stage and other furniture.

Another feature of the growth schools developed
by Hines and Hamlin in their long-range planning
is the ease with which each building can be ex-
tended beyond the originally planned 18 rooms.
If the need is still apparent for more primary and
grade school classrooms after 1956, the growth
schools can be enlarged to 24 rooms or even more.
The basic floor plan is flexible and wings can be
run out from the main core of the building as far
as ground space permits.

Each classroom wing has been designed as a
self-contained unit with its own toilet banks and
small storage rooms for janitor's supplies. This
cuts down traffic between each wing and from
wings to main building core. The upper wing is
joined to the main core by a covered arcade and
is reached from the core level by steps from the
arcade. In effect, each wing is a separate building
and is dependent on the core only for heat from
the central system. Ultimate plans call for a gymnasium to be located at the far end of the lower wing away from the office and administrative section.

These first four growth schools have been trial horses. Much has been learned by both architect and school authorities. Undoubtedly future growth schools, whether undertaken by Eugene or other communities, will take into consideration need for covered playground facilities early in the life of the school, probably about the time the first unit is constructed. There seems also merit in the suggestion of Adams Street School Principal Burbank, that the gymnasium be advanced on the growth timetable.

School officials have attempted at all times to keep construction costs at a minimum in these rather remarkable growth schools. Competition has been encouraged and contracts let each year for the additions. Result has been that five contractors, H. L. Shields and Son, E. E. Setergren, W. S. Hardie and Son, W. H. Shields, and Gale M. Roberts, have at various times built portions of these schools.

Biggest problem confronting school officials, believes Hines, is getting the public to realize the needs. The growth school is the answer to lack of money. At the end of eight or ten years, you have your school, but it is all paid for from current tax income, the school official pointed out. School districts can keep out of debt and save the cost of renting money over a period of years. Interest charges can be spent each year for school facili-

ties. Where school districts are faced with bonded debt limits, the growth schools may be the only answer.

Probably the most interesting feature of the growth school as worked out in Eugene, is the low cost per classroom unit in the growth school compared to the average classroom cost for the state of Oregon. Undoubtedly, much of this saving must be credited to Architect Hamlin for developing a design for the wings so that additional classrooms could be added with little additional cost for connecting roof, floor and wall lines and joining up utilities and corridors.

The pay-as-you-go growth school, in the eight

(See page 40)
Greenbrae Elementary School
MARIN COUNTY, CALIFORNIA

ARCHITECT: WILLIAM CORLETT, A.I.A.

CONSULTING ENGINEER: WALTER STEILBERG

ELECTRICAL & MECHANICAL ENGINEER, G. M. SIMONSON

OWNER: KENTFIELD ELEMENTARY SCHOOL DISTRICT

CONSTRUCTION COST: $14.04 Per Sq. Ft.
STRUCTURE:

The lower grade classroom wing, which was previously constructed in 1950, utilizes an open Web Steel Joist at 4 ft.-0" centers, spanning 36 ft.-0" from 8 inch WF corridor columns at 12 ft. centers to the south wall, with the remainder of the structural frame in wood set on concrete footings and radiant heated concrete slabs. The construction cost of this was $11.00 per sq. ft.

The upper grade classroom wing utilizes a 12 in. WF beam at midspan at the classroom and on 8 in. WF beam at the north and south walls with 20 x 10 wood joist at 16 in. centers spanning 12 ft.-0". The remainder of the structure is wood frame set on concrete footings, concrete floor slab radiant heated 3/8 in. plywood wall surfaces, and acoustical tile ceilings. Steel sash and vertical redwood siding on diagonal sheathing, and built-up composition roofing on diagonal sheathing complete the structure.

The Administration Building utilizes a 4 in. x 12 in. exposed wood ceiling joist at 4 ft.-0" centers. It has a wood frame, plywood interior walls, acoustical tile ceilings, vertical redwood exterior siding, and steel sash.

The Multi-Use Room utilizes laminated wood arches on 16 ft.-0" centers spanning 50 ft.-0", and 5 in. x 10 in. purline at 6 ft.-0" and sheathed with 2 in. x 6 in. T&G, straight layed. The wood frame has 3/8 in. plywood interiors, a 12 ft. x 50 ft. specially designed heat reducing glass skylight, built-up composition roof with special surfacing, and a vertical redwood exterior siding. Concrete slab floors are covered with asphalt tile, and warm heat supplies in a space above the kitchen return on east wall.

The covered corridors are exposed 2 in. x 6 in. T&G sheathing spanning 8 ft.-0" to a 4 in. x 8 in. wood girder which is supported on pipe columns at 10 ft.-0" centers.

CONSTRUCTION SUMMARY:

The six classrooms, Administration building, Multi-use Room, and Kitchen addition abandoned the use of Open Web Steel Joist as a roof framing because of the uncertain availability of steel. To comply with the N.P.A. restrictions in effect at the time of construction, steel used in the new addition was limited to twenty-two tons. The Multi-Use Room laminated wood arches, although slightly more expensive than steel per arch, proved simpler to tie into the roof membrane and were immediately available on a competitive bidding basis.
Typical Classroom . . . windows facing hill, acoustical tile ceilings, display boards at rear, movable desks and seat combinations, indirect lighting and asphalt tile floors.

Multi-Use Building (below) . . . Auditorium and Cafeteria, exposed laminated wood trusses, skylight, partial glass ends of building, portable tables and asphalt tile floors.
SITE UTILIZATION:
The seven and one-half acre school site was donated to the school district by the surrounding residential tract with the deed restriction that no building facility or playground apparatus could be placed within fifty feet of any property line. This stipulation eliminated the intended placement of the Multi-Use Building at the northwest corner of the site, but set up the design layout which clearly separates automobile and bus traffic from the playground area.

The Kindergarten and lower grade classrooms
were placed on a relatively level portion of the site so as to allow the development of individually fenced outdoor classrooms. The long dimension, 36 feet, of the lower grade classrooms is set at right angles to the thereby reduced length corridor.

The Upper-grade classrooms, which measure 30 ft. x 32 ft., were more readily placed on sloping northeast portion of the site which is unusable as a playground.

Two existing handsome gum trees were considered in the placement of the building units and the development of an outdoor eating court east of the Multi-Use Room. A magnificent view of Mt. Tamalpais to the southwest of the site influenced fenestration on the project.

INTERIOR TREATMENT:

The kindergarten and lower grade classrooms incorporate the use of low ceiled, 7 ft.-0", activity alcoves. The alcove roof over hang, 4 ft.-0", controls the south light as well as provides a covered adjacent area for the outdoor classrooms. Classroom walls are of ½ inch stained plywood, and all ceilings are surfaced with an acoustical tile. Concentric-ring incandescent fixtures light the classrooms.

The 50 ft. x 64 ft. Multi-Use Room contains ten cafeteria tables with benches which fold into wall recesses when the room is being used as an auditorium or for community folk dancing. A 10 ft. x 16 ft. folding platform 16 in. high may be set up at the north end of the room if desired. Ample storage is provided for the chairs. The kitchen will serve 350 meals, cafeteria style. The room will seat 350 persons for simple stage presentations or musical programs.

CONSTRUCTION COST:

The construction cost was $14.04 per square foot.

SUMMARY:

The design of the Greenbrae Elementary School is an effort of the architect to “Residential-ize” the character of the school in keeping with the architect-designed surrounding tract residences, as well as to avoid the “Shoe-box” character of structure forced upon so many school projects by increasing building costs.
The erection of a new State Capitol, or an addition to one already built, is always a complex problem. In California this is particularly true due to the immense volume of business done by the Legislature, the Governor, and the Constitutional Officers. This business has been further enlarged by the rapidly growing responsibilities of this government caused by the spectacular growth of the state's population. This is perhaps the greatest growth that history has recorded as having taken
place so quickly in any given area of the earth’s surface.

The Legislature and the other State officials in the Capitol obviously could not cease operations while a new building was being constructed. The first phase of the problem required that an addition must be built right through the regular flow of business, through at least two sessions of the State Legislature, and that the transition of expansion minimize insofar as possible the normal disturbances of moving.

The second phase of the problem was that of engineering. Much of the area under and around Capitol Park was at one time or other the bed of a river, or a slough, during the geologic history of this part of the country. Most of the surrounding concrete buildings are built on pile foundations driven thirty or more feet below the ground level. The placing of an addition to the Capitol on a pile foundation was inadvisable so close to the foundations of the original Capitol Building. To obviate this difficulty, a structural steel frame on a huge inverted waffle type foundation was decided upon and developed, and a lightweight concrete structure was decided upon.

One of the net results of this intricate engineering problem was the necessary reduction of the dead weight of the entire building to about one-half the weight of a standard reinforced concrete structure of the same size.

The third broad phase of the whole problem was
financial. The Capitol addition was estimated in round numbers at slightly under $7,500,000. It has been completed within this figure, and there is a balance of money left unexpended. There may be other Capitol buildings which have been built within the basic original estimate, but if so we are not aware of these.

The alternative methods of meeting the problem of expanding the Capitol would have been first to erect an entirely new Capitol structure. This could not have been done on the site of the existing Capitol for the reasons previously stated, namely: that the principal offices of the Government, including the Legislature, must meet and do business continuously. The erection of a new Capitol, for instance within the present Capitol Park, along lines roughly comparable to other State Capitols built during the last fifty years, would have cost somewhere within the neighborhood of $30,000,000.

The second alternative method would have been the purchase of a large tract somewhere in the city of twenty to thirty blocks of property, the clearing of same and the development of large and monumental State governmental center at a cost of probably in considerable excess of $100,000,000.

The new East Wing to the State Capitol is a working type office building. Its cost at the time of award of contract was in straight dollar comparison about 75 per cent of that of the Headquarters building which were being built by various large corporations in the State of California at the same time.

Various phases of the planning, designing, building and completion of the new wing were carried out by the architectural designing, mechanical engineering, electrical engineering, structural engi-

Member Louis Dean has been elected treasurer of the California Council of Architects for 1953.

Standing committee chairman, appointed by president to serve during 1953 include: Membership, Louis A. Dean; Practice, H. Louis Bodmer; Construction Industries, Jack R. Lewis; Governmental Relations, George C. Hatch; Legislative, Wm. F. Lodge; Education and Research, Clarence J. Paderewski; Public Information, Sam W. Hamill; Allied Arts, Robert Mosher; Civic Design, Lloyd Ruocco; Exhibits, Wm. L. Wilkinson, Jr.; Historical Buildings, Ray Alderson; Fellows, Wm. Templeton Johnson; Special Events, Delmar Mitchell; Archives, Robert T. Parlett; and delegates to the San Diego Art Council, Robert Mosher and Sam Bruce Richards.

OREGON CHAPTER

The April meeting was a special meeting in Eugene with the Student Chapter. An inspection was made of student work at the School of Architecture, followed by a dinner in the Erb Memorial Student Union and an address by Buckminster Fuller on the subject, “Experiments in Design.”

The regular business meeting was held on April 21 in Portland.

A. I. A. GOLD MEDAL WINNER ANNOUNCED

William Adams Delano, F.A.I.A. of New York City, will be awarded the 1953 Gold Medal of The American Institute of Architects at the Institute’s annual convention in Seattle, Washington, June 16-19.

Other outstanding awards will include the Fine Arts Medal to Donald Hord, sculptor; the Craftsmanship Medal will be given to Emil Frei of St.

FR. Thaddeus related the severe damage to the front of the church during the 1925 earthquake and the subsequent restoration in 1927. Need for restoration became critical in 1949 when results of reactive aggregate in P. C. Concrete and failure to follow construction plans caused severe structural failures. He described plans and progress of the present restoration.

At the Jr. Forum preceding the section meeting Elwyn H. King, Jr., A.S.C.E. described his welding design that won the 1952 Lincoln Electric Award.

Meetings are held the second Wednesday of each month. April and May meetings will be held at the University of Southern California campus.

STRUCTURAL ENGINEERS ASSOCIATION
NORTHERN CALIFORNIA

Henry Schwein, secretary of the Gypsum Association, was the principal speaker at the April meeting held in the Engineers Club, San Francisco. He spoke on the subject “Gypsum Roof Construction,” and covered the history of gypsum roof construction, various types, adaptability and methods of use with slides.

The California Legislative Council of Professional Engineers reported some 107 bills in the California State Legislature of special interest to the Professional Engineers and Land Surveyors. It was announced the Annual Picnic will be held on July 18 at the Sonoma Mission Inn, Sonoma, California.

STRUCTURAL ENGINEERS ASSOCIATION
OF OREGON

The following officers were named at the annual meeting to serve for the ensuing year:

Lewis R. Ellingwood, President; Robert M. Bonney, Vice-President; Sully A. Ross, Secretary-Treasurer.

Named as directors were, William J. Dorner, Roger V. Gillam, Leslie E. Poole, and Rowland S.
Rose, in addition to the above named officers.

Unusual pier construction by the Port of Portland for the new Swan Island dry docks and lateral tests of full scale lumber-sheathed diaphragms were the subject of recent meeting discussions.

SOCIOEY OF AMERICAN MILITARY
ENGINEERS—SAN FRANCISCO POST

"The Role of Research in the Development of Supersonic Aeroplanes" was the subject of a talk by Dr. Smith J. DeFrance, director of the Ames Aeronautical Laboratory, at the April meeting, held in the Presidio Officers Club, San Francisco.

Named at the annual election to serve as officers for the ensuing year were CDR N. M. Martinsen, President; L. L. Wise, Vice-President; Col. Paul Berrygan, 2nd Vice-President; R. M. Hamilton, Secretary; and Thomas Hurley, Treasurer.

FEMINEERS

The "Femineers", wives of members of the American Society of Civil Engineers, and Structural Engineers Association of Northern California, held a bridge and canasta card party at the Elks Club in San Francisco recently.

Mrs. August E. Waegemann was in charge of reservations.

STRUCTURAL ENGINEERS ASSOCIATION
OF SOUTHERN CALIFORNIA

"The Technical Aspects of Subsidence in the Harbor Area" was the subject of a talk by Robert Shoemaker and J. H. Davies at the April meeting. Shoemaker is chief harbor engineer, Long Beach Harbor Department and Davies a consulting engineer of Long Beach. Color motion pictures and lantern slides were shown to illustrate points of the discussion.

New members include Milton A. Abel, John D. B. Allison, Jr., Thomas Don Beason, Rupert C. Brittain, Kenneth S. Iwata, Coleman W. Jenkins, Charles F. Moran, and John E. Soehrens. Membership in the Chapter now stands at 405 members.

BUSINESS MEETING:

On March 16, the Producers' Council held a business meeting at the request of President Al West. For the past two years there has been considerable criticism about the size of the attendance at the annual Christmas Jinx.

Prior to 1952, it was the desire of the Producers' Council to increase the attendance at the Annual Jinx and spread the spirit of good fellowship to as many of the architects and their associates as possible. We were so successful at this, that we now find ourselves in the position where the attendance is so large that it is literally choking the activity to a point where it is losing its effectiveness as a well intended social function.

There has been little criticism of the type of material presented or in the dinner served and the locations.

It is purely a question of too many people.

This is the opinion of a large number of architects and, of course, this is shared with the members of the Producers' Council. From the Council's standpoint, the crowd is not only too large from a social standpoint, but our expenses associated with the cocktail hour have assumed tremendous proportions.

It was due to these conditions that could possibly eliminate or curtail the annual Christmas Jinx that President Al West decided to call the business meeting.

There were only 33 members in attendance and after considerable debate a resolution carried to place the eventual fate of the Annual Christmas Jinx in the hands of the Executive Council.

If anyone that did not attend this business meeting has any views that he feels should be expressed to the Executive Council, they are urged to do so. Decisions of this nature affect the entire council and the Executive Organization feels that any decision on a matter such as this must be suitable to the entire organization.

The method of paying our dues also was discussed at this meeting and it was the unanimous consent of the group that we should continue to "pay as we go" and not pay a lump sum to cover the expenses for the entire year.

PRODUCT DISPLAY:

The Producers' Council's Annual Table Top Product Display is scheduled for May 27th and will be held in the Fairmont Hotel. Mr. Tom Brewer, Beil & Gossett Company, is chairman of the committee handling the details. Tom asks that all the members begin giving consideration to the type of display they plan to present so that the last minute rush can be avoided.
A.I.A. ACTIVITIES
(From page 29)

of Pre-Stressing of Concrete at the Anderson's plant near Tacoma.

Reports indicate that the architects exhibit at the College of Puget Sound was well received and plans are already underway for a similar exhibit next year.

PASADENA CHAPTER

George E. Brandow, structural engineer of the firm of Brandow 
& Johnston, spoke at the April meeting on the subject of "Life-Slab Construction." He illustrated his comment with a motion picture and slides showing actual construction scenes.

Announcement was made that the First Federal Savings and Loan of Pasadena was sponsoring an advertising campaign urging the public to "employ the services of a Pasadena builder or architect."

Members were urged to note that the regular May meeting will be held the second Tuesday in May, rather than the first Tuesday.

LOS ANGELES ARCHITECTURAL FIRM WINS SCHOOL AWARD

The architectural and engineering firm of Daniel, Mann, Johnson 
& Mendenhall were recently awarded "honorable mention" for excellent design of the Alice M. Birney Elementary School at Rivera, in a nation-wide contest sponsored by the School Executives magazine.

Presentation of the award was one of the features at the annual meeting of the National Association of School Administrators held recently in Atlantic City.

PAINTING FIRM CELEBRATES 70th ANNIVERSARY

Executives and senior employees of the D. Zelinsky and Sons, pioneer painting and decorating contractors of San Francisco, celebrated the 70th anniversary of the founding of the firm at a recent Fairmont Hotel banquet.

David Zelinsky, founder of the company, and 32 employees who have been with the firm ten years or longer were honored guests. Gold wrist watches were presented to the employees, some of whom were flown from the Los Angeles office of the company to San Francisco for the occasion.

Hosts of the occasion included Mr. and Mrs. Frederick G. Zelinsky, Mr. and Mrs. Edward G Zelinsky, Mr. and Mrs. Robert D. Zelinsky, Mrs. Mervyn G. Zelinsky, Mrs. Milton Weingarten and Mrs. Herbert Zelinsky.

WOMENS ARCHITECTURAL LEAGUE HEARS FASHION DIRECTOR

Los Angeles Womens Architectural League recently on the subject of “Spring and Summer Fashions.”

The meeting was held in the Assistance League tea room in Hollywood.

E. H. MOORE FORMS OWN CONTRACTING FIRM

The general contracting firm of Moore & Roberts, Inc. has been dissolved and E.H. Moore announces the original company will continue under the name of E. H. Moore & Sons.

Contracts of the former firm will be completed by the new organization which will remain at 693 Mission Street, San Francisco. All personnel of the former firm are also being retained in the Moore organization.

The Moore firm has been operating since March when they started taking new business. E. H. Moore and James E. Roberts began business during the depression days and have since completed more than $100,000,000 in contracts of various
types of construction, including work for the Army, Navy, and Housing Authorities in Pacific Coast states.

Bill Harr, associated with the firm previously, has been named chief estimator and general manager of the new firm.

A.I.A. CONVENTION SECRETARY NAMED

Arthur B. Holmes, formerly executive director of the New Jersey Society and New Jersey Chapter of The American Institute of Architects, has been named A.I.A. Convention Secretary in charge of arrangements for the Seattle, Washington meeting, according to a recent announcement by Edmund R. Purves, Executive Director of the Institute.

OREGON WOMENS ARCHITECTURAL LEAGUE PRESENTS TRAVELER

The Womens Architectural League of Oregon presented Dean Sydney W. Little at their regular April meeting.

He spoke on his recent European travels and augmented his remarks with the showing of an interesting group of three dimensional color slides.

WOODWORK INSTITUTE OF CALIFORNIA ELECTS ROBERT HOGAN PRESIDENT

At the annual meeting of the Woodwork Institute of California, recently held in San Francisco, Robert Hogan of the Hogan Lumber Company, Oakland, was elected president of the Institute for 1953, succeeding Larry J. Woodson of San Francisco.

Reports of Institute activities during the year as submitted by Russell Bjorn, Manager-Director, indicated the organization had accomplished a number of outstanding objectives during the past year, highlight of which was the publication of a Manual of Millwork containing standards of the industry as adopted by the Woodwork Institute members.

Cooperating in the compilation of the Manual were Sherman S. Karns, Chairman of the Committee and Chief Engineer of the Hollenbeck-Bush Planning Mill Co., Fresno; George E. Lefler, Chief Draftsman, Pacific Manufacturing Company, San Jose; A. M. Smith, Production Manager, Union Planing Mill Co., Stockton; and Erick A. Ahlbom, Chief Estimator, Sierra Mill and Lumber Co., Sacramento.

Other officers named to serve with Hogan included J. L. Pierce, 1st Vice-President, Pacific Manu-
SOLVES SCHOOL SPACE PROBLEM

School stage and four classrooms!

PROBLEM: To get maximum use of space in small overcrowded school.

MORAL: Gould drapery hardware is a design tool, saving expense, providing many helpful solutions to today's problems.

fabricating Co.; Rex Sporleder, 2nd Vice-President, and James Moore, Long Bell Lumber Company, Treasurer. Directors also include Ernie F. Atkinson, Clinton Mill & Manufacturing Co.; Arthur Bernhauer, Fresno Planing Mill; Stanley Gustafson, Sierra Mill & Lumber Co.; Hollis Jones, Western Door & Sash Co.; Jock Little, Union Planing Mill; Seth Potter, Stockton Box Company; Larue J. Woodson, and Tom Work, The Work Mill & Cabinet Co., Inc.

JELLICK NAMED DIRECTOR OF CONCRETE INSTITUTE

Jay E. Jellick, manager Portland Cement Information Bureau with general offices in San Francisco, was elected to a three-year term as a director of the American Concrete Institute at the Institute's recent Boston convention.

The organization also announced that officers for 1953 would include Henry L. Kennedy, manager, Cement Division, Dewey & Almy Chemical Co., Cambridge, Mass., a consulting engineer specializing in reinforced concrete design and construction.

CONSTRUCTION INDUSTRY

(From page 9)

Schools Up

Pacific Coast—Higher volume in all categories, with 80 per cent of the replies foreseeing an increase in highway activity and 60 per cent foreseeing an increase in building work. Building, it was predicted, would decline in Alaska for the first half of the year.

There were some shifts in types of projects reported here and there in the country. However, nationally, the "heaviest" trends were: 18 per cent of the replies indicated a shift to commercial work; 15 per cent said school construction would go up over the comparable six months of last year, and 8 per cent reported that institutional work would increase.

Rocky Mountain States—Increase predicted in all categories with a rise in building construction more confidently expected than in highway or heavy. Building construction is expected to rise by 25 per cent in Wyoming with schools accounting for a good share of the building increase. Building will also be up in Colorado. School construction and public works to increase in Nevada.

New England Optimistic

The picture by area, with noteworthy features:

New England—Replies were 100 per cent for gains in building, highway and heavy construction over the comparable six months of 1952. The A.G.C. of New Hampshire and Vermont predicted more than a 100 per cent increase in heavy construction and a 15 per cent increase in highway construction in its area. The Rhode Island chapter
said prospects in all three categories for the next six months were "excellent."

Middle Atlantic—Building and highway work to increase, heavy to decrease. The decline in heavy construction was predicted by 55 per cent of the replies. Sixty-nine per cent of the respondents looked for a greater volume of highway work. Several of the replies noted a shift to commercial, institutional and school construction away from industrial. Competition was reported "terrific" in this area and one report said prices for completed projects "have not advanced and in most cases are lower than a year ago."

Building to Increase in South

South — Increases were predicted in all categories, with as high as 63 per cent of the replies for an increase in building construction. Here as elsewhere it should be borne in mind in evaluating the survey that the period of comparison was a time of record output for the construction industry.

West Virginia reported a building increase of 50 per cent ahead, with a shift to school construction. Industrial construction was expected to rise in Louisiana. Throughout the South, somewhat of a trend to commercial and industrial construction was foreseen.

Midwest — Greater volume of construction expected in all categories. A definite trend to commercial and school building with a lighter shift to public works, hospital and institutional work and a moderate decline in industrial.

Southwest—More building and highway work. Fifty per cent of the replies from this area predicted a decline in heavy work. A record volume of building construction was deemed possible in West Texas where in the field of heavy construction the emphasis was expected to be on public works. Somewhat of a trend to schools and commercial activity was reported from West Texas, Amarillo, Houston and Corpus Christi.

Materials Relatively Stable

A relatively stable price structure for materials was reported from all sections of the country, with some contractors declaring that various materials had declined or were expected to decline in price. Likewise, there were reports of increases in some items and the expectation of further increases. The Midwest and Middle Atlantic areas appeared to have the most stable price structures with pressure for higher prices strongest in the Southwest.

Pressure for higher wage rates was reported by 83 per cent of those answering the survey. Seventeen per cent said wages were likely to remain stable while 7.5 per cent reported pressure for fringe benefits such as health and welfare insurance. There were strong indications that employers generally would make determined efforts "to hold the line" on demands for wage increases.

BOOK REVIEWS
PAMPHLETS AND CATALOGUES

SCHOOL BUILDINGS—1945-1951. By Bruce Martin, A.A.Dip.-
(Roma), A.R.I.B.A., Crosby Lockwood & Son. Ltd., 39 Thurloe St.,
Contains a Foreword by S. A. W. Johnson-Marshall, B.Arch.
(Liverpool), Chief Architect for the Ministry of Education. The
book deals with the postwar years problem of school building
and the question of replacing destroyed, damaged and obso-
lescent buildings and the problem of increased school popula-
tions and changing educational methods.
The book includes a large number of plans and photographs
taken during construction and completion of schools. Included
are schools in England, United States, Scotland, Switzerland,
Sweden, and Holland.

FATHER OF AIR CONDITIONING—Willis Haviland Carrier.
By Margaret Ingels. Country Life Press. Garden City, N. Y.
Price $2.50.
Depicts the life of the late Dr. Willis H. Carrier, tells of the
company he founded (Carrier Corp.), and describes the industry
he pioneered.
Written in non-technical terms, the book covers the period
1500 to 1952 in a comprehensive chronological table, and tells of
the boyhood of Dr. Carrier, his education, start in business,
and early trials and tribulations in the then infant air condi-
tioning industry.
Also included is an appendix listing books and articles by
Dr. Carrier. 170 Pages.

PLASTERING SKILL AND PRACTICE. By Van Den Branden
and Knowles. American Technical Society. 848 E. 58th St.,
Chicago, III. Price $4.50.
The authors, Felix Van Den Branden, plastering instructor at the
Building Trades Apprentice School, Detroit, Michigan,
and Mark Knowles, Head Plastering Instructor of the same
school, present a modern guide to an ancient trade in this book.
It is written to initiate the novice and to up-date the journey-
man in the techniques, both new and old, in the plastering
trade, and methods to meet varying problems are those which
have earned recognition as the best by virtue of two tests: 1)
economy of time spent in labor, and 2) quality of the results.
Likewise, trade terms vary among different sections of the
country, but the basic practices are everywhere the same.
Many photographs and illustrations are included to clarify
written text with step-by-step procedures described. Such post-
war innovations as the plastering of structural steel members
and the versatile, eye-plastering acoustic plasters, are included
by the authors.

NEW CATALOGUES AVAILABLE
Architects, Engineers, Contractors, Planning Commission
members—the catalogues, folders, new building products
material, etc., described below may be obtained by directing
your request to the name and address given in each item.
Mention you read the item in Architect & Engineer maga-
ze—we will appreciate it.
Aluminum Hardware Brochure. An attractive brochure describ-
ing the new Yale line of anodized aluminum hardware for
schools, hospitals, and other institutional and commercial use
has been published by The Yale & Towne Manufacturing
Company. Picture in the brochure are samples and speci-
fications of the Yale aluminum hardware line, including
locksets, auxiliary mortise locks, door pulls, door stops, door
holders, sash fasteners, pushplates, flushbolts, and letter hole
trim. For copies of the brochure write to: Advertising Depart-
ment, Yale Lock and Hardware Division, The Yale & Towne
Manufacturing Company, Stamford, Conn.
Fiberglass Sound Control. Two new booklets on Fiberglass
sound control products have been published by the Owens-
Corning Fiberglass Corporation, Toledo, Ohio, and now are
available upon request. Each has 12 pages of information
about the various constructional and sound control products manu-
factured by the firm. One contains numerous pictures showing
the use of Fiberglas in offices, retail businesses, hospitals,
school and industrial plants. The other includes technical data
concerning noise reduction coefficients, application details and

specifications for textured, perforated and Sonofaced acoustical tile, ceiling board, Noise-Stop baffles, Aercoc, preformed insulated and insulating wool. Copies of the new booklet may be obtained by writing Owens-Corning Fiberglas Corporation, Toledo 1, Ohio.

New Architects' Catalogue on STANLEY Automatic Door Controls gives complete details on the application of both Magz™ and Magic Eye type of door controls for use in markets, restaurants, stores and industrial operations, including operating devices for swinging, sliding, bi-folding and bi-parting doors. Contains many drawings and photographs of actual installations. A.I.A. File No. 16-D. Available, The Stanley Works, New Britain, Conn. or Modern Building Specialties Co., 655 Folsom St., San Francisco (Exclusive Agents for Northern California).

Plumbing Fixture Protection. Describes plumbing fixture protection during building construction so that they will reach the consumer in perfect condition. Pamphlet has been prepared by the Insulated Cast Iron Plumbing Fixture Association in cooperation with the Vitreous China Plumbing Fixtures Association as part of an extensive educational program. Manufacturers of plumbing fixtures are seeking the cooperation of all crafts to protect fixtures, diminish damage during the dwelling construction, and reduce annoyance and misunderstanding so that the owner may take justifiable pride in the flawless condition of these most useful fixtures. Illustrations show the proper way to protect fixtures during construction. A.I.A. File No. 29-H. Available, Enamelled Cast Iron Plumbing Fixtures Ass'n., 1709 M St., N. W., Washington 6, D. C.

Swimming Pool Painting. A new chlorinated rubber paint has been developed as a solution to swimming pool painting problems. Results of a recent survey shows the new product "Ramuc" provides a smooth tile-like coat to the submerged surface of the pool; overcomes aggressive chemical action, and stands up under submersion and atmospheric changes. Describes color preference in use by hotels, country clubs, municipalities and private pool owners, such as sea green, sky blue, turquoise blue, light blue and white. Complete details about "Ramuc" and Inertool swimming pool service program are available at no cost by writing the Inertool Co., Inc., 485 Frelinghuysen Ave., Newark 3, New Jersey—or Inertool Co., Inc., 29 South Park St., San Francisco.

Air Cooled Heat Exchangers. A new 12-page, illustrated bulletin on air-cooled heat exchangers for a wide variety of industrial cooling and condensing applications. The new units, known as "Fiberglas" heat exchangers, are of the forced draft type and are designed to cool liquids or gases at pressures up to 5,000 PSI and temperatures as high as 1,500 degrees F. These air-cooled units are being installed to replace or augment water cooled heat exchangers in many plants faced with the necessity of dissipating great heat loads from everyday processes. Available, Fluor Corp., 2,500 South Atlantic Blvd., Los Angeles 22.

Engineered Timbers. A new booklet entitled "Modern Construction with Engineered Timbers" has been published as a guide and source of authoritative information on this subject; consists of 12-pages printed in color showing how timber is used in conjunction with other suitable materials as a modern engineering material with known structural values. Glued laminated beams, arches and trusses. Technical data includes sizes and properties of glued laminated beams; typical panel sizes; standard thicknesses of laminations and limiting curvatures; arch section dimensions for various roof slopes, spans and loadings; dimensions, sizes and weights of box framing and parallel chord trusses. A.I.A. File No. 19-B. Available, Timber Structures, Inc., P. O. Box 3782, Portland 8, Oregon.

Schoolroom Lighting. A new 9-page illustrated pamphlet entitled "Why Chalkboard Lighting in Schoolrooms", dealing with the problems of chalkboard lighting in schools has been written by Leonold V. James, noted illuminating engineering consultant, and for many years chairman of the American Standards Association Committee on standard practice for school lighting. The booklet thoroughly discusses every factor having to do with proper lighting in schools, including the effect of glare to the eyes, the light distribution over the chalkboard, the tasks of the chalkboard, and numerous others. Despite tremendous improvements made in school lighting in recent years the average classroom still has insufficient light at the chalkboard. Available, Solar Light Mfg. Co., 1357 So. Jefferson St., Chicago 7, Ill.

GROWTH SCHOOL
(From page 17)
to ten-year period required to complete it, will actually save the district money. There is a net saving of above five percent in interest, providing the entire school was built at once and money borrowed. There is a saving of depreciation obsolescence by building the rooms just as they are needed.

Another factor favoring the growth school is the widespread adoption of the single-story school idea with its lower cost and lighter construction. One-story frame buildings lend themselves to this type of design and inexpensive expansion and additions such as practiced in these buildings.

NEWS & COMMENT ON ART
(From page 8)
from the paintings submitted for the 1953 James D. Phelan Awards are on display at the M. H. deYoung Memorial Museum in Golden Gate Park in San Francisco.

"Sunset Beach" by Rexford Brandt of Corona Del Mar was awarded the $500 first prize; "Elements of Meaning" by Leonard Edmondson of Pasadena, $400 second prize; and the third prize of $300 was divided between "804" by Robert Irwin of Los Angeles, and "San Francisco" by Hubert Buel of Mill Valley. "Clouds, Kids and Kites" by Joan Irving was awarded first honorable mention, and "Atop Telegraph Hill" by Betty Suzanne Brun, was given second honorable mention.

The James D. Phelan Awards in Literature and Art was created by the estate of the late San Francisco Mayor and California Senator.

M. H. deYOUNG MEMORIAL MUSEUM
The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, under the direction of Walter Heil, offers the following exhibitions and events during April:

EXHIBITIONS—Early American Silver, from the Mark Bartman Collection; a Retrospective Exhibition of Paintings and Drawings by Henry Koerner; Sculpture by Beatrice Stone; Four American Painters; and the 1953 Honor Awards of The American Institute of Architects, an exhibition of the outstanding works of Bay Area Architects since 1933.

SPECIAL EVENTS—include Classes in Art Enjoyment for Adults, Painting Workshop, and for the children classes in the Elements of Art, Form in Art and Nature, and Picture Making.

The Museum also offers Permanent Exhibitions and Gallery Tours.

WINNER OF ABRAHAM ROSENBERG TRAVELING SCHOLARSHIP NAMED
Jack Jefferson, student of the California School of Fine Arts, San Francisco, has been awarded the 1953 Abraham Rosenberg Traveling Fellowship, according to an announcement by Francis V. Keesling, Jr., president of the San Francisco Art Association.

Jefferson has exhibited paintings at the California Palace of the Legion of Honor, at the Henry Gallery in Seattle, and at the University of Iowa.

His winning project included a design for six large mural paintings based on themes derived from study in the Bay Area.

SAN FRANCISCO MUSEUM OF ART TELEVISION SERIES
The television programs produced by the San Francisco Museum of Art entitled "Art In Your Life," and which are broadcast every other Sunday morning at 10:45 over Station KRON, Channel 4, San Francisco, will highlight the following subjects during coming programs:

"This Is Jazz," Sunday, May 3rd—jazz is a form of modern musical expression that is not fully comprehended and this program will seek to clarify jazz expression through a discussion and demonstration with jazz musicians.

"Life Takes A Picture Story"—a new kind of

### FIRE ESCAPES
- Ten-foot galvanized iron balcony, with stairs, $250 to install on new buildings; $300 on old buildings.

### FLOORS
- **Asphalt Tile**—1/8 in. gauge 18c to 35c per sq. ft.
- **Composition Floors**—such as Magnesite, 40c $1.25 per sq. ft.
- **Linoleum**—Standard gauge, sq. yd. $2.75
- **Mosaic Step**—$1.50 per sq. yd.
- **Battleship Linoleum**—6x6—$3.00 sq. yd.

### HARDWOOD Flooring
- Oak Flooring—1 & 6—Uniform

### CONCRETE AGGREGATES
- **Shovel**
  - Bunker 1000 cu. yd. $4.44 per ton
  - Top Sand $3.42 per ton
  - Concrete Mix $3.68 per ton
  - Crushed Rock, 1/2" to 1 1/2" $2.75 per ton
  - Crushed Rock, 1/2" to 1 1/2" $3.15 per ton

### CONCRETE READY-MIX
- Delivered in 4 yd. loads:
  - Per cubic yard, 1-B Mix $10.15
  - 1-6 Mix $10.70
  - 1-5 Mix $11.40

### CONCRETE BLOCKS
- 4x8x16-inches, each $21.25
- 6x8x16-inches, each $27.27
- 8x8x16-inches, each $31.95
- 12x8x24-inches, each $60.40

### DAMPPROOFING and Waterproofing
- **Two-coat work, $9.00 per square.** membrane waterproofing—4 layers of saturated felt, $10.00 per square.
- Hot coating work, $5.00 per square.
- Medusa Waterproofing, $3.50 per lb. San Francisco Warehouse.
- Trisolat concrete waterproofing, 60c a cubic yd. and up.

### ELECTRIC WIRING
- $15 to $20 per outlet for conduit work (including switches), knob and tube average $5.00 per outlet.

### ELEVATORS
- Prices vary according to capacity, speed and type. Consult elevator companies. Average cost of installing a slow speed passenger elevator in small four story apartment building, including entrance doors, about $25,000.00.

### EXCAVATION
- Sand $1.25 per yard or $1.50 per yard, $1.25 per yard, $1.50 per yard, $1.25 per yard.
- Above figures are an average without water. Steam shovel work in large quantities, less; hard material, such as rock, will run considerably more.

- Delivered in 4 yd. loads:
  - Per cubic yard, 1-B Mix $10.15
  - 1-6 Mix $10.70
  - 1-5 Mix $11.40

### CONCRETE BLOCKS
- 4x8x16-inches, each $21.25
- 6x8x16-inches, each $27.27
- 8x8x16-inches, each $31.95
- 12x8x24-inches, each $60.40

### DAMPPROOFING and Waterproofing
- **Two-coat work, $9.00 per square.** membrane waterproofing—4 layers of saturated felt, $10.00 per square.
- Hot coating work, $5.00 per square.
- Medusa Waterproofing, $3.50 per lb. San Francisco Warehouse.
- Trisolat concrete waterproofing, 60c a cubic yd. and up.

### ELECTRIC WIRING
- $15 to $20 per outlet for conduit work (including switches), knob and tube average $5.00 per outlet.

### ELEVATORS
- Prices vary according to capacity, speed and type. Consult elevator companies. Average cost of installing a slow speed passenger elevator in small four story apartment building, including entrance doors, about $25,000.00.

### EXCAVATION
- Sand $1.25 per yard or $1.50 per yard, $1.25 per yard, $1.50 per yard, $1.25 per yard.
- Above figures are an average without water. Steam shovel work in large quantities, less; hard material, such as rock, will run considerably more.

ALASKA DISTRICT ENGINEERS
AWARDS HOUSING CONTRACT

The Alaska District Engineers, Anchorage, recently awarded a contract to L. E. Baldwin of Seattle, for the construction of 47-eight family quarters at the Elmendorf Air Force Base at a price of $5,844,300.

The contract was awarded following release by the Bureau of the Budget of $68-millions in Alaskan defense construction.

CALIFORNIA NEW CAPITOL
(From page 27)

neering, estimating section, and construction services unit and laboratory divisions of the Division of Architecture, State of California.

It is interesting to note in observing some of the outstanding features of the new Capitol wing, the use of many types of building materials including nickel silver, aluminum, stainless steel, bronze and iron, many of which were installed by C. E. Toland & Son, ornamental metal craftsmen of San Francisco. Toland has fabricated and meticulously installed a rare symphony of these new materials, and the new Capitol project involved some 200 tons of steel and miscellaneous iron; 175,000 pounds of extruded and cast aluminum, with modeling and casting of aluminum spandrels and grilles in sizes never before attempted by a California fabricator. Truly an outstanding achievement without precedent in the West.

NEWS & COMMENT ON ART
(From page 40)

photographic artistry developed by Life magazine and a “picture story” will be followed from assignment to publication. Sunday, May 17th.

“Design For Eating,” Sunday, May 31st — The kitchen and dining room have a new look because they have been changed by modern designers. Dinnerware, cooking utensils, serving accessories, and flatware.

“Fernand Leger,” Sunday, June 13th — In conjunction with exhibition of the work of this famous 20th Century French painter, a special program has been planned.

“Can We Integrate The Arts?”, Sunday, June 27th — An architect, landscape architect, interior designer, sculptor and painter will debate the manner in which all of the professions represented can work together effectively.

Don't forget the 'master' touch of built-in telephone facilities

Your clients will appreciate the idea of concealed wiring and neat telephone outlets conveniently located to take care of their present and future telephone installations and changes. Wise home-owners today know the advantages of low-in-cost, high-in-satisfaction planned telephone facilities.

Just call Pacific Telephone's free Architects and Builders service. We'll gladly help you plan telephone facilities for greater beauty tomorrow in homes you are building today.

Put built-in telephone facilities in your plans

Pacific Telephone

APRIL 1953
NAMED CHAIRMAN ARIZONA HIGHWAYS

Calhoun of Mesa has been chosen chairman of the Arizona State Highway Commission by the members. He succeeds Louis Escalada of Nogales, whose term with the Commission has expired.

ARIZONA ARCHITECTS WANT CAPITAL MOVED

Members of the Phoenix Chapter, A.I.A., recently suggested moving the state capital to Papago Park and building entirely new structures to house the state's government.

The recommendation is the result of legislative action which provided for a committee of four architectural firms to "study the state's needs in this direction" and make a report.

The committee reports costs of remodeling present facilities would be comparable to building a complete new building, and that an entirely new venture would better provide for the state's future growth and development.

COURT HOUSE ADDITION

Architect Robert Keeney of Medford, Oregon, has completed drafting plans for an addition to the Siskiyou County Court House in Yreka, California.

Plans call for a 2-story, with basement, addition of reinforced concrete. Estimated cost is $181,290.

CHEWING GUM FACTORY PLAN

The William Wrigley, Jr. Company of Chicago, recently announced revised plans were being drafted for construction of a new $3,000,000 manufacturing plant in Santa Cruz, California.

Nelson P. Rice of Los Angeles, Associate Architect for the project and representing Architect Victor L. Chalm, Chicago, announced the new building will be of 1 and 2-story, reinforced concrete construction and will contain 147,000 sq. ft.

Facilities are being provided for general offices, cafeteria, hospital, locker rooms, warehouse and manufacturing area.

PACOMA JUNIOR HIGH SCHOOL

Architects William Glen Balch and Louis L. Bryan are designing a 1600 student Junior High School to be built in Pacoma (California).

The new school will comprise twenty-one standard classrooms, administration, health and counseling units, and will cost an approximate $2,168,000.

ORANGE COUNTY BUILDING RECORD

Rural One story construction set on all time record of $30,210,011 during 1952, a 54% gain over the previous year's mark, according to a report by Charles W. Donahue, county Building Inspector.

Even greater activity for 1953 was predicted by Donahue.

HOME OWNERSHIP IN ARIZONA

The U. S. Census Bureau reports California has a home ownership of 54.1% out of a total dwelling survey of 3,870,405.

The five states reporting the highest percentage of home ownership were: New York, California, Pennsylvania, Illinois and Ohio, in that order.

NEW MEDICAL OFFICES

Architect Stewart S. Granger was the designer of a new medical building recently opened in Hollywood.

Cost of the project was $200,000.

ARIZONA MILITARY EXPANSIONS

The Los Angeles District Office of the Corps of Engineers, U. S. Army, has announced proposed expenditures of $42-million on the expansion of Arizona military installations during the first half of 1953.

Projects are part of a $100-million expansion program being undertaken in Arizona, California and Nevada.

YOUNG ARCHITECT WINS NATIONAL AWARD

Architect Charles W. Jones, Jr., Los Angeles, was awarded first place in a nationwide competition for designs of bathrooms, kitchens and utility rooms.

Jones, a graduate of the University of Southern California, was awarded a $3000 check for his design of a bathroom for homes costing $25,000 or more. The award was made by George C. Perry, Southern California manager for the Crane Company, sponsors of the contest.

ELEMENTARY SCHOOL TEHAMA COUNTY

The Amlapote Elementary School District, near Red Bluff, Tehama county, will construct a new Elementary School in the immediate future, according to Clayton Kantz of Redding who is architect for the project.

COMBINATION GARAGE AND OFFICE BUILDING

The architectural firm of Carl I. and John C. Warnecke, Oakland, are preparing preliminary drawings for the construction of a 10-story, reinforced concrete office and garage building in Oakland.

The basement and first three floors of the structure will be devoted to use as a garage and the seven upper floors will be designed for office use. Estimated cost of the project is $3,000,000.

SITE PURCHASED FOR OFFICE

The Prudential Life Insurance Company of Los Angeles has announced the purchase of a site in Menlo Park, San Mateo county, upon which will be built a new office building.

Two acres have been acquired at the corner of Linfield Drive and Homeward Place for the development.

ARIZONA STATE COLLEGE

Kemper Goodwin, Tempe architect, has been authorized by the Board of Regents of the University and State Colleges to draw plans for $1-million Memorial Student Union Building and a dormitory on the Arizona State College at Tempe.

Alumni secretary Jim Greensman, campaign director for the building fund, reports necessary funds are almost available.

McLAREN RESIGNS BUREAU OF ROADS ENGINEERS

C. L. McLane, district engineer of the U. S. Bureau of Public Roads for Arizona since 1928, retired from office recently. He is succeeded by Baird M. French who comes to Arizona from Seward, Alaska, where he directed public roads work for four and a half years as district engineer for the territory.

UNION OIL NEW OFFICE BUILDING

Officials of Union Oil Company, Los Angeles, recently announced plans for the construction of a new office building in Fresno, California.

Wm. Hastrup, Fresno, is the architect.

ADDITION TO HOSPITAL

Architect Edward D. Cerrulli of Oakland has completed working drawings for the construction of a new Administration Building for the Fairmont Hospital in San Leandro.

According to Alameda county officials the new addition will cost about $275,000.

NEW CHURCH FOR CONCORD

Christ Cathedral at All Saints Parish in Concord, California, is building a 600 seating capacity church, according to a recent announcement by the Roman Catholic Archbishop of San Francisco.

Vincent G. Pan, Architect of San Francisco, is designing the building which is to be of reinforced concrete with wood roof trusses, and will cost an estimated $244,611.

AIR FORCE CHAPEL

The U. S. Corps of Engineers, Sacramento, recently authorized construction of a new Air Force Chapel at the Beale Air Force Base, near Marysville.

Contract of $140,785 was awarded to Chapel, Dowville, Gallino and Kohler of Sacramento.

ARCHITECT SELECTED

The Napa Elementary School District has commissioned Architect Wm. Collet of San Francisco to draw plans and specifications for the construction of a new elementary school building to be built in the City of Napa.

AMERICAN TRUST BANK BUILDING

Architect Harry J. Devine, Sacramento, is completing working drawings on a new branch bank building to be built for the American Trust Company at Alhambra and Broadway, Sacramento.

Estimated cost of the one-story, reinforced concrete building is $150,000.

HIGH SCHOOL SWIMMING POOL

The Recreation Department of the City of Oakland recently announced the selection of Architect Irving M. Johnson to draw plans and specifications for the construction of a new swimming pool and bath house at the Oakland High School.

Associate Architect on the project is William G. Hein, also of Oakland.

ARCADIA GLASS DOOR PRODUCT APPROVED

Architects and builders report a favorable reception of the new Arcadia sliding glass doors, used in homes and commercial installations, which operate on a "bottom-rolling" principle and a screw driver is the only tool necessary for making adjustments of door alignments.

Specially designed mechanism supporting rollers makes possible this easy adjust-
ment without removing door from installation, and Arcadia engineers report that adjustment is "an operation simple enough for the woman of the house to undertake."

SCHOOL BONDS
ARE VOTED
Voters of the San Mateo Elementary School District of San Mateo county recently approved the issuance of $2,000,000 in school bonds. Funds are to be used in construction of new elementary schools and in making additions to present elementary school facilities.

LAS VEGAS PLANS
NEW SPA HOTEL
Walter R. Stutz and Nate Rosenberg, San Diego business men, and Mrs. Lillian Woods, present owner of the Desert Spa Motel in Las Vegas, Nevada, have formed a corporation and plan to build a new hotel on the site of the present motel.

The new hotel, known as the Desert Spa Hotel, will contain 250 rooms, casino, night club, and swimming pool.

Estimated cost is $3,500,000.

PASADENA APPROVES
SCHOOL BONDS
Erectors of the Pasadena School District recently approved a school bond issue of $5,840,000, with funds to be used in the construction of a new elementary school in the City of Pasadena.

A number of other school bond proposals submitted at the same time were rejected.

ARCHITECT
SELECTED
The architectural firm of Ponsirol & Price of Oakland, have been commissioned by the Belmont Elementary School District to draft plans and specifications for the construction of an addition to the Home View Elementary School.

The addition will comprise a 7-classroom, kindergarten and toilet room unit and will be of frame and stucco construction.

SCHOOL BONDS
APPROVED
Qualified electors of the Woodland Elementary School District, Yolo county, recently approved the issuance of $248,000 in school bonds with funds to be used for the construction of two new Elementary Schools in the City of Woodland. The new buildings will be of frame and stucco construction.

Russell G. De Lappe of Berkeley, is the architect.

HOTEL BUILDING
FOR SAN MATEO
Walter W. Cribbins of San Mateo, recently announced plans for the construction of a $1,500,000 hotel in San Mateo and applied for a zoning permit.

The contemplated new hotel building would be 7-stories in height.

DETENTION HOME
FOR MARYSVILLE
Architect Russell G. De Lappe of Berkeley, is drafting plans and specifications for the construction of a new Detention Home in Marysville, Calif., for the County of Yuba.

SCHOOL BOND
ELECTION
Qualified electors of the Elsinor School District of Riverside county, California, will vote on a proposal at an election May 15, to issue $210,000 in bonds to finance construction of new school facilities.
ARCHITECT AND ENGINEER

ARCHITECTURAL INGENUITY IN HOME

ARCHITECT KEITH C. WOOLLEN, Longview, Washington

MAY 1953
GOOD SCHOOL LIGHTING... MEANS...
...intensive research covering the seeing task.
...quality and serviceability of the equipment.
...engineered and designed to accomplish the desired
results—high-test illumination standards.
The units illustrated have passed the rigid test.
CIRCL-LITE—incandescent, with low brightness, for criti-
cal seeing task in class or office.
SKYLlKE—giving controlled incandescent illumination for
many types of schoolrooms.
COLLEGIATE—proven adaptability where fluorescent
lighting is desired.
No Schoolroom Can Afford To Be Without Good Light

patterned for school lighting

ARCHITECTS BUSY

Architects throughout many parts of the nation are working overtime these days in an upswing of building activity which tops even last year’s record high, according to a recent survey conducted by The American Institute of Architects, national association representing the architectural profession of America.

Current work in architects’ offices, which reflects over-all conditions in the building industry, is up fifty-five per cent on the Pacific Coast with substantial increases also being shown in other sections of the country.

Especially good news to many school districts is the report that last year’s much publicized bottleneck in the nation’s school building program—due largely to shortages in structural steel—seems to be eased. Without exception, schools topped the list as the most active building type. Also high is commercial building, the long pent-up demand for which has finally been turned loose.

It is interesting to note that defense jobs are relatively far down the list percentagewise, though schools, houses, and other community facilities required as the result of military, atomic or defense connected installations, keep many architects fully occupied.

At least some of the new high in building is due to increased supplies of steel, copper, and aluminum which, until recently, have been in short supply and subject to government control. With few exceptions these vital materials are now readily obtainable on the open market with supplies at or near normal levels.

The tax bite on a $2,000 automobile is $614.00. Without taxes you could buy the car for $1,386.00.

ECONOMIC EDUCATION

It is easy to find persons who want to do more and more things through government help, through centralized control, and by taking responsibility away from the individual. It is easy to emphasize the “popular” side of these public questions, to look at only the ideal goals.

But those who question easy “solutions” in these directions often find their motives questioned merely because they insist on taking the long view, looking at the problems as a whole and pointing out the complicated interrelations.

Those who are committed to the free, voluntary approach to our problems, through a free competitive economy, have not always been able to make a persuasive case for their views. An important reason for this lack is an inadequate grasp of economics.

Mr. Lemuel R. Boulware, Vice President of the General Electric Company, who has thought about this problem deeply, puts it this way: “I believe it is clearly the obligation of business and professional leaders to learn—and teach—economics, and do so as a matter of self-preservation, not only for their businesses and professions, but for everything else they hold dear for themselves and their fellow citizens . . . the great need is, first to get management to go on to the more advanced economics befitting their responsibilities and, second, to find a way to interest our 100 million adults to join voluntarily in discussion groups not as a favor to their employer but on their own time as a good citizenship duty on their part.”

Economics must be taught as a method of analysis, as a help to stating convincingly the implications of the choices we can make between methods for attaining our goals.

The march of science with its constant production of new and better materials has made business monopoly more and more difficult, and less and less important.

RAGS TO RICHES

Richard L. Bowditch, a seacoast New Englander who earned his first money as a trapper-boy in a West Virginia coal mine some thirty-years ago, was recently elected president of the Chamber of Commerce of the United States by the board of directors.

Born in Massachusetts, the great-grandson of the inventor of the Bowditch navigation tables which are still used by the U. S. Navy, he started his business career in a coal mine because it was the only job he could find. Earlier the lure of the sea had taken him across the Pacific for an eight-month tour of Japan, China, Korea, and India. Arriving at St. John, New Brunswick, with $8 in his pocket he had to appeal to a brother for funds to get home.

He liked his work and was soon promoted to track-laying job; later to a job of hand-loading coal, and then to running a mine locomotive. After a year or two a surface job was taken and then one with the sales department of the C. H. Sprague and Sons Co., a firm which mines, ships and distributes coal and oil, and the Sprague Steamship Co., both of Boston.

Today Bowditch is president of the Sprague firms.
M. H. deYOUNG MEMORIAL MUSEUM REOPENS CENTRAL WING EXHIBITS

The Central Wing of the M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, has been reopened after being closed for remodeling of twenty galleries.

Additional hanging space has been provided and smaller art objects have been removed to the corridors to be displayed in built-in wall cases effectively lined and illuminated. Monk's cloth gallery walls have been replaced by painted plaster surfaces, and hardwood floors installed in many of the galleries.

CITY OF PARIS

The Rotunda Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan, is offering the Twelfth Annual Pacific Coast Ceramic Exhibition and Sale of Sculpture and Pottery during the month of May.

The exhibition is sponsored annually by the City of Paris, and is organized each year by Beatrice Judd Ryan for the artists of the Pacific Coast. Each artist is asked to submit from four to six entries which are for sale and eligible for prizes.

The Jury of Selection for this year's event comprises: Whitney Atchley, Mary Erckenbrack, Ruby O'Burke, Antonio Prieto, Vivika, and Audrey Evans, acting director.

CALIFORNIA SCHOOL OF FINE ARTS

The Albert M. Bender Memorial Exhibition, commemorating the role of Albert M. Bender in establishing a community of understanding between artists and business men of San Francisco, is being shown in the Gallery of the California School of Fine Arts, 800 Chestnut Street, San Francisco.

Winners of the Albert M. Bender "Grants-in-Aid", in the fields of painting and sculpture, literature and photography will exhibit representative samples of their work. The exhibition will remain on public display until June 1st.

FRANK LLOYD WRIGHT EXHIBITS MODEL BRIDGE

A sixteen foot model of the Southern Bay Bridge Span designed by Frank Lloyd Wright has been placed on exhibit at the M. H. deYoung Memorial Museum, Golden Gate Park in San Francisco.

The model built by architectural students under the direction of Aaron Green, represents an advanced design in bridge construction of reinforced concrete. It is of "butterfly wing design" and earthquake proof.

SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, is presenting the following calendar of exhibitions and events for May:

EXHIBITIONS—Etchings by John Marin; the Gifford Beal Retrospective Exhibition; Paintings by Lorena Maclver and I. Rice Pereira; 17th Annual Drawing and Print Exhibition of the San Francisco Art Association; Contemporary Japanese Prints and Pottery; Designer-Craftsmen, U.S.A.—1953; and Four Sculptors of the West.

The Parkmerced Branch will feature an exhibition of Color in Prints, and an analysis of What Makes Art Work?

SPECIAL EVENTS include Concerts, Composers' Forum, Lectures, Lecture Tours of the Museum, Discussions, and Classes in Art for adults and children. Art classes include "Art for the Layman," "Sketch Club", "Painting Class" and the "Children's Class". Adult and children's classes are also held at the Parkmerced Branch.

M. H. deYOUNG MEMORIAL MUSEUM

The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, under the direction of Walter Heil, offers a number of unusual exhibitions in conjunction with the opening of the newly remodeled central wing and the French period rooms and special galleries, gifts of Roscoe and Margaret Oakes.

The Max Pollak Color Etchings, presented to the Museum, will open on May 12th; and the San Francisco Art Association Open Exhibition for Artist Members, and featuring Oils, watercolors, sculpture and graphics will open on May 22.

Many permanent exhibitions in the fine and applied arts are shown, as are special exhibitions of art and culture. Lectures and Gallery tours are also offered.

MAY, 1953
The Program consistently adheres to the theme of the Convention, “A New Country — A New Architecture” in its subject matter, exploiting the development and resources of the great Northwest and the entire Pacific Coast.

PRELIMINARY PROGRAM

SUNDAY, JUNE 14
1:00 P.M.—10:30 P.M.—Registration starts.

MONDAY, JUNE 15
9:00 A.M.—Convention Registration continues
8:00 A.M.—Logging Camp Tour (return 6:00 P.M.)
2:00 P.M.—City Tour
2:30 P.M.—Boat Trip—Puget Sound and Lake Washington

TUEDAY, JUNE 16
9:00 A.M.—Registration continues
(Delegates registration closes 12:30 P.M.)
9:45 A.M.—Opening Session of the Convention
12:30 P.M.—Honor Awards Luncheon
2:30 P.M.—Industrial Tours
2:30 P.M.—Seminar—“Woods—The Forest”
4:00 P.M.—President’s Reception at the Rainier Club
7:00 P.M.—Students’ Forum
8:00 P.M.—Modular Coordination Meeting

WEDNESDAY, JUNE 17
9:00 A.M.—Registration continues
9:30 A.M.—Chapter Problems Meeting
Chapter Affairs
Chapter Officers
Chapter Editors
12:30 P.M.—Luncheon Seminar — “Oriental Influence on American Art and Architecture”
3:00 P.M.—Seminar—“Wood Processing”
3:00 P.M.—Liturgical Arts Seminar
7:00 P.M.—Dinner Dance

THURSDAY, JUNE 18
7:30 A.M.—Scrapple Breakfast
9:00 A.M.—Registration continues
9:30 A.M.—Polls Open
9:30 A.M.—Second Business Session
12:30 P.M.—Luncheon Seminar — “Condensation in Buildings”
3:00 P.M.—Seminar—“Wood—Construction Uses”
3:00 P.M.—Ladies’ Boat Trip
4:00 P.M.—Polls Close
6:30 P.M.—Cocktail Party as Guests of Washington State Chapter
8:00 P.M.—Banquet

FRIDAY, JUNE 19
9:30 A.M.—Final Business Session
12:00 Noon— Mount Rainier Tour
1:00 P.M.—Fellows Luncheon
3:00 P.M.—Embark for Alaska Tour
3:00 P.M.—A.I.A. Board of Directors—Organization Meeting
7:00 P.M.—A.I.A. Board of Directors Dinner
9:00 P.M.—Plane leaves on Hawaiian Tour
11:45 P.M.—Special Train, en route Home

PRODUCTS EXHIBITION

The exhibition of building products will open Tuesday morning and continue through Thursday between the hours of 9:00 A.M. to 6:00 P.M.

Supplementing the above will be four days of pre-convention meetings of the A.I.A. Board of Directors, the Association of Collegiate Schools of Architecture, the National Council of Architectural Registration Boards, and the Producers’ Council.
POLICE FACILITIES BUILDING

LOS ANGELES, CALIFORNIA

WELTON BECKET, F.A.I.A.

ASSOCIATED ARCHITECTS

J. E. STANTON, A.I.A.

AREA — 398,000 Square Feet

COST — $6,142,548.00
The work of two outstanding Los Angeles architects recently proved that through good design and businesslike methods it is possible to save taxpayers money, in this case $2,000,000, and at the same time present a functional and pleasing contemporary building.

The specific case cited is the Los Angeles Police Facilities Building designed by Welton Becket, F.A.I.A., and J. E. Stanton, A.I.A., Associated Architects. To the delight of the Board of Public Works, the low bid tendered, $6,142,548, was more than $2,000,000 under the proposed city budget for the structure.

Harold Nash, President of the Board of Public Works, highly praised the work of Becket and Stanton and expressed hope that other civic buildings would be constructed at proportionately low cost.

The new police building itself will undoubtedly establish a precedent in civic planning and perhaps revolutionize law enforcement procedure throughout the country. The structure, which will be eight stories high, with a basement and covering a full city block, represents the first entirely functional approach to the physical problems of police administration.

Except for a few geographical patrol divisions, all the various departments of the municipal police department—now scattered among half a dozen different buildings often miles apart—will be brought together under a single roof, with the design of the building providing a closer integration
between departments than ever before attained.

A combination ground and deck area will provide garage service and parking facilities for more than 850 police cars. Space is also available for invited public parking.

Underground squad rooms and lockers for the officers of the metropolitan, traffic and central divisions can be easily reached from the lower-level parking area. The basement will also contain assembly rooms for the officers.

On the first floor are the business offices, the information center, communications, traffic division, offices of the Police Commission, a completely equipped auditorium and stage for "show-ups" and a jail for initial booking procedures.

The felon prison and the Record and Identification Bureaus are on the second floor. The third floor will be occupied by the detective bureau.

The remainder of the building houses various police bureaus and business offices. The eighth floor will have an employee cafeteria and lounge.

The building itself is to be constructed of steel and lightweight concrete. All interior details and appointments will also be supervised by the architects.

According to architects Becket and Stanton, the building will have a total floor space of 398,000 square feet, and will be located on a Civic Center site already owned by the city, lying north of First street between Los Angeles and San Pedro streets and running through to Market street.

The Ford J. Twaits Company and the Morrison-Knudsen Company who jointly entered the lowest bid will be in charge of construction. The building is expected to be completed in two years.
Student enrollment increased from 900 to 2400 in six years.

PARKROSE GRADE SCHOOL
MULTNOMAH COUNTY, OREGON

ANNAND & BOONE ARCHITECTS
ENGINEERS

COST — $9.11 Square Foot

The new Park Rose Elementary School which is part of School District No. 3 of Multnomah county, Oregon, is located in one of the more rapidly growing residential communities immediately East of the City of Portland, and this unique school building designed in the offices of Annand & Boone, Architects and Engineers of Portland, is attracting considerable attention among school authorities throughout the nation because of the building’s unorthodox use of space and economical construction costs.

The problem presented to the architect was to design an elementary school building which would meet an increase of student registration of from 900 pupils in 1946 to a present registration of more than 2400 pupils, and at the same time bear
in mind a continued growth of the community and at the same time keep within certain financial limitations. To meet this situation the Park Rose District has produced something entirely new and different in the way of an elementary school building, and many of the architectural and design innovations will be of interest to architects, school boards and teachers, builders, and the taxpayer who is called upon to finance the construction of educational facilities.

Probably the best way to describe the new Park Rose School building is to visualize a series of matchboxes placed side by side and slightly staggered (Note illustration on page 13). Then if you
Classroom as seen from work alcove, showing part of additional blackboard and bulletin board area. Glass blocks used on upper portion of windows.

Unique shaped classroom. Sink and children's work bench area are on diagonal wall at the left rear. Part of work bench lifted to teacher's height.
run a corridor down through the middle of the jigsawed box design you have the approximate arrangement of this school. This unique handling of corridor and classroom represents what is believed to be a maximum of space utilization and space economy in relation to the utility use of the structure.

The classroom that results from the "staggered matchbox" design is slightly triangular with the service-end or work alcove at the pointed end. More wall space and efficient use of closet space make for greater use of what is actually smaller floor area. While the classroom is slightly smaller in size than the conventional type room, its greater "use area" and reduced initial construction cost, together with the fact that more efficient use can be made of the corridor, makes the building desirable.

The illustration at the bottom of page 11, and the two pictures on page 12 show detail arrangements of the classroom. The top photograph on page 12 shows the interior as viewed from the point-end, or work alcove. Additional blackboard and bulletin board space is provided along the longer walls on both sides. The lower picture on the same page illustrates the point-end where sink, counter, closets, wardrobes and book case are installed. This is the work area and can be easily used without interfering with the desk area. The teacher's desk or table, is located at a vantage point for use in supervision of students in either work area or while they are sitting at the desk.

The building has but one general utility room which has been designed to serve the purposes of a gymnasium, auditorium and cafeteria whenever the need arises. In addition to the "staggered" classrooms a conventional type primary classroom has been included. Plumbing is provided for each room and to facilitate use of the outside play-grounds, entrances have been placed in each room.

The building is of reinforced concrete construction. Roof overhangs to form weather protection for the sidewalks in some of the areas, and glass blocks have been used over regular windows to provide more natural lighting and at the same time reduce glare. Heating and ventilating are of the newest design.

Objective of the architect has been to get more space use for the money spent and cost of the 16-classroom building was $270,000, which figures at a square foot construction cost of $9.11.

Distinctive feature is wing of eight classrooms that are roughly triangular in shape, with corridor running diagonally through series of rectangles to form two rooms.
BENT THE HOUSE
TO FIT THE SITE
LONGVIEW, WASHINGTON

KEITH C. WOOLLEN, Architect
IRVIN C. EGGIMANN, General Contractor

By ARTHUR W. PRIAULX
When you design a summer home to fit into one of the most spectacular scenic spots on Washington's beautiful, winding Coweeman River, view is everything. Architect Keith C. Woollen, of Longview, Washington, has come up with a rather extraordinary budget summer home for the Melvin C. Rooney family which is a tribute to his imagination and skill as a designer.

The site selected was in the bend of this lovely river ten miles east of Longview and Architect Woollen was charged with getting as much view visibility as possible from each window of the house. To solve the problem, he decided to bend the house to fit the river bend. The result is a startling home of distinctive beauty and maximum utility and off-the-beaten-path floor plan.

A picture view of the river is had from every room, and some rooms afford two or more different vistas of this charming little river. The kitchen window overlooks the swimming hole, so Mrs. Rooney can watch her offspring while they are swimming. A sand beach is seen from the bedrooms. From the V-shaped living room a full and sweeping prospect of the full river bend is had.

Architect Woollen designed a summer dwelling which would blend into the woodsy character of the 100-acre Rooney tract. Exterior of the uniquely-shaped home is cedar boards and batten, finished
with two coats of stain to preserve the natural cedar coloring. Even the exterior doors have been finished in a blue-green, native woods color. The structure is a wood-casement and fixed-frame design.

To simplify construction problems, Woollen designed the two converging wings of the home in a nineteen foot, six inch width. The ceiling is supported throughout the living area in an economical and yet attractive manner. Four-by-ten-inch fir beams are arranged fan shaped, one edge supported on the fireplace at ceiling height and the other by the outer wall. The beams are left exposed in both living room and kitchen areas. A two-by-six fir decking forms the ceiling and the roof as well. Ceilings have been painted throughout the house. The beams have been left exposed in the three bedrooms.

The general plan of the owner and designer was to eliminate as much housekeeping work as possible. A concrete slab forms the floor of the home as well as the patio and carport. Carpeting has been used in living room and hall, but all other rooms have been finished in asphalt tile.

Space utilization is ingenious. In the 1050 feet of livable area has been designed three bedrooms and both, a large living room and kitchen.

The five-sided living room is the central feature of the home. On two sides of this unusual room are a solid twenty-eight feet of plate glass windows, six feet high, which afford a dramatic view of the Coweeman River. Four of the walls have been finished off in a vertical-grain fir paneling, a fifth wall is made up of a fireplace of Wilkinson stone (native Washington), from floor to ceiling. Around the corner from the fireplace is a snug, lounging area which adds to the charm, comfort and pleasant living of the family.

A novel pass-cupboard and bar serves as a wall between the living area and the cooking area. There is no door between the two areas of the home. The bar and pass-cupboard is really more of a mask or break than a wall. It is almost a part of the furniture for it houses storage cabinets on the living room side.

The kitchen is also finished in vertical grain fir paneling. Drainboards and cupboards are made of a composition material. On the kitchen side the pass-cupboard becomes a dining bar with a capacity for four. Dish storage space has been provided above this dining bar. The kitchen has also been equipped with modern conveniences, including a dishwasher.

So enamoured has the Rooney family become of their "summer" home that they live there much of the year. It is only ten miles east of Longview

A Patio within sound of the River sheltered by friendly fir trees.
and their 100-acre, natural-woods area is a private deer park preserve where no hunting is allowed. Deer are everywhere. But, not even the owner hunts. Fishing is mighty good, too, and Coweeman river water is warm enough for swimming much of the year.

The three compact bedrooms were designed with a definite woods theme. Each has been finished in a different wood. One is in knotty pine, another in western hemlock and a third in western red cedar. In every case the walls have been finished with a clear rez to preserve the natural

Looking Riverward from the fireplace wall into the Coweeman River.
Homey, easy living is keynote of this summer dwelling.
RIVER SITE HOME

DINING BAR
Gives family spectacular view of the River from the kitchen side. Note how this serves dual purpose as break wall between living and kitchen areas.

KITCHEN (below)
Compact and easy to manage. Cabinets and fixtures are built of vertical grain fir, finished natural with a rez coating.
grain of the wood and the distinctive coloring of the three western species.

Another interesting feature of the home is the entrance hall which opens off the inside of the U bend of the house. It serves the kitchen and living area and becomes as well a short hallway for the bedrooms.

Heating is provided by an oil-burning space heater, concealed behind the fireplace.

The living room is most spacious, with a thirty-two foot length. When you enter the living area from the hallway, the view is breathtaking. You get a sweeping and striking look at a woods and river wonderland. It is apparent that Architect Woollen has consciously utilized the natural beauty of this setting to a remarkable degree. Not a room in the house is without a view of the river and surrounding woods.

The bath has been built of plaster board and serves all three bedrooms and is fully plumbed. Closets and storage space become walls between the master bedroom and the child's room. The bedrooms are small, but purposely so, because they require a minimum of upkeep and the throw rugs on the tile floor make housecleaning a small chore.

The feeling of living outdoors, accentuated by the nearness of the river and woods, is further heightened by the easy accessibility to the outdoors. Four doors, at strategic locations around the home gives easy access to almost any part of the home from outdoors. Doors open onto the river-side patio from both the kitchen and living areas. Another door opens on the river-side from the bedroom wing and the main entrance from the off-river side patio and lawn area makes access to the home easy from the carport.

An interesting feature of the carport is its dual purpose. In the hot summer months in the after-

(See Page 38)

The Cedar Bedroom - the children's sleeping room, one of three finished in native woods. Other two are of hemlock and knotty pine paneled walls.

May, 1953
The design of this house came as a hurry up job. The energetic young farmer, James Marshall, having just sold his home and farm was ready in a few days to pick a building site on another farm, move dirt, and get a new house under way. Such activity is pleasant to any architect, though it does present a problem: to keep one blue print ahead of those that were to put the building together.

The location of this house in the delta region of the Sacramento River in northern California meant that it must be raised to a height to form drainage, and be oriented to make the most of the sun and shade, cross ventilation, and shelter from the
winds. Too, there was a problem of getting a house of the right size, and a shape that was pleasant, in a grove of many beautiful trees, all of them seeming too choice to remove.

Once our plan was formed and marked out among the trees, a spread footing was set on the surface of the ground, the walls of which were raised about three feet in height. A long, gentle slope of earth was started from far out in the fields, graded to the height of the foundation. A fill was also made within the walls of the foundations. Heater ducts of terra cotta pipe were set in the fill as earth was moved in. Over the fill a concrete floor was laid, and the walls were ready to be set.

Economy being something of a watchword, the work thus far had been carried largely with farm equipment, manned by farm help, carefully guided and managed by the owner. From the concrete floor up the walls were of cast blocks, with the exception of one long brick wall extending through the house from side to side. Some brick was used at the front entrance, and, as shown in the drawings and photograph, a considerable amount went into the raised hearth. The hearth extended from the fireplace to the end of the room, under the book cases, and across the end wall. The supply of both brick and blocks was within easy reach, some eighteen miles away in the city of Sacramento.

As the house walls neared the ceiling line, the romance of the river was to extend to our building, even though the river was some miles away. An old river pier showed up in the structural part of the ceiling. These heavy timbers were laid across the walls over which the ceiling and flat roof were laid. Roof and heavy pier timbers may be seen
extending well out over the walls to give window and door protection.

The ceiling material came from a mill in the nearby city of Stockton. It was a cedar lumber largely used by the mill in the manufacture of lead pencils. The material, as brought to the job, was a heavy tongue and groove planking some 3” thick and 6” wide. This stock of material was laid out on the floor, where it was painted five different pastel shades of soft colors. It was then laid diagonally in pattern on the upper side of the large supporting timbers from the pier. These timbers had been colored a gray-blue at the time they were set in place. One wonders now, looking up at this subdued, gay ceiling, just how many pencils might be made out of that much lumber.

The salmon-colored brick wall running through the house forms one wall of the living and dining area and the play room. A glass partition set in a chrome metal frame of dull silver or pewter color makes the division in this part of the house, and
leaves the brick wall visible for its entire length.

The metal used in the frame partition appears also in a hood for the fireplace, in the buffet, and in the screen at the front entrance. This metal against the brick as selected, and the fresh-colored ceiling, make a mellow and interesting room, not modern exactly, but certainly removed from the orthodox standards for room finish.

The screen at the entrance we think is a distinctive feature that has done much for the living area. It was built as a shelter against weather, and to afford some seclusion for people arriving at the house. It is a brick wall up some 4'6" from the floor, with a metal planting box set in the top, with glass above that, in all about seven feet high.

Walls other than glass or brick are almost uniformly of the natural building block throughout the house, kitchen, bedroom, and bath alike. Color in the form of both water and oil paints has been applied to the block walls. The treatment of color and the forthright type of construction naturally were a great factor in keeping costs to a minimum.
When J. K. Doolan, president and J. W. Komes, vice-president of the Bechtel Corp., planned the use of precast concrete panels for the construction of the new Continental Can Company's factory in Pittsburg, California, they also chose Roland Cowles as job superintendent because of his wide experience in the construction industry, and particularly because of his extensive experiments during the past two years with various compounds to be used as bond breakers when concrete panels are cast.
In his preparation for the panels, Cowles poured the floor and trowled it smooth. The entire surface of 840 ft. x 360 ft. was then treated by brush and spray with Thompson’s Water Seal. The concrete panels, some of which weighed seventeen tons, were then poured directly on the treated floor. When the cranes lifted them there was no bond whatever only a clean, very smooth surface on the underside of the panels. This method speeded construction, according to Cowles, as there was no need for long curing periods or the necessity for cleaning before painting. Both of these factors are also a major item in maintaining construction schedules.

Design of the new plant represents the most modern conception of a large manufacturing plant where objectives include the functional operations of a building, harmonious appearance with the surrounding area, and employee conveniences.

Large windows above center floor sections, and use of much glass in side walls, assures a maximum in natural lighting. Large steel trusses are used to obtain minimum floor obstruction, and the general appearance is in keeping with western industry industrial design.

Roland Cowles, Bechtel Corp’n and Carl W. Gott of Continental Can Co. standing by 17-ton tilt-up panel. Inset - Carl W. Gott and Roland Cowles beside smooth panel cast on concrete floor. (See photo below.)
SOUTHERN CALIFORNIA CHAPTER

Emphasizing the "Good Neighbor Policy" a recent meeting was devoted to Mexico's University City. A group of architects presented color slides and a report in the VII Congresso Pan Americano de Arquitectos which was recently held at University City in Mexico City. Taking part in the program were Anthony Thormin, Kemper Noland, Edward A. Fickett, Raphael Soriano, John Rex, Maynard Lyndon, and Carl Maston.

Members were reminded of the A.I.A. National Convention in Seattle, June 15 to 19, when architects, their families and guests from all parts of the world will be in attendance.

OREGON CHAPTER

It was announced at the May meeting that the annual meeting would be held on June 9th, the date being advanced so as not to conflict with the national A.I.A. Convention which is to be held in Seattle, June 15-19.

Recommendations of the Nominating Committee include: for Delegates to the 1953-54 A.I.A. Regional Convention—H. Abbott Lawrence, Holman J. Barnes, Donald W. Edmundson, Richard J. Marlitt, Robert W. Fritsch, Clarence H. Wick, Herman Brookman, John D. Annand, and Albert W. Hilgers. Officers placed in nomination to serve for the ensuing year included: John D. Annand, President; Albert W. Hilgers, Vice-President; Donald W. Edmundson, Secretary; Richard J. Marlitt, Treasurer, and H. Abbott Lawrence, Trustee.

New Member—Robert Martin has been presented a certificate as a Corporate Member.

PASADENA CHAPTER

The May meeting was a joint session with the Southern California Chapter on the campus of the University of Southern California at Los Angeles. Dean Callion and his faculty and students presented an extremely interesting program dealing with the education of the young architect in the School of Architecture at U. S. C.

Delegates to the national A.I.A. Convention in Seattle include: Dorothy and Wilber Harrison, Carl
McElvy, John Douglas, Broe Freeman, George Lindeberg, Culver Heaton and Bob Landon.
New member—Ward Deems has been elected to Junior Associate membership.

CALIFORNIA COUNCIL OF ARCHITECTS

The California Council of Architects will hold its mid-year meeting at the Hotel Fairmont in San Francisco on May 22-23. The two days will be devoted to business sessions and reports of committee chairmen.

The association has been particularly busy this year in connection with various phases of legislation offered to the state legislature at Sacramento having a bearing directly, and indirectly, on the practice of architecture in California.

SAN DIEGO CHAPTER

Tom Armstrong of Armstrong-Schramm Company discussed the subject "What Our Public Relations Program Should Include" at the May meeting with Sam Hamill serving as chairman of the program.

Charles Fry of Los Angeles, and president of the California Council of Architects was also present and discussed a number of architectural problems which are being considered on a state-wide basis.

PASADENA WOMENS ARCHITECTURAL LEAGUE HOLDS ANNUAL MEETING

The Pasadena Women's Architectural League celebrated their third anniversary early this month with a special meeting in the home of Mr. and Mrs. John Douglas in Monrovia.

Guy Brink, interior decorator and currently serving as Pasadena Chamber of Commerce community (See Page 32)
ARIZONA ENGINEER RECEIVES
A.I.A. HONOR MEMBERSHIP

Gordon M. Butler, Dean Emeritus of the College of Engineering, University of Arizona, has been elected to Honorary Membership in The American Institute of Architects. He will receive a Certificate from the Institute at its Honor Awards Luncheon to be held in conjunction with the Institute’s annual convention in Seattle, June 15-19.

Honorary Membership is conferred upon persons otherwise ineligible for corporate membership, who have rendered distinguished service to the architectural profession or to any of its allied arts or sciences.

Butler was chosen for this honor because of his outstanding work over many years in legal and educational aspects of engineering and architecture and because of his work on the Tucson Planning Commission.

STRUCTURAL ENGINEERS ASSOCIATION
NORTHERN CALIFORNIA

E. F. Ball, Chief Engineer of Fabricated Steel Construction for the Bethlehem Steel Company, was the principal speaker at the regular May meeting held in the Engineers’ Club in San Francisco.

Ball used a number of slides to show the financing, development, and history of the Chesapeake Bay Bridge, and also covered the subject of toll bridges in general. The superstructure of the Chesapeake bridge is four miles long over water and consists of 60 ft. beam spans; 100 ft. and 200 ft. girder spans; 250 ft. and 300 ft. simple truss spans; 480 ft.-600 ft. deck cantilever truss spans; a 760 ft. through cantilever span and a 1600 ft. suspension bridge main channel span. Erection of most of the truss spans was accomplished by building them at a common dock and floating into place on barges.

The brochure “School Construction Under the Field Act,” prepared by the Consulting Practice Committee under the Chairmanship of Fred Hall, has been published and is available for distribution. Copies have already been sent each member of the California State Legislature.

AMERICAN SOCIETY OF CIVIL ENGINEERS—LOS ANGELES

The Los Angeles Section of the American Society of Civil Engineers recently held a meeting at the University of Southern California and heard General L. J. Sverdrup, Corps of Engineers, U. S. Army, describe some of his experiences during the recent
world war on the island of New Guinea.

General Sverdrup was in charge of the construction of several air fields in the interior of the island where his equipment was composed of thousands of natives wielding picks, shovels and axes. He told of the many problems encountered and equally unusual methods of solution. His methods of procuring and utilizing native labor provided an interesting and colorful narration.

Color motion pictures taken by the General supplemented his comments.

---

STRUCTURAL ENGINEERS ASSOCIATION
SOUTHERN CALIFORNIA

The Los Angeles Engineering Council of Founder Societies recently heard Anthony J. Kennedy, attorney at law, and a member of the California Legislative Council, describe a number of legislative matters in Sacramento which affect the engineering profession. The meeting was held in the auditorium of the Edison building.

Ethan F. Ball, of the Bethlehem Steel Company was the main speaker at the May meeting of the Structural Engineers, taking as his subject the famed Chesapeake Bay Bridge, Ball has been identified with many of the outstanding bridge and building structures in the United States and illustrated his talk with many slides.

---

FEMINEERS OBSERVE
THIRD BIRTHDAY

Chapter members of the FEMINEERS—: Mrs. A. C. Horner, Mrs. L. L. Wise, Mrs. Henry Degenkolb, Mrs. H. W. Haberkorn, Mrs. S. Ospina, Mrs. R. F. Lyman, Jr., Mrs. Wm. Brewer, Mrs. L. Graham and Mrs. F. Ulrich were feted at an anniversary luncheon on May 20th at the Lake Merritt Hotel in Oakland.

The FEMINEERS is a social club composed of the wives of members of the Structural Engineers Association of Northern California and the American Society of Civil Engineers of Northern California.

The club was founded in 1950 with an initial nine members and to date now numbers over one hundred members. The chief function of the club is to aid in the planning of engineer conventions and to acquaint wives of engineers with each other socially. Membership is always open and new members are invited to join.

The highlight of the FEMINEERS’ 1951 season was the awarding of a $300.00 Engineering Scholarship at the University of California, to a worthy student.
PRODUCT DISPLAY

The Product Display on May 27 will feature competition among the exhibitors and three prizes will be awarded. The displays are to be completed for judging at 2:00 P.M. May 27 prior to the opening at 3:00 P.M. The prizes will be awarded to those displays which, in the opinion of the judges, best suit the theme of "Specify, Don't Mystify."

The judges will be Bill Corlett, architect; Mario Ciampi, architect; and Joe Murray, consulting engineer.

The prizes will be awarded to the individuals setting up the display and not the company being represented. The awards will be made prior to the opening of the exhibit.

CHRISTMAS JINX

As we all know, the size of this affair has gone beyond bounds and some type of corrective action was necessary.

On April 6, the Executive Committee, following its instructions by the majority of the members at a regular meeting on March 16, once again considered the best arrangement to solve this problem.

After due consideration and discussion as to the most practical solution, Mr. Charles Nichols, Crane Company, proposed a motion that the Christmas Jinx be eliminated entirely for 1953 and that a committee be set up now to study a program for 1954.

This motion was carried unanimously, as it was felt that this was the best possible solution to a rather ticklish problem. It will give the Council time to re-group its thoughts as to the desired purpose of the Christmas Jinx and the passage of the additional year between our Annual Christmas parties will remove the possibility of hurt feeling that would be present if we tried to reduce the number of attendants at the party this year.

ANNUAL SPORTS PROGRAM

The Annual Producers’ Council Golf Tournament & Sportsmen’s Dinner will be held again at the Olympic Club this year on Tuesday June 9.

The sports program has been enlarged to include tennis for those who have the energy and for those that think they are younger than they really are.

Singles matches will undoubtedly be played, but the prizes will be awarded to the winning doubles team. If you are young in heart, strong of limb and weak in mind, join your fellow Producers and Architects on the courts.

In the cow pasture pool department, ten awards will be made to the low gross, blind boogie low net, longest drive, and high score. Five of the prizes will go to the architects and five to the Producers’ Council.

For those that are not athletically inclined, the dinner is being made especially attractive—portables at 6:30 P.M., the finest type of good fellowship, food fit for kings and entertainment.

Harris Wilkinson, Pittsburgh Plate Glass Company, as program chairman, has the details well in hand and advises that as the Christmas Party will not be held this year, and you can’t afford to miss this terrific social event.
LOW RENT HOUSING

The Housing Authority of the County of Kern, Bakersfield, has authorized the construction of a 184-unit Low Housing project to be built in Bakersfield at a cost of $1,302,000. The project will include 1, 2, 3 and 4 bedroom duplex dwellings, also an administration building, shops and multi-purpose facilities.

Robert N. Eddy, Bakersfield, is the architect and Fred S. Macomber of Los Angeles is the general contractor.

SCHOOL BONDS ARE APPROVED

Electors of the Cupertino Union Elementary School District, Cupertino, Santa Clara county, recently approved the issuance of $350,000 in school bonds plus a State Aid of $1,950,000 for the construction of new elementary schools and additions to present buildings.

YATES COOK JOINS NAHB

G. Yates Cook, promoter of the "Baltimore Plan" of slum clearance and a leader in the fight against big city blight, has joined the National Association of Home Builders as head of a new Department of Urban Redevelopment, according to an announcement by Emanuel M. Spiegel, president.

Cook will direct a nation-wide campaign by private builders to wipe out rock-bottom slums and rebuild run-down areas in American cities.

ARCHITECT SELECTED

Architect Robert R. Jones of Carmel has been selected by the Elks Hall Association of Monterey to design a new Elks Clubhouse to be built in Monterey.

SHOPPING CENTER LAGUNA BEACH

Plans are underway for construction of the "Laguna Bazaar," a reinforced concrete shopping center in Laguna Beach, comprising 82,000 sq. ft. of floor space plus a 20,000 sq. ft. concrete slab parking area. Building will contain 50 retail shops, 75 professional offices, auto ramps and elevators to roof level.

James R. Friend, Long Beach, is the Architect. Cost of project, $1,300,000.

TELEVISION STATION

The KFTN Television Broadcasting Company of Stockton has commissioned the architectural firm of Mayo & Johnson & de Wolf, also of Stockton, to draft plans and specifications for a new Television Broadcasting Studio to be built near Stockton in San Joaquin county.

The new studio will be of concrete block and frame construction and will represent the latest in TV facilities.

ARCHITECTS NAMED TO SUPERVISE UC

The Regents of the University of California have named the architectural firm of Pereira & Luckman of Los Angeles as supervising architects to plan the over-all development of the 408-acre Santa Barbara College campus at Goleta.

Individual buildings within the master-plan may be assigned to other architectural firms, as in case of the science and library already under construction.

These permanent buildings and convers-

AMERICAN INSTITUTE OF ARCHITECTS CONVENTION

Pietro Belluschi, F.A.I.A., Dean of the School of Architecture and Planning at Massachusetts Institute of Technology, and William M. Allen, President of Boeing Airplane Company, will be the two keynote speakers at the 85th convention of the American Institute of Architects, which meets in Seattle, Washington, June 15–19.

The theme of the convention is “A New Country—A New Architecture,” specifically the contribution of the Pacific Northwest to contemporary American building. Seattle resident Allen will open the business sessions Tuesday, speaking on the first part of the theme, “A New Country.” Belluschi’s subject, “A New Architecture,” will close the week’s program on Friday.

Tied in with the convention theme is the choice of speaker for the Annual Banquet, Thursday, June 18. George H. T. Kimble, geographer, meteorologist and, since 1950, Director of the American Geographical Society, will relate architecture to the broader study of environment. Kimble classifies modern geography as a social science “primarily concerned with viewing the earth as the home of human communities and cultures, and with examining the way in which man has shaped the habitable parts for his own ends . . .”

Throughout the convention, daily seminars will also present a variety of subjects appropriate to the convention theme.

Professor Winfield Scott Wellington of the Department of Decorative Arts at the University of
California, will be the principal speaker at a seminar on “Oriental Influences on American Art and Architecture.” Other noted members of this panel include Antonin Raymond, F.A.I.A., architect for the new Reader’s Digest Building in Tokyo, Japan, and Harwell Hamilton Harris, Dean of the School of Architecture at the University of Texas. Both Harris, who formerly practiced in California and Raymond, who has won his major fame for work in the Far East, have been strongly influenced by Asian architecture.

A special business meeting on the Home Building industry will feature well known California builder Joseph Eichler and Los Angeles architect Edward Fickett as speakers, with Morgan Yost, F.A.I.A. of Chicago as the Committee Chairman.

Richard M. Bennett, F.A.I.A. of the Chicago firm of Loeb, Schlossman and Bennett, will act as moderator for the “Liturgical Arts” seminar, which will include on its panel representatives of the Protestant, Catholic and Jewish faiths.

Three wood seminars will be conducted by leading representatives from the fields of forest products, lumber research, plywood and timber manufacturing.

NATIONAL SOCIETY OF PROFESSIONAL ENGINEERS

Charles F. Kettering was presented the NSPE Award at the Society’s annual meeting in Daytona Beach, Florida, recently. Kettering, vice-president of General Motors Corp, was granted the award in recognition for his meritorious service to the engineering profession. The honor has only been previously awarded to former President Herbert Hoover and D. B. Steinman, bridge-builder.

T. Carr Forrest, Jr., of Dallas, Texas, was elected to serve as president, succeeding John D. Coleman of Dayton, Ohio.

GLADDING, McBEAN COMPANY INCREASES BOARD MEMBERS

Stockholders voted to increase the number of directors of the Gladding, McBean & Company from 11 to 12 at the recent annual meeting of the company. All former directors were re-elected and Jonathan Lovelace, president and director of the American Mutual Fund, Inc., was chosen as the new member of the board.

F. B. Ortman was elected chairman of the board, as well as president, succeeding Atholl McBean as chairman who will continue to serve as chairman of the finance committee.

James W. Mahoney, who has been vice-president in charge of sales, was promoted to executive vice president with headquarters in Los Angeles. Paul J. Lovewell, was appointed assistant to the president with headquarters in San Francisco.

The annual report of Ortman showed the remarkable progress this company has made since the end of World War II, with plant investments alone increasing in value from three million dollars in 1945 to more than eight million dollars at the present time.

ARCHITECT PRINCIPAL SPEAKER AT BUILDERS HARDWARE CONVENTION

Architect Don Kirby, of the architectural firm of Kirby and Mulvin, San Francisco, was one of the principal speakers at the eighth annual conference.

sponsored by the Pacific Coast Builders Hardware Clubs, the National Contractors Hardware Association and the American Society of Architectural Hardware Consultants, recently held in the Billmore Hotel in Santa Barbara.

Kirby told the hardware men that with continued advancement in technology and production a continuous effort should be made to improve building hardware design and that cooperation between industrial designers, manufacturers, salesmen and the construction industry as a whole, could accomplish the desired results.

REDUCE TILT-UP CONSTRUCTION COSTS

with

Thompson's WATER SEAL

for surface slabs
and tilt-up panels

• Locks out moisture, acts as bond breaking agent.
• Permits easy lifting of panels without suction.
• Eliminates hairline cracks for smoother concrete surfaces.
• Gives slower, more uniform curing.
• Protects against seepage, prevents efflorescence.

MANY OTHER CONSTRUCTION USES:
For lasting protection against moisture, use Thompson's Water Seal for plywood forms, concrete blocks, brick, tile, stucco, plasterboard and any other porous material. Sold in 1, 5, 30, 55 gal. sizes. Ready to use — no mixing. Applied easily by spraying, brushing, mopping or dipping.

Available at paint, hardware or building supply dealers.

BY-CHEMICAL PRODUCTS CO.
1355 Market Street • San Francisco 3, California

Schlage Lock Co., Robert Logan of the J. B. Rice Co., San Rafael, and Gene Hundley, San Francisco hardware dealer, were in charge of arranging this year's program. More than 400 representatives of manufacturers, dealers, and jobbers on the West Coast were in attendance.

HARRINGTON ATTENDS WASHINGTON CLAY BRICK AND TILE MEETING

R. W. Harrington, manager of the Clay Brick & Tile Association, San Francisco, attended a recent national conference of tile industry representatives at the Structural Clay Products Institute headquarters in Washington, D. C.

The meetings were held solely for the Industry's Board of Directors, Regional Directors, and Working Committee, whose members represent all parts of the United States. The conference included eight days of meetings with industry engineers and executives to determine the programs and policies of the tile industry for the ensuing year.

ASSOCIATION OF TESTING AND INSPECTION LABORATORIES

Formation of the Association of California Testing and Inspection Laboratories was completed at a meeting of testing and laboratory representatives in Los Angeles.

Theodore P. Dresser, Jr. of the Abbot A. Hanks, Inc., Engineers and Chemists, San Francisco, was elected president. Other officers named to serve the new organization included: Harrison H. McCall, Los Angeles, Vice-President; Frank R. Killinger, Oakland, Secretary-Treasurer; and Philip W. Helsley of San Diego and M. R. Neuman, Oakland, members of the Board of Directors.

Formation of the association followed a previous meeting of representatives of the Division of Architecture, State of California, and of representatives of the laboratories throughout the state. The need for such an organization to serve as a central point of contact for discussion of inspection and testing procedures in connection with school building and other public construction has long been recognized. The next meeting of the association will be held in Sacramento the latter part of this month.

SOUTHERN CALIFORNIA ARCHITECTS WIN NEW YORK RECOGNITION

Seven structures designed by Southern California architects are among 43 structures selected
by New York’s Museum of Modern Art as significant examples of architecture in the United States since World War II.

Models and photographs of the buildings are on display at the Museum, in conjunction with a book entitled "Built in U.S.A." which has just been published by the Museum.

Architects and projects honored include: Gregory Ain, Willlong house, Los Angeles, 1952; Harwell H. Harris, Johnson house, Los Angeles, 1951; Maynard Lyndon, Vista Elementary School, 1950; Richard J. Neutra, Tremain house, Montecito, 1949; Raphael Soriano, Los Angeles house, 1950; Lloyd Wright, Wayfarers’ Chapel, Palos Verdes, 1951; and Charles Eames, house in Santa Monica.

ADVANCED DESIGN WINS HONORS FOR AGRICULTURAL BUILDINGS

The new Home Economics Building on the Davis campus of the University of California, has been accorded both local and national awards for its advanced design in collegiate architecture.

Clark and Beutler, and Robert J. Evans, chief architect for the university, were honored by The American Institute of Architects, Award of Merit, and the School Executive magazine for their design of the building. One of the features of the L-shaped structure is its unique design to reduce discomforts from high temperatures, based upon extensive studies of the sun’s position at all times.

ARCHITECT OPENS OFFICES IN ABILENE, TEXAS

George Morgan, architect and engineer, has opened offices in Abilene, Texas, for the practice of architecture and engineering according to a recent announcement.

Morgan, a three year resident of Abilene, practiced architecture and was a designer of homes in California for twelve years prior to moving to Texas. He also engaged in designing numerous commercial, municipal and educational buildings, and during World War II was with the U. S. Corps of Engineers in Southern California.

ENGINEER APPOINTED TO LOS ANGELES BOARD OF EDUCATION

Ed Stahl has been appointed Structural Engineer, Building Branch, of the Los Angeles Board of Education. He will serve as assistant to Chief Structural Engineer Harold Omsted.

PORCELAIN ENAMEL INSTITUTE:—Members of the Porcelain Enamel Institute’s Executive Committee and other industry leaders met in Los Angeles recently, for a "Report to the West Coast", according to W. A. Barrows, Institute president.

BOOK REVIEWS
PAMPHLETS AND CATALOGUES

THE SMALL ENGLISH HOUSE . . . 1500-1939. By Reginald
Price $10.00.

On the premise that the house is the basic unit in architecture,
the author has told the story of English architecture, from the
late medieval times until 1939, in terms of the smaller house.
Extruding cottages on the one hand and the great mansions on
the other, Turton writes of the houses in which the middle class
people make their homes.

The genesis of the smaller English house is to be found in the
Hall of the later middle ages. It was not until the Renaissance
that the dwelling house ceased to be a traditional structure
with the architect unknown, and with the building of the Queen's
House at Greenwich by Inigo Jones entered a period when
houses came to be consciously designed often by named
architects.

There are nearly 200 photographs, engravings and plans,
which form a visual history of the development of the smaller
English house. 215 Pages.

A SURVEY OF HOUSING RESEARCH IN THE UNITED STATES.
Housing and Home Finance Agency. Washington, D. C.
Price $3.00.

Results of a survey conducted by the Building Research
Advisory Board, National Research Council, National Academy
of Sciences, under the supervision of William H. Scheck, ex-
ecutive director of the Building Research Advisory Board, to
provide the industry with as much information as possible
about what is being done in housing research by educational
institutions, scientific foundations, professional societies and
trade associations, and commercial laboratories.

The study is intended to assist the housing industry in the
most efficient use of current research activity and to pro-
vide information as to facilities available for further housing
research.

ADHESIVES FOR WOOD. By E. A. G. Knight. Chemical Pub-

Serves as a guide for the younger technician and a ready
reference for the experienced man. The age-old problem of the
engineer—how to join components together—is the theme of
the book, and in this case the components are made of wood.
The joining of wood to metals and plastics is also considered.

The book contains many interesting diagrams and tables,
giving numerical data on the moisture content of wood in vari-
cous tests. Other features are a glossary of special terms, a com-
prehensive index and many references on every phase of the
subject which will help the technical worker to locate more
detailed information he may need in his work. 242 Pages.

NEW CATALOGUES AVAILABLE

Architects, Engineers, Contractors, Planning Commission
members—the catalogues, folders, new building products
material, etc., described below may be obtained by directing
your request to the name and address given in each item.

Air Filters. Two new booklets, "Bulletin 201-D" and "Bulletin
401-A", covering the subject of automatic, self-cleaning air
filters and cleannable air filters are available from the Stanford
Mechanical Equipment Co., 368-40th St., Oakland 6, Califor-
nia, newly appointed Sales Representatives of Continental Air
Filters, Inc., of Louisville, Ky. The material includes a number
of charts, scales, drawings and photographs showing methods
and types of use.

Water Circulators. A new pamphlet devoted to information on
water circulators including performance charts, capacity tables,
dimensions, etc., on horizontal and vertical installations. Num-
rous drawings illustrate the various applications for hot water
heating systems and domestic hot water supply systems. Other
special and unusual applications are also called to the atten-
Piper Building. It was not until the 1950s.

Elevator and Dumbwaiter Doors. An illustrated, two-color, 12-
page folder describing the many advantages of bi-parting
telegraphing and single section freight doors for use on elevators
throughout industry and in stores, hotels and office buildings.
Also describes dumbwaiter doors used on hotel entrances for

ARCHITECT AND ENGINEER
Stainless Steels for Store Fronts and building entrances. A new two-color illustrated booklet that analyzes the use of stainless steel in a variety of store-fronts and entrances in various parts of the country. Detail drawings, photographs, and brief comments point up significant features of the installations presenting to the architect and designer stainless steel know-how in its most useful form. Prepared in cooperation with Department of Education and Research of The American Institute of Architects. A.I.A. File No. 26D. Committee of Stainless Steel Producers, American Iron & Steel Institute, 350 5th Ave., New York.

Tables of Distinction catalog is printed in full color and emphasizes new Fiore Design cast construction tile base. Other illustrations show a variety of metal finishes including cast anodized aluminum, chrome and bronze plate, cast solid bronze, and cast iron in a wide variety of porcelain enamel colors. Many illustrations, sizes and accessory specifications. Available from Chicago Hardware Foundry Co., North Chicago, Illinois.

Air Conditioning high velocity systems are described in a new bulletin (HV Manual 49) with engineering data on the selection, layout and installation of Anemostat units for high velocity air conditioning systems. This new publication contains data that will help consulting engineers design high velocity air conditioning systems, plus standard tables in the ASHVE Guide; useful tips on duct design, sizing of ducts, types of systems and balancing of units and information on how metal and space savings can be achieved. Photographs and drawings are shown. Available from Anemostat Corp. of America, 10 E. 39th St., New York 16.

Approved Playground Equipment manufactured by the American Playground Device Company is shown in colored pamphlet, also gives complete description and prices. Fittings and combinations of pieces of equipment are given. Includes playgrounds and swimming pools. Available from American Playground Device Co., Anderson, Indiana.

Awning Type Windows popularly used in ranch type residential building uses top-hinged or owning type windows. This pamphlet shows uses in single or multiple units, or in “ribbon” series as ventilators in large fixed glass areas. Device permits perfect control of sash in any projected position. Complete information available The Crescent Hardware Co., 612 N. Michigan Ave., Chicago 11, Ill.

Modernfold Doors. An architectural inspiration for every interior closure or space division problem. New catalog with many photographs, shows how to specify doors to save space in home and commercial installations and as a room division for both home and commercial use. Contains complete architectural detail for stock, standard and custom doors, including track sizes and styles; sound insulated doors, curved installations, switch installations and mechanically operated doors. Catalogs are available from Modernfold Door Division, 655 Folsom St., San Francisco.

Silent Light Switches are described in a new folder on “Life-time Quiette Switch”; can be installed in any position, quiet in operation, and designed for use with both incandescent and fluorescent lights. Complete information from Arrow-Hart & Hegemann Electric Co., Hartford, Conn.

Distribution Panelboard pamphlet lists specifications and enclosure sizes; can be assembled on job from stock parts; circuits may be changed or added to the panelboard with a minimum of lost time. Gives suggestions on correct installations, including a step-by-step photographic demonstration of an assembly. Available from Federal Electric Products Co., 50 Paris St., Newark, N.J.

Overhead Panelray new catalog. Contains photographs of various models for use in commercial and industrial buildings, theatres, churches, and auditoriums. Also data on dimensions and specifications and a number of testimonials. A.I.A. File No. 30-C-42. Available from Affiliated Gas Equipment, Inc., Monrovia, California.
ROBERT M. JOHNSON APPOINTED
SOUTHERN SALES MANAGER

Robert M. Johnson has been appointed Southern California sales manager for General Controls Co., according to an announcement by J. F. Ray, vice president of the company.

Johnson, a Los Angeles native, has more than fifteen years’ experience in the heating, ventilating and air conditioning fields. He is a registered professional engineer, member of the American Society of Heating & Ventilating Engineers and past chairman of the floor furnace group of the Gas Appliance Manufacturers Association.

CLAY MANUFACTURERS NAME
NEW EXECUTIVE DIRECTOR

The Structural Clay Products Institute, national association of brick and tile manufacturers, recently announced the appointment of Henry E. Bollman of Denver as executive director. The new post was created by the institute’s board of directors.

SOUND ENGINEER JOINS
REDWOOD CITY FIRM

Dr. Carl H. Becker, German physicist and audio engineer, has joined the staff of the Ampex Electric Corp. of Redwood City, California.

Dr. Becker was chief sound engineer and physici-
Building and Construction Materials

Prices given are figuring prices and are made up from average quotations furnished by material houses to San Francisco contractors. 3% sales tax on all materials but not labor.

Dampproofing and Waterproofing—

Two-coat work, $9.00 per square.

Membrane, waterproofing in large layers of saturated felt, $10.00 per square.

Hot costing work, $5.00 per square.

Medusa Waterproofing, $3.50 per lb. San Francisco Warehouse.

Tricalcium concrete waterproofing, 60 c. a cubic yd. and up.

Electric Wiring—

$15 to $20 per outlet for conduit work (including switches).

Knob and tube average $5.00 per outlet.

Elevators—

Prices vary according to capacity, speed and type. Consult elevator companies.

Average cost of installing a slow speed automatic passenger elevator in small four story apartment building, including entrance doors, about $9,500.00.

Excavation—

Sand, $1.00; clay or shale, $1.50 per yard. Trucks, $30 to $45 per day.

Above figures are an average without water. Steam shovel work in large quantities, less hard material, such as rock, will run considerably more.

Fire Escapes—

Ten-foot galvanized iron balcony, with stairs, $250 installed on new buildings; $300 on old buildings.

Floors—

Asphalt Tile, 1/4 in. gauge 18c to 35c per sq. ft.

Composition Floors, such as Magnesite, 45c to $1.25 per sq. ft.

Linoleum, standard gauge, sq. yd., $2.75

Mastic: $1.50 per sq. yd.

Battens: Linoleum—1/4"—$3.00 sq. yd.

Tar Floors—$2.00 per sq. ft.

Tar Step: $2.50 per lin. ft.

Mastic Wear Coat—according to type—

20c to 35c.

Hardwood Flooring—

Oak Flooring—I & G-Unfin.—

Clear Olds, White | $125.00

Clear Old, Red | $135.00

Select Old, Red or White | $150.00

Clear Pine, Red or White | $165.00

Select Pine, Red or White | $180.00

Oak Floors—

#1 Common, red or White | $310.00

#2 Common, Red or White | $350.00

Prefinished Oak Flooring—

Premade Standard, Prime | $1.25

Premade Standard, Standard | $1.75

Premade Standard, Select | $2.00

Premade Standard, Better | $2.50

Untinished Maple Flooring—

#1 2%, 2%, 2% 1st Grade, 450.00

#1 2%, 2% 2nd Grade, 365.00

#1 2% 3rd Grade, 150.00

#1 2% 4th Grade, 135.00

#2 2% 1st Grade, 400.00

#3/2 2% 2nd Grade, 360.00

#3/2 2% 3rd Grade, 320.00

Floor Lumber Wage $2.40 hr.

Glass—

Single Strength Window Glass—$30 per 100 sq. ft.

Double Strength Window Glass—$35 per 100 sq. ft.

Plate Glass, 1/4 polished to 7/8, $1.50 per sq. ft.

Window Glass, 1/2 fine, $1.74 per sq. ft.

Tinted Wire Plate Glass, $1.75 per sq. ft.

Ridge, Glass $2.50 per sq. ft.

Obscure Glass $3.50 per sq. ft.

Heat Absorbing Glass $3.50 per sq. ft.

Ribbon $3.00 per sq. ft.

Rough $3.75 per sq. ft.

Glas of additional $1.25 per sq. ft.

Glass Block, in place $2.80 per sf.

Heating—

Furnaces—Gas Fired

Floor Furnace, 15,000 Btu $70.00

30,000 Btu $120.00

45,000 Btu $210.00

Automatic Control, Add $40.00

Dial Wall Furnaces, 25,000 Btu $95.00

45,000 Btu $170.00

With Automatic Control, Add $30.00

Floor Heaters, 50,000 Btu $200.00

Gravity Furnace, 65,000 Btu $190.00

Forced Air Furnace, 75,000 Btu $315.00

Water Heaters—Year guarantee

With Thermostat Control, 20 gal. capacity $97.50

30 gal. capacity $103.00

40 gal. capacity $120.00
INSULATION AND WALLBOARD—
Rockwool Insulation—
(2) 12" x 5" insulating slabs—$4.00
(2) Over 1,000 sq. ft. $9.00
Cotton Insulation—Full-thickness
5/8" $9.50 per M sq. ft.
Stabilation Insulation—Aluminum
5/8" $9.50 per M sq. ft.
Tileboard—8" x 4" panel—$9.00 per panel
Wallboard—4" per thickness $5.50 per M sq. ft.
Finished Plank—69.00 per M sq. ft.
Ceiling Tileboard—69.00 per M sq. ft.
IRON—Cost of ornamental iron, cast iron, etc., depends on designs.
LUMBER—
4 x 4 $1.00 each;
1 x 6 $1.50 each
1 x 4 $1.25
1 x 2 $1.00 lbs.
3/4" x 6' $3.00
Redwood per board

Finishing lumber
11/2-inch, $1.00

PATENT CHIMNEYS—
6-inch $2.50 linear foot
8-inch $3.00 linear foot
10-inch $4.00 linear foot
12-inch $5.00 linear foot

PLASTER—
Neat wall, per ton delivered in S. F., in paper bags, $17.50.

PLASTERING—
(Interior)
3 Coats, metal lath and plaster.
Keene cement on metal lath.
Ceilings with 3/4" hot roll channels metal lath.
Ceilings with 3/4" hot roll channels metal lath plastered.
Single partition 3/4" channel lath 1 side (lath only).
Single partition 3/4" channel lath 2 inches thick plastered.
4-inch double partition 3/4" channel lath 2 sides (lath only).
4-inch double partition 3/4" channel lath plastered, plastered both sides.
Thermos single partition; 1" channels, 2 1/2" overall partition width. Plastered both sides.
Thermos double partition; 1" channels; 4" overall partition width. Plastered both sides.
3 Coats over 1" Thermos nailed to one side wood studs or joists.
3 Coats over 1" Thermos suspended on one side wood studs with spring isolation clip.
Note—Channel lath controlled by limitation orders.

PLASTERING—(Exterior)
2 coats cement finish, brick or concrete wall.
3 coats cement finish, No. 18 gauge wire mesh.
Lime $4.00 per bbl. at yard.
Processed Lime $4.15 per bbl. at yard.
Rock or Grip Lath 3/8"—30 pc. per sq. yd.
Composition Suction $4.00 per sq. yd. (applied).

PLUMBING—
From $200.00 per fixture up, according to grade, quality and runs.

ROOFING—
Standard Tar and gravel, 4 ply $13.00
per sq. for 30 sq. or over.
Less than 30 sq. $16.00
Tile $40.00 to $50.00 per square.
No. 1 Redwood Shingles in place.
4/3 in. exposure, per square $18.25
5/2 No. 1 Cedar Shingles, 5 in. exposure, per square $14.50
5/6 & 1/4—No. 1 Little Giant Cedar Shingles, 7 1/2" exposure, per square $18.25
4/2 No. 1 24" Royal Cedar Shingles, 7 1/2" exposure, per square $23.00
Roast with Gravel $5.50 per sq.
Asbestos Shingles, $27 to $35 per sq. laid 1/2 to 3/4 x 25" Resawn Cedar Shakes, 10' Exposure $30.00
1/4 to 1/2 x 25" Resawn Cedar Shakes, 10' Exposure $35.00
1 x 25' Resawn Cedar Shakes, 10' Exposure $22.00
Above prices are for shakes in place.

SEWER PIPE—
C.L., 6-in. to 24-in. B. & S. Class B and heavier, per ton.
$99.50
Standard, 8-in. $6.60
Standard, 12-in. $1.30
Standard, 24-in. $5.41
F.O.B. Plant, $1.00 L.F.
Standard, 6-in. per M. $240.00
Standard, 8-in. per M. $400.00

SHEET METAL—
Windows—Metal, $2.50 a sq. ft.
Fire doors (average), including hardware $2.80 per sq. ft., size 12x12. $3.75 per sq. ft., size 5x6.

SKYLIGHTS—(not glazed)
Galvanized iron, per sq. ft. $1.25
Vented hip skylights, per sq. ft. $2.25
Aluminum, puttyless, (un glazed) $1.25
 Installed and glazed, per sq. ft. $1.85

STEEL—STRUCTURAL—
$290 per ton erected, when out of mill, $350 per ton erected, when out of stock.

STEEL REINFORCING—
$200.00 per ton, in place.
1/4" Rd. (Less than 1 ton) per 100 lbs. $9.80
3/8" Rd. (Less than 1 ton) per 100 lbs. $8.70
5/8" Rd. (Less than 1 ton) per 100 lbs. $7.50
3/4" Rd. (Less than 1 ton) per 100 lbs. $7.25
6/8 & 7/8 in. Rd. (Less than 1 ton) $7.15
1 in. to 5 tons, deduct 25c.

STOREFRONTS—
Individual estimates recommended. See ESTIMATORS DIRECTORY for Architectural Veneer [3], and Mosaic Tile [35].

TILE—
Ceramic Tile Floors—Commercial $1.20 to $1.60 per sq. ft.
Cove Base—$1.40 per lin. ft.
Quarry Tile Floors, 6"x6" with 6" base $1.85 per sq. ft.
Tile Wainscots Floors, Residential, 6x4" x 6" $1.65 to $2.00 per sq. ft.
Tile Wainscots Commercial, 6x4" x 6" Tile, per $1.85 to $2.00 per sq. ft.
Asphalt Tile Floor, 1/2" $1.85 to 3.35 sq. yd.
Light shades slightly higher.
Ceramic $1.50 to $2.00 per sq. ft.
Mosaic Floors—See dealers.
Linoleum tile, per sq. ft. $1.60
Rubber tile, per sq. ft. $5.50 to $7.00

Furring Tile Scored
12 x 12, each $0.17
Kraftile—Per square foot Small Lot
Parl Tile—Riles Red
Lot
12 x 12 1/4 in. each $0.40
6 x 12 x 1 1/4 in. plain $0.39
6 x 12 x 1 1/4 in. plain $0.42

Building Tile—
8x8 or 12 inches, per M $2.50
4x4 or 6 inches, per M $1.50
4x4 or 6 inches, per M $0.50

Hollow Tile—
12x12x12 inches, per M $4.65
12x12x6 inches, per M $3.50
12x12x9 inches, per M $4.50
12x12x12 inches, per M $5.00

VENETIAN BLINDS—
75c per square foot and up. Installation extra.

WINDOWS—STEEL—INDUSTRIAL—
Cost depends on design and quality required.

Built-in telephone facilities will make a hit with your clients

Your clients will appreciate your thoughtfulness if you include built-in telephone facilities in your building plans. Concealed conduit for telephone wiring and conveniently located telephone outlets allow them to change the position of their telephone without detracting from the beauty of their home with exposed wiring.

Just call Pacific Telephone’s free Architects and Builders service. We’ll be glad to help you plan for better living tomorrow in the homes you are building today.

Put built-in telephone facilities in your plans

IN THE NEWS

SHOPPING CENTER
FOR PALO ALTO

A group of buildings and super-markets representing a cost of $2,000,000 is being planned for construction near the City of Sacramento, according to R. H. Cooley, Structural Engineer for the project.

The buildings are to be of single story, concrete block design and will be built by John J. Moore Company, General Contractors of Oakland.

REMODELING CONTRACTOR
GROUP BEING FORMED

A group of Southern California remodeling contractors are in the process of incorporating a new trade group to be known as the Remodeling Contractors Association, according to Harold Hammerson, temporary chairman.

Interested contractors are invited to contact Hammerson in Los Angeles.

MEDICAL BUILDING
FOR PALO ALTO

Paul James Huston, Palo Alto architect, has been commissioned to design a Medical Building, comprising three stories, for Palo Alto.

The building will be of 1 and 2-story design and 5-frame construction with some stone veneer on the exterior. A. G. Fryman of Menlo Park is the General Contractor.

AIRCRAFT PLANT
EXPANDS

Groundbreaking ceremonies were conducted recently for the construction of a new engineering and office building for the Marquardt Aircraft Company at Van Nuys, Los Angeles county.

A 2-story building will be used to house the expansion program involving an employee cafeteria, paving and lighting of employee parking area, installation of a public address system, and test laboratories.

OIL PLANT
FOR BREA

The Orange County Planning Commission has approved application of the Union Oil Company to build a new chemical plant for the manufacture of ammonia and by-products, on a site 14 miles east of the city of Brea.

General offices and administration building, change house and dispensary, warehouse, shop, loaders office and utilities building, compressor building, boiler plant, and tanks are included in the project.

INDUSTRIAL COMMISSION
BUILDING FOR NEVADA

The Nevada Industrial Commission has announced remodelling of a new Industrial Commission building to be erected in Carson City at an estimated cost of $100,000.

Plans and specifications are being prepared by the architectural firm of Ferris & Edgine of Reno. The building will be 2 story design with basement and complete interior remodel.

BRANCH LIBRARY
SAN FRANCISCO

The Department of Public Works for the City and County of San Francisco has hired the architectural firm of Abraham & Ward of San Francisco, to design a new branch library to be built at the corner of Webster streets.

Cost of the project is estimated at $150,000 and will be a 1-story, reinforced concrete building with a brick veneer exterior.

SEQUOIA HOSPITAL
REDWOOD CITY

The Sequoia Hospital District of Redwood City, San Mateo county, will construct a 98-bed wing addition to the Sequoia Hospital, according to hospital authorities.

The addition will be a 2-story reinforced concrete building and will cost $800,000.

Stone and Mulley & S. P. Marraccini of San Francisco are the architects.

ADDITION TO CAYUCOS
ELEMENTARY SCHOOL

Architect John Badgley of John Badgley & Associates, San Luis Obispo, is responsible for plans and specifications for a major San Luis Obispo county school addition.

Classrooms, cafeteria, corridors and utility rooms are being built for the Cayucos Elementary School District at a cost of $51,700.

C. C. Sharps of Arroyo Grande is the general contractor. The new facilities will be ready for use in the 1953-54 school term.

FACTORY BUILDING
FOR SAN FRANCISCO

The Kortick Mfg. Co., San Francisco, have announced construction of a 1-story reinforced concrete building of the new "tilt-up" method of wood trusses, is to be built in San Francisco at a cost of $160,000. It will contain 57,000 sq. ft.

Simpson & Stratta, San Francisco, are the Engineers.

MOVABLE PARTITIONS
VENTURA COURTHOUSE

Movable interior partitions will be a feature of the $250,000 annex to be built at the Ventura County Courthouse in Ventura.

Two stories in height, the annex will be fireproof and will provide facilities for a courtroom and offices.

Roy C. Wilcon of Santa Paula is the architect.

BLOOD BANK
BUILDING

Architects Stone & Mulloy, and S. P. Marraccini associate, have completed plans and specifications for a 1-story frame, stucco, and structural steel building to be built in Millbrae, San Mateo county, for the San Mateo County Blood Bank.

Cost of the project is estimated at $126,000.

HIGH SCHOOL
GYMNASHIUM

Architects Masten & Hurd of San Francisco have been commissioned by the Fremont Union High School District of Santa Clara county, to draft plans and specifications for the construction of a new gymnasium building at the Fremont High School in Sunnyvale.

PHOEBE HEARST
SCHOOL PLANNED

The Sacramento Board of Education has announced construction will soon start on the new $325,000 elementary school to be known as the Phoebe Hearst School.

It will comprise 14-classrooms, administration, kindergarten, nurses, and toilet room and will be of frame and stucco construction.

Harry J. Devine of Sacramento is the architect.

WEST ORANGE SCHOOL
WILL ADD CLASSROOMS

Architect Paul O. Davis is preparing plans for the West Orange Grammar School in Orange, Calif., which will add live rooms to the present building.

Three rooms were added in 1950 and with the present addition the unit will comprise a total of 14 rooms.

ARCHITECT OPENS
NEW OFFICES

Earl J. Taylor, A.I.A., architect, has opened offices in North Sacramento for the general practice of architecture.

A graduate of the University of Utah with a degree in civil engineering, Taylor took post graduate work in architecture at the University of Michigan and the U. S. Naval Academy at Annapolis. Before entering private practice in the Sacramento area, he was a naval architect at the Puget Sound Naval Shipyards and was also with the U.S. Bureau of Reclamation.

SCHOOL BONDS
APPROVED

Qualified voters of the Ravenswood Elementary School District of San Mateo County approved a bond election of $489,000 at a recent special election.

Funds are to be used in the construction of Elementary School buildings in East Palo Alto.

SHOPPING CENTER
HOUSING PROJECT

The Sterling Building Company of San Francisco have completed plans for the addition to San Mateo county for a zoning permit to construct a private housing project and shopping center in Pedro Valley near Sharp Park.

The project will include 300 residences and cost approximately $35,000,000.

CLASSROOM ADDITION

Architects Laurence V. Viole, Ayers and Demorest of North Hollywood have completed plans for the addition to classrooms to the St. Jane Francis de Chantal Parish of Los Angeles.

The additions will comprise one to construction, composition white rock roofing, concrete slab floors with asphalt tile, interior stucco and plaster work, pipe columns, forced air heating with thermostatic control, and toilets.

CONTRACTORS GETS
MILITARY WORK

Hal B. Hayes Contractor, Inc. of North Hollywood, has been awarded three Army projects near Salt Lake City, Utah. They will construct an initial 150 homes at a cost of $1,500,000 at the Desert Chemical Depot, Desert, Utah; 53 homes at the Utah General Depot, Ogden, at a cost of $1,000,000; and 25 residential units at the Nevada Ordnance Center at a cost of $250,000.

Contrasts were let through the Corps of Engineers, Sixth Army, San Francisco District.

OFFICE BUILDING
IN BURLINGAME

R. P. Elleman and S. W. Gates of Burlingame have commissioned architects Sharpe & Brown of San Mateo to draft plans for the construction of a new office building on El Camino Real.

The new structure will comprise a 2-story concrete block with some structural steel building with brick work. 50x85 ft estimated cost is $100,000.

SHOPPING CENTER
FOR HAYWARD

The Ames Parish Company, architectural firm of New York City, has been commit-

ARCHITECT AND ENGINEER
sioned by H. W. Owen of Hayward, California, to draft plans and specifications for the construction of a $20,000,000 Shopping Center to be built near Hayward.

The project calls for a group of store buildings.

ARCHITECT SELECTED

The architectural firm of Buchter & Lillis, Vallejo, has been selected by the Board of the Vallejo Unified School District to design a new Administration building to be built in Vallejo.

PORTLAND CEMENT INFORMATION BUREAU

Architects, contractors, and engineers seeking information relative to prevention of shrinkage cracks in concrete floor slabs, or concrete floor slab warping, or prevention of excessive dusting of concrete walls and ceilings, or almost any information pertaining to the use of concrete may secure such information from the Portland Cement Information Bureau, 564 Market Street, San Francisco.

The Bureau, in charge of Jay E. Jellick, answers dozens of questions on Portland Cement concrete and is designed to serve the entire construction industry.

NEW HIGH CAPACITY GAS FIRED INCINOR

Field tests have been completed on a new twin-burner incinerator of four bushel capacity for commercial use.

It uses LP, manufactured, natural or mixed gases at a rate of 50,000 BTU per hour input. Standard unit has ¾" thick steel plate combustion chamber and also furnished with heavy refractory lining at extra cost. Solves problem of hospitals, clinics, restaurants, stores, motels and institutions. Manufactured by Inceration Division, Bowser, Inc., Cairo, Ill.

OFFICE BUILDING

FOR BAKERSFIELD

Architect Robert N. Eddy, Bakersfield, is designing a new office building to be built in Bakersfield for the Inex Oil Company.

The building will be 1-story in height, and will contain 7500 sq. ft. of floor space.

A MASTER BUILDER

The Architect...an individual who professionally plans buildings and supervises their construction.

The American Institute of Architects, a national organization representing many architects throughout the nation, has recently published a collection of facts about the Architect, his services, his profession and his national association. Objective of the publication is to have available to those who may be interested in using an Architect, a ready reference on things architectural.

Employing an Architect is similar to engaging the services of any professional man. Training and ability are important; his business capability, his artistic and technical ability, and his temperament are also important.

It is a pretty safe rule when contemplating any new building, or remodeling of old structures, to "Consult an Architect" and if at all possible "Know Your Architect."

ANOTHER BITE

Members of the California State Legislature recently approved the assessment and collection of 1 1/2c per gallon gasoline tax from the motoring public. Payment of the one and one-half cents in itself will not seriously affect the operator of any motor vehicle, and if the funds raised are wisely spent on construction and maintenance of California highways there may possibly be sufficient benefit accruing to the motorist to compensate for the additional tax-bite.

There is considerable eye-brow lifting, however, in the manner and method in which the gasoline tax is spent and allocated. Motorists in one section of the state have difficulty in comprehending the tremendous expenditures in some other area, they cannot understand obvious inadequate highways in their community and super-duper freeways with complicated over-pass, under-pass, on-and-off approaches, and pedestrian walk-ways that seldom serve a pedestrian in another.

Highways are essential to modern living, but so is food, clothing, and shelter. Another 1 1/2c gasoline tax, an increase in automobile insurance rates, increase costs in automobile repair and maintenance, expansion of the parking-meter curse, and substantial increases in car parking rates in metropolitan areas, all contribute to less funds available for the also needed elements of living, i.e. proper food, clothing, medical care, and housing.

Members of legislative bodies empowered to assess charges against the income and necessities of living, should exercise such power in the light of the overall problem of the individual to meet the total costs of maintaining the American way of life. It should be well remembered that "the power to tax, is the power to destroy."

* * *

You didn't start working for yourself until April 22nd—prior to then all wages, salaries, rents, interest and dividends received represent an out-go for payment of taxes.

HOUSE TRADE-INS

The National Association of Home Builders, through a number of its members is experimenting in a "Trade-In" Home Program which promises to develop some extremely interesting factors in the home-owner-home builder relationships throughout the nation.

Many prospective home buyers are faced with the problem of what to do with a present house which must be disposed of before acquiring the new home. In many instances growing families make present living facilities inadequate and more space is needed. Preliminary study shows that incomes have usually increased since acquiring the initial home-buying obligation and nominal increases in monthly payments can easily be made on a larger house. Few families have, however, accumulated the cash necessary to make a down payment on the larger house, but can do so by using the accumulated equity in their present home.

The problem therefore facing the nation's home builders is What to do with the trade-in home, how much remodeling is necessary to put the structure in a easy marketing condition, and how far will the financing agencies go in such a program.

Indications are that cooperation among all phases of the home building industry throughout the nation will result in an acceptable plan and a program beneficial to the home owner will soon develop.
Creating Appetite Appeal with COLORFUL CLAY BRICK

following special Exhibitions and Events for the Month of June:

**Exhibitions**—Leger. A Survey of His Art; Contemporary Drawings from 12 countries; Paintings by Loren Maclver and I. Rice Pereira; Design for Outdoor living; and Costume and Stage Designs by Eric Stearne.

**Events**—Lecture tours of the Museum are held each Sunday at 3 p.m.; Discussions on Art each Wednesday evening at 8 o'clock; Classes in Art for the Layman (will close for Summer in June); and Motion Picture films relating to art subjects each Saturday and Sunday at 2 and 4 p.m.

More than 4000 entries were submitted for consideration in the exhibition of Contemporary Drawings from 12 Countries, and 314 works were selected for inclusion. This exhibition will also be shown at the Los Angeles County Museum and the Colorado Springs Fine Arts Center, as well as a number of Eastern art centers.

**SAN FRANCISCO ART ASSOCIATION**

Award winners for the San Francisco Art Association, 800 Chestnut Street, Open Exhibition for Artist Members have been announced and include:

Clayton Pinkerton, resident of Richmond and instructor at the Richmond Art Center, $100 for untitled Oil Painting; Alan Williams, Richmond, teacher of sculpture, Berkeley Evening High School, $100 for untitled Sculpture In Iron; Kenneth Nack, San Francisco, director of Area Arts Galley, $100 for watercolor "A Stringed Instrument With A Pear Shaped Body and A Fretted Neck."

David Park, Berkeley, $75 for Oil Painting "Manicure"; Emiko Nakano, San Francisco, $60 for Oil Painting "Landscape"; and Mary Navratil, San Francisco, $50 for Oil on Canvas "Omen."

Jury of awards consisted of John Haley, University of California instructor in Painting; John Humphrey, San Francisco Museum of Art staff member; Fenton Kastner, sculptor and librarian at the California School of Fine Arts; Weldon Kees, recently of New York City; and Jerry Walter, Sausalito sculptor.

**ARCHITECTURAL ACTIVITIES AT THE SEATTLE A.I.A. MEETING**

Thirty members of The American Institute of Architects were advanced to the rank of Fellow in recognition for their distinguished performance in design, education, literature, public service, and service to The Institute.

Among those receiving this high recognition were: William Charles Furer of Honolulu, T. H., for "service to The Institute"; Henry L. Gogerty of Los Angeles, for "Science of Construction"; Kenneth Smith Wing of Long Beach for "Design"; and Arthur P. Herrman of Medina, Washington, for "Education."

Pedro Ramirez Vazquez, President of the Mexican Society of Architects was elected Honorary Corresponding Member, an honor conferred yearly upon the presidents of architectural societies in England, Canada, Mexico, Cuba and the Philippines.

Joseph Eichler, home builder of Palo Alto, California, spoke at a special business session of architects and representative of the National Association of Home Builders. It was the first time an operative builder has appeared on a national convention program of architects.

Members of the Honor Awards Jury for this year included: H. Abbott Lawrence, A.I.A. of Portland; Lawrence G. Waldron, A.I.A. of Seattle; Rollin H. Boles, A.I.A. of Portland; Arthur P. Herrman, A.I.A., of Seattle; and non-architects Charles H. Gordon, Seattle; V. O. Stringfellow, secretary NAHB; Frederick M. Hunter, Eugene; and Walter L. Doty, Menlo Park, California.

Architectural exhibits were not limited to Seattle, but were also shown in Tacoma, Spokane and Olympia, Washington.

The Steel Joint Institute, Washington, D. C., and the Overly Mfg. Co., of Greensburg, Pa., were awarded "Certificates of Exceptional Merit" in the annual Products Literature Competition, an event sponsored jointly by the A.I.A. and The Producers' Council.

A 60-page manual, containing illustrations of Seattle Architecture and nearby lake regions, was issued in conjunction with the Convention. Copies ($1.00 each) may be secured from the Washington State Chapter, A.I.A. offices, 430 Central Building, Seattle 4, Washington.

A flying Indian Thunderbird, adapted from the totem pole carvings of the Haida Indian Tribe of the Queen Charlotte Islands, was chosen as the emblem for this year's convention. Selection of the local Indian symbol highlighted the character of the convention, the first ever to be held in the Pacific Northwest by the A.I.A. Designer of the emblem John Detlie of the Washington State Chapter, pointed out that the Thunderbird, part of Indian tribal mythology and legend, symbolizes the link between the native heritage of the Northwest and its contemporary art and architecture.
DRIVE-IN UNITED STATES POST OFFICE

LOS ALTOS VILLAGE
(LOS ANGELES)

WELTON BECKET, F.A.I.A., ARCHITECT
AND ASSOCIATES
ARCHITECTS & ENGINEERS

Southern Californians' partiality toward drive-in theaters, markets, and restaurants now includes a drive-in United States Post Office. Residents of Los Altos Village are proud of their new post office, first of its kind in the West. In the first three months of operation, more than 11,900 automobile patrons have been served at the convenient car-service windows.

The unique post office and store building was designed for the Lloyd S. Whaley Company and Home Investment Company by the architectural firm of Welton Becket, F.A.I.A., and Associates, architects and engineers.

Before committing the plans for the building to paper, the architects worked in close cooperation with Long Beach Postmaster Howard K. Goodwin to produce a post office that insures maximum efficiency in the handling of normal postal transactions. Studies were made of the traffic flow along the busy Bellflower Boulevard; of the driving habits
of the community; and available parking facilities in the rapidly expanding business area.

After careful consideration of local climatic conditions the designers made the best use of available sunlight and air throughout the building to insure the most favorable working conditions for employees.

Without leaving their automobiles, post office customers may enter the one-way drive off Bellflower and approach the outside postal windows to purchase stamps and mail packages. The windows themselves are specially designed at a convenient height inside to facilitate the operations of the clerks. Overhanging canopies at each of the two windows offers protection from rain. The windows have double protection with the usual outer slide-up iron grille and a slide-up window inside that can be closed in cold weather, leaving a small opening at the bottom for postal transactions.

Upon completing their business at the windows, the patrons have three choices of egress from the post office: straight through the parking lot to an alley or by turning right or left through the parking lot to the street on either side. The parking lot behind the building has space for 500 automobiles for the convenience of post office customers and shoppers at the adjoining stores.

Covering 12,000 square feet, the building includes space for doctors’ offices and stores in addition to the post office branch. There are both street and parking lot entrances to all the units in the building. It is constructed of reinforced concrete block, with ceramic veneer finishing on the post office front. The roof is of arched rib-type trusses in two spans. Ceilings are suspended acoustical tile. Interior walls are wood stud partitions, designed for easy expansion in the future.

Cantilever canopies on the east and west sides of the building cover the sidewalk and the walkway from the parking lot. Street entrances to the stores are of glass with extruded aluminum doors.

Postmaster Goodwin announced to the community that Southern California’s first drive-in post office is being studied with interest by top postal department executives. Los Altos Village was chosen as the testing ground for the unique idea because of the suburb’s typically modern personality. Judging by the favorable response on the part of the motorized shoppers of the area, Goodwin believes that other Southland communities will be demanding the easy drive-in service.

PLENTY OF ROOM—Solving the off-street parking problem before it develops, a parking lot for 500 automobiles is provided at the Los Altos Village new Drive-In-Post-Office. Outside windows at far left of building take care of patrons from their automobiles, similar service provided on street-side of building.
SITE: A residential lot, approximately 60' x 150', located in the heart of Berkeley, overlooking a beautiful wooded canyon and within earshot of a natural stream at the bottom of the canyon.

PROGRAM: To provide, for a couple whose children are married, a small, one-bedroom house (with a study and adjoining bath readily convertible to a guest room) which would take maximum advantage of the site and be easy to maintain.

PLAN: The structure of the house follows the contours of the slope to achieve the greatest possible area with minimum excavation and retaining walls.

It is oriented to give major living spaces full view of the wooded canyon and to retain such natural beauties as the flowering cherry and luxuriant laurel trees on lot.

Garden space and building structure were
planned as a unit to permit maximum enjoyment of outdoor vistas from every room in the house.

The location of the garage was determined by the contours of the site for easy access from the street, and to preserve the existing trees. Wood storage space is provided under the garage, and the overhang of the garage roof is extended to give covered passage to the front door of the house.

House and garage are separated by a small inner garden and pool which becomes an extension of the living room through a wall of glass. Sliding glass doors on the opposite side of the room overlook the wooded canyon and open out onto a spacious sun deck running the full length of the house, cantilevered over the steep edge of the canyon. An ell on the sun deck side of the living room forms the dining space, with floor to ceiling panels of fixed glass on the view side.

The study adjoins the living room, off the entry way from the front door. Glass doors open onto the sun deck on the east side, and a glass bay is located on the south wall overlooking the attractive gardens of the neighboring home. A convertible sofa-bed is recessed in this bay. The study fireplace, with raised hearth, is backed up to the living room fireplace and one chimney serves them both—as well as the furnace and water heater located in the work shop on the floor below.

Off the dining space at the north end of the house is the kitchen, with windows overlooking both canyon and inner garden. The breakfast space adjoining has a plate glass floor to ceiling window, affording an unobstructed view of the garden.

A utility hall, adjacent to the breakfast room, accommodates an automatic clothes washer and drier which are concealed from view by tambor shutters.

The large master bedroom is located directly over the living room with a wall of glass and French doors opening onto a balcony on the canyon side. The bath room is divided into two compartments with the dressing room adjoining. High windows provide privacy but permit a view of the cherry tree.

Large storage areas are located on this floor.

---

**OPEN ROOF**

Roof opens over master bed-room sun porch, with a sufficient overhang being maintained to protect the bedroom from glare and direct sun.

—Photo's by Ernest Braun.
Area facing the "canyon" is featured by large glass windows and "sun-deck" combination for indoor and outdoor living.

Top view—looks towards house interior.

Bottom view shows magnificent trees in canyon, behind city streets, and "deck" which enhances spaciousness of the area.
over the kitchen. Additional storage space is provided on the ground floor adjacent to the workshop.

The underside of the roof forms the ceiling for study, dining room and master bedroom. The roof framing is 4 x 10 select Douglas Fir beams sheathed with 2" T&G white fir. Beams are 30 feet long and cantilevered over the bedroom walls to the ridge in the center.

The shake roof horizontal siding is re-sawn 1 x 8 T&G redwood. Vertical siding is 1 x 6 T&G smooth surface redwood.

View from Canyon side shows how living space was extended by cantilevering the wood deck out into the tree tops.

North exposure of living space presents glass-framed view of the garden area separating house from street-side garage. A window, cut in garage wall, relieves the starkness of the wall and integrates this separate unit into over-all structure.
MADISON ELEMENTARY
CONVERTIBLE SCHOOL
Boise, Idaho

ANTON E. DROPPING, ARCHITECT
RESIDENT MANAGER, VICTOR N. JONES
AND ASSOCIATES
COST: $7.92 PER SQUARE FOOT

By ARTHUR W. PRIAULX

MODEST FRONT ENTRANCE

Could be lobby of apartment building, medical clinic or other residential-type building.

—Henry R. Griffiths, Jr. Photographs
Boise, Idaho may have solved one of the big headaches of school districts confronted with the unprecedented problem of supplying classroom space to house the over-size, war-baby crop. This Intermountain metropolis has developed the convertible school.

It is a "little" school, built to house the first four grades, and all facilities are in junior size. When the current crop of primary students has progressed, and authorities can look forward to a diminution of numbers of primary pupils, the building is designed for quick conversion into apartments, a clinic, a kindergarten or some other residential district use.

Zed L. Foy, superintendent of Boise schools, and Anton E. Dropping, architect, and Boise resident manager of the firm of Victor N. Jones & Associates, AIA, worked out the idea and plans for the novel school structure.

On a block square area in the center of a fast-growing residential district, this six-classroom neighborhood school structure was designed to conform to the surrounding residences and become an integral part of the community. Called Madison school, it is single storied.

The basic design and architectural problem confronting Architect Dropping was to develop a six classroom neighborhood school with the budget of $60,000. Actually, the low bid was $59,676 for 7,508 square feet, making a square foot cost of $7.92, exclusive of land and architect's fee. All other bidders were close so the low price was not a contractor's error.

The idea was to design a school that was completely functional yet was as simple as possible with a minimum amount of corridor loss. Administration, heating, toilets, janitor's room, teachers' room and kitchen space were kept to a bare minimum. One reason for minimum facilities and improvements was that in the event of sale by the school board at a later date for conversion to apartments, a minimum amount of walls would have to be torn out.

The entire building is standard construction, the

Front view of novel Madison Elementary School at Boise, Idaho—A "little" school designed to be converted to other uses when classroom demand has passed.
exterior walls being made up of eight inch bricks. All interior partitions are stud walls and plaster. Ceilings are covered with sheet rock and acoustical tile. Floors are concrete on grade with asphalt tile covering. All windows and doors are frame in standard sizes.

One saving was developed in the roof, the underside of the fir rafters forming the ceiling. The area between the roof and the ceiling is ventilated by a continuous screened vent under the eaves and a ridge metal monovent. This is a very satisfactory method of ventilating this type of construction. The roof is low pitched and is built up paper and asphalt roofing. The hall ceiling has been furred to accommodate the heat supply ducts, and the cold air return is by means of a system of concrete pipes installed under the floor and around the perimeter of the building. Heat is supplied by an oil-fired furnace in conjunction with an electric air filter.

This is one of four Boise schools designed by Victor N. Jones & Associates, but the smallest school designed for the Independent School District of Boise City.

Classroom space gets the lion's share of the floor area, 66.8 percent, and the six rooms contain 5005 square feet. Some idea of the use of space in the building and the compactness of the design can be gained by a look at the area set aside for other uses. Circulation areas have 951 square feet, toilets for students 323 feet, administration and teachers 435 feet, kitchen 122 feet, heating 250 feet and outside covered areas 422 feet.

To cut down on cost of finishing, all outside walls in classrooms have been left with exposed brick. Lighting is supplied by means of incandescent fixtures throughout, supplementing natural light from long runs of windows. Because all students

---

**Floor Plan—Madison School**

![Floor Plan](image-url)
This classroom has economy brick wall unfinished to save expense. It will be easy to convert in the future to almost any use.

using the “little” school are fourth graders or under, toilets, blackboards and wardrobes have all been installed at a lower than normal height to accommodate these youngsters. Also, the ceilings in the classrooms have been held to a lower than standard height. This, too, will eliminate costs when and if conversion to other use is undertaken. Architect Dropping believes this reduction in scale played a considerable part in keeping costs to a low price of $7.92 per square foot.

One feature of Madison school liked by parents of young students is that its convenient location in the center of a heavily saturated residential district places the school within walking distance for all pupils. Residences are completely around the perimeter of the school. In fact, the building so
Economy roof rafters become ceiling joists for classrooms. Note pitch of roof against far wall. Acoustical tile ceilings give good results here . . . blackboards placed against end brick wall.

Rear view of this unusual school building shows how compact and un-institutional it looks in center of residential district of Idaho's state capital city, Boise.
closely resembles nearby residences that it is not at first apparent that it is a school.

Architect Dropping believes the safety factor is high in this novel school structure with two exits. If, by chance, the corridors should be obstructed, it would be relatively easy to get out of the classrooms through the windows. The building is supplied with a fire alarm system and has extinguishers located strategically.

Another feature liked by parents is the greater possibility of participation of all students in activities because all students are of a similar size. In larger elementary schools, the first and second graders are at a disadvantage in competing for play equipment with sixth graders and older, and there generally is a bully or two in the older grades who makes life miserable for tiny tots.

Although Madison school was designed to accommodate the first three grades, a fourth grade section was moved in this year to relieve crowding in other schools, and the fourth graders enjoy the junior size accommodations as much as their smaller fellow students.

Boise people are so enthusiastic about little children attending this "little" school that it is quite likely that in the near future the city may build two more similar structures, according to Superintendent Foy, which could be converted into other uses. However, Mr. Foy is rather sanguine about the possibility of early relinquishment. He says the birth rate in Boise and nationwide does not indicate any let-up in lower grade enrollment for several years to come.

Architect Dropping has carried out carefully the theme of the residence simulation in the exterior design of Madison school. Even his entrance is modest, opening off a modest cement walk, in a lobby style which could be associated with an apartment entrance. Windows are plentiful, but not ostentatious, and could pass for residence, clinic or apartments. Actual conversion of this low-cost school building will present no costly engineering or design problems. Low ceilings will convert readily for residence use. Extra partitions can be added without trouble. Windows can be

(See Page 33)
A school of ultra-modern design will soon be housing the rapidly-growing child population of Darwin, capital of Australia's Federal-controlled Northern Territory.

Designers of this $200,000 building have jettisoned all ideas of stereotype school architecture so familiar in colder and older regions; it will be neither an unfriendly institution surrounded by asphalt nor an age-old venerable pile set in green playing fields, but a streamlined, up-to-date block, especially tailored for a vagarious tropic climate.

Darwin's new school will be in keeping with the new Darwin. Before the war Darwin was a half-forgotten tropical settlement with an almost static population. Between its white bungalows and the metropolis far to the south stretched thousands of square miles of sparsely populated cattle pastures and trackless wilderness. The township served a wild, frontier country inhabited by pioneer cattlemen, a handful of miners, missionaries and nomadic aborigines.

Irregular cargo steamers brought supplies from southern ports. A narrow-gauge railway with an in-
The pre-school kindergarten at Darwin is under the same lines as the highly developed Nursery school of Southern Australian cities and towns.

Area beneath the building is utilized as a playground.

Lower view shows a close-up of louver and window ventilation in classrooms.

frequent service, penetrated about 300 miles southward. A few unsurfaced motor tracks reached out to huge unfenced cattle stations and then petered away. Despite its obvious strategic importance on the map, Darwin was a neglected frontier post and seemed doomed to remain a neglected frontier post for many years.

Then World War II pitchforked Darwin into the spotlight. Japanese raiders bombed the town and destroyed many of its buildings. Allied servicemen took it over from the civilians and Darwin became a frontline town with a place in international headlines.
Now, the war over and the rhythm of civilian life restored Darwin is still a frontier town, but it is no longer a neglected static town. The Federal Government has moved in and is transforming the Territory’s administrative capital into a well-planned focus for tropical development.

High on its list of undertakings is the development of educational facilities. This work is urgent because the school roll has jumped from 69 in 1946 to 600 in five years.

Darwin’s population in 1939 was 3,500. Now it is more than 6,000 with the child population increasing more rapidly than the adult. In the first post-war year births amounted to 27. Next year the number was 144, then 216 and then 300. The present birthrate is the highest in Australia.

The old school with the makeshift additions put a severe strain on accommodation. Some children had to take their lessons beneath the school among the piers supporting the building. First, second and third year secondary pupils were for some time in one room.

In 1949 the Federal Standing Committee on Public Works investigated the position and heard evidence from many officials. Their recommendation for a new school followed and a start has been made.
Grade seven in the "secondary" school.
Darwin is a higher primary school with 600 pupils, including 63-post primary students.
The staff numbers seventeen.

A touch-typing class in the secondary school. These recently established commercial classes will help eliminate desperate shortage of trained commercial workers for business and administration offices.

Classroom in a temporary secondary school block on the site of the new school. The 80'x40' building has been converted into four classrooms by movable screens.
Ventilation is by glass louvers.
made on its construction.

Set in eight acres of sloping ground, the new school has been designed with the weather eye cocked on Darwin’s peculiar two-season climate. During “the dry” the sun radiates a glare and heat which cannot be shut out by doors and curtained windows lest they impede the relieving cooling breezes. In “the wet” day-long down-pours make out-of-doors study impossible. The school’s designers think they have beaten both problems.

Louvres in the 11-inch cavity cement-brick walls will catch the sea breezes, yet with the help of wide overhanging eaves, will repel the torrid sun overhead. As a second line, layers of insulating wool over all ceilings will beat off the heat and an ingenious system of cross ventilation will snare any zephyr that happens to be blowing. Green swards around the building will also assist in minimising ground radiation.

Vertical brickwork fins and projecting piers at regular intervals will also break down the tropical glare.

The louvred walls will provide adequate and constant daylight at desk height in all rooms.

For “the wet” there is a large covered playing area linked with all the school blocks by long shelters and including the “tuck-shop” so that once at school, the pupil need not venture into the rain for anything.

All rooms are wired for sound, for announcements and radio lessons and iced water drinking fountains will be placed both inside and outside the building.

The school is the first of several to be built in the residential areas that are part of the new Darwin. Each will have accommodation for 300 students without overcrowding.

Darwin’s new school is only part of the comprehensive programme of education development planned for the Northern Territory. When the war ended there were only two schools operating in the Territory—at Alice Springs (27 children) and Tennant Creek (28 children). The Federal Government was faced with the responsibility of providing modern education for a growing and widely scattered population in a territory covering 524,000 square miles. This is five times the area of Great Britain and three times the size of Germany.

Within six years the Government has made education free and compulsory for every white and mixed-blood child in this huge area. There are now five departmental schools, two private schools, two kindergarten centres and more than 150 children enrolled in correspondence classes. Darwin and Alice Springs have established evening continuation classes and Darwin has classes for the technical training of apprentices.

The South Australian Department of Education supplies the curriculum and teachers and the upkeep is met by the Commonwealth. Since the war the number of teachers has increased from 5 to 34, and the number of pupils from 156 to 1,288. Buses carry pupils from outlying settlements and living allowances are paid to children who have to board away from home.

For pupils in the outback, the Alice Springs

School Busses carry children to and from school. These semi-trailers are temporary arrangements pending the arrival of new busses. Five Government vehicles are used.

—Photographs by James Fitzpatrick.
"School of the Air" keeps regular contact with correspondence pupils. Two-way radios enable pupils to speak direct to their radio-teacher at the end of each lesson.

The new Territory schools have all the amenities and facilities available to children in the metropolitan areas of Australia. Cineprojective radios and libraries are standard equipment and regular medical and dental inspections are carried out by mobile clinics.

Education is for all children, whatever their origin. There is no colour prejudice. The first Northern Territory boy to gain the intermediate certificate sitting in the Territory was an aboriginal quadroon; of the 1,134 children attending school, 25 per cent are of aborigine extraction and seven per cent of Asian.

Compulsory education of full bloods has not yet been possible. Many live on isolated stations or are nomads with their tribes and even if they could attend schools, they have not the necessary background of English to keep up with other children.

This problem is being met by the Commonwealth Office of Education which has set up special primary schools at selected native reserves. Here, specially trained teachers are using a curriculum adapted to aboriginal children.

Mission stations have also well-conducted schools for aborigines and mixed bloods.

The administration's efforts to improve its education system have brought encouraging co-operation from Territory citizens who have thrown themselves enthusiastically into full support. Active parents' associations flourish and more than $2,240 has been raised to provide additional amenities not within the scope of the public purse. Throughout the Territory there is a happy union of government's aid and self-help. This was illustrated well at Pine Creek where there are only six families. With Government-supplied materials the six families hove to and quickly ran up a substantial shelter shed as a necessary school adjunct.

It is the Pine Creek spirit that is making the administration's job all the more easy—and pleasant.

The school bus service costs the Darwin administration more than $10,000 a year. Service is provided for the Convent School as well as for the Compulsory Departmental School. Children who live more than ten miles from an established school are entitled to a living allowance of approximately $120 a year, if they live away from home.
PRODUCERS COUNCIL HOLD SUCCESSFUL PRODUCT SHOW

The annual Producers' Council Product Display was held in the Fairmont Hotel in San Francisco the latter part of last month, with 46 exhibitors showing new lines of building products at special displays, and more than 158 members attending the one day show.

Special awards, offered for the three displays which best illustrated this year's Show theme—"Specify, Don't Mystery," were awarded to 1) Glad-ding McBean & Company, Kawneer Company and the Reynolds Metals Company. Judges for the event were: Mario Clampl, Architect; William Corlett, Architect, and Joe E. Murray, Consulting Engineer.

Some 454 architects and engineers attended the event as guests of the Council. Producers Council members participating in this year's show included:

NATIONAL PRESIDENT ADDRESSES

PUGET SOUND CHAPTER

AMERICAN SOCIETY FOR METALS

By H. L. Southworth, Boeing Airplane Company

A recent meeting of the Puget Sound Chapter of the American Society for Metals in Seattle was honored by the presence of Mr. R. L. Wilson, National President of the American Society for Metals.

Wilson is presently Director of Metallurgy, Timken Roller Bearing Company, Canton, Ohio. In addition to extensive metallurgical experience dating from his graduation from Lehigh University in 1921, he served during the late World War as Chief of the Constructional Steels Section, Steels Division, War Production Board. He is outstandingly qualified to discuss the topic he chose for the evening, "Recent Developments in Alloy Constructional Steels."

Wilson began by pointing out the large tonnage of alloy constructional steels used, which amounts to about 10,000,000 tons per year. Within the range of .25 to .40 carbon content, if these steels are properly heat treated to 200 to 400 Brinell, they are practically interchangeable. This fact formed the basis for the substitutional program. Alloying elements are interchanged where shortages occur and presently manganese and chromium are being used in place of nickel and molybdenum, and boron in place of all of these.

As these steels can be interchanged under most conditions another factor other than strength or hardenability must be used to evaluate them. Temperability has been found to be a very pertinent criterion as steels requiring higher tempering temperatures have great energy absorbing capacity or impact strength.

Wilson discussed recent work being stimulated by the competition of aluminum alloys and the materials such as Hy-Tuf, B-514 and Cr-Ni-Mo-V, Type 2 that have been developed. All of this work is directed toward a steel having a strength of 235,000 psi and above, coupled with an elongation that will be acceptable to designers. With steels operating with these strengths, their response to fatigue conditions and notch effects is very important and much investigation is following this line.

Several methods of increasing fatigue life and performance were presented such as shot peening, heat treating and shell hardening methods, which are also allowing substitution of medium carbon steels for alloy in certain instances.

It was predicted that with increased knowledge of residual stresses and how to avoid or eliminate these steels will have higher yield points, more elongation and better fatigue and impact resistance.

PROFESSIONAL CONFERENCE ON HIGHWAYS SCHEDULED

A three-day professional conference on modern highways was held on June 23-25 at the Massachusetts Institute of Technology, sponsored by the Departments of Civil and Sanitary Engineering and the City and Regional Planning at M.I.T., and by the Massachusetts Department of Public Works.

The program will include Planning, plans, route selection; Survey, aerial, soil study; and Design standards, capacity, safety.
After three years of joint participation in Home Shows with various types of tile exhibits, experience convinced a group of tile manufacturers and representatives that the shows lacked something the public was looking for.

The result was an exhibit set up as nearly like an actual home installation as possible.

It was found that the public, and especially the housewife, attends Home Shows to see the actual material set up as it would be in their own home. It was noted that people like to run their hands over the tile and feel it. With this in mind, it was decided to consolidate several tile lines into a single show, or exhibit, and the entire project was handled by the participating companies themselves.

The planning, discussions, and construction took a considerable amount of time and many changes were made as work progressed, particularly where color and design were concerned.

Sections or panels of plywood and light supporting frame work were first built and the tile applied with adhesive and grouted. To erect, the finished sections are put together and the only grouting required is the joints where the panels meet. Weight and ease of handling in erecting and dismantling was an important factor, and the entire exhibit weighs about 3000 lbs. and takes a 10' x 20' booth. Three men can completely assemble it in 4 or 5 hrs.

Public acceptance thus far at Oakland, San Jose (See Page 36)

Commercial Photo—Commercial Studio's Photo's.
De Gelleke was chosen for this award primarily for his nine years of distinguished service as Chairman of the Institute’s Finance Committee

SAN DIEGO CHAPTER

Edward Hale Fickett, A.I.A., architect and a member of the Southern California Chapter was the principal speaker at the June meeting. His subject was “My Relations with Tract Builders,” and having gained considerable national prominence lately in this field, Fickett gave a very interesting talk.

Fickett will represent the architects profession at a special collaboration session with the National Association of Home Builders, scheduled as a part of the A.I.A. Seattle convention.

Balance of the meeting was devoted to Chapter matters and discussion of State and National conventions.

PASADENA CHAPTER

E. S. McKittrick, past president of the A.G.C. was the principal speaker at the June meeting, his subject being “Relationships Between the Architect and the General Contractor”. The subjects of “specifications”, “drawings”, “trends in field methods”, “preliminary estimating” and “building practices” were specifically discussed by McKittrick.

New members include Herbert E. Kaiser and Robert L. Kurtz, Junior Associations.

NORTHERN CALIFORNIA CHAPTER

The annual meeting and election of officers resulted in the following being named to serve for the ensuing year:

Don Emmons, President; Wendell R. Spackman, Vice-President; William Corlett, Secretary; Bernard J. Saboff, Treasurer. Directors chosen included...
Charles S. Pope, WM. Stephen Allen, and Lawrence A. Kruse.

As part of a program designed to broaden the scope and activities of the Chapter, new offices have been opened at 26 O'Farrell Street in San Francisco.

WOMENS ARCHITECTURAL LEAGUE SOUTHERN CALIFORNIA

Leis, prizes, dancing, Hawaiian food, special entertainment and music by Hawaiian orchestra featured the Luau in San Pedro, sponsored by Women's Architectural League of Los Angeles June 27.

UNIVERSITY OF CALIFORNIA ARCHITECTURAL EXHIBITION

Twenty architectural students of the Berkeley campus, University of California, were awarded prizes for outstanding achievement, at the annual exhibition of the School of Architecture on June 10.

The exhibition of student work and the conferring of awards is held each year in cooperation with the Department of City and Regional Planning, Department of Art, Decorative Arts Department, and Landscape Architecture Department.

SOUTHERN CALIFORNIA CHAPTER

The June meeting was devoted to the subject "Federal Bureau Encroachment on Private Practice" with Chapter Committee members and particularly the Governmental Relations Committee, leading general discussions on the various phases of governmental competition with private industry.

Henry L. Wright, George B. Allison, Cornelius M. Deasy, Walter Hogedohm, Earl T. Heitschmidt, Paul R. Hunter, John J. Landon, Herman C. Light, Samuel E. Lunden, Anthony Thormin, A. C. Martin, Jr., Kemper Nolond, Walter Rechardt, John Rex, Ulysses Floyd Rible, S. Kenneth Wing, C. Day Woodford and Savo M. Stoshitch were elected official delegates to the Seattle convention.
WITH THE ENGINEERS

Structural Engineers Association of California

Structural Engineers Association of Northern California

AMERICAN SOCIETY OF CIVIL ENGINEERS
SAN FRANCISCO SECTION

"Construction Business Today" was the subject of a talk by H. W. Morrison, President of Morrison-Knudson Company, Inc., Boise, Idaho, at the June 16 meeting in San Francisco.

Morrison discussed the construction industry and the part played by both the contractor and the engineer. His firm was established in 1912 and today is one of the largest construction firms in the United States.

Members of the Section participated in an excursion to Folsom Dam, east of Sacramento, on the 27th, at the invitation of the San Francisco Post, Society of American Military Engineers.

New Members: Chairman Riggs of the Membership Committee reported the following new members: Col. Henry Berbert and Halvard W. Birke-land. Junior Members, Merrill W. Bird, Donald M. Bissell, Ramon F. Cayot, and Clarence K. Chan.

STRUCTURAL ENGINEERS ASSOCIATION
NORTHERN CALIFORNIA

Routine association activities were "aired" at the June meeting, with everyone present given an opportunity to express themselves. All complaints, "gripes," and any dissatisfaction with things "in-general" were considered and properly disposed of.

Considerable time and attention of association officers, directors and membership has been devoted to legislative matters pending in the State Legislature and with adjournment of the legislature attention will again be focused on more localized matters.

FEMINEERS

The June meeting was held in the Elks Club, San Francisco, with Mrs. Fred Pavlov in charge of the meeting.

Fred Wheeler, member of the Wine Advisory Board, spoke on the subject "Wine Cookery and Proper Use of Wine at Home."

STRUCTURAL ENGINEERS ASSOCIATION
SOUTHERN CALIFORNIA

One hundred and eighty-three members and guests of the Structural Engineers Association of Southern California met June 3rd at the Rodger Young Auditorium at their last regular dinner meeting before fall. Special recognition was given to James Byers, a 20 year member of the Association, who is retiring from his job as Chief of

Both are NEW both are distinctive

HAWS Model No. 76
the latest member of a "name" family, combines new beauty with the utility and reliability for which HAWS has been famous since 1909.

The New 56-Page HAWS CATALOG
thoroughly describes and illustrates HAWS complete line of Sanitary Drinking Fountains, Faucets, Electric Water Coolers and HAWS Emergency Eye-Wash Fountains and Drench Shower Equipment. Send for it today...study it...you'll see why it always pays to specify HAWS.

HAWS DRINKING FAUCET CO.
1441 FOURTH STREET (Since 1909) BERKELEY 10, CALIFORNIA

ARCHITECT AND ENGINEER

30
the Building Branch, Los Angeles City School Department.

President Ben Benioff introduced John Steinbrugge, new Association member, to the group.

Dr. Hugo Benioff, Professor of Seismology at California Institute of Technology and Carnegie Seismological Laboratories, and a member of the National Academy of Science, was the principal speaker of the meeting, taking as his subject: “Earthquakes.” His talk centered around the California faults and scientific data, much of which was obtained upon instruments designed by Dr. Benioff.

He told the group that the earth is continually going through cycles of energy storing and energy releasing, and the latter causes “elastic strain rebound.” The rebound sets up ground waves having amplitude and frequency which are often enough to cause major damage to buildings. Especially do these waves become destructive to structures when the resonance is developed between the period of the wave and the structures. An example of this is the Los Angeles building where the light fixtures fell during the Tehachapi quake of July 21, 1952.

AMERICAN SOCIETY OF CIVIL ENGINEERS SACRAMENTO SECTION

Two color films, “Snow on the Run” and “Earthquake Damage and Repair,” highlighted the June 2nd meeting, with the films and presentation being made by the Southern Pacific Railroad Company. Dr. James Bennett, assistant to the chief engineer of Hiller Helicopters, spoke at the June 9th meeting on “Development of the Helicopter”; “Structural Use of Aluminum in Building and Bridges” by Eugene P. Burton of the Aluminum Company of America featured the June 16 meeting; “Growing Up” by R. A. Derr, manager of the Stockton Chamber of Commerce was the June 23 meeting theme; and “The Role of the Engineer in Civil Defense” was the topic of the June 30 meeting with Brigadier General, Retired, Dwight Johns, U. S. Army Corps of Engineers, the principal speaker.

AMERICAN SOCIETY FOR METALS
PUGET SOUND CHAPTER

Reported by H. L. Southworth, Boeing Airplane Co.

The final session of the 1953 educational program recently presented by the Puget Sound Chapter consisted of a panel discussion on “Non-destructive Testing of Metals.” The panel members were H. L. Southworth, J. E. Carton and V. I. Black all of Boeing Airplane Company. The speakers presented talks and demonstrations on “Magnetic and Penetrant Methods,” “Ultrasonic Testing” and “Industrial X-Ray” in which the practical applications of these nondestructive methods were emphasized.
RETIREE

On June 30 G. R. "Ray" Kingsland is retiring from his position with the Otis Elevator Company and his other associated business activities, which includes the Producers’ Council.

Ray, in his association with the Producers’ Council, has done more for the Council than any other member. He was one of the original group of founders of our Chapter and was its president for the first three years (1931-3). Ray could well be called “father” of the San Francisco Chapter.

At the Chapter’s very inception, Ray attended the National Convention of the A.I.A. in San Antonio from which he returned with the enthusiasm of other attending members of Eastern Producers’ Council Chapters. It was this gentleman who carried the message of the Producers’ Council to the various A.I.A. Chapters and manufacturers throughout the Bay Area and it was due to his work that the Council got its successful start on the road to being an organization with high ideals.

Ray is retiring to enjoy his family, his garden, some traveling, and an occasional golf game after 45 very successful years with the Otis Elevator Company.

At the annual installation of new Chapter officers, attended by many of Ray’s personal friends made within the architectural profession, Ray was honored with a scroll presented by President A. I. West, thanking him for his tremendous service to the Producers’ Council.

NEW COMMITTEES

At the last regular business meeting, it was proposed and approved that the Producers’ Council expand its committee activities to include four new committees.

The By-Laws, originally included four committees; namely, Education, Entertainment, Membership, and Publicity.

Due to the expansion of the Council within the last few years and to our wish to continue and spread our activities to the Northern California Chapters of the A.I.A., four new committees have been approved. These new committees are—

1. Fellowship
2. Joint A.I.A. & Producers’ Council
3. Joint A.G.C. & Producers’ Council
4. Finance

This additional organization will enable the Council to function more efficiently and effectively.

NEW OFFICERS

With a marked absence of filibustering and a valiant attempt by President A. I. West to stay within parliamentary procedure, our new officers for the coming year were elected at the last business meeting, which was organized, oddly enough, to elect new officers.

The men responsible for the activities during 1953 and 1954 are—

President, Roly MacNichol, Libbey-Owens-Ford Glass Co.; Vice President, Ted Bakeman, F. W. Wakefield Brass Co.; Secretary, John Cowley, Hamilton Manufacturing Co.; Treasurer, Carl Frank, Detroit Steel Products Co.
added in present solid brick walls reserved for blackboards, without too much cost. Heating system would require no conversion. Toilet banks only would have to be removed. Economy has been a keynote of this building, and yet the children and teachers find it very comfortable and pleasant.

Madison is in an area not too far from two other large elementary schools, served by school buses. An attractive planter fills a recess in front of the windows serving the principal's office to lend further color to the residential atmosphere created by the building. Rear doors open onto a macadamized play area. All classrooms are identical in size, 33 by 24 feet.

Administrative offices, teachers and nurses rooms, waiting room and kitchen all have been arranged in a compact area near the center of the school and easily accessible to all six classrooms. An open counter from the kitchen facing the inner hall enables rapid service of tiny students at meal time. Students may thus line up in the long hallway and pass by the open service window to get their food, all with a minimum of inconvenience.

Madison is an efficient, well-planned school. It answers one of the problems which all school officials must face. That is, how to get comfortable teaching space now while the peak of war-babies need schooling, and yet avoid having a white elephant on hand a few years hence when the demand for primary facilities in this number may have passed.

OREGON ARCHITECTURAL STUDENTS INSTALL DOME

A 36-foot diameter wood framed, transparent plastic-skinned Geodesic Dome was recently installed on the University of Oregon campus by students in the School of Architecture and Allied Arts, and under the supervision of R. Buckminster Fuller, designer-engineer and creator of Dymaxion architecture.

Design, fabrication, and assembly of the Dome, viewed as a "prototyping experiment in design and production engineering," and in which a volunteer group of more than 40 students participated, was completed in seven days.

Many uses are predicted for the building which is 36 feet in diameter and 18 feet high. It is quickly knocked down and reassembled and easily transported. It has no rafter-angle cuts. Structural members are plywood with light wood cross bracing, covered with plastic, then bolted together with joints covered with weatherproof tape.
CLARENCE CULLIMORE
Architect, F.A.I.A.

Bakersfield, California

Graduated B.S. University of California, Berkeley, 1910; M. Architecture, University of Southern California, 1942. Certified to practice Architecture in California 1925;

Specialist in scientific design and construction of adobe buildings made fireproof, waterproof, and earthquake-proof, and his wide experience and successful application of adobe to residential architecture has made him internationally prominent in this field. His exhaustive studies and contributions to the art and science of architecture in the adobe field has laid a secure foundation for the future progress of this typical California art.

Prominent in local civic, fraternal and governmental affairs.

Author: Mechanical Drawing for High School Students, 1921; Old Adobes of forgotten Fort Tejon, 1942; Adobe Architecture, 1947; Historic Old Adobes of Santa Barbara, 1947; Contributed many articles on old adobes to Los Angeles Sunday Times, and American Institute of Architecture publications.

His son, Clarence Cullimore, Jr., is also an architect having graduated from the University of Southern California in Architecture and successfully passed the architectural examinations of the California State Board of Architectural Examiners.

NORTHERN CALIFORNIA
BUILDERS HARDWARE CLUB

Everett Appleton, president of the Northern California Builders’ Hardware Club and buyer for Dunham, Carrigan & Hayden company, announced the Club’s July 15 meeting will be devoted to a “Sport’s Night” theme.

Motion pictures of the 1952 Olympic Games will
be shown, as will an old time movie featuring the '49er. Everyone interested in the builders hardware industry is invited to attend.

Officers of the organization, in addition to Appleton, include: Clark Van Housen, of the McKinney Co., treasurer; Robert Depot of the Stanley Co., secretary; and Jim Whitty of the E. M. Hundley Co., sergt. at arms.

ROBERT GUNN VISITS EASTERN BUILDERS

Robert Gunn, an official of the Vincent Whitney Company of Sausalito, manufacturers of window sash hardware, returned to his California home recently from an extended business trip to many eastern and mid-western cities, where he conferred with distributors and representatives of his firm.

Conditions in the construction industry were generally reported good and excellent sales of the Sausalito firm are predicted for the balance of the year.

PRODUCERS COUNCIL MANAGER NAMED NATIONAL CHAMBER AID

Charles M. Mortensen, Managing Director of the Producer's Council, Inc., has been appointed Associate Manager of the Trade Association Department of the Chamber of Commerce of the United States, it was announced recently by Arch N. Booth, Executive Vice President of the Chamber.

Mortensen joined the staff May 1 and will work with Henry P. Fowler, present manager of the Trade Association Department, until the latter's retirement on August 31. He brings to the job more than 19 years of experience in the fields of engineering, sales, public relations and promotion work.

Mortensen has been with the Producers' Council since 1947. Before that, he was employed as California Regional Engineer for the American Iron and Steel Institute. He begun his career in 1934 as
a field engineer for the Iowa State Planning Board. Later he worked as sales engineer for the United-Des Moines Clay Products Co., and as Director of Public Relations for the Structural Clay Products Institute, Washington, D.C. During World War II, he served as a Naval gunnery officer assigned to the destroyer U.S.S. Steven Potter which saw action off Okinawa and Japan.

UNIQUE TILE EXHIBIT
(From Page 27)

and Salt Lake City has far exceeded anything anticipated. The exhibit will show at Monterey, San Francisco, the California State Fair at Sacramento, and Fresno County Fair.

Planning is already under way for a complete new exhibit for the 1954 season, which will display the new developments in decorative tile and new colors to keep pace with the ever changing interior decorations of the modern home.

The exhibit this year is jointly sponsored by five tile manufacturers: Cambridge Tile Co.—Emil te Groen, representative; Gladding, McBean & Co.—R. A. Sinnott and R. V. Jeffrey, representatives; Mosaic Tile Co.—A. E. Guerra and Howard DeWeese, representatives; Pacific Tile & Porcelain Co.—Thomas Dillon, No. California Distributor; Pomona Tile Co.—Claire Wilson, representative.

Crane Company furnished the tub and built-in pullman lavatory and L & H Company supplied the built-in electric surface unit and the electric oven in the cabinet.

WOODWORK INSTITUTE DIRECTORS MEET IN SAN JOAQUIN VALLEY

The regular quarterly meeting of the Board of Directors of the Woodwork Institute of California met in Fresno on May 22 in keeping with the newly established policy of the organization to hold meetings in various parts of the state.

Committee reports included: Membership, Hollis Jones of the Western Door & Sash Co., Oakland;
Program, Seth Potter of the Stockton Box Co., Stockton; Technical, S. Karns of Fresno and others.

Attending were: Stanley Gustafson, Sacramento; Seth Potter and Jack Little, Stockton; Ernie Atkinson and Hollis Jones, Oakland; J. L. Pierce, Santa Clara; Arthur Bernhauser and S. S. Kerns, Fresno; Tom Work, Monterey; L. J. Woodson, San Francisco; T. M. Cobb, Perry Acull and Al Little of Southern California, and Russell Bjorn, manager-director.

The next meeting has been set for Monterey during August.

LAURENCE LIVINGSTON, JR.
JOINS JOHN CARL WARNECKE

Lawrence Livingston, Jr., former assistant City Planning Engineer of the City of Oakland, and John Carl Warnecke, A.I.A. architect of San Francisco and Oakland, have joined forces to provide one of the most comprehensive architectural and planning service on the Coast.

The correlation of architectural design and the planning of large areas, taking into consideration their broader relation to the community and its development, is a trend which promises benefits to client and public alike. This wide service is particularly valuable in the solution of the many problems facing rapidly growing communities as well as the builders of new projects.

This new service is also extended to the firm of Warnecke & Warnecke, in which John Carl Warnecke is associated with his father, Carl I. Warnecke, A.I.A.

DEEPENING OF COLUMBIA RIVER 
ENCE RECOMMENDED BY ARMY

Deepening to 48 feet of the navigation channel of the Columbia River, across the ocean bar and in the entrance, has been recommended by the North Pacific Division, Corps of Engineers. The channel depth now, as authorized by Congress, is 40 feet.

In addition, consideration in the future was recommended for construction of a spur jetty or such other contraction works as the Board of Engineers for Rivers and Harbors may find necessary and economically justified.

The improvements proposed are designed to provide greater depths needed by present-day larger type cargo ships and tankers and to correct

The author, C. Leslie Martin, is Associate Professor of Architectural Design at the University of Cincinnati, has compiled a group of studies on the theory that Drawing is the universal language of the architect and designer.

The text is written so that it can be understood by persons who do not have the help of a teacher, and explains the characteristics of types of drawings and principles used giving explanations and simple examples.

Subjects covered by the author, include Orthographic and Oblique Drawings, Perspective Drawing, and Shades and Shadows. Many drawings and photographs are used. 213 pages.

A revision of the issue of 1952, enlarged to meet the present economic situation. All tables have been brought up to date, and new cases and current business problems and situations have been added.

A new chapter "Relativity of the Moral Hazard" has been added. It discusses the influence of a progressively adverse financial condition of a business upon the moral stamina of individuals in management, and how in times of great pressure, it may occasionally result in a breakdown of Character.

Problems of excessive indoor moisture in homes, its cause, effects, prevention and control, is given far reaching and well documented study in this 72-page booklet.

Generously illustrated the book is directed to home owners and craftsmen in the building trades as well as to architects, contractors, dealers, etc., and dealers in supplies.

NEW CATALOGUES AVAILABLE

Architects, Engineers, Contractors, Planning Commission members—the catalogues, folders, new building products material, etc., described below may be obtained by directing your request to the name and address given in each item.

Stainless Steel Wire is described in a new 20-page booklet of technical data on the application of stainless steel wire. Tables of physical properties, corrosion resistance, and analysis are included. Copies of the booklet are available from Allegheny Ludlum Steel Corp., 2020 Oliver Bldg., Pittsburgh 22, Pa.

Standardized Hangars by Luria—a new illustrated catalog on structures for civil and military aircraft; contains descriptions, photographs, cross-sectional drawings and specifications of various types of standardized hangars, lean-to's and clear-span service buildings. Highlighted advantages are the lower costs made possible by mass production methods, speed of erection, permanence of steel-frame design and adaptability to special requirements. Copies available from Luria Engineering Co., 500 5th Ave., New York 36.

Airco electrodes. Over 30 different electrodes, stainless, mild and high tensile steels, cast iron, non-ferrous, low hydrogen, and hard-facing are described as to chemical analysis, procedure for welding and application in a new 56-page pocket book guide. Other sections in the booklet include "Picking the Right Electrode," mechanical properties and testing of electrodes, and specifications. Copies of this illustrated guide may be obtained by writing Air Reduction Pacific, 220 Bush Street, San Francisco, California.

Hard facing. The subject of Hard Facing, a production method used to lower maintenance and replacement costs, is presented in a color booklet just published. It describes the method of applying hard alloy metal to a low alloy steel base or areas of wear to hold down production costs on original equipment, also illustrates how operating life of worn equipment is increased by the proper and economical application of hard facing. Hard facing alloys are now applied to linear, cylindrical or contoured shapes to provide excellent anti-cor-
Pipeable characteristics, increased operating life, resistances to high temperature, impact and abrasion. Copies of this colorful, profusely illustrated pamphlet containing photographs and descriptive data illustrating the types of products hard faced and the industries served, may be obtained by writing Cleveland Hard Facing, Inc., 3047 Stillion Ave., Cleveland 5, Ohio.

Garden lighting. A new catalog of garden and residential outdoor play area lighting units featuring the Steber line has just been published. An important item in this new line is the Steber Florlastic which is a handy garden light approximately 30-inches high, mounted on an aluminum ground spike for mounting anywhere in the garden or lawn. It is supplied with clear glass globe with inside frost for use with white, colored, or insect repellent lamps, and can be had with 10-foot or 25-foot attachment cord and plug. Play area lights consist of sturdy lampholders mounted to extension poles, one adjustable 5 to 8 feet high, the other 5 to 15 feet high. This Bulletin No. 135-53 is available from the Steber Mfg. Co., Broadview, Illinois.

Expandable concrete forms. A new booklet describing the advantages of Rubora expandable concrete forms has just been issued; contains description of use and photographs showing actual application of forms. Developed in the Netherlands the product can be re-used up to 100 times. Copies of the booklet and full details from the Kurt Orban Co., Inc., 1939 Santa Fe Ave., Los Angeles, Calif.

Impregnation of porus castings. The whole development and application story of modern impregnation of porus castings is available in a new, 2-color bulletin containing complete illustrations. The booklet shows how impregnation by a 100% solid copolymer differs from older methods, and why these new materials and methods can achieve complete impregnation. Photographs show the equipment used in batch impregnation for the rapid treatment of large quantities of parts, as well as applications in various metals. Tables show properties of the new impregnant and corroborates it will resist.

Cork Insulation. An illustrated 8-page bulletin describes the composition, application and uses of Paric No. 222 Cork Insulation. It is a cold-application fluid type of material composed of highly efficient insulating fillers of cork and asbestos and a bituminous base possessing unusual adhesive, waterproofing and corrosion-proofing qualities. Applied directly from drum by hand operated sprayguns.

Complete data as to thickness and coverage is given. Available from Witco Chemical Co., Pioneer Asphalt Div., 75 E. Wacker Drive, Chicago 1.

Church Arches. A new brochure on Church Arches designed to cover the subject so that the architect, the builder and the layman, can visualize the style of arches to be used in any church construction. Just enough structural data is given to enable the builder or contractor to judge erection costs in preliminary estimates. Many photographs and drawings are included. Available from McKeown Bros. Co., 5302 S. Keeler Ave., Chicago 32.

Manual and magnetic motor starters. Two new leaflets, no's 404 and 504, describing in detail specifications and applications of the Federal Electric's line of manual and magnetic motor starters is now available. The pamphlets describe special design features such as double-break silver contacts, servicing accessibility, and complete mounting flexibility; also sizes and horsepower, and type of current used. The magnetic motor starter booklet includes information on remote control, local control and selector switch control, in various types and sizes. Both publications are available from Federal Electric Products Co., 50 Paris St., Newark 5, N. Y.

Glass fiber pipe insulation. Many unusual and different features of a new one piece molded fine glass fiber pipe insulation are described in a booklet entitled "G-B Ultraline - Pipe Insulation." Photographs show types of application and methods; data on temperatures, and packaging. Copies are available from the Gustin-Bacon Mfg. Co., Kansas City, Mo.

Dual-fuel firing for heating. A new four-page, three color folder on gas and dual-fuel firing for heating, processing, and power is available from the firm listed below.

Emphasis is laid on the advantages of zone fired control for low start and modulated firing permitted by the Iron Fireman vertical gas burner, on the features of the "in-shot" type of burner with its efficient radiant heat, on ring-type burners designated for intermediate and high pressure gas, and on the recently announced dual fuel package unit combining the Radiant gas burner with the gas-type commercial oil burner. Copies of data may be secured from Iron Fireman Mfg. Co., Cleveland 11, Ohio.

physical characteristics of the entrance channel which are a hazard to navigation. The jetty or substitute works would be to reduce annual maintenance dredging requirements.

Cost to the Federal Government of the proposed improvements is estimated at $8,550,000, of which $2,898,000 would be for the initial deepening job.

STRUCTURAL CLAY FACING TILE
ONE OF NEWER PRODUCTS

The unique chemical properties of structural clay facing tile, one of the youngest of all clay products, have increased its use three-fold in the past ten years. Chemical plants, dairies, breweries, printing plants, industrial and institutional buildings now are being designed with interior walls of facing tile for sanitation, cleanliness, easy, low-cost maintenance and many special purposes offered by no other building material.

Facing tile should not be confused with ordinary wall tile, which is less than one-half inch thick and does not support its own weight. This relatively new material, developed in the past three decades, is a structural unit usually at least 4 inches thick. It holds its own weight and that of ceilings, roofs, joists or other loads placed on it.

It is made of burned clay, same as brick, and generally burns to a tawny buff color, but it can be glazed with permanent porcelain finishes to any color from white to black. When glazed, its surface is impervious to acids, stains, smoke or soot, and can be cleaned easily with soap and water.

Used in industry, it has special values. It aids in humidity control, since moisture condenses and runs off its surface. In factories processing textiles, drugs, chemicals and foodstuffs, it helps control lint, dust and dirt, and does not absorb acid fumes or odors. Bacterial growth is prevented on the walls in meat packing plants and research laboratories by facing tile, impervious to bacteria. Usable shop space need not be left idle to provide for cumbersome cleaning and painting equipment required with other types of wall finishes.

R. H. Saunders, Chairman of the Facing Tile Institute, national association of facing tile manufacturers, points out that demand has constantly increased for this material, so that shipments of facing tile have risen each year from 154,000 tons in 1942 to an estimated 450,000 tons in 1952. “We look for a continued upward trend in facing tile shipments in 1953,” Mr. Saunders added.

SAN DIEGO COUNTY BUILDING VOLUME SHOWS BIG INCREASE

Residential building in the unincorporated area of San Diego county will show a sharp rise in 1953, according to Dr. Willis H. Miller, director of planning for San Diego county.

The number of tentative maps filed during January and February this year is nearly double the number filed during the corresponding period in 1952, while the total number of lots proposed is over four times as great.

FREEZE ON ALASKA MILITARY CONSTRUCTION THAWED SOME

Colonel Carl Y. Farrell, acting District Engineer, Alaska District Corps of Engineers, announced recently that the freeze placed upon Alaska’s multimillion dollar defense construction program had been lifted by the Bureau of the Budget on twelve Army projects.

The twelve items cover construction at Fort Richardson, Ladd and Eielson Air Force Bases.

Of the $240-millions 1953 Alaska defense construction program $60-millions have been awarded.

APPOINTED AGENT: Wm. C. Tagmyer has been appointed sole Northern California agent for Tub sale, according to a recent announcement by F. G. Harmon, President. Offices will be maintained at 268 Market Street, San Francisco.
## Stimmer's Guide
### BUILDING AND CONSTRUCTION MATERIALS

All prices and wages quoted are for San Francisco and the Bay District. There may be slight fluctuation of prices in the interior and southern part of the state. Freight carriage, at least, must be added in figuring country work.

**BONDS**—Performance or Performance plus Labor and Material Bond(s), $10 per $100 on contract price. Labor & Material Bond(s) only, $5.00 per $100 on contract price.

**BRICKWORK—MASONRY**—
- Common Brick—Per M. $1.10
- Common Brick—Per M. $1.10
- Common Brick Venner on Frame Bldgs.—Approx. $1.20 and up
- Core Brick Venner on Frame Bldgs.—Approx. $1.80 and up
- Core Brick Venner—On M. $250.00

**BUILDING PAPER & FELTS**—
- 1 ply per 1000 ft. roll $5.30
- 2 ply per 1000 ft. roll $7.80
- 3 ply per 1000 ft. roll $9.70
- Brownks, Standard 250 ft. roll $6.85
- Sisatkraft, reinforced 250 ft. roll $8.50

**Sheathing Papers**—
- Asphalt sheathing, 15-lb. roll $2.70
- Dampire, 216-lb. roll 2.95
- Blue plasterboard, 40-lb. roll 5.10

**Felt Paper**—
- Deading felt, 3/4-lb., 50-lb. roll 4.30
- Deading felt, per yard 5.05
- Asphalt roofing, 15-lbs. 2.70
- Asphalt roofing, 30-lbs. 3.70

**Roofing Nails**—
- Standard Grade, 100-lb. roll, Light $2.50
- Smooth Surface, Medium 2.90
- Medium 3.40
- M. S. Extra Heavy 3.95

**BUILDING HARDWARE**—
- Sash cord, No. 7 $2.65 per 100 ft.
- Sash cord, No. 8 $3.00 per 100 ft.
- Sash cord, No. 9 $3.45 per 100 ft.
- Sash weights, cast iron, $100.00 per ton, 1-ton lots, $1.35
- Less than 1-ton lots, per 100 lbs. 4.75
- Nails, per keg, base $12.55
- Bin spars, 12.45
- Rim Knob lock sets $1.00
- Butts, dull brass plated on steel, 3/8 x 3/8

**Concrete Ready-Mix**—Delivered in 4-3/4 loads:
- Per cubic yard, 1-1/2 Mix $9.80
- 1 Mix $10.15
- 1-1/2 Mix $10.70
- 1 Mix $11.40

**Concrete Blocks**—
- Hayrite salt
  - 4x6x16, each, $11.15
  - 6x8x16, each, $11.15
  - 8x16, each, $11.15
  - 12x16, each, $11.15
  - 12x24, each, $11.15
- Hayrite Aggregates
  - 1/4" to 3/4" per cu. yd. $7.75
  - 3/4" to 1-1/2" per cu. yd. $7.75
  - No. 6 to 0-1/2" per cu. yd. $7.75

**Dampproofing and Waterproofing**—Two-coat work, $9.00 per square.

**Electric Wiring**—$15 to $20 per outlet for conduit work (including switches). Knob and tube average $6.00 per outlet.

**Elevators**—Prices vary according to capacity, speed and type. Consult elevator companies. Average cost of installing a slow speed automatic passenger elevator in small four story apartment building, including entrance doors, about $5,500.00.

**Excavation**—$5, $10, clay or shale, $15 per yard. Trucks, $30 to $45 per day.

**Fire Escapes**—Ten-foot galvanized iron balcony, with stair, $250 impled on new buildings; $300 on old buildings.

**Floors**—
- Asphalt Tilt, 1/2 in. gauge 18c to 35c per sq. ft.
- Composition Floors, such as Magnesite, 40c-$1.25 per sq. ft.
- Linoleum, standard gauge, sq. yd. $2.75
- Mastipave—$1.50 per sq. yd.
- Battleship Linoleum—9/16"—$1.00 sq. yd.
- Terrazzo Floors—$2.00 per sq. ft.
- Terrazzo Steps—$2.50 per lin. ft.

**Mastic Wear Coat**—according to type—20c to 35c.

**Hardwood Flooring**—Oak Tilt—$1.25

**Unfinished Oak Flooring**—Prime $369.00

**Unfinished Maple Flooring**—Prime $369.00

**Glass**—
- Single Strength Window Glass $20.00
- Double Strength Window Glass $30.00

**Plate Glass**—
- Plates glass polished 75c $1.40 per sq. ft.
- 1/4 in. Polished Wire Glass Plate 2.50 per sq. ft.
- 1/4 in. Rhs. Wire Glass $8.00

IN THE NEWS

ALASKA HOUSING
CONTRACT AWARDED
Lytle, Green, & Birch contractors of Seat-
tle, have been awarded a $4,206,268 con-
tract by the Alaska District Engineer for
the construction of family housing at the
Ladd Air Force Base.
Under terms of the contract, the Seattle
firm is to construct housing for 240 families
at the base. Two-story, frame con-
struction, with basement, in eight-family
units will be built.

DEPARTMENT STORE FOR VAN NYS
The May Company of Los Angeles is seek-
ing a zone variance for property in
Van Nuys, California, for erection of a
new department store building.

LAS VEGAS HAS
NEW DRIVE-IN
Architect Elmo C. Bruner of Las Vegas,
Nevada, has completed plans and specifi-
cations for the construction of a new drive-
in restaurant to be built in Las Vegas for
Lincoln L. Snyder.

Of steel frame construction, the building
will have a lightweight concrete roof, radi-
ant heating, asphalt tile and carpet floors,
air conditioning, insulation, plate glass,
steel sash, ceramic tile, bar joined trusses.

SWIMMING POOL
FOR WATSONVILLE
Trustees of the Watsonville Joint High
School District, Santa Cruz county, have
completed plans for construction of a swim-
ing pool in the City of Watsonville.

John Lyon Reid of San Francisco is the
architect.

COLEMAN NAMES
NEW MANAGER
J. R. (Jim) Pruitt has been appointed
manager of the construction division of the
Coleman Co., manufacturers of auto-
matic gas heating equipment, for Southern
California, according to a recent announce-
ment by L. R. Carney, District Manager.

Pruitt, a licensed general contractor and
graduate architect, is well known in the
construction industry throughout Southern
California. He was recently executive sec-
cretary of the Los Angeles Chapter of the
Building Contractors’ Association of Cali-
ifornia.

ARCHITECTURAL
OFFICES MERGE
Two well known Los Angeles architects,
Douglas Honold and John Rex, have
merged their offices and are now located
at 306 N. Doheny Drive, Los Angeles.

John Rex, former president of the Cali-
ifornia Council of Architects, and former
president of the Southern California Chap-
ter AIA, has designed many Southern Cali-
ifornia schools. He is at present a member
of the Board of Zoning Appeals for Los
Angeles.

Douglas Honold has won two honor
awards from The American Institute of
Architects for restaurant designs.

MASONIC
TEMPLE
A 1- and part 2-story concrete block
building is being built in San Gabriel for
the Masonic Temple Lodge. It is 87x105
ft. in area and will have a composition
roof, banquet room will seat 240 persons.
Scott Quinlin, Alhambra is the architect.

ADDITION TO
HOTEL
A height limit addition containing 175,000
sq. ft. is being designed for the Beverly
Hills Hotel in Beverly Hills, California, by
the architectural firm of Pereira & Luck-
man of Los Angeles.

The addition will comprise two floors
of garage space and the space will be
de luxe apartments.

COUNTY BUILDINGS
Qualified elector of Contra Costa county
recently approved a $1,350,000 special
bond election. Funds are to be used in
the construction of new county offices,
courts, and warehouse buildings in the
City of Richmond’s new Civic Center.

Proposed is a 3-story, with basement,
building 62 ft. x 62 ft. of reinforced con-
crete and some structural steel. It will
have a brick veneer exterior.

Donald L. Hardison of Richmond, is the
Architect.

SAHARA HOTEL
ADDITION
Plans for the construction of a 2-story
addition to the Sahara Hotel in Las Vegas,
Nevada, are being completed by architect
Martin J. Stern at Beverly Hills, California.

The new addition will contain 200 rooms
and will be of cement block and wood
frame construction.

ARCHITECT
SELECTED
The Tulare (California) Board of Super-
visors recently commissioned Lloyd J. Fletch-
or, architect of Lemon Cove, to design the
new Woodlake Memorial Building to be
built in Tulare county.

ALASKA ARMY
BUILDING
The Alaska District Corps of Engineers
recently announced an additional $2,000,000
has been released for defense construc-
tion at Kenai and Fort Richardson.

Seventy family dwellings will be built
at Kenai, together with a fence antenna
farm with guard shelter. The Fort Richard-
son project comprises a dispensary build-
ing.

APPOINTED REGIONAL
SALES MANAGER
Robert D. Jones, for the last 17-years a
field representative in the Los Angeles
area for Libbey-Owens-Ford Glass Com-

For that ‘extra finish’ don’t forget
built-in telephone facilities

Your clients will be happier with building plans that in-
clude planned telephone facilities. Concealed conduit for
telephone wiring and conveniently located telephone out-
lets will allow them to change the position of their tele-
phone or add a new instrument later on without detracting
from the beauty of their home with exposed wiring.

Just call Pacific Telephone’s free Architects and Builders
service. We’ll be glad to help you plan for greater beauty
tomorrow in the homes you are building today.

Put built-in telephone facilities in your plans

Pacific Telephone

JUNE, 1953
pony, has been named Pacific regional sales manager of the Corrulux Division of LOF Glass, according to a recent announcement by George D. Jefferson, sales manager of Corrulux.

Corrulux is a translucent plastic sheet material reinforced with fiber glass.

SAN MATEO ELKS CLUB BUILDING

E. J. Miller, architect of San Mateo, has been commissioned to draft plans for the construction of a new Elks Building to be built in San Mateo by the Elks Hall Association.

The new building will comprise a 1-story, frame and stucco structure with concrete slab floors, steel sah, composition roofing, warm air heating, and a swimming pool. Estimated cost of project is $300,000.

SCHOOL BONDS VOTED

Qualified electors of the Hayward Union High School District, recently approved a school bond issue of $8,000,000.

Funds are to be used in the construction of new High School buildings and additions to existing buildings.

HOSPITAL ADDITION

Swinerton & Walberg, San Francisco, and Cahill Bros of Oakland, have been given the contract under a joint-venture, for the grading and installation of drainage facilities and the erection of the first buildings at the new Ford automobile plant being built near Milpitas in Santa Clara county.

The initial building containing approximately 1,500,000 sq. ft. and a 2-story administration building are on the 160 acre site recently acquired. Total cost of the project is estimated at $35,000,000.

NEW JET TEST BASE CONTRACT

The Air Material Command has authorized Lockheed Aircraft Corp., to complete commitments with the architectural firm of Pereira & Luckmann of Los Angeles, to design a new jet test center to be built at Palmdale.

Facilities of the new field will be used jointly by a number of major aircraft companies.

ARCHITECT SELECTED

Leslie L. Nichols, A.I.A., architect of Palo Alto, has moved his offices from 627 University Avenue to 454 Forest Avenue, same city.

LOS ANGELES BUILDS COUNTY BUILDING

Architect Earl G. Boehm is the architect for a $2,000,000 sq. ft. office-warehouse building being erected for the Los Angeles County Purchasing and Stores Department, at a cost of $1,635,000.

Till-up concrete construction is being used. About 2½ acres of land has been set aside for parking and trucking facilities and a nine-car spur track is also being provided. The building itself will be about 375x630 feet.

ARCHITECT SELECTED

Francischi & Mullen of Sacramento were chosen architects to design a new school building for the Sierra-Plumas Joint Unified School District to be built in Downieville.

Selection of the architects was made by the governing board of the district.

AIRCRAFT PLANT EXPANDS OFFICES

The Douglas Aircraft Company, Inc., El Segundo division, is building an administration building containing 102,000 sq. ft.

Plans for the structure, which is 936 feet long, were prepared by Van Dyke & Barnes, Los Angeles architect and engineer. When completed it will house the employment department, reception lobbies, and offices, and the medical department comprising first-aid facilities, X-ray equipment and dispensary.

LOS ANGELES SETS BUILDING PACE

Los Angeles county led the nation in the amount of building permits issued during the first three months of 1959.

The grand total of $127,502,825 exceeded the totals of Chicago, Philadelphia and Detroit combined by more than $18,746,331.

Throughout the Pacific Coast the total permits issued were more than double the same amount for the same period of last year.

SCHOOL BONDS APPROVED

Voters of the Needles Union High School District in San Bernardino county, California, recently approved a special school bond issue of $825,000 to be used in modernization of the Needles High School and construction of a new Junior High School.

GARAGE-APARTMENT IN LONG BEACH

Architect Paul L. Williamson of Long Beach is the architect for a 2-story frame and stucco garage-apartment building being built in Long Beach for B. B. Sullivan.

ARCHITECT SELECTED

The architectural firm of Kirby & Mulvin, San Francisco, has been commissioned by the Housing Authority of the City and County of San Francisco, to design plans for the proposed Middlepoint Low Rent Housing project to be built in San Francisco at an estimated cost of $2,300,000.

The project comprises 2-story, row houses of frame and stucco construction.

WOMEN'S CLUB HOUSE

The Arvin Women's Club of Arvin, Calif., is building a new Club House and has commissioned architect Whitney Biggar of Bakersfield to draft plans and specifications for the new structure.

SUBDIVISION LAWS NEED REVISION

According to a report made by Marybeth Broneman of the Real Estate Research Program, Bureau of Business and Economic Research of the University of California at Berkeley, and filed with D. D. Watson, California Real Estate Commissioner, California's laws regulating residential subdivisions are badly in need of overhauling.

Conflicting regulations, lack of authority by regulating bodies, and the lack of a unified administration of controls combine to provide inadequate safeguards for buyers and delays for builders.

Findings of the survey indicate the bulk of complaints about subdivisions in the past...
few years concern flood hazards and improper drainage, erosion of ground fill, inadequate water supplies, improper sewage facilities, and the lack of proper road and street construction and repair.

CHRISTIAN CHURCH
BAKERSFIELD

The First Christian Church of Bakersfield will build a new Church in Bakersfield with a seating capacity of 760 persons. Plans and specifications are being prepared by architect Ernest L. McCoy.

Concrete block, brick and glass will form the exterior; steel sash, concrete floor and tile carpeting will be used in the sanctuary. The Chapel, of frame and stucco construction, concrete floor, plate glass, Roman ruffle brick and a shingle roof will seat 150 persons. A frame and stucco administration building will be built in a central position in relation to the entire project.

EXPAND STATE HOSPITAL
LAS VEGAS, NEW MEXICO

The State of New Mexico is constructing a new receiving ward and clinic at the State Hospital for the Insane at Las Vegas, New Mexico.

The project includes the fireproofing of existing buildings, revision and expansion of kitchen facilities, additions to present wards, and will cost $2,000,000.

W. C. Kruger & Associates of Santa Fe are the architects.

AIRPORT BONDS
APPROVED

Voters of the City of Oakland recently approved a special bond issue of $10,000,000 for improvements at the Oakland Municipal Airport.

Included in the new construction will be a terminal building. The project is under supervision of the Port of Oakland Commission.

GREYHOUND
REMODEL

Offices of the Pacific Greyhound Lines in San Francisco are being remodeled according to plans by architect W. D. Peugh of San Francisco.

The building occupied by the bus company’s general offices is a 4-story, with basement, structure and plans call for exterior and interior changes.

LABORATORY
BUILDING

The Eastman Kodak Company of San Francisco is constructing a new laboratory building in Palo Alto containing 150,000 sq. ft., according to a recent announcement.

The new laboratory will be a 1-story structure of reinforced concrete and reinforced fill-up construction. Steel sash will be used and a complete air conditioning system installed.

Ward & Bollas of San Francisco are the architects.

FRATERNITY
HOUSE

The Sigma Alpha Epsilon Fraternity, University of Nevada at Reno, are negotiating with general contractor Frank Capriotte of Reno, for the construction of a new 2-story, with basement, fraternity house which will cost in the neighborhood of $102,600.

The building, according to architect Russell Mills, who is drafting plans and specifications will be of frame and brick veneer construction.

HOME BUILDERS

Officials of the National Association of Home Builders of the United States have been endeavoring to convince members of Congress for the urgent need of immediate action to break the mortgage finance jam on home buying and thereby ensure a steady volume of housing production throughout the nation for the coming months.

Armed with first-hand reports from all parts of the country on the critical mortgage situation, M. Spiegel, President and R. G. Hughes, Vice President of the Association, presented a number of recommendations to the Senate and House Banking and Currency Committees. They endorsed the interim housing legislation under consideration by the committees, but pointed out it did not go nearly far enough to solve the industry’s most pressing problems.

Recommended for Congressional action was 1) reduction in down payments on mortgages insured by the Federal Housing Administration to give non-veteran families in the middle and lower income brackets a fair chance to buy the homes they want and need, 2) adoption of the plan to permit the Federal National Mortgage Association to operate the so-called “one-for-one” plan which would restore FNMA to its original function as a backstop to the market for use only in those areas where there is a temporary shortage of private funds. At the same time it would accomplish a substantial reduction in FNMA’s existing portfolio at the best terms for the government.

Everyone in the construction industry should interest themselves in the efforts being put forth by the NAHB to “smooth out” problems confronting the construction of adequate housing throughout the nation on the long established concept of individual and free enterprise.

* * *

A free market economy always leaves open the door of opportunity to the man with a new idea, a new product or a new method.

* * *

HOW HIGH IS UP?

How high can the Federal Debt get—and that is what determines the amount of taxes you pay to the federal government? Well, in 1869 when the Civil War had just been fought, the Federal Debt was $2.2 billion. After fighting World War I the Federal Debt stood at $25.2 billion in 1919, and after World War II and playing Santa Claus to the peoples of the World for a number of years, the Federal Debt stood at $252.7 billion.

In other words, if each family in the United States was to pay enough money to get the federal government out of debt, the family would have to pay $5,874.00. How long does it take you to earn $5,874.00? How long would you have to work to save enough money, over living costs, to have $5,874.00? How High is Up? Only your representative in Congress knows the answer.

* * *

SOCIAL SECURITY

Security for old age must be considered as a three-layer cake. The first layer constitutes the floor of security provided through the cooperation of a well administered and universal pay-as-you-go government program. The second layer is often cooperatively arrived at through the joint action of employer and employee. It should meet the particular needs and desires of the group involved. Finally, there is the most important layer—that of individual thrift, initiative and family responsibility which is independently determined by the individual and fashioned to meet particular desires and circumstances.

This three-layer cake is the approach to Social Security favored by the large majority of Americans. They have rejected the alien European view of the welfare state wherein it is assumed that the individual cannot and should not provide for his own security.

Recurrent postwar crises have demonstrated that the end result of the European welfare state is a crushing burden of taxation, inflation, and the destruction of the production base, the only real basis of security. Such an approach guarantees neither security nor well-being.

For years the social planners have regularly engaged in a campaign of statistical justification for the philosophy that people cannot save for their old age, that they are largely destitute and, therefore, must be wholly supported by the state. But the facts of the case show that aging persons have substantial assets. The total assets of people over 65 years of age have been estimated at some $90-billion; about 5.5 million of these people own their own homes and about a million own other real estate in substantial amounts averaging over $10,000.

Social Security will only be a reality when each individual is in possession of sufficient cash or securities to be security independent. To have this security is the responsibility of each individual and can not be obtained on a “let-George-do-it” program.

ARCHITECT AND ENGINEER
GROUND WATER IN
GRADE SLABS
— ITS EFFECT ON FLOOR COVERINGS
— ITS PREVENTION

Part One*
By C. LeROY OLSON

For at least thirty years or more the flooring contractors throughout the nation have been aware of the damage done to floor coverings by ground water present in and below slabs or by alkaline salts carrier from within or below the slab by such ground water. Often they have taken steps to overcome this trouble in various ways which will be discussed later on in this article.

While many architects, engineers, and others in the construction industry have recognized such shortcomings in construction of buildings having a slab on grade, not all such professional men have done so with the result that often the solution of such problems has been left to the floor covering contractor on the job sooner or later. Such architects, engineers in the construction industry have, however, been concerned about slabs below grade, such as basement slabs, and have taken steps accordingly to prevent the emergence of such moisture from the concrete slab and walls using various methods available to them.

Often our office receives inquiries from the staff of such building designers requesting specialized information not always available to them from other sources. Consequently, this article is being written for those in the construction industry who do not have the answers at their command and which are contained in this article. Copies of this article are being published in pamphlet form by the LeRoy Olson Company and will be available to the files of everyone interested—on request.

The methods used by the floor covering contractor for asphalt tile, grease proof tile and/or mastipave, etc., often consist of a cutback asphalitic adhesive, a primer coat of asphalitic cutback solution. If the emulsified type of asphalt cement or prime coat is applied, it must be thoroughly dry before any attempt is made to overlay it with floor covering, since to render waterproof such emulsified asphalt, all mechanically entrained water must be completely removed or eliminated by evaporation. Otherwise, such emulsified adhesive or primer will usually redissolve in place, migrate and leave the floor covering free to shift on the slab. Such floor covering is usually of the asphalt tile, grease proof tile or mastipave type of floor covering.

When alkalies are present in the slab or in the ground water and carried through the slab, they appear on the surface of the slab in the form of white incrustations which may attack or interfere with the asphalitic primer or adhesive, rendering it ineffective as a primer or as an adhesive.

This manifestation may likewise occur where cutback asphalitic adhesives or primers are used, but they do not show the same degree of migration or disappearance as the emulsified type of adhesive or primer.

Often a new type of primer such as lacquer or synthetic plastic liquids, etc., is used with good effect to prevent the appearance of such alkalies,

*(See Page 22)*
CALIFORNIA SCHOOL OF FINE ARTS

Summer sessions of the California School of Fine Arts, 800 Chestnut Street, San Francisco, offer a diversified and general program in both day and night classes.

Ernest Mundt, Director of the California School of Fine Arts, announced "Foundations of Modern Art" would be the subject of the Summer Sessions curriculum and includes "preparation for the student and teacher in the techniques, backgrounds and materials of Modern Art." Courses will also offer an integration of methods into thorough presentation of the philosophy and principles upon which contemporary art is based. Lectures and round-table discussions will give students a better understanding of the materials and techniques which the courses offers.

Among guest lecturers to appear during the "Foundations of Modern Art" discussions will be: Alfred Frankenstein, author and critic; Walter Landor, Industrial Designer; Dr. John W. Perry, noted Psychiatrist; Ernest Mundt, author and sculptor and CSFA director, and others.

Robert Neuman, recent winner of the Fulbright Scholarship to Europe, will offer a special course in water color painting, and Kenneth Nack, distinguished American painter and teacher, will offer a course in painting fundamentals, techniques, still life and non-objective work.

Full professional training is offered in every field of Painting and Sculpture, Commercial Arts and Design, Photography and Crafts.

SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, is presenting a diversified calendar of exhibitions and events for July, which is highlighted by the Leger Exhibition which
will continue until August 23. Other summertime activities include:

EXHIBITIONS: Steuben Glass; Leger—A Survey of His Arts; Prints by Enid Foster, Mar Jean Ketunen, and Julius Wasserstein; Design for Outdoor Living; Contemporary Drawings from Twelve Countries; and Costume and Stage Designs by Eric Stearne.

EVENTS will include Concerts and Lecture Tours (Sundays at 3 o’clock); Wednesday evening (8 o’clock) discussions; and the Museum activities covering “Art for the Layman”, “Adventures in Drawing and Painting”, and the Children’s Saturday morning classes have been recessed for the summer and will be resumed in September.

Museum hours are Mondays 12-5; Tuesday through Saturday, 12-10, and Sundays and Holi-

days 1-5.

SCHOLARSHIPS AWARDED BY THE CALIFORNIA SCHOOL FINE ARTS

Nineteen Certificates of Completion were presented graduating students by Francis V. Keesling, Jr., president of the San Francisco Art Association at the recent graduation exercises of the California School of Fine Arts in San Francisco.

Traditional setting was the Annual Student Exhibition in the galleries and patio of the School, presented by the Directors and Women’s Auxiliary, and the faculty. The exhibition, which included showing of work completed in illustration, painting, sculpture, ceramics, jewelry making, lithography, advertising layout and design, remained open for public inspection.

Awards were given to: Zoe Lowenthal, student in Photography and Graphic Arts, The Robert Howe Fletcher Cup; Gertrude Murphy, sculpture student, The I. N. Walker Sculpture Prize; Eleanor Prindle, student in fine arts, The Gertrude Partington Albright Award for Drawing; John Saccaro, Painting; Robert Carigg, Julious Wasserstein, John Kraus, Stavros Trian and Jakobine Schou also received awards in painting and sculpture.

Irene Patinsson, 1st in Design; 2nd Caroline West; Zoe Lowenthal, 1st in Photography, and Alex Libsohn, 2nd.

Eleven scholarships were also awarded from various trust funds and bequests left to the school.

M. H. deYOUNG MEMORIAL MUSEUM

The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, under the direction of Walter Heil, offers a diversified summer group of exhibitions and events for July including:

EXHIBITS: Contemporary Hand weavers of Cal-

ifornia—Fifth Annual showing; Watercolors by Richard L. Shell; Paintings by Graham Sutherland and Sculpture by Henry Moore; Paintings by Mario Sironi and Sculpture by Marino Marini; Association of San Francisco Potters—Seventh Annual exhibition; Building in Germany 1945-1952, representing a group of photographs of Post-War Architecture; Contemporary Indian Art and Crafts; Twenty American Paintings, from the Collection of the International Business Machines Corporation; and Thirteen Watercolorists—19th Annual.

SPECIAL EVENTS during July will include lectures and guided tours.

FRANK LLOYD WRIGHT RECEIVES NATIONAL INSTITUTE’S MEDAL

Octogenarian Frank Lloyd Wright, America’s still controversial peer of architects, was awarded the National Institute of Arts and Letters coveted Gold Medal for Architecture, according to an announcement by Marc Connelly, president.

Given twice annually for achievements in two different branches of the arts, the selection of Marianne Moore for the Gold Medal for Poetry was recently announced, the medal is given in rotation in other years for sculpture, music, history and biography, drama, and essays.

Presentation was made by Ralph Walker, architect and vice-president of the Institute. Wright’s work is also on display in the Gallery of the Institute-Academy, New York, together with works of grantees, award winners and new members.

DeYOUNG MUSEUM ACQUIRES RUBENS MASTERPIECE

The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, announces the acquisition of “Portrait of a Gentleman” by Peter Paul Rubens. This rare and valuable Rubens masterpiece painted about 1615, was donated by Mr. and Mrs. Roscoe Oakes.

According to Dr. Walter Heil, Museum director, no other American Museum has any portrait of such quality and few European museums can boast owning comparable ones.

As the Flemish master (1577-1640) was famous for his large compositions of holy and mythologi-

cal subjects he was kept so busy with commis-

sions from princely houses and churches he had to employ numerous assistants. His portraits how-

ever were usually entirely by his own hand. Hence they stand out among all his other paintings and are the most perfect token of his art.
SWIMMING POOLS
— THEIR EQUIPMENT
— THEIR CARE

By NORMAN R. MILLER, Vice-President
American Playground Device Co.

Durability, safety, approved design and economy are important factors to consider when selecting swimming pool equipment.

Look for the manufacturer who puts safety, in both design and construction, ahead of all other considerations, and who then builds into his products that extra durability which exceeds any strain to which they will be put.

First of all, be sure to buy diving units that meet the official requirements of the A.A.U. and N.C.A.A.

Conventional equipment at hundreds of pools is the one-meter diving unit. It should be constructed of hot-dip galvanized steel pipe, with the frame locked rigidly together by certified malleable fittings, throughbolted through the pipe members for greater strength and durability. Hot-dip galvanizing gives the metal enduring rust protection.

For pools where the walk areas are limited, an extra heavy duty regulation one-meter diving unit of the streamlined type is recommended. The frame, supports and guard rail assembly should be constructed of larger pipe, preferably 2½ inches in diameter. For resort hotels, country clubs and spas, where all accessory equipment must have true architectural beauty, the one-meter diving unit should combine graceful, streamlined design with heavy duty construction.

The streamlined three-meter diving unit should consist of a frame, main braces, stairway and risers of hot galvanized steel pipe, preferably 1½ inches in diameter. Counterbracing of heavy, cold-
rolled flat steel bars and cantilever construction add durability. All stairways should be slanting, with non-slip treads and safety handrails.

For larger pools, triple diving units will provide greater activity and enjoyment. This equipment should include one official three-meter and two one-meter units, fan-shaped to assure absolute safety for the divers. One official 16-foot and two 14-foot diving boards are recommended for the triple diving unit.

A.A.U. and N.C.A.A. official regulations require diving boards of 14 and 16 feet, each 20 inches wide, 3 inches thick at the base and tapering to 1½ inches at the diving tip.

Proper selection of diving boards will greatly reduce maintenance work and expense. A type which gives years of good service is the regulation board of solid laminated construction. Top grades of clear, 100 per cent flat dense grain, old growth Douglas fir must be carefully selected for moisture content and texture. Each of the 12 laminated sections comprising the board should be surfaced, planed and sanded to assure perfect glue joints.

Laminated sections should be matched and permanently welded together, using a special glue, resistant to tremendous pressures and to water. The boards should be treated with a sealant which seals in the proper moisture content so essential to assure the flexibility and resiliency required in official boards.

Springboard units are ideal for installation whenever official regulation diving units are not required. The springboards are made in 12 foot lengths, with 15, 18 and 20-inch widths. Complete units are equipped with strap-down fulcrums, all necessary fittings and anchors for installation on either a concrete or wood dock.

Increased safety is assured by covering boards

ON THE REDWOOD HIGHWAY . . . ACROSS THE GOLDEN GATE BRIDGE

PICTURESQUE SETTING FOR

RANCHO RAFAEL

SWIMMING POOL

IGNATIO, CALIFORNIA

ARCHITECT: JOHN M. McWILLIAMS
Rancho Rafael, located a few miles north of San Francisco on the famed Redwood Highway, is a beautiful California-Old Spanish Mission type of rural Motel-Hotel construction, with traditional thick adobe walls; attractive stone fireplace chimney; and traditional red-tile roof with eaves that extend well over the walls of the building to provide shade from the summer sun and protection from winter winds and rain.

The administration building, center of the site property, includes a spacious dining room decorated in cool forest green and natural California wood; large picture windows overlook the garden and swimming pool; and a comfortable air-conditioned "Round-Up" room, with sound proofing and indirect lighting, overlooks the terrace and large swimming pool.

Feature of the project is the "London Blue Lake" swimming pool which lies immediately adjacent to the administration building and is almost surrounded by the guest accommodations which form a huge arc around the entire hillside of the grounds.

The swimming pool is 25x50 feet in size and was designed and built to serve the community as well as the Rancho Rafael guests. It is equipped with the usual diving board at the deep-end, and is immediately surrounded by a paved area and lawn-patio which may be used for dining, or just relaxing in the sun. Pool umbrellas are provided for those who seek the out-of-doors, but not the direct rays of the sun.

To present an unusually attractive appearance the pool is painted in a light blue Ramuc swimming pool enamel which reflects and emphasizes the blue of the sky overhead. Painting of the pool with the chlorinated rubber-base enamel solves many a maintenance problem and retains the desired color as well as providing better sanitation, durability and customer satisfaction and pleasure.
MUNICIPAL SWIMMING POOL - - - La Mesa
california

architects: RAYMOND LEE EGGERS, A.I.A.
eggers & faddis, architects

Cost $113,000.00

This pool is located in MacArthur Park, a city park, now being developed near the center of the City of La Mesa, San Diego county, California. The architect Raymond Lee Eggers, A.I.A. of the architectural firm of Eggers & Faddis, points out that the pool represents an advancement in the design of such an installation.

The Recreation Commission of La Mesa determined that this was to be a community pool, designed for the enjoyment and benefit of every age group. Representative pools were visited by the architects and members of the Recreation Commission throughout Southern California and as far north as the City of Fresno in the San Joaquin Val-
MUNICIPAL POOL

LEY, on a survey to determine the design of this pool.

After careful study, it was determined to build a "U" shaped pool with a shallow portion (2' - 0" to 3' - 3") for wading and swimming instruction as one leg of the "U"; a diving area (5' - 0" to 10' - 0") as the other leg; and a swimming area with racing lanes (3' - 3" to 5' - 0") as the bar of the "U." This form was developed in our design process by adding the wading area to the form of similar "L" shaped pools which were visited in our survey. This idea, however, is not original with our firm but had been suggested by other pool designers, although, we believe this is the first to actually reach construction. The pool provides for 25 meter races in the racing lanes across the bar of the "U" and 25 yard races across the deep leg of the "U."

Although racing facilities are provided, this phase of the pool's use is de-emphasized since swimming meets will probably be held only twice each year while the other uses will continue throughout the season. This design devotes the major portion of the pool's area to the depths used by the largest percentage of the patrons, i.e., the swimming area—3' - 3" to 5' - 0". Safety float lines and safety fences isolate the separate areas to prevent patrons from straying into the deeper areas.

This pool is designed with heated water and a portion of the slab radiant heated to extend the swimming season or make possible its use the year around in the swimming programs of the local schools.

The mechanical system incorporates pressure sand filters with recirculating water inlets to the

---

**PLAN . . . showing functional facilities of operation.**

---

JULY, 1953
MUNICIPAL POOL

pool in the side walls of the pool shell and bottom drains. The pool area is approximately 5,400 square feet and it contains 220,000 gallons.

The pool shell is reinforced gunite walls with poured concrete floor. The interior surface of the shell is white cement plaster. Gutters and racing lane markers are tiled. Deck areas are spacious with attention given to a carefully troweled tinted concrete surface to provide good drainage, sufficient traction, but not such a rough surface as to damage the feet. A low concrete block wall with a cast concrete seat cap and a wire mesh fence surround the pool where not bordered by the buildings.

The showers and locker buildings are oriented to provide the maximum shelter from prevailing winds. All shower and locker buildings visited on our survey, shared two universal shortcomings which were, the lack of adequate natural light and ventilation. In order to overcome this problem, we have designed, for what we believe to be the first time in a shower and locker building, a roof on casters and track which is rolled off the Shower and Locker Rooms by electric power. These rolling roofs are light in weight consisting of translucent corrugated glass fiber plastic on a wood frame. When in the open position, these roofs shelter a sun bathing area on one side and a spectator area on the other side of the building. An added advantage to this feature is that the sunlight controls the growth of bacteria and algae thus reducing maintenance.

The buildings are constructed of concrete block treated with clear water-proofing on the exterior and sprayed on vinyl plastic on the interior. The area of the Shower and Locker Buildings is 2275 square feet.

The entrance and foyer facilities are reduced to a minimum consisting of a covered area with a Cashier’s Booth and turnstiles for the control of traffic.

A concession building is provided and is accessible to both bathers and spectators. This area is enclosed in fences to prevent papers and debris from entering the pool area. It is expected that this concession will yield part of the necessary funds for the maintenance and operation of the pool.

The bids for this project were received March 10, 1953, and it is now in construction. It is expected to be ready for use approximately August 1, 1953.
This project was bid in two parts consisting of the swimming pool as one contract, and the buildings as another contract. It was felt that lower bids were obtained in this way and that the successful bidders would be better qualified contractors for their particular contract. This is because the contractors engaged primarily in pool construction are reluctant to bid on projects which include both pool and buildings. On the other hand, few General Contractors are qualified in the specialized technique of swimming pool construction. Therefore, by permitting each contractor to bid that portion with which he is most familiar, lower bids were obtained. The contract for the swimming pool is approximately $56,000.00 and the contract for the buildings is approximately $57,000.00.
Showroom with glass front and anti-sun glare louvered canopy.

CADILLAC
STONESTOWN AGENCY
SAN FRANCISCO, CALIFORNIA

ARCHITECTS: WELTON BECKETT and ASSOCIATES

60,600 Square Feet

Latest addition to the beautiful new Stonestown Shopping Center just off 19th Avenue in San Francisco, is the elegant Cadillac showroom and service department.

Designed by Welton Becket and Associates, the showroom and business offices of Stonestown Cadillac, located at 20th Avenue and Buckingham Way, are as pleasing to the eye and as functional
in planning as can possibly be styled in the charming California contemporary design that is evident throughout the shopping center.

This eye pleasing appearance of the building has been carried out through the effect of colors, lighting, large areas of glass and a general easy flow of design.

Pastel shades of green, red, brown, and beige adorn the outer and inner walls and fixtures. Most evident of these is a soft Nile green covering the wall running opposite the showroom entrance. This color is used again in the two large neon signs over the entrance and along the side of the building. The signs spelling out Cadillac in script writing are extremely effective at night along with two others of the gold Cadillac crest over gold V symbols bordered by red neon.

Glass enclosed on two sides, the showroom has approximately 3,600 square feet of floor space and can adequately display five Cadillacs in any positions desired.

The floor is laid out in red quarry tile, which has durability and can be easily maintained.

The facade is predominantly glass. The west wall, 65 feet in length, is glass as well as the entrance doors. Aluminum division bars support the glass and aluminum frames enclose the glass doors. The glass facade has an appearance of smooth sleekness, complementing lines of the cars visible through it.

The south wall features 40 feet of glass running approximately two-thirds the length of the wall, the remainder is brick. The glass is free standing, steep pipe columns support the structure overhead.

The showroom and office ceilings the made of Cane fibre, sound absorbing, random perforated material with a noise reduction co-efficient of .63. The ceilings are basically a neutral color. Whether

Attractive red quarry tile flooring, recessed lighting, sound absorbent ceiling and pastel colors highlight the interior of the spacious new Cadillac showroom.

(Photos on this and opposite page by Moulin Studios.)
planned by design or not the showroom ceiling takes on a soft blended hue of red and green due to a reflection from the floor and walls. This reflected color tends to break up any monotony often prevalent in ceilings covering large areas.

Choice of lighting for the showroom and the building in general is excellent. Eight foot long recessed slimline fluorescent troffer lights are spaced on the ceiling with 32 square incandescent fixtures. The slimline lighting has a corning low brightness lens cutting glare and also giving economy and presenting clean graceful lines.

A soffit running the length of the west side of the building just above the glass wall holds a battery of 300 watt eye ball spot lights intermittently spaced with more square incandescent fixtures. The spots can be made adjustable to suit the desired car display.

A fourth type of lighting is used in the manager's office. In addition to slimline fluorescents there are five R-40 louvered spot lights that give added effect to any pictures or displays in the room.

Adding to the comfort of customers and employees is the latest combined heating and air-condition unit with modern overhead diffusers.

Looking at the building from the outside one immediately notices the louvered wooden canopy covering the length of the two glass fronts. In addition to the striking effect it gives the building, the canopy serves the functional purpose of cutting sun glare on window displays and supports the illuminated Cadillac signs.

Landscaping follows the contemporary California theme with two large palm trees at the north end of the building surrounded by lawn. Between the red brick walk and the front of the building

View of east customer entrance and exit to 57,000 square feet of modern automobile service facilities.

(Photos by John Black and Associates.)
are other tropical plants.

The huge new service department is located just across 20th Avenue in the magnificent Medical Dental Building that features outside walls of red brick, slab rock, and concrete.

The service department occupies the two lower floors of the building, an approximate area of 57,000 square feet. Easily accessible through two separate entrances, one for customers and one for service testing, the service department is one of the largest enclosed automotive service areas in the west and is considered excellent in its functional layout.

Space arrangement makes it possible to receive, service and deliver cars with utmost speed and no congestion whatever. The reception area just inside the customer down ramp is divided from the delivery area by an island housing the service and cashier offices. There is ample space to receive 14 cars at once and parking stalls for 11 cars that are ready for delivery, all within a few feet of the customer waiting room, which itself is comfortably furnished.

There are 13 production stalls on the top floor and on both floors space is available for 26 repair stalls. In addition to interior lighting, windows have

**South Entrance and Exit for service testing.**

Planned spacious reception area for automobile service department can receive fourteen cars at one time.
The entrance to the lower automobile service area is protected by automatic sprinkler system for fire protection.

Top floor automobile service area — natural daylighting is emphasized together with thorough air conditioning system.
been placed in front of each of the stalls to provide better working conditions for the mechanics.

The very latest equipment is in use. Most noticeable are the lubrication facilities. The four lube racks are stationary with a sub-floor under them. With no movable parts the lube area is inexpensive to maintain, and easy to clean. A metal grating on the floor level allows ample ventilation to the men working below, who can stand upright at all times due to the convenient height of the racks. Servicemen claim that many more cars can be handled in a day with this method.

One of the most important facilities of any automobile dealership is the parts department. Much planning has gone into this department at Cadillac Stonestown. In order to give prompt service the parts manager’s desk is situated at the counter, where he is available to customers and mechanics at all times. The storage area includes 48 large steel bins and 23 racks within easy reach of the parts manager. All parts with the exception of tires are handled in this well designed area under a new specialized inventory control system. There is no guess work in determining what parts are stored and the quantities of each that should be available.

Safety and working condition comfort is of prime importance. Both floors of the service area are equipped with automatic sprinkler system for fire prevention. In addition the department has its own air-conditioning unit keeping the building free from carbon monoxide. The paint department is equipped with a special paint spray booth, a completely enclosed drive-in room. At one end of the booth is a huge suction fan that draws out all excess paint in the air so quickly that it hardly ever hits the walls of the booth.

The beauty of design and the conveniences offered by the many new businesses in the Stonestown Development Corporation’s new Stonestown Shopping Center is evident by recent statistics revealing that one-third of the shoppers visiting the area are coming from outside the San Francisco city limits.
GROUND WATER IN GRADE SLABS

—ITS EFFECT ON FLOOR COVERINGS
—ITS PREVENTATIVE

(From Page 3)

which either destroys such floor coverings or prevents their adhesion to the concrete slab altogether.

LEVELING COURSES

Such underlayments or leveling courses as cold mastics, Masti-Dak, Neotex, etc., serve as surface sealers or water proofers to the slab while serving the purpose of a leveling course. Even magnesite finish coat flooring or base-coat flooring serves the same purpose, but as a rule is less economical. Likewise, often FLOORSTONE, SUPERSTONE or other similar materials serve the same purpose but generally are not entirely satisfactory as to permanence or cost.

Since we are limiting this discussion to grade slabs or below grade slabs, no attempt will be made to cover the subject of suspended slabs, wood subfloors, etc., in respect to the floor coverings and their behavior.

In general it can be said that linoleum, rubber, asphalt tile, vinyl tile, etc., magnesite oxchloride cement flooring, etc., can all be laid over concrete grade slabs or below grade slabs if such slabs have been waterproofed by internal membrane or cold mastics on the underside of such slabs.

It has also been observed that in many cases, linoleum, rubber tile, magnesite, vinyl tile, sheet rubber, etc., have been successfully installed over such grade slabs. Such floor coverings may have even been installed over the leveling courses of Masti-Dek, Neotex, cold mastic, etc., provided the ground waters and moisture have been entirely eliminated. While magnesite floors are less affected by such moisture, they are not immune to it.

Several instances come to mind over the years that often disprove theories on the subject of grade slab moisture.

HYDROSTATIC PRESSURE UNDER THE SLAB

In the Mission District of San Francisco a magnesite floor job was installed over a grade slab during the dry season. Some four years later during a heavy season of rainfall, a spot approximately four feet by four feet became damaged and buckled from pressure of ground water under the slab. This "spot" was replaced and the flooring problem ceased thereafter, even when covered and blanketed with asphalt tile.

SWEATING CONCRETE

Such an instance is recalled in Oakland where the slab was at an elevation of approximately 12" above ground level and rested on a gravel fill between concrete foundations. Evidently capillary attraction carried the moisture through the gravel fill and concrete slab to the magnesite floor topping for it disintegrated badly and the entire floor area became loose. The presence of water was noted over the entire surface of the concrete slab.

Thereafter the top surface of the concrete slab was cleaned, case hardened concrete steel nails driven in approximately every 3" to 6" each way allowing the heads to project approximately 1/4". The entire surface was then swept clean and asphaltic cutback primer applied thereon. Thereafter, a 1/4" to 3/4" coat of finish magnesite flooring was applied and sealed.

The magnesite floor was a good floor and served its purpose for some twenty years after. There are other instances of water passing through grade slabs with hot coat asphalt and three ply membrane each hot coated or mopped down. I recall a grade slab in Berkeley near the bay where the slab rested on top of the ground near the street 6" above ground with the rear end of the slab some two to four feet above the ground. This slab had been hot coated with asphalt and three plies of thirty pound saturated roofing felt mopped down with overlapping seams. Thereover, 3/16" or 6 mm. battleship linoleum was cemented down to the felt. This was considered a well waterproofed slab and no trouble was anticipated at the time of installation.

A few years later the linoleum rotted and water would spurt up in places at the seams when stepped on. The entire three plies of felt and linoleum had to be removed and replaced with asphalt tile. It was found that the water under the slab had worked its way up through the concrete slab and dislodged the hot asphaltic coating under the felt in a very large area. The hot coat had flaked and peeled off and was no longer effective.

The residue "hot coat" was dissolved, cleaned off and then replaced with a regular cutback asphaltic primer, whereupon an asphalt tile job was laid with cutback asphalt adhesive with permanently good results.

CONCRETE SLABS—

On Grade Without Membrane:

In highly arid locations and where the ground slopes away from the building site location—say desert country—slabs are often of the (1) plain poured concrete type. (2) Such grade slabs are often of the so-called dense, waterproof type of formulation where admixtures are employed and the mix well compacted to a dense close grained mass and where moisture cannot penetrate the concrete once it is set up hard, such as reinforced.
concrete successfully used in water tank construction, but in each case such slabs must be placed approximately at a minimum height of 12" above ground level at the highest point of ground elevation at the building site and on a crushed rock or gravel fill within the building foundation confines.

In semi-arid or farming communities or cities or industrial communities near bodies of water, rivers, canals, etc., of approximately the same elevation, such grade slabs should have a membrane (1) within the slab (between two sections of the slab) or slab should be (2) laid on a cold mastic layer approximately 1" thick or more. In each case a crushed rock fill or gravel fill within the building foundation confines should be provided. A sand bed layer on top of the crushed rock or gravel fill should be placed and the whole compacted by heavy rollers or other appropriate means before the (1) membrane slab or (2) the cold mastic layer applied. Hot street paving may be substituted for the cold mastic and rolled and compacted with street paving equipment. Where such mastics are used below the slab, it is optional whether a bed of sand approximately 1" or more be applied level over such mastic bed before the concrete slab is laid. The concrete slab in each case should be properly reinforced in accordance with commonly accepted building practice. In cases such as when No. 1 or No. 2 methods are employed, provision should be made for waterproofing the vertical surfaces against which the slab butts on all sides so that the effectiveness of the waterproofing is carried up or above the surface of the slab.

"FLOATING GROUND"

In communities where subsoil is supersaturated with water to such an extent that the ground may be unstable or practicably in a condition known as "floating ground" or constantly sinking, it may be necessary to drive piling in the floor spaces as well as the foundations before pouring concrete, and under such circumstances it is advisable to pour a section of concrete slab over the piling, then apply a heavy membrane well cemented in place with hot asphaltic cement. Such membrane must be either a non-rotting asbestos asphalt saturated felt or woven glass fabric or similar material in two or more plies, each ply hot coated down, after which the top section of the concrete slab is poured as specified for the job. The entire slab should be of steel reinforced construction in accordance with specifications for the job and/or commonly accepted standard construction practice.

In each of the foregoing instances the finish given the top surface of the slab will depend upon the requirements of the job or floor covering to be used. While such foregoing information is contained in construction manuals, textbooks, and other sources of construction information, we do find such questions arising either before or after a job is installed in practice. No designer of a building likes to admit a mistake in the ground slab after a building has been erected and often resorts to finding fault with the work of the general contractor or his subcontractors, often resulting in litigation or to say the least "ill feeling." Usually a careful approach to such problems will reveal a solution thereof.

Often the foregoing slabs will well serve the purpose if finished by smooth trowelling for asphalt tile, grease proof tile, mastipave, the various types of approved underlayments or leveling course materials such as cold mastics, Masti-Dek, and/or other types such as latexes, Neotex, etc., and in some cases even linoleum, rubber tile, etc., if moisture has been positively eliminated.

Such slabs are usually finished to a rough texture by rodding or floating for ceramic tile, non-rotting composition sleepers (Unibond Sleepers), etc., and the levels corrected either in the sand bedding for the tile or in the levels of the sleepers receiving the wood flooring for gymnasiums or dance floors, etc.

Note: Wood sleepers of late years, whether treated with preservatives or not, have generally proven unsatisfactory and less permanent without sufficient compensating saving in cost.

Wood blocks for industrial floors as well also as parquet wood tile may either be laid on top of a leveling course over the concrete slab using a mastic adhesive or they may be laid over a concrete slab on which hot or cold mastic has been applied as an adhesive and which also may serve as a seal against moisture coming through the concrete slab on occasions. There are also cold mastic adhesives used for the same purpose as the hot asphaltic adhesives.

(To be continued)

FEDERAL GOVERNMENT SEEKING ARCHITECT

An examination for architect has been announced by the United States Civil Service Commission to fill various vacancies in Federal agencies in Washington, D. C. and vicinity.

The positions range in pay from $3,410 to $10,800 per year. No written test will be given. To qualify applicants must have had appropriate education or experience.

Applications will be accepted until further notice and must be filed with the Executive Secretary, Central Board of U. S. Civil Service Examiners, Veterans Administration, Washington, D. C.

JULY, 1953

23
Dealers and distributors of Kraftile (Niles, California) products were recently given a practical demonstration of the techniques of laying Patio Tile, when company officials and dealers observed the firm's annual Dealer-Day. A conducted tour of the manufacturing plant was also observed.

- **Pouring Base**: Mix is poured onto prepared ground area. Edge boards in place to hold mix.
- **Leveling Base**: "Screeding" the mix to assure proper over-all depth.
- **Spreading Setting Bed**: After foundation has set, \( \frac{\text{3/4}}{} \) of bedding mortar is spread smoothly with a trowel.
SETTING TILE
Showing how damp tile is bedded. Each tile is gently tapped in place until firmly in position. Use of straight edge and level help get smooth, level job.

APPLYING MORTAR FOR JOINTS
Joining mortar (3 parts sand to 1 part cement, or, for exceptionally smooth joints, 2 parts sand to 1 part cement). Dry materials are mixed thoroughly, water added until mixture flows or pours.

Sweeping mortar into joints
Broom is used to sweep mortar into joints until all are full to top of tile.

APPLYING MINWAX SEALING COAT
Final. When tile has become dry, apply Minwax for sealing coat. This prevents staining, makes surface easy to clean and prepares for waxing, if desired. For best penetration, Minwax should be slightly heated and applied when tile surface is warm.
SAN DIEGO CHAPTER

Robert C. Dorland, Chief Building Inspector of the City of San Diego, was the principal speaker at the July meeting. He discussed numerous phases of the building industry in San Diego and presented a number of subjects very informally to the members in attendance.

President Donald Campbell reported on the

1953 A.I.A. Convention in Seattle, and his impressions of the Pacific Northwest. Indications were that the Convention was a great success and the country very beautiful.

New members include: Kempton Blair and Alan Daun, Junior Associates; and Carl Hotten, Associate.

OREGON CHAPTER

It has been reported that the Chapter’s list of “What to See in ‘53” has proven well worth while in diverting architectural delegates to the Seattle A.I.A. Annual Convention to inspection of a number of “buildings” representing typical Northwest architecture.

Dick Marlitt, and committee, prepared a directional map listing 25 buildings that everyone should see and many local people have taken advantage of the opportunity to view Portland’s architecture on parade.

WOMEN’S ARCHITECTURAL LEAGUE OF SOUTHERN CALIFORNIA

The Women’s Architectural League of Southern California has launched a program designated at restoration of the stained glass windows in the Chartres Cathedral.

Members of the Pasadena WAL recently made a contribution to assist in the program.

PASADENA CHAPTER

The July meeting was the annual “BUZZ SESSION” at which the Coordinating Directors presented the members of their respective committees and outlined their general activities for the ensuing year.
Delegates to the national A.I.A. 1953 Convention in Seattle reported briefly on the convention and Institute matters. A number of delegates to the national convention have visited Chapter officers and member architets while visiting in Southern California prior to returning to their eastern homes.

WOMEN'S ARCHITECTURAL LEAGUE CENTRAL VALLEY CHAPTER

The recently organized Central Valley Chapter of the Women's Architectural League held a meeting in Sacramento to hear Carl H. Oertertag, Director of Gumps Gallery of San Francisco speak on the subject "Art as an Appreciation of Our Times."

More than seventy-five women attended the meeting, and Mrs. William Koblik, president of the Chapter, announced similar program will be held in the future. Funds obtained from the activity are to be used in a scholarship to be offered by the WAL.

NAMED TO OREGON ARCHITECTURAL BOARD

I. G. Smith, Portland A.I.A. architect, has been named to serve as a member of the Oregon State Board of Architectural Registration, succeeding Glenn Stanton who resigned after serving for three successive terms.

PASADENA SCHOOL DISTRICT RAISES ARCHITECTURAL FEE

Culminating a three year effort on the part of the Pasadena Chapter of the A.I.A., the Pasadena School District has approved a plan which will raise their approved fee for architectural service to 8 per cent. This is in conformity with a number of other school districts which have adopted the 8% architectural fee basis. The old rate was 7 per

SAN FRANCISCO SACRAMENTO OAKLAND STOCKTON SAN JOSE FRESNO
STRUCTURAL ENGINEERS ASSOCIATION OF CALIFORNIA

No regular meeting was held in July, with the exception that the annual SEAONC Picnic was held Saturday, July 18th at the famed Sonoma Mission Inn near Sonoma.

Golf tournaments with Cecil Wells in charge; Art Anderson, Jr., in charge of a hot horseshoe tournament; swimming, baseball, and a full day of outdoor recreation plus a wonderful meal will go down in history as one of the most successful "picnics" yet held by the organization.

UNIFORM "JOB" SIGN NOW APPROVED FOR ENGINEERS

A 15x25" "job sign" form has been completed and tracings are available at the offices of the local Structural Engineers Association, for use by members.

Adequate spaces have been provided for insertion of the proper title and identification of users.

It is felt by Association officials that by use of a common sign format and lettering on a state-wide basis, the position of the engineer to the project will be improved in relation to the public.

STRUCTURAL ENGINEERS ASSOCIATION OF CALIFORNIA

John E. Finne, president of the Structural Engineers Association of California, announces that the 1953 Annual Convention will be held on October 8-10, at the Ahwahnee Hotel at Yosemite Park.

This year's convention is shaping up as another fine event that should not be missed by any engineer interested in present-day factors involving his profession. Arrangements are being made for excellent technical meetings and social events.

STRUCTURAL ENGINEERS STATE EXAMINATION

While complete and final details are not available, it is reported that results of the last structural examination, held November 1952, 27 percent of the applicants passed successfully. Sixty-six per cent of those taking the examination failed, and seven per cent are yet undetermined.

Examinations were held in Sacramento, Berkeley, and Pasadena.

NATIONS FOREMOST ENGINEERING WONDERS

A recent "vote" of members of the Metropolitan Section of the American Society of Civil Engineers,
New York City, to determine the “Seven Engineering Wonders” of the world disclosed the foremost “wonder” to be the world-famed George Washington Bridge, spanning the Hudson River.

The second “wonder” is the Brooklyn Bridge. Third choice went to the Empire State Building; 4th to the New York City Subway System; 5th place went to the New York Water Supply System; 6th to the Holland Tunnel, and in seventh place was the Brooklyn Battery Tunnel.

The Golden Gate Bridge across San Francisco Bay was given mention.

AMERICAN SOCIETY FOR METALS
Puget Sound Chapter

Reported by Howard L. Southworth, Boeing Airplane Company

Dr. Vsevolod N. Krivobok, head of the Stainless Steel Section of the Development and Research Division of the International Nickel Company in New York, discussed “Properties of Metals at Elevated Temperatures and the Factors Influencing Such Properties” before a recent Meeting of the Puget Sound Chapter of the American Society for Metals in Seattle, Washington.

Dr. Krivobok pointed out the impressive amount of scientific and engineering effort that has been expended in this field and the work is yet far from finished. As is still true in many fields of metallurgy, the merit of an alloy must still be evaluated by its performance in service. While most early investigations have studied the effects of temperature, temperature and stress must be studied together.

High temperature alloys can be generally classified as iron, nickel or cobalt base and using this classification, Dr. Krivobok discussed the metallurgical factors that effect the properties of such alloys. Maintenance of the original properties of a material while in service is highly desirable.

With the exception of iron base alloys, most of the materials are precipitation hardening. Alloy additions are made to strengthen by: (1) adding strength to the matrix and changing the solubility of hardening elements; (2) influencing the size and distribution of the precipitant; (3) controlling the

(See Page 32)
INFORMATION PAMPHLET

An information pamphlet is being mailed to all AIA chapters of Northern California. The membership of the Producers Council has prepared this booklet to assist those in the Building Industry Field who are charged with the responsibility of programming meetings for Architects & Engineers and Homebuilding Contractors and Architectural and Engineering students. If further information is needed please contact the Producers Council or the sponsoring company.

WAKEFIELD BRASS EXHIBIT

The F. W. Wakefield Brass Co. went all out in presenting a very interesting program at the monthly informational meeting July 14th in San Francisco. The meeting featured demonstration of modern lighting developments from the A.I.A. Convention in Seattle including: Lighting Geometrics — Integrated Modular Ceilings — Luminous Ceilings and the 3 & 4 Way Sky Ceilings. General showings were also available for Draftsmen, Designers and all interested in new lighting developments July 15th and 16th. Ted Bakeman, who is also our Producer Council Veep this year is to be highly commended.

We have scheduled such a fine program for future monthly informational meetings that we strongly urge all who possibly can to attend.

ANNUAL SPORTSMEN'S DINNER

The Annual Producers' Council Golf Tournament & Sportsmen's Dinner was again a huge success. We understand Merv LaFaille of Johns-Manville sustained injury which we all hope has arrested itself to the degree that the tennis courts will again see his fine play. Harris Wilkinson, Pittsburgh Plate Glass Company, as program chairman, did a fine job arranging for the excellent dinner and the various sports activities.

INSTALLATION NEW OFFICERS

The annual installation of new chapter officers was held at St. Julian's Restaurant at which a small but very convivial group was in attendance. G. R. "Ray" Kingsland of Otis Elevator Company was presented with a scroll thanking him for his tremendous service to the Producers' Council. This gentleman also received the much coveted "Oswald"
COUNTY HOSPITAL
LANSAHON
Plans are being completed by the Board of Supervisors of Shasta county for the
construction of a 50-bed addition to the county hospital in Redding. The
addition will be 1-story, reinforced concrete, with basement, steel sash and linoleum floors. Estimated cost $125,000. E. Geoffrey Bangs, San Francisco, is the
architect.

ATIONAL GUARD

PERSONALITIES

PAUL THIRY
ARCHITECT, F.A.I.A.

Seattle, Washington

Architect Paul Thiry is a northerner by birth, being born in Nome, Alaska. He received his early education in the public schools and graduated from the University of Washington, Bachelor of Architecture, receiving the A.I.A. Medal and Tau Sigma Delta recognition.

Before settling down to practice, Thiry made three trips to Europe and in 1934-35 made a trip around the world, including the Orient.

Paul Thiry first entered the private practice of architecture in 1929 and since that time has devoted his entire effort to his profession. He is licensed in the states of Washington, California, Utah and is registered with the N.C.A.R.B. His scope of work has covered the fields of site development and community planning, and most categories of building. He has recently completed construction of the Museum of History & Industry for the Seattle Historical Society; the Charles & Emma Frye Free Art Gallery, Seattle; a dormitory for 400 women at the State College of Washington at Pullman, and a building for the United States Army Engineers.

In addition to architecture, Paul Thiry is recognized in the field of literature and is co-author with Richard Bennett and Henry Kamphoefner of a book on CHURCHES and TEMPLES, published by the Reinhold Publishing Company. Many articles written by Thiry have appeared in books and periodicals throughout the United States, England, Italy, Norway, Spain, Japan and Argentina. Recognition has also been received in the field of furniture and carpet design and also fabric design.

Elected Fellow of the A.I.A. for achievement in Design in 1951, Paul Thiry was also decorated an Officer d'Academie by France in 1950.

NEXT MONTH: Scott Quintin, A. I. A., Albamba, California.

(From Page 29)

grain size. Dr. Krivobok discussed the effects of variations in these factors on the important engineering properties such as creep and rupture strength and emphasized that small variations often exert a large influence which may not be predictable. Properties of alloys during service are also greatly affected by prior history of fabrication and heat treatment even though variations in these may result in alloys with essentially the same room temperature properties.

There is great need to find a room temperature property that will correlate with high temperature performance.

A.I.A. ACTIVITIES
(From Page 27)

According to Culver Heaton, Pasadena architect, who spearheaded the campaign for the new rate, the new contract will benefit the school district as architects will now be able to pay the standard engineering fees required by the outstanding structural and mechanical firms.

WOMEN’S ARCHITECTURAL LEAGUE OF THE EAST BAY

The Women's Architectural League of the East Bay recently contributed the sum of $350 to the Architecture Traveling Scholarship Fund of the University of California, Berkeley.

The award is made every seven years to an outstanding architectural student. Last year the East Bay Chapter WAL contributed $1,000 to the same fund.

OUTSTANDING ARCHITECTURAL STUDENTS AWARDED PRIZES AT UC BERKELEY

Twenty architectural students of the Berkeley campus of the University of California, were awarded various prizes for outstanding achievements at the recent opening of the annual exhibition of the School of Architecture.

The exhibition of student work and conferring of awards is held in cooperation with the Department of City and Regional Planning, Department of Art, Decorative Arts Department and Landscape Architecture Department of the University.

Among those receiving awards this year were: Richard Lareau, San Diego, Architectural Association award; Bertram Berenson, San Diego, Alpha Rho Chi Medal; Don McCarty, La Honda, The American Institute of Architects Medal.

Medals of the School of Architecture were awarded to Wayne Bowker, San Francisco; Ralph Eissman, La Crescenta; Jordan Hall, Berkeley; Donald Honer, Santa Ana; Barnard Johnson, Richmond; Sockey Lee, Sacramento; James Matthews, Los Angeles; Donald Thaden, Sacramento; Gary Tucker, Burbank; Mineya Urdaneta, Berkeley; Richard Zahn, Menlo Park.

Chi Alpha Kappa Prize in Architecture: lower division, Howard Leach, Sutter Creek; upper division, Guy O. Anderson, El Centro; Kenneth Foster Strong Memorial prize, Bernard B. Zimmerman, Los Angeles; Women’s Architectural League of San Francisco, $200 prize to Paul Wilson, San Francisco.

The Producers’ Council, Incorporated, San Francisco branch, awarded a price of $50 for books to Robert Fisher, senior from Sacramento, who will graduate student in the fall semester. Fisher...
Any contour, shape or design attainable in steel may be similarly achieved with PORCELAIN ENAMEL on steel. And note the perfection of texture, of fit, of erection, in this typical installation. When you specify PORCELAIN ENAMEL VENEER, you assure craftmanship from layout through lay-up.

REduce Tilt-up CONSTRUCTION COSTS

with

Thompson's Water Seal

for surface slabs and tilt-up panels

- Locks out moisture, acts as bond breaking agent.
- Permits easy lifting of panels without suction.
- Eliminates hairline cracks for smoother concrete surfaces.
- Gives slower, more uniform curing.
- Protects against seepage, prevents efflorescence.

MANY OTHER CONSTRUCTION USES:

For lasting protection against moisture, use Thompson’s Water Seal for plywood forms, concrete blocks, brick, tile, stucco, plasterboard and any other porous material.

Sold in 1, 5, 30, 55 gal. sizes. Ready to use — no mixing. Applied easily by spraying, brushing, mopping or dipping.

Available at paint, hardware or building supply dealers.

BY-CHEMICAL PRODUCTS CO.
1355 Market Street • San Francisco 3, California

was also runner-up for the American Institute of Architects medal.

The Mario Ciampi Prize of $200 for the winning design submitted as a special problem in high senior design was awarded to Sooky Lee, who also received a School of Architecture medal.

Edward J. Maher, of the architectural firm of Blanchard and Maher, San Francisco, gave a $500 prize to Francis Evans Jones, Jr., Richmond. Jones will attend graduate school in the fall.

The prize of the Northern California chapter, American Institute of Architects, went to Barnard Johnson, Richmond, also recipient of a School of Architecture medal.

JOSAM MANUFACTURING COMPANY RECEIVES A.I.A. HONOR AWARD

Accepting the A.I.A. Award at the Seattle Convention of The American Institute of Architects are: Representatives of M. Greenberg’s Sons - Wayne James (left), Portland, Ore., manager; Stuart N. Greenberg, President; M. Greenberg’s Sons - Josam Pacific Co. (Western Division of Josam Mfg. Co.): Elmer K. Ross, Manager of Sales; Richard M. Bennett, Chairman of the Awards Committee of the A.I.A.; and Robert Chandler, Seattle Manager.

A record unequalled by any other firm in its field was established by the Josam Manufacturing Company when they were awarded their second successive award from The American Institute of Architects, Awards Committee, during the Seattle national A.I.A. convention.

The award was given for excellence in preparation and presentation of the Josam Drainage Catalog "K", which was distributed during the year to architects, engineers, contractors and others interested in the construction industry. This was the second time the Josam firm received this award, as it was given to them last year in recognition of their Catalog "J".

SWIMMING POOLS

(From Page 8)

titled malleable fittings should lock the chute, platform, safety handrails and supports into a strong integral unit.

Thriller slides always make a big hit with young and old. Constructed with either 20 or 30-foot steel
chutes, they plunge bathers into the water to depths of about three and a half feet at an exciting, yet completely safe speed. Safe features should include a spacious, completely enclosed tower platform, non-slip stair treads, slant-type stairway with safety handrails and chute guardrails at the top to permit bathers to position themselves properly before descending.

Where space is available, a swimming pool or bathing beach may add to its pulling power by installing a children's playground, equipped with swings, slides, see-saws, merry-go-rounds and castle tower climbing structure. Some operators might wish to cater to the family trade by installing picnic grills, tables and other picnicking facilities.

One of the important factors in the revenue-producing phase of swimming pool operation is the checking system, which safeguards the patrons' clothes and other personal belongings. It is also the method by which swimming pool admission fees are collected.

Checking baskets should be ruggedly built to deliver years of perfect service, and should be equipped with large number plates with 1/4" black enamel numerals. Companion piece is the checking pin, made of spring brass and heavily nickel-plated, with numbers embossed on the large hood.

Another essential piece of equipment is the steel basket rack, which provides compact shelving for orderly and sanitary storage of checking baskets and their contents. The rack should be equipped with padlock hasps and number plates.

Good seating is needed in the dressing room. Other pool accessories include umbrellas, rubber diving bricks and bicycle racks.

Care of Diving Boards

Here are some tips on the care of your official regulation boards:

Install your boards properly. First, make sure that all members of your diving stand are properly aligned and that your fulcrum is aligned and perfectly level with the floor. Second, locate your fulcrum correctly: For a 12-foot board, a distance of 6 feet from the anchored end of the board is recommended; for a 14-foot board, 6 to 7 feet; and, for a 16-foot board, 8 feet. Finally, make sure that the base of your board and fulcrum are aligned and perfectly level; then, bolt the base of your board securely to the stand.

* Use a regulation style fulcrum. Either a standard bar-type or a rocker-type fulcrum will assure good diving board performance, providing the fulcrums are properly designed and covered with a heavy thickness of live, resilient rubber to absorb the shock of the board when in use. While American has made the conventional bar-type for the past four decades, we recommend the new patented

BOOK REVIEWS
PAMPHLETS AND CATALOGUES

A newly revised issue of the "Reading List on Housing in the United States" containing 46 titles. Included in the bibliography are current publications of the Housing & Home Finance Agency and its constituents, the Federal Housing Administration, and Public Housing Administration, as well as materials from the lists of other Federal agencies and of private publishers. Appended is a list of periodicals and legislative documents relating to housing.
Subjects such as "Readings for the Prospective Home Owner," "Cooperative-Mutual-Nonprofit Housing," "Home Building as a Business," "Remodeling and Maintenance," "Rental Housing," and "Housing Finance" are covered. Orders should be sent to the Super of Documents, U. S. Printing Office.

Primary purpose of 1st edition by author Harry Parker, M. S., professor of Architectural Construction at the University of Pennsylvania, was to present in a concise manner the basic principles and methods underlying the design of structural members used in building construction. The new edition embodies all of the material contained in previous editions and adds considerable material which explains in detail the necessary steps in the design of both steel and timber roof trusses. New tables have been introduced and examples and figures have been altered and supplemented so that the design procedure is in agreement with current practice.

On the theory that Architecture is both an art and a business, this book is designed to help the architect with the business side of his work, to understand his responsibilities to client and contractor, to develop organizing powers and business-like methods; to find his way through the maze of present-day controls and to tackle the routine specification writing and the administration of building contracts. Also contains a number of charts and forms. Architects and builders, and students, will find this book invaluable in the conduct of their business.

NEW CATALOGUES AVAILABLE
Architects, Engineers, Contractors, Planning Commission members—the catalogues, folders, new building products material, etc., described below may be obtained by directing your request to the name and address given in each item.

Noise isolation bases for fans. Vibration and noise isolation bases for fans and motors are described in detail in the new Catalog FB-802.
Designed to give the maximum help to architects, engineers, air-conditioning contractors and fan manufacturers, this catalog gives illustrations, descriptions and specifications of vibration isolation equipment manufactured by the company. Case histories are featured. Copies of the catalog are available from The Kortlund Co., Inc., 32nd Place, Long Island City 1, New York.

Duct Insulations. A new 16-page design data book for Fiberglass duct insulations has just been issued, containing more than 40 photographs and drawings of the various rigid and flexible Fiberglass Insulations for the exterior and interior of warm and cool air ducts. A. I. A. File No. 30-A.
Included in the booklet is complete information about the new flexible duct liner, a product recently introduced to the trade. Copies of the booklet are available upon request from Owens-Corning Fiberglass Corp., Toledo, Ohio.

Low temperature space insulation. A new 24-page booklet entitled "Fiberglass Low Temperature Space Insulation for Walls, Ceilings, Floors." contains information about many application methods. Lists finishes, suggested thicknesses, insulation values and properties. The information is presented in an easy to read and follow fashion with many illustrative

ing, steel beams, wood joists, concrete slab, asphalt tile floors in offices, shallow ceiling, heating in offices and suspended gas heat- 

ers in warehouse area, steel sash, rolling 

MISSION CHURCH, San Mateo, San Mateo county, Roman Catholic Archbishop of 

HIGH SCHOOL REMODEL, Los Gatos, San- 

ta Clara county. Los Gatos Union High School District, Los Gatos, owner. Alterna- 

tions to the Academic building and interior remodel, $74,357. ARCHITECT: Sobey & Green, Los Gatos. GENERAL CONTRACTOR: W. R. Kalsches, San Jose.

FACTORY ADDITION, Burbank, Arco-Coup- 

ing Corp., Burbank, owner. Precast con- 

crete panels from factory, tapered steel girders, wood roof with composition cover- 

ing, concrete slab and asphalt tile floors, plaster walls, acoustic tile ceilings in kitchen, steel doors, steel sash, steel decking, toilets, grading, asphalt paving, 50x180 ft. in area. ARCHITECT: Kenneth H. Neptune, Beverly Hills. GEN- 

ERAL CONTRACTOR: H. M. Keller Co., Burbank.

CHURCH & SUNDAY SCHOOL, Concord, Contra Costa county, Presbyterian Church, 

cisco. GENERAL CONTRACTOR: Zucker- man Construction Co., Walnut Creek.

STORAGE BUILDING, Los Angeles. K. A. Davis Wire & Cable Co., Los Angeles, owner. 1-story, reinforced masonry, steel storage building, composition roofing, skylights, overhead car loading doors, concrete slab floor at dock height, 20 ft. exterior walls, rotary roof vents, 4,482 ft. area. ARCHITECT: London & Wilson, Los Angeles.

IN THE NEWS

MODESTO MEDICAL BUILDING
A group of doctors' have commissioned architect Merrill W. Baird of Glendale, to draft plans and specifications for the construction of a new medical building in Modesto.

Of reinforced brick with built-up composition roof, the building will include a refrigeration room, X-ray room, and outpatient department. Estimated cost is $150,000.

NEW FIRM ORGANIZED BY AMERICAN STANDARD
Thomas W. McNell, has been named president of the newly organized Sunbeam Air Conditioner Division of the American Radiator & Standard Sanitary Corp., of Pittsburgh, Pa.

Formation of the new division to handle the company's operations in the air heating and cooling fields, was prompted by the increasing importance of the air conditioning industry and by the growth of the company's activities in this field.

Other officials of the new division include: H. M. Carochan, vice-president; and Frank P. Weil, vice president.

ASSOCIATED LIGHTING MOVES THEIR OFFICES
Associated Lighting Service of San Francisco, manufacturers of architectural and theatrical lighting equipment, have moved their offices from 488 Bryant Street to 521 Brannan Street.

The manufacturing plant, formerly located in San Francisco, has moved to new quarters in Redwood City.

APPOINTS SERVICE UNIT REPRESENTATIVE
The Farr Company of Los Angeles recently announced the appointment of Air Filter Sales & Service Co., Jackson, Mich., and Air Filter Sales & Service Co., Nashville, Tenn., as representatives in their respective areas for Farr products.

Marshall, Neil & Pauley, Inc., Texas and Louisiana representatives for Farr have organized a subsidiary company in New Orleans to handle Farr sales and service in the New Orleans territory, it was also announced by Los Angeles Farr officials.

ARIZONA HIGHWAY BUDGET ANNOUNCED
The tentative budget for Arizona's highway system for the fiscal year 1953-54, as released by the state highway department, totals $32,792,600 as compared with $30,936,000 for the current year.

Of the total budget, $27,485,000 is allocated to the 4,000-mile state highways system; $19,137,000 for Primary; $6,920,000 for secondary, and $1,728,000 for the urban system.

The off-state system budget amounts to $1,156,000, of which $500,000 are city funds and $656,000 are urban funds.

NEW LUCITE AND CHROME TOWEL RING
Architects, home builders, and home owners will be interested in a new lucite and chrome stirrup-type towel ring that "corral" that both towel to the wall and is manufactured by the HALL-MACK Co., of Los Angeles.

Why built-in telephone facilities mean happier clients for you

Home owners like to tell their friends about the little "extras" you include in their building plans. That's why planned telephone facilities always appeal. People like the idea of concealed telephone wires and conveniently located telephone outlets to take care of their initial and future telephone installations and changes.

Just call Pacific Telephone's free Architects and Builders service. We'll be glad to help you plan for better living tomorrow in the homes you are building today.

Put built-in telephone facilities in your plans

Pacific Telephone
Public Hospital, Fallon, Nevada, are building a 16-bed addition to the Churchill Public Hospital, comprising a 1-story concrete block and frame structure. Estimated cost is $140,000. De Lonchamp & O'Brien of Reno are the architects.

ARCHITECT SELECTED

The Pacific Mutual Life Insurance Company, with general offices in Los Angeles, has commissioned architect W. D. Peugh of San Francisco to draft plans and specifications for the construction of a new Office Building to be built in San Francisco.

Costing $1,000,000 the new building will be located at the Northwest corner of California and Kearney streets.

RESIDENCE HALL FOR WOMEN

A new residence hall for women students is being built on the University of California campus at Davis.

Of 3-story reinforced concrete construction the new facilities will accommodate 200 students, and will cost $700,000.

Architects W. C. Hayes and Herbert E. Goodpastor of Sacramento are designers of the building.

APPOINT DISTRICT MANAGER

John W. Marton, has been appointed San Francisco District Manager for the Virginia Metal Products, Inc., according to an announcement by R. M. Drysdale, Jr., vice-president of the company who's general offices are maintained at Orange, Virginia.

The firm manufactures steel partitions, steel doors and frames, library stacks and equipment, vertical files, and conveyors.

HOSPITAL PLANS

ADDITION

The Alta Bates Hospital, Berkeley, California, is planning a 36-bed addition to the present facilities at the hospital.

Planned is a 3-story reinforced concrete building with steel sash, and asphalt tile and linoleum floors.

L. B. FOSTER CO. OPENS NEW WEST COAST OFFICE

Henry E. Piefkeme, vice president and general manager of the Chicago office of the L. B. Foster Company, will head the firm's new Los Angeles office which is being established to better serve the industrial markets of California, Arizona, Nevada, Oregon, Washington, Idaho, Montana and Wyoming.

The L. B. Foster Company maintains warehouse stocks of pipe, tubing, welding facilities, steel sheet piling, and steel rail and track equipment.

CALIFORNIA NATIONAL GUARD

The California National Guard is completing plans for the construction of a 1-story, type "A" Armory building in Red Bluff, Tehama county.

Present plans call for a 11,000 sq. ft. reinforced concrete, rigid steel frame, wood and composition roof structure.

APPOINTED VICE-PRESIDENT BY-CHEMICALS PRODUCTS CO.

Raymond L. Drew, has been appointed vice-president and a member of the Board of Directors of the By-Chemicals Products Company, San Francisco, according to a recent announcement by Edward A. Thompson, president of the firm.

Drew was formerly technical director in charge of manufacturing operations for the company at their King City, California, manufacturing plant and came to California from New York where he was technical director for the American Dye Wood Company.

SCHOOL BONDS ARE VOTED

The Cascade Union Elementary School District of Shasta county, recently approved issuance of $158,000 school bonds at a special election.

The funds, together with a $190,000 State School Loan, will be used for the construction of a new Elementary school building near Anderson.

ARCADIO METALS NAME NEW REPRESENTATIVE

The firm of Ralph, Mills & Company of San Francisco, has been named exclusive agents for Arcadio Products in Northern California, according to a recent announcement by Henry E. Neth, Jr., president of the Los Angeles manufacturing firm.

RESEDA HIGH SCHOOL

The Los Angeles Board of Education has commissioned the architectural firm of George B. Allison and Ulysses Floyd Ribbo, who have designed more than 30 Southern California educational institutions, to draft plans and specifications for the construction of a new High School for Reseda in the San Fernando Valley.

Designed to accommodate 2500 students
the new facilities will cover approximately 225,000 sq. ft. and will cost $4,233,000. A 2-story building is planned for academic and science classes, a library building, administration building, a building to house 4 homemaking classes, assembly hall to seat 1250, student store, cafeteria, boys and girls gymnasium, extensive shops for industrial arts classes, athletic facilities, and an agricultural unit.

STATE MENTAL HOSPITAL

The Washington Department of Public Institutions, Olympia, is building a 475-bed ward building for the Western State Mental Hospital at Steilacoom, Washington at an estimated cost of $2,300,000.

The new facilities will comprise a 5-story, and basement, building of reinforced concrete with a brick facing.

Architects George Cove and Lea, Pearson & Richards of Tacoma prepared the plans and specifications.

CONCRETE SAW SPEEDS REMOVAL OF ASPHALT PAVEMENT

In order to facilitate the removal of a central section of street in Santa Rosa, California, where an abandoned water main has caused the street to settle, contractor Chester S. Yardley used one of the new Clipper Model C-130 Concrete Saw’s equipped with a Clipper Diamond Blade.

Some 1800 ft. of 9” Macadam base asphalt roadway was cut to a depth of 3½”, in accordance with specifications of the city, in a matter of 12½ hours, or an average of 145 ft. per minute.

The city also specified that “free flowing traffic” be maintained. This was accomplished by completing all sawing before starting with the “breakout.” To overcome the possibility of difficulty in rejoining of the asphalt at the cut, due to heavy truck traffic and a 90 degree summer heat, Yardley sifted fine sand into the finished cut.

BONDS VOTED FOR DOCTORS HOSPITAL ADDITION READIED

The Doctors Hospital in Ontario, San Bernardino county, has commissioned architect Dewey J. Harnish of Los Angeles to draft plans and specifications for the addition of additional bed space to the hospital.

RESIDENCE

Architect Elmo C. Brunner of Las Vegas, is the architect for Frank Rogers who is building a new 7-room residence in Paradise Park, Las Vegas, at an estimated cost of $20,000.

NATIONAL HOME WEEK

Once again the eyes of the world will be turned on the homes of American families when "National Home Week" will be observed throughout the nation, September 20-27.

The event is sponsored in each city by local home building groups, in cooperation with architects, engineers, contractors and governmental officials, and is designed to show the public the latest types of homes, newer methods of construction, uses and application of building materials and products, and latest developments in home furnishings and equipment.

From this "public showing" of today's houses, comes the inspiration to own a "new-home"; the desire of building material manufacturers to further advance their services to the home building industry; the wish of the architect to advance the architectural perfection of residential design; and the hope of many people throughout the world, that "some-day" they may have a real home as in America.

CONSTRUCTION MARKETS

Problems facing the construction industry form a considerable amount of time, effort, and energy on the part of a large segment of persons connected with the nations leaders in planning, design, finance and building.

Such subjects as construction credit, materials, building costs, the demand for public and private construction, investment problems in income producing property, the needs and requirements for public works, construction statistics, the financing of construction, and the market for residential repairs and all type of remodeling—all these and many more come into prominence when reviewing the present and future of construction industry problems.

Trade organizations are fast taking a prominent spot in determining facts and figures pertaining to various phases of the industry, and participation by individuals in trade-association programs is important to the individual. It is important today to be on the inside of what is taking place in your industry, or profession, and the best way to make sure that you are keeping pace with current trends is to become an active member of your promotional group.

GUEST EDITORIAL

California Council of Architects

"A little more than three years ago the architects of California followed the lead of other members of the construction industry toward and of other professional groups, by implementing their own State-wide program.

"The California Council of Architects had existed before that time, and under the wise and conscientious guidance of its founders and early Presidents had achieved stature and had welded the profession together to a greater extent than ever before.

"But it was recognized that individual architects, no matter how much time they devoted to it, could not give the Council program the continuity and the necessary handling of a tremendous burden of detail which professional and trade associations must assume to attain full stature and influence.

"Therefore, the Council opened an office and employed a staff. The man chosen for Executive Secretary was Frederic A. Chase, former newspaperman, public relations executive, and a man who had become familiar to some extent with the profession and its problems during a period when he was Director of Public Relations of the Southern California Chapter of the Associated General Contractors.

"There were many doubts, inside and outside the profession, and there are still some. There were predictions that the Council would fall apart because 'architects are all individualists,' and because of ancient rivalries between Northern and Southern California.

"Three years later, the pessimism must be completely dispelled, because California's architects are working together now, through the Council, in many ways for the benefit of the profession as a whole, of the construction industry, and of the public.

"Isolationism is as dead in professional affairs as in international affairs. Much as we might like to live alone, in a sort of world all our own, that world, we cannot afford it. There are many rude hands ready to slap one out of it. The Legislature can put you out of business. Building design can be taken over by others; much of it has been. There are about 2,000 licensed architects in California; 6,500 or so engineers, and thousands of contractors.

"But the Council is not intended as an organized minority to do battle with the Goliaths of industry. It is organized to work, in full stature, with the contractor groups, and with everyone else concerned with the same problems. We have proved this in many ways. An example is that the California Council of Architects is a member of the Construction Industry Legislative Council.

"We have committees to work with other groups, and much more of this is on our schedule for the future.

"It is recognized that good relations within the industry are as good public relations for all of us; that the construction industry team, working together and solving its problems and differences within the family, can be a tremendous weight for good in the California community.

"We have been most encouraged by the friendly and cooperative attitude of the various other professional organizations, and the contractor organizations. They have welcomed the architects warmly to their councils. We are grateful, and dedicated to doing our full share.

"We also hope, as time goes by, and with the help of the rest of the building team, to broaden public understanding of the nature and value of the architects' service.

"And we might say—to engineers and contractors and others—we also solicit your aid in bringing forth and solving problems and misunderstandings that arise from time to time between us, so that the final result is to the best interest of the job and the client."

CERAMICS FOR WESTERN LIVING WINNERS

Awards in “Ceramics for Western Living”, an exhibition currently being shown at the M. H. deYoung Memorial Museum in Golden Gate Park, San Francisco, have been announced by Louis Ferrario, Exhibition Committee Chairman for the San Francisco Potters Association.

Receiving awards were: Edwin A. Cadogan, Kentfield, for integration to the exhibition theme; Madeline Cortese, Richmond, integration of architecture and ceramics; Margo Elberg, San Anselmo, excellence in experimentation and unification of ceramic media; Antonio Prieto, Oakland, general excellence; Marguerite Wildenhain, Guerneville, general excellence; Helen Peeke, San Francisco, honorable mention for progress in ceramics.

The jury making the awards and selecting the objects for exhibition was composed of the following San Francisco Potters Association members: Mary Lindheim, Elizabeth McCrone, John McDowell, Eileen Reynolds, and Roy Walker.

CITY OF PARIS

The Rotunda Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan is featuring a Coronation Exhibition during August. The material comprises a group of Lithographs by thirty-two contemporary British painters and is being sponsored by The Consul General and Mrs. Kenneth J. M. White.

A number of Prints selected in London by Beatrice Judd Ryan are being shown on the 4th Floor of the City of Paris.

SPECIFY Porcelain ENAMEL VENEER

FOR NEW CONSTRUCTION AND...

REMODELING OF OLD!

Porcelain Enamel Veneer was selected to transform St. Francis Hospital Pharmacy...in San Francisco...to its present state of classic beauty and functional simplicity.

Porcelain Enamel Veneer is a superb facing specification, which grants closest liaison between the architect's intent, the requirements of the craftsman and economic reality.

Virtually any color that can be created may be timelessly fused into this inorganic material...which is bonded to steel at high temperature...permitting its ultimate fabrication in any manner that steel itself will accept.

You may specify Porcelain Enamel Veneer with complete confidence, always

GROUND WATER IN
GRADE SLABS
— ITS EFFECT ON FLOOR COVERINGS
— ITS PREVENTION

Part Two*  

By C. LeROY OLSON

COMPOSITION SLEEPERS ON SLABS CONTAINING NO MEMBRANE

Where a concrete slab has already been installed without the waterproofing precautions mentioned above and where such composition sleepers are to be used, corrective measures may still be used and generally satisfactory results obtained by the following method:

SOLID WOOD FLOOR

The sleepers may be installed to the required levels and spacing to accommodate the job flooring requirements. Then the slab surface and composition sleepers may be hot coated with asphalt and the spaces filled flush with concrete to the top of such sleepers. Such concrete fill is then allowed to dry thoroughly. When dry, such concrete may either be hot coated or primed with cut-back asphaltic primer and when dry, covered with roofing felt or membrane, asphalt ply, sislakraft or other non-rotting building paper, chalk lines snapped over the paper to locate the sleepers and thereafter the wood flooring, either single or double, nailed to the sleepers. Obviously such construction, while solid and unyielding, requires no ventilating transverse tubes, holes or grooves in the sleepers nor does it require any ventilation in the ends of the sleeper spaces at the walls. Such concrete fill does not affect the Unibond Sleeper but does cause rotting in wood sleepers. Treating wood sleepers with preservatives does not sufficiently extend the life of such wood sleepers under the space filling technique described above to justify their use to the best of the author’s knowledge of present day preservatives. If such efficient preservatives do exist such information has not been universally made known or is extremely limited to say the least.

SPRING FLOORS FOR GYMNASIUMS OR DANCE FLOORS

Where such floors are to be installed over slab, not waterproofed as described above, the following procedure may be applied:

Install the composition sleepers to levels and spacing as required for the job and thereafter hot coat the slab in the spaces and over the sleepers. Then make a fill of concrete over the hot coat in the sleeper spaces with the top surface of the fill approximately ¼” or more below the top surface of the sleepers. Then proceed with the spring floor construction as specified for the job. No ventilation tubes, grooves or holes will be required with the hot coating and concrete fill described above. This if properly and carefully done, will take care of the waterproofing as a rule, although there are conceivable conditions which could arise to prevent such measures from becoming thoroughly waterproof, such as for instance movement of and cracking of slab after such hot coating and fill has been made. However, such situations are extremely unlikely and the method is logical and thus far over approximately twelve or fifteen years service has proven permanent and a good secure method of doing the job.

*EDITOR’S NOTE: Part One—Published in the preceding issue of Architect & Engineer dealt with concrete slabs as to the effect on floor coverings of various types and kinds.

Part two, which follows, deals with concrete slabs in connection with Sleepers and wood floors and the injury to wood floors caused by moisture and the prevention of such moisture and the resultant damage to such wood floors.
HOT COATING AND MEMBRANE ONLY

A method employed by many of the most successful and prominent architects for waterproofing a grade slab in the cities has been as follows:

The slab is constructed in accordance with the requirements of the job under the specifications and when thoroughly dry, it is given a hot coat of asphalt and one or more plies of roothing felt, each mopped down with hot asphalt. Thereover, chalk lines are snapped to accommodate the sleeper spacing specified and thereafter steelcrete nails 3/4" or 1" long (tempered) are driven on these lines at intervals of 3" to 4" with heads projecting approximately 1/4" above the hot coat. Then each nail is daubed with bitumens, cut-back asphalt and allowed to dry.

Thereafter either the "cast in place" composition sleepers or "precast" composition sleepers are laid along such lines to the predetermined levels and allowed to set hard and are ready for the wood flooring to be applied thereover.

The principal objection to such a method of waterproofing a slab lies in the fact that, in the opinion of the author, hydrostatic pressure of ground water from below might and probably would dislodge the hot coat above the most porous sections of the slab, if not the entire surface thereof, with the result that a film or sheet of water would lie below the membrane and later on cause trouble and damage to the wood floor and especially the kiln dried finished flooring when much inconvenience, damage, expense and trouble might result.

Hence, the author's suggestion and use of a concrete fill between the sleepers to hold down the hot coat with an appreciable amount of weight, thus aiding in waterproofing permanently the slab in much the same manner and function as membrane within a concrete slab. (Elsewhere within this article the same observation is made in the case of floor covering.)

In such cases where moisture is likely to appear on the surface due only to "sweating" or to capillary attraction only with no pressure of water from below, then such methods of hot coating and application of membrane thereover, including separate hot mopping would no doubt completely waterproof the grade slab.

BELOW GRADE SLABS

System of waterproofing such a slab by a most successful and prominent architect was as follows:

On this job several years ago the gymnasium was below grade approximately fifteen feet on its upper end and probably ten feet below grade or ground line on lower end. A very efficient and effective means was provided by the architect's office for waterproofing this slab as follows:

1. Crushed rock and gravel fill was laid.
2. Drainage—terracotta pipe was laid in the gravel and discharged into a sump.
3. This sump discharged at proper level to connect with the sewer lines well below the slab.
4. Reinforced concrete slab was poured over the entire area including concrete sump.
5. When the slab was thought to be dry a hot coat of asphalt and the several ply of asphalt saturated felt membrane applied, each mopped down with hot asphalt.
6. Chalk lines were snapped at spacing intervals of 16".
7. 3/4" tempered stub nails (steelcrete nails) were driven in at 3" to 4" intervals with heads projecting approximately 1/4" above membrane.
8. Here an interesting case of apparent sweating occurred which was at first thought to be hydrostatic pressure of water but which proved to be only "sweating" caused by the moisture content of the slab itself. In the upper end of the room where slab was the deepest, water came through the nail holes in the membrane. Thereupon, work on the sleeper installation was halted for two weeks after which all water on the surface dried up, thus proving that the water present was due only to "sweating." The drainage below this basement slab prevented any water emerging through the slab either by capillary attraction or by hydrostatic underground water pressure, and the work was then allowed to proceed on schedule.
9. Thereafter, the nail heads and holes were daubed with cut-back asphalt and allowed to dry.
10. Unibond sleepers were then cast directly over the chalk lines and nail heads at the predetermined levels and ventilation provided as specified.
11. Later the flooring specified was installed and all work completed in the gymnasium according to plan. Obviously such a well planned job contained all of the elements of success and is a shining example of the resourcefulness of the construction industry in meeting unusual situations.

Even in such a situation as described in the above job, had the method of waterproofing not been entirely successful, it is possible that the method previously described of installing a concrete fill between the sleepers would have saved the situation for the architects, but thanks to their careful planning of the job such a preventive procedure was not required. Thus the construction industry moves forward in stride with progress in the true American style, or shall we say in the true spirit of progress regardless of nationality. Many other instances of ingenuity in the methods of the construction industry and/or in our own in-
individual experiences make for progress. The unfortunate phase of such methods is that not all are properly recorded for future generations and no doubt many ideas of value have been lost through failure to record them in detail.

Occasionally an architect not too familiar with the composition, non-rotting sleepers and the true purpose of ventilating, transverse tubes, grooves or openings therein, is likely to run into trouble on his own theory that such ventilation facilities are intended to be used for “drying out purposes” rather than the true purpose of rot prevention.

The original intention back of the idea of rot prevention meant that while the sleepers themselves are rot-resistant and rotproof, it was shown that a complete change of air under the flooring every twenty-four to forty-eight hours would prevent rot occurring in the flooring.

It is a known fact that the magnesium chloride solution within the sleeper, itself, leaves a surface deposit of efflorescent salts of this solution which solution not only acts as one of the hardening agents in the composition sleeper but the efflorescent salts on the surface act as a germicide against decay of wood and also as a preservative of any wood coming in contact with the sleeper at the point of contact. Therefore, a change of air within the sleeper spaces every twenty-four to forty-eight hours would prevent rot in the subfloor.

The personal observation of the author over some thirty years indicates this theory to be erroneous since not a single case of rot has ever been observed (by the author) in that time either in such composition sleeper installations or in the wood subfloor or top flooring thereover, nor in the case of wood subflooring supporting magnesium floors or other exychloride cement floors where a sufficient air space below the subfloor existed. However, here we refer only to the subfloor and to the floor joists below the wood floor. If the air space below such floor joists is not properly ventilated and if less than say 18 inches clearance above the soil, such joists have been known to rot out or be damaged by termites regardless of the condition of the wood subfloor directly in contact with such magnesium or other exychloride cement floor. The opinion and theory that such ventilation facilities are intended to cause a drying out of all moisture finding its way under such flooring overlaying such sleepers is likewise erroneous since the moisture could not dry out before affecting the kiln dried finished flooring adversely.

Some architects and construction engineers have asked this question but have been told by the author that the presence of moisture should not be permitted under any circumstances in such installations. The steps in waterproofing the concrete slab have been described elsewhere in this article and are a practical solution to the problem of preventing moisture from entering such sleeper spaces.

The instances where moisture causes trouble usually results from three or more causes, (1) hydrostatic pressure of subsoil water, (2) capillary attraction by which subsoil or ground water is brought in direct contact with a poorly laid loose concrete slab, thus finding its way to the top surface, or (3) mechanically entrained water within a wall compacted concrete slab, must escape to the top surface of such slab by reason of the fact that it is not able to dissipate itself on the underside of the slab, probably due to moisture in the subsoil.

Hydrostatic pressure usually is caused by elevated ground on one or more sides of a building location sufficiently high to cause the water to rise above the ground level in the low areas and flow away if there is sufficient slope, or evaporate if not in sufficient quantity or slope to inundate the ground.

However, where the building is located, neither sloping ground nor evaporation would be present to prevent accumulation of water in the sleeper spaces unless the concrete slab had been previously waterproofed in the manner described previously herein.

Likewise, “sweating” could be prevented. In those cases or instances where the slab had not been previously waterproofed it would still not be too late—before the wood floors had not been nailed to the sleepers—to hot coat or otherwise waterproof the concrete in the sleeper spaces and over the sides and top of the sleepers. Then make doubly safe by pouring a concrete mixture therein, flush to the top of the sleepers but no higher. When the concrete is dry, either a hot coat of asphalt or a layer of fifteen pound roofing felt is applied and lapped three inches or four inches thereover and loosely nailed or tacked to sleepers. Then snap chalk lines over the sleepers and proceed to lay single or double floors direct to the sleepers.

Obviously no ventilation is needed at all in such an installation, and all fire ordinances in any and all cities are respected and well met.

In the case of spring floors for gymnasiums the same procedure of hot coating or otherwise effectively waterproofing the concrete slab surface in the sleeper spaces and over the tops of the sleepers may be followed but the difference thereafter in the procedure is as follows:

Make the concrete till between the sleepers but

(See Page 40)
No Part Of The Civilized World Is Built Without Some Modern Form Of

CONCRETE

Cities - Rural Communities - Residences - Schools - Factories

The cement industry, by and large, is easily recognized as one segment of the construction industry which serves in a very important manner practically every phase of industrial, commercial, residential and professional activity throughout the civilized world.

It would be quite difficult to select any individual industry, or almost any business endeavor which does not directly use in some degree, or substantially benefit from the manufacture of cement in its various forms.

The use of cement as a building material in many types of construction has been a pretty generally accepted operation for a great number of years, however, modern progress has utilized the many attributes of this product, particularly its

SACRAMENTO AREA—California’s State Capitol City is a typical concrete community with large multi-story office and business buildings, many residences, concrete and steel drawbridge over Sacramento River, industrial buildings, and modern concrete highways and overhead clover-leaves and ramps being constructed to better serve the American way of life.

Photo Courtesy "California Highways," Department of Public Works magazine.
CONCRETE . . .
durability in situations where subjected to unusually heavy wear, shock, and as a mixing agent.

Modern airlines which now circle the globe with huge multi-engined equipment capable of transporting many persons and items of freight use concrete in the construction of landing fields which must withstand the constant "shock" of landing aircraft and constant exposure to all types of weather conditions; the railroads, one of the pioneers in the transportation systems of the world, now use vast quantities of cement in the construction of bridges, culverts, railway stations, repair yard equipment, and administrative buildings; the comparatively new (when considered in terms of modern era development) oil industry uses concrete and cement products in a widening variety of construction, such as completion of wells, drilling operations, building great oil refineries, service facilities for the public, and business office buildings; the agricultural activities of the nation are dependent to a degree upon the use of cement. Vast irrigation projects with their combinations of dams, canals and irrigation ditches would not be possible without this product. Ranch and farm buildings everywhere represent additional use of cement by the rancher and farmer.

The nation's extensive system of modern highways, freeways, and roads with their myriad of bridges, subways, clever leads and traffic separation centers would not be a reality were it not for the use of cement, and the fact that cement can be adapted in its use to meet the ever increasing need for a more durable roadbed to serve the pleasure automobile and the increasing number of light and heavy trucks. Original standards of highway construction in terms of width and roadbed thickness have long been discarded. In their place have come wide divided highways of multiple lanes, and a roadbed thickness designed to meet the requirements of today's varied vehicles which pass over the highway. A number of illustrations are used on these pages to show the extensive and important factors dealing with the construction of highways in California. Similar segments of highway construction may be seen in almost every metropolitan area in the nation, and similar activities on perhaps a somewhat smaller scale may be observed in the smaller cities and throughout rural areas of the nation.

Probably the most frequently accepted use of cement is in the construction of factories, warehouses, office buildings, garages, commercial buildings and a very wide variety of residential construction. These are the types of building most people come in contact with most frequently, and in all such construction has been developed a recognized acceptance and approval. However, even in many of these common uses, the ways and means of handling cement products has moved ahead. One of the newest developments in the construction industry where concrete is one of the major considerations has been the advent of the pre-cast, or tilt-up, method of building. Engineers and contractors working together have developed a method of constructing concrete walls, and even floors, for multi-story structures wherein the walls and poured slab, allowed to set and then moved into place with crane, or other method, where these precast sections become a permanent part of the building. Much time is saved by use of this method as well as permitting the simplification of a number of other factors which are involved in the use of cement in construction.

Residential construction is another tremendous sector of the construction industry wherein cement, and cement products, are all important. Few of today's modern homes are built without the use of cement, in some form or another.

Cities and towns are built with cement. Streets, sidewalks, subways, sewers, bridges, and as pointed out almost every building, has some cement in it.

Cement is therefore basic to practically all building and it would be hard to conceive of a modern home, factory, airport, highway, office building, farm, garage, railroad, or public works project being constructed without the use of a substantial amount of cement.

Advent of this product into the construction industry took place many years ago, but the most spectacular era of the use of cement has been since the turn of the century and during the decade prior to 1930. The broadening use of cement and the spectacular building boom of that era, stimulated a great expansion in the number of cement

EDITOR'S NOTE—Basic construction materials such as cement, steel, wood, brick and tile, ceramics and a number of combination materials will be featured in ARCHITECT & ENGINEER in the future. This article deals with "concrete".

ILLUSTRATION AT LEFT—Shows the Arroyo Seco in Pasadena, California. In the foreground can be seen the old two-lane Colorado Street bridge built in 1912, and immediately beyond is seen the new Colorado six-lane freeway under construction . . . a project that would be impossible without the use of cement. The famous Rose Bowl, scene of the annual New Year's Day intersectional collegiate football game, is at upper left, and the residential area seen in the distance is a portion of the cities of Altadena and Pasadena.

CONCRETE

mills engaged in the manufacture of cement products. The capacity of the industry in this brief period was increased from 140-million barrels per year to a annual capacity of 270-million barrels.

With the depression of 1929, and subsequent years of tedious recovery, the expansion of the cement industry came to an abrupt halt, and in the past twenty years the capacity of the industry to produce cement has grown but about 5-percent to a present total of approximately 285-million barrels per year. The latest available figures, reported to the United States Bureau of Mines, Department of the Interior, show the production of finished portland cement in June of this year totaled 22,698,000 barrels which is a 9-percent increase over June of one year ago. So, it now appears the industry has taken up all slack, and is again faced with an expansion in production in order to keep up with the ever increasing, and widening, demands for cement.

A TECHNICAL ANALYSIS
OF ONE USE OF CEMENT

J. E. JELLYC, Manager
Portland Cement Information Bureau

In Northern California and the Bay Area, where prevailing low humidity and drying winds are common, concrete floor slabs are likely to show more than average shrinkage cracks when placed during the summer months.

There are many contributing causes of cracks in flat slabs, the most common of which are weather conditions, too much water in the mix, an excess of fines in the sand, too early and too much steel troweling, and insufficient or improper curing.

Some three years ago the writer was called upon to inspect a job of more than average cracks in the floor slabs in a Housing Project in Palo Alto. As is well known, F.H.A. requires a granular fill and on top a waterproof membrane (usually consisting of several pieces of tar paper) on which the concrete floor slab is placed. On this particular project two or three to one-half dozen shrinkage cracks were noticed in the rooms of each of the houses, which is no more than the average experienced during hot drying weather.

In the garage, which was part of the house, F.H.A. did not require a waterproof membrane and the granular fill had an excess of sand. It was noticed that practically no cracks had occurred in the garage after an inspection of some twenty or thirty houses.

After studying the situation and discussing it with contractors we were convinced that the sand in the granular fill, which absorbed a reasonable amount of water from the base of the slab, was responsible for the elimination of the shrinkage cracks in the garage. Accordingly, we made recommendations to certain contractors, who repeated the trouble in Fresno, Sacramento, and other unusually warm localities, and suggested that they experiment with a blanket of one or two inches of sand underneath the concrete floors that were placed on the ground, regardless of the subgrade. In checking with them later they all were enthusiastic about the use of a sand cushion underneath the concrete since it eliminated practically all of the shrinkage cracks.

Under the circumstances we now recommend the use of an inch or two of sand over any subgrade, other than sandy loam, or an all sand base. This is especially beneficial in the case of impervious and dense red rock fills or other materials in the subgrade which do not readily absorb moisture from the base of the concrete after it is placed.

Equally important is keeping the water content in the mix as low as possible, keeping the finishers from troweling until the surface water has disappeared, and above all—an early application of membrane curing. In this case emphasis must be placed on a sufficient amount of curing compound on the finished concrete flooring—particularly during hot drying weather—in order to insure a minimum or entire elimination of shrinkage cracks.

CONCRETE ROAD CONSTRUCTION—Use of concrete in highway construction is becoming more general throughout the world, the three views of the right show: TOP, construction operations on a freeway with cements used in position with a mechanical spreader and mechanical tamper; CENTER VIEW shows application of grey pigmented sealing compound to newly placed pavement; LOWER VIEW shows a modern traveling concrete mixing plant using base material, water and cement.

THE BETTANCOURT WAY

HONEST CONSTRUCTION YIELDS DIVIDENDS FOR CLIENT AND BUILDER

By FRED W. JONES

One day shortly after the beginning of World War II, Joseph Bettancourt, San Bruno contractor and builder, was called to the telephone. The War had put a stop to private building and Bettancourt had planned to "take it easy" for a few months.

"This is Frank Barrett of Barrett & Hilp," were the first words to reach the ears of the San Bruno contractor as he listened to the phone receiver. "Say, Bettancourt," the voice continued, "we are in need of a good superintendent at the Belair Shipyards, can you make it?"

"Never heard of the Belair Shipyards," replied Bettancourt, "anyway I am due to take a few months vacation."

EXECUTIVES OF J. BETTANCOURT BUILDER

J. Bettancourt (seated at left), Clifford Anderson and Clarence Hodges.

Harold Lister, another staff member is not shown in this photo.
"True, at the moment there are no Belair Shipyards," explained Barrett, "but it's up to you to build them. Joe, this is War!"

And the next day Joseph Bettancourt was on the job, overseeing construction of one of the World War II's major defense projects.

Aside from this government job, Jos. Bettancourt has successfully followed the contracting business since 1927, completing many notable structures, private and public, throughout the State of California.

Asked how he happened to go into the contracting business, the San Bruno builder replied, "I figured that if I could make money for the other fellow I could make some for myself. I enjoy my work and that is a very important factor, leading to success, in any vocation."

Bettancourt learned the contracting business while associated with R. H. Hamilton in Santa Cruz back in 1918. He spent two years in the sum-

The following firms, participants in the construction activities of J. Bettancourt, Contractor-builder, have display advertisements in this issue:

mer resort city in business for himself, then moved to San Francisco to become superintendent for the late Ed Garren and later for Cahill Bros.

Among the outstanding Bettancourt construction jobs, illustrated in this issue of Architect & Engineer magazine, is the Dr. James Hogan High School at Vallejo which was designed by architect Harry J. Devine, AIA of Sacramento, and represents an expenditure of more than $2,000,000 in school funds by the Vallejo School Board. The project, one of the largest of its kind in the State, consists of a group of thirteen separate buildings with Bettancourt the successful bidder on all but two units. All units are single story in height and combined occupy a thirty acre site. A notable feature of the school is the heating system, radiant heat, with pipes concealed beneath the main corridors and within convenient reach in case of emergency.

Besides a group of Safeway Stores up-and-down the "Peninsula", the Bettancourt organization built the San Bruno City Hall; the American Trust Bank...

KRAFTILE COMPANY
NILES 3611
LOS ANGELES 13: 406 South Main Street—MUTUAL 7281

Attending a preliminary meeting in Coronado recently were: Malcolm Reynolds, Oakland; vice-president; Lawrence Gentry of Los Gatos, secretary; Louis Dean, San Diego, treasurer; Frank Hope, San Diego; Convention Manager; William Glenn Balch, Los Angeles; Donald Beach Kirby, San Francisco; William Koblik, Sacramento; Arthur Gallion, Dean of Architecture, University of Southern California; John Rex, Los Angeles; Frank Mayo, Stockton, and Frederick A. Chase, executive secretary of the Council.

OREGON CHAPTER

Holman J. Barnes, AIA, architect of Portland, was chosen to serve as president of the Chapter for the ensuing year at the annual election meeting. Named to serve with Barnes were: Albert W. Hilgers, vice-president; Donald W. Edmondson, secretary; Dewitt C. Robinson, treasurer, and H. Abbott Lawrence, trustee.

Tentative plans for the new year were discussed and president Barnes announced full committee appointments and Chapter activities would be announced in the near future.

NORTHERN CALIFORNIA CHAPTER

Recent developments in the Civic Center Master Plan for the City and County of San Francisco, and establishing the Chapter in new quarters at 25 O’Farrell Street, have taken almost full time of president Donn Emmons and the membership.

A statement was prepared on architect participation in the city’s program of planning and submitted to the Committee on Buildings, Parks and City Planning, the Board of Supervisors and others. The statement, including an outline of the cost
estimates, was prepared by the Chapter's Area Planning Committee as a public service.

The new Chapter headquarters represent something startling in architectural decor and have commanded considerable favorable attention from many.

**PASADENA CHAPTER**

W. L. Holladay, representing the firm of Holladay & Westcott, was the principal speaker at the August meeting, taking as his subject the timely consideration of "Building for the Hot-Arid Climate." A refrigeration and air conditioning engineer, Holladay's discussion covered building design including human comfort, shading, ventilation, wetted roofs, evaporative cooling and air conditioning.

A number of Chapter matters were also presented for membership consideration.

**LOS ANGELES ARCHITECTS OFFER SERVICES TO COUNTY**

The Southern California Chapter of The American Institute of Architects has volunteered its services to the Los Angeles County Board of Supervisors to help facilitate selection of architects for the county's proposed 1953-54 building program.

Architect Henry L. Wright, president of the Chapter, pointed out in a letter to the Board of Supervisors that the county had adopted a comprehensive and equitable system of selecting qualified architects for county building work in the past and suggested that such a procedure be adopted again.

ARCHITECTS AWARD HONORS TO DR. GORDON M. BUTLER

Dr. Gordon M. Butler, dean emeritus of the University of Arizona, was elected to honorary membership. (See Page 36)

**FIGHT EFFLORESCENCE ON BRICK, STUCCO, CONCRETE WITH DARACONE INVISIBLE WATER-REPELLENT**

DARACONE is the proven way to combat leaks, efflorescence and stains in any type of above-grade exterior masonry.

DARACONE penetrates deeply into masonry, lining pores and hair-line cracks with an insoluble water repellent. Clear and colorless, it does not affect natural appearance or "breathing" qualities of the building. Long-lasting.
Structural Engineers Association of California

Structural Engineers Association of Northern California

structural engineers association of california—annual meeting

Plans are being set for the Annual Convention of The Structural Engineers Association of California to be held this year at the Ahwahnee Hotel in Yosemite Valley from October 8 to 10 inclusive.

Charles Scritch, general chairman of the convention committee, predicts from advance interest in the conference, that it will be one of the best attended conventions ever held by the Association, and that the varied program of technical discussions and entertainment will attract leading engineers from many sections of the nation.

structural engineers association of california members completing plans for their annual convention to be held in Yosemite, October 8-9-10, 1953: Wesley W. Graham (left), Sec.-Treas. of state association; Charles G. Scritch, general chairman of convention committee; John E. Rinnie, president of the state association; John J. Gould, delegate representing the Northern Section on the board of directors of the state association.

Arrangements being made by the Northern Section of the Association for the convention, include the following program speakers:

for consistency, always specify HAWS electric water coolers

When you specify HAWS Electric Water Coolers, you are specifying a source of refreshing drinking water that is:

- Consistent in good design
- Consistent in sanitation
- Consistent in mechanical dependability

There is a HAWS Electric Water Cooler for every requirement.

1441 FOURTH STREET (Since 1909) BERKELEY 10, CALIFORNIA

AUGUST, 1953
About three years ago The Producers' Council decided to present a Fifty Dollar ($50.00) book award to a deserving architectural student at the University of California.

For the third year The Producers' Council presented this award at the Architectural Department's annual award presentation ceremony.

This award is presented during the June graduation ceremonies, the recipient being one selected by a committee from the School of Architecture at the University. The award presentation serves several functions, the chief of which is to contribute to the encouragement that awards of this type have on the efforts of the student architect. In addition, the award indicates to the architectural profession that we are vitally interested in the future members of their profession. Of equal importance, it affords us the opportunity to introduce the advanced members of the student body to The Producers' Council by permitting a minute or two in the presentation for us to explain the function of the Council.

The award was started on an experimental basis, but the results have been so satisfactory it is recommended that the Council adopt it as a continuing award. In this way The Producers' Council is cementing itself into a closer relationship with the more generous awards of the Northern California and East Bay Chapters of the AIA, the Women's Architectural League of the East Bay and San Francisco.

We take this opportunity to present in this issue the various committee chairmen of the Producers' Council for the coming year.

These men are taking active part in the Council for furtherment of your objectives and aims of the Council. The acceptance of an office not only affords the opportunity of the individual to become better acquainted with workings of the organization and the membership, but adds a considerable amount of necessary and sometimes burdensome activity to serve the best interests of the Architect, Engineer, and the Council. Though the reader may not be represented by firm name or individual on the executive committee, we of the committee know there is many a good idea that the Council could consider and put in force if it were brought to the attention of the executive committee. We want these ideas! We urge the Architect, Engineer, and Producer Council members to contact any of the committee chairmen, in writing or by telephone. In this way you too are taking active participation in the Council.
One of the most successful and outstanding national conferences of the Philippine Mahogany Association, Inc., was held at the La Playa Hotel, Carmel-By-The-Sea, California, with representatives and members of their families present from all parts of the nation and the Philippines. Many subjects of great importance to the industry were considered during the scheduled business meetings presided over by Walter G. Scrim, president. Among top consideration was the Association’s advertising program which has proven so successful during the past few years, with plans being completed for a continuance of the program for the current fiscal year.

At the annual election of officers Walter G. Scrim was reelected President; Howard R. Black was chosen Vice-President, and George D. Scrim was elected Secretary-treasurer.

Special entertainment was provided for the ladies during the business sessions including golf and sightseeing motor trips throughout the Carmel area. Serving as an Entertainment Committee were: Mmes. Robert S. Osgood, Frank J. Connolly, John G. Ziel, H. A. Evans, J. Raymond Peck and Harry Lilly.

H. A. J. Evans presided over the Annual Dinner and acted as Master of Ceremonies. Walter G. Scrim, president, is thoroughly experienced in the Mahogany lumber industry, having started in the lumber business in Quebec, Canada, in the early days and later serving the industry in various capacities until forming his own lumber business, the Scrim Lumber Co. of Los Angeles in 1923. He has attended every annual convention of the Association, except one, since its organization more than a quarter century ago.

W. G. SCRIM, President, Philippine Mahogany Association, Inc. (seated) and son George, sec.-treas., inspect catalog issued by Association.

PERSONALITIES

SCOTT QUINTON
ARCHITECT, A. I. A.

Alhambra, California

Architect Scott Quinton has conducted a pioneer architectural office in the San Gabriel Valley in Southern California since 1920, when he opened the first architects office in Alhambra.

A graduate of the Drexel Institute in Philadelphia, Pennsylvania, he majored first in art and then in architecture. On leaving school he worked in several of the leading architectural offices in the United States, and in 1911 passed the California State Board and opened an office in the then new Story Building at Sixth and Broadway in the City of Los Angeles.

With his partner, Edwin Westberg, Scott Quinton now conducts his practice in a specially designed office building on North Garfield in Alhambra.

Quinton has played an important part in the development of the architectural profession in the Southland, and in addition to support of The American Institute of Architects, served as president of the Pasadena Chapter of the A. I. A. during 1952.

NEXT MONTH: Francis Joseph McCarthy, A. I. A. Architect of San Francisco.

HANDWEAVERS AND DESIGNERS
FIFTH ANNUAL EXHIBITION

The Fifth Annual Exhibition of Contemporary Handweavers being shown at the M. H. deYoung Memorial Museum in Golden Gate Park, San Francisco, this month features eighteen interiors by leading California interior designers and weavers. The Exhibition also includes an extensive display of fabrics illustrating the new trends in handweaving.

The show was planned by Architect Joseph Esherick and the interiors on display include living room, dining room, bedrooms, and a doctor's office by Edgar Frank. Working with interior decorators of their own choice, weavers have illustrated the importance of handwoven fabrics in...

WITH THE ENGINEERS
(From Page 31)
Motors Corp. "Better Highways" essay contest featuring the subject "How to Plan and Pay for the Safe and Adequate Highway We Need."

Willey received a check for $3000 as one of the three top honorable mention winners at a dinner in Detroit.

Other honorable mention winners were: David C. Guilbert, Spokane, Washington, manager of the Inland Automobile Association; and William F. Steuber, Jr., Madison, Wisconsin, assistant to the Wisconsin State Highway Engineer.

Winner of the first place and $25,000 was Robert Moses of New York City, construction co-ordinator and commissioner of parks.

CALIFORNIA TECH DENIED N.L.R.B. EXEMPTION

The National Labor Relations Board has refused to allow the exemption to California Institute of Technology it usually grants to educational institutions with reference to the operation of a wind tunnel for the benefit of airplane manufacturers and other industrial users.

Despite claims of California Tech in behalf of its non-profit status, the claim for exemption was denied because of the commercial nature of the project.

OPENS ENGINEERING OFFICE

Jack Martin, formerly with the Southern California engineering firm of Brandow & Johnston, has opened his own offices at 1820 Wilshire Blvd., Los Angeles.

AMERICAN INSTITUTE OF STEEL CONSTRUCTION

The American Institute of Steel Construction announced the ten $1000 scholarships in civil or

---

RAMUC Masonry Paint is a waterproof, natural rubber base coating that protects stucco, concrete and unglazed surfaces for years...average 2 to 5 years longer than other masonry paints. This maximum protection means lower painting cost. Does not crack, peel or chip. Is not affected by lime or moisture. Resists deterioration by heat and cold. Color bases are non-fading titanium pigments. RAMUC is easily cleaned...no streaks or dinginess. RAMUC Masonry Paint is available in nine pleasing, satin finish colors.

Calaveras White Portland Cement is a western product for western needs. It is a true and uniform white, easy and economical to use. Order some today!

**A.I.A. ACTIVITIES**

(From Page 29)

membership in The American Institute of Architects at the recent annual A.I.A. meeting in Seattle, Washington.

Dr. Butler was chosen for this honor in recognition of his outstanding works over many years in the legal and educational aspects of architecture and engineering.

**SOUTHERN CALIFORNIA CHAPTER**

The August meeting was a “workshop” gathering with members contributing ideas and suggestions pertaining to the Chapter and to the architectural profession.

President Henry L. Wright announced extensive plans were being made for the Chapter’s participation in the Annual Convention of the CCA to be held in Coronado in October.

**ARCHITECTS CONFERENCE ON RADIANT HEATING**

The Department of Architecture at Pratt Institute, Brooklyn, New York, is sponsoring a series of educational meetings on “Radiant Heating” during the fall months of October and November, according to an announcement by Olindo Grossi, Chairman, Department of Architecture.

Authorities in the fields of design, research, equipment, and materials will participate in an overall analysis of this particular type of heating.

**MOBILE HOUSE LABORATORY FOR HOME PLANNING PROGRAM**

A mobile house laboratory equipped on the Davis campus of the University of California will be used during the summer to determine how...
homes in the central valley areas can be made more comfortable.

The research plan is to spot the specially equipped house-trailer under trees, in open fields, along creek beds, on paving, and on grass ground around the campus and near-by areas to study temperature and humidity changes in and around the mobile laboratory.

Robert B. Deering, chairman of the landscape management department, is leader of the project in cooperation with the department of agriculture engineering and home economics, and agricultural extension service.

CONCRETE MASONRY MANUFACTURERS' ASSOCIATION OF CALIFORNIA

Fifty-five members of the California Concrete Masonry Manufacturers Association and their wives, made a three-day pilgrimage and tour of inspection of the Builders Supply Corp. of Phoenix recently.

Various manufacturing processes and plant experiments were conducted by Dr. George G. Olson of Builders Supply.

OPENS NEW ARCHITECTURAL OFFICES IN SAN FRANCISCO

Announcement has been made of the formation of the architectural firm of Mulvin & Priestley, A.I.A. and opening of offices at 110 Sutter Street, San Francisco, for the general practice of architecture.

The new firm is comprised of Thomas B. Mulvin, A.I.A. and Ralph B. Priestley, A.I.A.

ARCHITECT BECKET IS REAPPOINTED

Architect Welton Becket, of Los Angeles, has been reappointed supervising architect of the University of California at Los Angeles current building program, according to an announcement by Chancellor Raymond B. Allen.

The present program of university expansion includes expenditures in excess of $54,000,000.

Becket was first selected as supervising architect for the Los Angeles school in 1948.

NOTICE

In the July issue of ARCHITECT & ENGINEER magazine there appears an article on Page 10 pertaining to the Rancho Rafael swimming pool, Ignacio, California, as part of a general feature on swimming pool installations. Inadvertently in giving editorial recognition to John M. McWilliams, he was referred to as "Architect." Mr. John M. McWilliams is not a Registered architect but a "Designer," and as such designed the Rancho Rafael swimming pool.

BOOK REVIEWS
PAMPHLETS AND CATALOGUES

How to take good pictures of exteriors and interiors is explained in this first book to be published on how to take professional photographs of houses. Architects and interior decorators will find it a valuable guide in securing top-quality photographic records of their work. Professional photographers and the experienced amateur will learn how to take photographs of houses that crystallize the taste and judgment of their planners. Practical advice is given both on the basic technical problems like selection of camera angles and on the more artistic questions of design and composition so that the end result will truly capture the personality and individuality of the subject. Contains 325 actual photographs.

Offers "a revolution in drafting" that will result in a saving of industrial drafting time of from 30 to 50 per cent. The book marks the first major change in industrial drafting practice in years. It teaches new methods that are vitally necessary if the draftsman is to keep in step with the trend of modern industrial progress. The old concept of drafting is today as outmoded as the horse and buggy. The time element is dictating in ever stronger terms that drafting, as the key function between invention and production, produce drawings faster and with less effort.
Simplification of delineation, elimination of non-essentials, and extensive use of freehand drawing is emphasized. Both authors are well known in the professional engineering field.

The books begins with a chapter on the geographical and historical background, and then surveys the field of architecture and furnishings of churches of the first six centuries.
Forty-five ground plans and many illustrations of churches and objects discussed are included; also a map showing relevant sites: a bibliography, and a glossary.
The book covers ground not previously covered in modern English work, and should be of use to students of architecture and all who are interested in the origins of church buildings.

NEW CATALOGUES AVAILABLE
Architects, Engineers, Contractors, Planning Commission members—the catalogues, folders, new building products material, etc., described below may be obtained by directing your request to the name and address given in each item.

Small cooling tower. New bulletin describing in detail all features, data and dimensions of the "Thrift-Tower" in now available. Suitable to residential, commercial, and industrial air conditioning systems: saves up to 95% of normal water demands; capacity range 2 to 16 tons. Write Marlo Coll Co., 6135 Manchester Ave., St. Louis 10, Mo.

Steam traps. Two new catalog, No. 500 and No. 610, covering various types of steam traps, together with capacity charts. Contain many drawings, charts, and photographs on uses and installations. For complete information on the Universal Velan Steam Traps, write Velan Engineering Ltd., 6585 Jeanne Mance St., Montreal, Canada.

Built-up Roofing Performance. A new 4-page brochure entitled "Picture Diary of the History of Built-up Roofing Performance with Liquid Foli" contains numerous photographs showing condition of roofing after years of weathering and placing emphasis on the value of roofing protection, is available to architects, engineers and contractors. Write Dept. A&;E, Grama Manufacturing Co., 5635 So. 6th St., Klamath Falls, Oregon.

Booklet on welding. An 8-page reprint entitled "Will Inert-Gas Metal-Arc Save Money on Mild Steel", authored by G. C.
Christopher R. Becker of the Research Laboratories of the International Harvester Co., reports the results of weld testing mild steel with the inert-gas metal-arc welding method. Data is recorded in tables which show costs as compared with the conventional method of welding mild steel. Graphs and cross-section photos of weld deposits are also shown. Copies are available by writing Dept. A&E, Air Reduction Public Co., 220 Bush St., San Francisco.

Heat Exchangers and Hot Water storage heaters. A new 16-page general catalog covering hot water storage heaters and heat exchangers; includes horizontal and vertical hot water storage heaters, instantaneous water heaters, converters, condensate coolers, dishwasher boosters, fuel oil heaters and instantaneous suction heaters for viscous fluids. Copies of this Catalog 5, may be obtained from Dept. A&E, Patterson-Kelly Co., Inc., 619 Warren St., East Stroudsburg, Penn.

Translucent coverings. A new 4-page, well illustrated, folder describing how to build translucent, fiber glass reinforced, plastic coverings for terrace, patio, porch, breezeway or corridor. Gives easy-to-follow instructions on how to put up the shelter framework and how to install the covering. Folder may be obtained by writing Dept. A&E, Resolute Corp., Zelienople, Penn.

Glazing the air conditioned home. The booklet gathers together available data of interest to the individual planning or building a home so that he may obtain the greatest benefit from the glazing of windows, proper orientation, with data about different kinds of glass and hints about wash. Numerous photographs are used. A.I.A. File No. 26-A-9 1953. This booklet may be obtained by writing Dept. A&E, Libbey-Owens-Ford Glass Co., Toledo 3, Ohio.

Metal Wall Panels. A new catalog describing Steelcraft Insulated Metal Wall Panels, in brilliant 4-color process, is available. The catalog contains 8-pages filled with descriptive information, illustrations, specifications, and detailed drawings. Prepared primarily for architects, engineers, and contractors, it provides information on types of materials, textures and colors. Copies are available by writing Dept. A&E, Steelcraft Manufacturing Co., Rossmoyne, Ohio.

Skylights. 44-Page Catalog featuring aluminum skylights, separated into four major classifications: 1) Tubular de luxe, 2) de luxe, 3) standard, and 4) special applications. Illustrated with drawings, charts, photographs and descriptive material, also specifications and applications. A.I.A. File 121. Copies may be obtained by writing Dept. A&E, O'Keefe's, Inc., 225 Shaw Road, South San Francisco, California.

Lighting Catalog. A new 80-page booklet illustrating and describing complete line of lighting fixtures and provides a most comprehensive selection. It includes illustrations, descriptions, dimensional data, lighting curves and other detailed data on incandescent and fluorescent fixtures for commercial, industrial and outdoor use. Copies are available by writing Dept. A&E, Electro Slw-A-King Corp., 2000 W. Fulton St., Chicago, Ill.

Motor Starters. Describing in detail combination motor starters, a new publication, No. 514-515, is available. Illustrated with photos of various types; detailed drawings of special features. Starters provide means for disconnecting motors with either disconnect switch, fusible or unfusible, or an air circuit breaker, combined in a single enclosure with magnetic starter, as specified by National Electric Code. Dimensions and weights of all types are given. Available by writing Dept. A&E, Federal Electric Products Co., 50 Paris St., New York.

AUGUST, 1953
GROUND WATER IN GRADE SLABS
(From Page 10)

keep the surface of the fill from 1/4" to 1/2" below the tops of the sleeper, then allow the new concrete fill to dry. Thereafter proceed in the usual way in installing a spring floor. The ample and enormous amount of ventilation in such spring floors is ample protection against rot.

It is quite evident that most of us in the construction industry are prone to neglect writing and recording good ideas for future generations, feeling that at the proper time in the future and whenever a similar occasion presented itself, we would again think of the same idea or a better one. Thus ideas are often lost because the similar occasion never again presented itself.

One wonders if the lost art of tempering copper by the ancient crafts was not lost in a similar manner. Apparently someone or many neglected to record just how the tempering was done in detail and the idea then died when the last survivor died. How many other times did such things occur? Can it be said that many ideas or methods of doing things in research were not actually done in the laboratory and simply because unrecorded, they were promptly forgotten. Someone later comes along and does the same thing in research and thinks the idea is "new."

Many ideas in ore dressing, once familiar to many operators, in later years were thought to be "new" by the younger generation. Thus time, often all too soon, closes the pages of knowledge.

If everyone would stop long enough to record worthwhile ideas in a neat and orderly manner, many good ideas in the arts or sciences would never have been lost.

The author asks permission of the reader to digress from the theme and thought followed here above and suggests that all architects, construction engineers follow the example of many architects and engineers high in their professions who make it a practice to cooperate with general contractors and subcontractors and material men realizing that trustworthy representatives of the construction industry among these crafts can bring best results. All should work together for best all around results.

The construction industry, the same as other industries, has and always will have those who are eternally looking for an opening to take advantage of others for their own benefit. No one can do good work for less than cost and the owner very rarely gets more than he pays for.

The architects and construction engineers have a profession which is highly creative and offers an opportunity for self expression in permanent form, likewise many other professions in industries such as automobile, machinery, etc. For that reason the closest cooperation between all professions in the construction industry is bound to get the best results. An architect or his associates cannot be expected to be so fully informed on all materials and methods of construction that timely advice would not help him now and then. Likewise the architect may often help the contractor in doing a better job. Thus the architects and/or construction engineers, once their specifications have been issued, may still have recourse to addenda, etc., to this end, which is constantly being done.

There is nothing "new" in this article but occasional restatement of well-known facts as a refresher is never out of order and the reader may often pick up an idea that is new to him, if not new to the industry as a whole.

(Conclusion)

AMERICAN COUNCIL OF COMMERCIAL LABORATORIES

The Annual meeting of the American Council of Commercial Laboratories is scheduled for November 4-7, in Detroit, Michigan, according to an announcement by Harold M. Dudley, executive secretary. A full program of divisional and committee activities are being planned.

IN THE NEWS

BANK SITE PURCHASED

The Bank of America, San Francisco, has purchased a site in Hayward for the construction of a new Bank building. Estimated cost of the new structure is $100,000.

GLENDALE CHURCH

The Zion Lutheran Church of Glendale has commissioned Architect William E. Foster of Los Angeles, to prepare drawings for the construction of a reinforced brick and artificial stone trim building in Glen- dale. Facilities will include classroom building and will cost approximately $140,000.

CHURCH AND SUNDAY SCHOOL

The First Presbyterian Church of Vallejo, California, will build a new Church, Sun- day School, and Fellowship Building in Vallejo at a cost of $250,000, according to a recent announcement. Of frame and stucco construction, the new facilities are being designed by Arch- itect Donald Powers Smith of San Francisco.

NEW ELEMENTARY SCHOOL READIED

Architect Bolton C. Moise, Jr., of River- side, has been commissioned to prepare plans and specifications for a new ele- mentary school for the RomolandElementary School District, Riverside county.

PALO ALTO STORE

Architect Morgan Stedman of Palo Alto has completed design of a 17,000 sq. ft. building for the firm of Stern & Price to be built in Palo Alto.

An unusual amount of plate glass will be used in the construction.

NATIONAL TECHNICAL LIGHTING CONFERENCE

A wide range of subjects will be pre- sented at the technical sessions of the Illuminating Engineering Society Confer- ence in New York City on September 14-17, according to advance announcements. Some 1000 members and guests are expected to attend the sessions which will be highlighted by a paper presented by Dr. W. S. Stiles of the Department of Sci- entific and Industrial Research, National Phys- ical Laboratory, London, England.

Reports will include “Lighting Progress,” “Lighting Service,” “Residence Lighting,” and “Vision Specialists.”

E. M. Strong of Cornell University will be succeeded as president of the Society by A. H. Mantwaring, Executive vice-presi- dent, Philadelphia Electrical & Mfg. Co.

ALL-BRITE DESIGN MAKES DEBUT

Designed for pendant mounting, the Cali- fornia is a luminous indirect fixture which combines low brightness, high efficiency and clean, slim western contemporary lines.

Full reflecting transmitting ribbed poly- strene plastic panels are curved at a radius which is modern in appearance and allows ideal levels of illumination for class- rooms, offices and other interiors. Metal parts finished in high-reflectance baked enamel, accessible for maintenance, manu- factured by Flourescent Fixtures of Cali- fornia, San Francisco, Los Angeles, Port- land.

ARCHITECT SELECTED

Lawrence W. Gentry, architect of Los Altos, has been commissioned by the Los Altos Union Church to draft plans and specifications for the construction of a new Church building in Los Altos.

Estimated cost of the project is $100,000.

SCHOOL BONDS ARE APPROVED

Electors of the Lake Tahoe Unified School District recently approved a school bond issue of $350,000.

Funds are to be used for the construction of a new Elementary School at El Tahoe in El Dorado county.

ARCHITECT MOVES OFFICES

W. Z. Smith, Jr., Phoenix, architect, has moved his offices from 1127 E. Camelback Rd. to new headquarters on 7th Street, Phoenix.

Smith's new offices were designed and built under his direction.

HARBOR PLYWOOD NAMES CALIFORNIA MANAGER

George A. White has been appointed manager of the Harbor Plywood Corp. of California, according to H. W. Van Natta, supervisor of sales warehouses, Aberdeen, Washington.

White is well known in the lumber in- dustry having been associated with Har- bor for more than ten years in various sales capacities. He succeeds Wayne I. Rawlings.

Harbor maintains warehouse facilities in San Francisco and Oakland.

Don't forget the 'master' touch of built-in telephone facilities

Your clients will appreciate the idea of concealed wiring and neat telephone outlets conveniently located to take care of their present and future telephone installations and changes. Wise home-owners today know the advantages of low-in-cost, high-in-satisfaction planned telephone facilities.

Just call Pacific Telephone's free Architects and Builders service. We'll gladly help you plan telephone facilities for greater beauty tomorrow in homes you are building today.

Put built-in telephone facilities in your plans

Pacific Telephone

AUGUST, 1953
NEW TWO GUN CATHODE RAY TUBE ANNOUNCED

Larger display, higher sensitivity, and closer tolerances are the features of the new type 72RA, two-gun, cathode ray tube just announced by the Electronic Tube Corp of Philadelphia, Pa.

The new 7" tube is designed for use in dual-channel oscilloscopes having high sensitivity. Electric-static focus and deflection as well as adequate shielding against cross talk is used. Tube is normally coated with PI phosphor, but other standard phosphors supplied upon request.

FISCHER APPOINTED OVERTY ASSISTANT SALES MANAGER

Malcolm E. Fischer, formerly executive secretary of the National Metalclad Door Association, has been appointed assistant sales manager of the Overtly Manufacturing Company, according to an announce ment by Herbert W. Wehe, president.

Fischer will serve as advisor and consultant in metal and metal clad fire doors as well as traveling representative for the firm which operates manufacturing plants in Los Angeles, California and Greensburg, Penna.

COURT HOUSE ANNEX

The Board of Supervisors of Glenn county recently commissioned Architect Albert W. Kohl of San Mateo to draft plans for the remodel of the Annex to the Glenn County Court House in Willows.

Cost of the proposed work will approximate $30,000 according to George S. Lewis, chairman of the board.

HONORARY DEGREE IN ENGINEERING

Brig. Gen. David Sarnoff, chairman of the Board, Radio Corp. of America, was given the honorary degree of Doctor of Engineering at the Drexel Institute of Technology, Philadelphia, Pa., during the Institute's 66th commencement exercises when 981 students were graduated with bachelor of science and master of science degrees in engineering, business administration, home economics and library science.

The presentation was made by Dr. James Creese, Institute president.

CONCRETE INSTITUTE REGIONAL MEETING

The American Concrete Institute's South west Regional Meeting will be held Octo ber 29-30 in Houston, Texas.

Co-chairmen of the event are Prof. Phil M. Ferguson, chairman of the department of Civil Engineering, University of Texas, Austin, and John A. Murlin, Texas Con crete Products Corp., Austin.

ARCHITECT SELECTED

The architectural firm of Hertza & Knowles, San Francisco, has been com missioned by the Housing Authority of the City and County of San Francisco to draft plans and specifications for the construc tion of a 350-unit Low Rent Housing proj ect in San Francisco.

It is estimated the cost of the project will exceed $2,500,000, and will comprise 2-story frame and stucco row-houses.

SCHOOL BONDS APPROVED

Qualified electors of the Sonoma Ele mentary School District of Sonoma, ap proved issuance of special school bonds for the construction of a new 9-classroom, kindergarten, and administration, multi purpose and kitchen Elementary School in the City of Sonoma.

Mario Ciampi, San Francisco, is the architect.

ALASKA US ENGINEERS MOVE SEATTLE OFFICE

Col. L. H. Foote, Alaska District Engineer, announced recently that the Seattle Branch office of the Alaska District Corps of En gineers, had been moved to 4735 East Marinal Way.

Lt. Col. Edward F. Arnold is Officer in charge.

Identity and function of the office will remain separate and distinct from the Seattle District, although the two offices are located in the same building.

PARKING GARAGE SAN FRANCISCO

The State Board of Arbor Commissioners is contemplating the possibility of developing an automobile parking area north of the Ferry Building in San Francisco.

The proposed project would consist of a 3-story reinforced concrete building on concrete pile foundations, and according to preliminary estimates would cost in the neighborhood of $1,500,000.

S. S. German has been selected as Chief Engineer of the project.

SOUTH HILLS COUNTRY CLUB

Architect Richard H. Pieger of Corona Del Mar has been commissioned by the South Hills Country Club to draw plans and specifications for a new Club at West Covina.

APARTMENT PROJECT

A 1500 apartment project is scheduled to be built in Phoenix, Arizona, this sum mer according to Ralph Haver, Phoenix.
who has been appointed architect for the project. Thirty buildings and a shopping center are included in the plan which will take two years to complete at an estimated cost of $12,000,000.

TO BUILD CITY

The Del Webb Construction Company of Phoenix, and the M-O-W Homes, Inc. of Bellflower, California, are scheduled to build the new Arizona copper mining city of San Manuel for the San Manuel Copper Company, subsidiary of the Magma Copper Corp. Two-thousand homes are being planned to serve an estimated population of 7000.

INTRODUCES NEW BATHROOM CABINET

One of the newer bathroom cabinets combines distinctive luxury and practical price in a modern sliding door design. Beautifully finished in white enamel, the cabinet provides attractive decorator contrast on both white and colored walls.

The two large, smooth-sliding mirror doors, are set into stainless steel frames by a special process which eliminates clouding, peeling or discoloring due to steam or moisture.

"SLIDE-O-NETTE" doors are 16x20 in.; cabinet interior 27x17x4 1/2 inches; doors and shelves removable for easy cleaning. Manufactured by Premier-Hall Mfg. Co., Chicago 47, Ill.

HALL OF RECORDS

Harold F. Kellogg of Pasadena has been appointed architect by the Los Angeles county board of supervisors to design plans and specifications for alterations to the Hall of Records, Los Angeles.

Cost of the work will approximate $200,000

BANK AND OFFICE

The 1st National Bank of Nevada, Reno, is completing remodeling of its building in Reno, according to architects Ferris & Erskine.

The 4-story and basement building, type 2, is structural steel frame and reinforced concrete. A penthouse is also included in the work. Cost is $500,000.

KAISER GYPSUM APPOINTS COSTA

Robert A. Costa, formerly administrative assistant to the general sales manager of Kaiser Gypsum Company, Inc., has been named the Company's assistant general sales manager.

Entered as second class matter, November 2, 1905, at the Post Office in San Francisco, California, under the Act of March 3, 1879. Subscriptions United States and Pan America, $3.00 a year; $5.00 two years; foreign countries $5.00 a year; single copy 50c.

ARCHITECTS’ REPORTS are published daily from this office, Vernon S. Yallop, Manager.
PROBLEMS? YOU JUST THINK SO

You think you have problems?—around the office, with your clients, with the contractors, with the building material supply manufacturers and dealers—You do not know what trouble is . . . you are in the better of the elite professional professions and the great serious problems of today pass right by your door.

If you do not think so, give up your present activity and try what you may think is a greener field—take the automobile business for instance.

Since the turn of the century the industrial history of the nation has been shaped by the passionate love of the American for his automobile—sure, food, clothing and a roof over head was important, but, an automobile! that was a must even if it was necessary to skimp just a little on some of the other things.

So great and indispensable has become the automobile that tabulation by the National City Bank of the largest American corporations, on the basis of sales for 1952—which will carry along into 1953—the twenty-five largest corporations are shown to have sold $56,635,000,000 worth of goods, and of this, 42½% or $24,150,000,000, was credited directly to the automotive business.

The first half of 1953 has seen automobiles made at a record pace, but reports indicate the used cars—which have to be taken in on new ones in the majority of instances—are piling up on lots, a fact which anyone can see for himself by a little directed observation. These used cars must be sold, so must the new ones, if the present rate of production is to be maintained. So, the problem becomes of greater importance each day.

Talk to a few key men in these "greener pasture" businesses and you will agree with us that you just think you have problems.

The United States Treasury took in more money in the five days March 16-20 than it collected in the 83 years from 1789 to 1872, during which time it fought three wars and bought Louisiana, Florida and Alaska.

It is easy to see that with the Eisenhower administration starting in Washington with a debt of $268-billion inherited from Truman, government economy was one of the most urgent problems facing the past session of Congress and the new President. What has been done to date? What will be done?

ARCHITECTURAL PROGRAM

SHOULD BE PART OF COMMUNITY PLANNING

Mario J. Ciampi, Chairman
Relation with Allied Arts and Affiliated Professions,
San Francisco Chapter A.I.A.

The San Francisco Art Commission passed a resolution some time ago in which it recommended "in the interest of beautification and the sponsoring of the Arts, that all future appropriations for building construction by the City and County of San Francisco shall include a minimum of 2% of the estimated gross project cost to be allocated and appropriated for the specific purpose of landscaping, sculpture and painting."

We, the architects of this community, are professionally and morally required to make every effort to help the "Art Commission" make this objective a reality so that the public may gain in cultural and spiritual betterment.

The recent completion of many new civic and community buildings reveals that frequently architects, through extreme anxiety to incorporate the arts in their buildings, have been denied such opportunities because of the failure to approve funds for this work.

These basic values are inherent in our work, inseparable as the body and the spirit. We all know that good architecture includes emotional and spiritual qualities as well as economic and functional requirements. That down through the ages all civilizations, whether Egyptian, Greek or Mederel—even the primitive and uncivilized—have all endeavored to integrate the arts in their structures. This is a basic human need which manifests itself in every people, whether in their form of attire, or in the character of their homes. That most material possessions have more than a functional value. The decorative attempts to give special interest to these material things indicate that man all over the world, regardless of epochs, environment or race, seeks pleasure and satisfaction in his emotional reactions.

We, as a people, the dynamic leaders of world progress, have become so engrossed in materialism that other aspects of life are losing their significance.

It is therefore imperative that we architects, as a cultural force in our society, should put forth maximum effort and project into the work at community level the same basic aspirations we have reflected in the wish to enhance man’s own personal environment.

The artist is the輛encia of society, and every society should encourage him to express those values which are not always apparent, and by his recognition identify him with the community rather than discourage the very ideals he has been taught to believe in. The building he helps create, which gives him his education in his art, should in turn stand as a symbol of community aspiration, and as a guide and inspiration for the artist of tommorrow.

The forces which guide the destiny of man in his quest for the enrichment of life have for some years manifested themselves in various cities and countries throughout the world. Many people long ago discovered that in order to realize their ideals and to forestall the efforts of those more materially inclined, they must appeal to the public conscience in terms of law. Basic legislation or rules have thus been adopted to regulate the funds expended for civic work, so that a fair share of all funds allocated for new work would be reserved for cultural embellishment such as landscaping, painting, sculpture and other more specialized works of art.

During the past few years the writer visited several countries and corresponded with many persons willing to assist in the compilation of information. The results of these efforts show that the general appropriations for arts and architecture vary from 1%, 2% and therefore the problem suggested by the San Francisco Art Commission is entirely in accordance with generally accepted principles and should be adopted in any community desirous of keeping pace with today’s construction trends.
WORLD'S SMALLEST
COMPLETE KITCHEN!

General Chef complete kitchen units fit in 5.4 square feet. The ideal solution wherever space and dollars are important.

SINK One-piece porcelain top of heavy gauge steel. Faucets and all hardware triple-chrome plated. Units also available without sink.

BURNERS Units come with 3 gas burners (easily adjusted for bottled, natural or manufactured [L.P.] gas), or 3 electric burners (220 V.) or 2 (110 V.).

FREEZER Holds 9 ice cube trays, or 12 standard frozen food packages.

STORAGE DRAWER Ample storage space for pots and pans.

5 YEAR GUARANTEE
Every General Chef Unit is guaranteed in writing to give trouble-free service for 5 years!

WRITE for complete information and specifications if you are building, remodeling, designing — you will be interested in the space and money you can save with General Chef units. Several models are available. Fully guaranteed. WRITE TODAY for complete information and specifications on all General Chef units. We will also send you name and address of distributor nearest you.

SEPTEMBER, 1953
DIRECTOR OF ART GALLERY NAMED FOR U.C.L.A.

Frederick S. Wight, associate director of the Institute of Contemporary Art in Boston, has been appointed professor of art history and director of the art galleries at the University of California at Los Angeles.

A well known author, painter and teacher, Wight has been in charge of educational activities at the Boston institute for the past four years, and has given courses on modern painting at Harvard and the University of Michigan.

Dr. Gibson Danes, chairman of the U.C.L.A. art department, announced the appointment of Wight.

UNIQUE ART GALLERY IN SAN JOSE

Something new and different has been added to the art interests of San Jose, California. It is Yvonne's Art Gallery and Gift Shop which is located on U.S. Highway 101, and where lasting mementos of places of interest and historical value in the medium of underglaze decorating on semi-porcelain dinnerware is created. San Francisco scenes on plates and Siamese cat dinnerware are popular throughout the United States.

During September, the Gallery will show the paintings of Sam Harris of Monterey, Pat Cucaro of San Francisco, Jack Green, cowboy artist of California and Nevada, and Jack La Chappelle of Berkeley.

Besides domestic and imported gifts, shut-ins and people who do clever things well at home, here find a ready market for their talent. Young and old participate in this unusual feature.

COMPETITIONS AND AWARDS

San Francisco Art Association Watercolor Annual: October 14 to November 15, Address SFAA, 800 Chestnut Street, San Francisco.

San Francisco Art Festival: September 24-27, Address SFAA, 800 Chestnut Street.

Fifth Annual Art Fair; Lafayette, California, September 11-15. Painting and Sculpture limited to two, Entry fee of $1 for each field of art. Address Artists Market, 1045 Stuart Street, Lafayette.

Los Angeles County Fair; Pomona, September 15-30. Address Richard Pettersen, Director of Arts and Crafts, Los Angeles County Fair Association, Pomona.

University of Minnesota Gallery's National Print Annual; Address 310 Northrup Auditorium, University of Minnesota, Minneapolis. Entry fee $1.

M. H. deYOUNG MEMORIAL MUSEUM

The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, under the direction of Walter Heil, has announced the opening of Fall activities with a special group of exhibitions and events featuring the Art of The South Pacific Islands. This is a important and comprehensive show of some 350 outstanding works assembled from twenty museums and twelve of the foremost private collections. A profusely illustrated catalog is available on this exhibition.

EXHIBITIONS: Art of The South Pacific; Contemporary Prints from France; Watercolors by Serge Romanovskly; Harnett and His School; and the Third Annual exhibition of the Metal Arts Guild.

SPECIAL EVENTS: Gallery Tours and lectures; Painting for Pleasure featuring Exercises in Percep- tion, for adults. Offering an opportunity to develop more enjoyment of art and of all visual experience. Seminars in the History of Art, will feature a practical discussion led by Charles Lindstrom. Painting Workshop offers painting from the model, and the Children's Classes in Picture Making, Art and Nature, and the Art Club have been resumed for the Fall months.

CITY OF PARIS

The Rotunda Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan, will feature a fall exhibition of the Paintings by Julia Colton, Norma Groton and George O'Connell.

The Pictures of the Month exhibition will feature selections from the City of Paris' Coronation Exhibition, representing a select group of Lithographs by thirty-two British painters.

SAN FRANCISCO MUSEUM OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, is offering the following calendar of events for September:

EXHIBITIONS: Modern Aubusson Tapestries, an American Federation of Arts Exhibition; Mobiles, by Alexander Calder; Bay Area Sculpture; Rio Grande Graphics; Prints by Enid Foster, Mar Jean Kettunen, and Julius Wasserstein; Paintings by Alice Rohan Fitzgerald; Sculpture by Saul
Baizerman; and Contemporary Danish Furniture.

SPECIAL EVENTS: Lecture-Tours each Sunday at 3 o'clock; Discussions on art subjects, each Wednesday evening at 6; and the Children's Art Classes each Saturday morning at 10 o'clock which will again feature the Sketch Club and the Painting Class.

ANNUAL SAN FRANCISCO ART FESTIVAL
The San Francisco Art Commission's seventh annual Art Festival, staged in downtown Union Square and adjoining Maiden Lane, held the latter part of September, was again an outstanding event in the realm of art, according to Martin Metal, Festival Director.

Panel shelters were erected along the walks and accommodated more than 400 art exhibits and a 30x30 ft. stage provided for dancers and concerts.

CALIFORNIA PALACE OF THE LEGION OF HONOR
The California Palace of the Legion of Honor, Lincoln Park, San Francisco, under the direction of Thomas Carr Howe, Jr., opened its fall exhibition season with a group of special exhibitions including:

Concours d'Elegance; selections from the Second International Hallmark Award, comprising an array of more than 100 watercolors; Berthe Morisot and Her Circle, paintings from the collection of Mme. Ernest Rouart, daughter of the artist; an Exhibition of the Museum's publications; Chinese Export Porcelain; Paintings by Helen Dunham; Exhibition of Japanese Folk and Provincial Art, from the Honolulu Academy of Arts and being shown under auspices of The Japan Society of San Francisco; and Works by Four Contemporary Artists—Jeremy Anderson, Ernest Briggs, Hassel Smith and James Weeks.

The Achenbach Foundation for Graphic Arts will feature Prints by Berthe Morisot and her contemporaries, and Four Centuries of Nautical Prints, a loan exhibition at the San Francisco Public Library.

Educational Activities include Painting classes for Children, ages 6 through 14, each Saturday morning at 10, and Painting Classes for Adults each Saturday afternoon at 2. Motion pictures are shown each Saturday afternoon, and the regular Organ Program is offered Sundays at 3 pm.

CALIFORNIA SCHOOL OF FINE ARTS
For the first time in its 82 year history, the California School of Fine Arts, 800 Chestnut Street, San Francisco, is offering a Bachelor of Fine Arts degree to students completing an enlarged new four-year program.

Ernest Mundt is Director of the School.

PAPER MANUFACTURING PLANT
TRACY, CALIFORNIA

WILLIAM CORLETT, A.I.A. Architect
PETER H. SKAER, A.I.A. Architect Associate
JOHN M. SARDIS, Structural Engineer
G. M. SIMONSON, Mechanical & Structural Engineer
OSMUNDSON & STALEY, Landscape Architects
B & R CONSTRUCTION COMPANY, General Contractors
The American Reenforced Paper Company, manufacturers of reenforced building paper and other reenforced papers, with plants in Attleboro, Massachusetts; Gary and Chicago, Illinois; London, England; and in Australia, purchased a thirty acre site in Tracy, California in February, 1952. The company believed that their proposed new plant need not look like the average industrial building. They felt that it should incorporate the principles of contemporary architectural design and selected San Francisco Architect, William Corlett, and his engineering consultants to design and supervise the construction of the mill.

Corlett journeyed to the company's Massachusetts Plant to observe the operation of their Attleboro mill and to determine a basic site utilization plan properly incorporating the various service elements that make up the complex facility necessary to the manufacture of building papers.

The resultant design incorporates many features unique in the field of industrial construction which proved to be attractive in appearance and economical in cost.

San Francisco Structural Engineer, John M. Sardis, utilized a welded steel frame in the 37,600 sq. ft. main building for the following reasons:

1. A 20 percent cost saving in structural steel due to the continuity and simplicity of the design.
2. Elimination of the usual rivets, bolts and clips.
3. Less cleaning maintenance due to the cleaner and simpler exposed framing.
4. The flexibility of the welded steel design allows the use of tapered sections and more desirable girder to column connections.
5. More liberal erection tolerances are allowed.

Interesting wide-angle view of the front of the plant — main entrance at left and the motor vehicle and railroad loading dock are shown in the right foreground of picture.

(Photos on this page were taken by Ernest Braun, Photographer)
BEAM TO GIRDER CONNECTION

Showing how shear clips were welded to beam flange and to girder to obtain greater simplicity in erection.

DETAIL

Steel girder is welded to supporting steel column with extension of column to form roof support.
6. Shop welded erection clips designed to take full design loads as well as serving as erection clips simplified erection, allowed greater field erection tolerances and eliminated web welding.

7. Shear clips were welded to the top flanges of the beams and girders supporting the 7" concrete mezzanine floor slab to take advantage of the composite action furnished by the slab to the structural steel beams and girders. This resulted in stiffening of the entire floor as a diaphragm and decreased vibration considerably.

Wood purlins support 2 inch T & G roof sheathing and an insulated composition roof sprayed with aluminum paint.

Corrugated transite is stud welded to horizontal steel channel girts as exterior siding. Flat transite is utilized in the soffits and in spandrels. Ten inch exposed steel channels form the south wall vertical and horizontal facias.

**MAIN FLOOR PLAN** showing cross section at top
Glare and heat reducing glass, blue in color, is set in the steel sash. Cool-shade screens cut out south sun in mezzanine office and locker room areas.

The main entrance all glass panel is set in enameled steel tubular frames. Blue and amber glass in alternate glass panels present an interesting and colorful pattern.

The continuous concrete base around the main building is covered with rubber base paint, terracotta in color.

Interior exposed framing, sprinklers and all process piping are painted cream yellow. Columns are painted tile red to a height of 6 feet. Mezzanine office areas are sheathed with ¼ inch mahogany plywood.

The 120 ft. by 200 ft. main building is served by an adjacent covered truck loading platform, railroad car loading dock and spur.

An adjacent steel framed 40 ft. by 60 ft. boiler building houses a hot oil heater, resin tanks and the main boiler. A large incinerator, which burns large amounts of trimmings and waste, is backed up to the boiler house adjacent to the boiler. Mechanical Engineer, G. M. Simonson, at the request (See page 38)

Total Car Port
Square Feet . . 538
Total Living Deck
Square Feet . . 905

COST: Total Cost of Project . $23,500
Including — land, construction,
architect's fee, and landscaping.
Per Square Foot . $8.20
VIEW
Shows relation of raked glass front to pool and terrace.

LOOKING
From living room towards kidney shaped pool, glass window wall and terrace, showing a portion of Bay panorama beyond.
HILLSIDE RESIDENCE . . .

Economy in construction is due to functional structural design principles, and therefore, according to common practice, by considering the spacious deck and adjoining car port as one-half of the cost of the entire living area—the total estimate of space in this project would be some 2,506 square feet. Using this as a basis, the cost would then be but $8.20 per square foot, an admittedly unusually low cost for home construction today.

It should be understood, however, that such a phenomenally low cost was only made possible and was brought about by the very close cooper-
ation between the owners, the architect and the building contractor. This made possible the liberal use of many economical building materials, and it is important to remember when considering construction costs that building materials fluctuate a great deal in cost according to varying market conditions. A product which might not be in common use today and therefore have a low market price, can increase rapidly with a great demand and in some instances rising costs can necessitate the replacement of an alternate material.

One of the main features of this residence for Mr. and Mrs. Leslie Gottwald, according to Architect Bruce E. Heiser, A.I.A., is the liberal use of imported Philippine mahogany sheathing and trim inside and outside of the structure. Selection of this material was made because of its extremely low present-day cost, and its ability to withstand the variations of summer and winter weather experienced in this particular area on the lower ex-
panse and eastern side of the Coastal Range and Mt. Tamalpias region of Marin County.

It was demonstrated also that use of the Philippine mahogany material speeded-up construction time as there was no time-out for drying of plaster or other wet-wall construction necessary.

As will be noted from the photographs, other features of the home include the full wall-glass windows which afford an excellent panorama view of the bay to the east; the large number of built-in cabinets and features of the kitchen, dining and living room area; the attractive wall-to-wall floor covering, and the planted-wall separating the interior living space from the car port.

The kidney-shaped swimming pool, a portion of which is exposed to the outer deck area, and the other portion extending past the glass-wall into the interior of the home, is unique but definitely synonymous with the "livability" of this California home.
RAMSDELL'S
SANTIAM RIVER HOME

A RURAL SHOWPLACE

LEBANON, OREGON

OWNER: MR. and MRS. VITTZ RAMSDELL

ARCHITECTS: ARNOLD SOUTHWELL
A.I.A.   MURLIN DRURY

TOTAL COST PER SQUARE FOOT
$10.50
By ARTHUR W. PRIAULX

Oregon's Santiam river is noted for its beauty and breath-taking vistas, especially as it winds its way across the valley floor from the Cascade Mountains to its juncture with the Willamette. Home sites along its gently sloping banks and in untouched wilderness settings among the native fir and maple, have become as choice and as much sought after as any in Oregon.

Five miles east of Lebanon, Mr. and Mrs. Vittz Ramsdell have built a home of rare beauty to match an exquisite natural setting to get a storybook effect of unusual grace and distinction. Architects Arnold Southwell and Murlin Drury, AIA, of Oswego, Oregon, designed this contemporary ranch style home in its lovely rural surroundings.

Architects Southwell and Drury had several problems to solve in order to achieve this picturesque home. The home first had to fit the surroundings. The site sloped gradually from a flat area to the river's edge where a natural screen of trees formed an attractive boundary. A low ranch-style design was selected as most suitable with exterior walls finished in western red cedar in natural color. The house had to hug the ground contour, the architects decided, so some tricky foundation pouring came into play.

The two-bedroom home was then designed to catch every possible bit of beauty the river's edge site afforded from the principal rooms of the home. Full river view was arranged for living room, kitchen-breakfast nook and master bedroom. A patio outdoor living area follows the river-side of the Ramsdell home the full length of the living room.

Another problem undertaken by the architects was to design this home on standard centers, spacing and modules so that standard lengths of lumber could be used without waste. As an example, width of the structure was designed so that the main bearing foundation pier line would carry sixteen and ten foot floor joists. Throughout the building similar attention was paid to fully utilize standard lengths of lumber. It developed into a study of economic framing by Owner Ramsdell, who is a lumberman.

The Ramsdell home has been finished outside with vertically applied western red cedar boards ten and twelve inches wide with ¾ inch by four

Note flow of lines of roof and exterior walls as garage and home are tied together, thus giving the residence a low, rambling effect and a sense of belonging to the site.
A RURAL SHOWPLACE . . .

inch cedar battens. One coat of special seal was sprayed on as soon as the siding had been installed and another coat will be sprayed this summer. This treatment has held the natural color of the cedar, which fits beautifully into the rural location, and has the added advantage of being the final exterior treatment which the home will require for many years, the owner believes. This should reduce upkeep to a minimum.

A garage finished in cedar identical with the home, 22 by 26 feet in size, and connected by a breeze-way covered by a roof extension, adjoins the home on the east and follows the close, snug fit of the home in hugging the contour of the ground.

Heart of this home is the living room with two rare features. A solid wall of glass faces the river side with an unforgettable view of rural Oregon.

The outside wall is built up of West Coast hemlock in random widths of four to eight inches with a simple V joint. The hemlock has been finished natural. Centered in the wall is a fireplace made of ceramic marble tile with hemlock mantle and panelled trim.

What gives this hemlock wall such distinction and beauty is the contrast of the ceiling and end walls which are plaster and have been finished in a cardinal color. The effect is to frame the light-colored hemlock wall.

Doors from the living room open onto the patio, into the kitchen, and into the bedroom wing. The sliding door into the kitchen has been painted to match cardinal walls. A sliding birch door to the bedrooms and on the right of the fireplace has been finished in natural color to match the hemlock wall. A short entrance hall from the off-river

WIDE EAVE overhang makes a very effective "eye shade" for the Ramsdell home, keeping out excessive sunlight, keeping home cool, and serving as roof and shelter for river-side patio lounging area.
side ends in an entry way at the left of the fireplace. Oak floors cover living rooms, bedrooms and the den-activity room.

Windows throughout the house are fixed millwork frame, but each room has one or more double hung screened windows to provide ventilation. A continuous screened ventilator under the eaves provides a steady down-river draft which keeps the flat roofed home unusually cool. The roof is built up of three layers, first two of paper and the third of split sheet mineral surface.

Adequate ventilation is provided in the under-house area. The home is a basic frame construction job and economies effected in the design to utilize all standard lengths of lumber without waste in no manner interfered or limited the architects in achieving their goal of a home of outstanding appearance and livability.

Like the living room, the master bedroom has a full glass wall on the river side. Two double hung windows allow for full ventilation. Both bedrooms have room-height built-in clothes lockers with storage compartments above. Sliding doors accommodate all of these built-ins in the bedrooms, in the den-activity room, and in the kitchen. The kitchen has been designed to give Mrs. Ramsdell a north and an east view of the river with ample windows in two walls. Kitchen built-ins are numerous and roomy and all fixtures and storage installations were custom built from available lumber and plywood.

The basic house floor plan is 53 feet six inches long by 25 feet 10 inches wide. Roof slope is away from river to give height to home on riverside. Living room ceiling follows roof line adding to appearance of spaciousness in this living space of 16 by 29 feet.
A RURAL SHOWPLACE . . .

LIVING ROOM
WALL WINDOWS
Faces lovely tree lined Santiam one hundred yards down hill. Door opens from living room into patio to make two areas almost one.

LIVING ROOM
Interesting feature is this room where wall of hemlock is framed by red tinted ceiling and side walls.
MASTER BEDROOM

Full floor to ceiling glass wall on river side. Site developed in every possible way, lawns slope to river's edge, trees and shrubs have been left natural.

DINING NOOK'S RIVER VIEW

Each room, except one, has a river view. Here two-window view sweeps the Santiam. Kitchen finished in serviceable plywood cabinets, built-ins and modern appliances.
The river side of the kitchen is the breakfast nook and dining space for the Ramsdells. Full view windows open onto an incomparable view of the meandering Santiam, seen through a natural screen of firs, maples and other native shrubs and smaller trees.

Arrangement of the Ramsdell home on the acre plot on the upper area away from the river has created a perfect balance of tree mass on the lower side offsetting the home. A sloping lawn ties the two together. This is a rural showplace achieved by arrangement of structures on plot as well as affinity of design to natural surroundings, and without excessive expense. The Ramsdell home was built for $10.50 a square foot including cost of the acre of land, driveways, walks around garage and home, landscaping expense complete with shrubs, lawn and other fixtures.

ENTRANCE OFF DRIVEWAY into small entrance-way is sheltered with a cedar screen to break the wind impact. Wide overhand eaves have been used on this south side of home to keep the residence cool.
Passengers on Australia's future jet air services will be whisked up in elevators from subways under aerodromes to the doors of their waiting aircraft without being exposed to weather or the noise and blast of jet engines.

This is Australia's answer to the world-wide problem of re-designing airports to provide protection for airway users against the scream and blast of jets.

But it is only one of the radical features of an airport that the Australian Department of Civil Aviation has designed for major Australian air terminals. Aviation authorities in the United States of America, Britain and France are interested in this original approach to modern airport design.

The effect of underground passenger facilities at the airport is obtained by building them under an elevated apron section where aircraft normally assemble to embark and disembark passengers and to refuel.

Passengers will enter the airline lounge at road level, and take one of several elevators up to their aircraft standing on the apron overhead. Subways will lead to the elevators serving more distant aircraft positions.

Aircraft will taxi from the runways up a ramp to the apron level cutting off their engines just before they turn into the apron lane at the top of the ramp. Then they will roll down a three per cent slope to the loading positions where chocks will rise from the apron to stop them.

As the elevator carrying the passengers up from the subway reaches the level of the aircraft door, the elevator cabin will roll forward to allow passengers to step straight into the aircraft. Luggage and freight will come up in the lift too. Cargo can be discharged from the front compartment of the aircraft down a chute into the basement.

With passengers comfortably seated and luggage stowed away, both the chocks and the lift will be retracted into the apron and the aircraft will roll down the slope to the engine starting area near the main taxiway—well away from the terminal buildings.

The scale model built provides for an 18-position apron, handling that number of aircraft simultaneously. It would enable the airport to handle 40 aircraft movements an hour.

Taxiways will be built up like causeways with earthworks, and paved with concrete. Only a comparatively small area of heavily stressed concrete pavement will be needed. This, and the fact that all the buildings will be of normal structure, will keep the cost of the total scheme down to the level of that of a normal airline terminal and apron.

All the usual passenger and freight facilities of an airport will be provided in the terminal buildings.

Built at road level and extending beneath the loading apron, will be the booking hall, passenger lounge, airline office, buffet, cabin services, luggage stations, toilet facilities, freight store, entrance for outgoing passengers from a bus dock and exit for incoming passengers at a second bus dock.

Concourses will run under the loading apron to enable passengers to walk under cover to any of the 18 elevator entrances.

An observation terrace for visitors above the passenger accommodation overlooks the apron. Administration offices are located on a mezzanine floor.

A basement beneath the ground floor level is reserved for freight and luggage rooms, meal preparation, employees’ change rooms, and other domestic facilities.

The engineers designed their airport to serve the busy internal air services, but now they are adapting it for an overseas terminal. Additional needs to be met are provision for segregation of aircraft to prevent contact between incoming passengers and the public before customs formalities have been completed. Changes in design of accommodation will make room for customs, health and emigration services.

Detailed planning will still be necessary to complete the airport scheme. In its present stage it has been examined critically by many Australian aviation experts, including airline operators. No fundamental objections have been raised to the

Editor’s Note: This special feature was prepared for ARCHITECT & ENGINEER magazine by the author John Loughlin, to show how engineers and the Commonwealth of Australia are cooperating to meet the many problems arising in commercial use of jet aircraft. The article will be concluded next month.

SEPTEMBER, 1953
LIBERTY HOUSE
MODERN DEPARTMENT STORE

KAILUA [Suburb] HONOLULU, HAWAII

ROTHWELL & LESTER - Architects
BURKE, KOBER & NICOLAIS - Designers

The Liberty House, designed by Burke, Kober & Nicolaïs of Los Angeles, and the firm of Rothwell & Lester serving as Architects, is the largest department store in the Hawaiian Islands.

This new building is being located at Kailua, one of the important suburbs of the City of Honolulu, and will cover an area of 28,000 sq. ft. when completed.

The interior is designed in an informal style, using a wide variety of building materials. Local beige stone and stucco with a Zolatoned surface make up the general exterior surfaces. The ac-
cents are especially designed ceramic tiles around the entrances and a patterned brick on two walls. Planting has been freely used as part of the architecture, both interior and exterior. A continuous marquee is used around most of the building on a walkway framed by varying sizes and shapes of window displays.

The interior will serve the usual large department store facilities; the second level will be used for the Beauty Salon and the Coffee Shop, while the ground level will house the various departments. Wallpapers, woods and design motifs have been selected in character with the semi-tropical atmosphere of the Hawaiian Islands. Colors also have been carefully studied to harmonize with the character of the islands. Each department is individualized as to design and color in keeping with the nature of the department.
ARCHITECT DEASY OF LOS ANGELES SELECTED TO STUDY GERMAN PROBLEM

C. M. Deasy, architect of Los Angeles, has been selected as one of the eight United States architects to tour Western Germany to study reconstruction procedures and community planning as guests of the Federal German Republic.

The group will fly to Frankfort and will spend three days in Bonn for conferences with various ministries. Traveling in Western Germany and visiting West Berlin will occupy the remainder of their stay in the country.

Deasy, secretary of the Southern California Chapter of The American Institute of Architects, is an instructor in industrial design at the Art Center School in Los Angeles.

PUBLIC INVITED TO ARCHITECTS MEETING

The Southern California Chapter, AIA, recently invited the public to attend a joint meeting of the Chapter with the Southwest Chapter of the American Society of Architectural Hardware Consultants at which a technical discussion was presented by the architects to the consultants.

Following the general discussions an open forum was held. A. C. Zimmerman, chairman of the Technical and Materials Committee, served as moderator.

PASADENA CHAPTER

The regular September meeting was in the form of a barbecue in Altadena, at the home of Ken Gordon, with arrangements in charge of the Junior Associates. Don Ramberg, presiding, at a non-architecture “Trip to the Enchanted Isles” in the form of a motion picture taken by Charles Rucker off the coast of Mexico. Rucker served as narrator during the film’s showing.

WASHINGTON STATE CHAPTER

Dr. S. Harvard Kaufman, professor at the University of Washington in the Department of Psychiatry was the principal speaker at the September meeting taking as his subject—“Interpretation of
the Interpersonal Relationship of the Architect and the People with Whom He Comes in Contact.”

Miss Dayis Holcomb, newly appointed Executive Secretary for the Chapter was introduced. Miss Holcomb will have charge of the offices of the Chapter at 409 Central Building, Seattle.

Officers selected to serve for the ensuing year, at the annual election were: John S. Dettle, president; Ralf E. Decker, 1st vice-president; Edwin T. Turner, 2nd vice-president; Wendell H. Lovett, secretary; Arnold G. Ganges, treasurer, and Executive Board members including Paul Thiry, William J. Bain, J. Emil Anderson and Robert B. Price.

HEITSCHMIDT REPRESENTS ARCHITECTS AT CONFERENCE

Earl Heitschmidt, A.I.A., architect of Los Angeles, represented the architectural profession (west of the Mississippi) at a joint co-operative committee meeting of the Associated General Contractors and the American Institute of Architects held in Chicago this month.

The committee meeting was held just prior to the annual Associated General Contractors Convention, and taken under consideration were: modular co-ordination, insurance, AIA general conditions, contract forms and general items of the building industry.

CALIFORNIA COUNCIL OF ARCHITECTS

Among items coming before the annual convention of the California Council of Architects in San Diego on October 15-16-17, will be consideration of the reorganization of the Council office in Los Angeles.

Fred Chase, who has been serving as executive secretary resigned his position, effective December 1, and a successor is to be named. Consideration of the functions of the executive secretary and possible expansion of the Council activities to include additional personnel, will also be taken under advisement at the annual meeting in Coronado.

Annnounced results of consideration at the annual meeting were:

(See Page 34)

"Take it from me... concrete made with

DAREX AEA

is more durable"

DAREX AEA is the world’s leading brand of air entraining agent. Contractors, engineers and ready-mix plants all over the world use DAREX AEA to make concrete that places easier and faster, is more homogeneous, finishes better, has better surface texture, and is more durable when exposed to weathering, sulphate and sea water action.

FRESNO
FEMINEERS

"Fashions In Flight" was the theme of a Fashion Show held on September 16 in the San Francisco Elks Club, in conjunction with the regular monthly luncheon.

Millinery and Fur Fashions highlighted the event with Miss Carol M. Bigelow, Women's Representative of the United Airlines providing the commentary and background for the show. Furs were supplied by Roberts' Furs and the hats were furnished from the Francois Modes new fall line.

Models included FEMINEERS, R. D. Dalton, E. D. Kohler, G. R. Maurer, Eric Moorehead, William Moore, Fred Pavlov, Victor R. Sander and B. A. Vallerga. Musical background was furnished by Mrs. Harold B. Hammill. Arrangements for the event, which is held each year, was under the supervision of Mrs. John Fies.

STRUCTURAL ENGINEERS ASSOCIATION OF NORTHERN CALIFORNIA

"Complexities of Soil Compaction" was the subject of an address by Francis N. Hveem, materials and research engineer for the California Division of Highways, Department of Public Works, at the September meeting held in the Hotel Claremont in Berkeley in joint meeting with the East Bay Structural Engineers Society. Hveem is considered an authority on bituminous pavements, soil conditions, and soil compactions having served in the California Division of Highways for more than 30 years.

Consideration was given to the annual Structural Engineers Convention, scheduled for October 8-9-10 at Yosemite, and early registration urged.

AMERICAN SOCIETY OF CIVIL ENGINEERS

The highest distinction within the power of the Board of Directors of the American Society of
speakers; round table discussions, and a varied program of entertainment is being provided for those attending this year’s conference. Limited accommodations at the Ahwahnee Hotel is a suggestion that reservations should be sent in without delay, send to Ted Newman, 306 Sharon Bldg., San Francisco.

STRUCTURAL ENGINEERS ASSOCIATION SOUTHERN CALIFORNIA

"Building Accelerations Produced by Strong Ground Motion" was the subject of an address by Dr. George W. Housner, Professor of Civil Engineering and Applied Mechanics at the California Institute of Technology at the September meeting held in the Rodger Young Auditorium in Los Angeles.

Dr. Housner recently completed extensive research on the subject and related results to observe damage resulting from recent earthquakes. The study was conducted by detonating large charges of explosives adjacent to the structures under considerations and then recording actual accelerations. The results were very interesting and informative.

PAUL JEFFERS MEMORIAL SCHOLARSHIP ANNOUNCED

A Paul Jeffers Memorial Scholarship is being established by the Structural Engineers Association of Southern California, honoring one of the founders of the Association and its first president.

The award will be made annually to an outstanding student in Civil and Structural Engineering.

Jeffers at the time of his death was President of the California State Board of Registration for Civil and Professional Engineers. He was responsible for much of the structural design in many prominent buildings throughout Southern California.

SCHOOL TRUSTEE REQUESTS
EMPLOYMENT LOCAL ARCHITECT

Taking the position that public school officials should set an example in following the principles of free enterprise, Robert M. Jackson, a trustee of the Redwood City (California) Elementary School District, contends the services of an architect residing in the district should be retained, rather than employing a full time architect by the district.

Considerable expansion of educational facilities in the form of new school buildings and remodeling, is anticipated by the District to keep pace with the rapid residential growth of the community, and in connection with such a program, Jackson points out the district will actually save money by employing the services of a local architectural firm on a fee basis, rather than putting an architect on the districts payroll.

In a recent communication to the superintendent of the Redwood City schools, Jackson pointed out "I think it is far better for our tax-payers to have our architectural services rendered by a private company rather than open ourselves to more "State control." Governmental trends, as evidenced by the 83rd Congress, is towards getting Government out of business rather than increasing competition with private enterprise, the communication concluded.
Annual Convention
California Council of Architects

The annual convention of the California Council of Architects is to be held on October 14th, 15th and 16th at the Hotel Del Coronado in Coronado, California. The convention as usual, is jointly sponsored by the California Council of Architects and the Los Angeles and San Francisco Chapters of the Producers Council, Inc. As a background, this convention is held in the South one year and in the North the next, with applicable chapter of the Producer’s Council taking over the required committee duties according to the location of the convention. This year as in the past the Los Angeles chapter is furnishing the committeemen with only one representative on each committee from the San Francisco Chapter. Primarily, the Producer’s Council is responsible for handling the sports activities at the convention and, accordingly, the Los Angeles committees have been hard at work on this program. We understand the prizes for winners are quite select.

It goes without saying, that every member on the Producer’s Council who finds it possible to attend this convention, will find it a wonderful opportunity to enjoy the fellowship that exists between members of the two organizations.
ARCHITECT SELECTED
Lawrence W. Gentry, AIA, architect of Los Gatos, has been commissioned by the Sunnyvale Elementary School District, Santa Clara County, to design plans and specifications for the construction of the new Cherry Chace Elementary School to be built in Sunnyvale.

The new school will comprise 6 classrooms, administration facilities, and toilet rooms and will be of frame and stucco construction.

MURRAY MERRIN MADE GENERAL MANAGER
Murray Merrin, Chairman of theEmployment Committee of the Structural Engineers Association of Southern California, and prominent southern engineer, has been appointed general manager of the Sierra Steel & Fabricating Company.

Manufacturing plant of the firm is located in Gardena.

ARCHITECT MOVES OFFICE
Architect Henry V. Chescoe of San Francisco, has announced opening of new offices for the practice of architecture at 121 Beale Street, San Francisco S. Formerly located at Market and Third streets, the new offices are larger and much more complete.

NEW ENGINEERING FIRM ORGANIZED
S. K. Johnson, partner of Daniel, Mann, Johnson & Mendenhall, Los Angeles architectural and engineering firm, has announced the formation of the DMJM Engineering Company. The parent firm has been extensively engaged in engineering projects in this country and abroad for the past several years, and organization of the new civil engineering section will better serve the firm's clients.

DOANE APPOINTED SALES ASSISTANT
John E. Doane has been named assistant sales manager of the Calaveras Cement Company, according to an announcement by W. W. Mein, Jr., president.

He will continue to serve as traffic manager of the firm and will add his new duties in the sales department under Mel J. London, vice president and general sales manager.

COLLEGE NAMES ARCHITECTS
The architectural firm of Pereira & Luckman of Los Angeles has been named by the Regents of the University of California as the executive architects for the new music building to be constructed on the future campus of Santa Barbara College at Goleta.

Cost of the new music building is $656,000 and it will have an estimated area of 28,800 sq. ft.

SUPERVISORS APPROVE MASTER IMPROVEMENTS
The Los Angeles County Board of Supervisors has approved a master zone plan for the community of Palmdale in accordance with a program advocated by the Palmdale Chamber of Commerce.

The plan calls for 211 acres for commercial purposes, 180 acres for manufacturing development, 6,746 acres for single-family residential expansion and approxi- mately 19,000 acres for agricultural uses.

It is one of the largest single package zoning plans ever processed by the Regional Planning Commission of Los Angeles.

ARCHITECT SELECTED
Architect Jack Buchter of Orinda has been commissioned by the Orinda Elementary School District board to draw plans and specifications for the construction of a new Elementary School in Orinda.

The new facilities will be occupied by the 7th and 8th grade students.

BAKERSFIELD CHURCH
Architect Whitney Biggar of Bakersfield is completing plans and specifications for the construction of a new First Congregational Church building to be built in Bakersfield.

The building will be of masonry with wood roof, concrete floor, radiant heat, laminated wood arches and will comprise a sanctuary, offices, Sunday school, social hall and kitchen. Estimated cost is $260,000.

NAMED GENERAL SUPERINTENDENT
Jack Ogden has been appointed general superintendent of the Ford J. Twaits Company, general contractors and engineers with main offices in Los Angeles, according to an announcement by company officials.

Ogden has been the superintendent of the Police Facilities Building now under construction in Los Angeles by Ford J. Twaits Co., and Morrison-Knudsen Co., Inc.

ENGINEERING FIRM EXPANDS
The Conley Engineering Company, general civil engineering consultants, have opened new offices at 1348 S. La Cienega Blvd., Los Angeles, according to a recent announcement.

ARCHITECTURAL PORCELAIN

Dramatic-design, customer-attracting store fronts with Cameo architectural porcelain enamel. Available in countless colors and textures that never need refinishing, and in practically any shape or size. It is lightweight, fire and weather resistant and easily constructed. For complete engineering specifications, write or call today.

CALIFORNIA METAL ENAMELING COMPANY
6904 E. SLAUSON AVE., LOS ANGELES 22, CALIFORNIA • Underhill 0-1268

SEPTEMBER, 1953
FRANCIS JOSEPH McCARTHY
Architect, A.I.A.
San Francisco, California
Both father and mother of architect Francis Joseph McCarthy were born in Virginia City, Nevada, so he is another Westerner by inheritance and birth as he actually first saw the light of day in Sidney, N.S.W., Australia where his parents had moved in order that McCarthy senior could practice his profession of mining engineer.

Aside from globe-trotting in his early youth, McCarthy's boyhood was spent in the mining camps of Nevada, Arizona, and California, and it was while attending a University of Arizona extension School class and seeing the instructor draw plans for a house that he determined to become an architect.

After graduation from the San Juan High School at Fair Oaks, California, and attendance at Stanford University, McCarthy worked in various architectural offices obtaining his major training with Charles F. Dean in Sacramento, and William Wilson Wurster in San Francisco, augmented with study at the California School of Fine Arts in San Francisco.

McCarthy opened his own architectural offices in 1939 and immediately designed a number of houses and was associated in the designing of the Czecho-Slovakian Exhibit at the Golden Gate Exposition. With the outbreak of World War II, he became associated with James Wickenden and Theodore Bernardi in doing public housing work in San Luis Obispo county.

In 1944 he went to Brazil to work on U. S. Government projects, returning to San Francisco in 1945 to again become associated in war housing projects with J. Francis Ward. In 1949 an association was made with Donald Forbes, interior and furniture designer and a great many projects have since cleared the office.

McCarthy says and believes "architects are specialists in design and construction—not in building types for, once the problem has been stated and properly analysed, the only problem is the resulting design and construction."

His non-office activities include many civic efforts, and participation in A.I.A. on a local, state and national level.

McDONALD BROS., CONSTRUCTORS
ADD DESIGN-ENGINEERING DEPT.

Lloyd McDonald, partner of McDonald Brothers, Los Angeles construction firm, announces the addition of a design and engineering department which will be an integral part of their present construction

The new department is the most recent of a series of expansion moves by McDonald Brothers to keep pace with the industrial growth of the West.

Lloyd McDonald (right) partner McDonald Brothers: Construction firm discussing expansion plans on the new Design and Engineering Department with Russell D. Koons (center) and George S. Ballew.

Russell D. Koons, formerly with the Bechtel organization for eleven years, will head the new department. He has had more than sixteen years experience in engineering and construction of major projects, including oil refineries, shipyards, industrial and chemical plants.

George S. Ballew, formerly with Stone & Webster Engineering Corp., well known specialist in petroleum process design, will manage McDonald's service department for the petroleum industry.

CONGRESS APPROPRIATES FUNDS FOR ARMY ENGINEERS CIVIL WORKS

Congress appropriated some $421,686,600 for the Civil Works functions of the Corps of Engineers in Fiscal Year 1954, according to an announcement by Major General Samuel D. Sturgis, Jr., Chief of Engineers.

The funds, included in the Department of the Army Civil Functions Appropriation Bill signed by the President on July 27, 1953, are allocated to construction, maintenance, planning projects and survey reports in the Congressionally authorized food control and river and harbor improvement programs assigned to the Army Engineers.

Of the total appropriation for the year, the general construction program receives the major share, $276,770,000. Amounts have been specified for 81 individual construction projects in 35 states, as well as for three items in various states: emergency bank protection, snagging and clearing, and local protection projects. Construction in the

RAMUC MASONRY PAINT

years more protection

for less cost!

RAMUC Masonry Paint is a waterproof, natural rubber base coating that protects stucco, concrete and unlazed surfaces for years . . . average 2 to 5 years longer than other masonry paints. This maximum protection means lower painting cost. Does not crack, peel or chip. Is not affected by lime or moisture. Resists deterioration by heat and cold. Color bases are non-fading titanium pigments. RAMUC is easily cleaned . . . no streaks or dingsins. RAMUC Masonry Paint is available in nine pleasing, satin finish colors.

This beautiful apartment house at 1900 Valley Street, San Francisco, was painted in 1946 with Peach RAMUC Masonry Paint. Still in excellent condition, the paint job is good for years more of beauty and protection for the owners.

Write today for descriptive, specification details on RAMUC's outstanding protection that costs less.

27 SOUTH PARK • SAN FRANCISCO 7
amount of $13,500,000 is to be accomplished from surplus funds. The appropriation for advance engineering and design was $1,900,000, and the operation and maintenance allocation was $79,000,000.

Construction funds allocated by basins include: Columbia River Basin (including Coastal streams) $110,345,000; Gulf Coast and New Mexico and Texas streams, $26,301,000; Sacramento-San Joaquin River Basins, $16,000,000; and South Pacific Coastal Streams and Arizona and Utah streams, $13,350,000.

Among the large projects included were: The Dalles Lock and Dam in Oregon and Washington, $32,000,000; McNary Lock and Dam, Oregon and Washington, $26,350,000; Chief Joseph Dam, Washington, $23,350,000; Lookout Point Reservoir, Oregon, $18,000,000; Folsom Reservoir, California, $8,800,000; Albeni Falls Reservoir, Idaho, $6,840,000, and the Los Angeles County Drainage area of California, $6,200,000.

**APPOINTED ENGINEER FOR PANAMA LAMPS COMPANY**

Mandle J. Mierbach, E.E., has been appointed Engineer for Panama Lamps and Commercial Co., Inc. of San Francisco, according to an announcement by Guy de Leuze, president of the firm.

In his new work, Mierbach will direct an extensive lighting program for the marketing of fluorescent tube and incandescent lamps, residential fixtures, lustrous illuminated ceilings and other products distributed on the West Coast by Panama Lamps.

Mierbach has had sixteen years experience in industrial, commercial and military applications of electrical engineering and received additional training in post-graduate work at Harvard University and at Massachusetts Institute of Technology. He was a director of the California Society of Professional Engineers, Bay Area Chapter, and is a member of the American Institute of Electrical Engineers and the Illuminating Engineering Society.

**A.I.A. ACTIVITIES**

(From Page 27)

Annual Convention include: Public Relations, panel discussions with nationally prominent speakers, educational exhibits, tours of the area (including Tia Juana, Mexico), and many social functions.
SAN DIEGO CHAPTER

A motion picture sponsored by the La Jolla Camera Club featuring "The City", "Crises in Iran", and "Does It Matter What You Think" featured the regular September meeting. The program was arranged by Bob Mosher and Lloyd Ruocco.

Considerable attention was given to the October meeting of the California Council of Architects which will be held at the Hotel Coronado in Coronado, with the San Diego Chapter serving as the "host" group.

NORTHERN CALIFORNIA CHAPTER

Redevelopment of the San Francisco Civic Center Plan won a major test recently when the Board of Supervisors appointed a special committee to handle the problem. The project is being keenly watched with Chapter members headed by Donn Emmons, president, taking a very active part in conferences with City officials and members of the Planning Commission.

SOUTHERN CALIFORNIA CHAPTER

The September meeting was the annual joint outing of the architects with members of the Producers Council with the event being held at the Anoakia Estate in Baldwin. Horseshoes, baseball, swimming and other recreational activities featured the day’s outing. Fred Smith served as general chairman of the event.

OREGON STATE CHAPTER

As a good preliminary to a full fall and winter activity, members are urged to attend the Sun Valley Regional Convention on October 9-10-11.

WOODWORK INSTITUTE OF CALIFORNIA

The Manual of Millwork, released to architects early this year, has met with an enthusiastic response and many requests for additional information which the Technical Committee of the Institute is giving careful consideration.

Sherman S. Karns, Chairman of the Technical Committee reports that the initial portion of an "addendum" to the Manual in preparation and will soon be ready for distribution. It includes a 3" scale drawing of various stock windows and door frames. Full size sections of stock sash and door stickings will also be included. The material will cover details of special applications of frames and sash most frequently required in modern school and commercial construction.

Karns declared "The Woodwork Institute of California is endeavoring to make their Manual of Millwork the most complete reference in the millwork field, and welcomes suggestions from architects as to their further requirements."

This book represents an annotated, cross-indexed, and organized collection of 165 of the selected architectural details that have for many years been the most popular feature of Progressive Architecture.

The drawings are the work of Elmer Bennett, many years experience with leading Boston and New York architectural offices and free-lance illustrator to technical and consumer magazines, teacher, and for the past seven years on the staff of Progressive Architecture.

The book is organized for easy reference to two parts. First, a collection of details inherent to particular building types; Second, details inherent to many types of buildings. Introduction by Caleb Hornbostel, a practicing architect, teacher, and writer on architectural subjects. A philosophical introduction has been prepared by Richard J. Neutra.

Plastering Skill and Practice is written to initiate the novice and up-to-date the journeyman in the techniques, both new and old, of the plastering trade.

Methods recommended by the authors are those which have earned recognition as the best by virtue of two tests: 1) economy at time in labor, and 2) quality of the results. Likewise, trade terms vary among different sections of the country, but the basic practices are everywhere the same.

The book abounds in photographs and illustrations.

This book is an instrument of service prepared for the profession and contains a Technical Data Section—reference material on the design and specification of heating, ventilating, and air conditioning systems, based upon the "transactions," "investigations" of the Research Laboratory and cooperating institutions, and the practice of the members and friends of the Society; A Manufacturers' Catalog Data Section—containing essential and reliable information concerning modern equipment; and Complete Indexes to Technical and Catalog Data Sections.

It contains 1086 pages in the technical data section and 427 pages in the catalog data section. It is the 31st edition of The Guide.

NEW CATALOGUES AVAILABLE

Architects, Engineers, Contractors, Planning Commission members—the catalogues, folders, new building products material, etc., described below may be obtained by directing your request to the name and address given in each item.

Power Exhausters. A new Bulletin 53-B (AIA File #30-D-1) gives illustrations, drawings and charts on installation, types, and sizes of wall and roof exhausters. Includes typical specifications for and schedule of recommended air changes for auditoriums, banquet halls, boiler rooms, churches, kitchens, laboratories, and other industrial and commercial buildings.

Copies available by writing Dept. A&E, Jenn-Air Products Co., Inc., Architects & Builders Bldg., Indianapolis 4, Indiana.

Fire Hose Racks, cabinets, accessories. 1953 edition of catalog on fire protection equipment, including patented fire hose racks, spring clip nozzle holders, and accessories. Illustrated; charts give dimensions and hose capacities, hose reels, saddle racks, and cabinets. Copies of Bulletin 27F are available from Dept. A&E, The American Rubber Mfg. Co., 1145 Park Ave., Oakland 8, California and for the Powder-actuated fasteners. Complete applications manual for use with powder actuated fastening systems compiled from thousands of field reports, including many photographs and cutaway sketches to show precisely how powder actuated tools and fasteners are best employed in various installations in building, construction and maintenance fields as well as

ARCHITECT AND ENGINEER
marine, electrical, air conditioning, plumbing masonry and many other crafts. Lists specifications on more than 20 fixtures and accessories, drive pins and threaded studs which comprise the Ramset powder-actuated fastening system. Copies available, write Dept. A&E, Ramset Fasteners, Inc., 12117 Brea Road, Cleveland 11, Ohio.

Oil burners. New colored Catalog containing many illustrations of types and installations; charts showing types, features, and electrical characteristics. Specifications and capacities. A condensed, handy Catalog available by writing Dept. A&E, Ray Oil Burner Co., 401-499 Bernal Ave., San Francisco 12, Calif.

Boiler-Burner unit. A new catalog on oil, gas or oil and gas combination Boiler Burner unit; gives descriptive details; output rating chart; cutaway drawing indicating all basic component charts showing ratings, performance data and dimensions; and discussion of various elements in the burner system. Copies of this bulletin B-3133, AIA File No. 34-B, may be obtained by writing Dept. A&E, Iron Fireman Manufacturing Co., 3170 W. 108th St., Cleveland 11, Ohio.

Pre-Cast Uni-Bond Composition Sleepers. Material is now available on the subject of Pre-Cast Uni-Bond Composition Sleepers (AIA File No. 23-D) including history, specifications, photographs of installations, drawings and other detailed data. Copies available by writing Dept. A&E, LeRoy Olson Company, 3070 17th Street, San Francisco 10, Calif.

All purpose pump. Three color brochure illustrates details of construction with cross illustration of the 109 all-purpose Kenco, multipurpose sump pump and switch. Working principles of pump and switch operation are detailed in a series of drawings, showing each phase of operating control. An improved liquid level control switch for greater simplicity and longer life. Copies of Circular No. 12, obtainable by writing Dept. A&E, Kenco Inc., 1125 N. Ridge Road, Lorain, Ohio.

Baseboard radiators. A 12-page brochure describes and illustrates a new line of baseboard heaters. Complete information is furnished on the unique features, including uniform heating 50% by radiation and 50% by convection, three extra large water-ways holding 1.1 quarts of hot water per linear foot, and rugged cast steel construction. Details also included in “How To Figure The System” along with approved table of IRR capacities; typical baseboard layouts for different types of homes; typical piping layouts; roughing-in dimensions; and detailed, step-by-step instructions for installing baseboards for recessed or standard mounting. Copies available by writing Dept. A&E, Waterfilm Boilers, Inc., 36-40 New York Avenue, Jersey City 7, N. J.

Cook On Your Refrigerator. New Catalog containing numerous photographs, rough-in dimensions, and specifications of the General’s new “Budget Priced Refrigerators” which incorporates a condensing unit on the top of the refrigerator. Describes uses and various installation possibilities in the home, factory, hospital, office, apartment, and resorst. Copies are available by writing Dept. A&E, General Air Conditioning Corp., 4542 E. Dunham St., Los Angeles 23, Calif.

Luminous ceilings. New catalog (AIA File 31F290 and AIA 31F21) for Lighting and Equipment; and AIA File 30B1 for Acoustical) describes entirely new development in illumination and ceiling treatment to solve the problem of glare, noise and unsightly ceiling construction. Copies of catalog are available by writing Dept. A&E, Luminous Ceilings Inc., 2500 W. North Ave., Chicago 47, Ill.

Filing negatives and transparencies. Based on the premise that effective negative filing systems must not only provide for the secure storage of the negatives and transparencies but must also be arranged so that desired films can be readily found, a leaflet “Filing Negatives and Transparencies” outlines tested methods of classifying, identifying, and storing photographic negatives and sheet film transparencies. Contains 20 pages, liberally illustrated with photographs of all important points. Copies available by writing Dept. A&E, Sales Service Division, Eastman Kodak Co., Rochester 4, New York.

World’s smallest complete kitchen. If you are designing for building, remodeling, you will be interested in complete information and specifications on a complete kitchen unit that will save money and can be installed in a 5.4 sq. ft. space; comprises sink, burners, refrigerator, freezer and storage drawer in one compact unit. For complete data write DEPT-A, General Chief, 4536 E. Dunham St., Los Angeles 23, California.

September, 1953
they were to meet the requirements of the latest
types of aircraft.

‘The result is that while our aerodromes are rea-
sonably satisfactory, the building side is below our
requirements,’ said Mr. Hepburn.

(To be concluded next month)

LOS ANGELES ARCHITECT
ASSISTS NEW ORLEANS

Henry L. Wright, Los Angeles architect, has been
chosen by the New Orleans parish schools to act
as advisor and consultant on their new 20-year
building program, it has been announced.

Wright is president of the Southern California
Chapter of The American Institute of Architects,
and his firm of Kistner, Wright & Wright has
designed some of California’s most noted school
structures.

PAPER MANUFACTURING PLANT
(From Page 10)
of the owner, has designed the combination boiler-
incinerator, served by one stack, to successfully
utilize incinerator heat in the boiler. Complex pro-
cess piping and jacketed lines carried on an over-
head pipe structure span the 90 ft. distance be-
tween the Boiler House and Main Building. Two
10,000 gallon asphalt storage tanks are adjacent
to the boiler house.

Extensive lawn areas, ground cover, shrubbery
and trees as designed by Landscape Architects,
Osmundson and Staley, enhance the entrance
facade and public parking area.

The plant, now in production, is pronounced by
its owners as admirably fulfilling their functional,
appearance and economic requirements. It stands
as documentary evidence that the combined efforts
of Architects and Engineers can produce a hand-
some and economical industrial building.

Total construction cost, including all mechanical
work, process piping, site development work, and
landscaping .........................................$558,000
Total Floor Area .................................. 37,400 sq. ft.
Total Cubage ......................................598,600 cu. ft.
Building Cost per sq. ft. .......................$10.00 per sq. ft.
Building Cost per cu. ft. .......................$ 0.62 per cu. ft.
Structural Steel, 174 tons @ $318 per ton . $56,000
Structural Steel (pounds per sq. ft.) .......9.31 lbs. per sq. ft.
Structural Steel (pounds per cu. ft.) ......9.58 lbs. per cu. ft.
Total Concrete .................................... 1350 cu. yds.
Miscellaneous Steel (25 tons @$5.00 per ton) $15,000
Miscellaneous Steel (Lbs. per sq. ft.) ........1.34 lbs. per sq. ft.

DAMPPROOFING and Waterpoofing:
Two-cost work, $9.00 per square. Membrane waterproofing—4 layers of saturated felt, $10.00 per square.
Hot coating work, $5.00 per square.
Medallion Waterproofing, $3.50 per sq. ft. San Francisco Wharehouse.
Trowel concrete waterproofing, 60c a cubic yd. and up.

ELECTRIC WIRING—$15 to $20 per outlet for conduit work (including switches). Knob and tube average $6.00 per outlet.

ELEVATORS:
Prices vary according to capacity, speed and type. Consult elevator companies.
Average cost of installing a slow speed automatic passenger elevator in small four story apartment building, including entrance doors, about $5,900.00.

EXCAVATION:
Sand, $1.00 per cubic yard. Trucks, $30 to $45 per day.
Above figures are an average without water.
Steam shovel work in large quantities, less hard material, such as rock, will considerably more.

FIRE ESCAPES:
Ten-foot galvanized iron balcony, with steps, $225 installed in new buildings; $300 on old buildings.

FLOORS:
Asphalt Tile, 1/8 in. gauge 18c to 35c per sq. ft.
Composition Floors, such as Magnesite, 40c to 75c per sq. ft.
Linoleum, standard gauge, sq. yd.,...$2.75
Marlpatine—$1.50 per sq. yd.
Battleship Linoleum—$2.00 sq. yd.
Terazo Floors—$2.00 per sq. ft.
Terazo Steps—$2.50 per lin. ft.

Mastic Wear Coat—according to type—20c to 35c.

Hardwood Flooring—Oak Flooring—1 & 2—$1.55. Prefinished Oak Flooring—Standard $399.00. Prefinished Maple Flooring—Natural $399.00.

GLASS:
Single Strength Window Glass...$0.30 per sq. ft.
Double Strength Window Glass...$0.45 per sq. ft.
Plate Glass, 1/4 polished to 7/16...$1.60 per sq. ft.
In. Obscure Glass...$0.44 per sq. ft.

HEATING:
Furnaces—Gas Fired
Floor Furnaces, 25,000 BTU...$70.50
35,000 BTU...77.00
45,000 BTU...90.50
Automatic Controls, Add...39.00

**CONSTRUCTION CONTRACTS AWARDED AND MISCELLANEOUS PERSONNEL DATA**

**TWO ELEMENTARY SCHOOLS.** Rialto, San Bernardino county. Rialto Elementary School District, Rialto, owner. One school will contain 8-classrooms, 2-kindergartens, toilet facilities and administration unit; frame and stucco with red clay tile roof, asphalt tile floors, area 11,956 sq. ft., walkboards, metal toilet partitions, metal sash, radiant heating, insulation covered walls, incandescent lighting, plumbing and electrical work. Other is exact duplicate, $307,950. ARCHITECT: Harold Gimeno, Santa Ana. GENERAL CONTRACTOR: L. P. Scher, Redlands.

**FRATERNITY HOUSE ADDN.** Palo Alto, Sigma Nu Fraternity, Stanford Campus, Palo Alto, owner. Two-story frame and stucco fraternity house addition to provide for kitchen and additional dormitory space, shingle exterior, $11,900. ARCHITECT: Remmers & Overmyer, San Francisco. GENERAL CONTRACTOR: M. C. Ingraham, Menlo Park.

**HATCHERY ADDN.** Anaheim, Orange county. Demler Hatsherry, Anaheim, owner. One-story, frame and stucco addition, gravel roof, slab floors, metal sash, slab doors, electrical work to provide for six electrical incubators, and concrete work. ARCHITECT: Everett Lynd Child, Fullerton.

**LOW RENT HOUSING.** Richmond, Contra Costa County, Richmond Housing Authority, Richmond, owner. Comprises 300 1 and 2-story frame and stucco units to be built in the Easter Hill Village project, $1,952,766. Architect: And Engineer.
ministration offices, 2-science rooms, home making unit, library, arts and crafts, art room, music room, cafeteria, combination gymnasium and auditorium, shop building, toilet rooms, reinforced concrete, wood roof, $1,378,000. ARCHITECT: J. Clarence Feliciano, Santa Rosa. GENERAL CONTRACTOR: Rapp Const. Co., Santa Rosa.

GENERAL CONTRACTOR: H. Schlinkman, Fields Landing.

ARCHITECT SELECTED

The architectural firm of Warnecke & Warnecke and the architectural firm of Corlett & Anderson, both of Oakland, have been selected by the Port of Oakland Commission to draft plans and specifications for the construction of a new passenger terminal building at the Oakland Municipal Airport.

It is estimated the cost of the new structure will be $3,500,000.

ARCHITECT

WINS ALASKA ARMY AWARD

The S. S. Mullen Company of Seattle were low bidders on proposed construction at the Eielson Air Force Base in Alaska with a bid of $395,110. Government estimates on the job were $373,365.

The work comprises construction of a two-story communications center.

SAN FRANCISCO FIRM BUILDS PLANT IN EAST

The Western Condensing Company of San Francisco has entered into a contract with the Luran Engineering Company of Bethlehem, Pa., for the construction of a 25,600 sq. ft. standardized steel warehouse in Appleton, Wisconsin.

The new facilities will serve as a mid-western sales and distribution center for the dairy by-products manufactured from whey.

GAR WOOD NAMES MARK L. SHEPARD

Mark L. Shepard has been named manager of the Richmond (California) Division of Gar Wood Industries, according to an announcement by E. F. Fisher, president.

He succeeds J. B. Sneed who has been transferred to the Wayne, Michigan, plant.

APPOINTED DISTRIBUTOR

A. H. Scheffer, sales manager of the Chambers Company of Shelbyville, Ind., announces appointment of the Quality Television Corp., Los Angeles, as distributor for the Chambers console ranges and build-in equipment for the Los Angeles area.

Jack N. Smith is president of the Los Angeles organization.

APARTMENT BLDG.

West Los Angeles. Zundel Katz, Los Angeles, owner. 2-story, 15-family, 52 room, frame and stucco, apartment bldg.; composition roof, oak linooleum and ceramic tile floors, interior plaster, insulation, individual gas water heaters, forced air heating units, tile baths and stall showers, electric bathroom heaters, stone veneer, sliding wardrobe doors, fireplace, garbage disposal units, built-in breakfast nooks, dishwashers, ceramic tile bathroom slabs, steel components, sliding plate glass doors, $110,000. ARCHITECT: Herman C. Light, Los Angeles. CONTRACTORS: By owner.

CHURCH

IN THE NEWS

PORCELAIN ENAMEL INDUSTRY CONFERENCE

The uses of porcelain enamel as a large scale structural material will be the subject of a twoday Conference, November 12-13 at the National Academy of Sciences, Washington, D. C. The conference is under the sponsorship of the Porcelain Enamel Institute and the Academy’s Research Advisory Board.

Four major sessions are scheduled and will consider 1) analysis of chemical and physical properties of porcelain enamel, 2) architectural applications of the material, 3) engineering properties and methods of sealing and insulating, and 4) its uses in combination with other materials.

Leading architects, contractors, and industrial leaders will be represented at the meeting and take part in all programs.

FIRE HOUSE FOR RENO

The City of Reno, Nevada, will build a new fire house, according to plans announced by the City.

The architectural firm of Ferris & Erskine, Reno, will design the plans. Estimated cost of the construction will be $50,000.

NEW HOSPITAL ADDITION

The Greater Bakersfield Memorial Hospital Association has announced plans for the construction of a new 103-bed hospital building in Bakersfield.

Plans for the building which will cost an estimated $2,100,000 are being prepared by the architectural firm of Stone & Mulloy and S. P. Morraccini of San Francisco, and comprise a 2-story reinforced concrete structure of 58,000 sq. ft.

BIG DEVELOPMENT FOR BURLINGAME

The Calkins Realty Company of Los Angeles has announced plans for the immediate development of the old Mills property in Burlingame, California, into a combined residential, commercial, and industrial project.

Plans call for the construction of 2,500 residences of all types, a shopping center, and numerous facilities.

Plans are being prepared by Earl P. Wilsey Company, Civil Engineer, and contract for construction has been awarded to the Trousdale Construction Company of Los Angeles.

Built-in telephone facilities will make a hit with your clients

Your clients will appreciate your thoughtfulness if you include built-in telephone facilities in your building plans. Concealed conduit for telephone wiring and conveniently located telephone outlets allow them to change the position of their telephone without detracting from the beauty of their home with exposed wiring.

Just call Pacific Telephone’s free Architects and Builders service. We’ll be glad to help you plan for better living tomorrow in the homes you are building today.

Put built-in telephone facilities in your plans

Pacific Telephone
MEDICAL BUILDING

Architects Riley & Levinas of Whittier are completing working drawings for the construction of a 1-story, reinforced brick medical building to be built in Whittier for Dr. William F. Kroener. The building will contain 4500 sq. ft. of floor space, built-up composition roofing, steel sash, concrete slab floor, and air conditioning.

RESEARCH ENGINEERING DIVISION IS FORMED

Henry P. Sanders, engineering designer, has been appointed Director of the Research Engineering Division of Steelbilt, Inc., according to an announcement by W. C. Watkins, president of Steelbilt.

Product improvement, new product development and supervision of laboratory testing facilities will be under the direction of Sanders.

NOVESKI APPOINTED SALES MANAGER

Joseph L. Noveski has been appointed National Sales Manager for the Sunbeam Lighting Company of Los Angeles, according to Philip Freeman, Sunbeam president.

Noveski has a broad background in the electrical supply and lighting equipment field being formerly District Supply Sales Manager for the General Electric Supply Company in the Los Angeles area, including Tucson and Phoenix, Arizona.

NEW MEXICO ADOPTS HIGHWAY BUDGET

The New Mexico State Highway Department has approved a 1953-54 highway budget of $32,165,000, which is slightly less than the $32,792,600 set up by the Arizona State Highway Department for the same period.

Major expenditures include: Federal construction, $12,519,583; State construction (municipal arterial, $1,600,000); rights of way and secondary roads, $3,000,444; Road maintenance, $5,433,720; Engineering, $2,716,500; General administration, $461,625; Planning and research, $244,125; De- benture principal, $2,003,000; and Debenture interest, $276,000.

ARCHITECT SELECTED

The architectural firm of Swartz & Hyberg of Fresno, has been selected by the City of Hanford Trustees to draft plans and specifications for the construction of a new Fire House building.

Plans call for a 1-story, 16x44 ft. addition to present firehouse facilities.

APPOINTED WEST COAST MANAGER

D. L. Bobon has been named west coast manager of the DeVilbiss Company and will assume complete charge of all west coast operations, according to an announcement by Henry M. Kidd, Vice president and sales manager of the company's spray painting equipment division.

Bobon fills the vacancy created by the retirement of Charles E. Fesler who has been with the company for 22 years.

Other executive changes announced included J. W. Dayton to west coast district sales supervisor and L. C. Buckmaster, Santa Clara branch supervisor.

LAS VEGAS HOTEL IMPROVEMENTS

Architect Arthur Froelich of Los Angeles, is completing plans for the construction of a new wing and breakfast room fronting on the swimming pool, and relocating of the Casino, for the Hotel Last Frontier in Las Vegas, Nevada.

The new wing will have accommodations for 100 guests and will be styled in a Western theme. Cost of the project is estimated at $1,500,000.

CHESTER W. BIRCH NAMED CONTROLLER

Chester W. Birch, assistant controller, has been elected controller of the L. J. Muller Furniture Company, Milwaukee, Wis., succeeding Harry Wirth who passed away on June 30.

Birch is chairman of the Milwaukee Chapter of the Wisconsin Society of Certified Public Accountants, and a member of the American Institute of Accountants.

COUNTY FIRE STATION

The Ventura county board of supervisors approved purchase of property in Meiners Oaks, near Ojai, to be used as the site for a new County Fire Station.

JOINS STAFF OF WELTON BECKET

Jack B. Beardwood, Portuguese Bend,
California, and formerly with the U.S. Department of Health, Education and Welfare, Washington, D.C., has been appointed Administrative Associate of the architectural firm of Welton Becket & Associates of Los Angeles, according to an announcement by Welton Becket, F.A.I.A., head of the firm.

Prior to joining the Palo Verdes Corp., in 1949, Beardwood was for 15 years active in newspaper and magazine work.

**TERMINAL BLOCKS**

**WITH HINGED COVER**

A new heavy duty moulded terminal block with non-separable hinged cover which provides effective added protection to control and circuit wiring has just been introduced.

Manufactured by the Buchanan Electrical Products Corp. of Hillside, New Jersey, the blocks are available in either screw or solderless type contacts, and in 4, 6, 8, or 12 circuit sizes with either plain or numbered marking strips. Conservatively rated at 750 volts, 35 amperes (screw type) and 750 volts, 50 amperes for the solderless type.

**SITE PURCHASED FOR SAFEWAY**

The Bramwell Construction Company of Oakland, a division of the Safeway Stores, has acquired a site near the City of Santa Clara, Winchester Road and Stevens Creek, and will build a new Safeway Store.

**ARCHITECT SELECTED**

The architectural firm of Coates & Metz, A.I.A., Fresno, has been selected by the Fresno County Board of Supervisors to draft plans and specifications for the construction of a Hall of Records addition to the County Court House.

The proposed construction will be the addition of a 4th floor to the present 3-story building. Estimated cost will be $325,000.

**NEWSPAPER BUILDING**

Architect Wm. Hasrip of Fresno is completing plans for the construction of a new newspaper material manufacturing building in Fresno for the Fresno Guide.

The new building will contain 10,000 sq. ft. of floor space; 1-story and mezzanine; reinforced brick, concrete floor, wood roof with composition roofing.

**REPRESENTATIVE IS NAMED**

Donald Colburn has been appointed district sales manager of Alaynile Company of America for Southern California and Arizona, according to W. D. O'Morrow, sales manager of the San Diego plastic building material manufacturing firm.

Colburn will maintain offices in Hollywood, California. He was formerly associated with the Owens-Corning Fiberglas Corp. in an executive sales capacity.

STRANGER THAN FICTION

Somewhere in the Aesops Fables’ is a story about the left-handed man who didn’t know what his right hand was doing, or visa versa.

Whether the man was right or left handed is probably immaterial, but there is an element of truth in the inference that the constructive effort of one hand may be nullified by the destructive effort of the other hand, and this situation may often apply to business institutions and professional organizations of today.

The untiring effort of a far sighted business executive to expand the scope of his firm’s activities may be completely wiped out by the attitude of a few employees; the devotion of an individual professional man to build public confidence in the profession he represents, may be nullified by the actions of another member of the same profession. It’s not an exception to the rule that such a thing occurs, in too many instances it’s the rule.

* * *

Municipal taxes in the nation’s 41 cities of 250,000 or more population averaged $61 per person. In the District of Columbia where Congress is the taxing body, the average was $128.61—highest tax in the nation.

* * *

A GOOD NEIGHBOR

There is a way to be a good neighbor . . . a way to take care of the many who need all the help you can give.

The very young and the in-betweens, the troubled families, the older people, the ill and the handicapped, the men and women engaged in our national defense . . . their health and welfare is first concern of the voluntary services that unite each fall in a campaign for funds to carry on their vital work.

Red Feather drives and united community campaigns in cities and towns all over the country will come to you this month for your contribution. When you give to your town’s united health and welfare campaign you give to many causes . . . you give to many people in many ways.

GIVE GLADLY . . . THE UNITED WAY

* * *

FIRST YEAR OF CONSTRUCTION FREEDOM

A year ago construction was carried on in a controlled market. Materials were allocated, pri-

vate building was closely restricted, material prices were controlled, credit was controlled, rent was controlled, and wages were controlled.

Although the mounting materials production assured the end of controls sometime during 1953, government agencies—even late in 1952—were stating that this could not safely take place before the second half of the year.

The Eisenhower administration proceeded to dismantle the controls program. Mortgage credit controls were removed during the spring; materials controls were out by March; price and wage controls followed soon after; Federal rent controls went out in July, except in a few “critical areas.”

So! Let’s take a look at what happened under a free industry. The total dollar volume of construction activity during the first free year will exceed any year on record, thus continuing to an unexpected peak a spectacular eight-year rise, since the end of World War II.

The Department of Commerce estimates a year-end volume of more than $34.6-billion of new construction activity and is conclusive proof that the Free Enterprise system is the Best System.

* * *

PAY-AS-YOU-GO HIGHWAYS

A number of Eastern areas have found that a partial answer to America’s $50-billion street and highway problem is the building of toll roads.

Perhaps, if we are to finance properly a ten year program for an adequate highway system, the so-called “pay-as-you-go” program will develop into a vital, expanded role, in the American transportation program.

Exactly how large a part toll roads will play in solving the nation’s major highway needs is still unknown, and many well qualified agencies and organizations are making extensive studies to determine the best approach to the fullest development of toll road possibilities.

Reactions of users and planners leave little doubt about the growing popularity of the idea. Mounting traffic figures and receipts on supertype, toll highways now in existence tell their own story. At least sixteen states have passed legislation for new or expanded toll highways in the past year, and new toll road work now under construction has been unofficially estimated at 1,000 miles, to cost some $1.5-billion.

There are undoubtedly a number of situations in the West where toll roads could be constructed at an actual saving to motorists in general.

OCTOBER, 1953
NEWS and COMMENT ON ART

SAN FRANCISCO MUSEUM
OF ART

The San Francisco Museum of Art, War Memorial Building, Civic Center, is featuring exhibitions of Norwegian Serigraphs; a Design in Industry; Paintings by Alice Rahon Fitzgerald; and the 17th Annual Water Color Exhibition of the San Francisco Art Association during the month of October.

The regular Lecture Tours and Workshop activities are also included in the month’s schedule of activities and events.

CALIFORNIA PALACE OF THE
LEGION OF HONOR

Located in Lincoln Park, San Francisco, under the direction of Thomas Carr Howe, Jr., a special group of exhibitions have been scheduled for October including an Exhibition of Japanese Folk and Provincial Art (from the Honolulu Academy); Works of four contemporary artists, Jeremy Anderson, Ernest Briggs, Hassel Smith and James Weeks; Chinese Export Porcelain; Paintings by Helen Dunham; and Paintings and Watercolors from the Collection of J. Jerome Hill. Educational activities include painting classes, motion pictures, Organ recitals and television programs.

M. H. deYOUNG
MEMORIAL MUSEUM

The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, under the direction of Walter Heil, is featuring an Art Exhibit of the South Pacific Islands during October. It is an important and comprehensive show of work assembled from Museums and Private Collections. Other special Exhibitions include Contemporary India Arts and Crafts; the 14th Annual Exhibit of the Society of Western Artists; and a showing of Contemporary Prints from France.
Porcelain ENAMEL VENEER

Why and how Architectural Porcelain Enamel Veneer was used in recreating Bask's Department Store in Bakersfield, California... severely damaged by earthquake, August 22, 1952... is best told in the Architect's own words.

"... the simplest and most effective treatment of the building face proved to be a continuous new skin broken only by new windows... only the very minimum of weight could be added to the old foundations, i.e., the use of lightweight materials was mandatory. Almost 5500 square feet of Porcelain Enamel was used on the principal face and corner of the building, both as a background for the signs and as a means of establishing the scale of the building..."

Ease of fabrication, lightness and lifetime retention of color makes ARCHITECTURAL PORCELAIN ENAMEL VENEER the one facing material that you can specify with complete confidence, always.

*From Notes by C. M. Deasy, A.I.A., Architect
Mr. A. Hepburn, Director of Airports for the Australian Department of Civil Aviation, in discussing the engineered-planned development of the Commonwealth's commercial airports, to properly provide for present and future use of jet propelled aircraft, declares that "in the near future, although the landing areas will continue to be improved, more money will go into new buildings. The type of building in the passenger terminal area will be designed to meet the higher traffic density and the special requirements of jet aircraft. It will also remove such disabilities as the walk from terminal buildings to the aircraft through bad weather and sorting of luggage in the rain.

"Such a building calls for original design. No structure has yet been erected to meet all the problems involved, and no such designs have been made public."

More airport buildings have been built in the United States since the war than in any other country, but the major airport designs were not applicable to Australian conditions, Mr. Hepburn asserted. In the American designs the solution of a traffic problem had to take second place to the need for raising revenue by increasing the number of "concessions" at an airport. Passengers had to be routed through the concession area.

"We believe that an airport terminal is essen..." (See Page 24)
In selecting materials for Palo Alto’s new City Hall, low cost of maintenance received utmost consideration, along with beauty, adaptability and permanence. Colorful Clay Brick supplied the answer...structural strength plus handsome appearance that will never require protection or embellishment. Thus Clay Brick, easy on the eyes and easy on the pocketbook, scores another achievement—for Architect Nichols, Palo Alto city fathers and the taxpayers.

Kenneth B. Clark and Lawrence A. Enersen, partners in the architectural firm of Clark and Enersen, Lincoln, Nebraska, were winners of first place and a $1000 award in the Nebraska competition for the best new designs for small concrete masonry homes.

The award was announced at a quarterly meeting of the Nebraska Architects Association, chapter of The American Institute of Architects, which sponsored the competition with the Nebraska Concrete Masonry Association the donor.

A second place $250 award was given to a design submitted by Sidney W. Campbell and Reginald E. Davies, associated with the firm of Unthank and Unthank of Lincoln.

Ten $50 Awards of Merit were given to designs submitted by Alex Weinstein of Omaha; Clyde Bourgeois of Omaha; Mrs. Blanche Plunkett of Hastings; Ed C. Gross of Lincoln; Burkett E. Graf of Lincoln; John H. Aylor of Omaha; Woodrow Hull of Lincoln; James W. Nicas of Omaha; James
Within twenty-four hours after the big earthquake of 1952 that disrupted communication, transportation and the commercial activity of the lower San Joaquin Valley in California, the largest city to be effected, Bakersfield, began to dig out from under the tons of rubble that littered the city. Within a week the streets were cleared, dangerous structures evacuated and the city began to face the task of rebuilding.

Among major buildings seriously damaged was the four story building of Brock's Department Store. With the same kind of ingenuity and energy that had made this the largest department store in the San Joaquin Valley, the entire department store operation was transferred to a huge circus tent until new quarters could be prepared.

Like many of the older reinforced concrete buildings in Bakersfield, damage to the Brock building was the result of very low strength concrete and lack of provision for seismic stresses. A painstaking study of the structure by Structural Engineer William T. Wheeler indicated that rehabilitation was possible and economically feasible by transferring part of the load from the low strength concrete to new very high strength gunite sections added to the beams and columns.

New gunite panels in certain of the old window openings provided the required resistance to seis-
mic forces. It should be said here that a great part of the reconstruction program in Bakersfield could not have been achieved without gunite. Probably there is more gunite per square block in Bakersfield than any other city in the world and it is largely responsible for the amazing way the city has re-built since the disastrous shake.

Simply reinforcing the old building did not fit in with the Bakersfield determination to build a better city which the Brock executives thoroughly endorsed. A thorough face-lifting was also ordered. Having built a new and modern Men’s Store beside the Department Store within the past five years, the problem was to bring the whole

FORMER LARGE WINDOW AREAS FILLED WITH GUNITE . . . Porcelain Enamel Veneer Panels Being Installed To Form Continuous Outer Cover.
Initials of the store owner Milton Brock, "MB," are used to form interesting design on exterior of the building.

Flood lighted at night presents an unusually attractive display.
block long structure into a unified design.

Due to the amount of structural reinforcing required and the number of window panels filled in with gunite, the simplest and most effective treatment of the building face proved to be a continuous new skin broken only by new windows at the fitting rooms and executive office areas.

The simplicity of this treatment on so large an area posed a problem of scale. For this reason two materials were used, cement plaster and porcelain veneer. Both were chosen because the weight factor was critical. Only the very minimum of weight could be added to the old foundations so the use of light weight materials was mandatory.

Almost fifty-five hundred square feet of porcelain enamel was used on the principal face and corner of the building, both as a background for the signs and as a means of establishing the scale of the building. Large panels were used, three foot by four feet, with joints slightly emphasized. A bold spatter was applied over the base color of the panels to insure a surface quality that would read as porcelain enamel when seen at a distance. Over the regular grid of the panel joints another pattern of surface decoration was applied on alternate groups of panels in the form of an abstract set of initials.

Extending the Mens' Store marquee all around the Department Store, providing new show windows and a new face for the old building carefully coordinated with a structural rehabilitation have transformed this badly damaged building into a safe and thoroughly modern structure.

EARTHQUAKE TESTS TO DETERMINE BUILDING ACCELERATIONS PRODUCED BY STRONG GROUND MOTIONS

By DR. GEORGE W. HOUSNER*

Earthquake effect full scale tests to determine the building accelerations produced by strong ground motion, correlated with observations made from the 1940 El Centro (California) earthquake, and the recent Arvin-Tehachapi earthquake, have been made by the California Institute of Technology. The material herewith is confined to the tests and their results without venturing into the broad field of proper methods and factors for use in the design of earthquake-resistant structures.

Opportunity for the first test came with a decision to tear down a moderate sized reinforced concrete building in Los Angeles. This 40 foot by 125 foot structure had been designed with one row of interior columns and monolithic exterior walls and columns prior to realization of the importance of design for lateral forces other than wind. However the openings in the exterior walls were few in number, and nearly symmetrical.

The United States Coast and Geodetic Survey contributed many instruments for use in the tests as well as a rather unique "shaking" machine. Three wheels, only two of which turned in the same direction, were mounted on a frame and bolted to the fourth floor of the building. Eccentric weights were then mounted on these wheels such that an unbalanced horizontal force of 5,000 pounds could be applied with varying periods of vibration in a crosswise direction of the building, thus causing resistance to come primarily from the end walls.

The machine was deliberately designed so that only negligible unbalanced vertical forces were applied, for study has shown that the primary damage to structures in earthquakes occurs as the result of horizontal forces.

To estimate the amount of stress applied to the building, the natural periods of the building were first investigated. Large amplitudes of vibration

*EDITOR'S NOTE: Dr. Housner is Professor of Civil Engineering and Applied Mechanics at the California Institute of Technology, and as an authority on engineering seismology, presented this material to members of the Structural Engineers Association of Southern California at a recent meeting.
were found at periods of 0.2 seconds, and of 0.4 seconds. With the shorter period, overall displacements of the magnitude of 0.10 inches were measured at the roof, corresponding to an acceleration of 3% "g", where "g" is the acceleration of a freely falling body under gravitational force.

The longer period demonstrated another interesting characteristic of buildings—that of torsion, or rotation of the floors. The machine had been placed off the center of the building to develop this motion, and accelerations of 4% "g" were measured. The machine thus produced motions in the building analogous to those of a small earthquake.

Opportunity for the second test came when the Minnesota Mining and Manufacturing Company planned to facilitate its operations by blasting a hillside near its Corona, California plant. Tunnels were driven up to 200 feet into the hill and filled with explosives at a location only 1,000 feet from the building selected for analysis during the blast.

It may be noted that such opportunities to obtain information on the actual motion of a structure are very helpful in determining the complex action of structures under lateral forces. The difficulties of trying to reconstruct the forces and motions causing the damage that is so often seen are obvious.

The three year old test structure consisted primarily of a sub-basement, a structural steel frame with a 6 inch concrete slab about 45 feet above the first floor, and 4 WF10 "X" bracing as the only resisting elements to lateral forces. The light super-structure and other characteristics of the building were such as to be negligible in comparison with the 200,000 pound weight of the elevated slab, and hence made the structure well suited to analysis in an effort to interpret the test results.

Strong ground motion of about 1 second duration, with 5 reversals, was measured in the sub-basement, and a maximum acceleration of 8% "g" was noted. During this period the amplitudes of motion in the elevated slab built up through 10 reversals in about 2½ seconds, with a maximum of 11% "g" being reached somewhat before the maximum ground motion.

For comparative purposes it may be noted that many buildings have been designed on the basis of a lateral force of about 10% "g". However, the duration of the blast was only 1 second whereas most earthquakes have strong ground motions lasting 10 to 15 seconds or longer.

Computations to determine the particular properties of the building, particularly the damping characteristics, were made, and from these, estimates of the motion of this building under actual earthquakes are possible. For example, with the 1940 El Centro earthquake, maximum ground accelerations of 30% "g" were found with a 25 second duration of strong ground motion, and would probably have resulted in an acceleration of 65% "g" on the elevated slab, if the structure would have taken these loads. Similarly the Arvin-Tehachapi earthquake with an 18% "g" ground acceleration might have produced 30% "g" in the elevated slab. This seems reasonable in view of the 11% "g" recorded in the slab under the effect of explosive charges located 1,000 feet from the building.

(See Page 40)

THE INSULATION OF UNDERGROUND STEAM LINES

By GRANT AUSTIN
Mechanical Engineer
Mgr. Underground Insulation Dept.
Western Asbestos Co.

Considering the general subject, "THERMAL INSULATION", it is probable that the specific field of underground installation is the most controversial. The inherent advantages of underground steam distribution versus overhead systems appear obvious. The greater problems involved are equally obvious.

Readily available in the market are numerous well designed and highly efficient thermal insulation materials, but such attributes in themselves do not necessarily insure satisfactory performance in underground installations.

In general, there are three types of systems available, all of which have mature experience records and can be described as follows:

1. The Split Tile Conduit.
2. The Pre-Sealed Conduit.
3. The Monolithic Conduit.

Underground pipe insulation systems must be designed to be adaptable to conditions often completely unknown until trenches have been opened. They must be designed to withstand conditions more destructive than installations of other types and be able to deliver year after year predictable efficiency and performance, with little or no maintenance expense.

Insulation designed for underground steam distribution systems must embody the greatest possible degree, at least seven prime requirements. Not necessarily listed in the order of importance with the exception of requirement No. 1, they are as follows:

1. High in dielectric strength and as completely free from dissimilar metals in contact.
ALTERATION OF
BARNARD MOTORS, INC.
COMPLETE AUTOMOBILE AGENCY
PORTLAND, OREGON

MORGAN H. HARTFORD, A.I.A. ARCHITECT

PARKER-JOHNSON COMPANY
GENERAL CONTRACTOR

OCTOBER, 1953
A four story reinforced concrete building 115' x 121', built in 1911, located on an important intersection in Portland, Oregon, serves as an automotive distributing and display center and is known as Barnard Motors, Inc., Cadillac-Oldsmobile Agency.

The owners desired modernization of the structure and improved display for new cars. They stipulated that during the construction period, the premises must be maintained open for business as usual.

Consideration was given to various facing materials and structural glass was chosen because of relative light weight, minimum setting thickness, non fading color and permanence of polished surfaces and relative economy of application.

The entire concrete building was dressed down by removal of old fashioned belt courses, dentils, window trim and other outdated architectural embellishments. Cornice was streamlined and vaulted windows were squared off. Wood trim and old fashioned transom sash and wood entrances were removed.

New modern entrances and new full height plate glass display windows set in aluminum trim were installed. Terrazo steps with safety treads were installed at entrances.

Structural glass surfacing was accomplished on the three upper stories by anchoring aluminum angles to black coated concrete. Structural glass is held in place by mastic and the aluminum angles support the vertical weight.

On the first story, vertical weight of structural glass is supported by concealed clip angles and the ashlers are held in place by mastic. The upper stories of the building were faced with polished Cactus Green and the first story with polished Jade Green. The coping and belt course are covered with moulded aluminum trim. An ornamental aluminum pipe rail is mounted on the coping. Aluminum ribbon type letters are used across the face of building for the company name.

Existing wood windows of upper stories were painted green to match the color of first story structural glass. All neon signs were removed, reconditioned and painted two shades of green to harmonize with the two tones of green structural glass facing. The two shades of green selected approximate the official Cadillac Agency colors.

Steel pipe scaffolding was used for dressing the building down and for application of facing.

The Customer Service Department of Barnard Motors is located in a one story concrete 100' x 110' building built about 1920. The owners desired to modernize Customer and Employee's fa-
CUSTOMER SERVICE DEPARTMENT—Before alterations (top view) and the illustration below clearly shows architect's modernization of the office and customer service area as well as facilities for minor mechanical adjustments.

Photos by Architect Morgan H. Hartford
facilities in this Department and stipulated that business must go on as usual during alterations.

The alterations proceeded as outlined. Skylights were removed and decked over. Trusses were repaired and stiffened. A new roof was installed complete with necessary sheet metal work. A system of catwalks was installed connecting to roof deck hatchways. Next a system of wire and rod hangers was installed to support a metal channel grid system to which was hung a metal perforated insulated ceiling pan, painted white, known as Acoustisteel. Upon this surface was mounted the illumination system comprised of louvered fluorescent fixtures.

Temporary offices were built at one end of building and used during construction of new facilities. A new overhead door with pedestrian pass was installed at entrance controlled by electric eye operators.

New Offices, Rest Rooms, Waiting Rooms were constructed and finished in white birch plywood. Asphalt tile floors were installed. Heating system was improved. New signs were added on exterior of building, which was repainted in light green with dark green trim.

Interior of main Service Department area received dark green ceramic tile wainscot with new plaster wall above painted light green. Upon completion of new offices, the temporary offices were removed and the renovation was completed.
The new 100 x 100 one-story reinforced concrete combination sales office and warehouse of Aluminum Lock Shingle Corp. is a 10,000 square foot structure, together with fenced parking facilities, occupying a full city block at S. E. 7th and Powell Blvd., Portland, Oregon, with fronting on an important traffic arterial.

The building is of modern architectural design and provides offices for General Business, Sales, Shipping and Administration as well as expansive warehouse space with direct trucking facilities. Overhead truck doors are electrically operated. The plan features a combination walk and drive-in entrance covered by an illuminated canopy, which leads directly to a trim free standing all glass and aluminum doorway connecting to a spacious reception lobby from which General Offices and Display Rooms can be visited. A handsome natural Birch curved counter with red and black plastic surface extends full width of Reception Area to receive visitors. The Reception Area is flanked by massive piers faced in rich red structural glass.

All ceilings are acoustical fibre board. Floors are asphalt tile with full carpeting in President’s Office and Conference Room. Walls are painted plaster toned in pastel shades of gray-green and yellow and doors are natural Birch. Textured glass is used in Sales Office partitions.

Display Room ceiling is louvered aluminum.
PRESIDENT'S OFFICE—Large windows in circular form give light and feeling of spaciousness; acoustical tile ceiling, all modern installations for heating, cooling, ventilating. Top view.

ILLUSTRATION below is a view of the Display Room.
aggerate with fluorescent lighting to provide the most even fall of light upon displays. Walls are to be decorated with murals featuring the use of the firm's Aluminum Lock Shingles.

The President's Office has a continuous curved window across two sides of the room. Walls are finished with natural matched Walnut Flexwood. Soft green carpeting extends from wall to wall. Ceiling is Acoustical Tile, windows are covered with aluminum venetian blinds and soft green draperies. Office furnishings are walnut leather and aluminum.

The exterior surface of building is waterproof stucco painted white with black structural glass trim. Green heat absorbing glass is used in office windows. Windows and Railings are aluminum. A protective marquee leads from parking area across front window display to Main Entrance. Parking area and building are extensively landscaped and floodlighted.

A floodlighted four faced sign tower on the roof 50' wide and 60' high, advertises the Company's Products, as illustrated in the Architect's perspective on page 20.

Both Incandescent and Fluorescent Lighting recessed and surface types have been used throughout the building. A heating system composed of an oil fired hot water boiler circulating forced conditioned warm air through overhead anemostats and underground air returns, heats the building. Unit heaters are used in Warehouse. Auxiliary thermostatically controlled electric heat supplements the general system in Display Room and Lobby.

NIGHT VIEW of distinctive Entrance—use of large glass plate and overhead lighting adds to attractiveness of business offices.
tially for handling traffic”, said Mr. Hepburn. “If any other objective is allowed to interfere with the future increases in traffic it will eventually result in major and costly modifications to the original design.”

“This does not mean that we should avoid the commercial aspects at our airports. There is every indication that they could yield considerable revenue which would eventually give financial relief to the aircraft operator or permit revenue to approach the Commonwealth annual outlay. Our new buildings will take every advantage of this aspect.”

“In major airport planning, therefore, Australia cannot afford to follow the example of other countries, but must seek its own solution.”

D.C.A. was seeking the following advantages in developing a passenger and express freight terminal:

Reduction of unpleasant features created by present and future aircraft by allowing access from road transport to aircraft by the shortest possible means, avoiding passing through weather conditions, avoiding blast, and reducing engine noise to a minimum.

Provide mechanical arrangements for loading and unloading freight, luggage and cabin services, thus eliminating most apron apparatus.

Reduce capital cost by reduction of the apron areas.

To achieve these features the lounge and concession area in the airport plan has been kept at the natural surface level and the apron has been formed at roof height.

The Australian airport design was original in its general arrangement, said Mr. Hepburn, but there was nothing new in the various features. All had been tried and proved in other transport services. Elevators formed a normal means of transport on the London tube, for example.

Handling of aircraft on the slopes and on the limited width of the holding positions had been tested successfully on full scale with aircraft now operating on Australian services.

The scheme, according to Mr. Hepburn, takes into account existing conditions, and those required in the near future to handle present jet aircraft. But like every other section of aviation, airport design must take care of the more distant future as well.

It would be safe to expect consider improvements in aircraft until civil planes along a coastline range.

Australia is in a position to build passenger terminals that will meet the needs of jet traffic. Its present runway systems, says Mr. Hepburn, will meet the requirements of existing aircraft. But it will have to consider further extensions of runway lengths on all airports handling overseas traffic to provide for future aircraft developments.

Advantages of the new airport design were summed up by D.C.A. supervising airport engineer, Mr. N. L. Keyes. He detailed the following eight points:

The scheme provides a means of handling jet aircraft without expensive mechanical equipment.

It permits passenger access to the aircraft with complete protection from the weather.

Congestion on the loading apron is minimized by eliminating loading platforms and vehicles, steps and other paraphernalia.

It eliminates danger to aircraft from vehicular traffic on the apron.

A considerable saving in pavement cost should result from the reduced pavement area and smaller loading “coastline” required.

A compact arrangement of loading bays and passenger and freight handling facilities is possible.

The unit arrangement allows for expansion dictated by traffic density.

Mr. W. H. Pickford, superintending airport engineer, D.C.A., said that the terminal building shown in the drawings was designed around 18 aircraft loading positions, but the scheme would lend itself to stage-by-stage developments.

The apron or triple taxiway had been designed with a down-grade of three per cent at the 18 loading positions. This was sufficiently steep to enable any aircraft to roll without aid of motors, even against strong head winds. The aircraft would normally roll away from the chocked position and would be stopped at a holding point before entering the main taxiway. This holding position would be sufficiently far removed from other aircraft, buildings, and staff for the safe starting of jet motors.

Operation of the aircraft was described by Mr. Pickford in the following stages:

**Outgoing Passenger**

The outgoing passenger would arrive at the air-
port by airline bus or private car, enter the building and await his call to an elevator.

**Outgoing Luggage**

Outgoing luggage would be off-loaded from the bus and passed by chute to the outward luggage station at basement level. Luggage deposited at the airline office immediately inside the entrance would also reach this room. It would then be loaded on to trolleys and wheeled in to the elevator for the particular aircraft position. For some types of aircraft, luggage would have to be taken off the elevator at apron level and loaded into the aircraft by forklift truck.

**Incoming Passenger**

The incoming passenger would step out of the aircraft into the waiting elevator and descend to the lounge to await the airline bus.

**Incoming Luggage**

Incoming luggage would be loaded into the elevator and taken to the inward luggage station in the basement by trolley or passed down a luggage chute to the inward luggage station. It would then be taken by luggage elevator to the luggage dispatch at the bus dock where it would be available to the passenger or be loaded into the airline bus.

**Outgoing Freight**

Outgoing freight would be brought into the airport and unloaded into the freight store at the truck bay. It would be trucked to the elevator and loaded into the aircraft.

**Incoming Freight**

Incoming freight would be off-loaded from the aircraft into the elevator and from there, carried on trolleys to the freight store.

**Incoming Aircraft**

The apron manager would be responsible for apron positions. The incoming pilot, when taxi-ing towards the terminal after landing, would be given his apron position. The position would be defined on the apron for day or night operations.

The apron would be fitted with a system of interlocking chocks to prevent accidents. The apron manager would have the chocks for the particular aircraft raised so that it could not pass its correct position. The pilot would then taxi his aircraft to the top of the grade and drift down to the correct position on the apron.

**Outgoing Aircraft**

When all loading operations on an outgoing aircraft were complete, the chocks would be lowered and the pilot would drift the aircraft down to the start position. At this point, sufficiently distant from buildings or staff, motors would be started. In the event of a complete engine failure, aircraft would be towed to a holding apron.

**Operation of the Apron Elevators**

The apron manager would arrange parking order of the various incoming aircraft, taking care to ensure that his parking arrangements allowed aircraft to depart on schedule, irrespective of the order of their arrival.

Tests had shown that pilots ought to be able to follow the well defined center line provided for accurate taxi-ing and parking. The center line would be illuminated for night operation.

In some cases it might even be necessary to tax an aircraft around the circuit and back into the top positions again, but these would be rare. Operation of the apron would be facilitated if aircraft were limited to say one hour on a loading position.

Spacing between elevators is 115 ft. This could be varied, within limits. It was decided on as it provided enough space for nearly all modern types to park one behind the other.

The lateral separation of taxiways of 140 ft. on the inner taxiway and 160 ft. on the outer taxiway would provide for a Stratocruiser to pass a Constellation, but all large aircraft of this kind would be kept on the outside taxiway. An overseas apron dealing with the larger types of aircraft would probably require some variation for both separation of taxiways and spacing of elevators.

A movable section of the apron which would cover the elevator well, would need to be designed to support aircraft loading. Its movement would also have to be co-ordinated with the elevator movement and for both movements to be governed by sufficient safety devices to prevent possible accident.

**Refuelling Facilities**

Refuelling would be carried out by a high pressure hydrant system. Storage tanks would be located on the airport side of the apron and would be filled by mobile tankers. Aircraft would be refuelled by a small mobile hose and meter unit attached to the hydrant at each aircraft station.

**Ambulance and Fire Fighting Units**

These units could be located on the outside extremities of the apron which would command a god view of the airport and give quick access to all parts of the field.

**Stand-by or Freight Apron**

A stand-by or small freight loading apron could be provided close to the terminal apron. Freight loading normally takes longer than passenger loading.

One criticism so far levelled at the project is that it does not permit enough flexibility in handling traffic on the apron. But complete flexibility—the ability to withdraw aircraft from any position—would necessitate spreading aircraft parking positions and thus lengthening the apron, or would require the use of mechanical means. These alternatives were not acceptable, and it was decided that it would be better to suffer some problematical minor inconvenience to gain the obvious ad-
vantages. With intelligent operation, it is considered that the arrangement of 18 positions will provide for 40 aircraft movements per hour on the runway with maximum holding times of one hour on the apron and also give sufficient flexibility.

Another criticism pointed to the major earthworks involved and questioned the cost of the scheme. D.C.A. points out that while the earthworks are big in terms of methods of 30 years ago, today, using modern earthmoving equipment, the cost would be less than five per cent of the total cost of the project.

(Conclusion)

GLADDING, McBEAN & CO.
BUY ANGELENO TILE CO.

Availing itself of an opportunity to increase production capacity for glazed tile, Gladding, McBean & Company have acquired the land, buildings, machinery and equipment of the Angeleno Tile Co., 1704 Ruxton Lane, Redondo Beach, Fred B. Ortman, Board Chairman and President of Gladding, McBean Co., announced.

After the changeover in manufacturing techniques and raw materials, the output of the newly purchased plant will be sold under the name of Hermosa Clay Tile.

Sales activities will be under the direction of Verne W. Boget, Vice-President and Sales Manager of the Hermosa Division. Concurrent with the addition of production facilities, the Company will also manufacture and market a complete line of stainless steel drainboard cap, drainboards and other trim shapes for use with ceramic tile and other wall and floor coverings. These products will be sold under the name Selectsteel by the Hermosa Tile sales organization.

Constructed about four years ago the Redondo Beach plant is modern in every respect.

MORTGAGE CREDIT STILL BLOCK
TO LOW COST NEW HOME MARKET

Emanuel M. Spiegel, president of the National Association of Home Builders, emphasized, in a statement issued at the opening of the NAHB Directors Fall meeting in New Orleans, La., on October 10-11, that he is advising home builders not to start any new projects without firm financing commitments until there is unmistakable evidence that the mortgage drought actually has been broken.

"While there have been numerous hopeful signs of an improvement in the mortgage market in recent weeks, they have not yet been reflected at the builder end of the credit pipeline," he said.

"Home builders would be foolhardy to undertake any major operations at this time without solid assurance that the mortgage credit is available."

Spiegel said one of the most important recent developments has been the Eisenhower Administration's public acknowledgement that a strong home building industry is essential to the national prosperity and that the government has a responsibility for its continued vigor.

The NAHB President said that, while there has been no official word of a change in the Administration's "hard money" policy, recent market developments appear to indicate that Federal action in the coming months may be directed toward an easing of the credit supply.

"I am encouraged by signs of a growing sense of responsibility and statesmanship on the part of the great lending institutions upon which home building depends," he said.

Spiegel said most mortgage lenders recognize the prosperity of the housing industry and their own business depends upon the mass market which, in turn, requires a large volume of mortgage capital at terms the average American family can afford.

"It is the opinion of most observers that this sound judgment will prevail and excessive discount abuses, which have particularly hurt the middle and low income home buyer, will be eliminated in the near future," he said.

Given a stable mortgage market based on a stable Government fiscal policy, the home building industry can go forward with confidence to meet the still-unfilled demand of the American people for more and better housing in 1954."

ERIC MENDELSONohn FAMED
ARCHITECT DIES

Eric Mendelsohn, one of the pioneer greats of contemporary architecture who won international fame, died in San Francisco recently following a brief illness.

Mendelsohn, 66, was ranked with France's Le Corbusier and America's Frank Lloyd Wright in his professional career. Noted for scraping the gingerbread off buildings of the 19th Century, and designing structures for 20th Century living, Mendelsohn endowed his structures with sweep, breadth and light. What they lacked in orthodoxy, they gained in uncluttered space.

A native of Germany, he received his education in his native land. In 1919 he was commissioned
to build the Albert Einstein Tower in Potsdam; in 1920's his Universum Cinima was built in Berlin. In 1933, Mendelsohn left Germany and took up residence in England where he practiced until 1941 when he came to the United States as consultant to the U.S. Department of War. He established residence in San Francisco in 1945 and among outstanding work is the Maimonides Health Center and the Hebrew Nursing Home, also designed by Mendelsohn were buildings at the University of California and structures in Palo Alto.

CONSOLIDATION OF TWO ARCHITECTURAL OFFICES

Cejay Parsons, Architect, recently announced the consolidation of his architectural practice with the firm of Jack H. MacDonald, architect and engineer, in an association that will be known as Jack H. MacDonald & Cejay Parsons, Associated Architects and Engineers.

New headquarters of the firm will be located at 8943 Wilshire Blvd., Beverly Hills, with Los Angeles offices at 3123 W. 8th Street.

STRUCTURAL ENGINEERS ADOPT UNIFORM JOB SIGN

Structural engineers throughout California who are members of the Structural Engineers Association have begun a cooperative program to identify their projects by use of a uniform job sign bearing the Association emblem.

Designed by the Structural Engineers Association of California for use by its members, these "on the job" signs include the name, title and address of the engineer, and the Association name and insignia. Use of these job signs throughout California is designed to make the public aware of the vital role the structural engineer plays in the West's vast building program. The structural Engineers Association of California is comprised of three groups—Southern, Central and Northern California.

AN INVESTMENT BLUEPRINT for ARCHITECTS & ENGINEERS

By FRANK J. KIME

Lewis Albert Alesen, M.D., immediate past-president of the San Francisco Medical Society, is a small, dynamic physician with very definite ideas on the merits of individual liberty, versus the dangers of collectivism.

His conferences like and admire him: and about a year ago he concluded that too many young people were becoming in-acculturated with the virus of the welfare state, and, with characteristic energy and resolution, wrote his prescription. He sent a circular letter to key physicians throughout California in which he said in part:

"As you no doubt know, there are something over 1,500,000 marriages in this country each year...If, when called upon to make a gift to one of these young couples, instead of sending them the customary gold plated towel-rack, or something else equally useless, we send a few shares of one of the lower-priced mutual investment funds, we shall have inserted an opening wedge in their thinking which can do much to help your country and mine return to economic and social sanity."

These shares can be purchased in small denomination from your broker or banker. Each quarter thereafter, the young couple will receive a small dividend check and a statement of the trust operations for the preceding three months. Very soon, they will come to learn that what hurts business hurts them, and also what helps business helps them..."

Dr. Alesen's letters underscore the knowledge of mutual funds that characterizes most professional men and women and emphasizes the high regard in which these securities are held as investment media. Mutual fund shares evidence ownership of a corporation. In this they differ from bonds which evidence indebtedness.

A phenomena of the post-war period has been the growth of these funds. More than five billion dollars has been invested in the securities of some 150 mutual investment funds. Perhaps the most important reasons for this popularity are widespread diversification and sound selection of securities, and expert supervision and management.

The offering prices of mutual funds fluctuate with the market value of the investments they hold. There is also a sales charge, usually from 6% to 8%.

Shares of building and construction companies are prominent in the portfolios of many of these funds. The oldest and largest fund on June 30, 1953, held the following:

Architects and engineers should find mutual fund shares of especial interest because of the emphasis placed upon building and construction securities by many funds. They should be able to evaluate the merits of the products manufactured by the various companies in the construction materials and maintenance fields.

Properly selected mutual funds are the ideal investment media for the architect or engineers who are accumulating a stake. Shares of many funds may be acquired on a periodic investment plan with a down payment of as little as $20 and subsequent monthly payments of $10 in one instance.

Just as each plan must be drawn for the needs of the particular client, so should the mutual fund selected, and there are more than 150 from which to pick, be the one best fitted for the needs of the individual architect or engineer.
SAN FRANCISCO ARCHITECTURAL CLUB SCHEDULES FALL CLASSES

The San Francisco Architectural Club, 507 Howard Street, have announced the schedule of classes in Engineering and Architecture for this Fall.

Classes in Structural Engineering for Architects, under the direction of George A. Sedgwick, offer a 4-semester, 2-year course designed to prepare students for the structural section of the examination of the State Board of Architectural Examiners. Each semester consists of a minimum of 15-class meetings, one each week, starting October 1st.

A class in Architectural Specifications is being offered with Michael J. Sweeney, instructor, with 15-weeks devoted to consideration of the preparation of construction specifications with emphasis on materials and methods of construction. Complete information is available from offices of the San Francisco Architectural Club.

OREGON CHAPTER

Regular meeting was held in conjunction with the Regional Convention in Sun Valley.

Announcement was made of appointment of Committees for 1953-54 and a number of Chairmen have already scheduled meetings to get their activities for the new year underway.

SECOND ANNUAL CONFERENCE NORTHWEST REGIONAL COUNCIL

The Second Annual Conference of the Northwest Regional Council of the A.I.A. was held in Sun Valley, Idaho, October 9-11, with members of the Idaho Chapter of the A.I.A. serving as host Chapter.

Participating were architects from Washington, Oregon, California, and Idaho, with general seminar and business discussions devoted to pertinent phases of the practice of Architecture and the construction industry.

PASADENA CHAPTER

“Developing Your Sales Personality” was the subject of a talk by C. C. Mullin of C. C. Mullin &
Associates of Los Angeles at the October meeting.

Mullin's firm specializes in speech training courses for professional and business men and women.

NORTHERN CALIFORNIA CHAPTER

A number of special committee reports were made recently including Frank Ehrenthal on "Area Planning", which included San Francisco's "hot" Civic Center Plan; Bolton White on "Public Relations"; William Fox on "Codes", and Ralph Priestley's Committee on Building Types.

Charles Fry, President of the California Council of Architects also addressed the Chapter recently on the subject "California Council Activities" showing the CCA was extremely busy.

WASHINGTON STATE CHAPTER

An official Roster of membership in the Washington State Chapter, AIA, has been compiled and published. Listing of membership is broken down into various classifications and shows that the Chapter has a total membership at this time of approximately 343 members.

CALIFORNIA COUNCIL OF ARCHITECTS

The element of time prevents a complete report on Convention activities in Coronado, however, among major considerations of the four day conference is a plan for reorganization of the Council and adoption of an expanded state-wide program.

Recommended by the Council Board's Executive Committee was that the activities of the organization be separated into two separate functions, 1) Public Relations and Legislative, and 2) man-
STRUCTURAL ENGINEERS ASSOCIATION OF CALIFORNIA

A number of outstanding speakers appeared before members at the Annual Convention in Yosemite, and at this time details of the conference were not available. However, scheduled to appear on technical programs were:

Also scheduled for consideration was a panel discussion on "Human Relations in Engineering Practice"—John E. Rinne, President SEAOC, and Jonathan G. Wright, participating.

A more complete report on the Convention will be given in a later issue of A&E.

DR. MARIA TELKES NAMED RESEARCH ASSOCIATE

Dr. Maria Telkes, noted for her achievements in solar energy utilization and in the conversion of sea water to fresh drinking water, has been appointed a research associate in the Research Division of New York University's College of Engineering, according to an announcement by Dr. Harold K. Work, Director of the Division.

STRUCTURAL ENGINEERS OF SOUTHERN CALIFORNIA

The October meeting was a joint meeting with the A.S.C.E. in the Rodger Young Auditorium with the program being devoted to a consideration of "Atomic Energy in Private Industry". Discussions were led by Richard B. Barton, Engineer of General Electric Company. General Electric has been the pioneer in developing and furthering the use of atomic energy in industrial applications, and manage the Hanford Atomic Products operation at Richland, Washington, for the Federal Government. They also carry on intensive research in this field at the Knolls Atomic Laboratory at Schenectady, New York. Many industrial applications of atomic energy will be utilized with turbines and
generators and as turbine engineer for GE, Barton is well acquainted with the most recent developments in the field.

Also on the program was “A is for Atom”, GE’s color cartoon which received the 1953 Oscar at the Cleveland Film Festival.

STRUCTURAL ENGINEERS ASSOCIATION
NORTHERN CALIFORNIA

The regular October meeting was combined with the Annual Meeting of the Structural Engineers Association of California in Yosemite Park.

Recent new members include Thomas W. Power; and George F. Barnett and Conrad R. Sovig, Affiliates.

KENTUCKY DEAN TO HEAD CIVIL ENGINEERS

The American Society of Civil Engineers announces the election of Daniel V. Terrell of Lexington, Ky., as President. He is Dean of the College of Engineering at the University of Kentucky. Dean Terrell, succeeded Walter L. Huber of San Francisco, at the Society’s annual meeting held recently in New York City.

Two Vice-president and six directors were also elected in a mail ballot of the more than 36,000 members. They were inducted to office also at the October convention.

The new Vice-presidents include: Enoch R. Needles for Zone 1 and Mason G. Lockwood for Zone 4. New Directors included Samuel B. Morris, manager and Chief Engineer, Los Angeles Department of Water and Power, District II; and Raymond F. Dawson of Austin, Professor of Civil Engineering at the University of Texas.

CORROSION ENGINEERS OF WEST TO MEET IN NOVEMBER

An opportunity for study and conferences on corrosion will be provided by the Western Region, National Association of Corrosion Engineers when a three day course on cathodic protection will be offered by the University of California at Los Angeles on November 16-20. NACE is sponsoring the

"A GOOD BUILDING MUST BE BUILT WELL, WORK WELL, AND LOOK WELL."

The editor of this article offers a silver dollar to the reader who first identifies the architect who is accredited with first making the above statement. (Editor's firm excluded). Go way back boys.

PRESIDENT RETURNS

Rolly MacNichol has returned from Pittsburgh, Pa. where he attended the National Convention of the Producers' Council. Rolly gave a talk on "How To Expand Chapter Activities Beyond Chapter Cities". This subject, in effort, is a very important part of the Northern California Chapter.

Rolly said they kept him so busy he didn't have an opportunity to get beyond the confines of the hotel. However, I understand a few special stories were told. Try to get one for the next issue.

MONTHLY INFORMATIONAL MEETINGS

Most of us have at one time or another attended one of the informational meetings. There are those who wouldn't miss one on a bet. Personally I have found the meetings fulfilling their purpose most satisfactorily.

The attendance is always good, comprised of Producer Council members and guests from the Architectural and Engineering professions. Many times it has been noted Producer Council members outnumber the guests from these two professions.

In order to increase the guest attendance and also to give the Architect and Engineer more opportunity to obtain product information, the executive committee has decided to send two (2) guest names to each member company. One for the Producer's Council representative and one for the alternate.

Ted Bakeman informs me that the November meeting is to be sponsored by Great Lakes Steel Corporation through their representatives, Kyle Prefab Steel Co., San Francisco. Mr. Al Brinkman of Kyle prefab will be in charge of the meeting. Also in attendance will be Mr. R. V. Langcor, Regional Manager for Great Lakes Steel Corporation and a representative from the Detroit office.

The program will consist of a new film covering steel production through to the fabrication of steel products. Also a demonstration on truensteel light gauge nailable frame, showing its uses and application in modern construction.
WITH THE ENGINEERS
(From Page 31)
short course. November 19-20 will be devoted to the Third Annual Conference of Western Region NACE, when corrosion problems affecting pipelines, oil refineries and aircraft will be discussed.

The University of California course will be directed toward training personnel in the field installation and maintenance of cathodic protection systems.

At the regional conference some of NACE's technical committees are expected to make reports during the morning of November 19. Technical papers will be presented during the afternoon on gas and water pipeline corrosion. On the following morning, papers on corrosion problems in the aircraft industry will be given and in the afternoon corrosion problems in petroleum refineries will be discussed.

The week's activities affords an opportunity to listen to and discuss with some of the nation's leading corrosion engineers current corrosion problems and what is being accomplished in controlling corrosion damage.

A.I.A. ACTIVITIES
(From Page 29)
attendance at Coronado will reach an all time high and subjects under consideration will make a new record in diversity.

WRIGHT AWARDED BROWN MEDAL
Frank Lloyd Wright, architect, was awarded the Frank P. Brown Medal of The Franklin Institute of the State of Pennsylvania at the Institute's Medal Day ceremonies held October 21.

The award was made for: "No one man has had so much to do with the shaping of our external world during the past half century . . . His name has become synonymous with architecture. In consideration of his very extensive contributions to the entire field of architecture over a period of more than a half century, by means of countless and varied buildings, by reason of his many writings and lectures and through his Fellowship at Taliesin".

BARRETT & HILP DISSOLVE CONTRACTING PARTNERSHIP
J. F. Barrett and H. H. Hilp, of the forty-one year old general contracting firm of Barrett & Hilp, with headquarters in San Francisco, announced the dissolution of the firm.

The firm stated that it will not enter into any building contracts "the duration of which may extend beyond February 28, 1954". Present contracts will be completed, however, under the firm's name.

John Frank Barrett and Harry H. Hilp formed their own firm in San Francisco in October, 1912 with total cash assets of approximately $450. Last year their total volume of business was about $20,000,000.

ENGINEER NAMED FOR HOTEL PROJECT
Morris Steinbaum, president of the Morris Hotel Chain, operators of the Hotel Clark in Los Angeles and other large hotels throughout the country, recently announced that William M. Taggert, structural engineer, had been appointed to supervise important changes in the Hotel Clark.

Taggert is converting the hotel boilers from high to low pressure and installing the latest type of vacuum heating pump and combination gas-oil pressure boilers as part of a $500,000 remodeling program.

ARCHITECTURAL OFFICE CHANGES
Announcement has been made that Russell deLappe and Mitchell Van Bourg are continuing the practice of architecture at the offices of the firm in the Hotel Claremont, Berkeley, and that Herbert Mallory formerly with the firm of Russell Guerne deLappe & Associates is no longer associated with the firm.
Russell Mills, A.I.A
Architect - Engineer
Reno, Nevada

Like so many professional men and women who gravitate from their early training into allied fields of practice, Russell Mills was educated in the Mechanical and Electrical Engineering profession and turned to Architecture as a preferred endeavor.

Following attendance at the University of California where he studied Mechanical and Electrical Engineering, Mills joined the Pacific Gas & Electric Company as a Valuation Engineer. Moving to Reno, Nevada, he entered the field of Architecture and began the practice of Architecture as a principal in 1934.

During the time he was doing engineering work, Mills designed many homes and buildings for real estate firms in Berkeley and architects in Reno.

Mills took time out from his private practice in 1935-1938 to serve as Architectural Supervisor for the U.S. Government under the Home Owners Loan program and again during World War II, he served as Consultant for the U.S. Bureau of Yards and Docks; for the U.S. Treasury Department on many evaluation projects, and later served as Regional Architect for the National Housing Administration. Director of the OPA for the State of Nevada was another "public service" activity.

Included among work designed by Architect-Engineer Mills, is a wide variety of large buildings; a good number of schools; and probably equally outstanding are more than one hundred residences in the City of Reno itself.

Architect-Engineer Mills has always taken an active part in community events and has contributed much in the way of Public Service to his Government, State and City, and to his profession. He is a Member of the National Council of Registration Boards; President of the Nevada Chapter of The American Institute of Architects;
Chairman of the Nevada Board of Architecture, Member of the Land Use Adjustment Committee of the City of Reno, and a number of other city and state committees and organizations.

Architect-Engineer Mills office is currently engaged in quite a few projects throughout the State of Nevada.

JOINT ENGINEERING COMMITTEE WINS LEON S. MOISSEFF AWARD

The American Society of Civil Engineers has announced the award of the Leon S. Moisseff Award for the paper "Lateral Forces of Earthquake and Wind," prepared by the Joint Lateral Force Committee representing the San Francisco Section of American Society of Civil Engineers, and the Structural Engineers Association of Northern California.

The award, consisting of a medal and certificate, is given each year to an important paper in the field of structural design, and will be presented to the winners at the annual convention of the Society in New York City on October 21.

UNDERGROUND STEAMLINES

(From Page 14)

1. Intact, as possible.
2. Inherent structural strength, excluding that of the piping system itself.
3. Freedom of pipe movement within the insulation, medium, and as nearly "free floating" as possible.
4. Highly resistant to thermal shock.
5. High in moisture repellency.
6. Complete protection from underground water conditions even when submerged completely.
7. Predictable and stable thermal properties insuring efficiency over long periods of operation, both constant and intermittent.

It is unquestionably true that no system available today rates "perfection" in all the many requirements actually demanded for such installations. However, the designing function can, by proper evaluation and analysis, determine which particular type of installation will prove best for specific job conditions.

Corrosive soils and/or electrolysis is the prime enemy of underground piping insulation systems. Seldom can system failures be placed on the insulation medium. The fact is that in many systems, failures much of the insulation medium can be salvaged. System failures more replacement of the piping proper or sections thereof, not the insulation material.

The foregoing statements are the reasons for the writers opinion that Requirement No. 1 is most important.

A very well known industrial industry has and is carrying on a large research program involving sacrificial anodic protection for underground pipe line protection, so that electrical potentials may be in balance and electrolytic destruction retarded. Annual losses in damage to underground steel structures of all kinds due to electrolytic action is staggering, and this accounts for a large percentage of annual steel production used for replacement purposes only.

Early but inconclusive reports indicate that this field of research may well have very important results in retaining much of the total economic loss.

The writer has seen sections of underground in-

Summerbell for SCHOOL ADMINISTRATION

Summerbell Roof Structures
825 East 29th Street - Box 214, Station "K" - Los Angeles 11
sulated piping thoroughly perforated and pin-holed after only 6 months use. This unusual failure was brought about by an equally unusual condition, in that the job site was heavily interlaced with underground Direct Current electric cable lines and the acute "stray" current factor from such cables accelerated the damage tremendously. Another reinforcement for the importance of Requirement No. 1.

Out of service for the replacement of just one short section of piping, means shutdown for the whole system.

ANNOUNCE NEW CONTRACTING FIRM OF HILP & RHODES

Harry H. Hilp, Sr., Theodore Rhodes and Harry H. Hilp, Jr., have announced formation of the general contracting firm of Hilp & Rhodes.

Offices of the new firm will be maintained at 16th and Kansas Streets in San Francisco, according to the announcement.

OAKLAND ART GALLERY

The 21st Watercolor, Drawings and Prints Annual is being held this month in the Municipal Auditorium, Oakland.

WOODEN FRONT DISHWASHER FOR NEW CUSTOM KITCHENS

Keeping pace with the desire of the construction industry to make available "optional" selection of modern home equipment, and to fulfill the desire of the homeowner for "installations" that will match the surrounding cabinets, a natural wood panel has been perfected that fits the GE undercounter dishwasher; available in most of the popular woods, such as knotty pine, birch, Honduras mahogany and oak.

The panels are designed to replace the standard metal panel normally supplied with the dishwasher, and can be installed in a matter of a few minutes without necessity of custom filling at the time of installation.

Available through GE Major Appliance dealers or distributors, either finished or unfinished so that special coloring can be added at time of installa-

tion to match the shade and finish of adjoining cabinets. Blueprints for local construction are also available through GE.

CONCRETE MASONRY'S WINNING HOME DESIGN

(After Page 11)

A. Lynch of Omaha; and Dale L. Gibbs, Roy C. Neumann, and Hedy C. Neumann of Lincoln.

The winners were introduced at the meeting by Martin I. Aitken of Lincoln, professional adviser for the competition, and awards were presented by Lew Anderson of Lincoln, president of the Nebraska Concrete Masonry Association; in charge of the meeting was Edward J. Sessinghaus of Omaha, president of the NAA.

Winning designs were chosen from a field of 31 entries by a Jury of Award consisting of Harold Spitznagle, architect, Sioux Falls, South Dakota; James T. Lendrum, executive director of the Small Homes Council, University of Illinois, Urbana, Illinois, and R. E. Copeland, director of engineering, National Concrete Masonry Association, Chicago, Illinois.

The first place design by Clark and Enerson is a three-bedroom house, 46 x 23 feet, with an added kitchen ell, plus covered porch and carport. It has a divided basement, and features a large living room and a large, open multi-purpose area.

In commenting upon the winning design, the jury noted that it employs carefully considered new uses for concrete masonry; that it shows a good basic relationship between rooms; that it is a direct and simple plan with an open quality; that it is advantageously oriented to the lot; and that its easily-supervised multiple-purpose area is unusual in a house of the size under consideration.

Announced purpose of the competition was to

THE FINK & SCHINDLER CO.

Since 1982 552 Brannen Street San Francisco, Calif. EXbrook 2-1513

ARCHITECT AND ENGINEER
(1) stimulate new ideas for home builders in the moderate income class; (2) stimulate a greater interest in the use of concrete masonry for home construction; and (3) stimulate a further desire for architectural services in home design.

The designs were based on a lot, located anywhere within the state, with a frontage dimension not to exceed 60 feet and a depth of 125. Living area was restricted to 1200 square feet on one level with the basement not taken into consideration. Use of modular dimensioned concrete masonry in the construction of all exterior walls and chimneys was mandatory.

POMONA TILE APPOINTS WOOLEY TO PERSONNEL

Ben-Allen Wooley has been appointed personnel manager for Pomona Tile Manufacturing Co., according to Drew Schroeder, executive vice-president.

ARCHITECT & ENGINEER MAGAZINE IS HONORED AT CALIFORNIA STATE FAIR

Among outstanding county exhibits at the recent California State Fair was the diversified showing of Calaveras County’s natural, economic and industrial resources.

Highlight of the industrial portion of the exhibit was a working model of the Calaveras Cement Company plant at San Andreas which was scaled to 1/5 inch to the foot. All moving parts turned at actual rates of speed of their genuine counterparts.

As a background display a number of large illustrations were used showing the use of cement products, and among these was an enlarged illustration of a swimming pool constructed of Calaveras White Cement. This photograph had previously been used as a cover illustration on the July 1953 issue of Architect & Engineer magazine, but was so well liked by company officials that they used it in the Fair exhibit.

Barbara Lee Nutter, theme girl of the 1953 State Fair, calls attention to the model plant.

Practical Houses for Contemporary Living presents what might be called forty success stories in home planning. The houses were selected because they admirably fulfill the living requirements of their owners and range in price from $7500 upwards.

The book is divided into six main sections: Houses for One Person; Good Small Houses; Houses Planned for Children and Adults; Houses for Limited Lot Lines; Houses for Irregular Land; and They Knew What They Wanted. All houses are architect designed.

Dr. Cazaud says in part "The extent of the literature on the characteristics and behaviours of metals, when subjected to cycle stresses, is so great as to present a real difficulty even to that specialized circle of engineers and scientists who must, for professional reasons, keep themselves closely informed of progress and knowledge, though experience and technical application in this field.

This "more recent material in the present work, an extensive, lucid and up-to-date review of fact, practice and experience which, if thoughtfully applied, should be most helpful towards the improvement of design, selection of material, the use of more suitable workshop methods and finishes, together with useful guidance at the inspection stage.,"
terminating gross heat outputs—this booklet is intended to satisfy that need; to provide complete and easy to use data for accurately determining the output of all types of boilers, tanks and heaters. Formulas and tables cover recommended relief valves for cast iron boilers and steel boilers, as well as those boilers for which there is no nameplate data or set procedures for establishing the output; hot water supply heaters and tanks, heat exchangers and unfired pressure vessels are also covered. Write Dept. A&E, McDonnell & Miller, Inc., 3500 N. Spaulding Ave., Chicago, Ill.

Machine tool attachments. South Bend Lathe has collected into one large bulletin the complete story on their many machine tool attachments and accessories, entitled "165 Reasons Why"; another birds eye view of the job range now possible with their lathes, drill presses and shapers; handy pocket size and 160 illustrations. Copy available by writing Dept. A&E, South Bend Lathe Works, South Bend 22, Indiana.

New roof deck. A new architectural design manual (A.I.A. FILE No. 37-D-2) for the use of Tectum roof deck has just been released. "Engineered Roof Deck" the book explains the methods of anchoring the material, specifications for its use, design data, and other architectural details; contains loading tables, technical drawings, and specifications. Also have available a catalog called "Tectum, The New Basic Building Material." For either, or both, write Dept. A&E, Tectum Corp., 165 S. 8th St., Newark, Ohio.

Oil generating burner. A new combustion head, the greatest innovation in the oil heat industry since the gun type burner. When installed with any gun type burner, either new or existing, it provides more heat, cuts oil consumption from 30 to 50 percent and prevents carbon from forming on the spray nozzle; safe, efficient, economical; descriptive literature. Free copy, write Dept. A&E, Gilgas Generating Burner, Inc., 410 S. Jefferson St., New Castle, Pa.

Silicone products. The new 1953-54 reference guide to Dow-Corning Silicone Products is now available. Contains cross-reference application index, and products themselves are described largely in terms of operating and service characteristics; thorough, comprehensive, listing of silicone products; fifteen new products, ranging from adhesives to molding compounds; many applications for silicone fluid are described, and the performance of Silastic as a dielectric is also described. Free copy, write Dept. A&E, Dow-Corning Corp., Midland, Michigan.

Fully automatic heavy fuel oil burners. A new oil burner which will start, follow the load demand and then stop automatically is fully described in a booklet just released by the Ray Oil Burner Company. Operating cycle starts when temperature or pressure-actuated controls call for heat and an electric spark lights a gas pilot, which in turn ignites the oil; dual ignition on larger sizes. Various types of burners are described, hourly capacity ratings are given and construction features are covered in detail. For free copy write Dept. A&E, Ray Oil Burner Co., 1301 San Jose Avenue, San Francisco.

Radiant panel heating. Radiant Panel Heating with Pre-Formed Copper Tube Panel Grids is the title of a new brochure (A.I.A. 30-C-44) just released by the American Brass Company. The booklet contains descriptive data on panel heating; use of copper tubes; illustrations on methods of installation and use; layouts and charts of BTU output as applied to ceilings, floors, and a comprehensive tabulation of heat loss factors. Free copy available by writing Dept. A&E, The American Brass Co., Waterbury 20, Conn.

Key switches and control components. A complete, comprehensive catalog illustrating "telephone type" components for industrial use: a helpful guide to engineers, architects, and purchasers. Shows scores of photographs and devices, switchboard lamps, jacks and caps, and other control devices. Specifications tables designed for easy ordering. Copies available by writing Dept. A&E, Automatic Electric Co., 1033 W. Van Buren St., Chicago 7, Ill.
EARTHQUAKE TESTS
(From Page 16)

Many interesting speculations may be made about actions resulting with different thickness slabs, or with bracing of different flexibility. With very stiff bracing, accelerations should become close to that of the actual ground motion. Buildings with low damping characteristics tend to develop high accelerations.

After the Arvin-Tehachapi earthquake, analysis was made on some structures where the resisting elements could be isolated, and results indicate that actual accelerations of 30 to 35% “g” were present.

In conclusion, many structures have an inherent strength much greater than the 10% “g” design criteria would indicate when consideration is given to the ultimate strength of the materials. Then, too, many buildings have elements of stiffening which are customarily omitted in the design concept.

However, it has been noted that even where older buildings have withstood severe first shocks, they have been loosened an appreciable amount. Then, when aftershocks of smaller magnitude occur weeks later, even more extensive damage has been reported. Such was the case recently at Bakersfield, and also in 1935 at Helena, Montana.

The reduced stiffness of the building evidently leads to a longer period, at a time when the material has already been weakened. For example, merely tightening bracing rods that already have been stretched an appreciable portion towards their breaking strength cannot possibly restore the structure to its original strength.

CENTRAL VALLEY OF CALIFORNIA ACSE FORM NEW SECTION

John G. Meyer, District Engineer for the California Division of Highways, Stockton, was elected to serve as President of the newly chartered Central Valley sub-section of the Sacramento Section of the American Society of Civil Engineers, which was recently formed at a special meeting of engineers held at the Kentucky House on the Calaveras Cement Company property at San Andreas.

The meeting was presided over by Walter Shulz, President of the Sacramento Section, ASCE, and principal hydraulic engineer for the California State Division of Water Resources.

Ted Stivers, chief-engineer of the South San Joaquin Irrigation District, gave an illustrated talk on the Tri-Dam Project contemplated for the North Fork of the Stanislaus River.

E. M. Barker, Mel J. London and Grant Metzger of the cement company served as hosts and conducted the more than 100 visiting engineers on a tour through the Calaveras Cement plant.

Other officers elected to serve with Meyer included: Felix A. Wallace, head of the department of engineering at College of the Pacific, Vice-President; Frank Lucas, associate highway engineer State Division at Stockton, Secretary; Harry M. Moses, Civil Engineer, U. S. Bureau of Reclamation, Stockton, Treasurer; and Board Member at Large, J. Don Layson, City of Stockton engineering department.

DESIGNER AMONG SPECIALISTS AIDING FRENCH MERCHANDISERS

Edgar I. Kober of the firm of Burke, Kober & Nicholais, Designers, Los Angeles, is among four American merchandising experts selected to share their know-how with consumer goods manufacturers and retailers of France.

Under sponsorship of the productivity and technical assistance program of the Foreign Operations Administration, the Americans will demonstrate modern selling techniques to businessmen in cities and town throughout France.

Other members of the group are Mark T. Shaw, chairman, South Pasadena; James S. Webster, Los Angeles; and Walker M. Thorn of San Mateo.

### DAMPROOFING and Waterproofing

Two-coat work, $9.00 per square. Membrane waterproofing—4 layers of saturated felt, $10.00 per square. Hot coating work, $5.00 per square. Medusa Waterproofing, $3.50 per lb. San Francisco Warehouse. Triscal concrete waterproofing, 60c a cubic yd. and up.

### ELECTRIC WIRING

- $15 to $20 per outlet for conduit work (includes switches).
- Knob and tube average $6.00 per outlet.

### ELEVATORS

Prices vary according to capacity, speed and type. Consult elevator companies. Average cost of installing a slow speed automatic passenger elevator in small four story apartment building, including entrance doors, about $9,500.00.

### EXCAVATION

Sand, $1.00; clay or shale, $1.50 per yard.

Above figures are an average without water. Steam shovels work in large quantities, less; small material, such as rock, will... considerably more.

### FIRE ESCAPES

Ten-foot galvanized iron balcony, with stairs, $250 installed on new buildings; $300 on old buildings.

### FLOORS

- Asphalt tile, 1/8 in. gauge 18c to 35c per sq. ft.
- Composition Floors, such as Magnesite, 40c to 1.25 per sq. ft.
- Linoleum, standard gauge, sq. yd., $2.75.
- Battlship Linoleum—1/4"—$3.00 sq. yd.
- Terazzo Floors—$2.00 per sq. ft.
- Terazzo Steps—$2.50 per lin. ft.

### Mastic Wear Coat

According to type—20c to 35c.

### Hardwood Flooring

Oak Flooring—1 & 2—Unfin.—$3.25 to $5.00 per sq. ft.

### GLASS

- Double Strength Window Glass...
- Plate Glass, 1/4 polished to 75...

IN THE NEWS

UNIQUE CATALOG ISSUED BY BURKE

One of the more interesting construction industry catalog has just been issued by the W. J. Burke & Co. dealers of concrete construction specialties, with offices in Seattle, Portland, San Francisco, Los Angeles and Albuquerque.

The 103-page book contains many drawings, photographs and charts showing possibilities and application of a complete line of concrete construction specialties. Thoroughly indexed, a special feature is a quick front page index which offers page reference to major items and subjects contained in the publication.

George Gaetke, president of the firm, points out that compilation of this catalog has been done "as a valuable aid to Architects, Engineers and Contractors" and is available upon request.

NEW RIVERSIDE OFFICE BLDG.

Architect Herman Ruhnau of Riverside is preparing working drawings for the construction of a 2-story steel and frame office building to be built in the City of Riverside.

The building will contain 18,000 sq. ft. and will cost an approximate $250,000.

CAMPBELL ELECTRIC DRAFT CONTROL

A new and improved model suitable for coal and oil fired heating plants; saves up to 30% on installations in factories, office buildings, hospitals, hotels, and other commercial size applications.

Essential point of superiority and efficiency is two damper openings—smaller damper operates barometrically when stoker is burning; when burner or stoker shuts off, a larger draft gate takes over. This electrically operated check damper moves to a full-open position, bypassing about 80% of the chimney pull—thus thousands of BTUs which would be normally wasted up the stack are retained in the combustion chamber.

Oil Company, GENERAL CONTRACTOR: Ben C. Gerwick, Inc., San Francisco.

RESIDENCE, Alamo, Contra Costa county. Mrs. Englehart, owner, 1-story frame construction, some brick veneer, air conditioning, tile baths, $95,000. ARCHITECT: Jack Buchter, Orinda. GENERAL CONTRACTOR: Fred C. Von Guenthner, Orinda.

CAMPBELL Commercial Draft Controls are manufactured by the Fuel Reduction Corp., 220 N. Ada St., Chicago 7, Ill.

ELEIMARY SCHOOL

The Housing and Home Finance Agency of Phoenix, Arizona, have commissioned the architectural firm of Edward L. Varney Associates, architects and engineers, of Phoenix, to draft plans and specifications for the construction of a new elementary school and living quarters for personnel, at Window Rock, Arizona. Estimated cost of the project is $1,000,000.

PARKING ENGINEERS OPEN NEW OFFICES

Don E. Grover, consulting engineer and president of Optoconics Engineering Corp. of Los Angeles, and Carlisle F. Mauaugh, owner of Plant Engineering Co., have formed a partnership and opened offices at 1416 Westwood Blvd., Los Angeles.

The new firm of Grover & Mauaugh will specialize in parking and traffic problems.

ADDITION PLANNED FOR HOSPITAL

Working drawings have been completed by Architect Harry J. Devine of Sacramento for the construction of a 100-bed addition to the Mercy Hospital in Sacramento.

The new addition will provide also for surgical facilities, X-ray laboratories, a pharmacy and out-patient clinic, and will represent a 4-story and penthouse, reinforced concrete building.

Estimated cost of the project is $1,600,000.

STANFORD UNIVERSITY TO BUILD MEN'S HALL

The Board of Trustees of Stanford University, Palo Alto, recently announced plans calling for the construction of a new Men's Residence Hall on the Stanford campus.

The project calls for construction of 8-story dormitory type buildings and facilities for administration, kitchen and dining room, connecting corridors and living rooms.

The architectural firm of Spencer & Ambrose of San Francisco are designing

For that 'extra finish' don't forget built-in telephone facilities

Your clients will be happier with building plans that include planned telephone facilities. Concealed conduit for telephone wiring and conveniently located telephone outlets will allow them to change the position of their telephone or add a new instrument later on without detracting from the beauty of their home with exposed wiring.

Just call Pacific Telephone's free Architects and Builders service. We'll be glad to help you plan for greater beauty tomorrow in the homes you are building today.

Put built-in telephone facilities in your plans

Pacific Telephone
the buildings which will be of reinforced concrete and will cost approximately $2,750,000.

GROUND BROKEN FOR NEW FACTORY

Ground has been broken and construction started on the new plant of the Plexolite Corps in El Segundo, adjacent to the Los Angeles International Airport. It will contain over 30,000 sq. ft. of manufacturing floor space, general offices, railroad siding and automobile and truck parking.

Designed by George Novikoff, the new manufacturing facilities will represent an investment of $250,000, and according to David S. Perry, president of Plexolite, the plant will be the largest of its kind in the nation and will be adequate to meet the expanding demand for the firm's manufactured products which are used extensively in residential and industrial applications.

PHOENIX AREA HAS SHOPPING CENTERS

The steady growth of Phoenix, Arizona, is accompanied by a continued construction of shopping centers and a recent survey discloses the following projects.

Homes & Son Construction Company have

a new center in Northwest Village to provide facilities for 28 stores and will cost $400,000.

Farmer & Godfrey Construction Company has a $55,000 contract for an 8-unit store building at 500 E. Camelback Road.

The John Long Construction Company has a $200,000 shopping center underway in the Maryvale Home area.

The H. & J. Construction Company is erecting a building at N. 16th Street and Missouri Ave., at a cost of $110,000, and

Kim Tang is building an 8-unit store building at E. Indian School Road and 24th St. at a cost of $100,000.

HAWAIIAN HOTEL

Architects Oleg N. Ivanitsky and Roy G. Watanabe of El Cerrito, California, have been commissioned to draft plans and specifications for the construction of an 8-story, 256 room reinforced concrete hotel building to be built in Honolulu, Hawaii.

Estimated cost of the project is $1,500,000.

PAPER PULP PLANT AT FLAGSTAFF

The first paper pulp plant in Arizona is built near Flagstaff by the Coconino Pulp and Paper Company. Daily production will be 25-tons of a crude type of paper known as wet lamp matt which will be sent to the west coast for further processing.

James M. Potter, Phoenix, is president of the company, capitalized at $3,000,000. Twenty to thirty men will be employed in the plant with additional crews in the forests cutting and hauling jack pines.

ARCHITECT SELECTED

Directors of the Parks Victory Memorial Hospital, Napa, California, commissioned architect Gene Verge of Los Angeles to draw plans and specifications for the construction of a new 100-Bed Hospital Building to be built in Napa.

Facilities of the new building will include surgery, X-Ray, and various laboratories.

ARCHITECT MOVES OFFICES

Architect Donald G. French, has announced the opening of new offices at 757 Kains Avenue, San Bruno, California, where he will continue the general practice of architecture. Offices were formerly located a 217½ El Camino Real, same city.

NEW EASY-FIT RADIATOR COVERS

Easy-fit radiator enclosures are available now in 34 convenient ready-made sizes, and are available in department stores, furniture stores, and hardware dealers. Recently introduced, they are attracting attention of style and budget conscious homemakers who want to cover up radiators.

Made in four choice finishes—walnut, mahogany, ivory and white—all are backed on enamel; made of heavy furniture steel, rigidly welded, built in valve door. Protect walls and draperies from dust and smudge, but do not retard radiator heat.

Built by Quaker City Metal Products Corp., 200 N. 14th St., Brooklyn, New York.

AIR FORCE FUNDS RECENTLY APPROVED

Among Army, Navy and Air Force projects throughout northern California recently receiving appropriation approval were:

Herlong, Lassen County—Sierra Ordnance Depot storage and operational facilities, $543,000.

Alameda, Alameda County—Naval Air Station jet engine test cells, $1,700,000.

Merced, Merced County—Castle Air Force Base, airfield pavements, air-track maintenance, storage facilities and utility installations, $1,370,000.

Sacramento, Sacramento County—McChord Air Force Base, airfield pavements, liquid fuel storage and dispensing, communications and air field lighting opera-

SHOPPING CENTER STORE COMPLETED

The Expectation Shops, located in downtown San Francisco, has completed construction of the interior of a new store in Stonestown Shopping Center and will soon occupy the site.

The architectural firm of Hertuka & Knowles, AIA, were designers of the new store facilities.

NEW TYPE FILTER FOR PLANT WATER

A new type filter employing diatomite filtering for plant water has been introduced by the Sparkler Mfg. Co. of Mundelein, Ill. Fine uniform filtering is obtained with a surface type diatomite filter and can be used for large volume water filtering with complete success, according to the manufacturer.

Operating engineers report that daily laboratory tests show this filter will completely remove suspended matter either colloidal or solid, bacteria 90% to 100% depending upon type of bacteria and grade of diatomite used. Thus reducing the required chlorination to a very low point.

Sizes vary from 25 sq. ft. to 100 sq. ft. of filtering surface; flow capacities over 2400 gpm per unit.

GARAGE BUILDING

The City of Reno, Nevada, has entered into a contract with Reno Garages Inc., for construction of a 4-story, reinforced concrete garage building that will provide for 500 car parking.

The new garage is to be built on West 1st Street, next to the Security National Bank Building.

Contract for the construction has been awarded to Haas & Hayde Contractors of San Francisco. Estimated cost is $1,000,000.

LEONA WICKHAM NAMED ADVERTISING MANAGER

Leona Wickham has been appointed advertising and customer relations manager for the Bobrick Manufacturing Corp., Los Angeles, according to William S. Louchheim, president.

Mrs. Wickham was formerly with the Barton A. Stebbins Advertising Agency, Los Angeles office.

Yallop, Manager. Telephone DOuglas 2-8311.
FEDERAL LANDS

When Uncle Sam decided to stake a claim for future Americans in the vast lands of the West during the last century, his reasons were clear and just and can be summed up in one word—Conservation.

Conservation was needed in the West's vast expanse of forests and plains where too many people, prompted by what seemed limitless resources, took what they could from the land, and moved on.

The Federal government set aside parts of the public domain to preserve its resources—timber, minerals, grazing acreages, water supplies and oil. In recent years some private lands have been acquired for the purpose of conservation, and such a policy is continuing.

Today, the Federal government owns over one-half of the land in 11 western states, and as the West's largest land owner pays no taxes. Cattlemen, lumbermen and mining operators who depend upon the use of federal lands for their livelihood, and who justify this use by developing the nation's natural resources and thereby increase its wealth, are hampered by some of the restrictions imposed on the lands.

Public interest also requires due regard for conservation of the land. The public has a right to assurance that the national parks, with their game and protected wildlife, and opportunities for recreation, shall be preserved.

The problem is quite complex, except that without question, the water resources, the timber, the grazing lands, the oil reserves, and the mineral wealth should be conserved by private enterprise and government so as to properly conserve them for future use.

Automatic tax cuts scheduled in the next 14 months would save American taxpayers an estimated $2,750,000,000 in the fiscal year beginning July 1, if they are permitted to go into effect.

TRY THIS ON . . . For Sizel

A national magazine circulated extensively in the construction industry, recently emphasized the following promotion material in its quest for support and business:

"How would you like a nationally known Architect to design your new home at a total cost to you of $5,000?"

The appeal then goes on to point out that "375,000 home plans have been sold", representing residential construction in a price range of from "$8,000 to $20,000" per house.

Taking an average of $12,000 per house, and 375,000 houses, the nation's Architectural Profession has been deprived of an income of some $270-million on a Fee basis of 6% . . . according to our way of figuring.

By striking contrast ARCHITECT & ENGINEER magazine, which has been published on the West Coast every month since 1909, is continuously emphasizing Editorialy, through the news columns, and by featured articles, the many advantages to be derived by employing the services of an Architect.

We, as publishers of a magazine commissioned to advance the architectural profession, have never compiled architectural material to be peddled direct to the public. To do so would be to engage in business in direct competition with the Architect.

On the other hand, ARCHITECT & ENGINEER magazines, answers many inquiries relative to the practice of architecture by reference to recognized, authoritative architectural associations and groups. It is our desire to serve . . . not compete with professions of the Construction Industry!

Since 1940 the number of families with 3 children has increased by 77%, those with 4 children by 50% and those with 5 children by 27%.

FEDERAL HOUSING

A study is underway which may spell the end of another long-term excursion by the Federal government into the realm of private enterprise at the expense of the taxpayer.

It is an analysis being conducted by the Housing and Home Finance Administrator into the low-rent public housing program. The study was ordered by Congress, which asked for a report of the Administrator's recommendations by February 1, 1954.

The low-rent program was initiated under the U.S. Housing Act of 1937, as a relief program, and many contend that present-day conditions do not justify further Federal government participation in the financing of public subsidized housing.

Industrial research laboratories once were considered a luxury, a kind of insurance—today they are recognized as one of the essential ingredients required to keep our industrial corporations running.
General Chef complete kitchen units fit in 5.4 square feet. The ideal solution wherever space and dollars are important.

**SINK** One-piece porcelain top of heavy gauge steel. Faucets and all hardware triple-chrome plated. Units also available without sink.

**BURNERS** Units come with 3 gas burners (easily adjusted for bottled, natural or manufactured [L.P.] gas), or 3 electric burners (220 V.) or 2 (110 V.).

**REFRIGERATOR** Four cubic feet of space. Electric (sealed, self-oiling Tecumseh unit). Owens-Corning Fiberglas insulation. Convenient bottle shelf in door.

**FREEZER** Holds 9 ice cube trays, or 12 standard frozen food packages.

**STORAGE DRAWER** Ample storage space for pots and pans.

**5 YEAR GUARANTEE**
Every General Chef Unit is guaranteed in writing to give trouble-free service for 5 years!

WRITE for complete information and specifications if you are building, remodeling, designing—you will be interested in the space and money you can save with General Chef units. Several models are available. Fully guaranteed. WRITE TODAY for complete information and specifications on all General Chef units. We will also send you name and address of distributor nearest you.

NEWS and
COMMENT ON ART

CITY OF PARIS
The Rotunda Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan, has scheduled an Exhibition of Paintings by Victor Amautoff, George Post and Gerald Wasserman, for showing during November.
The Pictures Of The Month, will feature new paintings from Paris by F. Gall and Louis Dali.

CALIFORNIA PALACE OF THE LEGION OF HONOR
Located in Lincoln Park, San Francisco, under the direction of Thomas Carr Howe, Jr., a group of November exhibitions include:
Three Centuries of Great Spanish Prints From Goya to the Present, lent by the Prado Museum of Madrid; Painted Faces—Religious, Decorative and Festive; Tree, European and American small woodware of various periods; Exhibition of Japanese Folk and Provincial Art, from the Honolulu Academy of Arts; and Works by Four Contemporary Artists, Jeremy Anderson, Ernest Briggs, Hassel Smith and James Weeks.
Educational activities include painting for children; motion picture series; Organ recital each Sunday at 3 p.m.; and continuation of the TV series each Tuesday afternoon.

M. H. deYOUNG MEMORIAL MUSEUM
The M. H. deYoung Memorial Museum, Golden Gate Park, San Francisco, under the direction of Walter Heil, offers a number of outstanding exhibitions during the month of November, including the following:
ART OF THE SOUTH PACIFIC ISLANDS, a comprehensive show of 350 outstanding works, assembled from 20 museums and 19 foremost private collections. FOUR ARTISTS OF THE SAN FRAN-

Stories of the fabulous gold strike in far-off California were the lure that induced a young foundryman, his good wife, and two children to leave Paris, France, and come to this far-off "Utopia."

Arriving in San Francisco after being shipwrecked in the Straits of Magellan, this young pioneer finally, in 1854, established his own foundry, at 58 Halleck Street (where the Bank of California now stands).

For a hundred years three generations of the family have served industry and the public in the best American tradition, a record of which they are justly proud.

Today, the imposing modern plant on Folsom at 4th Street, and its 18 offices, serve the Plumbing, Heating, Fire Protection and Art-Bronze requirements of the nation, plus the territories of Alaska, Hawaii, the Philippines and Far East.

Twenty-five years ago M. Greenberg's Sons became exclusive distributors of Josam Drainage Products in the West through its wholly-owned subsidiary Josam Pacific Co.

From Morris Greenberg, the founder, his sons and grandsons, to the present head, a grandson Stuart N. Greenberg, the firm has kept pace with the solid growth of the West.

In our 100th Year

Manufacturers of:
UNDERWRITERS APPROVED Fire Hydrants, Valves and Fittings, Fire Protection Hose Goods • Industrial, Navy and Maritime Bronze Valves and Fittings • Plumbing and Hardware Brass Specialties • Bronze Plaques, Letters and Name Plates • Crematory and Cemetery Bronze Products

HOW TO GET THE MOST FROM THE HIGHWAY CONSTRUCTION DOLLAR

By B. B. ARMSTRONG*, President
Associated Contractors of New Mexico

PART I

A tremendous road construction program faces the United States. Most groups that have studied our highway and street deficiencies place America's highway needs at $50 to $60 billion; the American Association of State Highway Officials in a recent study place the needs on the 664,000 mile Federal-aid system alone at $32 billion. According to the National Safety Council last year's traffic accidents cost the United States $36 billion with 53 million motor vehicles in use at the end of the year.

Reliable organizations predict that by 1975 between 65 and 75 million vehicles will be registered and others forecast the total registration by 1975 would reach the staggering figure of 85 million. In any case, the work of overcoming America's highway deficiencies will demand maximum benefit from every highway construction dollar invested. Because of this fact, I am pleased to have this opportunity, on behalf of the Associated General Contractors of America, Inc., which has a membership of 6,400 firms of which nearly fifty percent engaged in highway work, to outline to you recommended methods to obtain maximum economy on road construction.

Co-Operative Effort Is Very Important

The AGC believes, and we know this feeling is shared by all state highway officials, that much can be accomplished on problems in construction of highways through the Joint Cooperative Committee of the American Association of State Highway Officials and AGC. An invitation was extended by the AASHO and AGC early in 1919, shortly after the formation of our association, to further understanding of the difficulties encountered by contractors in building highways and to encourage cooperation between the two associations. As a result of this invitation, an organizational meeting was held on December 11, 1920, and the Committee's work was fully initiated in 1921.

Since then, the Joint Cooperative Committee has worked harmoniously and effectively in obtaining workable solutions to important and frequently highly involved problems related to highway construction. This cooperative action between the State Highway Department and the members of the AGC has proven an effective method of ironing out problems arising on highway construction programs.

The National Joint Cooperative Committee meetings work well in solving the problems that cover wide areas. Through the years the joint cooperative action has resulted in improved conditions of benefit to both the contractor and the highway departments.

2. Improved specifications.
3. Improved design for more economical construction.
4. Better pay for engineers in the Highway Departments and procedures relieving engineers of non-engineering work to help offset the shortage of engineers.
5. Improved public relations on highway construction programs.
7. Preparation and adoption of satisfactory freight rate escalator clauses.
8. Adoption by numerous state highway departments of clauses for their construction contracts that would permit these contracts to be cancelled.

*NOTE—Address was delivered by Mr. B. B. Armstrong, manager of the firm of Armstrong & Armstrong, General Contractors of Roswell, New Mexico, at the recent 32nd Annual Convention of the Western Association of State Highway Officials held in Santa Fe, New Mexico. Many pertinent factors relative to western highway construction and problems are covered by Mr. Armstrong, ED.
in a national emergency.

But there are innumerable problems that often cause local friction that can best be tackled in a local area by a local joint cooperative committee of highway officials and AGC members of which there are many local committees.

Long-Range Planning Important

We believe one of the greatest potential means of saving the highway construction dollar lies in the long-range planning and advance purchasing or safeguarding of right-of-way to be needed later. Since the right-of-way for express-ways and highways is becoming more and more expensive, long-range planning should be used in determining the ultimate width of right-of-way to be required. If at all possible, this should be made a part of the initial project. We all know the rate of increase in highway traffic during the last 10 years, and we all know what to expect during the next 10 and 20 years. Of all the things that could be used to obtain the most for the highway dollar, of greatest importance, we believe, is the skillful planning for acquisition of adequate right-of-way well ahead of the time the land becomes occupied by costly buildings and other improvements.

Land Costs Eight Times Construction
On Detroit Expressway

Let me give you an illustration—last June in his testimony before the Subcommittee on Roads, P. M. Thornton, highway contractor of Hancock, Michigan, and AGC Highway Division Chairman for this year, cited an example of the cost on a Michigan highway project. In the widening of three miles of Woodward Avenue in Detroit, the cost of acquiring the property was more than $9,800,000 out of a total cost of approximately $11,000,000. In other words, the last cost or that for needed land was almost eight times the cost of construction. This is an extreme example, but this is the experience today in almost all large cities.

California Establishes Special Fund

In contrast, here is a happier story. The 1952 Special Session of the Legislature of the State of California passed an act relating to the acquisition of properties for State highway purposes, and made an appropriation of $10 million to the highway right-of-way acquisition fund. It was the intent and purpose of this law that the monies appropriated should be expended only on properties required for highway purposes and because of the imminent probability of development, prompt acquisition would be required to prevent such development and consequently, higher acquisition and construction costs.

A letter received this summer from the California State Highway engineer states that properties with an appraised value of $8,620,572 were either purchased or in the process of negotiation at the time. In accordance with the terms of the law, each of the properties had been presented to and authorized for acquisition by the California Highway Commission. The estimated cost of acquiring these properties at a later date, after development had been permitted to proceed, is placed at $46,993,707, and this estimated amount is believed to be conservative. In other words, by acquiring the right-of-way at this time it was possible to save over $38,000,000 and to get the property for about one-fifth what it would have cost later.

The original fund was increased at the last session of the California legislature from $10 million to $30 million, and now I understand it is $50 million. Provisions were made so that it will be used as a revolving fund. This California Fund has been termed a "highway protection fund." How very rightly it is named.

The United States needs highways now. Funds are available for at least part of the needed construction. Let's build now with the funds now available, but in the process, plan for the future, too. To put it another way, this meeting of highway engineers and contractors is interested in the expenditure for highways of funds for the actual construction not for real estate to be used for the construction placement.

What we spend 10 years from now for actual construction does not have to be a fraction of that spent for acquisition of needed real estate if adequate planning and location are used and provision is made for purchase of needed land on a logical basis.

Engineers Must Be Better Paid

Another very good investment to obtain maximum benefit for each highway dollar is an adequately trained, high-caliber, well-paid engineering staff. Without it the long-range foresight and planning; the active construction program; and the liaison work between highway departments and the state and federal government and the construction industry will miss the opportunity of saving large sums of money.

We all know that the problems encountered in planning and getting approved and under way a highway program are many. Of prime importance in assuring success in such undertakings are the engineers who are responsible for the project. Continued efforts should be made in building up the highway department's staff, and in training such personnel to do the job.

Steps Taken To Relieve Engineer Shortage

Shortage of engineers has been a concern of every industry in the country that employs engineers. The highway industry, particularly the state highway department, has been in the worst plight.

(To Be Concluded Next Month)
NEW HEADQUARTERS
NORTHERN CALIFORNIA CHAPTER

The American Institute of Architects
San Francisco, California
The Northern California Chapter of The American Institute of Architects recently opened new offices at 26 O'Farrell Street, San Francisco, after having been located at 369 Bush Street for more than a decade. The new offices were designed by William Reiner, a Junior Associate member, who won the competition held for Junior Associates.

An opaque glass door opens into the entry, which is separated from the main office by a free-standing storage wall of color, embellished with an official emblem of the organization.

The office proper has acoustic plaster ceiling of eggshell color and walls partially painted green and partially covered with burlap, with an oversized peg board for display purposes. The floor is gray asphalt tile with coral accents. Furnishings consist of built-in cabinets made of natural finish birch. Matching birch door slabs have been used as desk tops, set on standard metal desk bases.

The storage wall contains recessed standard metal file cabinets, with storage space overhead, and a walk-in closet complete with wash basin and space for the addressograph machine.
Medina Manor is a restricted subdivision in Seattle’s Bellevue area, just north of a new golf and country club, and is featured by well-contoured roads, natural settings, territorial views, wide streets, and proximity to the Country Club and complete shopping center in Bellevue.

The G-E "Young America Home" was designed by the architect to attract people to Medina Manor and
at the same time offer a type of home to which people have become accustomed in the northwest, with an extra something that would have more than passing appeal.

From the standpoint of design, the home is simple, economical and definitely “livable” with attractive landscaping. The floor plan creates an interior space that is completely usable from all standpoints. A minimum of hall area is used and circulation within the house is ideal as one may go from the entry to any part of the home direct without passing through any other part. From the kitchen and work areas, the bedrooms, bath, entry, family room and utility room are readily available.

Bedroom windows are kept high from floor to allow any desired grouping of furniture; perimeter heating system provides warm air outlet in each room with location of furnace in utility room. Special low-voltage light switch system allows for continuous light pattern throughout the house and lights may be turned on or off from any location.

Highlight of the home is the combination “family” room and kitchen which has been equipped with all modern conveniences. Two small ranges are separated by a maple chopping block. Metal cabinets were used throughout the kitchen with coral colored counter top to lend warmth.

Exterior materials were chosen to represent typical natural material of the Northwest. Heavy hand split shakes were used on the roof.

More than 8000 people inspected the home during the time it was open, attesting to the acceptance of its architectural design and modern features.
Termitc Infestation Prevention

DAVES AVENUE SCHOOL

Los Gatos, California

JOHN M. EVANS, A.I.A., ARCHITECT

School districts and Architects are being, and will continue to be, confronted with the growing problem of termite infestation in wood frame school buildings.

In the area around Los Gatos, three recently built schools have been infested by termites; two buildings by the dry wood type, during construction, and one by the subterranean type, after completion.

The two schools under construction were fumigated after completion at the expense of the contractor, but such treatment is no guarantee against return of the insects.

LEFT — Termite treated overhead wooden rafters in place.

LOWER view shows chemonite treated siding and extent of school building.
The Board of Trustees of the Los Gatos Union School District, having had one unfortunate experience with termites, spent considerable time with the Architect, discussing termite prevention in the new Daves Avenue School.

While termite shields and soil poisoning are effective against the subterranean termite, they are no barrier to their dry wood cousins, who can enter the building in cracks and crevices above ground. After due consideration the problem evolved into two solutions: spraying the frame after erection or pressure treating the lumber before delivery to the job. The latter method was decided upon since penetration would fill all existing checks and laps of materials would be treated.

All framing lumber, blocking and sheathing were pressure treated with all job cut material over 1 inch thick required to have ends dipped on the site. Bored holes and notches were also job treated.

Construction consists of concrete slab floors, wood studs and exposed structural wood mullions, wood roof trusses, cement plaster exterior walls, cement asbestos shingle roof, classroom walls Douglas Fir plywood, with acoustical tile ceilings. Heat is supplied from a central plant through unit ventilators, with the Kindergarten being supplemented by radiant floor coils.

The above described pressure treating added about 25c per square foot to construction cost but eliminated need for redwood sills and customary dipping of sheathing and framing lumber adjoining concrete. Fumigation costs ran from $100 to $200 per classroom as against pressure treatment at about $250 per room.
“Great Oaks From Small Acorns Grow”

WRITTEN IN BRONZE . . . . AND COURAGE

. . . THE STORY OF M. GREENBERG’S SONS

By ROBERT O’BRIEN

IT WAS 1854 and the city was pushing up the flank of windswept Nob Hill to the west and Telegraph Hill to the north, and sprawling in tent settlements across the sand dunes south of Market Street. Half a thousand bare-spurred ships of the Gold Rush fleet swung at anchor in San Francisco Bay.

Stocky, dark-haired Morris Greenberg of Paris, France—he and his wife, Annette, and their two children had sailed around the Horn to the gold-fields three years before—stood in the bustle of Portsmouth Square and studied the hillsides. Amid the bedlam of Long Wharf he looked out at the ships that had been abandoned by their gold-hungry mates and crews.

“Men take more than gold from the earth,” he
said to himself. "And San Francisco—its new houses, these ships, when the crews come back—will need more than gold."

He was thinking back to the years of his apprenticeship in Paris, recalling the reek of the foundry smoke, the roar of the furnaces, the weight and swing of scorching-black molding sand in the shovel, and molten metal that streamed like white liquid fire from the dark crucibles.

This was what he knew. This was what he had to contribute to the life and commerce of the booming young seaport.

On a little street three blocks long, hard by the waterfront, he found a tiny, one-story frame building, No. 58 Halleck Street. Over the narrow doorway he hammered a painted sign: "Eagle Brass Foundry."

Bottoms of beached ships yielded copper for his melting pots. From the dunes by Rincon Point he dug sand for his molds. While the summer fogcs billowed in from the sea that year, Morris Greenberg bent industriously over the molds and crucibles in the little foundry, casting keys and hinges and chandelier fittings for the houses going up on the hills, and spikes of bronze for the planks of ships, and bells for Gold Rush churches...

Later, bronze cannons cast by Morris Greenberg for the Union Army thundered across the Civil War battlefields, and water gushing from his great monitor nozzles tore at the placer earth of the Mother Lode foothills for gold for the Union Cause.

The little frame building in Halleck Street was already far in the foundry’s past. The plant had grown with the city, and as the city pushed its waterfront east into the bay and adapted itself to its changing shoreline and growing population,
Greenberg’s copper now came in ingots from the mines of Lake Superior, Lehigh coal blazed in his furnaces, and square-riggers with Greenberg castings in their holds fared west through the Golden Gate for China.

During their first years in San Francisco, Morris, Annette and their two children occupied a house on Sacramento Street, and there in 1854, the year of the foundry’s beginning, they became the parents of their third child, Joseph. As a two-year old Joseph lay awake in his crib and listened to the tramp of drilling Vigilantes on the plank sidewalks; during the dramatic months of their war against cut-throats and criminals in the spring of 1856, they sand-bagged the appraisers’ storehouse next to the Greenberg home, and converted it into their headquarters, “Fort Gunnybags.”

A few years later, the Greenbergs joined the flight of the affluent to the south, across Market Street, and to a commodious home at 661 Harrison Street, high on the slope of fashionable Rincon Hill and well above the foundry fumes of Tar Flat. Down its wide flowered walk each morning strode father and son, Morris and Joseph. As they parted on the Harrison Street sidewalk, the father bent his footsteps down the hill to the foundry; the lad tucked his schoolbooks under his arm, turned his alert, inquisitive face west, and hurried along the
five blocks to Fifth Street's Lincoln Grammar School.

In the spring of 1868, Morris beamed proudly as he conducted a reporter from the Daily Alta California through his busy, up-to-date plant. And as he talked on, the reporter noted facts and figures and impressions for his newspaper:

There came a time, in 1878, when Morris had more impressive news for reporters than this. With the help of Joseph, who had entered the business in 1871, he had perfected the first complete unit ever manufactured at the foundry . . . the California-type fire hydrant.

Swift and dependable in action, with independent valves that insured a steady constant pressure, it won Morris, Joseph and the firm the gratitude of smoke-eaters from Seattle to San Diego, who, for years, had been handicapped in their fight against fire by complex and unreliable Eastern hydrants.

The invention was an achievement that lighted the last years of the pioneer's life. On May 8, 1884, three years after he had moved the plant to still larger quarters at 225-227 Beale Street, Morris, now 61, started his morning walk down First Street to work.

There was a jauntiness in his step, a youthful pride in his bearing: two days before, he and Joseph had toasted the 30th anniversary of the firm's establishment. But half-way down Rincon Hill, his step faltered. He collapsed to the sidewalk. A passing carriage rushed him home. Twenty minutes later he was dead.

Supervision of the business passed to Joseph's hands—hands rendered capable by 15 years of experience under his father's careful guidance. During a brief partnership with his brother, Leon, Joseph ordered a new sign painted across the foundry's facade. "M. Greenberg's Sons," it read, in tribute to their emigrant father and to the 30 years of honest toil that he had contributed to the commercial life of San Francisco.

Down on the waterfront the eight coke furnaces of the Beale Street plant burned as hotly and as

Some of today's more than 250 employees, who in observing the firm's 100th birthday and anniversary, look forward to continuing the outstanding progress of M. Greenberg's Sons.
brightly as ever to furnish the bronze and the brass for castings that ranged from hydrants and lift pumps to tinkling bells for San Francisco's cable cars.

When, in 1906, the Earthquake shook the city, the foundry roof and walls crashed about the furnaces. The very flames that had been the foundry's life set them blazing. Eighteen days later, on May 6—52 years to the day since Morris had opened the Eagle Brass Foundry on Halleck Street—M. Greenberg's Sons was again in operation.

The wooden walls were new and raw; the foundry was open to the sky; but from the molds by the hundreds came the bright castings for buildings that would rise upon the smoking ruins of the devastated city.

Joseph lived to see them rise, and on his death in 1912, San Francisco mourned the passing not only of the head of one of its pioneer industrial firms, but also of a civic leader whose devotion to the city of his youth found its clearest expression in his unflagging activity in behalf of the Lincoln
SHOP area in upper picture is prior to modernization.
LOWER illustration shows strictly modern manufacturing shop.
Grammar School Association, of which he had been one of the founders and first president. Another organization benefitting from his keen interest in civic affairs was the Native Sons of the Golden West; he had been the founder of the Leland Stanford chapter of San Francisco, named in honor of his close friend, Governor Leland Stanford.

Once more, however, a Greenberg stood ready to take a father's place. Joseph's elder son, Maurice, at the age of 22, became the head of the firm. In 1913, a year later, he was joined by his brother, Stuart N. Greenberg.

Alert to the development of all the West and eager to grow with it, the young brothers moved to extend the frontiers of M. Greenberg's Sons. While Maurice devoted himself to the administration of the business, Stuart compiled the first catalogue of the foundry's products, tucked it into his brief case and hit a long road that took him from Canada to Mexico and east to Denver. Orders from new accounts demanded stepped-up production. Soon oil instead of coke flared in the foundry's furnaces in a technical improvement which doubled their melting capacity from 2,000 to 4,000 pounds.
FIRE SYSTEM
HYDRANTS

Many cities have installed this type of fire hydrant in their fire protection systems... here is a finished group ready for shipment and immediate installation.

Moulin Photos

Shortly after the First World War, the Southern Pacific Company bought the Beale Street property for use as a freight terminal. A new and expanded foundry and office building rose at 765 Folsom Street, a site across which Morris must have gazed many times as he sat on the porch of his Rincon Hill home, and looked west to Twin Peaks.

Seven years later, in the depression year of 1930, San Francisco financial writers eyed with respect the survival and steady growth of the firm. Full-time employees numbered 75. The annual payroll topped $150,000.

"Written in Bronze," they wrote, "is steadily climbing to the half-million-dollar mark."

The pace never slackened. In 1934, Stuart's ingenuity tackled the problems of accidents in the congested traffic of city streets, accidents that resulted in sheared-off hydrants and geysers shooting skyward from fractured mains. Soon he had developed and patented an improvement in the California hydrant: an automatic check valve which functioned instantly to shut off the flow of water from a broken hydrant.

With a backlog of orders straining production facilities to their utmost, Maurice and Stuart, in 1937, announced construction of a $250,000 addition to the plant at 765 Folsom Street. Once more M. Greenberg's Sons furnished copy for San Francisco's financial writers: eager for signs of recovery from depression, they viewed with optimism this first major construction project in the South of Market industrial area since 1934.

"We are putting up this new building," the Greenberg brothers said, "primarily because we need space for a growing plant." But, they added, it was permanent; M. Greenberg's Sons was in San Francisco to stay. "It will completely express our faith in the city in which we were born, and which three generations have had good reason to believe is a mighty good business site."

The addition provided the facilities for the expanded activity of the firm as it reached out into (See Page 33)
NEWLY ELECTED OFFICERS FOR 1954

Elected at the Annual Meeting to serve as officers of the Structural Engineers Association of California for the ensuing year were:

HAROLD KING (Center), President, Sherman Oaks, Calif.

JAMES SHEFFET (Left), Secretary-Treasurer, Pasadena, Calif.

MERLE A. EWING, Vice-President, Sacramento, Calif.
CONVENTION SCENES

LADIES' KNIT FASHION SHOW, held at the Structural Engineers Association Convention at Yosemite. Left to right: Mrs. Marvin Kudroff; Mrs. Jack Horner; Mrs. George Maurer; Mrs. Art Sedgwick; Mrs. John Minosion; Mrs. William Brewer; Mrs. George Brandow; Mrs. James Stratta; Mrs. Kay Quimby; and Mrs. Byron Nishkian.
AN INVESTMENT BLUEPRINT for ARCHITECTS & ENGINEERS

By FRANK KIHM*

How to keep what you earn is a problem when high income taxes prevail, and moderate relief promised for the near future. An effective way to save on taxes is offered to those in the upper income brackets through investing in municipal bonds. Income from these securities is exempt, under present regulations, from Federal income tax. California municipals are exempt from the State income tax and from personal property taxes.

Further enhancing the attractiveness of these securities is the present yield schedule resulting from comparatively lower prices. At the end of October average yield on 20 bonds, as computed by the authoritative publication, "Bond Buyer," stood at 2.72% as against 2.35% a year earlier.

Now 2.72% does not seem a high return for invested funds. But remember you can keep all income from municipal bonds. This feature emphasizes some interesting aspects when considered in relation to individual income.

Let us assume that you are married and that you file joint tax returns on an annual income, after exemptions and deductions, in the $28,000 to $32,000 bracket. Dividing this by two because of the joint return puts you in the $14,000 to $16,000 bracket.

Take a typical California issue—City of Los Angeles, Department of Water Power Electric Plant Revenue Bonds 234% coupon rate, maturing October 1, 1983, offered at par to yield 2.75%. Bonds are rated AA and regarded as a desirable security. The "equivalent yield" is shown in the following table:

<table>
<thead>
<tr>
<th>Income After Exemptions and Deductions</th>
<th>Return needed from Taxable Securities</th>
</tr>
</thead>
<tbody>
<tr>
<td>$10,000-$12,000</td>
<td>4.75%</td>
</tr>
<tr>
<td>12,000-14,000</td>
<td>5.25%</td>
</tr>
<tr>
<td>14,000-16,000</td>
<td>5.85%</td>
</tr>
</tbody>
</table>

*For a single person, to find the taxable equivalent yield for taxpayers filing joint returns, divide the entire surtax net income by two and use the income bracket applicable to the amount thus obtained.

Thus, a taxpayer in the $50,000 bracket, even though filing joint returns, would have to find a taxable security yielding better than 8% to equal the 2.75% municipal bond yield. And it would be difficult to find a security with this return, and the safety of principal that characterizes good municipals.

Other attractive features of municipal bonds are high collateral value and ready marketability. Banks and other lending agencies will loan from 80% to 90% of the market value of good bonds. Quotations may be readily obtained from banks, stock brokerage houses, and investment banking firms, and purchases and sales may be readily effected.

Like any other investments, municipal bonds must be carefully selected. Prices fluctuate reflecting supply and demand. Those investors who can hold bonds until maturity are assured of payment of interest and return of principal. However, if a sale is necessary when bond prices are depressed, the seller may take a loss.

In the past only wealthy individuals, and institutions were interested in municipal bonds. Today the high income tax rates are responsible for widespread interest on the part of well-informed investors with relatively moderate incomes.

*(EDITOR'S NOTE: Mr. Kihm is well qualified to discuss the investment needs of professional people. He was Executive Secretary of the San Francisco Medical Society from 1945 to 1953 and City Editor of the Wall Street Journal (San Francisco) from 1939 to 1945, and has contributed articles to Barron's and other business publication. He is now with the San Francisco investment banking firm of H. E. Work & Co.)
PASADENA CHAPTER

"The Monorail System and its Application to the Southern California Area" was the subject of a talk by Colonel George D. Roberts at the November meeting. Col. Roberts is president of Monorail Engineering Construction Corporation and in addition to a general discussion of the subject,

progress requesting detailed information on the subject.

The Civic Design Committee, comprising Gill Davis, chairman, reported at a recent meeting that the proposed Seminar has been postponed pending obtaining suitable space.

ARCHITECT ASSISTS COUNTY SUPERVISOR

Bernard J. Sabaroff, treasurer of the San Francisco A.I.A. Chapter, has been named chairman of a special A.I.A. committee to assist Mrs. Vera Schultz, Marin County Supervisor, and a Marin County Citizens Committee on several proposals involving the location of county governmental buildings.

Three proposals have been submitted; remodel the present building and remain on the present site in San Rafael; re-locate the buildings on the outskirts of the city; and re-locate the buildings on the site of a former military academy in San Rafael.

ARCHITECT OFFICE MOVES

The architectural firm of William Decker Holdridge, A.I.A., announced recently that they had moved into larger quarters at 1604 Monterey Street, San Luis Obispo, California. The mail address, Post Office Box 41, remains unchanged.

SOUTHERN CALIFORNIA CHAPTER

"Modern Brazilian Architecture" was the subject of an illustrated talk by Raul de Smandex, Brazillian Consulate, at the regular November meeting in the Rodger Young Auditorium. The program presented Brazil through Brazilian eyes and music as special musical numbers also featured the program.

The December Chapter meeting will be held on the 8th in Long Beach at the Lakewood Country Club, according to Robert Field, program chairman. The program is being arranged by the Long Beach architects.
Structural Engineers Association of California

Structural Engineers Association of Northern California

FEMINEERS
The “Femineers” November meeting, held in the Elks Club, San Francisco, was devoted to an election of officers, committee reports and a colorful demonstration and discussion on “Yule Decorations” which was given by Mrs. Zoe Lindgren, a member of the group.

Another outstanding November event was the annual Semi-Formal Dinner Dance at the St. Francis Yacht Club on San Francisco Bay.

STRUCTURAL ENGINEERS ASSOCIATION SOUTHERN CALIFORNIA
“Structural Effects of Nuclear Explosions” was the subject of a talk by Frederick A. Grasier, Regional Engineer of the Federal Civil Defense Administration, at the November meeting, held in the Rodger Young Auditorium in Los Angeles.

Grisier presented many ideas of the F.C.D.A. regarding design of buildings, recommended loads, recommended stresses, and design and detailing practice. The Atomic Energy Commission and the Federal Civil Defense Administration conducted “Operation Doorstep” in March of this year, and in this project typical structures were subjected to nuclear explosions. Results of these and other tests were reviewed. An illustrated sound film was also shown.

Three subcommittees have been formed to study structural concrete: John Minasian is chairman of the Precast Concrete Subcommittee and is preparing reports on “Control of Shrinkage at Grouted or Poured Joints,” “Diaphragms of Precast Concrete,” “Design of Vertical Diaphragms Anchored to Foundations,” and “Bearing Wall Design and Test Reports.” The second committee, of which Cecil Armour is chairman, is the Prestressed Concrete Subcommittee and a tentative report is being prepared on “Design Stresses and Safety Factors,” “Material Specifications,” and “Field Practice.”

The Fire Resistant Standards of Concrete Subcommittee, F. T. Collins, chairman, is studying recent Fire Underwriters Laboratory tests made on concrete floors, and a special committee is being formed from this committee and the Prestressed Concrete Committee to collaborate with U.C.L.A. in a “Fire Test on Prestressed Concrete” program in which full scale fire tests will be made.

New Members include Harold L. Epstein, ASSOCIATE, and Ralph E. Lind, Jr., MEMBER.

CALIFORNIA SOCIETY OF PROFESSIONAL ENGINEERS
The largest group of professional engineers ever to assemble on the Pacific Coast will converge on San Francisco when the California Society of Professional Engineers annual convention and trade show will be held next May 27-29.

Professional Engineers is a highly specialized group of executives representing every branch of industry, government, public utilities, manufacturing, and construction.

C. D. Allen, president of the Society and Ignatius H. McCarty, convention chairman, are already working on plans for the event.

STRUCTURAL ENGINEERS ASSOCIATION OF NORTHERN CALIFORNIA
The November meeting, held in the Engineers Club, San Francisco, was devoted to a discussion of “Earthquake Stresses in a Fifteen-story Building” with the discussion being led by John E. Rinne, Structural Engineer for the Standard Oil Company of California.

Rinne, currently president of the Structural Engineers Association of California, was chairman of the Joint Committee which was recently awarded the Leon S. Moissessian Award by the American Society of Civil Engineers for their paper “Lateral Forces of Earthquake and Wind.”
The meeting’s discussion centered on the results and engineering significance of a rigorous mathematical analysis by E. C. Robison of the vibration characteristics of the fifteen-story Alexander Building. Subjects included the relative importance of the fundamental and higher modes of vibration; correlation of study with recommendations of the Joint Committee on Lateral Forces, and possible modifications that should be made to earlier recommendations.

A special committee of School Construction Costs has been appointed with George McKee, Chairman.

AMERICAN SOCIETY OF CIVIL ENGINEERS—San Francisco

Dr. Donald H. McLaughlin, who has been Chairman of the Department of Geology at Harvard University, Dean of the College of Engineering at the University of California, Chairman of the A.E.C. Advisory Committee on Raw Materials, a Director of the American Trust Company, and currently a Regent of the University of California, will speak at the December 2 meeting on the subject “Gold—Still Our Monetary Metal.”

The meeting is scheduled for the Marines Memorial Building, San Francisco.

APPLICANTS PASSING THE CALIFORNIA EXAMINATION

Engineers who passed Structural Engineering examinations held by the State of California, and heretofore unpublished by A.E., include:

CONSULTING ENGINEERS ASSOCIATION OF CALIFORNIA HOLD CONFBAB

One hundred and fifty engineers representing the Consulting Engineers Association of California recently heard a discussion on the problem of “Unfair Competition Between Consulting Engineers in Private Practice and Governmental Agencies,” with James Mussatti, general manager of the California State Chamber of Commerce, the principal speaker.

The meeting was held in San Francisco with Mark Falk of Folk & Booth, presiding, and Pecos H. Calahan, formerly Executive Secretary of the California State Board of Registration for Civil and Professional Engineers, serving as Secretary.

STRUCTURAL ENGINEERS FORM NEW ORGANIZATION

Robert D. Dalton, Structural Engineer, and Robert D. Dalton, Jr., Structural Engineer, have announced the formation of the partnership of Dalton and Dalton, Consulting Structural Engineers, for the practice of Structural Engineering.

Offices of the new firm have been opened at 374 Seventeenth Street in Oakland, California.
PRESIDENT'S CONFERENCE NOTES

The annual Producer’s Council meeting and President’s Conference was a tremendous success, being both informative and interesting.

The reports given by various committees of the national organization gave nothing but encouragement because of the efforts these committees are putting forth to make the Producer’s Council a worthwhile and valuable organization to all members. The committees work very closely with the national AIA, NAHB and AGC as well as with most of the government agencies and organizations that concern themselves with the housing and building field.

One of the meetings consisted of round table discussion of all chapter presidents prompting some excellent ideas. Our President’s impression was one of complete satisfaction in the performance of the Northern California Chapter. He states we do not have to take a back seat to anyone as far as organization and activities.

The Honorable Albert M. Cole, Administrator of the Housing and Home Finance Agency of the Government, gave an excellent talk entitled “Whose Business is Housing?” Mr. Cole explained relationship between the economy and the housing and building field is getting more and more recognition from every segment of the economy for its importance to the entire economy. Incidentally, he predicted a better than average year in building for next year.

We have been discussing the traveling table top exhibit for some time. This exhibit is to be organized at the national level and moved from city to city, thereby taking a considerable work load from the local chapters. The exhibit would provide better and more uniform display of the quality building materials represented by our organization. We hope there will be more info on this project soon.

Several architects spoke before the assembled group, giving their ideas on the importance and value of the relationship of the Producers’ Council to the AIA and their ideas gave confidence to our President that our efforts in the Producers’ Council were not in vain; our organization was certainly very much worthwhile.

“A good building must be built well, work well and look well.”

The award offered for identifying the above statement in the October issue is still open.

VITAMINS do wonders for a guy when you try to build on seven hills.
HETIRES
Seattle, Arizona
OMPA COMPANY

SOUTHWEST RESEARCH INSTITUTE NAMES NEW RESEARCH EXECUTIVE
Dr. George L. Cunningham, nationally known industrial scientist and research executive, has been named to the staff of Southwest Research Institute, according to an announcement by Dr. Louis Koening. An inventor and holder of many patents, Dr. Cunningham will head a group of technologists working toward the advancement of the science and technology of inorganic chemistry and inorganic manufacturing.

ALASKA CONTRACT AWARD ANNOUNCED
The Alaska District, Corps of Engineers at Anchorage, recently announced the awarding of a $2,796,072 construction contract to the firm of Luce-Leighland and M.B. Construction companies of Seattle, Washington, as joint venturers.

The contract covers the construction of outside utilities, POL laboratory, guardhouse, package petroleum storage, ammunition shop, ammunition booster station, and the paling of roads, streets, and walks at Fort Richardson.

ARCHITECT SELECTED
Architect Mario J. Ciampi of San Francisco has been commissioned by the Board of the Jefferson Union High School District of Daly City, San Mateo County, to draw plans and specifications for the construction of a new High School Building.

Estimated cost of the project is $2,000,000.

NEW ARMORIES ARIZONA GUARD
Plans for construction of five new Armories in Arizona have been submitted to the Department of the Army, according to Brig. Gen. Frank E. Fraser, guard adjutant general. Armories would be built at Yuma, Kingman, Mesa, Tempe and Chandler. Estimated cost is $375,000.

NEW OFFICES OPENED FOR HOME BUILDERS INSTITUTE
The Home Builders Institute of Los Angeles county has moved into new offices, according to an announcement by K. Sende Sennese, president.

Location of the Institute's offices is at 2330 W. 3rd Street, Los Angeles.

The Institute membership comprises large scale operative builders throughout the county.

PASADENA WILL BE "REPLANNED"
Pasadena has been selected for a 10-month city planning study by 63 fifth-year students of the University of Southern California School of Architecture.

Under the direction of Si Elmer, professor and professional community planner, the class project is intended as a part of the university's program to give professional education to students as well as to assist the community of Pasadena.

In cooperation with the Pasadena City Planning Commission, students will study phases of community development in their economic, social, political and industrial activities. At the conclusion of the study 16 master plans will be submitted to city officials for their use and study.

HAROLD'S CLUB REMODELS
Plans are underway for remodeling and construction of an addition to Harold's Club in Reno, Nevada, according to Harold Smith, owner. The new building will be of 9-story and basement, structural steel frame and reinforced concrete construction, and will cost approximately $750,000.

Ferris & Erskine of Reno are the Architects.

SACRAMENTO AIRPORT ADMINISTRATION
Architect Leonard F. Starks of Sacramento, has completed plans for the construction of a new Administrative Building at the Sacramento Municipal Airport, Sacramento.

Cost of the 2-story reinforced concrete building will be $35,000.

ARIZONA ENGINEERS HOLD PHOENIX MEET
A joint meeting of the parent engineering societies of Arizona was held early this month in Phoenix.

Host for the joint conference was the Arizona Section of the National Society of Professional Engineers.

CALIFORNIA REPORTS ON SUBDIVISIONS
The California State Division of Real Estate reported recently that there were 190 new California subdivisions filed for in September and that this was slightly less than the 12-month average of 200.

The first two months of the fiscal year, 397 new tracts have been filed, compared with 378 a year ago.

ARCHITECTURAL PORCELAIN
BY
CAMEO
SINCE 1911

When you modernize a store, add customer-appeal and showmanship by specifying Cameo architectural porcelain enamel.

You know that it is lightweight, easy to fabricate and construct in any shape or size you desire. But do you know about the new type of porcelain enamel construction, which conforms to the up-to-the-minute trends in building. For engineering specifications, write or call today.

NOVEMBER, 1953
PERSONALITIES

RICHARD L. RONNE, Contractor
Home Builder

SACRAMENTO, CALIFORNIA

Among outstanding personalities in the Construction Industry of California's famous Sacramento Valley is Richard L. Ronne, Executive head of the firm of RONNE, RONNE & RONNE, Contractor and Home Builder, with general offices in the City of Sacramento and branch offices in Marysville and San Francisco.

"Dick" Ronne was born in Nebraska where he lived on a farm as a boy; received his early education in the public schools; and like most youngsters of his age, "dreamed" of the day when he could "go out West" and seek his fortune in the land of golden opportunity, California.

It was not until 1928 that Ronne had an opportunity to visit the West, and in 1933 he accepted a position with an engineering school in San Francisco as an instructor, also taking charge of details in connection with publication of material used in conjunction with a correspondence course.

Soon tiring of the "big city," Ronne moved to Sacramento where he started in the construction industry as a home builder in 1935. Since that time he has completed many projects in the Sacramento area, and has also built homes and commercial projects in Grass Valley, Richmond, Santa Cruz, Marysville, Vallejo and San Francisco.

Richard Ronne has been very active in development of the Associated Home Builders Association of Sacramento and is currently serving as President of the organization, which represents contractors and builders of Sacramento. He is a Director of the National Home Builders Association with headquarters in Washington, D. C.; a member of the North Sacramento Rotary Club; and a member of the Advisory Board of the Salvation Army.

Ronne resides with his wife and daughter in North Sacramento.

NEXT MONTH: John A. Blume, Structural Engineer, San Francisco.

ROBERTS APPOINTED CHAIRMAN
CALIFORNIA CONTRACTORS BOARD

H. Cedric Roberts, Southern California contractor, has been elected chairman of the California Contractors' State License Board to serve for the fiscal year ending June 30, 1954.

Roberts has served in various official capacities since his appointment to the board in 1944.

REORGANIZATION OF
ARCHITECT OFFICE

Reorganization of the firm of Lance, McGuire & Muri, Architects, in Tacoma, Washington, has been completed and the new firm of McGuire & Muri, Architects, is continuing the practice of architecture from the firm's offices at 231 Broadway, Tacoma, Washington.

APPOINTED ON NATIONAL
CHURCH PLANNING GROUP

Walter Hagedohm, Los Angeles A.I.A. architect has been appointed to the church architecture committee of the Lutheran Church, Missouri Synod.

Other members of the committee include Bernard Gunter of New York; Clifford Ramey of Wichita, Kansas; Edgar Stubenrauch of Sheboygen, Wisconsin, and Kenneth E. Wishmeyer, St. Louis, Missouri.
the sales territory of the 11 Western States, Hawaii, Alaska and the Philippines. But four short years after its festive dedication, flags stood at half-staff over 765 Folsom Street solemnly to signalize Maurice’s sudden death, at the age of 52. On the plant’s lobby wall, in his memory, is mounted a bronze plaque, its lettering reads, "His words and deeds were an inspiration to all who knew him."

The responsibility of guiding the firm through the war years and on toward its second century fell upon Stuart, whose year-in and year-out association with the business had been broken only twice since 1913, for engineering studies at the University of California, and during the First World War, for a tour of duty as a pilot in the U.S. Army Air Corps.

In 1943, at the height of the war effort, more than 500 representatives of the State and city governments, labor, management and the armed forces, and employees of M. Greenberg’s Sons and their wives, gathered at a banquet in the Gold Ballroom of The Palace Hotel, to celebrate the firm’s 90th birthday.

Morris was gone, and his son Joseph, and his grandson Maurice, but at the speakers’ table, as host and managing owner, was his second grandson, Stuart.

Behind him and his co-workers lay 90 years of stability and quality—and a decade of modern expansion during which the foundry had turned out bronze valves by the thousand, and solid bronze faucet handles shaped like birds and chipmunks for the wealthy clientele of V. C. Morris of Maiden Lane; Josam roof and floor drains, and gold-plated shower doors for the San Simeon castle of William Randolph Hearst; brass flanged fittings, and bronze ladders for the swimming pools of Lawrence Tibbett and Will Rogers; bronze bearing plates that held up the Bay and Golden Gate Bridges, and monitor nozzles for fireboats, and hydrants for the City of Manila.

But now the seven oil and gas furnaces of M. Greenberg’s Sons were blazing day and night, and the foundry and the machine shop lathes were working at 10 times their normal production rate to make the bronze and brass valves, the flanges and hydrants and couplings desperately needed by the Navy, the Maritime Commission and the Army.

One by one, scores of loyal and old-time employees stepped to the speaker’s table to receive from Stuart their service pins, tiny gold replicas of Greenberg fire hydrants. Then, with the praise and congratulations of the speakers ringing in their ears, they smiled with pleasure and sati-

825 EAST 29TH STREET • BOX 218, STATION "K" • LOS ANGELES 11
General Eisenhower radioed him from North Africa: "Our fighting men, standing shoulder to shoulder with our gallant allies, the British and the French, have driven the enemy out of North Africa. . . . There is glory for us all in this achievement."

Rear Admiral E. L. Cochrane wired Stuart from Washington, three days before the invasion of Normandy: "Your excellent performance of duty . . . has made it possible for the building yards to exceed the quotas of landing craft set by the combined chiefs of staff. . . . The Bureau of Ships desires to pass to all hands concerned the message, 'Well and smartly done.'"

Today, commemorating his firm’s 100th birthday and looking forward to the beginning of a second century of service, Stuart N. Greenberg remains a modest, unassuming, cheerful, confident, shirt-sleeved executive whose 250 employees from drafting room to foundry call him by his first name.

He directs the $4,500,000-a-year affairs of the largest manufacturing plant of bronze products in the West from an air-conditioned office paneled in bleached walnut, and is pleased when discerning visitors express their admiration of the smart Chinese modern decor of the plant's impressive bamboo-papered conference room.

Among his employees, who share an annual payroll of $1,250,000 and enjoy the protection of the firm’s own pension and insurance program, are two up-and-coming members of the fourth generation of Greenbergs, Stuart, Jr., and Maurice’s son, John M. Greenberg.

On the third floor, above Stuart’s second-floor office, the machine shop lathes spin ceaselessly, and draughtsmen bend over their north-lighted drawing tables. On the ground floor the foundry furnaces blaze and roar all day long, and foundrymen pour the white-hot metal that streams like liquid fire from crucible to mold.

In the shipping rooms stand row upon row of freshly painted, applegreen and Underwriters’ approved fire hydrants awaiting shipment to Oregon and New Mexico, South America and Alaska; and Saudi-Arabia; anti-magnetic bronze fittings for Navy mine-sweepers; bronze valves for ships that will ply the seven seas to every port in the world; gleaming brass nozzles for fireboat hoses; heavy, highly polished bronze crematory urns; bronze markers for the graves of the Nation’s war dead; massive bronze name plates and historical plaques; Underwriters’ approved standpipes for the West’s new industrial plants and skyscrapers; Josam brass and iron drains and other Josam drainage products destined for hotel and hospital projects; shining, mellow-toned silicon bronze bells for the bridges of the Navy’s fighting ships.

To the east, the mighty towers of the Bay bridge cast their shadows across the sites of the Beale and Fremont Street plants. To the north, in the heart of San Francisco’s busy financial district, the granite-pillared Bank of California covers the location of Morris Greenberg’s little Gold Rush foundry.

"Our story is written in bronze," Greenberg employees say.

There is more to it—and it is more enduring—than that; for it is also written in the deeds and lives, the faith, courage and industry of a pioneer, and his sons, and his grandsons.

PRESIDENT EISENHOWER
APPOINTS WILLIAMS

Paul Williams, Southern California A.I.A. Architect, has been appointed by President Eisenhower to serve on the newly appointed Housing Advisory Commission.

Williams has served as a member of the California State Housing Commission and the Los Angeles Municipal Housing Commission.

ARCHITECTURAL FIRM
ANNOUNCES OPENING

Wm. Glenn Balch, Louis L. Bryan, John Loring Perkins and W. K. Hutchason have announced
the formation of the architectural firm of Balch, Bryan, Perkins & Hutchason for the general practice of architecture.

Offices of the new firm are located at 2933 Rowena Avenue, Los Angeles, California.

MOSAIC TILE COMPANY EXPANDS ON COAST

Opening of a new showroom and warehouse in Seattle, and opening of a Fresno warehouse were recently announced by Thomas B. Jordan, Western Manager of the Mosaic Tile Company.

The new Seattle building features contemporary styling and occupies 5,000 sq. ft., 800 of which is devoted to office space and showroom. Special facilities have been provided for loading and unloading trucks.

New Seattle Offices

Activities of the Seattle district are under the direction of R. Burton Corcoran, manager of the Washington operations of the firm for the past two years.

The Fresno warehouse and showroom, while under the supervision of A. E. Guerra, district supervisor of the San Francisco, Salt Lake, and Fresno offices, will be managed by Howard DeWeese, formerly warehouse manager in San Francisco.

In making the announcement Thomas B. Jordan said, "This expansion on the West Coast is in line with our policy of best possible service to the customer."

NEWS & COMMENT ON ART

(From Page 4)

CISCO ART ASSOCIATION; CONTEMPORARY AMERICAN INDIAN ARTS AND CRAFTS, in cooperation with the U. S. Department of the Interior; PAINTINGS BY MAX HEIMANN, retrospective exhibition; DRAWINGS BY FRANCIS DE ERDELY, and SOCIETY OF WESTERN ARTISTS, 14th Annual Exhibition.

Special activities include Museum tours, and adult and children classes in painting.
SCHOOL RESEARCH THESIS. Department of Architecture. Pratt Institute. Brooklyn 5, N.Y.
The New York State State Association of School Business Officials released this study in cooperation with the Department of Architecture of Pratt Institute.
During the next two decades, school business officers and architects will jointly plan and erect billions of dollars worth of new or modernized school plants. No other aspect of public expenditure will affect so many people, or have as lasting and vital an impact upon our American way of life. Architects, engineers, school administrators, teachers, and public spirited citizens can all gain much if new American schools are efficiently planned, attractively designed, and economically constructed. This publication contains many drawings, charts, and study surveys.

Through sixty impressive drawings and a nontechnical, explanatory text, this book gives the reader a vivid impression of the power of building in the United States today. Drawings portray outstanding structures designed since 1929. A brief introduction sketches architectural developments previous to that date as the author saw them at first hand, and traces the development of the contemporary architectural character through the buildings shown. Illustrations include viaduct, bridge anchorage, grain elevator, power dam, and lead through industrial plants and office buildings. Architects, engineers, city-planners, students and contractors will be interested in this book.

The author, Talbot Hamlin, is the well known Prof. of Architecture at Columbia University, and in this book revises the rapid growth of architectural knowledge and the maturing and clarification of the movement generally called Modern Architecture. Many of the older illustrations have been re-engraved and some 23 new illustrations covering the work of the post-world war period have been added.
The aim of the book, designed for the general reader as well as for the architect and the student of architecture, is to show that existing buildings are not isolated objects existing arbitrarily in one or another of the recognized set styles, but rather the inevitable results of the ways of living, governing, worshipping, and doing business in practice at the time they were built.

NEW CATALOGUES AVAILABLE
Architects, Engineers, Contractors, Planning Commission members—the catalogues, folders, new building products material, etc., described below may be obtained by directing your request to the name and address given in each item.

Marble for the home. A Marble Forecast for 1953-54 entitled “Marble For The Home” has just been prepared for distribution to architects, engineers, and contractors by the Marble Institute of America; contains considerable data on types and uses of marble. For free copy write Dept. A&E, Marble Institute of America, Inc., 108 Forster Avenue, Mount Vernon, New York.

Channel frames and fittings. New catalog contains installation photographs, illustrations and information on various types and sizes of channel frame and fittings, engineering data charts, and how and where to buy and other useful material; featuring Multi-A-Frame, fully-locking, completely reusable; can be quickly assembled or disassembled. Write for booklet Dept. A&E, Multi-A-Frame Division, 1471 E. Atwater St., Detroit, Mich.

Soap dispensers. New multi-colored catalog illustrating extensive Bobrick line of quality soap dispensers, valves and fittings is now available to architects, engineers, contractors and specifiers; contains data on capacity, dimensions, and individual features of each model illustrated. Free copy write Dept. A&E, Bobrick Mfg. Corp., 1214 North Ave., Brooklyn 25, N.Y.
Solenoit valves. New catalog on Eclipse "DO" Solenoid Valves is now available. Contains valuable illustrations; drawings of operation; dimensions of valves and a complete table of specifications and prices. For free copy write Dept. A&E, Eclipse Fuel Engineering Co., 1001 Buchanan St., Rockford, Ill.

Plywoods. New full-color catalog on Malarky plywood and full line of panel and flush doors with complete architectural and other data is now available, to architects, specifiers and contractors. It includes several new products including PT Board Panels, Fir and redwood Shadowood in matching Shadowood moldings, plate rails and battens. Write Dept. A&E, M and M Wood Working Co., 2310 N. Columbia Blvd., Portland, Oregon.

World's smallest complete kitchen. Now available complete information and specifications on the GENERAL CHEF complete kitchen unit. Ideal for motels, hotels, apartments, offices, factories, trailers, remodeling work, etc. Modular units can be used in either new installations or for remodeling where space saving is a factor. Write Dept. A&E, GENERAL CHEF, 4536 E. Dunham Street, Chicago, Ill., or Suite 762, 11 West 42nd St., Los Angeles.

Floors and Floor Problems. An attractive 24-page brochure offering authoritative discussion of floor covering problems; well illustrated, drawings, and diagrams—covering various types of floors, how they are built, what factors enter into their deterioration, and how floor troubles can be diagnosed and treated. Divided into 10-sections. Copies of A.I.A. File No. 22D, 25G, may be obtained by writing Dept. A&E, The Tremco Mfg. Co., 8701 Kimmon Road, Cleveland, Ohio.

Steel rolling service doors. New 12-Page catalog, Bulletin No. 301, gives illustrated data on floor, grilles, aluminum rolling counter doors and specialty doors. Featured is a series of charts designed to simplify selection of proper gauge and type of steel, and complete technical data on their use, installation, maintenance, and servicing. Single copies of "STEEL ROLLING SERVICE DOORS" No. 571, are available by writing: A&E, Small Houses Council, Mumford House, University of Illinois, Urbana, Ill.

Metal lath centering. Illustrated brochure just off the press shows types of metal lath used in centering, and sample specifications ft'or installation, spans and safe loads for ¼", ½" and ¾" rib lath and sheet lath. Technical Bulletin No. 6, for free copy write Dept. A&E, Meat Lath Manufacturers Ass'n., Engineers Building, Cleveland 14, Ohio.

Steel or aluminum buildings. Complete information is now available in a new catalog issued by the Soule' Steel Company on "Standard Steel or Aluminum Pre-Engineered Buildings." The 24-page, illustrated catalog gives full data on construction, erection details, and facts about all-weather units. Pictures show some of the various materials, unit combinations, and designs that add value to industrial and commercial buildings. For free copies write Dept. A&E, Soule' Steel Company, 1750 Army St., San Francisco.

Contemporary lighting fixtures. Just published comprehensive brochure on contemporary lighting fixtures; Recessed—12 pages in color, fully illustrated, detailing dimensions, wattage and trim details for flush lights. Surface Fixtures and Portable Lamps—8 pages, illustrated detail on full line of modern fixtures; wide range of colors and finishes; ideal for new construction and remodeling. A.I.A. File No. 31-F-23. Write Dept. A&E, The Prescolite Mfg. Corp., 2229 4th Street, Berkeley 10, for free copy.

BUILDING INDUSTRY CONFERENCE
BOARD HOLDS ANNUAL DINNER

The Annual Achievement Awards Dinner of the Building Industry Conference Board of Northern California was held at the Palace Hotel on November 12.

James W. Follin, Director of the Slum Clearance and Urban Re-development Division of the Housing and Home Finance Agency, Washington, D. C., was the principal speaker.

The Annual Awards Dinner has become an important part of the construction industry of Northern California and the Awards are made annually for outstanding achievement and for service to the industry.

Participating organizations in the Conference Board are the Northern California Chapter The American Institute of Architects; San Francisco Section, American Society of Civil Engineers; Structural Engineers Association of Northern California; The Producers Council, San Francisco Chapter; Building Owners & Managers Association of San Francisco; Associated Home Builders of San Francisco; Central California Chapter, The Associated General Contractors of America, Inc.; Golden Gate Chapter, American Society of Heating and Ventilating Engineers; San Francisco Federal Savings and Loan Association; Consulting Engineers Association of California, and the Association of Landscape Architects.

KRAFTILE AWARDED HONORS
AT CALIFORNIA STATE FAIR

Recognition was accorded the Kraftile Company at the recent California State Fair, held in Sacramento, for "the Best Display of Tile Products" at the 1953 fair.

Above illustration shows Harry Bartell, member of the Alameda County Board of Supervisors, presenting Joe, B. Peebles, Sales Promotion Manager of Kraftile Company, Niles, California, the coveted Blue Ribbon designating 1st Prize.

DONALD H. HERAK APPOINTED
DISTRICT ENGINEER AT SPOKANE

Donald H. Herak has been appointed District Engineer of the Spokane office of the Portland Cement Association, according to an announcement by Carl D. Franks, association president. He succeeds Robert E. Tobin.

Graduating in 1946 from Gonzaga University, Spokane, Herak joined the U.S. Bureau of Reclamation as a construction engineer at Hungry Horse Dam in Montana. He joined the Portland Cement Association in 1951 as field engineer for the Spokane office, and as the new District Engineer will direct Association activities in eastern Washington and northern Idaho.

OPENS ARCHITECTURAL OFFICES
IN MERCEDES, CALIFORNIA

Paul C. Shattuck, A.I.A., architect, has opened new offices in Merced, California, for the general practice of architecture. He was formerly associated with Architect Robert Jones, A.I.A., of Carmel.

Architect Shattuck has been commissioned to design a new Professional Building to be built in Merced at an estimated cost of $125,000.00.
All prices and wages quoted are for San Francisco and the Bay District. There may be slight fluctuation of prices in the interior and southern part of the state. Freight carriage, at least, must be added in figuring country work.

**BONDS**—Performance or Performance Bond(s), $10 per $1000 on contract price. Labor & Material Bond(s) only, $5.00 per $1000 on contract price.

**BRICKWORK—MASONRY**

Common Brick—Per 1 M. laid—$150.00 up (according to class of work).
Face Brick—Per 1 M. laid—$200.00 up (according to class of work).
Brick Steps—$3.00 up.
Common Brick Venner on Frame Bldgs.—Approx. $1.20 up (according to class of work).
Face Brick Venner on Frame Bldgs.—Approx. $2.00 up (according to class of work).
Common Brick—$36.00 per M. truckload lots, delivered.
Face Brick—$81.00 to $106.00 per M, truckload lots, delivered.

**GLAZED STRUCTURAL UNITS—WALLS ERECTED**

- **Clear Glazed**—
  - 2 x 6 x 12 Partition...
  - 4 x 6 x 12 Partition...
  - 4 x 6 x 12 Double Faced...

- **For colored glass**—
  - 3.00 per sq. ft.

- **Metal Fire Brick**—$150.00 per M. F.O.B. Pittsburgh.

- **Building Tile**—

  - 12x12/2-Inches, per M...
  - 12x12/2-Inches, per M...
  - 12x12/2-Inches, per M...

- **F.O.B., Plant**

**BUILDING PAPER & FELTS**

- 1 ply per 1000 sq. ft., roll...
- 2 ply per 1000 sq. ft., roll...
- 3 ply per 1000 sq. ft., roll...
- Brown's Standard, 300 sq. ft., roll...
- Sashkraft, reinforced, 500 sq. ft., roll...

- **Sheathing Papers**—
  - Asphalt sheathing, 15-lb., roll...
  - 30-lb., roll...

- **Dampcourse, 21/4-ft., roll**...
- Blue Plasterboard, 60-lb., roll...

- **Felt Papers**—
  - Deadening felt, 3/4-lb., 50-lb., roll...
  - Deadening felt, 1-lb., roll...
  - Asphalt roofing, 15-lb., roll...
  - Asphalt roofing, 30-lb., roll...

- **Roofing Papers**—
  - Standard Grade, 100-lb., roll, Light...
  - Smooth Surface, Medium...
  - Heavy...
  - M. S. Extra Heavy...

**BUILDING HARDWARE**

- Sash cord, No. 7...
- Sash cord, No. 8...
- Sash cord, No. 9...
- Sash cord, No. 10...
- Sash weights, cast iron, $100.00 per ton...
- 1-Ton Loads...
- Less than 1-Ton lots, per 100 lbs...
- Nails, per keg, base...
- 8d. spires...
- Rim Knob lock sets...
- Butt, dull brass plated on steel...

**CONCRETE AGGREGATES**

- The following prices net to Contractors unless otherwise shown. Carload lots only.
  - 1 Bunker...
  - 10 Bdl...
  - per ton...

- Gravel, all sizes...
- Top Sand...
- Concrete Mix...
- Crushed Rock, 1/4" to 1"...
- Crushed Rock, 1/2" to 1/2"
- Roofing Gravel...
- River Sand...
- Sand...
- Lapis (Not 2 & 4)...
- Olympia (Not 1 & 2)...

- **Cement**—
  - Common (all brands, paper sacks), Per Sack, small quantity (paper)...
  - Cash discount on carload lots, 10 a bbl., 10th...
  - Less than carload lots, $4.00 per bbl., f.o.b. warehouse or delivered.
  - Cash discount 2%, on L.C.L.

- **Trinity White**—
  - 1 to 100 sacks, $3.50 sack
  - Medusa White...

- **CONCRETE READY-MIX**

  - Delivered in 4-yd. loads.
  - Per cubic yard, 1-8 Mix...
  - 1-7 Mix...
  - 1-6 Mix...
  - 1-5 Mix...

  - Curing Compound, clear, drums, per gal...

- **CONCRETE BLOCKS**—

  - Max...
  - Ball...
  - Salt...

- 4x8x16-Inches, each...
- 6x8x16-Inches, each...
- 8x8x16-Inches, each...
- 12x8x16-Inches, each...
- 16x8x16-Inches, each...
- 1/2-Inch to 3/4-Inch, per cu. yd...
- 3/4-Inch to 1-Inch, per cu. yd...
- 1-Inch to 2-Inch, per cu. yd...
- No. 6 to 10-Inch, per cu. yd...

- **DAMPPROOFING and Waterproofing**—

  - Two-coat work, $9.00 per square.
  - Membrane waterproofing—4 layers of saturated felt, $10.00 per square.
  - Hot coating work, $5.00 per square.
  - Membrane Waterproofing, $3.50 per lb.

- **ELEVATORS**—

  - Prices vary according to capacity, speed and type.

- **EYEWALTS**—

  - Prices vary according to capacity, speed and type.

- **EXCAVATION**—

  - Send, for 100 cubic yards or under...
  - Trucks, $30 to $45 per day.

  - Above figures are an average without water, Steam shovel work in large quantities, less hard material, such as rock, will be considerably more.

- **FIRE ESCAPES**—

  - Ten-foot galvanized iron balcony, with steels, $250 installed on new buildings.
  - $300 on old buildings.

- **FLOORS**—

  - **Asphalt Tile**—
  - 1/2 in. gauge 18c to 35c per sq. ft.
  - Composition Floors, such as Magnesite...
  - $1.25 per sq. ft.

  - **Linoleum**—
  - Standard gauge, sq. yd...
  - $2.75

  - **Battleship Linoleum**—
  - $3.00 sq. yd.

  - **Terazzo Flooring**—
  - $2.00 per sq. ft.

  - **Terazzo Steps**—
  - $2.50 per lin. ft.

- **Hardwood Flooring**—

  - **Oak Flooring**—
  - 1" x 3"...
  - 1 1/2" x 1/42...

  - **Unfinished Maple Flooring**—
  - $370.00

  - **Unfinished Pine Flooring**—
  - $370.00

  - **Unfinished Oak Flooring**—
  - $370.00

- **GLASS**—

  - Single Strength Window Glass...
  - Double Strength Window Glass...

  - Plate Glass, 1/4 polished to 7/8...

  - 7/8 to 1"

  - 1/4 in. Pochled Wire Glass...

  - 1/4 in. Wire Glass...

  - 1/4 in. Obscure Glass...

  - 405 Hx21A...

  - 405 Hx21B...

  - 405 Hx21C...

  - 405 Hx21D...

  - Gray Glass...

  - Glass Blocks, set in place...

- **HEATING**—

  - **Furnaces**—
  - Gas Fired...

  - **Air and Water Heaters**—
  - $80.00

  - **Water Heaters—5-year guarantee**

  - With Thermostat, 20...
  - 30 gal., capacity...

  - 40 gal., capacity...

**designed with**

**SCHOOL CLASSROOM IN MIND!**

**HAWS**

**Deck-Type Drinking Fountain**

School classrooms may differ widely in their requirements. Realizing this, the new HAWS Deck-Type VANDAL-PROOF Drin- king Fountain was designed to accept practically any combination of HAWS Pantry Faucets—or Fill Glass Faucets—and HAWS bubbler-type Drinking Faucets.

- The HAWS Receptor is cast iron—beautifully finished in acid resisting white enamel. Stainless steel mounting rim prevents water running onto table or cabinet top and affords a water tight bond between sink and top surface.

Write today for brochure illustrating combinations of HAWS fixtures that may be utilized with Receptor. You'll find a combination to fit the school job you have on the board or are now planning!

LeROY OLSON COMPANY

3070 Seventeenth Street, San Francisco, California

ARCHITECT AND ENGINEER
ARCHITECT SELECTED
Architect Donald F. Haines, San Francisco, has been selected by the Stockton Medical Center, Inc. of Stockton, to draw plans and specifications for the construction of a new 8-story, and basement, Medical-Dental Building.

The building will be erected on the N.W. corner of Sutter and Fremont in Stockton and will comprise a 1-story structure of 150 x 150 feet and an 8-story tower 60 x 150 ft. Parking facilities are being provided for in basement and portion of roof of 1-story building.

Cost of the project is estimated at $1,300,000.

ARCHITECT SELECTED
The architectural firm of William G. Corlett and Arthur W. Anderson of Oakland, have been commissioned by the Board of Regents of the University of California to design and compile specifications for the construction of an Electronics Research Laboratory Building to be built in the Radiation Hill area of the University campus at Berkeley.

SECHLER APPOINTED LOS ANGELES MANAGER
R. Eldon Sechler has been appointed manager of the Los Angeles District of Detroit Steel Products Company, according to an announcement by E. C. Hodges, vice-president in charge of sales.

The Los Angeles district includes all of Southern California and the Phoenix area in Arizona.

FEDERAL AID ROADS ASSIST ARIZONA
The Bureau of Public Roads in Washington, D.C., reports a $6,367,000 federal-aid highways construction program is underway in the State of Arizona which involves some 89 miles. The federal government is providing $4,528,000 with the balance coming from the state.

SALT LAKE FIRM GETS ARIZONA CONTRACT
The Oakland Construction Co. of Salt Lake City, Utah, submitted the low bid of $493,000 to the Veterans Administration, Washington, D. C. for the construction of a boiler plant and incinerator building at the Ft. Whipple Hospital in Prescott.

BENEFIEL NAMED CE DISTRICT SALES REP.
Richard J. Benefiel has been named District Sales Representative for the Carbolyte department of the General Electric Company.

Benefiel, with headquarters in Oakland, will cover Northern California, Oregon and Washington.

ARCHITECT SELECTED
Paul C. Shattuck of Merced has been commissioned by the Board of Supervisors of Merced County to design a new School Library and Audio-Visual Building for Merced schools.

LEROY COLEMAN JOINS KINSEY
Leroy Coleman, prominent in the field of architectural design in Southern California, has become associated with Kersey Kinsey, builder, according to a recent announcement.

Coleman will serve in a managerial capacity and will supervise cost and construction control.

WAREHAM PROMOTED: MOVES TO OAKLAND
T. R. Wareham, Regional Sales Manager of the Pacific Coast Division of Detroit Steel Products Company, who has been serving also as Los Angeles Division manager, has moved his offices to company headquarters in Oakland, California.

ALASKA CONSTRUCTION CONTRACTS ANNOUNCED
The Alaska District Corps of Engineers recently announced the awarding of a contract to S. Macri & Sons Co. of Anchorage, $2,842,000, for the construction of road, street and sidewalk paving and construc-

Why built-in telephone facilities mean happier clients for you
Home owners like to tell their friends about the little "extras" you include in their building plans. That's why planned telephone facilities always appeal. People like the idea of concealed telephone wires and conveniently located telephone outlets to take care of their initial and future telephone installations and changes.

Just call Pacific Telephone's free Architects and Builders service. We'll be glad to help you plan for better living tomorrow in the homes you are building today.

Put built-in telephone facilities in your plans

LEGAL NOTICES

FIRE STATION

ADDITION

The City of Las Vegas, Nevada, is com-
pleting plans for the construction of a dor-
mitory addition to the Central Fire Sta-
tion. The addition will be of concrete block
construction, built-up roof, asphalt tile floor,
electric heat, refrigerated air conditioning
and some ceramic tile.

Floyd E. Brewster of Las Vegas is the
Architect.

DEADLINES TO TAFT HOSPITAL

The Taft Westside Hospital District, Kern
county, is contemplating making extensive
alterations to the Westside Hospital in Taft.

Work includes demolition of a portion of
the existing building, rehabilitation for new
radio-graphics and laboratory areas.

Ernest L. McCoy of Bakersfield is the
Architect. Walker, Koliomitz and Klinger
man of Los Angeles are consulting archi-
tects.

SELF PARKING

GARAGE

A self-parking garage is being built in
Oakland at 17th and San Pablo Avenue
for the Western Department Stores.

A 1-story structure the building will
be 226x300 ft., structural steel frame,
reinforced concrete floor and roof, and some
concrete walls. Provision is also being
made for auto parking on the roof.

R. H. Cooley of Oakland is the Struc-
tural Engineer. John J. Moore Company
of Oakland is the contractor.

ELECTED PRESIDENT

CANADIAN NICKEL

Ralph D. Parker was elected
president of the Canadian Nickel Company, Ltd.,
Inc. subsidiary at the annual election of
officers.

He has served as vice-president and
general manager of Canadian Operations
of The International Nickel Company of
Canada, Ltd., since May, 1952.

EQUITABLE LIFE

BUILDING PLANS

The Equitable Life Assurance Society,
San Francisco, has announced plans for
the construction of a new 25-story build-
ing on the northeast corner of Montgomery
and Sutter streets in San Francisco.

The first 15 floors will be topped by a
10 story tower: 161x121 ft. Estimated cost of the project is $10,500,000, according to Society Officials.

W. D. Peugh, San Francisco, has been selected as the architect, with Irvin Glavan of New York City to act as Consulting Architect.

F. W. Kellberg, San Francisco, has been named Structural Engineer, and the firm of Bayha, Weir & Finato, San Francisco, will serve as Electrical Engineers on the project.

FENESTRA MOVES OFFICES IN SAN FRANCISCO

Announcement was recently made of the change of address of Fenestra in San Francisco to the district office of the Detroit Steel Products Company at 821 Larkin St.

The move was made to provide larger quarters and better customer parking facilities, according to George Quamby, District Manager, who pointed out that the San Francisco office served as the focal point for Fenestra steel products in Northern California, Nevada, and the Hawaiian Islands.

STATEMENT REQUIRED BY THE ACT OF AUGUST 24, 1912, AS AMENDED BY THE ACTS OF MARCH 2, 1933, AND JULY 2, 1946 (Title 28, United States Code, Section 233) SHOWING THE OWNERSHIP, MANAGEMENT, AND CIRCULATION OF

Architect and Engineer, published monthly at San Francisco, Calif., for October 1, 1953.

In selecting materials for Palo Alto's new City Hall, low cost of maintenance received utmost consideration, along with beauty, adaptability and permanence. Colorful Clay Brick supplied the answer... structural strength plus handsome appearance that will never require protection or embellishment. Thus Clay Brick, easy on the eyes and easy on the pocketbook, scores another achievement—for Architect Nichols, Palo Alto city fathers and the taxpayers.

DECEMBER, 1953
M. H. de YOUNG MEMORIAL MUSEUM
The M. H. de Young Memorial Museum, Golden Gate Park, San Francisco, under the direction of Walter Heil, presents a special Holiday Season program of Exhibitions including:

Civic Center Planning, sponsored by the Northern California Chapter of The American Institute of Architects; Dolls—Pageant of the Past, from members' collections of the San Francisco Dolls Club of the United Federation; Gifts Through Five Years, anniversary exhibition of the de Young Museum Society; Four Artists of the San Francisco Art Association, Show No. 1; Paintings by Max Heimann, retrospective exhibition; Drawings by Francis de Erdely; and Contemporary Indian Arts and Crafts, shown in cooperation with the U.S. Dept. of the Interior.

SAN FRANCISCO MUSEUM OF ART
The San Francisco Museum of Art, War Memorial Building, Civic Center, is presenting the following schedule of events and exhibitions for the Holidays:

EXHIBITIONS: Landscape Painting; Paintings by Robert McChesney, Nicholas Roukes, Bryan Wilson and Polia Pillin; 28th Annual Exhibition of the San Francisco Women Artists, and the Albert M. Bender Collection. An added feature is the Christmas Gift Selection of Paintings and Sculpture, and Christmas Decorations of table ornaments and trees.

EVENTS will be highlighted by the annual Christmas Party, Lecture Tours, Discussions, Films, Television programs, and Classes in Art for the Layman and Children.

SPECIAL EXHIBITION OF CIVIC CENTERS
An exhibition of models, photographs, maps and architectural plans illustrating civic center planning in twenty-five cities, both here and abroad, is being shown at the M. H. de Young Memorial Museum, San Francisco. The exhibition, the first of its kind, is sponsored by the Northern California Chapter of The American Institute of Architects. It offers a comparative study upon which expansion plans for the present San Francisco civic center might be based.

SAN FRANCISCO MUSEUM OF ART
War Memorial Building
Civic Center

View of installation of the cut painted paper designs by Henri Matisse for the stained glass windows in the Chapel of the Rosary at Vence, France. In the foreground, Matisse's crucifix for the altar. (From the exhibition, THE ART OF HENRI MATISSE, shown at the San Francisco Museum of Art, May 23 - July 6, 1952.)
The display contains examples of civic design in India and Columbia; and in England, Germany, and Italy, both before and after the second world war. Some of the European cities illustrated were damaged by the war; others untouched by it. In the United States are illustration of redeveloped civic centers which Philadelphia, Detroit, Brooklyn and other major cities had outgrown. California civic centers included are those of Los Angeles, Sacramento, Richmond and Oakland.

Frank F. Ehrenthal, chairman of the Area Planning Committee of the A.I.A., pointed out that when the San Francisco civic center was built in 1911 it was recognized both nationally and internationally as a pioneer project. And plans for succeeding civic centers were based upon it. But since that time advancements have been made in other large cities pointing the way to expansion and adjustments that might be effected locally to meet present day needs.

Mr. Ehrenthal stressed the need for city planning not only for more efficient movement of people and vehicles and better physical well being but for better mental health.

CITY OF PARIS

The Rotunda Gallery of the City of Paris, San Francisco, under the direction of Beatrice Judd Ryan, is offering an Exhibition of Painting and Sculpture by fifty-six artists of the Rotunda Circle entitled “The Cocktail Hour”.

Also featured as a part of the holiday season is a group of landscapes and sculpture.
Shortage of engineers has been a concern of every industry in the country that employs engineers. The highway industry, particularly the state highway department, has been in the worst plight.

Through the efforts of the American Association of State Highway Officials, the American Society for Engineering Education, and the Associated General Contractors, and others, this shortage of the key man has been given serious study and steps taken to secure relief.

It is good to report that major progress has been made.

Right here it must be added that competition is extremely keen for highway construction contracts. The Bureau of Public Roads reports that Nationally, the average number of bids on federal projects for 1946 or seven years ago, was 3.9. Last calendar year the average was 5.0 bids and many bids were well below the engineers’ estimate.

Competition this year is even keener. Figures of the Bureau of Public Roads place the average for the first six months of 1953 at 6.5 bids per Federal-aid project.

99% of Federal-Aid Program Done By Contract

That contract construction is doing the job is evidenced by the fact that during the last seven years, 1946 to 1952 inclusive, 98.9 percent of the Federal-aid highway construction program was executed by contract. Moreover, more and more states are finding that maintenance by contract is the solution to the manpower problem and a means of saving money.

The items discussed so far will bring about large savings in the long-range program. But I suppose you are saying “What can be done to bring about savings in our construction program this year?”

Methods to Obtain Economy

The AGC is a contractors’ organization and not a design engineers group and we shall not attempt to tell you how to prepare detailed designs regarded as the most economical. However, from the standpoint of overall economy, we do strongly recommend:

a. That in preparing his design the engineer constantly keep in mind the methods to be used for economical construction by the contractor.

b. That the engineer be responsible for the accuracy of borings and subsurface data shown on plans.

c. That engineering plans be complete and definitive, yet sufficiently flexi-

REMODEL

FIRST PRESBYTERIAN CHURCH

CHURCH Prior To Extensive Remodeling Program
REMODELING IN PROGRESS

THE SITE: Ideally located on a rise in the center of the city. Although extremely limited in size, it has great value in its accessibility and as a familiar landmark, as well as having a high property value.

FLOOR PLAN OF BUILDING—BEFORE

THE PROBLEM:
To remodel existing church (c. 1911) that was inadequate in facilities and structural strength.

Provide maximum seating in the sanctuary with provisions for overflow.

Improve worshipful atmosphere and general appearance of the building at a minimum cost.

Strengthen entire structure to meet accepted engineering standards.

Modernize plumbing, heating and cooling facilities.

THE SOLUTION:
Church school facilities were moved to a recently purchased residence located at the rear of the church. A new education building on the site is planned for future construction.

The Sanctuary was expanded as far as the site allowed, and by utilizing space released by relocating the church school, seating was increased from 175 to 375 plus overflow.

Judicious use of materials and revamping the building's lines and main masses (as far as it was economically feasible) improved the building's atmosphere and appearance.
Interior Finishes: Natural redwood panels and grilles.
Colored plaster
Gold and tinted glass lighting fixtures.
Carpet and asphalt tile on floors.
Stained and matted glass windows.

Exterior Finishes: Stucco
Redwood Trim
Belfry Tower: Copper over asphalt shingles.

THE COST:
$42,500 excluding fees, pews and furnishings.

PLAN
Of the Newly Designed Church After Remodeling.
SITE AND DEVELOPMENT

Golden Gate Baptist
Theological Seminary

MARIN COUNTY, CALIFORNIA

$10,000,000.00 PROJECT

JOHN CARL WARNECKE, A.I.A.
Architect

AT LEFT—John Carl Warnecke, A.I.A. Architect, pointing to Strawberry Point Campus site of the Golden Gate Baptist Theological Seminary.

Dr. Harold K. Graves, President of the Seminary, discusses architectural development of the 125-acre site with Architect Warnecke.
May all who see the new campus of Golden Gate Baptist Theological Seminary, when completed, be impressed with the greatness of human life and the glory of the divine calling.

The above statement, from a prominent Baptist clergyman in the deep south, is but one of many inspiring messages brought forth by announcement of plans for a complete new campus of Golden Gate Baptist Theological Seminary on Strawberry Point in Marin County.

This project is one which is naturally of great interest in religious and educational circles on the Pacific Coast. The news was made public on October 2, 1953, that the seminary trustees had authorized purchase of a 125-acre piece of Strawberry Point from Samuel R. Neider for an undisclosed sum, with John Carl Warnecke, A.I.A., of San Francisco and Oakland, as architect for the entire project, which will continue over an estimated ten years and involve some $10,000,000 investment. Since that time, the purchase has been completed and the new property owners have been granted a use permit by the Marin County Board of Supervisors.

In expressing his appreciation of the prompt action of the Marin planning authorities and the supervisors, the seminary’s president, Dr. Harold K. Graves, made the following statement:

"We feel that we have found just the right spot for the new campus. It has everything we could wish for. We have now been made to feel that we are welcome to the county and the community of Strawberry Point and we hope to be good citizens and neighbors."

To many people, such an ambitious program, carefully projected and soundly supported by an

CHURCHES IN THE MODERN WOOD

By ARTHUR W. PRIAULX

It is in contemporary church design that the western architect has risen to heights of magnificent imagination, yet retaining the sacred and traditional habiliments and form of the church of the ages.

Whether it is the great Washington Cathedral or a neighborhood church of a poor parish, the architect and designer has met the challenge in designing a sacred house of worship in the spirit of our age of change.

There has been no abandonment of the influence of the hallowed temples of ancient Egypt and Greece, nor a sharp departure from the traditional Roman and Gothic forms which have through the ages been identified as the classic religious styling. Nor have the modern designers lost contact with the influence of simplicity introduced in early American churches.

But, the needs of the modern have changed, and so must the architecture to be functional. From
soley a place of worship, the modern church in every faith has evolved into a more complex structure. Today the church is a community center. It has the sacred rooms for services, the less formal rooms for Sunday school, and all manner of new rooms for social affairs, extra-curricular activities not exactly religious in character, but properly considered today a function of the church. Youth activities have expanded, thus increasing the multi-purpose nature of the new church.

The modern architect is creating a church in the modern mood, patterned, it is true, after ancient and medieval originals, but designed for the changing scope of religious activities.

We are in the midst of a vast church building period, probably unsurpassed in history. More than one billion dollars worth of church construction is presently planned or contemplated. The challenge to the architectural profession to utilize this opportunity to create a contemporary ecclesiastical styling as distinctive as that of ancient, me-

dieval, or early American periods is being met with enthusiasm, daring and original expression which is both exciting and satisfying.

It is apparent that a definite 20th century sacred style is evolving from all this vast activity. Architects find their requirements somewhat similar and pressed always for economy, they gravitate to the sturdy, modified-classical, contemporary house of worship. Churches seldom become obsolete, old age enhancing rather than reducing values. Therefore, age-tested materials, such as stone, cement, glass and wood are used.

Here in the field of new materials lies the op-

SEVENTH DAY ADVENTIST CHURCH—Boulder, Colorado. Jones and Hunter, Architects. Sweeping arches provide a nave to accommodate one thousand worshipers.
LUTHERAN CHURCH OF THE REDEEMER, Van Nuys, California. John Fleming, Architect. Interesting use of cross members & king bolt reaching to roof apex which serve to ornament the simple arches.

LUTHERAN CHURCH OF THE REDEEMER, Van Nuys, California. John Fleming, Architect. Interesting use of cross members & king bolt reaching to roof apex which serve to ornament the simple arches.

In a church structure, when you shape your roof, you have set your design. The roof dominates virtually all ecclesiastical buildings. Certainly, then, the most impressive and dramatic evolution in the entire field of church design is the perfection of a new engineering material which has given wings to architect's imagination. This new engineering material has been known to man since the time of Solomon, but never exploited commercially until the past decade and a half. It is a new engineering material made from the oldest known structural material—glue-laminated wooden trusses and arches.

Unquestionably the advancement made by architects in the design of vastly improved church structures and the development of a wide range of economical styles has been due to the amazing flexibility of these tailor-made wooden members.

With a truss or arch that can be shaped almost at will to meet the demands of a design problem, the architect has been handed tools he never possessed before. Beautiful, long sweeping arches, reaching heavenward from the church floor, release almost all limits on the imagination and ingenuity of the designer. The architect can create massive laminated arches several feet in thickness, which will support the tallest church roof, and without posts or obstructions of any kind, cover a room large enough to seat comfortably 1000 people. Or, he can have a truss, arch or beam laminated small and dainty for specific purposes where strength is not important. The de-

QUEEN OF THE ANGELS CHURCH
Port Angeles, Washington
John W. Moloney, AIA, Architect
Cambered beams lend a tone to this beautiful church not ordinarily seen.
signer can have built of wood arches in almost any shape, size or style, with almost any desired curvature or taper built into the wooden structure.

Wood has been associated with churches in the minds of man down through all the ages. Architects honor this tradition by leaving these massive and beautiful wooden arches exposed whenever possible. New exterior glues are important where beams in belfries and other exposed places must withstand weather and exposure.

Wood serves as well to bind the present with the past, for as new methods, designs and techniques appear, wood comes up in many structural and decorative forms. The combination of structural performance of the glue-laminated arches with graceful lines has increased the popularity of the wooden arch and truss among church designers.

When the trusses were erected for the Fauntleyroy Congregational Church, Seattle (see Page 12), they created such a dramatic focal point against the green background of trees that Architects Robert L. Durham and Associates designed a remarkable full glass chancel wall which gives the church an extraordinarily unique expression. The design is extremely simple and pleasing. Trusses were spaced eleven feet apart, making possible the use of 3-inch T&G hemlock planking placed directly on the top member of the truss without use of purlins. The window mullions of the chancel wall are of spruce to give the strength needed in 30-foot lengths. Handsplit cedar shingles cover the roof and the walls have been built up of cedar boards and batts. The basic design of this truss was not dictated by any wish to be stylistic, but merely to give a graceful line which would create the effect of as much height as possible in this church intended to seat 340 persons. Trusses were brought down at pew ends to encourage use of

side aisles, expressing added length to the nave.

Architects Robert L. Durham and John C. Lindahl, and associate architects, had a different problem in designing another Seattle church, the Community First Congregational at Bellevue (see Cover). A slightly larger basic design to seat 370 with 15-foot pews called for wider spacing so parabolic arches were used. The arch was coordinated with a clerestory design in which 2x8 studs were placed 12 inches apart. This gives a very light interior without glass area visible to the worshipper. Below the soffits on each side, angular screened walls were used so that light comes
in every four feet, without glass being evident to the person in the pew. Since there is a basement below, the bottoms of the trusses were tied together with laminated beams supporting joist construction.

"We are pleased," Robert L. Durham stated, "that the flexibility of using laminated trusses has allowed us to create two designs in churches of similar size with entirely different atmospheres."

The church at Fauntleroy received the 1952 honor award from the Washington state chapter of AIA.

Architect James M. Hunter, AIA, Boulder, Colorado (see Page 13), in designing the Seventh Day Adventist Church of that city, had the problem of creating a structure large enough so the nave would seat 750 people and still keep costs down to a minimum. To get beauty as well as utility, he went to a 61-foot, four inch laminated bent arch for his structural skeleton. The bents are pin-coupled at the ridge and the entire load is carried directly to the foundation where it is tied across with a steel rod. This permitted the designers to effect considerable saving in the masonry work and avoided load-carrying piers. Hunter believes the wooden arches provided a maximum span for a minimum expense and gave added ceiling height over and above what any other truss would have provided.

"We have used laminated wood," Hunter said, "to a considerable extent in the past few years, in an effort to reduce building costs, both in church construction, in schools and public work."

A western contemporary church which has attracted much attention in California is the St. Albert the Great Church in Compton, designed by Chaix and Johnson, architects, AIA, Los Angeles.
The keynote of this design is simplicity, originality and economy. The curving laminations are restful relief from the straight line severity of the contemporary simplicity of design. A clear view of the altar may be had from the wall which connects by folding doors on one side and nursery chapel on the other. Hall roof is constructed of laminated beams, and the hall and church together seat 600. Lighting is concealed behind laminated wood trusses, so there are no hanging light fixtures to mar the simplicity of the huge nave. "Wood trusses," Chaix and Johnson declare, "are the only method of construction for this type of building which would allow an unobstructed roof interior and still give the warmth and texture that only natural wood can have."

The Lutheran Church of the Redeemer of Van Nuys (Page 14, top), California, may well establish a style for small churches where cost is a controlling factor. The attractive, modern house of worship was designed by Jno. H. Fleming, AIA, Glendale, and has already been copied by three other church groups. The church could be called a growth-church, for it has been so designed by Architect Fleming that additional space can be added to the nave without structural changes by adding additional laminated arches.

Interior View

Architect Fleming used laminated arches to get height in the nave, which money often fails to permit in small churches; also, in designing for horizontal forces, this type of arch is economical in a small high structure. Present plans for this building call for a "U" shaped structure with an educational unit at rear tying the present building to the future larger sanctuary. To get maximum economy, roof decking was left exposed to
form an attractive ceiling which fits well with the exposed beams and purlins. The glue-laminated rib has a very definite appeal, says Architect Fleming, in small church interiors because of its simplicity and honesty.

One of the northwest's best known church designers is John W. Maloney, AIA, Seattle, who has developed one of his usually fine buildings in the Queen of the Angels Church at Port Angeles, Washington (Page 14, bottom). He used six 48-foot cambered and tapered laminated beams on 14-foot eight-inch centers for his roof section. The effect is one of rugged simplicity. This is an example of the flexibility of laminated beams and gives an idea of the added latitude afforded an architect when going to this form of roof support.

Donald W. Edmundson, AIA, Portland, has given his talents to many an outstanding church in the northwest. A fine craftsman, his houses of worship always are distinctive, like the new Kern Park Christian Church, in Portland (Page 15, bottom). Again Edmundson has drawn from the lovely small parish church of the English rural areas for his motif. The V-type arch with parabolic curve is the ideal shape for roof where timber is to be such a dominant part of the church interior. Exposed purlins and roof sections match the texture of highly polished wood in the arches. There is an intimacy about these parish-type buildings which seem to reach out to the worshiper.

One of the best examples of the cathedral effect of lofty height in a small and narrow church structure has been obtained by Architect James L. Payne, Portland, in his Holy Cross Lutheran Church (Page 15, top), of that city. Tall, boomerang-type arches give an illusion of great loft in this building which carries the general feeling of up-
ward sweep even into the chancel where a more modified form of arch serves in a narrower area. Decking has been installed vertically, laid against purlins and left exposed to give an atmosphere of reflected warmth from the soft-textured fir arches and decking. Architect Payne has departed from the traditional by installing rows of low windows along both walls at head height when worshipers are seated. A number of contemporary western churches include this feature. In such cases the traditional, stained-glass windows are generally eliminated in favor of the more utilitarian glass areas.

Parabolic arches, which sweep upward away from the walls in graceful curves to snug up underneath the roof which they support, create a structure of unusual architectural beauty in the First Lutheran Church of Alhambra, California.
CHURCHES . . .

which Culver Heaton, AIA, Pasadena, has designed (Page 20). Heaton has created a church which has both dignity and great strength. The exposed arches break the square lines and give a flowing unity to the design plan. It is an altogether remarkable building, a tribute to the imagination of the designer.

To get maximum safety in their church structures where earthquakes are a threat, Architects Frick and Frick, AIA, Pasadena, have used hinged arches to give adequate horizontal bracing. These laminated arches have several features that we particularly like, Arthur Frick advises. They combine a clean structural system with the utmost in economy and the results provide space that is particularly appropriate for church use. They offer any number of possibilities for interior design as the slope of the roof structure and width of span is completely flexible. "We have used laminated arches," Arthur Frick pointed out, "which have the same beauty of clean structure and allow the architect to use the full extent of his imagination." The La Crescenta Methodist Church (Page 18) is typical of the splendid church structures which this brother architectural team has been creating in California.

Much of the beauty of the traditional church has been retained in the lovely Immanuel Christian Reformed Church of Ripon, California (Page 21), designed by Architect G. N. Hilburn, Modesto. He has used a series of five glulam arches forty-three feet long which have been built up with an interesting camber at heel and ridge. An extra thickness has been built into the arches at the ridge to give an effect of greater weight in the roof section. An illusion of increased depth with effective shadows and character has been obtained by creating two different pitches in the lower line of the arches and the line of the roof decking.

San Gabriel's First Methodist Church, designed

FIRST LUTHERAN CHURCH OF ALHAMBRA, Alhambra, California. Culver Heaton, AIA, Architect. Remarkable effect of a double structure is realized by curving arch members away from side walls.
by Architects Quintin-Westburg, (Page 23, top), is still another example of the wide range of flexibility of modern structural materials and their impact on modern church design. In this instance, the designers used triangle arches for framing with a super-structure of lighter framing reaching to the ceiling apex. These structural members are held firmly to the arch with iron straps which serve both for structural purposes as well as beauty. The decking has been left exposed in this church, but laid diagonally on the purlins in each section in an interesting pattern.

Church enrollments are growing at a rapid rate, so the architect with an eye to practical problems must consider this factor in designing the basic floor plan as Kurt Schuett, AIA, Portland, did when he created the lovely St. John's Evangelical Lutheran Church of that city (Page 23, bottom). It is another growth-church. The chancel wall is built so that it can be moved as new arch sections are added. Eventually the church will be L-shaped and the present nave will serve as overflow for future church. Schuett likes the dramatic and colorful effect of the natural wood and has left the two-inch fir decking exposed as well as the purlins and laminated ecclesiastical arches.

No review of church structures on the Pacific Coast would be complete without at least one of Pietro Belluschi's unique architectural conceptions. One of his most distinctive is the remarkably conceived St. Philip Neri Catholic Church in Portland (Page 17). There is much symbolism in the outward facade of this building, a daring sweep to the structural lines which is most attractive. There has been no sacrifice of graceful utility. The lofty roof of the nave and chancel is supported by glue-laminated split beams with purlins engineered to match the great strength of the roof section. There is a vastness about this nave not apparent from the outer expanse of the building, it seems this effect has been gained by getting a maximum, unencumbered clear wall sweep. The
use of slit windows also does not detract from the effect of height. This is Belluschi at his imaginative peak.

Somewhat off the traditional in church architecture is the clean-lined, simple motif of the Sacramento Church of the Brethren (Page 22), a creation of Architect Lloyd Osborne. He used massive boomerang-type laminated arches which join in a parabolic curve, tapering to almost dainty proportions at the V-joint. In turn this curved structure supports a T-shaped lighter wooden structure which extends into the roof apex. The structure and arch are hinged together to give added horizontal stability. To continue the theme of extreme severity, decking has been laid on rafters set on the purlins. The entire upper structure of wood has been left exposed, as has been the case in many of the contemporary western designed ecclesiastical buildings.

In a good many cases architects have specified that these exposed members of wood be left untreated, unstained and unpainted. The desire is to get the delicate effect of well-worn and aged wood common to houses of worship in older countries. In a few cases, decking and exposed beams have been given a coating of clear varnishes to retain as faithfully as possible the natural color and tone of the wood.

Native western woods afford the architect a fine selection of species with which to design his church structures. A part of the region, with an affinity for the soil, these woods blend well with stone, brick and glass to create structures of rare charm, beauty and durability. One of the finest possible recommendations for native woods, whether in the form of glued arches and beams, or in the form of timbers and lumber, is the matter of economy in costs. Most architects are frank to admit they use native materials because they can save money, and money is always a paramount consideration in limiting church design excesses. They are also just as quick to proclaim the virtues of wood and the great freedom this oldest known structural material gives them in design latitude. Unquestionably, the development of the glulaminated arch and beam as an engineering

**CHURCH OF THE BRETHREN, Sacramento, California. Lloyd Osborne, Architect. Massive are these arches which impart a definite strength of character to this overly simple nave.**
material has opened up entire new fields for the architect in church design. He can let his imagination run almost unhampered, he can create structures of exquisite loveliness, he can retain the traditions of the Gothic arch with modern variations and improvements, he can capture the religious spirit in his buildings and yet give worshipers inspiring architecture to earn their continued interest and approval.

Western architects are leading the way nationally in the creation of a contemporary church form. Aided by these new materials, they are doing some of the outstanding designing in the entire nation. Gradually, a western contemporary church form is emerging. It combines the best of the old with the knowledge of needs of today. It clings to church dogma, yet sparkles in new ideas of church function. It provides reverently for religion’s traditional ceremonies at the altar and chancel by using modern techniques to glorify the chancel area with newly learned methods of lighting and acoustics. This new form does not affront even the most devout, and certainly it is not so intended. It is intended to bring into this most popular of all public gathering places, the comforts and advantages learned from modern science and invention, and the lessons learned and practiced by architects free to use their skills and arts in a field too long bound by unyielding tradition.

FIRST METHODIST CHURCH, San Gabriel, California. Quintin-Westberg, Architects. This unique California church is noted for its simplicity of lines.

ST. JOHN’S EVANGELICAL LUTHERAN CHURCH, Portland, Oregon. Kurt Schuett, AIA, Architect, Portland. Growth churches which can be expanded readily are the answer to increasing enrollments.
Design of a reinforced-concrete beam flexed by bending moment in two directions can be solved by fixing the direction of the neutral axis on a selected slope. The beam in Fig. 1 is loaded with a vertical bending moment of 32,000 ft lbs and a lateral moment of 16,000 ft lbs. Allowed stresses are 1200 psi in the concrete and 20,000 psi in the steel, and \( n \) equals 10.

The cross section of the beam is drawn with \( d \) equal to 10 units on any convenient scale. The width of the beam from right-hand edge to left-hand bar is proportioned as desired; in this case it is shown as \( .67d \). The point \( O \) through which the neutral axis passes is on the line connecting the left-hand bar with the upper right-hand corner, at a distance \( kd \) vertically from the top.

The length \( A \) of the compressive area is selected so that the lower end of the internal moment arm will, when drawn later, pass approximately through the quarter point of the distance between bars. The selected compressive area may be triangular or trapezoidal. If triangular, distances \( X \) and \( Y \) to the center of gravity of the compressive force are one-fourth of \( A \) and \( B \) respectively. If the area is trapezoidal, these distances and \( F \), the internal tensile and compressive force, may be computed in terms of \( d \) by exact methods, or they may be found by the empirical formulas (2), (3), and (4) of Fig. 2, in which \( B' \) is the vertical height of the compressive area on the left-hand side.

\( A \) is here selected as \( .60d \), whence \( B \) scales \( .645d \). From the c. g. of the compressive force the internal moment arm is drawn parallel to the vector sum of the two externally applied moments to intersect the line of tensile steel; in Fig. 1 it terminates at the scaled distance of \( .569d \) from the right-hand edge.

\[
\begin{align*}
(1) \quad \text{kd} &= d \frac{k_e}{k_e + f_c} = d \frac{1200}{20,000 + 1200} = .375d \\
(2) \quad X &= .25A \left[ \frac{B}{B'} \right] \quad \text{FOR TRAPEZOID} \\
(3) \quad Y &= .25B + \left[ \frac{B'}{B} \right]^{.2} \times .083B \\
(4) \quad F &= \left[ \frac{.67 + \left( \frac{B'}{B} \right)^{.4}}{.333} \right] k_e AB \\
(5) \quad F &= \frac{k_e AB}{6} \quad \text{FOR TRIANGLE} \\
(6) \quad F &= \frac{32,000^*}{d - Y} \\
(7) \quad F &= \frac{32,000^* \times 12}{\left( 1 - \frac{.645}{4} \right) d} = \frac{1200^* \times 6d \times .645d}{6} = 18.08^* F = 25,400^* \\
(8) \quad .67 \times 18.08^* - 2.00^* = 10.10^* \\
(9) \quad 25,400^* \times \frac{.569 \times 18.08^* - 2.00^*}{10.10^*} = 20,800^* \\
(10) \quad \frac{25,400^* - 20,800^*}{20,800^* \times .474d} = .52^* 
\end{align*}
\]

FIG. 2

Computations are shown in Fig. 2. By combining formula (4) or (5) with (6), \( d \) and likewise \( F \) can be found. As shown by equation (7) \( F \) is 25,400 lbs and \( d \) is 18.08 in., and the scale of the drawing is established. According to (8) the distance between bars is 10.10 in. Taking moments about the right-hand bar in (9) shows that the force in the left-hand bar is 20,800 lbs, and at 20,000 psi 1.04 sq in. is required. Since the unit tensile stress in each bar is proportional to its distance from the neutral axis, (10) shows that the re-
AN INVESTMENT BLUEPRINT
for
ARCHITECTS & ENGINEERS

By FRANK KIHM*

The professional services of an architect who conceives, plans and supervises the construction of a building, or the engineer who designs a bridge or dam are roughly comparable to those rendered by the economists, security analysts, and statisticians who direct the investment of funds pooled by many shareholders in investment companies. There is an important difference, however: architecture and engineering are most exact sciences, but managing money is an art, based upon knowledge derived from formal education, continuous research, experience, objectivity, and good judgement plus the ability to translate decisions into action.

Thus the primary asset of a mutual fund or investment company is its management. The progress or retrogression of an investment company is a direct reflection of the degree of the management's skill. And the results are plainly charted. Under provisions of the Investment Act passed by Congress in 1940, investment companies must furnish stockholders at least twice a year complete data about its operations. Most companies report every three months. Investment holdings are shown, and in many cases portfolio changes—securities added or eliminated—are listed. Net asset value per share, which represents the company's net resources after deduction of all liabilities divided by the number of shares outstanding, is usually reported on a comparative basis. Investment companies compute net asset value daily and are the basis of "bid" prices of sponsors or issuers which are usually carried by metropolitan papers daily under the caption "Investment Co. Funds." Thus the investor knows at all times what his shares are worth.

Discussion of current economic conditions are sometimes included in reports of investment companies. The president of one of the leading funds had this to say in a letter to shareholders dated October 20, 1953: "The evidence presently at hand does not suggest that the country is facing a substantial business depression. Sustained government expending for defense purposes, prospective cuts in personal and corporate income taxes, the large reservoir of personal savings, continuous rapid growth of population and forthcoming application in industry of recent scientific and technological developments, all in your management's estimation, work toward maintaining a high level of national income. Against this background, it is your management's current opinion that carefully selected common stocks today represent excellent values for the purposes of the Fund—all the more so after the declines witnessed in the security markets this year."

There are about 150 investment companies operating at present. Managements vary—some achieved better success than others. None are omniscient or infallible. There is a sales charge to the investor averaging 7 1/2%, covering the purchase, and the sales of these securities. There is also an annual management fee averaging 1/2% of the amount invested.

Just as the architect's fee is a most invaluable factor in the cost of a building project, so are the charges, involving expert selection and supervision and widespread diversification of securities an invaluable item in an investment program.

Editor's Note: This is the third of a series of special articles written for ARCHITECT & ENGINEER magazine by Mr. Frank J. Kihm relating to financial relationships with the construction industry. Another article will appear next month.
WASHINGTON STATE CHAPTER

The December meeting was a review of the Chapter's activities during the past 59½ years, with Senior members being given a place of honor in recognition of their promotion of the architectural profession and community service.

A number of Committee reports were given and a general discussion centered on the program for next year. It was agreed that the year ending had been a "busy" one, but, next year would be even more so.

SAN DIEGO CHAPTER

"Recent School Buildings in California" was the theme of the December meeting. Through the cooperation of "Pat" Paderewski, a number of colored picture slides of outstanding school buildings in California were shown and accompanied by a running commentary by "Pat".

NOMINATING committee for election of officers at the January meeting was named.

NORTHERN CALIFORNIA CHAPTER

Frank Lloyd Wright was honored, the latter part of November, when some six hundred and thirty architects, architectural students and guests turned out to hear Wright censure the architectural profession at a dinner given in his honor.

In his customary, headline capturing manner, Wright declared "I am ashamed of my profession" in his opening statement, and as expected his comment made the daily papers.

Assisting in the event were members of the Women's Architectural League, Mrs. Leffler Miller, president.

National AIA awards of merit were presented to Stephen Allen and Robert Anshen for their Santa Clara house, and to George Rockrise for a Marin County residence, prior to the address by Wright.

OREGON CHAPTER

Reports of recent AIA meetings featured a re-
cent meeting of the Chapter. Waldo Christensen, Regional AIA Director, discussed a Board meeting, and Ralph Decker, vice-president of the Washington State Chapter, reported on a number of cooperative activities of the Washington Chapter dealing with city and community planning.

A conference on School Planning was conducted on the Campus of the University of Oregon, sponsored by the Oregon State Department of Education and the School of Education at the University of Oregon. Representing the architectural profession was Jack Annand.

PASADENA CHAPTER

William Manker, well known and distinguished color consultant, was the principle speaker at the December meeting, taking as his subject "Architectural Interiors". Manker maintains offices in Los Angeles and Pasadena Hills.

SOUTHERN CALIFORNIA CHAPTER

The December meeting was a joint meeting with the Long Beach Association of Architects, and was held at the Lakewood Country Club, Long Beach, with the Long Beach Club hosts of the meeting.

Cornelius M. Deasy, Secretary of the Southern California Chapter AIA, was the principal speaker and gave a resume of his recent trip through Western Germany as a member of a U.S. team to study reconstruction procedures and community planning. His talk was accompanied by the showing of colored slides.

WASHINGTON'S NEW ARCHITECTS

Stephen M. Curn, Douglas P. Haner, Lois Jane Hastings, Donn L. Rothe, William Trogdon, and Anne Detwyler Warren, all recently passed the 1953 examination and have been granted licenses to practice Architecture in the State of Washington.

Here's Why

ANTI-HYDRO IS THE BUY

When You Want Durable Concrete

1. Increases slump of concrete.
2. Permits use of less water in concrete mix.
3. Permits control of hardening time of concrete.
5. Steps up the strength of concrete.
6. Reduces shrinkage over untreated concrete.
7. Prevents 100% watertight concrete in government tests.
8. Protects steel reinforcing from corrosion.
9. Effects a perfect bond between mortar and concrete.
11. Internally cures, hardens, dustproofs concrete floors.
12. Offers field inspection service on jobs to be guaranteed.

TRAINING COURSE FOR SCHOOL CONSTRUCTION INSPECTORS

A course designed to train building inspectors for school construction inspection is being held in Los Angeles under sponsorship of the Structural Engineers Association of Southern California and the Southern California Chapter of The American Institute of Architects.

The California Legislature, shortly after the disastrous 1933 Long Beach earthquake, enacted laws requiring school districts to carry on continuous inspection of all public school buildings under construction. The purpose of the training program, therefore is to improve and unify field inspection and construction of school buildings.

General subjects to be covered by lectures include: Overall duties and responsibilities of school construction inspectors; structural inspection requirements; mechanical finish inspection requirements; electrical and architectural inspection requirements.

Lecturers for the course from the SEAOSC include: Robert Bolin, principal structural engineer, and Bernard S. Harder and Milton Nigg, district structural engineers, of the Los Angeles office, State Division of Architecture; Donald Cuniff, assistant maintenance and operations officer, Los Angeles Board of Education; John Glazer, director of buildings and grounds, Pasadena City School system; and Robert Cousineau, John Minasian, Lewis Osborn, Henry Layne and Charles Peterson, structural engineers.

Representing the AIA as lecturers will be Henry Wright, president of the Southern California chap-

FEMINEERS
The FEMINEERS, wives of members of the SEAOSC, took over the Tonga Room of the Fairmont Hotel, San Francisco, for their annual Christmas Party on the 16th of December. Highlight of the luncheon was presentation of the Atens Water Follies program “Here Comes Santa Claus” starring Olympic swim champions.

Special invitations were extended members of the American Society of Civil Engineers, East Bay Structural Engineers, and Structural Engineers of Northern California. The program was in charge of Mesdames C. R. Graff, Wesley Hayes, H. S. Kellam, William Moore, Theodore Newman, Michael Pregno, Burr Randolph, Howard Schirmer, George Washington, and R. J. Woodward.

PUGET SOUND CHAPTER AMERICAN SOCIETY FOR METALS
Francis G. Tatnall, director of research for the testing machine department of the Baldwin-Southwark Corp., discussed “Translation of Laboratory Tests Into An Improved Product” at a recent meeting of the Society held in Seattle.

Tatnall gave an outstanding presentation of a relatively new approach to the solution of the problem of metal failures. He feels the subject should be approached in forms of complex structures operating under multiple and varying dynamic loads. This requires new techniques of measuring the capabilities of materials and incorporating them into efficient design. These techniques consist of running tests on actual models or complete structures rather than the separate evaluation of component parts.

Complementing these are structural fatigue tests of entire assemblies, and high speed motion pictures of machine operations under varying conditions of dynamic loading.

for CONSISTENCY, ALWAYS SPECIFY HAWS ELECTRIC WATER COOLERS
When you specify HAWS Electric Water Coolers, you are specifying a source of refreshing drinking water that is:

- Consistent in good design
- Consistent in sanitation
- Consistent in mechanical dependability

There is a HAWS Electric Water Cooler for every requirement.

See Sweet’s...or write for new HAWS Catalog...NOW!

1443 FOURTH STREET • BERKELEY 10, CALIFORNIA

DECEMBER, 1953
Phil Brown, Otis Elevator and John Cowley, The Bookman Co. attended the Architects Convention as representatives of the Northern California Chapter Producer’s Council. They were good enough to get together and write up the following good reading.

CONVENTION AFTER-THOUGHTS

The Regional Convention of the California Council of Architects was held at the Hotel Del Coronado on October 15, 16 and 17 and, while a thing of the past, there were several events and deeds which bear repeating.

The San Francisco Chapter of the Producers’ Council was represented by about 12 of its local members and though weak in number, they were strong in spirit and, on occasion, strong in “spirits.” We were guests of the Los Angeles Chapter and rendered assistance to the southerners in the social activities that they fostered. Of particular note was the swim show consisting of the stalwart talents from the Los Angeles Athletic Club, the Sportsmen’s Dinner on Saturday night where John Doe presented the beliefs and viewpoints of a fugitive communist architect, and what he thought should be done to the architectural profession here in California to benefit all of the common people and several cocktail parties where a group of students from the Architectural School at Cal-Poly held the limelight with their singing.

As is usually the case, however, the most outstanding feature of the Convention was the annual struggle between the north and the south for athletic supremacy. The score this year again was in favor of the south, 21-14. For those who did not participate and for those who are not aware of this contest, this is a baseball game and not football as the score would indicate.

In the dressing room after the game, (the bar) the coach advised that the game was actually a lot closer than the score would indicate and that it was only due to their very clever scouting that they were able to exploit our weaknesses.

These weaknesses consisted of poor fielding, poorer pitching, and the inability to hit the ball. There was an exception to this for it seemed that Ed Dill had some kind of an arrangement with the southern pitcher so that he consistently hit home runs.

The north was playing under a bit of a handicap inasmuch as the umpire at home plate was the wife of the southern catcher and the third base umpire was the daughter of the southern catcher. This family combination, the Herman Lights of Los Angeles, was just one of the psychological weapons used by the southern team to take advantage of our small weakness in our athletic ability.

One of the heroes of the game for the north, and a candidate for the award of Future Farmer of America was Clayton Kanitz, architect from Redding, who ploughed a furrow straight and long between home and first base with his nose and eyeglasses. A runner-up in the dirt thrashing department was Berny Sabaroff, architect.

All in all, the game was a success and the trophy remained in the hands of the southerners but with the cries in the background by the northerners of “Wait Until Next Year.”
extensive church organization in 22 southern States of the Southern Baptist Convention, came somewhat as a surprise. The explanation is forthcoming from Southern Baptists themselves that while they are comparative newcomers to California, their churches here have grown very fast and there is now great need for trained preachers, religious workers and church musicians of every category. The small plant of the young seminary, at present located in Berkeley, has become altogether inadequate and in order to accommodate its present student body of nearly 300, is using almost every type of temporary facility available.

The new campus is being planned to accommodate from 1200 to 1500 students, many of whom will be married and will live on the grounds with their wives and children. It will therefore need housing of various types, from dormitories to multi-family housing units.

To the Southern Baptists themselves and to most people throughout the south, such a project is not surprising. To explain this point, Dr. Graves has stated:

"The first Baptist theological school in the South was founded in 1859 at Greenville, South Carolina. It was moved to Louisville in 1877. That school now occupies a beautiful 70-acre campus in the finest section of the city and holds property with improvements worth well over $5,000,000. Its beautiful Georgian Colonial buildings provide a memorable spectacle to thousands of visitors annually. The institution has held a significant place in Louisville's community life through the years.

"Forth Worth and New Orleans have likewise been hospitable homes for our seminaries. Students have come from all over the world to study at the seminaries in these cities, and their graduates have covered the earth in missionary work.

"So beneficial has been the influence of our seminaries, and so wide their recognition, that when a committee of Southern Baptists was looking for a city in which to locate a new seminary in the Southeast three years ago, a score of cities made bids. Atlanta promised $1,000,000 as a beginning if it should locate there. After establishing a new seminary at a location finally decided upon at Wake Forest, North Carolina; that same committee turned to the Baptist seminary operating in Berkeley under the Southern Baptist Convention of California as the institution worthy of support in the West."

The architect for the project, John Carl Warnecke, son of the East Bay's architect Carl I. Warnecke, first came to the attention of the Southern Baptists through his now very well-known Mira

(See Page 33)
JOHN A. BLUME, Structural Engineer
San Francisco, California
A native Californian, John August Blume was born in Gonzales and raised in San Francisco where he attended Lowell High School, and later obtained two engineering degrees at Stanford University. His schooling, like many engineers, was not without interruption, adventure and practical experience—traveling and living in the Hawaiian Islands, working in the construction industry as a laborer, truck driver, steel erector, riveter, carpenter, and surveyor.

Blume has had an intense interest in the earthquake problem since experiencing the Santa Barbara earthquake of 1925. Earthquake-resistant designs and research are as much a hobby as a part of his work.

In this field he has worked with Dr. Lydik S. Jacobsen at Stanford University, in mathematical research on building dynamics, on models of buildings for shaking table research, and in developing and using a portable machine for vibrating buildings, dams and bridges in the Western States. Since then he has worked in design standards, codes, committees, and has given papers and written many articles and books on various phases of engineering seismology. He believes that structures can and should be designed and constructed at little or no extra cost to resist anticipated earthquakes and, further, that this involves professional judgement and not merely the blind following of building codes and mathematical formulae.

Since 1945 Blume has had his own offices in San Francisco for the practice of civil and structural engineering and has been responsible for wharves, docks, towers, special buildings and structures as well as the structural design of a great many schools, public buildings, commercial and industrial buildings, theatres and office buildings. Engineer Blume is active in professional organizations and public service.

NEXT MONTH: John Carl Warnecke, AIA, Bay Area Architect.

GOLDEN GATE SEMINARY
(From Page 31)
Vista Elementary School in El Cerrito (Richmond School District). At the headquarter’s at Nashville, Tennessee, church architects there had read about Mira Vista and liked its character. In time, the Warnecke firm was engaged to make preliminary studies and site analyses for the Golden Gate seminary and on December 12, 1952, was commissioned for the entire project—even though at that time no site had been acquired.

In the meantime, the Warnecke firm has been occupied with a two-fold task. The first, to find a suitable site; the second, to make a complete program for the development of such a campus. For the most part, the actual needs of the institution were not even known to its own people. It took almost endless hours of conferences between the architectural staff, the administrative staff of the seminary and the faculty, to get such a program under way. It will now require some months of hard work in adapting this program to the actual site and in developing a full site utilization plan before specific buildings can be designed. In this part of the work the firm will be assisted by its planning consultant, Lawrence Livingston Jr.

Although no actual buildings have as yet been projected in anything like a definitive form, one thing is definite: the Southern Baptists have no idea of bringing traditional Southern architecture to California. They want the new campus to be developed along functional lines and adapted to Bay area living, while yet retaining the dignity and inspiration of a religious institution.

Strawberry Point, once considered a site for UN headquarters, is admirable for such a development. With natural beauties completely unspoiled, it has pleasantly rolling contours and some higher elevations which lend themselves to dramatic development. A great chapel, to seat upwards of 1500, is to be the central feature of the campus and will be so located and designed that it will be visible for miles.

From the architectural point of view, the Strawberry Point development should provide continuing interest for years to come. And from the religious and educational points of view, Golden Gate Baptist Theological Seminary, with its strong emphasis on evangelical and missionary work, can add immeasurably to the Bay area’s influence in the Pacific area. To quote its president again, "... something which will symbolize the hopes, the dreams, the culture and the spiritual foundation of our civilization."

DECEMBER, 1953
That interpretable so that they may be adapted without loss of time and, if possible, without increases in costs, when conditions change in the field.

d. That interpretation of specifications in the field be entrusted to supervisory personnel who have had practical experience with contractors and who understand their methods of obtaining results and who have authority to make binding decisions.

e. That regularly scheduled field meetings be held between engineer and contractor representatives to discuss the work so as to be of mutual assistance when problems arise.

f. That where separate specialty designs are involved they may be thoroughly coordinated in advance, with field conditions in mind.

g. That it be remembered that a design that appears most economical from a purely design standpoint may actually be more costly if it calls for special construction methods.

Might the AGC further suggest that the awarding agencies seeking greater economy aid the contracting industry by the following logical steps:

1. Write specifications defining precisely and accurately the results you wish to obtain without specifying methods and means for securing the results.

2. Consider new methods of construction, such as prestressing, welding and the use of high-tensile-strength bolted connections.

3. Prepare designs whenever possible that permit duplicate use of formwork.

4. Design and specify the reinforcing steel layouts, the steel detailing, the formwork, the machinery and methods of assembly as simply as good design and construction will allow.

5. Prepare specifications that permit the most economical use of construction equipment and the use of large units whenever possible.

6. Provide inspectors that are experienced mature men able to interpret the specifications accurately without making unreasonable restrictions on the contractors operations.

7. Also provide sufficient inspectors that the contractor can operate "round-the-clock" if conditions require; the contractor's investment in equipment is large and economical methods demand long hours of use of this machinery when weather permits.

8. Prepare designs that make use of a maximum of local materials.

9. Seek for a balanced construction program each year, that is, do not have a lot of culvert construction one year and none the next.

10. Award programs in contracts of various sizes to provide work for the large and small contractors alike, and thereby secure maximum competition.

11. Make each year's construction season as long as possible by awarding all projects as early as possible.

12. Pay the contractor promptly for completed work, his workmen demand that they be paid each pay day and prompt payment of vouchers from equipment distributors and materials men results in lower prices.
13. Before a contract is awarded make certain that all the necessary right-of-way is available, when a contractor moves all of his expensive equipment onto a project only to have his operations delayed seriously by right-of-way difficulties this adds greatly to his costs and may result in higher bids when he bids at the next letting.

Engineers and Contractors Are Ready

The nation is becoming increasingly aware of the highway problem this country faces. As the public relations activities of those groups selling good roads becomes effective at the grass roots level and all highway users are made increasingly aware of the loss this country undergoes each year because of inadequate highways, the American people will demand and will be willing to pay for a bigger road construction program.

You, the state highway employees working with the Bureau of Public Roads and the local highway agencies, will plan and design better roads. We, the contracting industry, will build them. There is no doubt in my mind that when the general public finances a larger highway improvement program we will be able to give them their good roads promptly and that in doing so we will give them their money's worth by continuing to place great stress on improved and more economical construction procedures.

(Conclusion)

REINFORCED-CONCRETE BEAM

(From Page 24)

quired area of section of the right-hand bar is .52 sq in. Width of beam required is 10.10 in. plus 4 in. or 14.10 in., and depth is 18.08 in. plus 2 in. or 20.08 in.

Use 14 x 21 in. beam with a 1-in. sq or No. 9 bar at the left and a ¾-in. bar at the right near the lower face, and near the top face add two ¾-in. bars as suitable top steel. The maximum stresses in this beam when solved by exact methods are found to be 1135 psi in the concrete and 19,000 psi in the steel.

ARCHITECTURAL OFFICE OPENED

The formation of a partnership between Kurt Gross, AIA, and Fred Marburg, Architect, to be known as GURT GROSS, AIA—FRED MARBURG, ARCHITECTS, has been announced.

Offices of the new architectural firm, which will engage in the general practice of architecture, will be located at 390 Park Avenue, San Jose, California.

December, 1953

A complete coverage of all phases of planning for all types of school shops, it answers many questions on planning, laying-out and equipping school shops of all types and sizes.

This 113-page book, including 139 illustrations, is a factual, authoritative volume containing precise, practical suggestions for overall planning and individual shops, i.e. general shops, automotive shops, drafting shops, electrical, radio, TV-Shops, graphic arts shops, machine shops, metal working shops, and woodworking shops.

It has been written for those who are interested in new construction, remodeling, and planning. Includes principles of purchasing and safety in the school shop.

SUNSET IDEAS FOR HILLSIDE HOMES. Lane Publishing Co., Menlo Park, California. Price $1.00.

A new book packed with tested and proven ideas that hill dwellers have used to get the greatest value out of their homes and homesteads. It shows with 100 clear “how-to” illustrations and 125 photographs, how you can take the fullest advantage of your view, utilize your space for pleasant outdoor living, avoid excessive street traffic; provide protection from prevailing winds; prepare your hillside for planting and drainage; select the plants best suited for your sloping garden; use decks and terraces for fullest enjoyment.

Solutions to many problems contained in this book will be of help to every hillside home owner, and to those who are planning hillside homes.

AN OPPORTUNITY TO REBUILD CHICAGO THROUGH INDUSTRIAL DEVELOPMENT ON THE CENTRAL SOUTH SIDE. Published by South Side Planning Board, 2018 S. Calumet Ave., Chicago 16. Price $2.00.

Contains thirty-two pages of illustrations, maps, diagrams, and text. It is the result of a four-year study in collaboration with twenty local public and private agencies concerned with urban redevelopment. The proposal opens vast opportunities for the individual manufacturer who seeks an efficient hillside plant location; for the industrial developer who looks for a profitable investment; for the adjoining community where residential and institutional redevelopment are well under way; and for the city as a whole whose economic future is dependent on the existence of a sound economic base.

Dock board for service. New brochure on Beacon Dock Boards for Service and Quality is available; showing illustrations of uses, permanent and temporary. Describes sizes, and gives many suggestions; designed to specifications. Write Dept. A&E, Hameslag Equipment Co., 45 Elmira St., San Francisco, for free copy.

NEW CATALOGUES AVAILABLE

Architects, Engineers, Contractors, Planning Commission members—the catalogue, folders, new building products material, etc., described below may be obtained by directing your request to the name and address given in each item.

Flush-valves. New Hand Book and Catalog No. 53 just issued by Coyne & Delany Co., features many details and features on the installation and practical use of flushometers, and is the most complete hand book of its kind ever printed. Illustrations show installation details and specifications covering every known type of installation—exposed and concealed. Write on firm letterhead to Dept. A&E, Engineering Dept., Coyne & Delany Co., Inc., 834 Kent Ave., Brooklyn 5, N. Y.

Copper water tube. A 16-page catalog containing technical specifications, giving design and installation data to help in proper selection and application of copper water tube has just been issued by Triangle Conduit & Cable Co. For free copy write Dept. A&E, Brass and Copper Tube Division, Triangle Conduit & Cable Co., Inc., New Brunswick, New Jersey. Ask for Catalog BC-1.

Tennis Courts. A new 12-page, 4-color booklet, for engineers and architects with detailed specifications, color photographs of typical installations, information concerning basic types and styles of all weather LAYKOLD and GRASSTEX tennis courts.

CAMBRIDGE TILE MOVES OFFICES TO REDWOOD CITY

The general service offices of the Cambridge Tile Company, which are under the supervision of Emil te Groen, division manager, have been moved to 132 Wilson Street in Redwood City, California.

Location of the new offices on the San Mateo Peninsula will afford the firm more space for conduct of its business, and will make it much easier for customers as congested traffic and parking problems have been eliminated.

The offices, which were formerly located in San Francisco, serve the construction industry throughout Northern California, Oregon, Washington, Idaho, Wyoming, Utah, Colorado, and Nevada.

TOM DILLON DEVELOPS SAFETY-GRIP BAR

The newest development in a continuous expansion program, with the original adobe home of the Munras family as a nucleus, is the Convention and Recreation building, heated swimming pool and 12-unit cottage building, designed by architect Robert R. Jones, of Carmel.

The Dillon Safety-Grip Bar, illustrated above, was invented by Tom Dillon of the Dillon Tile Company of San Francisco, to meet the requirements of an accident proof, safety grip with concealed mountings for installation in the Minimum Security Prison, State of California, at Soledad. The idea has subsequently been developed for use in hospitals, hotels, and recreational facilities such as the Casa Munras Hotel in Monterey, California.

WOODWORK INSTITUTE OF CALIFORNIA MEETING

The quarterly meeting of the Woodwork Institute of California, meeting in San Francisco recently, heard Carl A. Rasmussen, director of the Research Laboratory of the Western Pine Association in Portland, Oregon, give an illustrated lecture on “Research and Wood Products”.

Special committee reports were given by S. Karns, Bush-Hollenbeck Company of Fresno, who stated additional technical material would soon be available and distributed for inclusion in the Institute’s Manual which was distributed to the construction industry about a year ago.

Russell Bjorn, managing director of the Institute, reported on membership gains and finances.

Robert Hogan, Hogan Lumber Company, Oakland, president, presided.
**BUILDING AND CONSTRUCTION MATERIALS**

**BONDS**—Performance or Performance plus Labor and Material Bond(s), $10 per $100 on contract price. Labor & Material Bond(s) only, $5.00 per $100 on contract price.

**BRICKWORK—MASONRY.**

Common Brick—Per 1 M lb $8.50. Face Brick—Per 1 M lb $12.00 and up. **(accord- ing to class of work).**

Building Stone—$3.00 and up.

Common Brick Veneer on Frame Build. — Approx. $1.70 and up—**(accord- ing to class of work).**

Face Brick Veneer on Frame Build. — Approx. $2.00 and up—**(accord- ing to class of work).**

Common Brick—$4.50 per M truckload, de-

levered.

Fire Brick—$8.00 to $10.00 per M, truckload

loads, delivered.

**DAMPPROOFING and Waterproofing—** Two-cost, work $9.00 per square. Membrane waterproofing—4 layers of saturated felt, $10.00 per square.

Hot coating work, $5.00 per square. Moduza Waterproofing, $3.50 per Ib. San Francisco Warehouse.

Tricalc concrete waterproofing, 60c a cubic yd. up.

**ELEVATORS—**

Prices vary according to capacity, speed and type. Consult elevator companies. Average cost of installing a slow speed automatic passenger elevator in small four story apartment building, including entrance doors, about $9,500.00.

**EXCAVATION—**

Sand, $1.00; clay or shale, $1.50 per yard. Trucks, $30 to $15 per day.

Above figures are an average without water. Steam shovel work in large quantities; less hard material, such as rock, will run considerably more.

**FIRE ESCAPES—**

Ten-foot galvanized iron balcony, with stairs, $250 installed on new buildings; $300 on old buildings.

**Floors—**

Asphalt Tile, 3/4 in. gauge 18c to 35c per sq. ft.

Composition Floors, such as Magnesite, 40¢ to 75¢ per sq. ft.

Linoleum, standard gauge, sq. yd. $2.00.

Mistpine—1.50 per sq. yd., Brush Linoleum, 3/4" $3.00 sq. yd.

Tereso Floors—$2.00 per sq. ft.

Tereso Steps—$2.50 per lin. ft.

Mastic Wear Coat—according to type—20c to 35c.

  - 4 inch double partition ½ inch panels and metal lath 1 side: 7.50
  - Thermak single partition: 2 ½ ft. overall partition width. Plaster both sides: 10.00
  - Thermak double partition: 2 ½ ft. overall partition width. Plastered both sides: 15.00
  - 3 coats over 1 Thermak nailed onto one side wood studs or joists: 4.50
  - 3 coats over Thermak suspended to one side wood studs with spring sound isolating clip: 5.00

**PLASTERING (Exterior)**

- 2 coats cement finish, brick or concrete wall: $2.50
- 3 coats cement finish, No. 18 gauge wire mesh: $3.00
- Lime—$4.00 per bbl at yard.
- Portland cement—$4.15 per bbl at yard.
- Rock or Grit Lath—2½ c. per sq. yd.: 25c
- Composition Stucco—$4.00 sq. yd. applied.

**PLUMBING**

- From $200.00 per fixture up, according to grade, quality and runs.

**ROOFING**

- **Standard** tar and gravel, 4 ply: $13.00 per sq. for 30 sqs. or over.
- Less than 30 sqs. $16.00 per sq.
- Tile $4.00 to $50.00 per square.
- No. 1 Redwood Shingles in place.
  - 4½ in. exposure, Per square: $18.25
  - 5½ in. No. 1 Cedar Shingles, 5 in. exposure, Per square: 14.50
  - 6½ in. No. 1 Cedar Shingles, 5 in. exposure, Per square: 18.25
  - 4½ No. 2 & 124 Royal Cedar Shingles, 5½ in. exposure, Per square: 23.00
  - Re-cover with gravel & metal $5.50 per sq.

**STEEL**

- **Structural**
  - $290 per ton erected, when over 1 1/2 story.
  - $350 per ton erected, when over stock.

**TILE**

- Ceramic Tile Floors—Commercial $1.20 to $6.00 per sq. ft.
- Cove Base—$1.40 per lin. ft.
- Quarry Tile Floors, 6x6" with 6" base: $1.35 per sq. ft.
- Tile Wainscots: Floors, Residential, 4x4x4, $1.45 to $2.00 each.
- Tile Wainscots: Commercial Jobs, 4x4x4 Tile, $1.50 to $1.65 each.
- Asphalt Tile Floor 5x5, $1.85 to $3.50 per sq. yd.
- Light shades slightly higher.
- Cori Tile—4 x 7, 70 per sq. ft.
- Mosaic Floors—See dealers.
- Limestone tile, per sq. ft: $6
- Rubber tile, per sq. ft: $5 to $7.50

**VENETIAN BLINDS**

- 75c per square foot and up. Installation extra.

**WINDOWS**

- **Steel—Industrial**
  - Cost depends on design and quality required.

PRE-WIRED LIGHTING SYSTEM SAVES TIME

Silbray Skylite, a complete factory pre-wired and pre-assembly unit for recessed lighting systems; can be installed in 4 time saving steps.

INSTALLER, nails, or wires, frame in ceiling opening, connects service conduit to outlet, locks socket screws to reflector in special key-hole slots and engages unit mounting screws to frame. Beautifully styled in smart, contemporary louvered design, finished in baked enamel, unit or multiple installation.

Unit is fully approved by Underwriters' Laboratories, manufactured by SMOOTH-HOLMAN Co., Inglewood, California.

ARCHITECT SELECTED

The architectural firm of Corlett & Anderson, Oakland, has been commissioned by the County of Alameda to draft plans for the construction of an Out-patient Clinic Building to become a part of the Highland Hospital in Oakland.

Estimated cost of the project is $1,500,000.

PROFESSOR EUREKA

ARCHITECT DIES

Franklin T. Georgezon, 64, one of Northern California's well and popularly known architects, died at his home in Eureka, California, the latter part of October.

Born in San Francisco, Georgezon moved to Eureka as a child, and established an office for the practice of architecture more than forty years ago, following graduation from the University of California.

His better known works include the Christian Science Church, Eureka; St. Joseph's Hospital, Eureka; Santa Rosa Memorial Hospital, Santa Rosa; Oxnard Hospital, Oxnard, California; the O'Connor Hospital in San Jose; and at the time of his death was working on the Merch Hospital of Bakersfield, and additions to the St. Francis and St. Mary's Hospitals in San Francisco.

A veteran of World War I, Georgezon was active in civic and fraternal affairs of Eureka.

ODD FELLOWS BUILDING

The Odd Fellows Hall Association of Gilroy, Santa Clara county, have announced plans for the construction of a new Office and Lodge Building to be built in Gilroy at a cost of $90,000.

The new building will be 2-story, reinforced concrete and frame and will con-
tain 12,000 sq. ft. Lodge offices will be on the first floor with lodge facilities occupying the second floor.

O. B. Christensen of Santa Clara, is the architect.

PROFESSIONAL BUILDING

Architect Paul C. Shattuck of Merced is working on preliminary drawings for a Professional Building to be erected in the City of Merced at an estimated cost of $125,000.

The new building will be 2-story in height; frame and stucco.

APARTMENT BUILDING FOR SAN FRANCISCO

Theo. G. Meyer & Sons have announced plans for the construction of a 12-story Apartment Building at the corner of Clay and Jones streets in San Francisco.

Cost of the new building is estimated at $1,000,000.

H. C. Baumann, San Francisco, is the architect.

JAMES A. WHITE

APPOINTED

James A. White has been appointed sales representative of the Calaveras Cement Company for Stanislaus, Merced and Mariposa counties in California according to an announcement by Mel J. Jordan, vice-president and general sales manager.

White has established headquarters in Modesto.

SCHOOL BONDS

APPROVED

Electors of the Brentwood Union Elementary School District, Brentwood, recently approved the issuance of $100,000 in School Bonds for the purpose of constructing an addition to the Edna Hill Elementary School. The addition will be of frame and stucco construction.

OFFICE AND FACTORY

H. M. O'Neil, Structural Engineer of Oakland, is working on a combination office and factory building to be built in San Leandro for the Electric Engraving Works.

The combination building will be of 1-story tilt-up concrete construction with wood roof and will contain 20,000 sq. ft. Estimated cost is $125,000.

LARGE CALIFORNIA OFFICE BUILDING

The State of California has appropriated funds for the construction of a new office building to be built in the City of Sacramento.

The new building will house the State's Employment Department and will be 2-blocks long; steel frame and reinforced concrete construction, and will contain 500,000 sq. ft. of floor space.

More than $3,500,000 has been appropriated for cost of construction.

APPOINTED SALES MANAGER

R. T. Miller has been appointed Manager of Sales of Hardboard Products of the Weyerhaeuser Sales Company, St. Paul, Minnesota, according to R. S. Douglas, vice-president and general manager of the organization.

Miller will head a new activity of the firm consisting of marketing products of a new plant being constructed at Klamath Falls, Oregon, although his headquarters will be in St. Paul.

Prior to becoming associated with Weyerhaeuser, Miller was with the Simpson Logging Company, and before that with the Masonite Corporation of Chicago.

POST OFFICE ANNEX

The U. S. Post Office Department will construct an annex to the present Post Office building in San Mateo, according to plans announced by the architectural firm of Sharps & Brown of San Mateo.

The Annex will be 1-story, reinforced tilt-up concrete construction with wood roof.

SCHOOL BONDS

APPROVED

Voters of the Martinez Elementary School District, Contra Costa county, approved a $552,000 School Bond issue at a special election.

Funds of the bond issue are to be used in the construction of a new Elementary School and to add to present school facilities in the City of Martinez.

HARRY J. WILLIAMS

PROMOTED BY U. S. STEEL

Harry J. Williams has been appointed Director of Public Relations for the Western District of the U. S. Steel Corp., according to an announcement by J. Carlisle MacDonald, assistant to the chairman of the Board.

The Western District headquarters are in San Francisco.

HOSPITAL BONDS

APPROVED

Electors of the Antelope Valley Hospital District, Palmdale, California, approved a proposal to issue $300,000 in bonds to finance a portion of the construction of a new hospital for the district.

STANDARD OIL

ENLARGES PLANT

A $30,000,000 refinery program designed to increase substantially the quality and octane rating of motor gasolines will include the construction of one large catalytic reformer at the Richmond, California, plant according to an announcement by T. S. Petersen, president of Standard Oil Company of California.

Another similar reformer will be built at the company's El Segundo plant in Southern California. Construction of the two new units will start immediately.

ROBERT W. HUNT CO.

ADDRESS CHANGE

The Robert W. Hunt Company, inspection and testing laboratory, has moved into new and larger quarters at 500 Iowa Street, San Francisco.

The firm's office was formerly located at 251 Kearny Street. Other offices are maintained in Los Angeles, Portland and Seattle.

NEW HIGH SCHOOL

FOR LAS VEGAS

A new Senior High School will be built in Las Vegas, Nevada, for the Las Vegas Union School District, according to Claud Beelman, architect and engineer.

The building will be 2-story concrete block 125,000 sq. ft. steel beams and columns, insulated roof deck; concrete slab, hardwood and asphalt tile floors, steam heating, evaporative cooling, acoustic tile ceilings, toilets, lockers and gymnasium.

New Knocked-Down
STEEL DOOR FRAME

This new steel door frame is designed to
conserve valuable storage space and cut
down on costs; is shipped from factory in
4 pieces, 2 jamb, head and spreader bar;
easy to assemble using a simple tab con-
nection and 4 sheet metal screws. Spread
bar is used to keep frame in alignment.

New County Hospital

Architect Albert W. Kahl of San Mateo is
working on plans and specifications for the
construction of a 20-Bed Hospital building
for the County of Tehama, California.
Estimated cost of the project is $100,000.

Appointed Distributor

Tre Air Filter Sales & Service Co., Inc.,
San Francisco, has been appointed North-
ern California sales and service representa-
tive for the Farr Company of Los Angeles,
according to J. D. McCampbell, Farr sales
manager.

School Bonds Approved

Voters of the Rockford Elementary School
District, Porterville, California, recently ap-
proved issuance of $55,000 in school bonds
for the construction of a 8 classroom, admin-
istration and kitchen, addition to the Ele-
mentary School. A State Aid of $200,000
has also been secured.

Pacifc Clay Products
BUILDING LABORATORY

A new $100,000 research laboratory is
being constructed in Los Nietos, Californ-
ia, for Pacific Clay Products, according to
a recent announcement by John D.
Fredericks, president.
Studies will be conducted to improve the
firm's products and to reduce manufac-
turing costs.
It was also announced that Meredith C.
Brown, formerly director of Research and
Development, has been appointed Vice-
president in charge of Research and De-
velopment. Brown will head the research
activities in the new laboratory.
