Recipes by Alice Foote McDougall; Louise Gibbons Gurnee; Emily Post and others. 44 pages, profusely illustrated.

28 HOUSE PLANS ........................................ 40c
Houses costing under $10,000 to build, with complete floor plans, costs, etc. Designed by some of America’s best-known architects. 36 pages.

SEND YOUR ORDER, WITH REMITTANCE, TO

The American Home
GARDEN CITY, N. Y.
An annoying trickle of rust-colored water . . .

Rust-clogged pipes, damaged walls and costly repairs . . .

OR...a full flow of clear water ALWAYS!

ANAconda BRASS PIPE entirely eliminates rust—the principal cause of all water pipe troubles. This durable pipe, the accepted standard of quality, costs no more than other trade-marked brands of Brass and, for the average 7-room house, only about $60 more than pipe that rusts. And every dollar invested in Anaconda Brass Pipe brings convenience and downright saving to any home. No one wants the annoyance that rusting pipe causes. And who can afford the upkeep expense of any pipe less durable than Anaconda Brass? May we send you our helpful booklet, "Copper, Brass and Bronze in the Home"? Address The American Brass Company, Waterbury, Conn. In Canada: Anaconda American Brass Ltd., New Toronto, Ont.
WHERE CLEANLINESS IS VITAL

Toilets must be kept spotless. But you don't have to take a brush or cloth and scrub and scour. The modern way with Sani-Flush eliminates this nasty work. And you'll always be proud and protected with spick-and-span toilets.

Simply sprinkle a little of this germ-destroying cleanser into the closet bowl (directions on the can). Flush the toilet . . . and the job is done. Germs and odors are killed, simply and surely. The plumbing remains unharmed.

At grocery, drug and hardware stores, 25c. (Another use for Sani-Flush—cleaning automobile radiators. See directions on can.)

KNITTING WOOL

Your knife is a generous sample of lovely NU-TONE Marquises. You’ll love the great transparency, and the shimmering lustre of these charming flat or ruffled curtains with or without ruffled valances.

Samples of our regular NU-TONE MAR-QUETTE, M 116 and of M 76, a new weight with hand finished thread that is particularly lovely—we also yours for the asking. Then when you decide on the curtain styles and lengths you want, you can buy right from the sample at your favorite store.

ECHO BRIDGE CURTAINS

Yours for the asking . . .
ON THE HEARTH OF THE AMERICAN HOME

Ladies and Gentlemen

Introductions are in order! We've got some new colleagues we want you to meet. Stand up, Mr. Guild. Stand up, Mr. Treidler. There's Guild, see him, brown suit, brown hair, big blue eyes; hasn't dieted since he got through college something over ten years ago. That other fellow is Treidler, big gun in art circles during the war, on Creed's commission, did many war posters. He's never thought of dieting; his suit's gray, hair sparse, his eyes are also blue.

You'll like these men. Both have been phenomenally successful. Treidler was doing covers for the old Collier's when he was hardly out of his teens. He's branched out since then but he still does an occasional cover for the new Collier's and they are just as popular as ever. Mrs. Treidler is an artist with a camera and both he and she are crazy about houses, old and new, and about decoration and about that art we are all trying to learn—the art of home making.

Guild is a bit more innocent looking fellow you ever saw. You'd never suspect him of genius. He blushes too easily, for one thing. And yet he's an artist, antiquarian, decorator, and author all rolled into one. On top of that he's one of those new fangled stylists who design things for manufacturers and make a lot of money for everybody—mostly themselves. He has designed (and been paid for so doing) things as various as locomotives, lace curtains, water pitchers, linoleum, and trolley cars. You wouldn't think such diversity possible.

He and Mrs. Guild, also an artist, live in an old Colonial house that would be a museum of antiques if they didn't make it one of the realist, most lovely American homes we have ever seen.

Step Right Up

Shake hands people—you're going to hear a lot about Mr. Guild and Mr. Treidler. Some other time we want to show you some pictures of that famous house of Mr. Guild's and of that sweet Early American one Mr. Treidler has designed to build for himself on Nantucket Island.

But right now we've got to cut short the conversation and tell you what these bright lights are doing here. Obviously they're the American Home type; they love the things we do. You'll like these men. Both have been phenomenally successful. Treidler was doing covers for the old Collier's when he was hardly out of his teens. He's branched out since then but he still does an occasional cover for the new Collier's and they are just as popular as ever. Mrs. Treidler is an artist with a camera and both he and she are crazy about houses, old and new, and about decoration and about that art we are all trying to learn—the art of home making.

Guild is a bit more innocent looking fellow you ever saw. You'd never suspect him of genius. He blushes too easily, for one thing. And yet he's an artist, antiquarian, decorator, and author all rolled into one. On top of that he's one of those new fangled stylists who design things for manufacturers and make a lot of money for everybody—mostly themselves. He has designed (and been paid for so doing) things as various as locomotives, lace curtains, water pitchers, linoleum, and trolley cars. You wouldn't think such diversity possible.

He and Mrs. Guild, also an artist, live in an old Colonial house that would be a museum of antiques if they didn't make it one of the realist, most lovely American homes we have ever seen.

Adopt a Family

Adolph Treidler has a family that we are actually going to adopt. If you will look at the cover of this month's issue you will meet them all—all but the little girl who is playing store with the little girl next door, and the wire-haired puppy who is scratching his back on the grassy, but deliciously cool and shady, underpinnings of the family coupe.

This isn't charity. They're a typical American Home family. They have a car, a neat, attractive home, a lovely little garden, in fact everything—but one thing. We haven't a name for them!

Have you got a name you're not using? Do you want to suggest one for the handyman-golfer, for his wife who thinks he's nothing but a little boy after all, and for those two swell kids, the amateur golfer and the, alas! invisible amateur storekeeper?

There's a real story about these people that we're going to tell you next month but right now we're going to keep our car close to the mailbag, listening for good names to come in.

And we like to be near the mailbag. You can't write too many letters to suit us. Our magazine grew rapidly and flourished even in the face of this bitter depression because we read every letter from every subscriber that crossed our desk and fashioned The American Home in the way they dictated.

A Good $500 House

We should have ended that last paragraph by saying "in the way the majority dictated" for there are some requests from readers that we cannot meet. For instance, after reading "What This Country Needs Is a Good $5,000 House" in our April issue an Illinois gentleman said we should have more articles on good $500 houses.

Of course in a way he's right and nobody would like to see good $500 houses in this country more than we should but right now they are not possible. We're looking to the day, however, and an article in our next issue will tell you "What To Expect of Modernism." We shall discuss the potentialities of the mass production houses that General Houses, Inc., and similar organizations are planning to offer for your consideration a modern house designed for us by a well-known firm of New York architects.

But the majority of readers, who dictate our policies, are women and our October issue will contain mostly the information they have told us they wanted. We've tried to make it readable and practical for so many women have told us that magazine articles—particularly those on the subject of cooking—are unconvincing. They say they are not going to try the experiences and therefore cannot be duplicated. We of The American Home think we know how to serve you best and every article that goes into this magazine is designed for your own particular use.

SCHOOLS FOR AMERICAN HOME FAMILIES

FOR GIRLS

MILWAUKEE-DOWNER SEMINARY
Accredited collegiate and preparatory school for girls. Liberal Academic Course, Music, Art, Business, Non-collegiate Courses, Industrial Arts, Small Classes. Individual Attention, Tuition $169. For further address the Principal.
MISS ANNA A. RAYMOND, A.M. Milwaukee-Downer Seminary
Box E
Milwaukee, Wis.

NORTHAMPTON
School for Girls
Exclusively for College Preparation
Regular four-year preparatory course for high school graduates. One-year intensive course for high school graduates. Special house for younger girls. Nine-acre campus. Outdoor and indoor facilities. Address club.
Dorothy M. Bennett, Sarah B. Whitaker
Northampton, Mass.

SAINT AGNES
Excellent College Preparatory Record
New Sophomore building. Includes tennis court and 22 acres of the best residential section outside the City of Albany. Moderate price. Sports of all kinds. Address:
MISS BLANCHE PITTMAN, M.A.
50 Elk Street
Albany, New York

CO-EDUCATIONAL
AUSTIN-CATE
College Preparatory School
C. CUMMINGS, Headmaster
Box 72
Center Stafford, N. H.

CHERRY LAWN
A Progressive Boarding School
Elementary, college preparatory, Laneu faculty, isolated summer. 2.000 acres of woods. Open air classes and sleeping porches.
Miss L. B. Potts
Sept. 21, 1932—June 21, 1933
Brookside Ave.
1910-1925
Dallas, Conn.

GEORGE SCHOOL
Quaker Est. 1893
College Prep. of Geography Entered 32 Colleges in 1922

Summer Menus Simply Made

Cook with Cold

by BETTY STUART

Wouldn't your husband feel a bit sore if he gave you a house, and you lived in one room? Or a car, and you drove it round the block? Or a whole new outfit of clothes, and you stored everything but the hat?

Yet some of us treat the family check signer in precisely that fashion when it comes to the mechanical refrigerator. We act as though our trained polar bear had just one trick—

WON'T your husband feel a bit sore if he gave you a house, and you lived in one room? Or a car, and you drove it round the block? Or a whole new outfit of clothes, and you stored everything but the hat?

mind, and such food placing will soon become automatic.

Listing the benefits to be derived from this steady cold in its varying degrees, we find that the first is—we can order more at a time and so pay less. The second is the time factor related to the same idea—fewer trips to market or minutes at the telephone. The third, the variety that may be kept on hand, turns unexpected company from a trial into an opportunity to demonstrate our cleverness.

Suppose a crowd lands on us for tea. We have sandwich fillings always on hand. The lettuce is crisp in our vegetable container, even if we put it there days before. We can pop a loaf of bread too fresh to slice into this firming cold, and, if we can count on as much as an hour, it can

be cut wafer-thin. A roll of ice box cookies, ready to slice and bake, is wrapped in waxed paper, and how good they’re going to taste! Cake frostings, even cake batters, can be kept as easily as though time stood still. Here is a recipe to test cooperation between the refrigerator and the range.

**REFRIGERATOR COOKIES**

2 cupfuls bread flour or 2 1/2 pastry flour
2 teaspoonfuls baking powder
1/2 teaspoonful salt
1/2 cupful butter
1 1/2 cupfuls brown sugar
1 egg
1 cup walnut meats, chopped
1/2 teaspoonful vanilla

Sift flour, baking powder and salt. Cream butter, add sugar, and cream well. Add beaten egg, nut meats, and vanilla. Add flour, shape into rolls 1 1/2 inches in diameter. Wrap in waxed paper and put in refrigerator to chill. When hard enough to slice, cut very thin with heated knife and bake in hot oven, 425 degrees, about 10 minutes. To vary, flavor half the dough with lemon and add chopped almonds instead of walnuts. Can be made days before using.

Why not keep a batch of dough on hand for hot breads, too? The limit isn’t one day but several. Rolls for dinner, and more hot rolls for breakfast. Muffins for lunch, and another lot for tea. Biscuits, shortcakes, coffee cakes.

Bake one lot for the time you know you need it, and keep the rest in the big pan or the little pans, ready to whisk into the oven for surprise parties. Paste can be stored, too—wrapped in waxed paper. By the way, have you tried the new pie recipe that doesn’t need cooking at all, except to brown the meringue, and the ginger roll that’s simply grand and made in a jiffy?

**REFRIGERATOR LEMON PIE**

5 egg yolks
5 lemons (juice)
3 egg whites
1 can condensed milk
1/2 lemons (rind)
3 tablespoonfuls sugar
2 small boxes vanilla wafers

Beat egg yolks, add milk, lemon juice and rind, mix well. Put vanilla wafers through meat grinder and line a well-buttered pie plate with them. Pour in the mixture and top with meringue of stiffly beaten egg whites and sugar. Bake in moderate oven, 375 degrees 15 minutes. Chill in refrigerator several hours.

A greater variety and amount of food may be kept on hand because of the uniformly low temperature of the electric refrigerator, thus eliminating frequent trips to the market. (Frigidaire)
fold in fruit and nuts. Turn into molds and chill. Serve on lettuce. Fruit salad dressing, easy to keep on hand, is made as follows: Drain juice from canned pineapple to make about 1 cupful. Mix 4 tablespoonfuls flour, 3 tablespoonfuls sugar and enough juice to make smooth paste. Heat remaining juice and add flour mixture. Cook, stirring constantly, till thickened. Place over hot water. Add 2 eggs, beaten till light, and 1 tablespoonful butter. Cook about ten minutes, stirring. Cool and put in refrigerator. Just before serving, whip 1 cupful of cream (or whatever will correspond to the quantity to be used at the time) and fold in.

**FROZEN CHEESE AND FRUIT**

1. **cream cheese**
2. **cupful mayonnaise**
3. **tablespoonful lemon juice**
4. **teaspoonful salt**
5. **tablespoonfuls crushed pineapple**
6. **cupful nut meats**
7. **bananas sliced**
8. **cupful whipping cream**

Combine cheese, mayonnaise, lemon juice, and salt. Mix in pineapple and nuts. Fold in bananas and whipping cream. Turn into trays and freeze 4 hours. Slice and (Continued on page 208)
You may now have Iris in flower from the earliest spring season until the latest ones are killed by frosts. The magical touch of the hybridizer in getting new varieties that extend the flowering season or fill in the gaps between previously existing groups, together with the recent introduction into gardens of new Iris species in various parts of the world has accomplished this.

The first to flower are bulbous Iris reticulata, royal purple, with violet fragrance and the related Cantab, delicate blue; both are free flowering, the blooms carried on wiry stems about twelve inches tall and of ample size. They are indeed among the first flowers of springtime, pushing their way through the ice and snow and bursting into a mass of bloom ahead of the Crocus. This year on Long Island Cantab flowered the first week of March and was followed by reticulata, which continued into April.

Next to flower are Jean Siret and Souv. de Lieut. Chavagnac, a yellow and a violet dwarf respectively (introduced from France) the fore-runners of an everblooming race because, in addition to being the first of the Dwarf Bearded Iris to bloom, they also flower intermittently throughout the summer months, and again bloom profusely in the fall. Their first blossoms appear on Long Island in late March or very early April. Other miniature jewels immediately following these in bloom, filling out the month of April and flowering well into the middle of May, are Atroviolacea, Black Midget, Judy, Dixmude, Marocain, Coerules, Eclipse, Betsy Presby, Glee, and Stagellae. They flower in about the order named and cover a nice color range. The rock garden, or front of the border is the appropriate place for these low growing Iris.

Two interesting groups follow, flowering throughout the month of May. The Intermediates are the result of crosses between the earlier Dwarfs and the later Tall Bearded Iris producing a race that is "intermediate" in height as well as in flowering season. The other group, known as Pogocyculus Hybrids, is the result of crosses between the Bearded Iris, and the Oncocystus species from Asia Minor. Quite hardy and easily grown they bloom practically together and are from eighteen to twenty-four inches tall. An interesting group of the Intermediates in the various colors are Primavera, Soledad, and Yellow Hammer, three lovely yellows; Istrid and Ingeborg, two whites; Aquamarine, an exquisite soft blue; Rose Unique, a rosy toned variety; Gnome, Kochii, and Prince Victor, three purples; and Zua, a gray Iris that is so "creped" that it looks artificial. In the Pogocyculus Hybrids, which are entirely unlike any other Irises, a fine assortment would consist of Congress, Dorak, Shiraz, Shushan, Hamadan, Wm. Mohr and Zwanenburg. Lady Lilford, the darkest, blooms later.

A new race of Early Tall Bearded Iris is the next to flower, embracing Ammon, lovely sky blue; Louis Bel, the darkest of all Irises; Rheingauerle, an exquisite orchid color; Lord Lambourne, a rich reddish blend; Moonlight, a giant white; Mesor, purple; Dr. Chas. H. Mayo, pink; Magnifica, Chinese violet; and Chalice, yellow.

We next come to the best known group, in which there are hundreds of handsome varieties to select from. Nevertheless, I shall mention a few that will be representative of this group and cover the color range: Gold Imperial and Shekinah, for deep and soft yellow; Americana, a metallic bronze blend; True Delight, a white with buttonhole stitching of red; Ballerine, Hyperion and Jacqueline Guillott, three entirely different blue ones; Coppersmith, a coppery red blend; Morning Splendour, a deep red; (Continued on page 218)
Do you realize that all “evergreens” are not necessarily just “green”? That there are bright yellows, beautiful blues, and soft grays that might be in your garden? And they are nothing new. Every nursery has them, only you probably never thought about them from the standpoint of color values.

During recent years evergreens have become really popular—no doubt you have planted some yourself. They are excellent for foundation planting and if properly employed add much to the all-year-round beauty of any home. But once in a while, as you may have noticed, they are overdone. One way to avoid this is by not planting too thickly and one way to overcome it is by thinning out from time to time.

The judicious use of the color varieties of evergreens gives life to a group; and there are a great many such in various shades of yellow, blue, and gray.

**E vergreen s**

giving color effect

by EDMUND H. FULLING

New York Botanical Garden

There is at least one yellow form of almost every kind of evergreen that is suitable for foundations and similar plantings. The promiscuous use of these yellow varieties is a liability to be avoided, though their judicious employment is to be recommended. As a rule, their value is primarily as accent plants, to interrupt the monotony of a large unicolored green planting. But if planted in mass as thickly as the green forms, and particularly if set alone, they become too prominent and lose their association value. They present a case of a good thing that may be spoiled by overuse. A conservative use enhances the value of each plant, so probably the safest way to use them is to decide on some ratio of say only one yellow colored evergreen to every ten of the more or less green ones. If the entire planting is small and a satisfactory effect is achieved by the exclusive use of the green forms (particularly in the case of foundation planting), then so much the better. Since yellow is more striking than green, a smaller amount of it is needed to produce the same intensity of effect. Yellow is apt to be not so soothing and consequently it should never (Continued on page 212)
nowadays we know that these are not qualities as definite and permanent as blue eyes. We forget our elementary psychology as fast as possible, perhaps, after the last examination, but shreds of truth cling to us. We now realize that an employee who has been sulky and slow in the service of a carping housewife may become the cheerful little sunbeam around the house in a pleasanter environment, and a miracle of efficiency to boot, while the houseworker who has been getting away with murder in the home of a careless employer may resent having to reform. Obviously, a domestic employee who has never worked well or cheerfully for anybody is still the hirest hire.

Willingness to work is confused by some housewives with willingness to slave. A good rule to remember is that no domestic employee should be expected to put in as strenuous a day’s work as you could do yourself. The pride of possession, the love of cherished belongings, are a spur that the woman working in another man’s home cannot be expected to have. Moreover, modern methods of housework and of bringing up children have changed radically the things that ought to be required of her.

Let us begin with the hiring. Honesty, cleanliness (including neatness), and good health are three essential qualifications that have not changed in the least.

Two more essentials are a good disposition and willingness to work, but the house in a pleasanter environment, and a miracle of efficiency to boot, while the houseworker who has been getting away with murder in the home of a careless employer may resent having to reform. Obviously, a domestic employee who has never worked well or cheerfully for anybody is still the poorest bet.

Willingness to work is confused by some housewives with willingness to slave. A good rule to remember is that no domestic employee should be expected to put in as strenuous a day’s work as you could do yourself. The pride of possession, the love of cherished belongings, are a spur that the woman working in another woman’s home cannot be expected to have. Moreover, you can fly around one day and rest up the next, which is quite a different thing from keeping up the same steady pace day after day, as the paid houseworker must do. The modern young mother has an especially difficult time explaining to the ordinary employment agent the kind of general houseworker she wants. “Ah yes!” rejoices the agent, “I have just the woman for you—she is experienced in caring for small children!” The mother looks skeptical. She doesn’t want a woman with all the wrong ideas about bringing up children. Nothing has advanced by such leaps and bounds recently as the science of child care. From the preparation of food to matters of discipline, new technics have supplanted old. An inexperienced girl, she reflects, is easier to train than a woman who has much to unlearn.

For the first time, perhaps, the mother sits down and figures out what sort of domestic employee she really needs. Honest, clean, healthy, good-natured, willing to work—yes! But three additional qualities, she discovers, are necessary in a houseworker who is to help with small children.

First, she must be calm, even-tempered. Nervous types do not belong in a ménage where there are children. You can teach a girl to cook, but you can’t teach her to create a restful atmosphere and keep her head at all times if she is naturally high-strung.

Second, she must have native intelligence. She need not be the product of much schooling, but she must be able to assimilate her employer’s quaint ideas about vitamins in the vegetable water, the significance of poison labels on medicine bottles, and the sinister behavior of those unseen things called germs.

Third, whether she has ever taken care of a child before or not, she must have a natural liking for children.

The ridiculously high turnover of domestics, the dread with which women face the ordeal of finding a new houseworker, the generally chaotic mental attitude of employers and employment agencies toward the whole problem of satisfactory domestic service, have been due mostly to careless thinking on the part of housewives who haven’t taken the trouble to discover what qualifications in a domestic employee (Continued on page 211)
In Praise Of
CORN—OUR NATIONAL DISH

by MOLLIE AMOS POLK

Our American custom of eating corn on the cob, so historians tell us, is a legacy from the Red Man. In most tribes, the Green Corn Dances, held just before the corn hardened into seed, were the high spot of the Indian year, a time of family feasts and rejoicings, much like our own Thanksgiving Day. And to-day, although Indian life has changed vastly, the old custom is still followed by most of the tribes.

On the Onondaga Reservation, just outside Syracuse, New York, the Green Corn Dances are solemnized each year as a grand reunion of the scattered tribes which made up the famous “Confederacy of the Six Nations,” drawing Indian guests from the half dozen other reservations which dot the Great Lakes states and southeastern Canada.

Every fall upon the reservation just outside Ponca City, Oklahoma, the Poncas, Otoes, and Pawnees still observe the elaborate ritual of the har-vest dance, all in honor of her majesty, Corn. Even the Indians of the southwest mesa and pueblos, whose customs differed so widely in most respects from their eastern cousins’ held similar harvest dances celebrating, so to speak, the joys of “the full dinner pail.” Every fall hundreds of thrilled tourists take to the ancient Indian trails to catch a glimpse of primitive life in these ceremonies.

In every tribe the dances ended with a great feast in which the eating of the boiled young corn was a sacred ceremonial—and with most American families it still is almost that, for no other vegetable is quite so firmly entrenched in American affections as corn, served on the cob. Nor is any other dish quite as exclusively American. To realize this, one has only to view the look of incredulous horror which sweeps across a European’s face when he sees, for the first time, a dinner party of Americans abandoning themselves to the joys of their favorite August sport. To the uninitiated, the spectacle suggests the wild Indian, at his very wildest!

To appear at its best, corn must be eaten promptly after it is picked. But since not all of us can have gardens, a few hints as to how one can judge the freshness of the grocer’s offerings may not be amiss.

An ear of corn, in its prime, has a tuft of silk trailing out of its tip. At the end, this silk should be brown and crisp, but strands, pulled out of the casing of shucks, should be pale green in color, succulent, and slightly elastic in texture, clinging tightly to the kernels.

The husks themselves, should be green, without traces of yellow and tightly wrapped about the ear. The pithy stem where the ear was broken away from the parent stock should also be green, or white, flecked with green, never dry and yellowish, or brown and withered.

Corn should have a fresh grassy smell, without a trace of mustiness or sourness.

(Continued on page 211)
Vote for your Candidate

Get out the vote! Get out the scissors and a stamped envelope and vote! This is the simplest balloting you have ever encountered. A snip of the shears, a lick of a stamp and an envelope flap, and your work is over—while ours is just beginning. We have a special ballot-counting department in readiness to handle the flood of votes and hope to be able to tabulate the returns in time to catch our next issue. This means that the contest will have to close September 1st and to make things easier for our tally clerks we earnestly urge that you get your vote in early so that last minute tabulations will not be necessary. Do it now! Clip the ballot and let us have it! Don't vote more than once!

This is an unique contest. Never before has a great home building public, like the audience of American Home readers, had an opportunity to register a preference in a regularly conducted architectural competition. Most "prize winning" houses are selected by a small jury of architects. But here are three prize winners which will be picked by the people, the ones who really build and buy houses. In order to make this contest truly authentic and of greatest value to the building industry, including architects, realtors, manufacturers, and home builders everywhere, it is of supreme importance that we get out every single vote.

The 300,000 families who compose the audience of the American Home are, of course, the best possible judges of architectural styles and home building values. Most of them live in their own homes and many have built in recent years or will build in the near future. If both husbands and wives cast ballots in this contest we shall have an electorate of more than half a million. The answers that this immense body of home makers and home builders give to the questions: Which architectural style does America prefer and which type of house plan is most satisfactory? will re-echo through the building industry for years.

And beside votes we shall welcome expressions of opinion telling why a certain design is the best of the twelve which have been offered for your consideration. We shall want to quote a few of those letters which best interpret the feelings of our audience.

The American Home Architectural Contest, you will remember, was announced on page 145 of our December, 1931, issue. The editors, assisted by two well-known architectural authorities, Penrose V. Stout and Chester B. Price, eliminated 821 designs out of 833 submitted and the remaining twelve designs have been offered for the careful consideration of our readers in three issues of the magazine. The announcement of the twelve winners and complete information about our contest was given on page 84 of the May, 1932, issue. Four of the twelve houses were published in the May issue, four in the June-July issue, and you will find the last four houses published on the following four pages.

On page 189 we republish the eight drawings which were printed in the two previous issues. If you have not read these copies of the magazine, we suggest you obtain them before casting your ballot. At the bottom of each page on which a house is shown you will find a ballot bearing the name of the architect who designed it. If you will clip this out, on the dotted line, and send it to The American Home Architectural Contest, Garden City, N. Y., you will have registered your personal opinion in this important contest. If you have not kept your May and June-July issues and wish to vote for one of the designs shown in these two issues you may use the blank ballot at the bottom of this page. Just write in the name of the architect, you do not need to put in his address, and send it to us.

As readers of our previous announcements know, the architect whose design wins the most votes in this contest is going to receive the Award of Merit and $500 in cash. The architect who wins the next largest number of votes will be awarded the second prize and $250, and the third prize and $150 in cash will be similarly awarded.

Another interesting feature of this contest is the fact that the opinion of architects will be compared with the opinion of laymen. We have asked a jury of architects to render a verdict in the contest and we shall announce their decision when we announce the popular judgment.

Those who wish to buy working drawings and specifications of any of these twelve houses may have them for $6 a room (not counting garages, basement rooms, bathrooms, and halls) by sending a check or money order to The American Home, Garden City, N. Y. Most of them are 6-room houses and the drawings and specifications may be had for $56. If they are returned to us unused we shall refund $26 but must keep $10 for a service charge.

All the houses have been certified to contain less than 30,000 cubic feet and could probably be built in most sections of the country for from $8,000 to $12,000. An architect or builder in your community can tell you what each house would cost to build per cubic foot in your locality.

THE AMERICAN HOME ARCHITECTURAL CONTEST

I cast my vote for:

Name of Architect

This ballot may be filled out and used in place of one published in one of the last two issues if desired.
Plans and specifications of these four houses may be bought for $6 a room. For details see page 184

A letter to the Editor
and some suggestions for

Off-to-the-office Wives

REGINALD T. TOWNSEND, Editor
THE AMERICAN HOME
Garden City, New York
My dear Mr. Townsend:
After reading How to Be Happy Though Helpless in the last issue of The American Home I felt someone should say a word for the three-rooms-and-a-bath bride who works... If this young family believes that the American home must be the citadel of gracious living, it will find budgets of money and of time a constant and invigorating challenge.

Interestsely,
THERESIA R. LONG
Los Angeles, California

by THERESIA R. LONG

How to entertain on two hours a day is no small problem for the three-rooms-and-a-bath bride who is most likely to be an off-to-the-office wife, especially if she has just come out of a well mothered and managed home, in which her own part in the domestic arts has been primarily ornamental.

As she looks at her list of friendly dinner obligations she is likely to decide on Sunday, the day with a day’s time, as the best for entertaining. But after two full-dinner Sundays, she will undoubtedly find herself humming over the ingredients of what makes Jill a dull girl. If she is wise she will decide that most of the week-ends should be spent companionably with her husband, even though the inevitable answer is mid-week dinner parties.

Any working young wife who makes this choice should do so with her eyes open. To be a gracious mid-week hostess (especially if one is slow or unskilled) is to set apart three successive evenings for one dinner. And under the stress of such sacrifice she will likely decide never to have less than six for dinner and will probably aspire to eight. The first evening is for preparing, the second for partying, the third for convalescing—for keeping the mid-morning and mid-afternoon yawns out of the office routine. Even so, that leaves at most five hours for all preparations—of the table and the lady inclusive: seven to ten on the first night and five to seven on the second.

Now what can she do on this much (or little) time and a budget to match?

In those last two hours before the guests arrive she will have time to make a simple canapé and appetizer, fix one fresh vegetable, prepare a quick cooking meat, unmold a salad, prepare her table, her self, and her kitchen for inspection.

That means that the preceding evening must see finished the salad, the dessert, usually one vegetable, the ingredients for the preliminary course, and sometimes, be it confessed, the washing and ironing of some of the table linen she intends to use. Don’t forget, too, most of this preparation comes after the lady of the house has already organized and served one dinner-for-two, whose goodness and companionship cannot ever be sacrificed for subsequent kitchen activities.

Here are simple and slim-budget fitting ways of splitting up a dinner to fit the schedule. First, the vegetable that must be prepared ahead: New potatoes, little ones, can be boiled about twenty minutes, slipped out of their jackets and put into an ice box jar for overnight. The next night they can be turned out on a pie plate, sprinkled with salt, hastily dotted with butter, and set in the oven half an hour before serving time. They will be crisply brown and fresh. When new potatoes are not in season, unwieldy old ones transform into golden potato sticks by the simple application of the apple corer. Beets for lemon buttering or carrots for glazing show no signs of having been cooked and skinned the evening before. In general, the homely vegetables stand up best to first-evening treatment.

For salads everyone has her set of favorites, but three simple ones that submit excellently to day-before preparing are avocado mint, pineapple crème, and tomato piquant. They all charm a simple purse and a particular palate.

For the first, add to a package of mint gelatine (at syrupy stage) a paste made of one large mashed avocado and cream cheese softened with top milk and mayonnaise, and flavored with cayenne, lemon juice, and salt. Mold as usual and serve with mayonnaise. This salad is especially good as a delicacy subterfuge when avocados are high because it will serve ten people. The amount can be varied by the amount of gelatine used.

For some reason men always remark admiringly about the second: merely lemon gelatine, Philadelphia cream cheese, a small can of crushed pineapple, and a diced cucumber, made after the fashion of the first and altered in the same way, in this case one package serving seven or eight.

Of equal ease and economy is tomato piquant. A can of solid pack tomatoes well mixed together forms the foundation for eight salad rings. It needs in addition one of the two packages in a box of gelatine, properly dissolved, one onion and one bell pepper chopped very fine. Mayonnaise fills the hole. An experimenter might add cream cheese here with effect.

Desserts are likely to be over rich and over costly. They can, however, be neither and yet fit satisfyingly into a split dinner menu. The easiest is a frozen short cake. Between and on top of the split and stacked halves of individual bakery sponge cakes (six for fifteen cents) which are arranged in a waxed paper-lined freezing tray, pour a mixture of half a pint of whipped cream (day old at fourteen cents) and two boxes of crushed strawberries which have stood for fifteen to thirty (Continued on page 210)
No longer need the humble towel be considered for merely utilitarian purposes. Modern designers have made of it a work of art and counted it a decorative accessory. For example, in the extreme upper right-hand corner a pair of green and white towels make a dressing table flower. Beside them towels have been made into a pair of bathroom curtains. In the right center is a laundry bag, with a buttoned over section on the bottom for ease in emptying and under that is a hand bag or a case for wash clothes. In the lower left-hand corner is a thick beach sheet of soft toweling with a pocket with talon fastening for magazines. Above is a chic beret and scarf of toweling with a gay border, while to the right are hot water bottle covers. Above them are wash cloths made into toys for the children. Diagonally along the center are some new and smart designs in towels, which come in a variety of colors. (Courtesy Cannon Mills, Marita Co., and B. Altman & Co.)

Towels in New Rôles
Not long ago, a young bride said to me, "I think rugs and carpets are the hardest things in the world to buy. Of course, selecting the design and colors you want is quite simple. But how in the world is a person to know whether she is buying a really good rug at a bargain or paying an exorbitant price for some cheap fabric that will fall to pieces after a few months of wear?"

"I can tell a good drapery or curtain material when I see it," she continued, "and I'm not a bad judge of furniture, but whenever I try to learn how to compare values in floor coverings, I simply get lost in a maze of technical terms, such as 'a ten-wire, worsted Wilton, three-ply yarn, 257 pitch' and goodness knows what other words those rug salesmen use!"

You've probably felt the same way yourself, if you've ever tried to become a competent judge of woven floor coverings. This isn't surprising, either, because rugs and carpets are rather complicated fabrications.

But don't let this problem discourage you. It is possible to buy rugs and carpets intelligently without taking a six months' course at the mills. And in these times, that's quite a valuable accomplishment for any home's purchasing agent, for these three reasons:

First, because it's stylish these days to be thrifty and thrift means intelligent spending as well as careful saving. Second, because the stores are offering some perfectly wonderful bargains in rugs and carpets at present, but—third, you must watch your step! Unfortunately, all that glitters in the "Big Rug Sale" is not a bargain.

There are four general methods of judging the quality of a domestic rug or carpet. The first of these is to determine the type of weave—that is, whether the fabric is Chenille, Wilton, Brussels, Axminster, Velvet, or Tapestry. These words are not names of the manufacturers, as many people believe. They are the names of the most common types of domestic floor covering weaves.

Having determined the weave, the next step is to differentiate between the various grades in each weave. For example, you may be shown two

by CYRIL EDWARDS

Axminster Brussels Chenille Tapestry Velvet Wilton

Which rug gives the best value?

The assortment of rugs is indeed bewildering and the selection difficult unless the purchaser knows what to look for in each type. To compare quality in carpets and rugs examine the under side. In the upper row (below) are three grades in the Axminster weave, distinguished by the double strand rows of jute fibre. The high grade fabric at the left contains 10½ rows to the inch, the medium grade 7, and the cheaper grade 5. In the bottom row at the left is shown the back of a high grade Velvet rug, having 8½ rows to the inch; the cheaper grade at the right has 7 rows to the inch.
rugs, both of Wilton weave, but one of excellent quality, while the other is so poorly constructed that it is a doubtful value.

A third method of judging rug and carpet values is by feeling the weight of the fabric. Usually—but not always—a heavier fabric will give the most service.

Finally, we have the very common index of price. In floor coverings, as in most other things, we receive approximately what we pay for. There are exceptions, however, and in these times—when economic buying is a necessary virtue and deceptive pricing a common vice—it doesn't pay to rely too heavily on the price index alone.

Very often you can learn the weave by finding the manufacturer's stencilled mark or label which is usually affixed to the edge or stamped on the back of the rug. However, some rugs are not so marked, so it is well to be able to determine the weave yourself.

Strange to say, Chenille, the most luxurious and long-wearing weave of all, is the least known. This is probably because Chenille is a custom-made fabric, which is not often sold in the form of "ready-to-wear" rugs but is usually cut from rolls to the desired size or else woven to order in practically any design, color, shape, or size desired.

The name Chenille comes from the French word for caterpillar. It is so named because the surface of this fabric is made up of rows of fuzzy, V-shaped cord laid upon a blanket of coarse, heavy wool and bound to it by means of strong cotton or linen threads. By bending the fabric back, you can readily see these rows of V-shaped surface cord attached to the heavy backing of coarse, hairy yarn. By these two features, you can always tell the Chenille from other carpet weaves.

Chenille carpet ranges from one half to one and one half inches in thickness and is much heavier than other American-made weaves.

Although made on power looms, Chenille requires a great deal of hand work. Because of this and the large amount of yarn it contains, Chenille is one of the most expensive floor coverings made in this country.

If you are looking for a deep, soft, luxurious carpet that will give you a lifetime of good service and rich appearance, investigate Chenille. You'll find it available in practically any color, design, shape, or size you desire.

There are many different grades, which may be judged by thickness, weight, and—since there is less competition among dealers in this weave—by price.

Next to Chenille in price and quality, is the Wilton weave—a sturdy, durable fabric with a tightly woven back and a firm, close, resilient surface. Wilton is heavier than the Axminster, Velvet, and Tapestry weaves, but lighter than Chenille.

The Wilton weave's reputation for long service is largely due to the hidden quality or cushion back which every true Wilton has. From three to six "frames" or layers of differently colored yarns are used in the Wilton loom. Since only one of these colors can appear in each tuft, the yarns not brought to the surface by the pattern device are buried in the body of the fabric, where they remain until the pattern requires them on the surface. Thus, under each tuft of yarn on the surface there are several layers of yarn buried in the back of the fabric. This forms a cushion which gives the fabric added softness and durability.

These buried yarns can usually be seen running lengthwise in the back of the Wilton rug or carpet, partly hidden by the closely criss-crossed warp and weft yarns of cotton. No other type of weave contains these hidden layers of woollen yarn. Wilton qualities can be compared by determining the type of yarn used, by feeling the weight and thickness of the fabric, by counting the number of threads to the inch, and, to some extent by price.

The surface yarn is either wool or worsted. Worsted Wiltons are considered the better, (Continued on page 210)
Eventually

Why Not Knit Now?

GLADYS WESTON RYAN

Knitting needles are jabbing and stabbing into yarn with a fervor that has not been equaled since the War! Joan Crawford, on a visit to New York, startled more than one studio assistant and mannequin when, at every breathing spell between poses and fittings, she fell upon her knitting as though her salary depended upon it. Women's club meetings, it is reported, mix parliamentary order with "knit one, purl one." And, if you invite a young lady to tea to-day, you are apt to find her gulping her cup of brew to busy herself with the shoulder of her husband's new sweater.

simplest style is the stocking cap rolled up to frame the face. In knitting or crocheting such a cap (patronize your neighborhood yarn shop to find out how easy it is), you have the choice of many yarns; silk, wool, silk-and-wool, angora— even common store string, if you have a dash of daring in your make-up!

Then almost as easily, a turban may be fashioned of wool bouclé or silk cord by knitting a long band, four inches wide, the length depending upon the head size and the amount of twisting and draping desired. Start draping by placing one square end on top of your head, pointing forward; then fold the remaining part of the band around the head into the most becoming shape. Pin it into place and later tack. This process may be made easier by slipping a fitted lining on the head, before draping, and pinning to that. Be sure to have a long enough band—you may want to twist it twice around your crown in a braided effect. If you are uncertain about the length, slip your stitches off on a large safety pin before binding off and tentatively drape the band around the turban.

The crab-net beret that has snared half the younger generation to put its heads into it can be crocheted in the bleachers, or even to snuggle under for those joyousinks.

Repeat round 7 until cap measures 5½ inches in diameter. Continue without increasing until the proper depth, 6 or 7 inches from center of crown, about 10 rounds, stretched. Finish with even s c rounds, 1 s c in each ch st, omitting d c, until material is all used. This makes the roll on edge.

Sweaters, this season, have played into the hands of the hasty, for many of them are abbreviated as to length and sleeves and use lacy stitches that multiply quickly. In fact, the short, puff-sleeved blouse shown in the illustration seems to go almost as fast as ripping, once you buy three balls of sheerest yarn and needles, sizes 2 and 8, and start to follow these directions:

next-to-no time, from one ball of wool according to these directions:

Ch 4, join and ch 3 to count as 1 d c. Work 15 more d c in ring, join and ch 4. Join all rounds with a slip st in the 3rd ch.

Round 2: *1 d c on d c, ch 1, 1 d c on next d c, ch 2. repeat from * ch 5 and turn.

Round 5: 1 d c, ch 6 and turn.

Round 4: 1 d c, ch 7 and turn.

Round 5: 1 d c, ch 8 and turn.

Round 6: 1 d c, ch 9 and turn.

All articles courtesy of Columbia Yarn

The crab-net beret that has taken the younger generation by storm can be made quickly according to the directions given here.

The afghan, at the left, is useful when motoring, at the beach, in the bleachers, or even to snuggle under for those forty winks.

Repeat round 7 until cap measures 5½ inches in diameter. Continue without increasing until the proper depth, 6 or 7 inches from center of crown, about 10 rounds, stretched. Finish with even s c rounds, 1 s c in each ch st, omitting d c, until material is all used. This makes the roll on edge.

Sweaters, this season, have played into the hands of the hasty, for many of them are abbreviated as to length and sleeves and use lacy stitches that multiply quickly. (Continued on page 208)
I don't know where Tom got the phrase but I remember very well the time he first labeled me "a hairpin mechanic." He didn't mean it in the nicest way and I took it just the way he meant it—but that's long ago and although the name has stuck it is more like a badge of honor now because Tom realizes there are lots of little chores that he used to have to do (when he could have been polishing his golf sticks or doing something useful like that) that I do now in his place. Familiarity with the "children's diseases" of plumbing systems and all those minor ailments that the equipment of even the best regulated house will develop occasionally—and at the most inopportune times—has taught me how long each repair job will take so I no longer confront Tom and his guests in the front hall, with a face covered with grease, as I did that terrible time I first got my accolade of "hairpin mechanic." I was trying to get upstairs—but that was long ago, and I'm writing this article because the editor told Tom he wanted a few simple suggestions from a real hairpin mechanic.

Let's begin with the electric wiring system and electrical equipment, necessities in every American home and simple enough to manage if you know what to do. For instance, the cord of our iron had become worn near the plug which fits into the wall socket. The first thing I did was to disconnect it from the socket and loosen the two small screws in the plug that hold the cord in place. That done, I slipped out the cord, and with a small sharp knife cut off all the worn part, and then removed half an inch of the outer silk covering and the rubber insulation.

I now had the twin wires, each consisting of many fine copper threads twisted together, free of all insulation. Working carefully, so that the threads would not break, I pulled them through the hole in the plug. One wire (it does not matter which one) was carried half way around the left prong, and wound around the screw on the same side. The screw was then tightened so that the wire was held securely. The same thing was done with the other wire, and the job was done. The entire repair was completed in less than ten minutes. In winding the wires around the screws I made certain that there were no loose threads. If two uninsulated wires touch they will "short circuit" the current and blow out the fuse.

If the cord had broken at the other end near the plug which fits into the iron, it would have been quite as simple to repair, although the actual work might have taken a little longer. Plugs that fit into irons and other electric appliances such as toasters, waffle irons, and percolators, are made in two sections. The first step is to take the plug apart by unscrewing the two small screws that hold it together. When the plug is open you will see that two narrow grooves run from the end of the plug to the connecting screws. Now make certain that the cord is through the protecting spring at the end of the plug, then cut enough of the outer insulation so that the twin wires are a half inch longer than the length of the grooves in the inside of the plug. Scrape a half inch at the very end of the wires free of all insulation (the rest of the wire within the plug should have the silk outer insulation removed, the rubber inner one left on) and wind the uncovered wire around the screws. Tighten the screws, replace the sides of the plug, and another easy, but important job is finished.

It is more common for electric cords to wear at the ends than in the middle, but some cords, especially those used for floor lamps in living rooms, may be weakened by being walked on. If a floor lamp develops a tendency to flash on and off (Continued on page 208)
A We don't need to be told that cake should be cooled on a wire rack, but it isn't always possible to get a rack that is large enough to hold a big cake. Then we scramble around for make-shifts to prevent sweating of the cake before it is iced. In the upper left-hand corner is shown a two-layer cake cooler made in two parts for convenience in storing. The racks are eleven inches square so as to hold large size layer cakes.

B Luncheon sets of moisture-proof fabric simplify the laundering problem and, coming in lovely pastel shades, are especially fitting for summer use. This set consists of five pieces and comes in seacrest green, maize, peach, white, and cameo blue.

C So-called waterless cookers which cook the whole meal over one burner, do not require watching during the cooking period. Some have heat indicators in the cover as an added feature. The use of parchment paper also makes it possible to cook several vegetables in one pot by wrapping each separately. Less fuel is required for cooking and the kitchen is kept cooler. Parchment is especially desirable to prevent odors escaping when cooking foods with strong odors such as cauliflower, cabbage, onions, and fish.

D The last word for angel food and sponge cake specialists is a handled cake breaker made of comb-like chromium prongs. It cuts, or perhaps it just separates, cake so there is no question about the superiority of the texture.

E A time switch to turn an electric appliance on or off at a given time is convenient for many purposes, and one of its best summer uses is to turn off the fan (Continued on page 210)
Making a place for Children in the Home

by HELEN A. STOREY

I used to dread visiting my friend's house, although I liked her very much. She had two little children, one of them a baby, and, from the top to the bottom, the house was strewn with blankets, bottles, toys, and small bits of infant's apparel. A baby carriage occupied the front hall; the nursery was always full of damp clothes drying; the bathroom was decorated with folding bath tubs, baby scales, jars of cotton, and olive oil; and the living room cluttered up with a play pen. I now have two children of my own and I am convinced it is quite possible to have happy, active children and an orderly household at the same time. It merely takes a little planning and wise application of that useful old saw, "A place for everything and everything in its place."

It is true that with the arrival of an infant in the home one's household goods are suddenly multiplied considerably. Nor can the baby's things be confined entirely to the nursery, unless he is to have a nurse especially detailed for his care. Baby's wraps, carriage blankets, and pillows, with a supply of diapers and pads are often most conveniently kept downstairs. A drawer in a slant-top desk or a chest of drawers can be assigned to them. Baby's carriage can be kept in the cellar. Play pens are best used out of doors; inside it should be possible for the creeping baby to have a wide scope for activity. Gates at the top of stairs, slip covers over upholstered furniture, breakable things put safely out of reach—all these are helpful in preventing accidents.

An important event of the infant's day, requiring much paraphernalia, is the bath. The process may be made simple instead of complex and laborious; it is only a question of finding a working center within easy reach of everything needed. I have a friend who bathes her baby in the porcelain-lined laundry tubs with which her kitchen is equipped. She dries him on the kitchen table, softened with a large bath blanket, and then weighs him on scales which are placed on top of a chest of drawers near by, recording his weight on a
It is ideal when possible for each child to have a room of his own where cherished possessions may be kept in an orderly fashion. The room above, "1872," was shown at the Antiques Exposition in Grand Central Palace, N.Y., by Childhood, Inc. With the exception of the wallpaper, every appointment in the room is Early American.

chart thumb-tacked to the wall. In the top drawer of this chest are kept absorbent cotton, mineral oil, castile soap, tooth-picks, and all the rest of the bath accessories, while the lower drawers contain dresses, underwear, diapers, towels, and washcloths. She gets her baby’s bath out of the way in less than half an hour. When the baby is old enough to sit up alone, he will be promoted to the large bath tub in the bathroom.

When this sitting-up stage is reached, one has to decide where the baby’s meals will take place. For now he gets cereals, fruit and vegetables as well as his bottle. It depends on the space accommodations available in kitchen or dining room. To begin with, a high chair in the kitchen is convenient, but the baby mustn’t be kept sitting up in it too long, nor must he be allowed to tip himself over. A small chair and table soon replaces this, especially when there are two children. In our house, because our space is so limited in both kitchen and dining room, we use folding pieces for the children, putting them away in the closet when not in use. It’s an adaptable method, serving the convenience of the moment, and since the food is carried on trays it is easy to manage. If one has an alcove in kitchen, or dining room, it may be equipped with a small table and chair, one of those charming miniature reproductions of Early American, French provincial, or sturdy Jacobean models.

As Peggy and Peter grow a little older, there are advantages, both in convenience and training, in having them eat with the family. Here, as at the small table, posture should be considered, the height of the table and the chair being adjusted so that the child can sit erect and eat comfortably. His feet need support; if they do not rest on the floor a foot rest or stool should be provided. Recently when we promoted our five-year-old daughter to a place at the family table at breakfast time we bought a regulation high chair in a New York department store for $1.98, took off the tray, lowered the foot rest, cut the legs off about three inches, and it makes a comfortable seat for her and one which will serve later for her little brother. This met the need inexpensively.

Almost as necessary as eating in a child’s life is the need of things to play with and a place to play in. Play is the child’s experimental approach to life, and the more we encourage it the more we help him to become acquainted with his environment. By handling things he learns to distinguish between hard and soft, hot and cold, smooth and rough, and so on. When Jimmie pulls clothes out of drawers, investigates the contents of the icebox, or overturns the wastebasket, he is an explorer in his own small way, and if we let him do as much as we reasonably can, without too great damage to himself or the furnishings, his initiative is encouraged and eventually his interest is transferred to other more constructive activities.

There is, to be sure, a conflict between our ideal of a perfectly arranged, beautiful home and the children’s notion of a fine place to live in. We like quiet, (Continued on page 211)
by MARGARET RICHARDS FRISKEY

Practical application of knowledge is demonstrated in this boy-built, girl-furnished house, a project of the Vocational Trades class and the Art Appreciation and Home Economics classes of a high school in Highland Park, Illinois. Here the young masons, carpenters, and cabinetmakers are more concerned with raising their grades than their wages. The living room, below, has a feeling of harmony that would be a credit to experienced decorators. The davenport and two upholstered chairs in this room were made by the boys.

THE HOUSE THAT JILL DECORATED
JACK BUILT

Reading, writing, and arithmetic are only part of an up-to-date curriculum. There may be a hickory stick, of course, but more than this there are sometimes substantial two-by-fours, joists, bricks, beams, and shingles included in the practical, constructive education of some of our modern youth.

This English cottage type house, for instance, was built from foundation to roof by the boys in the Vocational Trades class of the Deerfield-Shields high school in Highland Park, Illinois. The boys themselves, under the supervision of Mr. W. E. Durbahn, working straight through the winter, did the masonry, the carpentry, the plumbing, the landscaping—everything, in fact, except the sheet-metal work, plastering, and paper-hanging. Contractors and tradespeople furnished the materials for the house with the understanding that the bills would be paid when the house was sold upon its completion.

As nine thousand five hundred dollars covered the cost of the house, this is the price asked for it. Four other houses built in previous years by the boys in Highland Park are now occupied by tenants who are satisfied that they are living in well-built homes.

This English cottage type house, for instance, was built from foundation to roof by the boys in the Vocational Trades class of the Deerfield-Shields high school in Highland Park, Illinois. The boys themselves, under the supervision of Mr. W. E. Durbahn, working straight through the winter, did the masonry, the carpentry, the plumbing, the landscaping—everything, in fact, except the sheet-metal work, plastering, and paper-hanging. Contractors and tradespeople furnished the materials for the house with the understanding that the bills would be paid when the house was sold upon its completion.

As nine thousand five hundred dollars covered the cost of the house, this is the price asked for it. Four other houses built in previous years by the boys in Highland Park are now occupied by tenants who are satisfied that they are living in well-built homes.

This house is the sixth building venture undertaken by the classes in Vocational Trades. There have already been built five other houses and an auto-mechanics shop at the high school. This house, however, is the first one in which the girls have had a hand. This year the girls in the Art Appreciation and Home Economics classes decorated the interior of the house. A committee of local women acted in an advisory capacity to the girls. Much of the furniture was made by the boys in the Industrial Arts class.

This boy-built, girl-furnished house has many admirable features. The floors and woodwork are finished by a process which gives a soft, dull finish that brings out the natural beauty of the wood. The cold air vents, of which there are many to give good circulation for the warm-air type of furnace, are set in the baseboards of each room. The cabinet work in the

The floor plans were worked out to make efficient use of all available space, special thought being given to bedroom wardrobes. The total cost of building the house was $9,300.
kitchen and bedrooms was excellently planned and executed.

In the living room, the girls started with plain cream-colored walls, texture finish, and a mole-colored rug as their background. In this neutral setting they put the warmth of mulberry glazed chintz curtains, lined with sateen and French plaited onto rings so that they could be drawn together. The wing chair built by the boys is upholstered in the same chintz, which ties the curtains up to the room in a manner approved by the best of decorators. The davenport and small chair are upholstered in a soft old rose material. The color notes of the room are repeated in the hooked rugs used before the fireplace and in the doorways. The radio is tucked unobtrusively away in the attractive secretary desk.

There is a door opening from the living room onto a terrace at the back of the house which is also reached from the kitchen. This feature should be a joy to the hostess who quite frequently serves afternoon tea or luncheon out of doors in warm weather.

The dining room, separated from the living room by French doors, also has cream-colored walls and a mole-colored rug. The curtains here are red toile on a cream ground, made so that they can be drawn. The furniture and fixtures selected by the girls are in keeping with the type of house as are the table and chairs made by the boys.

The master bedroom is papered in a pale apricot. The woodwork is cream, the curtains are ruffled organdy in apple green, and there is a green quilt on the maple bed. There is a very satisfactory closet arrangement in this room. The woman's wardrobe is on the left with a rack built in for shoes and a separate compartment for hats. The man's closet has the excellent added feature of ample drawer space for his clean linen. Between these closets there is a cedar-lined storage chest built as a window seat, using all space to advantage. The boy's room is papered in yellow plaid. The curtains of yellow and orange and black and the furniture in this room have a modernistic feeling. There is a secretary desk built in the wall of this room.

The girl's room has walls and ceiling painted a delicate sage blue. The woodwork is ivory as are the wide ruffled curtains at the windows. Two curtains are interestingly draped over three narrow windows. The cabinet work in this room is nicely arranged. There are two low cupboards built in the wall at the left, excellent for toys, a dress closet, and a built-in desk and bookcases compactly arranged.

The high school girls made the spread and covered the dressing table and bench in a quaint little print in rose, blue, and yellow. They put a blue slip-cover on the chair made with a contrasting cording used as a piping.

The kitchen has a red linoleum floor, and curtains made of a small gay print in green and red. Notable in the kitchen is the Dutch cupboard with its wood scalloping. Efficient up-to-date equipment has been installed including a mechanical refrigerator, an electric dishwasher, and other electrical appliances.

This interesting high school project proves that reading and writing and arithmetic are only a part of a modern educational program and the tune of the hickory stick is in another key.
To gain a year

SOW SOME SEEDS NOW

by T. H. EVERITT

Seed sowing and springtime are so closely associated in the minds of most people that the opportunity presented to adventure further with seeds, soil, and the waterpot in late summer is likely to be overlooked.

Yet, if we stop to consider, we must realize that Nature's most important seed-sowing season is late summer and fall. Many of those naturally sown seeds germinate within a short time, and the young plants become sufficiently established to enable them to withstand the rigors of winter and thus they get away with a flying start in the following spring.

Let us, then, take a lesson from the book of Nature and sow now seeds of our more hardy garden plants! In this way we can gain almost a year with perennials, and our gardens can be gay with the blooms of a select list of annuals much earlier next year than if we rely entirely upon next spring sown material; nor must we forget the biennials, those useful subjects which are sown one summer to bloom the next, and are afterwards discarded.

August is the month in which to sow the perennials and biennials, but the annuals are better left until the following month. These latter should be sown directly in the open ground in the sites where they are to bloom; but sowing in a coldframe offers the best means of assuring success with perennials and biennials, and is especially advisable when the seed is comparatively expensive.

Prepare the frame by deeply forking and incorporating with the soil liberal quantities of well-rotted leafmold or humus and sufficient coarse sand to make the whole friable and kindly to plant growth. A good seed-soil should feel pleasant to handle, be sweet-smelling, and the particles of sand and leaf-mold plainly visible in quantity to the naked eye. If a handful be taken and squeezed together, it should fall apart, (even though pleasantly moist) upon releasing the pressure. On the other hand, it must not be so sandy that it will not retain water long enough nor in sufficient quantity to support healthy plant growth. Under no circumstances use manure or fertilizer in the preparation of the seed-soil.

After forking, rake the surface fine and level and gently firm with the back of the rake. It is better to sow the seed in drills rather than broadcast because of easier weeding, and keeping the soil loose between the young plants. The drills may be drawn a few inches apart and rather deeper than for the spring sowings, say twice the diameter of the seed to be sown. A piece of a stout dahlia stake is an effective tool for drawing out the drills. Water the drills thoroughly about fifteen minutes before sowing, and after the seed has been scattered evenly along the drill cover carefully with fine soil and lightly firm with the back of the rake. Cover the frame with sash (which should be adjusted to give ventilation and to prevent the temperature rising to an unreasonable degree) and (Continued on page 212)
If I were decorating

A DINING ROOM

in a small home

by LURELLE GUILD

If I were to decorate a dining room and it could be my ideal room, I should have it on the east side of the house with windows that would let the early morning sun pour in unhampered and I should put my gayest flower beds just without these windows! For no time of the whole day is so bustling and exciting in Nature's realm as the early breakfast hour and far too many of us are forced to spend it indoors and to miss the changing of color, the singing of birds, and busy buzzing of myriad wings that seem to indicate that the flowers, birds, and bees are aware of the new day. How many Mondays would be blue, I wonder, if we ate our breakfast from sunflooded tables? And how much could our perennial, autumnal sadness be alleviated if our garden could endure throughout the winter transposed in all its glory of color to our dining room, to bolster our waning spirits when the long winters seem drab and dull and the landscape drear? We feel that life would be cheerier in a room that has been made a gay and charming garden, a room where color and sunshine are abundant.

And suiting the action to the words we sought out this scenic wallpaper that gives a vista of flowering trees and vines and gay colored birds. Here is a true garden that will blossom the year round and be worth its cost a thousand times over in the cheer it will bring. This type of paper is now made by lithographic process instead of costly hand blocking and the price is so low that any of us can afford it while the effect is as beautiful as in many of the more costly wallpapers.

In this room we paneled the two side walls with a simple raised panel...
from chair rail to ceiling with a matching paneled dado that runs around the four sides of the room. This woodwork was painted a cool blue to give us that unequaled color of a clear summer sky.

For curtains in keeping with the splendor of the walls we have selected a celanese silk in a browned gold which picks up the notes of this color in the wallpaper. A brass star holds the folds of the drape and the cascade which falls to the floor. No casement curtains have been used for we substituted Venetian blinds to let all the light possible into the room and still keep the direct sun from being annoying. These blinds have been painted the color of the woodwork with the linen tapes in old gold color.

We may speak of formal and informal dining rooms but the very function of repeatedly assembling a family at a certain hour to partake of a meal is probably the most formal act of the day in the average home omitting, of course, entertainments of any nature. The very arrangement of this room is of necessity also quite severe and set in pattern to meet the functional requirements of the room. Taking these facts into consideration we are justified in using in this room furniture that is in keeping with the formality of the room even though the remainder of the house be comparatively simple.

We have confined ourselves to the necessary pieces and have selected from the Sheraton and Hepplewhite styles that always seem so appropriate to a dining room. Sideboard, table, and serving table are all of mahogany and characterized by the decorative use of the inlay of the period. The side table has a beautiful serpentine front and contains three most ample drawers, a large one in the center flanked by a smaller one at each end. Above the table hangs an engraving of New York City in the early nineteenth century. The sideboard is commodious and interestingly shaped with concave compartments at either end running into a convexly curved center drawer and apron. A pair of knife boxes grace the board while above it hangs a girandole mirror crested with a spread eagle. The gilded frame and decoration of this mirror enhances greatly the richness of the room.

The broadloom rug which covers the center of the floor is sand color in plain design, practical both from a

A print of this character with its interesting and colorful pastoral scenes would be effective for draperies. (Waverly print)
Good gardening is more than merely planting and cultivating—it's choosing with discrimination, selecting the right plant to obtain the desired effect. Height, color, season of bloom, all are vital and the more readily you can get mental pictures of the material available, the better gardener you will become. These graphic charts show plant facts in a comparative manner, visualizing them in such a way that at a glance you can realize just what you want.

Pleasing plant combinations are as the flesh on the backbone of design in making beautiful gardens. Not only must the colors be right but the proper heights must be chosen and the season of bloom considered carefully. Charts create mental pictures of the facts quickly and more clearly than the printed word. If you need a background plant for June bloom, a glance will show you the important ones, the heights and colors in which they are available. To make a blue garden, the charts offer selections for each season in a variety of heights. Dwarf plants for the foreground are especially important and the charts show them to be mostly spring blooming varieties with a few for other seasons. By checking up on the charts you can build a symphony of color into your garden. Mass effects should fill the borders all during the growing season.

If your garden has weak spots, study them in the light of these charts which will help you to find just the plant that fits. Should you not be acquainted with all the varieties listed, check them up in the catalogue, visit several nurseries at different seasons of the year and observe closely each unfamiliar variety. These charts do not include all the available kinds, so you might make additional lists as you learn of others which seem desirable.

In making new gardens these charts should prove invaluable. With the varieties classified according to height, color and season of bloom, it is easy to pick and choose. The best way to proceed is to make a planting plan on paper, drawing it quite large, at least one inch on the plan to every foot in the garden. This will give room enough to mark everything on it. Select your plants by referring to the charts, mark the name in each space on the plan and also note the height, color, and season of bloom. By this method you can clearly visualize the garden and see it almost as plainly as when later planted. Should your garden be too extensive to plan on one large sheet of paper, allowing an inch to each foot, divide it into sections and work out each part as a separate unit.

The charts may also be used when revamping your borders. With their guidance you can rearrange the plantings, work out new color schemes, and add to them to secure more perfect effects. Not only must we know what to plant but how to combine the various things and for this it is desirable to have the data right in front of you where instant reference is possible.

Use groups and masses to secure the best display but do not sacrifice variety and succession of bloom. Small borders and little gardens call for smaller groups and more careful selection with special attention to continuous bloom all through the season. Here the data on the charts will be valuable.
Dutch Bulbs
As Winter House Plants

by THEODORE LINDQUIST

Two vital principles underlie the successful cultivation of indoor blooming bulbs. Planting proper kinds of bulbs is the first principle; and getting a good root development is the other. Better and stronger bulbs are needed for indoor growth than for outdoor growth. In particular does this apply to the Paper-whites and the Chinese Sacred-lilies which are grown in water, and so get no external sustenance. Poor bulbs are costly at any price, but in particular is this true with those that are to be forced.

The varieties to be planted will depend largely upon the objective desired. For abundance and sureness of bloom the bulbs of the Narcissus family stand without a superior. If a great variety is desired then Tulips, Hyacinths, Crocus, and Freesias may be added. Most amateurs work under conditions which make indoor culture of Tulips quite difficult. The plants often become so covered with aphis, however strenuous a war is waged against them, that one feels that he has a menagerie rather than a plant. If some red is especially desired among the blooming bulbs it is really more satisfac-

All of the Narcissus family respond well to the facilities of the average amateur, are free from disease and mites, and will pay big dividends to the grower in blooms for his expense and labor.

Establishment of a very well developed root system before permitting the tops to grow is the second principle of successful indoor bulb cultivation.

This root growth is best secured in the dark under a temperature of from 40° to 50° F. Never have I had better indoor bulb blooms than while living in a house heated with stoves. The dark vegetable cellar proved an ideal place in which to store the crotches of bulbs to develop root growth. But you say, "our fruit and vegetable room is in the basement next to the furnace room." True; but is there not all out of doors? Plant your bulbs, as explained later, then dig a trench 2½ to 3 feet deep, and wide and long enough to hold all of the pots set side by side. After the pots are thus placed fill in the earth again, round off the top, and over this place some brush or other material—I use gladiolus lops—to shed superfluous water. If leaves are handy it is worth while to line the cavity with them in order to keep the crotches cleaner. Set a stake that can easily be seen at each corner of the trench and as crotches are removed change the stakes to new positions. Some gardeners place the potted bulbs in ashes in a coldframe and get good results.

Plant as soon in the fall as the bulbs are secured and a place can be cleared in the yard where the crotches can be buried, but not later than the end of October. The longer they are in the ground the better developed will be their root systems. For this reason and also in order to prolong the blooming period they should be raised in three or four groups, at intervals of about two weeks. The first may be taken out eight or ten weeks after planting. To (Continued on page 218)

PEONIES THAT WIN THE PRIZES

Lessons at the
1932
National Show

by EDWARD AUTEN, JR.

This pink seedling (No. 73) won for Mr. Brand the American Home Achievement Medal as the best novelty in the show.

Solange, called the capricious, the difficult, again belied its reputation and for the third successive year won the B. H. Farr Medal for the "best bloom in the show" at the Des Moines meeting of the American Peony Society, June 8-12. The Rev. William J. Lockhart achieved the honor with a home-grown Des Moines bloom. And to add further to her laurels, Solange took first in the twenty bloom white class with central Illinois grown blooms, none of which had been sacked, all of which had been rained on for five consecutive days, some of which had been mailed 260 miles before going into storage, and the rest had been frozen while stored in a local market refrigerator. This helps to prove that a healthy root of Solange is well worth a place in any garden.

The gold medal for one hundred varieties, one bloom each, was captured by Mr. W. G. Du Mont, president of the American Peony Society, who really deserved higher honors for being the head of the cooperating clubs which gave the Peony the most beautiful setting ever provided at a national show, rivaling in its general features the midwinter shows of the large cities. Masses of evergreens and willow, a grand fountain, superb lighting effects, an artistic plan by Amos Emery, architect, garden club displays with other flowers, classic dancing, music, a flower lover's picnic. To say that the show was profitable financially in these times might be another way of showing the success of Des Moines and Iowa in paying homage to the Peony.

Mr. Du Mont had a clever arrangement of his display. On the lower shelf of the step-up bench he placed all the reds, on the center shelf the pinks, with the whites on top. Fine blooms of Milton Hill, Lady Kate, Minerva, Mrs. Harriet Gentry, Mr. L. Van Leeuwen, Red Bird, Mons. Martin Cabuzac, Ben Franklin, Jubilee, and Le Cygne were included.

To an old campaigner who has for many years hoped that such a thing would come to pass, this show seemed to indicate that at last the American people are definitely becoming American minded in Peonies. Le Cygne was shown, Alice Harding won a second, Philippe Rivoire was supreme in the three bloom red class; but outstanding Peonies of American origin were to be seen on every hand, and

Le Cygne was shown, Alice Harding won a second, Philippe Rivoire was supreme in the three bloom red class; but outstanding Peonies of American origin were to be seen on every hand, and attracted the attention of the public to an unusual degree. Martha Bulloch, Anna Sass, and Walter Faxon won in twenty bloom dark pinks; Richard Carvel, Longfellow, and Ben Franklin in reds; Florence MacBeth, Victory Chateau Thierry, and Walter Faxon in three blooms, dark pink. Hans Sass when he saw his blue ribbon remarked that he considered Elsa Sass his best Peony and better than Florence MacBeth. It is a pale creamy pink double with much charm.

As a result of unusual weather conditions, the Brand Peony Farms were able to send a large display to compete with local Des Moines and other "early season" growers. To Brand went the James Boyd Medal for the most outstanding display of the show, and also the American Home Achievement Medal for the best new Peony exhibited at the show. The latter and a First Class Certificate were given on his seedling No. 73, an enormous full double, even, light pink, its form indicating easy opening qualities, an important point with a large Peony. He also received five other awards on new seedlings, the most outstanding one being the new (Cont'd on page 212)

Prairie Afire, the new Jap Peony by Brand, was the sensation of the show. It has pink guards with deeper colored staminoids.
You can't draw the veil over a pre-war bathroom!

Nothing "dates" a house so definitely as the bathrooms and kitchen. The bathrooms, particularly, are "on view." You may make your guests comfortable with an old heating system, but you can't draw the veil over a pre-war bathroom.

Modernizing the bathroom has always been a fairly expensive operation. Even if the present fixtures are well-designed and in good condition, there are the walls—tile is not only costly, but the laying of it calls for highly skilled labor.

That is why Johns-Manville entered the field with their Asbestos Wainscoting. It has the appearance, and all the practical advantages of colored ceramic tile of the highest quality—without the cost. Any carpenter of ordinary ability can transform your bathroom with it.

Transform is not too strong a word. Its polished surface, kept spotless and shining by the use of a damp cloth, will forever banish that Victorian melancholy from the room which above all others should radiate cleanliness and light. And the cost is as little as $9.75 down—the modest balance payable over a year.

FIRE! No cry is more terrifying in the stillness and dark of night. "Fire"—then Red Destruction. Loss of treasured possessions. Sometimes loss of life itself.

Often its beginning is a tiny spark from the chimney—and a tinder-dry roof. Records show that 23% of all residential fires start on roofs!

This is unnecessary destruction. At the lowest cost in history, you can now have a Fireproof roof of Johns-Manville Asbestos Shingles. As little as $19.50 down, for the average house. The balance in small monthly payments over a year.

They can't catch fire! Nothing in them will burn—they are made of asbestos fibers and Portland cement, combined under pressure. They are permanent—you'll never have to re-roof. They are harmonious—now offered in a wide variety of soft, blending shades, as well as the more conventional grays and browns.

The local Johns-Manville dealer will show you samples...

Ask him also to show you J-M Flexible Asphalt Shingles—even lower in cost. They are made in solid colors or blending shades. Surfaced with finely crushed rock or slate, they are fire-resistant and durable.

The J-M dealer will gladly inspect your roof free, and give you any roofing information you desire. If you are unable to find his name in your telephone directory, address Johns-Manville, Madison Avenue and 41st Street, New York City.

Costly labor isn't necessary. Any carpenter of ordinary ability can transform your bathroom and kitchen with Johns-Manville Asbestos Wainscoting.

The same treatment works wonders for a dingy kitchen—"dressing up" the room—giving your modern range and refrigerator a suitable background.

The local dealer will gladly show you Johns-Manville Asbestos Wainscoting. If you don't know his name, address Johns-Manville, 41st Street and Madison Avenue, New York City.
Eventually—why not knit now?
Continued from page 194
work across knitting together the 2 center sts. Work even until front measures the same as back from underarm seam, on next row start the ribbing. On 26 sts, k pattern st for 1 inch. On next row increase 1 st at neck edge, and continue to increase 1 st every 4th row at neck edge 14 times. At arm edge work same number of even rows as on back, then increase as back was decreased and cast on 4 sts. Make other shoulder to correspond and make 2 rows, then decrease to 18 sts. On next row decrease 1 st even, then continue working in pattern st until back from under arm measures 6½ inches, next row knit on 26 sts for shoulder, bind off 28 sts for neck and start front on 26 sts, k pattern st for 1 inch. On next row increase 1 st at neck edge, and continue to increase 1 st every 4th row at neck edge 14 times. At arm edge work same number of even rows as on back, then increase as back was decreased and cast on 4 sts. Make other shoulder to correspond and

Summer menus simply made

sugar will be needed for the same number of servings. This makes a delicious company dessert.
The trouble with an article like this is to know where to call a halt. Did you ever play pigmaroole when you were a child? The first narrator starts the story, works it up to a climax and stops in the middle of a sentence. The next in line gives a gasp or two and takes it up. All we can do is to leave you standing in the kitchen, looking with fresh respect at your polar bear. What you'll work out between you, given a bit of impetus, is probably better than anything we could suggest in a brief article such as this.

My husband calls me a hairpin mechanic
Continued from page 195

If your doorbell rings very faintly or refuses to ring at all look first of all to the bell itself. There may be a derangement of the parts, needing only tightening of the adjusting screw. This screw is inside the bell box and may need to be moved closer to or farther away from the spring.

It is more than likely if the doorbell is not connected to the house electric system that one or the parts, needing

BACK: With the smaller needles, cast on 112 sts, k 4, p 4 for 4 inches; on next row, transfer to the larger needles, decreasing to 52 sts, and start pattern st as follows:
Row 1: K 2, *yarn over k, 2 to together, k 1, repeat from * across. Continue working in pattern st for 9 inches, bind off 4 sts each side of row, then 1 st at each end of every other row until you have made 6 decreases, then continue working in pattern st until back from under arm measures 6½ inches, next row knit on 26 sts for shoulder, bind off 28 sts for neck and start front on 26 sts, k pattern st for 1 inch. On next row increase 1 st at neck edge, and continue to increase 1 st every 4th row at neck edge 14 times. At arm edge work same number of even rows as on back, then increase as back was decreased and cast on 4 sts. Make other shoulder to correspond and

serve on lettuce with French dressing. Other fruits may be used, if preferred.

3 tablespoonsful sugar
1 teaspoonful vanilla Salt

erratically examine the cord, and you may discover (if it isn't the light bulb that is loose) that it is weak in one or more places. Disconnect the cord and cut it at the worn spot, and scrape off the covering and insulation from each end for a distance of two inches. Then remove the outer covering on each end of the wire for two inches more. The wires must now be spliced, which simply means that the ends of wire must be put together again. This is done by laying the two pieces of the cord flat on a table, so that the four uncovered pieces of wire are opposite each other. Now wrap a wire from each end of the cord together (it does not matter which one), cover each repaired wire with black tire tape, and wrap the whole joint with tape.
A broken wire, or the use of too many appliances on the same circuit, may cause a fuse to “blow.” In the majority of homes the fuse box is located in the cellar, and putting in a new fuse merely means that the “blown” fuse must be unscrewed, and a new one substituted. Although it is possible to find the “blown” fuse by examining each one or by a process of elimination, that is, by unscrewing each fuse in the box, and replacing it with a new one until the lights go on, a far easier way is to have each fuse labelled so that you can tell at a glance the rooms it controls. Thus, if the light suddenly fails in the dining room, it is only necessary to replace the fuse which controls the dining room circuit.
No matter how careful one may be, kitchen pipes do become clogged. Frequently a “plumber’s helper”
## New Book Tells You All About WALL PAPERS

Specially compiled with the help of noted decorating authorities.

**This offer comes to you from the makers of Mayflower Wall Papers—those marvelous new creations, designed by celebrated artists, that you buy by name with the assuring Mayflower trade mark plainly imprinted on each sample book cover and sample pattern.**

You simply send coupon below for your copy of "Your Walls Are You"—and when it arrives, you'll not only learn things you never knew about wall paper, but you'll find page after page of fascinating suggestions for its use in every room of your home.

Mayflower Wall Papers are so unusual in pattern charm, they are highly recommended by a committee of America's foremost decorating authorities. They are so well made, they are approved by famed research institutes. They are so sensibly priced, they allow thousands who want truly distinctive wall paper to have it without being at all extravagant.

Authentically styled! Socially correct! Mayflower Wall Papers hang smoothly, wear wonderfully, clean beautifully, never fade. And progressive wall paper men proudly carry them. Send now for "Your Walls Are You"—profusely illustrated with actual room arrangements in which the most enchanting new Mayflower patterns are used.

Which rug gives the best value?
Continued from page 197

One step down from the Wilton in price and quality is the popular Axminster weave—of which a greater variety is produced than of any other woven floor covering.

The Axminster weave is easily distinguished by the double strands of jute filaments, running across the back of the fabric. Because of these cross-wise or weft shots of jute, which are stiffened with starch to add weight and make the rug lie flat, an Axminster can be rolled lengthwise, but not crosswise.

The quality of the fabric may be judged by counting the number of these double-strand rows of jute on the back of the fabric. If there are from eleven to twenty rows to the inch, you are looking at one of the better grades.

Velvet weaving is a much simpler and speedier process than either Chenille, Wilton, or Axminster. Velvet—so-called, and seen through the cheaper fabrics.

There is absolutely no excuse for lifting water by the pailful from the basement. A ceiling or wall drain may be installed at a small cost, and the drain will discharge the floor of water immediately.

The length of the pipe should be cut to fit the opening, and the pipe end should be chamfered to a bevel of 45 degrees. The bevel should be at right angles to the pipe in order to prevent clogging with dirt and leaves.

Gordon-VanTine Ce.

Just a word about rug care: if your rugs feel much more luxurious under foot and, by keeping the back from direct contact with the hard floor, eliminate friction and greatly increase the life of the floor covering.

With grace and ease—and the young husband. For while she is doing the inevitable last minute duties,
Making a place for children in the home
Continued from page 198

order, elegance—fine fabrics for curtains and upholstery, and distinctive furniture. Such a home needs sympathetic care. For a youngster, however, the ideal home is one in which he can play out of doors as much as possible. Sand-box, swings, etc. help a great deal. For rainy days children to play out of doors as much as possible. Sand-box, swings, etc. help a great deal.

How to bring about a compromise between these diverse points of view is a problem which requires patience and understanding for its solution. First we must decide which is, on the whole, more important—the home and its furnishings or the growth and education of the children. Most of us will give the decision to the children, keeping in mind that after all children is a comparatively short period. A satisfactory method of keeping the house in order is to encourage the children to play out of doors as much as possible. Sand-box, swings, etc. help a great deal. For rainy days children to play out of doors as much as possible. Sand-box, swings, etc. help a great deal.

The question of hours has probably been the sorest spot in the general houseworker problem. In the past, only days off, usually Thursdays and alternate Sundays, were clearly agreed upon. Some girls worked fourteen hours a day, some four.

Housewives with any sense of fair dealing worked hard, cooked well, cleaned properly, laundered, market, and did everything. No decent woman wants to be a slave driver. On the other hand, an employer is entitled to something for the wages she pays. To-day informed houseworkers demand that within reasonable limits of total hours work per day, two hours of passive work may be counted as equal to one hour of active work and selection of new pieces, and their opinions and preferences are given some consideration, their interest in the home is increased. Simple things like low hooks in closets with small hangers, a low shelf for hats and a convenient drawer for sweaters and mittens; a towel rack

What to expect of a general maid
Continued from page 182

are essential and quite reasonable to demand. Revolutionary as the statement may seem, it is of secondary importance whether or not a general houseworker knows how to cook, clean properly, launder, market, set a table and serve correctly, answer telephone and doorbell with conventional courtesy. The more of these useful accomplishments she has, of course, the more salary she is worth.

kernels, when pricked, should exude

in the bathroom within reach of short arms; and sturdy stools placed in strategic places for the child to stand on—all these are great aids in encouraging self reliance and helping to keep from the child a sense of inferiority and helplessness.

Where to keep the toys and play and work materials that children accumulate is a problem. A large basket which can be filled with the playthings given to one-year-old Peggy by fond uncles and uncles is out of date. A more decorative way is to plan open shelves for the toys, with sections of different sizes, including one for picture books. Here each toy is in sight and is readily accessible. Peggy can choose her own plaything, take it from the shelf, and later learn to put it back. A draw curtain may conceal the shelves when not in use, or a decorative screen stand in front of them.

In a house for a family with children a downstairs washroom and toilet adds considerably to the general convenience.

Pink Jag named Prairie Afro. One of the
sensations of the show is a large vase exhibit. This is a com-
position of medium pink guard petals with very brilliant center of cherry to salmon petals.

A large number of new seedlings were exhibited, and twenty-one were given awards. Reno Rosefield rec-
ceived 2nd for that creamy pink double
and a creamy white double; Judge Voris
two, on two typical red Japs; A. B. Franklin three, on two pink doubles and a light all red Jap. President
W. G. Du Mont broke into the originators class with a large double white; H. P. Sue received an award on what he terms a
more certain La France; and B. B. Wright won on a full double incurred pink. Edward Asten, Jr. received five awards, one on a semi-double,
velvety black red, and four on Officialis X Sinensis hybrids. Hy-
beautier background of green. The
tiny, with two rows of petals, the
color of stamens quite prominent. Hybrid No. 25, first full
full low bomb, probably as black as a red
ever seen in a Peony. This may
dvelop into a high bomb as the plant
gets older. No. 1845 is another hybrid,
single, showing blooms from two-
year plants, a medium-sized full
either, red like Felix Cottin. Hybrid No. 20 attracted the most
attention, being a brilliant glowing
red black-red Jap, with golden stamens atta-
ch the edges of the petaloids to the color of the

These four hybrids are only a sug-
gestion of what is to come for a few
years from several hybridizers. Mr. Lyman Glasscock will have next
year a large number of new hybrids in the show. The greatest credit is the development of the Peony that we
remain. Already we know that we can secure blooms in a variety of
exhibited for one week. The
Chinensis season, already that some
of these red shades are of almost un-
believable beauty, and that many of them are very durable. Work
has already been done to secure pinks and whites in this species cross, and it
it will undoubtedly succeed, for so far it
seems easy to unite the good points of both species in the offspring.

With an increasing interest in the Singles and Japs, it is unfortunate
that the Singles are not easier to hold
for a show. This places a premium
nearly so in the Japs. How different
kinds may vary in this was strikingly
shown. In the amateur class a prize-
form attaining a height of ten or
fifteen feet and well known as
a Japanese dwarf plant.

One yellow variety worthy of con-
sideration is the George Peabody's
Arbovitae (Thuja occidentalis var.
latea). It is of narrow and pyramidal
form, being a brilliant yellow during
the early summer.

The Golden Plumed Retinispina
which forms a dense globular bush with
slender stringy branchlets. It does
not have the prominent leader of the
form and has the variety and the individual,
either. It is slender and green and grows
in the summer or becomes increas-
ively more brilliant.

One of my favorite evergreens is the
Dwarf Hinoki Cypres (Chamae-
cyparis obtusa nana), a beautiful
compact and very dense dark green

I provide shade to offset the drying
influence of the sun's rays.

At least once a day look over the
frame and if the surface soil shows
dryness give the water freely using a fine

Sow some seeds now

Continued from page 201

hottest hours of the day. As soon
as the second pair of leaves is
well developed the young plants
may be transferred to nursery rows a foot
apart. In the fall, allow a covering of
four or five inches between the plants on
a piece of ground which has been
deeply forked and to which a dress-
ing of plant food not over strong
in nitrogen has been given—I use
bone meal. Water well after plant-
ing, and keep the ground between
the rows regularly hoed for the re-
mainder of the season to develop
stable growth. After several days
are well frozen protect the young plants
with a very light covering of salt hay
or some such material and transplant
them to their permanent positions in
the following spring.
Shop Windows of To-day
by DIANA NORTH

The Pilot-Wheel lamp is ideal for an Early American room. The 11" base is finished in maple and walnut, and has a 6½" pilot's wheel which operates the switch by means of a small brass chain around it. Height over all 14". The 11" parchment shade is cream color, lined with pale orange, and has a decoration of a brisk landscape in natural colors. Price complete $2.95 sent shipping charges collect. The BOULEVARD Shop, Inc., 141-05 Northern Boulevard, Flushing, New York.

The Directoire will be useful about a summer estate, or a camp, and every boy will like one for his room. The compass circle is of heavy brass gauge, 6" in diameter. The little compass is 2½" in diameter, and is used to guide you in placing the brass circle correctly in regard to the points of the compass. $1.25, postpaid anywhere in the U.S.A. HAMMACHER, SCHLEMMER CO., 145 East 57th St., New York City.

Cleans the outside of windows from inside
It is used to mean fine and none to clean windows. Besides it was dangerous... Now it's fun. This new device permits you to clean outside from inside simply by moving the handles. It works like an automobile windshield wiper. Two small, reversible water tanks are attached to each arm. One edge has a rubber cleaner. The other a chalk or draperies, and such articles as lamp shades, wall tacks, etc. Authoritative guidance in selecting.

The original and beautiful hooked rug above is unique enough for a wall hanging. Here in soft colors is depicted the quaint little Southern house which was the original structure on the site of "Wakefield," the birthplace of Washington. This representation of it is taken from a Currier & Ives print dated 1825. The size is 50" x 50" and price $30.00, postpaid. MRS. LAURA S. COPHENAVER, Rosmert, Marion, Virginia.

SOMETHING new has come into our domestic life, and it is good. People who hitherto have taken the garden as just a casual appurtenance to the suburban home have this year found in its offerings not only real recreation but the beginning of an enthusiastic interest. People who have never before seriously gardened have built rockeries and attached pools. Nearly always that is the combination. Rural and country roadside florists and small nurseries have done a thriving business in catering to the developing demand for plants.

Rose varieties are being studied critically; and as for the small evergreen, it is almost in danger of being a too popular fad. Perhaps this new garden interest is a reaction from the general depression and the developing of a more sedate manner of living and a keener understanding of the quieter joys of living. Whatever the cause, the fact is patent. Community garden clubs, centers of local pride and civic interest, not yet part of either of the great federated movements but purely local and personal, are creating and feeding upon this interest. All this means not only more gardens, but better gardens and better plants, and a growing intelligence and knowledge of how plants can be used and how they fit differently into different situations—that plants are not just merely plants but each has special qualities and specialized uses.

THE tendency to specialize in individual gardens is noteworthy. In addition to the lines of interests already suggested, there are gardens of Irises, of Peonies, of Daffodils; nor must we forget the Delphinium, that subtle flower, elusive as it is majestic, the bluest and showiest of all the blue flowers of summer, and responding to care. If any plant in my judgment is an index of cultural attention of the gardener, it is the Delphinium, for it will not grow in a garden untilled, uncultivated, unfed, untended; but given those things, especially beginning with tillage preparatory to planting, deep tillage, we may all have Delphinums, even despite the blacks—descriptive name for the distorted congested tip of the shoot that collapses just at the time when the flowers should be forthcoming. This "disease"—it is really caused by a minute mite that sucks the juices and stunts the growth—is controllable, but as with so many other things in the garden, success is the reward for early vigilance. Best use a preventative spray. If not, spray as soon as the mite is detected, and kill it. If done properly and under conditions otherwise good, the plant will gracefully respond by taking on new growth.

The bacterial rot is something else again. For that there is no cure. When the plant collapses, it is done for. Yet slowly but surely it seems we are getting constitutional vigor in the plants. Better Delphiniums are more easily to be had to-day than was the case a few years ago, so progress is being made. Perhaps the fostering care of the resuscitated American Delphinium Society will achieve its visioned goal. Dr. Leon H. Leonian, of the University of West Virginia, the new secretary, has demonstrated his efficiency in giving the Delphinium fans an informative bulletin which contains a vast lot of facts about the origin of the Delphinium, its trend and tendencies to-day. Hitherto an activity of the Pacific Coast, the American Delphinium Society is embracing a new era of nationwide expansion.

The American Delphinium Society is an index of cultural attention of the gardening movement. Hitherto an activity of the Pacific Coast, the American Delphinium Society is embracing a new era of nationwide expansion.

Often the problems and difficulties of cultivation of plants that one may run into are either inherent to the strain or type chosen or there may be climatic and regional handicaps—something that is not perhaps given full thought in the tendency to generalize in telling how to grow any given plant. The garden as we know it is a much mixed collection of plants, foreign or exotic, possibly native under a multitude of different conditions, and all brought together in an attempt to make them harmonize with each other and adjust themselves to a new set of living problems. They cannot always do it. But a plant in nature even does not always find itself in the location best fitted to its habits of growth; not necessarily so. There may be other controlling factors, and, taken into a new region, it may find an altogether more congenial environment than it did in its old home, just as the foreign insect pests sometimes spread rapidly when established in a new country. This rule of plant adaptation must be remembered however, as we broaden the spheres of intensive and highly artificial garden practice. The more exotic a plant, the more desirable it would seem to be, broadly speaking, and therefore the more care it should be given. Careful tending will not change climatic and geographic handicaps, but it will make them milder. Thus plants from abroad brought into northern gardens and established there may not necessarily be easily taken into our gardens of the South. In fact, to be specific, every once in a while complaints are made of a failure of Tulips in the warmer parts of the country. Here in this instance it is not because the plants cannot grow if once they are planted but because the bulbs themselves are overheated in storage on ships and docks, etc., before planting. Tulip bulbs do not take kindly to temperatures running up over 100 degrees. All bulbs need careful storage when they are out of the ground which is an unnatural condition for them. Isn't it obvious that it is a climatic hazard that causes complaint of Tulip failures in the South when a lament of that nature is practically unheard of in the cold North? So watch your bulb supplies if you are planting this fall and satisfy yourself that the bulbs have not been overheated in transit or storage. Do not store bulbs, Tulips or anything else for that matter, in a hot garage or in an overheated cellar.

One of the significant outgrowths of the greater home garden love is the increase in fall flower shows. Of course, the Dahlia is dominant at this season and the leaders among the varieties change from year to year, so inexorable is the march of progress and change of fashion. The American Dahlia Society's show September 22nd and 23rd at the Hotel Pennsylvania, New York, is one of the big events of the season. This is preceded by the Third Atlantic City Flower and Garden Pageant opening on the 3rd and continuing for seven days. Both these events have achieved national importance. Attention to your local shows and cooperating in the events and lending support to the activities of your local garden club will all help for a spread of a greater community interest. As we gather at the fall shows we can see how far the achievements of the current season and to some extent get a forecast of the promises of next year. Keep in touch with and support your local flower show, be your community never so small nor the flower show itself never so local.
Time to Think of Planting

DAFFODILS

These gayest of all Spring flowers bloom from early in April until the middle of May. Ten different classes provide various charming forms, some deliciously fragrant. They live for years, growing in beauty and value. You are sure to succeed with our extra selected, double-noised, quality bulbs.

Special Introductory Offer

We will supply 6 choice varieties, representing 6 distinct classes as follows: King Alfred (Trumpet), Glory of Sassenheim (Bi-color Trumpet), Red Beacon (Barrel), Bernargino (Incomparable), Lord Kitchener (Loodedii), Dante (Poticus).

6 of each kind (at $7.00 value) for $6.00
12 of each kind (at $14.00 value) for $11.50

Each bulb will bear at least 2 flowers. We guarantee them to bloom if you follow planting instructions as given.

“Greetings from Tulipland”

is the title of our catalog offering Tulips and other imp­­er­­ted bulbs in order of their respective merit. It tells about the finest Daffodils grown in our own nursery on Long Island. And “Bulbs in a Can All Their Own” are offered at “live and let live” prices. Write or order today.

---Rock and Hardy Plants---

Why It Is To Your Advantage

To Send Now

For This Fall Catalog

Isn’t it so, that walking around your garden now, you can see exactly what plants are needed? Waiting until spring, means forgetting. Furthermore, September and October are ideal months for shifting old plants and filling in with new.

Next spring all that bother will be over and the plants fully at home, ready to start growing and blooming. We particularly urge fall rock garden planting.

Send for the Hardy Plant and Rock Plant Catalog. Make your order. Send it to us and we’ll ship any time to your convenience. But make your selections now—that’s the point.

Garden reminders for August and September

North

The Flower Garden—The complete garden must have some Lilies. Try a tall white variety for next spring’s bloom. . . Perennials sown in May will be large enough soon for transplanting. Let them root in perlite or other mixtures before cold weather sets in. . . Sow other perennials in coldframe. . . Divide Primroses, Pyrethrum, and Perennial Poppies in August. Apply liquid manure to Chrysanthemums Dahlias, and Hydrangeas. . . Take cuttings of bedding plants. . . Plant Sweet-potatoes next summer’s bloom. . . In late September take cuttings of Anemone japonica. . . Forget-me-not, Pansies, and Bells sown in August will be transplanted in September. . . Plant Peonies.

The Vegetable Garden—Seeds to be sown in August and September include Bush Beans, Endive, Lettuce, Corn Salad, Turnips, Early Peas, Cucumbers, Cabbage for coldframe, Cress, Kohlrabi, Basil, Radish, and Spinach. . . Thin out foliage of Tomatoes planted late. . . Pinch back Lima Beans and Pole Beans when they reach to the tops of their supports. 

Cabbage growth is induced by good tillage. . . Blanch Early Celery. . . Cabbage, Turnips, Early Peas, and other deep-rooted plants where they are to grow. . . Prepare beds for new Roses, spacing deeply and laying down oyster shells for drainage in the bottom. Fertilize and lightly prune ever-blooming Roses to blossoms in October.

The Vegetable Garden—Sow salad vegetables, such as Parsley, Radish, Lettuce, Roquette, Kale, Cauliflower, Mustard, Turnips, Collards. . . Divide Onions, Celery, Shallots, Plant Peas, Beans, Carrots, Parsnips, Salsify, and other hardy vegetables. . . Keep the ground well worked and do not let it bake. . . If English sparrows eat up seeds just sown, protect with white cotton string stretched across garden. Gather pumpkins, cashew, and mirilot as they ripen, and if frost threatens, cut these and the tomatoes and bring them in to ripen indoors.

South

SEPTEMBER: Mixtillanous—This is the month to start the garden in the Far South. . . Clean up and trim summer-blooming shrubs, hedges, vines, clearing away surplus growth. . . Spray the entire garden with oil and soap-suds for aphids. . . Cut back Stocks, Snapdragons, and other spring-blooming annuals which may bloom again. . . Plant Freesias, Iris, Oxalis, Hemerocallis, Calla Lily, yellow and white. Re-pot Cyclamen. . . Withhold water this month from Azaleas, Malus. Feed leaves or peat moss. . . In the upper part of the South, plant Peonies. . . After Sept. 15, sow seeds of all early-spring-blooming annuals—Pansies, Pink, Sweet Alyssum, Calendula, Columbine, Stocks, etc. in boxes or sheltered beds. Sow Pansies, Eschscholzia, French marigold, other deep-rooted plants where they are to grow. . . Prepare beds for new Roses, spacing deeply and laying down oyster shells for drainage in the bottom. Fertilize and lightly prune ever-blooming Roses to blossoms in October.

The Vegetable Garden—Sow salad vegetables, such as Parsley, Radish, Lettuce, Roquette, Kale, Cauliflower, Mustard, Turnips, Collards. . . Divide Onions, Celery, Shallots, Plant Peas, Beans, Carrots, Parsnips, Salsify, and other hardy vegetables. . . Keep the ground well worked and do not let it bake. . . If English sparrows eat up seeds just sown, protect with white cotton string stretched across garden. Gather pumpkins, cashew, and mirilot as they ripen, and if frost threatens, cut these and the tomatoes and bring them in to ripen indoors.

AUGUST: If crowded, divide and move Japanese Iris, before new growth begins. Plant in partial shade, providing much moisture. Also move or divide Iris cretensis (stylosa) for winter blooming. . . Water Gladiolus after blooming, while the plant is storing its food. Plant Sweet-peas in Southern California for Christmas, also Lobelia, Nemesis, and Petunias. . . Layer Carnations, and make cuttings of Geraniums, Fuchsia, Violas, Pansies, Hydrangeas, Heliotrope, Petunias. Salvia, Phlox, Penas, and Gazanias. Plant Iris cretensis in full sun, but wind-sheltered and in soil free from lime. Continue planting Freesias and plant Roman Hyacinths, Chinese Primroses, Callas, and Lilium candidum. Sow brief-blooming Schizanthus at intervals. . . Water the Roses at the month end. Water the Amaryllis in groups for succession of bloom.

SEPTEMBER: Look well after the autumn blooming plants, fertilizing and watering. Keep Chrysanthemums and Dahlias staked and protected. Also the tall Campanula pyramidalis. . . Put the garden in order, removing annuals and spent blooms, and raking up the dead leaves for the compost pile. Dig and fertilize the soil, leaving it loose and open for the early rains, and if delayed, do not neglect irrigation. . . Complete planting Freesias and Watsonias, and plant Roman Hyacinths for succession. Plant dwarf Gladiolus, Oxalis, Snowdrops, Callas, and Spanish, Dutch, and English Begonias. Bury old Narcissus, and other bulbs. . . Sow Primula malacoides, divide the Primroses and set out the seeds of Primula major, M. Magnolias, and make cuttings of Camellias, Rhododendrons, Veronica, etc. . . Plant now Vinca major and minor (Periwinkle) in partial shade.

EVERGREENS

carry their own rewards of beauty, of value, and of permanence to home owners who use them freely. From August to mid-October is the period nature approves for transplanting. . .

Rhododendrons

Hardy Azaleas

TAXUS (Yew)

In fact all evergreens may safely be moved from our fields. Here is a superb collection of rare and familiar varieties. All are fully described and priced in our catalogue, which will be mailed free to points east of the Mississippi River (west on receipt of 50 cents).

BOBBINK & ATKINS
Rutherford, New Jersey

LILIUM WALACELI

A Fall Flowering Hardy Dwarf Lily

Having propagated a large stock of this handsome Lily which previously, owing to its scarcity, has been among the higher priced varieties, we can now offer this variety at 40¢ each, $4.00 per dozen, $30.00 per 100.

Wallacei is the only dwarf hardy Lily coming into bloom in late August and early September. The color is rosy apricot. The bulbs produce several flower stems ranging in height from 18 to 24 inches and multiply freely. Any order for 1 dozen or more Wallacei will entitle purchaser to a copy of the book “Consider the Lilies.” To those who already possess this valuable book, a discount of 20% will be allowed on this particular Lily. Also we offer a collection of 5 of the most dependable Lilies, namely: Auratum Platyphyllum, Columbiaunn, Elegans Alice Wilson, Hansoni and Speciosum Rubrum; 5 each of these 5 varieties with “Consider the Lilies,” a total value of $9.70 for $5.00 postpaid.

Write for our fall bulb list giving full details of this wonderful offer.

Iris that bloom all season

Continued from page 180

King Karl, peach ground, peppered red; Frieda Mohr, a gigantic deep pink; Robert W. Wallace, deep violet purple; Mildred Preston, white standards and creamy yellow falls; Thedens, a rich deep blue bi-color. Three of the latest varieties to bloom in this section should be added, namely: Ambassador, a dark rich blend; Tanay, a very deep yellow; and Sun- set, a coppery blend, suffused soft violet. This will carry us past the mid­

The Siberian Iris bloom at about the same time as the Tall Bearded Iris and add variety to the collection. An expensive collection would con­ sist of Blue Flame, soft sky blue; Periwinkle, the finest dark purple; Bob White, pure snow white; Nurse Cavell, white veined violet; and Kingfisher Blue, a very tall deep blue.

The Japanese Iris with large flat flowers now comes in, fertilized in late June and on through July. A dozen good ones are Blue Danube, indigo blue; Bobbaka, pink; Carlton Childs, white with a purple venation; Chinese Amethyst; Io-so-nomi, soft blue.

Dutch bulbs as winter house plants

Continued from page 205

make sure that the root systems are sufficiently developed raise a crock, clean off the top, examine it for root­

lets around the top edge and at the base of the bulbs. Some bulb growers are selling a bulb prepared for forcing. Any good garden soil mixed with sand or ashes to make it friable can be baked. It should be loose enough so that when some of it is pressed to­gether in the hand it will not form a lump but will fall apart. There is a prepared fibrous material for sale which contains the proper ingredients that is perfectly odorless into which the bulbs may be planted but this added expense is not essential to secure fine blooms. Some pieces of broken crocks or small stones placed in the bottom of the crocks as drainage is very necessary. Cover the bulbs with the earth setting them so that about an inch is left between the earth and the top edge of the crock.

For the first few days after the crocks have been taken out of the ground, or until top growth starts, they may be kept in a somewhat cool place. As soon as the shoots are well started they must be given light. Keep the plants in a cool room. Then when the fibrous roots from the base into bloom they are at the proper stage to be brought into the living quarters. Keep them well watered until through blooming. A little feeding before blooming is beneficial. Use a solution of a good chemical plant food.
Don't Live in a Mere "House and Lot" When You Can Easily Make It a "Home Beautiful!"

inddoors—outdoors
the house—garden
garage

Here's the practical Money-Saving Way that Home Owners and Planners are using to guide them on every step of building, decorating, furnishing, financing, repairing

Whether you own your home or rent it, contemplate building, or live now in an apartment—successful home-making is more than a labor of love. It demands KNOWLEDGE.

Do you know how to furnish a long, narrow hall effectively? What are the correct colors to use in a room with northern exposure? What should a home cost in proportion to income? Could you adapt decoration to the design of an apartment or house?

Which rooms should have dark floors and which light ones? How should your garage be planned? Where, when and what kind of garden should you plant? How should your kitchen be arranged for cooking? How are you going to in* sist home-making problems such as these, and hundreds more like them? By the expensive, disappointing "trial and error" method—or by KNOWING IN ADVANCE? Every phase of home-making calls for planning. And when you know what, when and where to build, remodel and repair, the fees of hired help, if you need it, always come lower. Knowing how means that at least cost you can create and maintain a home you will be proud of as long as you live.

Herefore, expert advice on all the details of home-making has been entirely too costly for the person of moderate means. But NOW a new treasure-house of tried-and-tested knowledge can be yours—and at unbelievably low cost!

10 NATIONALLY NOTED EXPERTS TELL YOU AND SHOW YOU IN THE NEW AMERICAN HOME LIBRARY

These recognized experts, with years of successful experience helping others build, furnish and maintain beautiful homes, have put their heads and hearts together to help YOU! In these ten remarkable books they plan, visualize and talk over with you every last detail of home-making. They sit down beside you and put their vast practical knowledge at your command—now and for years to come, because you will use these books year after year.

And to obtain the services of all these specialists in any other way would cost hundreds of times the astonishing low price of the library!

These books are practical from cover to cover—packed with money-saving and work-saving IDEAS THAT WORK on home planning, building, decorating, furnishing, financing, repairing—from cellar to attic, indoors, outdoors, the year round. They contain all the "do's" and "don'ts" you SHOULD know.

How are you going to meet home-making problems such as these, and hundreds more like them? By the expensive, disappointing "trial and error" method—or by KNOWING IN ADVANCE? Every phase of home-making calls for planning. And when you know what, when and where to build, remodel and repair, the fees of hired help, if you need it, always come lower. Knowing how means that at least cost you can create and maintain a home you will be proud of as long as you live.

Herefore, expert advice on all the details of home-making has been entirely too costly for the person of moderate means. But NOW a new treasure-house of tried-and-tested knowledge can be yours—and at unbelievably low cost!

WHAT YOU GET IN THESE 10 GREAT VOLUMES

Edited by Reginald T. Townsend, Editor of the American Home Magazine: containing nearly 2000 pages, size 5 x 7 1/4, durably bound in green vellum cloth with colored wrappers. Scores of inspiring photos, plans, drawings, vividly picture the valuable information. Points of construction, suggested rooms, period furniture, balance and color in decoration, garden plants and bulbs, planning the house, repairs—these are but a few of the countless vitally important subjects made crystal-clear with the aid of the camera's eye, the draftsman's pen and the artist's brush. There is nothing "too technical." Every word is clear, every point or suggestion is easy to understand and simple to follow. No pains or expense have been spared to make The American Home Library absolutely complete in every last detail. Use the coupon below at once and see for yourself how valuable these books can be to you.

Nelson Doubleday, Inc.
Garden City, New York

Please send me, charges prepaid, for 5 days' free examination.
THE AMERICAN HOME LIBRARY, consisting of ten compact volumes.

If I do not want it I will return it at your expense. If I keep it, I will send $1.85 and $2.00 each month for four months, a total of only $9.85 in full payment (or only $9.36 in one payment).
