BEFORE YOU MODERNIZE—study the room above. Two simple changes have brought this room pleasantly up-to-date. The first is a floor of Armstrong’s Linoleum (Embossed No. 6019), trimly tailored and cemented in place. Change number two provides the smart, modern wall effect—Armstrong’s Linowall (Knotty Pine No. 900), a permanent, washable wall material not unlike linoleum. Both these inexpensive aids to home modernizers are described in our new book, "Floors That Keep Homes in Fashion." Many illustrations in full natural color bring you a wealth of new ideas for decorating all types of rooms. Sent for 10c. (In Canada, 40c.) Armstrong Cork Products Company, Desk A2, Floor Division, Lancaster, Pa.

HUSBANDS SHOULD BE TOLD

how they can save money by installing permanent floors of Armstrong’s Inlaid Linoleum. Wives already know the work-saving advantages of these beautiful floors. In this dining-room, for example, daily care is a matter of minutes—just a quick dusting, an occasional waxing—(to make it still easier use Armstrong’s Linogloss Wax). Yet with such simple care, Armstrong Floors wear and wear and wear—free from the frequent expense of scraping, sanding and varnishing. Be sure to tell your husband, too, that each step you take on an Armstrong Floor is cushioned, comforted, quieted—that freedom from cracks means freedom from drafts, freedom from the little ills that sometimes mean big bills. The best place to tell him this modern floor story is at your local linoleum store. He’ll be sure to like the smart 1935 “streamline designs”—and the modest price he’s asked to pay for floors that keep their youth! (A suggestion: take your room measurements with you.)

ARMSTRONG’S LINOLEUM FLOORS A for every room in the house

HOW TO BE SURE
of getting the finest and cheapest kind
of automatic oil heat

Before General Electric engineers ever began designing the G-E Oil Furnace, they set up specifications for ideal oil heating—14 points of vital importance to every home owner—a standard against which every oil heating device could be measured. These are listed here so that you may use them as your own check list. Not one of them can you afford to do without; not one is missing from the G-E Oil Furnace.

1. DEPENDABILITY: Built-in automatic controls which regulate every feature of operation.
2. ECONOMY: Burns low-cost oil by means of an entirely new principle of atomization. Effects a saving from 20 to 50 per cent in fuel bills.
3. CONTINUOUS HOT WATER: Built-in water heater provides ample year-round supply for all purposes.
4. FREEDOM FROM ATTENTION: Completely automatic, sealed-in, self-oiling mechanism.
5. COMFORT: Famous G-E Thermal Control with electric clock automatically changes from day to night temperature at selected times, operates to maintain even temperatures at all times.
6. CLEANLINESS: No smoke, soot, odor or dust. No exposed oily parts.
7. QUIETNESS: Quiet operation only one rotating element, and that sealed in steel.
8. SAFETY*: Arc-welded steel boiler, every operation feature under automatic safety control.
9. LONG LIFE: Lifetime boiler, self-oiling mechanism.
10. COMPACTNESS: Mechanism on top. Controls built in. Occupies less than two square yards of floor space.
11. EASILY SERVICED: Parts sealed against tampering but readily accessible. Any feature quickly removable without disturbing others.
12. ATTRACTIVE APPEARANCE: Beautifully designed steel shell, finished in gray and black lacquer with chromium trim, stainless steel base.
13. UNDIVIDED RESPONSIBILITY: Every part made and guaranteed by G-E.
14. BACKED BY QUALIFIED AND RELIABLE MANUFACTURER. Product of General Electric.

The complete facts are told in an interesting booklet of 16 pages—THE INSIDE STORY. Mail the coupon for a copy today.
No other ROOF has these ADVANTAGES!

HERE'S a roof that sheds HEAT and COLD as well as water! Carey Cork Insulated Shingles combine weather protection and efficient insulation. A layer of cork added to the underside of this shingle provides an effective insulation that is automatically applied when the roof is put on—eliminating the extra cost of material and labor involved when separate insulation is used. Carey Cork Insulated Shingles will keep your home many degrees cooler in summer and correspondingly warmer in winter with a substantial saving in fuel bills. They are extra thick—producing those deep shadow lines that add so much to the appearance of a roof and are available in colors to suit your individual taste.

Don't just re-roof—insulate, too! At one labor cost you can have a roof that is water-proof, weather-proof and heat-proof—a roof of Carey Cork Insulated Shingles! Write Department "A" for Free Sample Free Booklet

Build Your Summer Cabin or Year 'Round Home of REAL LOGS

WHETHER you're planning a vacation retreat or a complete modern year 'round home ... a cozy lake cabin or a more pretentious house ... you'll find that Page & Hill Cabins of REAL LOGS add a new charm to living. They are remarkably enduring and low in maintenance cost.

The rustic charm and pioneer ruggedness of Early American woodcraft have been happily blended with modern comforts and conveniences in this most interesting architectural development. Chilton D. Aldrich, America's foremost log cabin architect and a member of our staff, develops plans and structural features for these unique and charming structures ... in any size, to meet your own requirements.

Built of full, round logs of "everlasting" Western Red Cedar, properly seasoned ... the recognized outstanding wood for log cabin construction ... cut and fitted at the factory. Perfected weather-tight grooved and splined construction, heavy doors, appropriate hardware, snug-fitting frames and sash ... a sturdy, enduring structure ... cool in summer and surprisingly easy to heat in winter. Unusual built-in features and picturesque rustic furniture of cedar also available. We will build complete on your location ... or supervise the building by your own local labor.

Send a rough sketch of your floor plan requirements for suggestion and estimate, or write for illustrated brochure "Cabins of Real Logs."

Just a Few Hundred Sets Left!

The 10-volume AMERICAN HOME LIBRARY
(Made to Sell For $15)

For $6.65 per set—less than one-third their actual value! The books are 5 1/2 x 7 3/4", generously illustrated, handsomely bound in green vellum cloth, with colored wrappers.

Here is the expert advice of nine leading specialists which is guiding and saving money for thousands of present and future home planners and builders—on all practical phases of home-making, financing, decorating, furnishing, repairing—from cellar to roof, indoors, outdoors, winter, summer!

These ten compact, profusely illustrated volumes are PRACTICAL from cover to cover. They are packed with money-saving, work-saving IDEAS THAT WORK—all the "Do's" and "Don'ts" you SHOULD know! Scores of interesting photos, drawings, illustrated plans, and charts make every point clear.

How to SAVE MONEY on Building, Remodeling, Furnishing, Repairing

Whether you own your own home or rent it, contemplate building, or now live in an apartment—successful Home-Making is more than a labor of love. It demands KNOWLEDGE! Do you know, for example, how to furnish a long, narrow hall effectively? What are the right colors to use in a room with a northern exposure? How should your kitchen be arranged for greatest convenience? Can you repair and renovate old furniture? Do you know all the factors to be considered in selecting a home-site?

How are you going to meet problems such as these and hundreds more like them? By the expensive, disappointing method of "trial and error"—or by KNOWING IN ADVANCE! Herefore, expert advice on ALL details of home-making has been much too costly for the person of moderate means. But NOW a treasure house of tried and tested knowledge can be yours—at an almost unbelievably low cost!

This 69% Saving Offered to American Home Readers Only

The American Home Library was published to sell for $15. The few hundred sets we now have left are being set aside exclusively for readers of American Home Magazine. While they last, they will be sold for only $6.65 per set—less than one-third their actual value! The books are 5 1/2 x 7 3/4", generously illustrated, handsomely bound in green vellum cloth, with colored wrappers.

And—although you must ACT AT ONCE in order to make SURE of getting one of these remaining sets at this 69% saving—yet you may examine the set for 5 days FREE before deciding whether to KEEP it!

SEND NO MONEY
5 Days' Free Examination

Simply mail coupon below—without money—TODAY. The 10-Volume American Home Library will be sent at once, all charges prepaid.

Read the books for five days before you decide. Then, if you don't agree that this new kind of home library will save you money, time, work, and worry—send it back at our expense and the trial will have cost you nothing. Otherwise, you may keep the books and send us only $4.65 as payment in full.

While they last, these sets are snapped up! NELSON DOUBLEDAY, Inc., Dept. 32, Garden City, New York.
I have just come back from a trip: viewing thousands of homes; finding readers' homes that were charming—and hundreds that were not. Due to the depression? No. Due to repression. What this country needs is to let itself go. Too many homemakers have crawled into their shabby, disconsolate little homes and stayed there. Why not so much as a gay shutter have they dared defy public opinion that things were "bad."

Yes, I can remember when I, too, enjoyed the depression. It was like enjoying poor health. The more one talked about it, the more plausible it became. It has taught us new values, but as a conversation piece it is beginning to pall.

Let's remember the new sense of values the depression gave us—but let's forget the depression. We are not as poor as we like to impress our neighbors. For that matter, nothing is worth self-respect. And when we let our homes go shabby on us, we have truly lost a bit of our self-respect. Color costs so little, gayness nothing at all. Isn't it about time our homes dropped their dull, depressed expressions and leaned ever so little toward a bit of gayety? You just can't come in a drab, dour little house three or four times a day without its doing something to you—and something pretty bad.

I had planned a decorating class. In eight or ten issues, I was going to compress everything I knew about decoration. I figured no one could go on making mistakes if they knew the difference between right and wrong. But now I feel very much like the woman who wrote "Let Freedom Ring" in our January issue. Like her, I am no longer in a dither about whether homes are in good taste or not. The important thing is to start things. Some of them will be bad, but far more will be right. We are all indulging in an orgy of repression. And, like all orgies, the first starts are bound to be wrong starts. But what of it? Shaking ourselves out of this beloved lethargy is worth some wrong starts. The important thing is to start.

And so, in place of a decorating class with all its gilt-edge theory, I want to get you started. Will you take a snapshot of any room you have that is suffering from long inertia, and send it to me? In the spring issues, we shall take that room and show you how to bring it out of its depression. We shall tell you all.

---

ON THE HEARTH OF THE AMERICAN HOME

REPRESSION not DEPRESSION

A great many people have found that there is real joy in garden work—during these past five years! Maybe gardening at first was largely a beginning of necessity. The fact that there was the land and that by a little bit of forethought and a little bit of energy some good use could be made of unused areas to relieve the economic pressure dawned upon people.

There was a spurt in home vegetable gardening. Oh, it didn't last long—I know that. That is to say, on a large scale, but it revealed for the first time to many a home owner that there was such a thing as joyous production in a self-maintaining home industry, and of a profitable occupation of leisure time.

The curious fact about it all is too that, talk as you may, you just cannot buy, in the local market, garden produce that measures up in quality with what you can produce at your own doorstep. But then the bulk vegetables, potatoes, cabbages, even tomatoes perhaps, and all suchlike you can get equally well from other sources but the real delicacies of the table—fine crisp lettuce, fresh really stringless string beans, crisp, young, small and therefore tender, radishes, carrots, and the like, and peas that are peas of a melting lusciousness and sweet corn on the cob that is sweet. These are real luxuries that you can give yourself and cannot buy in the ordinary channels. The home vegetable plot means real table quality if you will only take it. Let's keep up the good work and "grow our own." It is not merely a garden for that bunch of people who have a green thumb and a little extra money in the way of plants for foundation planting. The American home should be beautiful as well as practical outside as well as inside; and proper planting, even of the conventional foundation type, will go a long way to achieve this. Plant something! We want to help with individual problems and with your cooperation we will take concrete examples and suggest ways to improve. Often a little touch of planting will leave a whole lot. Dull and dead streets, ugly emptiness of lot after lot and block after block, injures your community. You do not know what to plant? Then we want to help you. Make the garden gay—not garish but animated—a fitting expression of harmonious planting to suit the plot and the environment in which your house stands. Maybe a garden is very largely just good taste. Begin your gardening by planting the things you like and add to them as your knowledge grows by acquaintance and experience. Discard and eliminate by the same rule. Then we shall have throughout the land ecstatic gardening and not static gardening. There has been far too much static gardening—just planting a conventional shrub or two in a conventional way and then sitting down and doing nothing.

SEE HOW QUICKLY LISTERINE RELIEVES IT

Don't put up with the pain of ordinary sore throat. It is so unnecessary. At the first symptom of trouble, gargle with Listerine just as it comes from the bottle. You'll be delighted by the result.

Often one gargle is enough to relieve that tight, raw, burning feeling. If relief is not immediate, repeat the gargle at 2 hour intervals. Usually two or three applications of Listerine are sufficient.

Listerine gets results because it is first of all a powerful, though safe, antiseptic which attacks millions of germs on mouth and throat surfaces. Tests have shown that when used as a gargle, Listerine reaches far beyond the soft palate into the posterior pharynx where sore throat frequently starts.

Keep Listerine handy in home and office and use it full strength at the first symptom of a cold or sore throat. Lambert Pharmacal Co., St. Louis, Missouri.

How a Man of 40 Can Retire in 15 Years

IT MAKES no difference if your carefully laid plans for saying have been upset by the depression. It makes no difference if you are worth half as much today as you were in 1929.

Now, by merely following a simple, definite Retirement Income Plan, you can arrange to quit work forever fifteen years from today with a monthly income guaranteed to you for life.

Suppose you decide to retire on $250 a month beginning at age 55. Here is what you get:
1. A check for $250 when you reach 55 and a check for $250 every month thereafter as long as you live.

This important benefit is available alone; but if you are insurable, your Plan can also include:
2. A life income for your wife if you die before age 55.
3. A monthly disability income for yourself if before age 55, total disability stops your earning power for six months or more.

It sounds too good to be true. But it isn't. There are no "catches" in it. The Plan is not limited to men of 40. You may be older or younger. The income is not limited to $250 a month. It can be more or less. And you can retire at any of the following ages you wish: 55, 60, 65, or 70.

How much does it cost? When we know your exact age, we shall be glad to tell you. In the long run, the Plan probably cost nothing, because, in most cases, every cent and more comes back to you at retirement age.

Write your date of birth in the coupon below and mail it today. You will receive, without cost or obligation, a copy of the interesting illustrated booklet shown below. It tells all about the new Phoenix Mutual Retirement Income Plan and how it works. Send for your copy of the booklet now. The coupon is for your convenience.

Are you preparing your children for FAME or FAILURE?

The average child in fifth grade, according to Government statistics, has only one chance in 50 to complete a college education—one chance in 50, really, to avoid failure. Fame comes usually only to those who have a working knowledge of many subjects. You cannot be sure your children will ever complete college courses, but you can be sure, with Britannica Junior, that you have given them the working knowledge they need for future success.

Britannica Junior, in twelve beautiful volumes, is the child's own encyclopedia—filled with essential information, presented in a style he or she can understand and enjoy, and stripped of all non-essential information that could be jammed into such books to give them quantity rather than quality.

Britannica Junior does not straddle all age groups. It is designed for the recognized need. Prominent educators and Encyclopaedia Britannica have combined to produce this set of books for children along modern educational lines, and to fill a long-recognized need.

LOOK AT THESE FEATURES

Ready Reference Volume. A full-size volume containing important, quick information on over 20,000 subjects, with over 50,000 references to further information in the set.

Study Guide. An innovation in child-education. A complete guide to following any particular course of study.

New photographs—beautiful color plates. Profusely illustrated throughout. Twenty-four end-pages, in full color: twelve of which give complete plans and specifications for making many beautiful, useful things; twelve are maps.

YOUR CHILDREN NEED BRITANNICA JUNIOR

Britannica Junior gives the whole world to your children in their own language. You owe it to them to find out more about this great new educational aid. Send in the coupon below and we will send you, absolutely FREE, 24-page book describing Britannica Junior, with specimen pages.

Modern Comfort and Modern Beauty

One of the most important features of the New Ford V-8 for 1935 is its remarkable riding comfort—especially in the back seat. This is achieved by fundamental changes in weight distribution, new seat position, and longer springs of unusual flexibility. You ride forward, toward the center of the car—center-poised between the springs. This gives rear-seat passengers the comfort of a "front-seat ride" and makes every road a smoother road.... There's increased leg room, body room and luggage room and the front seats are 4 to 5½ inches wider.... New and modern also are the distinctive lines and colors of the New Ford V-8 and the luxurious upholstery and appointments of the De Luxe body types.... The all-steel bodies are equipped with Safety Glass throughout at no additional cost.... Ease of steering, new easy-pressure clutch, improved quick-stopping brakes, and the dependable, economical performance of the V-8 engine are additional reasons why it is such a satisfactory choice for the woman motorist.... The New Ford V-8 is modern in every detail.

"The smart younger set are smoking Camels…"

Mrs. Langdon Post

WHEREVER the smartest, brightest young people gather, there you will find the popular Mrs. Langdon Post. She has a finger in all the gaiety that gives such sparkle to a New York season.

"Enthusiasm is very contagious," she says.

"Look at the way we are all smoking Camels. They have become 'the' cigarette and I think I know why. Dashing about from this to that we all smoke a lot and I know from experience that Camels never affect my nerves. They taste better, too, milder and richer. And when I am tired I find that smoking a Camel gives me a 'lift' in a nice way. I feel fresher and more enthusiastic afterwards."

That natural "lift" you notice after a Camel is just your latent energy that has been released. A safe, easy way to restore your energy. Try a Camel today when you become fatigued.

Among the many distinguished women who prefer Camel's costlier tobaccos:

MRS. NICHOLAS BIDDLE, Philadelphia
MRS. ALLSTON BOYER, New York
MRS. MARY BYRD, Richmond
MRS. POWELL CAROT, Boston
MRS. THOMAS M. CARNEGIE, Jr., New York
MRS. J. GARDNER COOLIDGE, II, Boston
MRS. BYRD WARWICK DAVENPORT, New York
MRS. HENRY FIELD, Chicago
MRS. BERTHA GOULD, New York
MRS. JAMES RUSSELL LOWELL, New York
MRS. POTTER D'ORSAY PALMER, Chicago
MRS. MIRIAM Recorder, New York
MRS. EVELYN WATTS, New York

Camels are Milder!.. made from finer, More Expensive Tobaccos

A summer camp for family living

Designed and drawn by Wallace Wolcott

This outdoor living camp is designed for what we might call a second generation family. It is intended to be flexible in meeting every sort of vacation problem. Suppose you are a member of such a grown-up family. First, there are the elders, and their relatives and friends. Next come their grown-up children, some married with children of their own, and some not. Add to these their friends and their children's friends. Take these all together with every complication of vacation lengths; all summer, two weeks or a weekend. Our problem is to provide a camp at which a good vacation is possible for everyone in the family.

If a summer camp, especially one planned for a large family, is to give good vacations it must first provide complete privacy, comfort, and independence for all: youngsters, elders, or in-betweens. It must be able to expand when there is a big crowd and to contract when just a few are in camp, and it must be able to work easily and smoothly always. This outdoor living camp does all these things because it is made up of a series of sleeping cabins, grouped around a main living camp. Some of these sleeping cabins accommodate a family of four, while others are just right for two people. In the main camp are located a fine living room flanked on each side by two spacious living porches. The efficient and well-appointed kitchen with all service requirements is part of the main camp while on the second floor are two bedrooms, bath, and general storage.

The sketch above shows the main camp, a simple cottage sheathed with unplaned siding. It has a fine living room, two spacious living porches, an efficient kitchen, and two upstairs bedrooms and bath—a concession to those who really don't enjoy roughing it. The other cabins (see next page) provide sleeping quarters, a playroom, and maids' room.

The type of family camp is designed with the idea of providing a real vacation for each member of the family, flexible enough to take care of a large crowd, or cozy when just a few are in camp. It can be built gradually from summer to summer and is simple enough to be constructed easily by the owner himself. On the opposite page is shown a complete plan of the layout of the entire camp with its various cabins.
with a children's house to one side of a fine sunshine play space. The rear of this house has a maid's room accommodating two beds. Both the children's house and open play space are so placed as to be supervised easily from the kitchen windows. Back of the sunshine play space should be located tennis courts and sport equipment for older youngsters and adults.

If you will look at the general plan you will see these features laid out. My idea in drawing this plan was not to fix definite buildings, but to give an idea of what such a plan could be. I have shown four sleeping cabins, two accommodating four people, and two, two people. Of course, these would vary with the people the camp would probably be asked to accommodate. As I show it, the camp would sleep sixteen members of the family and two maids. This is quite a large order, but I really think this matter could be taken care of without undue trouble or confusion.

If you will look at the individual plans and sketches, I shall describe briefly each type of building as designed.

The sleeping cabin for two gives an open-air screened sleeping room, two large closets, and an open porch. The open window spaces can be closed by means of a shutter which is pulled up and down, like the bottom sash of a double-hung window. In this way the cabin can be closed for the winter in just a few minutes. The screens are hinged on the inside.

The sleeping cabin for four is really two single cabins placed end to end. It has two open-air sleeping rooms and closets whose doors can be opened to separate the two sleeping rooms (plan at right). The window spaces can be closed by double-hung shutters, similar to those in the two single cabins. I have shown a ventilator in the roof which is the most efficient way to keep a room cool in hot weather.

The children's house is a suggestion for keeping the small children out from under the older people on rainy days, or when the main camp is used for an afternoon party. It has ample closets for toys and, as shown, is a splendid size for all children's activities. The maid's room is located in the rear, so that she may unofficially be on hand should a case of necessity arise.

If your camp is to be in the woods, be sure to provide a sunshine play space for children. Here can be located swings, trapeze, jungle jims, sand piles, or what not.

The main camp I have shown a simple cottage sheathed with unplanned siding and stained a light gray-green. Use white pine posts (plain on one side), instead of 2" x 4's", and leave the wood material finish or paint a light color for all inside finish. The two upstairs bedrooms and bath are a concession to those persons who really don't enjoy roughing it. This main camp is complete in itself, and it could well be built to stand cold weather and used for week-ends in early spring or late fall. By all means, arrange the kitchen to be a light, efficient, well-ventilated room with the best equipment you can afford.

This type of a camp can be built gradually from summer to summer. The sleeping cabins were designed simply, so that they might easily be built by the owner himself. Material for the single cabin should cost around one hundred and fifty dollars.
A year 'round week-end camp at Lake Lenape, N. J.

owned by Mr. and Mrs. Harry Collins, Jr.

This log siding cabin of five rooms and bath has every convenience for the year 'round use to which it is put. Built by Mr. Elsworth Dobbs from plans drawn up by Mr. and Mrs. Collins, the interior was finished off by the owners themselves. Green asphalt shingle roof; two fieldstone chimneys; siding stained with burnt umber and linseed oil; cedar rafters in the living room are features of note.
Overlooking the Minnesota River Valley

Located about seventeen miles from Minneapolis, the log cabin (shown above) of Dr. Kenneth Bulkley commands a high, wide, and handsome view of the Minnesota River Valley.

The Bulkley cabin contains a large screened porch, an 18' x 28' living room with a towering high log raftered ceiling, two bedrooms, bath, and kitchen. We regret space did not allow our showing the unusual built-in features of the kitchen. Of Western red cedar, these units are as compact and efficient as the most modern home kitchen.

The photograph at the right shows a corner of the living room. Here is comfort for every phase of summer living, even to a well-lighted game corner. The furniture is sturdy rustic and picturesque—yet evidently planned for comfort. Most of the furniture in the cabin, as well as the cabin itself, was built by Page & Hill Company.
Several years ago, when the spring days called mortals to the open, my husband and I ran across a lovely small acreage on the banks of the Cumberland River near Nashville, Tennessee. At the foot of the bluff was a dam, put there many years ago by the government in connection with locks. This made this spot very alluring as the roaring noise reminded one of the ocean.

Investigation showed why this particularly lovely spot had not been "grabbed up." Alas, it was subject to overflow! Were we willing to have it for a summer cabin with that drawback? Finally, we decided we were, and went about the purchasing and building with the assistance of Mr. William Colley, architect. The "before" picture (in the circle at the right) shows our first venture. Like a very charming bad child, the love for the spot and "Roarin' Cab'n" grew until we were not happy anywhere else.

There are only two of us in the family. As my husband is a surgeon and must necessarily leave me alone much of the time, we decided to make the house into a duplex. This seemed advisable for two reasons: more income, and protection for each family. It must give absolute privacy for two families and still retain for as many rooms as possible a view of our lovely river.

By raising the cab'n above flood line we gained much usable space including two shower rooms at left rear. Entering garage at end we have space for six cars instead of two. The space underneath the owners' dining room was not enclosed and was converted into a living porch overlooking the dam. Opening onto this porch and into garage the space underneath the new living room was made into a rumpus room with kitchenette facilities.

Plans on page 146 show that by increasing the size of the original back bedroom and enclosing sleeping porch a dining room and additional bedroom for tenants' apartment were gained—thus giving the apartment six rooms, two baths, closets, and porches. The roof of the garage was utilized as a porch, giving privacy and view. This is reached by French doors from the dining room.

The attic space of the cab'n was well insulated and converted into the owners' sleeping quarters, baths, guest room, cedar room closets, and storage space. The owners' bedroom opens on deck roof over newly added living room. This roof has great possibilities which we expect to utilize as a greenhouse for winter blooming plants. Between the dining and living rooms is a step platform giving access to the kitchen and dining room. Underneath this platform we gained a large wood storage space, fed from the outside living porch.

Plans show the improvements. They were begun in February, 1933, and completed in April, 1933, at an approximate cost of $2500. It nets us an income of around $500 annually which shows a splendid investment in these hard times.

The question of making "help" satisfied and comfortable came up and, where, oh where, was a servants' cabin to be placed? A very beautiful and necessary slough, called Gibson Creek, separated the small acreage from the next land at one side of lot. This
—on the order of a Lazy Susan—and adds the informality that a place like this needs. Around this grill is planted the wild garden and in spring it is a riot of color with the Laurel, Azaleas, Rhododendrons, and many small and dainty woodland plants. In the summer after the bloom has passed, we gain color with the beautiful, fancy leaved Caladiums, and tuberous rooted Begonias. Of course, should the flood waters stay long these things would not bloom, but our floods are very short lived. Immediately after the flood waters recede the vegetation is cleaned of all deposited mud.

Hoping that the story of Roarin' Cab'n will help someone else who longs for a certain location and

In remodeling the house, provision was made for two families, giving both adequate privacy and taking full advantage of the river view. Below is shown one side of the living and dining room

just "don't dare," my message to them is "do and dare." For where there is the will a way will come with a thrill of achievement all the while! There are so many enchanting spots in this old country of ours for vacation retreats that one certainly need not be at a loss to find the type that appeals most. And more than that—the question of money investment need not be the uppermost consideration for the person with a little imagination and patience, for there are innumerable "finds" in the highlands or near seashore just waiting to be snatched up and made into the vacation spot of your dreams.

Drained the uplands and also served the river to spread out as back water in spring flood season. The logical place for the servants' cabin was at the entrance gate farthest removed from owners' cabin and so placed all passage to the main building would be taken care of. Much amusement is given our friends by our floating servants' quarters. There are underneath it forty-three oil drums and it is guided up and down by large iron pipes with sleeves bolted to the cab'n. The colored man who occupied this happened to be named Art, so "Art's Ark" it became. This works beautifully and rises and settles on exactly the same foundation it was intended. Of course, our very dependable Weather Bureau can tell us to almost an inch what the flooded stream will do—and when. This gives us ample time to take proper precautions against a flood.

The greatest bother I experienced was my flower garden and what would "Old Man River" do to my adored plants? After four years, and in that time having the grounds submerged twice, the accompanying photographs will show how little damage a flood really does. Many plants seem to thrive on so much water. Roses seem to adore it. I have never had a single one rot, many freeze. The river bank is covered (in two years) with Climbing Hybrid Teas and Wichuraiana Roses. This gives a gorgeous show of color in June and always a few blooms are to be seen or pulled.

On the slope of the Gibson Creek at the rear is a grill for outdoor cooking and dining. On this is a picnic table, with a revolving top

On the order of a Lazy Susan—and adds the informality that a place like this needs. Around this grill is planted the wild garden and in spring it is a riot of color with the Laurel, Azaleas, Rhododendrons, and many small and dainty woodland plants. In the summer after the bloom has passed, we gain color with the beautiful, fancy leaved Caladiums, and tuberous rooted Begonias. Of course, should the flood waters stay long these things would not bloom, but our floods are very short lived. Immediately after the flood waters recede the vegetation is cleaned of all deposited mud.

Hoping that the story of Roarin' Cab'n will help someone else who longs for a certain location and
At right, the coolly shaded outdoor dining room and outdoor fireplace. An unusual feature is the revolving table top—a glorified family-size Lazy Susan.

In center of page: the view of the roaring waters tumbling over the dam one gets from the living-room windows. Here, too, is a shady retreat in the form of a wide bench encircling a tree at the water's edge. An idea of the truly magnificent panoramic view may be judged by the proportionate size of the fishermen on the ledges as against the watering-maid in the foreground.

At right, the open porch on the garage level opens off the rumpus room. There is a comfortable screened porch above it on the living-room level.
The house that hands built

Kreigh Collins

My wife said that this would be a dandy title if only my name were Hans. She is a hard realist. . . . So the hard realist and the artist collaborated, and announced to friends and family that said two were to build a house. Result: derision, heart to heart talks, and reams of advice. However, we're used to that type of entertainment and proceeded merrily with our project.

In '31 we had rebelled at being armchair explorers, and in spite of dire forebodings on the part of our friends we went to Europe and traveled all over on thirty dollars a week pour deux personnes. For four months we had a lovely time. So when in '34 we decided to build a cabin we were well trained and thoroughly inoculated against advice, which was fortunate, for friends, etc., were consistent with their usual prophecies. In fact, one gave the Hard Realist a hollow laugh over the 'phone when the HR mentioned that I was to build the place, which must have wrecked the conversation as the HR is indeed a staunch partisan.

But we did it—and, furthermore, two of the Jeremiahs are now breaking pencils by bearing down too hard on the paper on which they are making strange marks and signs which the "loonies" think will be little cabins next spring. It seems to be a disease. We must remember to go over and give them some advice.

The first consideration was a piece of land, which was easy—there is plenty of land. We selected a site in a wood lot.

Like the man who when asked whether he played the piano said no but he was willing to try, I told the HR I would design a house. I had a lot to learn. I dove into the mysteries of board feet and, due to my being an experimental mathematician, my difficulties of turning all those boards of all shapes and sizes into board feet would bring tears of pity to the most hardened contractor.

I gave up trying to make the bill of materials fit the house and started all over again. This time I reversed matters, having come to the conclusion that it would be easier to design the house to fit the materials. Selah, it was done. The floor was to be twelve by sixteen. Floor joists and flooring came in those sizes and there would be no wastage. Incidentally, we could use sixteen foot material for the rafters by cutting them once on the diagonal. The foundation was to be fieldstone, half sunk in the ground. We did not intend to sink a well as there is a fast flowing spring a mile away directly on the road, and we could carry our drinking water in a five-gallon container. The washing water would be caught. 

We wanted none of the medieval meal arrangements found in most summer cottages. Our kitchenette is efficient and cool and our dinette seats five very comfortably—seven in a pinch. Access to the balcony is by a ladder which serves not only as a means of going to bed, but also for housing our many books.
in a rain barrel. We became familiar with such terms as "plates," "studs," "sills," and what not, and by carefully bringing the conversation around to that point we could spring a few of them now and then and thereby impress our friends with the seriousness of our multitudinous accomplishments.

At the end of ten days I possessed: (1) a house plan, (2) a bill of materials, (3) a profound respect for architects.

It was the seventeenth of May. We had a wild idea of having the place roughed in far enough so that we could camp in it at least by the first of the month. Rent day. Well, we jolly well had to start humping. By this time friends and family had come to the conclusion that we were a menace to society; the idea was ridiculous enough for us even to try and build a house, but to move in in two weeks. . . . We tried to explain that it would be just a glorified form of camping out at first, but all that did was to draw caustic comment on the adjective. We ordered the materials without hesitation.

Bright and early the next morning we drove the seventeen miles out to the wood lot and, with bated breath, awaited what the day had to hold. We had never seen such an impressive sight as the lumber truck bearing down upon us. No one can realize how truly majestic a lumber truck can be. Then the trouble commenced.

The house site was back in the center of the woods. And the trail we cut was just large enough to accommodate the Art Special, our eight-year-old coupé of modest make. The truck was a little long on one end and started too sudden on one side. The driver solved the problem in classic manner. Like Alexander and his Gordian knot, he dumped his load by the side of the trail and disappeared into the morning mist. We went into a huddle. If we tried to carry all that stuff through the woods some one else would have to build the house for we wouldn't have the time. I guess all labor-saving devices were invented because man by nature is a lazy animal. We rigged up a "hinkus" from a length of rope and were able to carry about a dozen boards on
Traces of painted floors with more or less ornamental borders in stenciled designs have been found among the carefully preserved houses of over a century ago. They are particularly suitable, however, for simple summer homes where rugs are apt to be impractical. These painted floors are done in two ways: an all-over pattern and one with a border and plain center. This article treats of the border variety. And to do one is neither difficult nor expensive. Such a floor is very effective, whether it appeals to you as a method to restore an old floor, or one made of cheap boards. Certainly they are most appropriate in the summer house.

The old floor should be given a thorough cleaning first, getting out all the dirt and grease. A good sanding comes next if the floor is rough. The sanding machine (which can be rented) saves a lot of time and labor. Uneven spots can be planed down or scraped. They should then be given a background of solid color such as a dull blue, olive green or a gray. The center can be given a pepper and salt or spattered treatment if desired, but the plain background seems best. If the floor is old and dry, a first coat can be put on in some neutral color as light gray.

The background color is made from white lead or flat white paint. If pure white lead is used, dilute it with turpentine. The shade is made by adding raw color ground in oil. These colors are very powerful and a small can will give more than enough. Dilute the raw color with turpentine and add it to the lead or flat white until you get the desired shade. A good blue is made by combining white lead, Prussian blue, and a very little black.

Most important—the background color must dry dead or flat. If there is any gloss to it the stenciled colors will not cover sufficiently well.

The stenciling is applied with regular artists' oil colors which come in tubes. It is advisable to add just a few drops of dryer to these colors as they are rather slow in drying.

The floor designs of the early homes were usually of some free-flowing pattern in flowers and leaves. Sometimes geometrical figures were used, too. Not always were stencils used because there are examples which show plainly they were done free hand. And any amateur artist can draw a simple, freehand design that will be effective. The design shown in the photograph is only a suggestion. It is composed of a conventionalized sunflower and a scallop shell that anyone can copy. The flower is in brilliant yellow with brown center and the leaves in pale green. The shells are ivory or cream color. A little lining on the shells with a cameo pink adds to them. The festoon of smaller shells is in the same shade, graduated in size, largest in center.

The possibilities for design and color are, of course, without limit. A floor full of life and color is a solid background of Chinese vermillion with a border of black dragons relieved in gold. Flowers, leaves, and geometrical figures can be worked into fine and individual patterns. Such floors cost only three or four dollars in materials but they are priceless to the one who makes of them something of his own in design.
Campaign against “discards” for camp furnishings

Why? It cannot be anything but another of our fond, false ideas of economy. And so for months, we have been keeping our eye “peeled” for sturdy simple furniture for every possible camp need, all of it comfortable and all of it inexpensive. Leaving you,

Here are two chairs that offer good, substantial, solid comfort to the weary camper at the end of a strenuous day. The one above: Habitant Shops, Inc.; the maple upholstered one from The Sikes Co., Inc.

There have been many campaigns these last few years—too many, in fact, but none that we know against the continued use of “discards” for furnishing otherwise wholesome, clean camps. We have practically abolished the shameful practice of putting all the house “discards” in the children’s rooms—but fear we have only chased them off to summer homes. And so we are hot on the trail of these faded tapestry chairs, springless sofas, and prison beds, gummy mahogany tables and threadbare Axminster rugs. Not even the Salvation Army would consider them worth the hauling—and here they are incongruously ensconced in our summer homes where we fled for a “change.”

A gate-leg table of hickory which opens up to 50 x 36 inches and obligingly folds up to a width of only 14 inches when not in use. Old Hickory Furniture Co.
in other words, without a single good argument for using those "discards."

Camp life can be either of two things: it can be a new lease on life, with the usual monotonous tasks simplified to a point where they are practically non-existent, or, as so often happens, it is merely a continuation of everyday life, minus its comforts and conveniences. It can be a complete physical as well as mental rehabilitation—or it can be more work and more annoyance than if we had stayed in town all summer with our modern labor-saving devices.

Wholesomely simple, practical camp furniture

For the main room of the camp, a long table like this maple one is adaptable for magazines and books and summer reading in general, and at a moment's notice can be cleared off and extended to seat all the neighbors who may drop in for the evening meal. From The Sikes Co., Inc.

Above: A junior bridge lamp that fits in the camp decoration. Made of Old Hickory, with a well-balanced, substantial base

A piece of furniture that can serve as desk or dressing table or both is made of northern white cedar, rubbed down and spar varnished, and ornamented with wrought-iron hinges. Habitant Shops, Inc.

At right, a comfortable sofa designed by one of the country's leading furniture designers for the Old Hickory Furniture Co. combines antiqued pine, hickory, and gay, sturdy upholstery. Based on an authentic, quaint old pattern, this piece and its matching wing chair not only will be at home in any rustic setting, but will take camp "punishment"

Above: A cupboard that may serve as a linen chest, silver storage and china cupboard—or for books, radio, and linen storage. An Early American piece built by Stickney which fits in admirably in the summer home as well as the small home for which it was originally intended

Below: A tea wagon of hickory in dark oak finish, with drop leaves and under-tray which can be put to double use as a table for impromptu meals on porch or out-of-doors. Old Hickory Furniture
Solid maple head and footboards are suitably simple for the camp or cottage bedstead. Made by The Sikes Company, Inc.

Below: A bed that is twin bed, cedar chest, and bookshelf all in one. Drawers are solid cedar, large enough for storing linens, clothing, and bedding, and the bed itself is of solid maple. Truly an answer to the space-conservation prayer of every camper. Made by the Peter Klerner Furniture Co.

A camp version of the four-poster is constructed of northern white cedar. Habitant

At top: A hurricane candlestick which is proof against sudden gusts of wind. Handle and base of black iron, it has sufficient weight so that it will not tip too easily. From H. P. & H. F. Hunt Co., who also make it in a wall sconce.

A good place for magazines, and a handy chopping-bowl-on-legs for apples to munch, for one's knitting, or for a dozen other uses are other Habitant pieces which contributes more to a new lease on life than at first appears. Aside from the incongruity of greasy tapestry chairs and white iron bedsteads in a leafy, green out-of-doors, this old discarded furniture has no utilitarian reason for existing beyond its natural life in town. Space becomes all-important in the camp. Almost every piece of furniture in a camp should give account of itself for at least two purposes—the bed. For instance, on this page. Not only is it a comfortable, attractive bed obviously at home in its surroundings, but it provides precious storage space in an area usually given over to dust collecting, and provides book and radio shelves with a safe place for the lamp—needed just where it is.
By skilful selection of furniture in proper small scale and by the employment of numerous decorative devices to create the illusion of space, Mr. Richard Wallace, in his apartment in a brownstone-front, has created a home with a very personal home quality. At right, an effective use of mirrors and a scenic wallpaper give a cheery welcome unlike that met with in most apartment foyers.
Making an apartment look like home

Charlotte L. Eaton

Throughout the length and breadth of the land there are hundreds and thousands of city dwellers whose homes are made in apartments. The average one of these apartments has a number of handicaps to be overcome if it is to be a real home. There is usually a small number of rooms, often no dining room, and small dimensions are apt to prevail everywhere. In addition to lack of space inside, often there is no view, or an ugly view to be concealed, and no outside vistas, no glimpses of soft green trees in summer or picturesque brown trunks and branches in winter, to give an illusion of space. Fireplaces, which bring so much homey quality into a living room, are often missing, rooms are dark, windows and wall spaces make furniture grouping difficult—there are endless difficulties which are only too well known by those who have had to cope with them! Nonetheless, our cities are full of apartments, full of fine home atmosphere. Their owners and their owners' friends enjoy them so much that news of some of them has been brought to us, and we have selected four to show what can be done, and done successfully to create real apartment "homes."

Of these four, all in New York, two are in remodeled "brownstone fronts," one in a Riverside Drive apartment house dating back quite a while, and the fourth is in a modern structure. To our minds, each one has a distinct personality, a fine home quality that should be suggestive and full of ideas for other apartment dwellers.

Two views of Mr. Richard Wallace's apartment in a brownstone front are shown on page 154. A small room and rather dark, the bedroom gains fine dignity from the beautiful moldings originally in the house and fortunately left by the architect in charge of remodeling. A single
There is a definite country atmosphere in the Fitzgerald bedroom, with its green and white color scheme, hooked rugs, and fourposter pair of sheer gold curtains hung straight from rod to floor accentuates the architectural trim and brings warm light into an otherwise gloomy room. Gold is repeated in the damask bedspreads, contrasting with a plum-color carpet covering the floor completely, to make the small space seem as large as possible. The illusion of space is also enhanced by a large mirror over the bureau, reflecting the furniture grouping on the opposite wall.

Made up of living room, bedroom, bath, and kitchen, this apartment has a long and rather wide passageway to the living room cleverly handled to create a charming vista, and also to provide a logical place for dining. The scenic paper, the famous "Hindustan" design, covers the walls above a green dado, and structural beams are covered with mirrors set on with simple moldings, another space-creating device.

Mr. and Mrs. Garrett T. Fitzgerald, in their apartment on Riverside Drive, have the advantage of unusually large rooms, but the disadvantage of no outlook, their apartment facing on rear walls of other apartment houses. The successful Colonial atmosphere in the living room suggests that they were blessed with fine family heirlooms in antique maple and pine furniture. As a matter of fact, the pieces are all reproductions, and were assembled from local department stores in the course of three months. The Fitzgeralds are bride and groom, both of them professional people with little time to spend shopping for furnishings and decorations, but they knew what they wanted and what their apartment would accommodate, and certainly have succeeded in creating a very real home atmosphere. A portable fireplace in the living room, simple window treatments, quantities of growing plants and flowers, chintz-covered chairs and sofa, and many hooked rugs, make it seem more like a country home than one in the city. The long table in the living room is used for dining, and the little serving table near the entrance archway, easily accessible from the kitchen, is convenient for refreshments when friends drop in to call. Not the least interesting feature of the green and white bedroom is the fourposter bedstead.
The living room in the apartment of Mr. and Mrs. Malcolm Ames MacIntyre is shown above, and, to the right, the bedroom adjoining.

Another view of Mr. Marinsky's living room (below) shows the built-in cupboards and bookshelves, painted to match the walls with its tester, and valances of eyelet embroidery. Even the hallway, with its Colonial mirror and Currier & Ives prints and its vista into the living room, has a definite feeling of the country.

The living room at the top of the page, that of Mr. and Mrs. Malcolm Ames MacIntyre, owes much of its pleasant home atmosphere to family heirlooms, double windows treated as one, built-in bookcases, a comfortable big sofa which does not show in the photograph. Carpet and over draperies are plum color, the latter edged with cream fringe. The bedroom, shown in the smaller picture, has mulberry moiré curtains bound and tied back in cream. cream moiré bedspreads piped to contrast, a carpet in a warm shade between plum and raspberry, and a peach satin chair, very becoming to mahogany.

At the bottom of these pages are two views of the living room in the apartment of Harry Marinsky, artist, so much of whose work appears in The American Home. He has been very clever in creating a feeling of space in a small room. One thing that helps this effect is the room-size carpet, which is in eggplant; another is the mirror, hung without moldings between the windows. Built-in bookshelves and cupboards are painted chocolate-brown to match the walls, and curtains are in corn-yellow. An ugly radiator is concealed under a structure modeled after some of the old fireplaces, brown burlap stretched across the opening to admit heat.
A landscaped sandpile

Sherman R. Barnett

After years of weeding and seeding, raking and rolling, and sprinkling and spading I rather prided myself on a fairly respectable looking commuter's back yard. Then, like a stab in the back, I was peremptorily informed that the children must have a sandpile. A sandpile! An unruly pile of sand in the middle of my carefully grown lawn, like a splash of gravy on a dress shirt!

From the children's standpoint there was, of course, no argument. They invariably love a sandpile; they'll play there by the hour (which is satisfactory to the mothers), and any doctor in the world will tell you that it's a very healthy pastime.

"Sweetheart," I said, being undecided whether to ruin my lawn or kill the children, "let me think this over for a few days. I've got a whole back yard at stake and I don't want to hurt it any more than possible."

The next two or three evenings when I returned from work I meditated in the back yard. The sandpile, I noted, should be in the sun at least part of the day. It should be large enough for our two kids and the six or eight others in the neighborhood. It should dry out quickly after a rain. It should, if possible, be inconspicuous. It should have retaining walls of some sort to keep the sand from spreading. Also, as far as I was concerned, it had to be inexpensive.

A happy thought solved the problem. Even if I do say so myself, I now have a sandpile which meets all of these requirements. In addition, it can barely be detected at twenty feet and, when seen, it is actually attractive.

With the aid of the accompanying photographs, which, I fear, reflect my inexperience as a photographer, I shall try to describe its general construction.

I first dug a circular hole about six feet in diameter and inclined the bottom so that the shallowest part was about fourteen inches and the deepest part about eighteen inches below the ground level.

The local tinsmith provided, at a nominal cost, a ring of galvanized iron to serve not only as a retaining wall but, in addition, to keep water from draining in from the sides.

This installed, I salvaged an eighteen-inch drain tile from the local dump heap and dug a place for it on the deepest side of the hole so that it would project downwardly and outwardly at an angle away from the hole. This pipe, of course, was unnecessarily large but, being free, I used it.

After blocking the top of the [Please turn to page 192]
WHAT'S NEW?

Each year there is a host of new flowers clamoring for your favor. At least a year before the novelties can be offered they have to be "put into production" on a large scale. Then it is that the horticultural critic can fairly evaluate the ratings of the debutants.

In these days of airflow automobiles, stream-line trains, and super-athletes, one rarely looks for signs of progress in the peaceful atmosphere of the flower garden—but in this field, too, there are new and striking creations that bring us closer to perfection each season. This year, for example, rust-proof Snapdragons, a laciniate Calendula, double Nasturtium hybrids, and a really blue Petunia will be among the "new and different" Annuals that will be offered by American seedsmen.

Probably the most important is the rust-resistant strain of Snapdragons. This will certainly be a boon to the home gardener, who has dusted, sprayed, and experimented with all sorts of other remedies, but still lost his Snapdragons through the withering blight of the rust fungus. In general, seedsmen do not claim that the rust-proof varieties are quite as fine as the very best specimens of non-resistant varieties—but they closely approach the latter for beauty, and certainly will be far more satisfactory in the garden. Colors to date are canary, yellow, copper, cream, white, red, dark pink, light pink, and mixtures containing the above and other shades—quite a large selection, too! Guarantees that 75% of the plants will be immune from rust are being made, and an extra 10% of susceptible plants can be eliminated during the "flattening" stage by scattering rusted leaves among the tiny plants.

Another outstanding advance of this year comes with the Double Hybrid Nasturtiums and the Double Scarlet Gleam. Bred from the popular and showy Golden Gleam, the same form and growing habit are retained, but in a wide range of new colors. Scarlet Gleam, the first after Golden Gleam to be offered in a fixed color, is a bright orange-scarlet. The Hybrids come in a mixture of salmon, golden yellow, orange-scarlet, maroon, orange, crimson, and gold flushed scarlet shades. In growing for the showiest effect, just jot down a note to avoid overwatering. They need a good amount of water, of course, but remember that too heavy a soaking will bring the foliage as high as the blossoms, spoiling the de-

Snapdragons that resist rust disease will be welcome indeed. At top, glorious Double Gleam Hybrid Nasturtiums are available now in a mixture of bright colors.
sired mass effect of the flowers.

Not strictly new this year, but so underrated that it still remains new from a practical standpoint is the Unwin Dwarf Bedding Dahlia strain. Sometimes called "perennial annuals" because they bloom from seed the first year, but can be grown later from tubers, these Dwarf Dahlias are most valuable. Growing from one to two feet tall, the tiny plants are full of blossoms, and besides furnishing cut-flowers for many months, they are most effective in mass plantings, or as borders. They come in the full range of bright autumn colors—red, yellow, peach-red, scarlet, cream, tan, terra-cotta, orange, and apricot—and the single and semi-double flowers are most attractive. The small flowered Dahlia is by all odds the most generally useful as a plant for the average household.

One of the best uses for Dwarf Dahlias is as pot plants. Grown in this manner, plants can be brought indoors, a single pot making a gorgeous and most artistic bouquet. They should not be kept out of the sunshine for too long at a time, but will do comfortably indoors for a week at a stretch. An even newer and different strain is the Unwin Ideal Bedding with quilled petals.

Also obtainable last year, but too scarce to have received much publicity, is the new type of Godetia, Sybil Sherwood. Nothing of the painted lady effect, nor the bushy mass of blooms for this garden gem. The color is soft salmon-pink, edged white, and the blooms are well spaced on the compact bush. A good keeper, and perhaps as effective for potting as the Dwarf Dahlias.

Another Godetia that garden lovers will enjoy is the dwarf growing Wild Rose. It is a gem for bedding, as it is most floriferous and the blooms stand right out of the foliage to form a solid carpet of rose-pink flowers. Be sure, however, to mass the plants most closely together, otherwise the compact ball type growth of the plants will break up the desired solid color effect.

In Calendulas, we find Orange Shaggy as a new departure which breaks away completely from the formal disc type of the old style Pot Marigold, its petals being heavily fringed and laciniate. In addition to its artistic qualities, Orange Shaggy draws plaudits because of its long stems and fine growing habit.

In Petunias, the balcony type Blue Wonder will prove a most welcome newcomer. This one is a bright, intense blue, with no fading of the backs of the blossoms to mar the mass effect. Not quite as tall, and more upright than the average Balcony Petunia, Blue Wonder lends itself most effectively to mass plantings. Speaking of Marigolds—one method of discouraging the halitosis-like odor is to arrange the blossoms outdoors and leave them in the fresh air from four to five hours. The odor comes from oils released by bruising the stems and leaves during handling, and will subside several hours after the foliage has been touched. This will be good news to many.

Another "break" has produced three new ones that will do much to increase the garden effectiveness of the Marigold. This is the incorporation of the large type blooms into plants of dwarf growing habit. These will be most showy in the garden, for they bloom in such profusion that the foliage is all but hidden beneath the blossoms.

Not at all new, but never given its value in publicity, is the dwarf miniature Calliopsis marmorata. This tiny flower, which bushes less [Please turn to page 195]
We improvise a fountain

Richmond K. Fletcher

And at the same time glorified an ugly brick pier and lattice screen

Below the porch where we dine in summer is a high wooden lattice which is divided in the center by a rather unsightly brick pier. We had attempted to mask the lattice and pier with high planting, but with unsatisfying results. Then, one day, my gardening spouse and I were smitten with a violent yearning for a wall fountain. We wanted it where we could hear it tinkle, sitting in our shady porch on hot evenings. There was the brick pier, staring us in the face. We decided to turn the pier into an attractive feature, with the fountain basin below it in the long flower-bed skirting the porch.

To be sure, our only wall was that of expense, which promptly reared itself between us and our pet obsession. Deep foundations, concrete work, and the plumber’s bill were beyond our reach.

But if we could not afford the real thing, we determined to attain our elusive goal as nearly as ingenuity and elbow-grease would carry us. We poured a libation to the goddess Inspiration, and lo, she appeared!

Soon, a mystified plumber was interviewed, fifty cents changed hands, and we became the owners of a very rusty, but sound, cast-iron sink of the early stable period. This was the nucleus of our gorgeous fountain basin. It had nice flat sides and bottom, ideally suited to the tile lining, which we planned, and it made deep foundations unnecessary, for if frost should get under it the basin would move as a unit.

The remaining materials were assembled at slight expense. For the basin, we needed black asphaltum paint, which was applied inside and outside, a can of elastic roofing cement for tile setting, an odd lot of inch-square ceramic tile in various shades of blue and green—enough to cover eight square feet of surface, and lastly some six-inch-wide slate tile one inch thick, to form a border over the exposed iron rim of the sink—when set in the ground.

For the fountain, we obtained a lump of modeling clay and twenty-five feet of eighth inch, flexible copper tubing, with a pet-cock and an adapter for a half inch water pipe. Sand, cement, and broken stone completed the list of materials.

Inspired by a head on a Florentine paper-cutter, we modeled a tile for the fountain head whose surface gradually blossomed into the features of a grinning satyr, delightfully diabolic in certain lights. We made this tile to line with the brick jointing of the pier, and left a quarter-inch hole for the water tube through the satyr’s mouth. From this objet d’art a cast-stone manufacturer made a glue mold, which in turn
BRIDGE TABLES

to keep out all the time

Inquiries from our readers for bridge party ideas make us believe that bridge is already one of the great American pastimes, and may become more so with the greater leisure available for many of us. Having acknowledged this, it is only intelligent to think about bridge and game tables as permanent set-ups. No longer an occasional need, they must be something more than the “hide away” pieces they once were. No longer need they be strictly utilitarian, folding up, and an asset chiefly to the closet under the back stairs. There is no really well-designed furniture to serve this purpose, something to be proud of, and to enjoy, as part of the permanent decoration of our living rooms. And here on these pages are some of the different sets we discovered—sets that are as well designed and carefully built as the other furniture in the room in which these occupy a permanent place. We hope you will find one in this collection that is just right for your house.

Directly above: A very distinctive maple (Leg-O-Matic) bridge set in Chinese Chippendale design has table and chairs covered with suede effect material. It can be folded up out of the way, but would be a fine permanent addition to an 18th-century or Colonial pine paneled room, like the one which is shown. Both setting and furniture are from John Wanamaker.

At the right: Bone white furniture introduces a pleasant contrast into many a room. If you already have a white occasional chair, or white accessories, consider this bridge set in white also, the table bordered in mahogany and topped with white leather. The room in which this photograph was taken, decorated by R. H. Macy & Co., has brown walls, green and white striped curtains, and white blinds of split bamboo. The bridge set is Macy's, too.
At the right: There is a delightfully informal quality to a maple bridge table and chair set, a festoon design painted in green on chair backs, and a plaid border on the table matched to the green and white plaid chair cushions. Indirect lighting from the corner column. Shown in John Wanamaker's "Modern House".

Above: Both table and chairs are leather-covered in this adaptation of Chinese Chippendale, in mahogany. Pleasantly simple, it is appropriate for the 18th-century living room, and adaptable to other styles of decoration as well. The standard lamp for indirect lighting is interesting. From James McCutcheon & Co.

Below: The informal living room, or the game room would find a welcome addition in this maple set, the chair backs wound with heavy rope for decoration. The table itself can be extended for refreshments after the game. This is the new Amodet furniture.

Above: The 18th-century mahogany furniture seems made to order for the bay window in this living room, arranged by W. & J. Sloane. Incidentally, it would be as good a place for breakfast or tea, as for games. One of the interesting details here is the concealed lighting behind a mirror cornice.
Put that under-stairs closet to work!

Practically every home that boasts a second floor has an under-the-stairs closet. Most of them are little used. Some, because they're as dark as a tunnel; others after swallowing up luggage, golf sticks, and all sorts of don't-know-what-to-do-withs, are about as accessible as a tropical jungle. Why stand for its continuing idle? The open door of the erstwhile closet below reveals a gay powder room flush with mirrors and gleaming chromium to give the illusion of greater space. It's the surprising kind of a room—slightly akin to Pandora's box—that's bound to delight guests who pause to dab the nose!

The papered walls are done in thin red-and-blue stripes, horizontally arranged on a bone-white background, with red bandings up the sides and around the ceiling. Having lights behind frosted glass that give out a soft illumination without glare, the modern dressing table of tubular chromium makes excellent use of the limited space. The red of its metal tray is repeated in the chair seat and back. Two red-framed pictures with posies painted on a mirrored background and frosted glass bottles with red dots carry out the color scheme, while the dark blue carpeting gives weight and balance. All of the things illustrated can be bought very reasonably—or, having given you the determination to put your closet to work, you can probably think of something even gayer!

Rowena Aitken
Transformation for $900

Home of Mr. Phillip de Beisedon, Beverly Hills, Cal.

Without disturbing the main lines of this house, minor alterations costing a total of $900 have transformed it from a cold and gloomy looking affair into a bright, warm, sunny home. The wall around the entrance was eliminated and the entrance accented by installing stone ashlar trim, a leaded glass oriel bay window with a copper roof was added at the right, wide horizontal siding was placed in the gables, and leaded glass was substituted in place of wood muntins in all the windows.

The wood siding portions were painted a soft creamy tan, the stucco an off-white, the shutters and front door a glazed pumpkin yellow, and the copper roof of the bay an oxidized copper green.

The living-room fireplace was re-designed from a plaster hooded affair to a simple slit-tile and wood trim mantel, and all the interior plaster and wood trim was painted in off-white.

Gable and Wyant
Architects of remodeling
Garden loam, leafmold, and sand mixed together in about equal proportions will make a good seed bed. As soon as the young plants are of a size to handle, better transplant them, even if into other flats, as these boxes are called. For the first transplanting the same type of soil generally will suffice, as the young plantlets cannot take much food. Keeping them properly watered is of most importance. Wait until young plants are making new growth before starting to feed

The mere making of a box in which to sow the seeds is a simple enough matter. But that is only the beginning. Make it strong enough to be handled and preferably of cypress wood, unpainted. The depth is immaterial, but around 3 in. will be quite convenient. This gives ample space for the very important matter of drainage. Real success depends on a good start. That begins with ¼-inch drainage put in the bottom. Over that, a fairly porous soil.

1. For drainage to let out excess water—an important factor in starting seeds—leave small cracks between floor boards and bore ½ in. holes

2. Over the bottom of the seed box spread a layer of coarse material such as gravel, cinders, small pebbles, or pieces of broken crockery

3. Fill the flat almost to the rim with ordinary coarse earth; then top off with a layer of fine earth which is sifted through a hardware cloth sieve

4. The excess earth should next be removed. Use a short strip of wood 1 x 2 as a straightedge to scrape off the fine earth level with sides of box
5. Tamp the soil down firmly using a short 2 x 4 or a brick for a tamper; it is quite important to keep surface perfectly level so water won’t pool.

6. Mark out shallow furrows for seed rows; space them evenly about 2 inches apart; the depth should be gauged according to size of the seed.

7. Sow seeds thinly by dropping in the furrows with thumb and forefinger. Label each row carefully as planted to avoid future mistakes in transplanting.

8. Using a screen wire sieve, sift some fine earth over the seed previously sown in furrows. Push in large seeds with finger before covering.

9. Sprinkle thoroughly, making certain earth is wet through to bottom. A jar with lid perforated with small holes is convenient for this purpose.

10. Finally cover the moist seedbed with newspaper to prevent evaporation. Seeds do not need light until after germination has taken place.
Small miracles with WALLPAPER

Do you remember, when you were young, how much fun you used to have getting out the wallpaper sample book, mixing a saucer of flour and water paste, and making yards of chains for the Christmas tree? And, later on, cutting out grand wallpaper hearts and folders for valentines to send to your best girl or beau? Well, now that you're grown up and have a home, you can still have just as much fun—with much more satisfactory results—using wallpaper to brighten up odd, neglected corners and walls that don't, perhaps, look really colorful or interesting enough.

As you no doubt know, the wallpaper industry has staged a very definite comeback during the last year or two, with the result that there is a greater variety than ever before of designs and colors, to say nothing of borders. Moreover, most of the new papers are washable, which makes them decidedly practical as well as decorative! So, with this abundant source of supply, let's see what can be done.

Did you ever think of using wallpaper in the panels of the doors? No? Well, you'd be sur-
prised how effectively it can be done, especially if the room needs design and doesn't offer much wall space for it. Scenic designs are especially good for this purpose. And as for those painted walls you want to brighten up—try a decorative border just under the picture moulding. It's easy as can be to put on and it certainly does the trick.

Cabinets, bookcases, and secretaries can be made much more decorative and colorful with the application of a wallpaper backing. Choose your pattern carefully; according to the type and location of the piece of furniture in which you plan to use it, and then apply the wallpaper. If the shelves will come out, so much the better; if they don't, it isn't a great deal harder. And when you've finished, and see how much it adds to the room, you'll decide it was certainly well worth all the trouble you have taken.

Have you a small uninteresting mirror to contribute to the cause of a very effective, "important-looking" wall decoration? With the aid of a distinguished floral or scenic wallpaper—of which there are many this year—and a narrow colored picture frame, you can make the smart panel shown here. Make the wallpaper mat almost as wide as the mirror and mount it on heavy cardboard or corrugated paper. Cut the opening exactly as large as the unframed mirror so that it will fit tightly (a little glue on the backing board will keep the mat can be shellacked or not, just as you prefer.

Your scrap baskets—take a look at them. Would they, too, benefit by a fresh new coat, both decorative and washable? Use one of the smart stripes or sceneries or small stylized designs to be found in the new wallpaper lines. These can be left untrimmed or finished off top and bottom with one of the simple borders available. Or a decorative border against a plain paper would be stunning. If the basket slants, cover it with a sufficiently large piece of wallpaper (paper clips will hold it in place), and trim around the top and bottom edges to get the right shape of the object.

Do your bedroom windows need brightening up? A wallpaper covered cornice will help a lot. This used with either plain color draperies or just ruffled curtains will make a complete and effective window treatment. Use beaverboard or thin plywood as the base for your cornice and hang it from the window frame with L-hooks and screw eyes. You have two choices for the decoration.

You can use a decorative border again—one or two strips according to the size of the window—or you can use a paper with an all-over flowered design and shape the edge of the cornice to follow the design. (See illustrations.)

THE NEW LAMPS
give light as well as beauty

For years the only qualifications people have asked for in buying a lamp were in respect to its looks. If it was attractive in appearance and the shade was the right proportion to the base, well and good. That was all that was necessary. Today, however, the picture has changed. Decorative qualities still count but, in addition, there is something else that matters, and that something is the light-giving qualities. Does this lamp give enough light to read by? Will that lamp light my desk sufficiently? Is that the lamp I should get to light my card table? Those are the kind of questions we hear today when the alert man or woman goes forth to buy a lamp.

By revolving the arm, the modern floor lamp to the left can be used as either a bridge lamp or reflector type. From Russell Wright Studios. Below it, a double-duty lamp in modern design which can serve as floor or bridge lamp. The height is adjustable. Rembrandt Lamp Corp.

The reflector lamp, as you probably all know, is the lamp with the inverted metal cone, at the bottom of which is placed a high-wattage bulb. This reflector throws the light against the ceiling and it is deflected down in an even, shadowless light. That was the first step in better illumination and it was one which has practically done away with a type of lamp once very popular—the plain candle-arm floor lamp. Today we hardly ever see these lamps on the market. The candle-arm reflector, with its greatly improved lighting, has replaced it.

From then on, experiments were made by the dozen. Every company began bringing out improved reflector lamps, adding new features or making variations that they thought would increase their light-giving qualities. However, so far most of this light engineering was confined to floor lamps. Table lamps or modern in feeling. Shade can be lowered or raised to meet any need. Mutual-Sunset Lamp Mfg. Co.

Below: Table lamp, modern in feeling. Shade can be lowered or raised to meet any need. Mutual-Sunset Lamp Mfg. Co.

Albert M. Leach

Let's look back at the really amazing strides that have been taken during the last few years in "light engineering," as the science of illumination is called. About three or four years ago, lamp manufacturers began to realize that there was something to be considered in bringing out new lamps besides their mere appearance. They had heard numerous complaints from various sources in regard to the need of better lighting but they had done nothing about it. So they began to experiment with different kinds of lighting equipment, looking for a means to aid in giving a stronger and more direct light. And they hit upon the reflector.

Table lamp at right, in untarnishable silver, has a new device: a switch control for three degrees of light. Shade of stretched eggshell silk. The Lightoller Company.
Re-creating an ancient Mexican hacienda

Eloise Roorbach

The word "hacienda," as rather carelessly used today, means a Mexican country house only, though originally the name included the entire estate, grazing lands, forests, and farming acres. With rooms arranged around a central courtyard or patio, it was in reality more than a dwelling house. Somewhat like a stockade as far as high walls and a single entrance are concerned, it was a sanctuary, a place of refuge in times of stress.

Literally the name means "things to be done," and certainly, many and various "things" were done in the early California haciendas, especially in that center of family life, the patio. At times the family burros and horses were sheltered in the patio, as in French courtyards, so an anvil might frequently be found in a corner near a forge. Within the shade of its arches the women ground corn in stone metates for the daily tortilla. Red peppers and strings of Indian corn hung from the rafters. Ollas were

Mr. Cliff May, a descendant of families who have played a distinguished part in California's history, has preserved in his modern hacienda the true spirit of the gay, secluded adobe buildings of old California. Low, roomy, its mellowed white walls enclose the patio, the heart of the house strung from beams, or branches of a Lime or an Olive tree, where winds might keep the drinking water cool. A loom occupied a sheltered corner and clothing, rugs, and curtains were woven on it according to the fancy and skill of the weaver. Food and water jars, moulded of adobe, were set in sunny spaces to dry. There were benches against the wall where the men could idle happy hours away while twanging out the measures of a dance on their guitars. In the patio, the great outdoor room of the house, guests were received, meals served, siestas enjoyed, and flowers bloomed. It was a gay, lovable, and most important part of every true hacienda.

The hacienda, as being recreated today in southern California, is splendidly adapted to modern living and its patio is just such a lovable, romantic, and indispensable part of it. Cliff May, a young man of San Diego, has recently embodied his love of our old adobe haciendas in a
Window and door frames are that lovely shade of green that the Olive tree puts forth in early spring. Window shutters are a time-dimmed mustard yellow decorated with delicately faded flower colors that draw house and garden closely together.

The planting carries out the traditional use of ancient and twisted Olive trees, groups of Banana trees, and Oleanders beneath the bedroom windows. Wild Grape climbs one pillar; Castilian Roses another. Strings of red peppers hang from the rafters, ollas bang in cooling winds, and pots of blooming plants stand about in sociable groups or in prim little rows. There are deep-seated sun-seats in El Lugar de la Siesta (the place of the siesta) and a low, squat tea wagon copied after the style of the typical old ox carts.

modern house that holds all the charm and poetic beauty of the past, yet leaves nothing to be desired in the way of luxurious comfort. A great-great grandson of that pioneer who built and lived in the historic adobe in Old Town, San Diego, known to everyone as Ramona's Marriage Place; a direct descendant of the distinguished Estudillo and de Pedrorena families who played so vital a part in early California history; who spent much of his boyhood in the adobe house (built in 1812) on the famous Las Flores rancho—he, naturally, imbibed the spirit of those secluded buildings. So, loving and respecting them, feeling that they are eminently desirable for present-day living, he is devoting his life to re-creating them, preserving all that is most to be desired in them, but introducing, in an unobtrusive way, every modern device that adds to the comfort and ease of living.

For instance, the walls are of hollow tile, instead of perishable adobe, but are made to look as though they were three feet thick, as were the old adobe walls. The space between is cleverly used for closets, cupboards, and books. There are modern heating plants, copper water pipes, and weather strips, ventilated niches for kitchen stove, convenient places for electric refrigerators, laundry tubs, and garage.

This home of Mr. May's, built in a restricted residential section of San Diego, is worth a detailed study for it has caught the fleeting beauty of the past, yet is so scientifically constructed that every workman, from those who laid the foundation to those who fashioned the roof and fitted the plumbing, were required to give a written guarantee, a pledge of excellent workmanship.

Low, roomy, gayly over-run with blossoming vines, with the spirit of the past breathing from every detail, it attracts attention even before the patio, the heart of the house, is seen. The walls are a mellowed white, somewhat like an old ivory, but, being Mexican in type, a better word is “bone” white. The tiles of the roof have been carefully chosen and laid to simulate the sun-baked and sun-warped, rudely fashioned tile still to be seen in some of our old missions. The chimneys, squat, simple, intrude as little as possible. The rafters are weathered, hand hewn, and softened at the ends. Window and door frames are of that lovely shade of green that the olive tree puts forth in early spring. Window shutters are of a time-dimmed mustard yellow and each panel decorated with semi-formal bouquets of flowers, the design for which was found in an old Mexican monastery. The colors, all ancient looking, are a dull Apache red, serape blue, straw, and saddle brown and faded olive green. These delicately faded flower colors echo the living colors in the patio, drawing house and garden together in most charming manner.

This same design of flowers has been used, modified somewhat, on furniture and in kitchen and dining room decoration.

The floor of the corridor is of...
able groups or prim little rows. There are deep-seated sun-seats in El Lugar de la Siesta (the place of the siesta) and a low, squat tea wagon with wheels made after the style of the old carretas or ox carts, of a single piece of wood, hand shaped.

This hacienda is entered by a grilled gate, through which the bright colors of the patio are seen while one is waiting to be admitted, after pushing the electric button set in a circular Mexican tile of flower design. Above this tiled button is a little Portezuela or "peep-window," painted to harmonize with the flowered tile. At the left of El Saguan (entrance hall) is an arched niche in which is a fountain and pool where flowers may be arranged conveniently. Beneath is a cupboard for extra flower pots and baskets.

At the right of this hall is El Comedorcito, or breakfast room, truly Mexican in color, with painted furniture and soft-toned rugs. As far as finished beauty is concerned, this small but exquisite room might serve

The chief feature of la Sala (the living room) is its fireplace, looking as though it had been fashioned and smoothed by the loving hands of a Hopi potter. The furniture in El Cuarto del Dueño (the master's bedroom) was especially designed and made for Mr. May's own use.

The dining room, El Comedor, is furnished with furniture painted in rich mellow colors, peon linens, and Mexican pottery gaily colorful as reception room or perhaps den.

Then the kitchen, or la Cocina, with its time-mellowed bone-white walls that look somewhat like the whitewashed walls of olden days. All the walls, both inside and outside, have been smoothed by hand which gives them the quality of an old vase. The woodwork is of that dull shade of white which might be termed "straw" color and each panel is painted with some lovely variation of the same design found throughout the whole house.

A most delightful feature of this room is a wide grilled window over the sink, so designed that there are three unevenly spaced openings where pots of flowers are set and changed as the seasons require. A row of potted plants stand on the sill and flowers from the garden outside have climbed high enough to twine themselves through the grille and offer color and add fragrance to the pleasant odors of a good meal in preparation. The floor is of linoleum in tile design. Indian rugs placed where needed. Between meals this room might be mistaken for a library, for all pots and pans are out of sight behind painted doors and the refined tone of the room with its rugs and flowers, lift it into a distinguished beauty.

The dining room, El Comedor, entered from the kitchen is quite as full of color. A refectory table, benches, and chairs are painted in soft yet rich colors, and with the modified bouquets of flowers on backs or legs. With peon linens and Mexican pottery, with double doors opening into the patio, and with a fireplace in the corner that almost pleads for a dull day that a fire may glow upon its hearth, the room bestows beauty and charm to whomsoever enters it.

The living room, la Sala, is reached by three wide and low steps and through an archway gained by the simulated three-foot adobe walls. The depth of this archway helps to attain the solid substantial feeling of the old haciendas and to reproduce the spirit of the past when men con-
Sunday morning breakfasts

Mary E. Hussong

When news reached us last fall that Sally Perkins was coming east to boarding school we immediately wrote her parents and proposed that she spend some of her weekends with us in the city.

So it was agreed. And during the autumn months, Sally, from time to time, came into the city to spend a couple of days with us. Not knowing what would interest Sally most, we trotted her impartially from Greenwich Village to the smartest shops, up Broadway, along Riverside Drive, and to the top of the Empire State Building. Sally was wide-eyed over speed and height and luxury and glittering lights by night. But it was only after several weekends that she confided to me what had impressed her most.

"It's all so marvelous," she told us, "but you know, nothing has been so perfect as the Sunday morning breakfasts at your house."

"But you have those out in Idaho!" I commented.

"No, not us. We just waste our Sunday mornings. We eat in shifts from nine to ten and then sit around until it's time to start to church. But your Sunday morning breakfasts are piles of fun!"

The first Sunday that Sally was with us she came out into a maidless kitchen and offered to help with a breakfast for six. "We don't need a thing but coffee and toast," she suggested helpfully, "and couldn't we eat it on our laps?"

"On our laps?" I asked incredulously, as I swathed myself in a huge kitchen apron. "This will be the best meal of the day! We'll have fun. Come on, now, I'm going to arrange the table."

It was a chilly day in mid-October and Sally and I arranged the table before a log fire in the living room. Over the table I spread a cloth of roughly woven cream linen (I
am one of those who strongly prefers a covered breakfast table) with gay stripes of red and yellow. The china was brown glazed earthenware, an inviting and inexpensive choice for breakfast. And the centerpiece consisted of a large wooden bowl filled with tiny red and green peppers. It was all very brown and red and warm and intriguing looking.

The menu started off with a cereal—Scotch whole oats. And with this, instead of the usual cream and sugar, I served cream in which I had dissolved crushed maple sugar.

"Delectable!" pronounced Sally. My main dish was a nice fluffy egg omelet. And for bread I selected long rolls of the soft variety, slit them through the middle with a sharp knife, and toasted the halves in the oven. They looked very nice in a natural-colored woven bread basket into which had first been tucked a fresh white napkin.

The second Sunday morning that Sally spent with us I deter-

A brief for the broiler

Let your butcher help you with your work when you intend to broil the cut of meat you buy. Most shops have ready-cut chops and steaks, but a successful cook spurns these and orders the meat cut to suit her. The ready-cut pieces are invariably too thin for broiling, and the attempt to cook them this way results in a hard chip of meat that is most unpalatable.

Many kinds of meat are suitable for this healthful method of cooking, the best-known of course, being thick juicy steaks (which will stay juicy) and lamb chops. Tenderloin patties with a bit of suet or butter broil easily and quickly, and thinly sliced ham is at its best when prepared this way. Pork chops assume aristocratic airs when prepared on a broiler, but they need special treatment. The

The broiling rack is far too often a mere appendage of the modern gas or electric stove, used not at all or merely for toasting sandwiches. Why it is so neglected remains a culinary mystery. The only explanation is adherence to old habits of cooking or ignorance of this latent asset with which modern stoves are providentially equipped. Women who never use the broiling pan cannot tell the reason why. Probably they are unaware of its presence. They shouldn't be. The broiler is not deserving of such ostracism in the modern home.

Recent researches in food preparation have convinced most cooks that meats do not need to be turned frequently while cooking, and that conclusion has taken all the unpleasantness out of broiling. Whether it is a chop or a thick steak the oven door need be opened but once for turning the meat—that is when it is half cooked. A well-broiled cheek is not the necessary accompaniment of a tender steak. I have tried both methods, and I find that the less the fuss the better will be the chop or steak.

Six rolled into one

Rolls for breakfast, luncheon, and dinner made from one basic batter recipe which is stored in the refrigerator. Guests will remark on these delectable rolls, and only you will know how simple they are to make!—FRANCES CAMPBELL AND KATHERINE TAYES SANBORN

Recipe printed on back of each photograph
black walnut breakfast rolls

And egg, butter, lemon extract, and sugar to the batter (see recipe for Twisted Circles) and beat until smooth. Stir in flour, toss onto a floured board, and knead well. Roll the dough into a thin sheet, about 8 by 16 inches, spread with soft butter, sprinkle evenly with brown sugar and black walnut meats, roll up like a jelly roll, cut into six equal parts, and place on a buttered baking sheet.

Take a pair of pastry scissors, clip each roll twice thirds of the way through, dividing the rolls into equal thirds. Brush with melted butter, let rise to twice their size, bake in moderate oven (375°F) for about 25 minutes.

These rolls are even more delectable the next morning than they are fresh from the oven. Tested by The American Home

cheese-oatmeal luncheon rolls

Stir oatmeal and flour into batter (see recipe for Twisted Circles), toss onto a floured board, and knead well. Roll dough into a rectangle 7 by 8 inches, and cut into 6 equal rectangles. Cut 6 fingers of American cheese ½ by ½ by 3 inches long; wrap each in a piece of dough, making sure that the cheese is carefully sealed within, place on a buttered baking sheet, brush with melted butter, let rise to twice their size, bake in a moderate oven (375°F) for about 20 minutes.

Your bridge luncheon guests will be surprised and delighted. Tested by The American Home

pigs in pokes

Fry sausages until thoroughly cooked and browned, place in a wire dripping basket to cool. Stir flour into batter (see recipe for Twisted Circles), toss onto a floured board, and knead well. Roll dough into a rectangle at least 7 by 8 inches, cut into 6 equal rectangles, wrap each around a sausage carefully sealing all the edges, place on a buttered baking sheet, brush with melted butter, let rise to twice their size, bake in a moderate oven (375°F) for about 20 minutes.

Take these on a picnic with potato salad and listen to the "ums" and "ahs." They are equally good served at home with a spring salad. Tested by The American Home

braided poppy-seed rolls

Stir flour into batter (see recipe for Twisted Circles), toss onto floured board, and knead well. Divide into three equal portions; roll each between the hands until it is a rope about 25 inches long. Press the ends of the three ropes together and braid, pressing the remaining ends together when finished.

Cut into 6 equal portions, place on a buttered baking sheet. Brush with slightly beaten egg white, sprinkle with poppy seeds, let rise to twice their size, bake in moderate oven (375°F) for about 20 minutes. Tested by The American Home

chocolate breakfast rolls

Divide batter (see Twisted Circles) into two equal portions. To one add cocoa, beat, add ½ cup flour, toss onto floured board and knead well. Add ½ cup flour to the remaining batter, toss onto floured board and knead well. Roll the plain dough into a rectangle 6 by 16 inches, spread lightly with soft butter. Roll chocolate dough between the hands until it is 16 inches long and 1 and ½ inches in diameter. Wrap this in the sheet of plain dough, clip diagonally with pastry scissors into six equal rolls. Place rolls on buttered baking sheet, brush with melted butter, let rise until twice their size, bake in moderate oven (375°F) for about 20 minutes.

Remove from the oven and brush with confectioner’s frosting made from powdered sugar, butter, vanilla, and enough cream to make a soft paste. These rolls are simply delicious when served hot. Tested by The American Home

twisted circles

Divide batter into two equal parts; stir into one bread flour and into the other graham flour. Knead separately on floured board. Divide each into 6 equal parts, roll each part into a rope about seven inches long. Twist together a graham and a plain rope closing the ends to complete a circle. Place on a buttered baking sheet, brush with melted butter, let rise to twice their size, bake in moderate oven (375°F) for about 20 minutes.

Basic batter: 1 compressed yeast cake 3 tablespoonsful sugar 3 teaspoonsful salt

Melted butter: 2 cupsfuls scalded milk 1 cupful cold water 4 cupsfuls bread flour

Crumble yeast cake into mixing bowl. Add sugar, salt, and butter. Cool scalded milk with cold water and stir into ingredients in mixing bowl until yeast is thoroughly dissolved. Beat flour into this mixture until all the lumps have disappeared. If the batter is to be used the following day, cover and place in the refrigerator. If it is to be used the same day, let rise to three times its size, beat thoroughly again, and proceed. Tested by The American Home
we say it's spinach and everybody will like it • • it's HEINZ NEW CREAM OF SPINACH SOUP • • it's delicious, and we guarantee that even the most ardent spinach-hater will "go for" it.
It's EASY to paint
with Collopakes!

"I'm painting this room myself, because Cabot's Interior Flat Collopakes go on so easily and smoothly. I can get a flat, even finish with no trouble at all. There's no fear of leaving brush-marks; these Collopakes smooth right out of their own accord. And there'll be no shiny spots on this wall, when it's done. "Next, I'm going to paint the baby's room that adorable Pale Blue. It's such fun to make the rooms in your house seem like new with these lovely fresh colors!"

You, too, will find that it's easy to paint with Cabot's Interior Flat Collopakes. You can get them from any Cabot Agent. They cost no more than other good paints. 

Send us the coupon below, for a Color Card and the name of your local Cabot Agent.

Sunday morning breakfasts

(Continued from page 175)

minded to carry out an orange and white color scheme, and went about it in this way. The cloth was a nice simple one of white linen with a hemstitched inch border. The cunning breakfast set was white china spotted all over in orangy dots. And for a centerpiece I used a white toile tray of which I am very fond, spread with green leaves and piled high with oranges.

Baked apples made the first course. We served them in individual brown ramekins. And into each apple, just before it was brought to the table I buried two cherries and spread the top with blackberry jam. Powdered sugar and cream were served with the apples. The remainder of the menu consisted of crisp French fried potatoes and bacon, coffee, and hot biscuits.

The coffee was made by a favorite recipe for French Drip which is as follows:

Preheat the pot with boiling water and pour off just before making the coffee. Use coffee ground to the fineness of cornmeal—not pulverized. Allow one tablespoonful of the coffee to one cupful of water. Pour freshly boiling water over the coffee in the upper part of the machine, and allow it to drip through only once.

On another Sunday when Sally brought a friend into town with her I attempted to do a young girl's breakfast table, and used a cloth of sheer organdy, rose white, and blue plaid, deeply bordered in blue organdie. The china was white Spode in the Savoy design, and the centerpiece consisted of a round shallow white pottery bowl with a pineapple apple standing upright in the middle surrounded by pink apples.

We started off with cold canned raspberries served in little individual glass bowls set in large glass bowls filled with cracked ice. Waffles made the main course with syrup served in a little old Toby jug. Cinnamon toast and Mexican chocolate concluded the meal. The girls admired the Mexican chocolate, and it was made in the following manner:

For each cup of milk I added two teaspoonfuls of sugar, a quarter of a teaspoonful of cinnamon, a teaspoonful of cocoa, and a teaspoonful of melted butter chocolate. Mix the dry ingredients and add to hot milk.

A brown and white table that Sally admired was arranged with a solid color cocoa linen cloth and napkins which I made myself merely by neatly rolling the edges. The china consisted of creamy Wedgwood ware. And in the center of the table we used four white pottery cornucopias filled with white blossoms.

We began this breakfast with pineapple cocktail which is pineapple juice with orange and lemon juice added and, if desired, a pinch of sugar. This was served in little glasses set in bowls filled with cracked ice. The main dish consisted of baby frankfurters (boiled in an uncovered pan to prevent bursting) and two dozen scrambled eggs scrambled in the French manner, as follows:

Yolks and whites are beaten together until foamy. To each egg is added one eighth cupful of cream. After the cream has been beaten in, the mixture is poured into the top of a double boiler and rises like an omelet to an incredible height and fluffiness. Be certain that you leave the top off of the double boiler.

In my bread basket I served toast and assorted rolls. And on this table, since honey was included in the menu, I was able to use one of the pets of my household, a white pottery honey jar to the sides of which cling small golden bees.

Sally's delightful enthusiasm for Sunday morning breakfast has reinforced our conviction that it is just about the most delightful meal of the whole day.
JUST MARRIED
_on an income of
$18 a week

"Believe me, I use Royal when I bake... my budget won't cover any failures,"
says Mrs. Edgar Moore Green, Jr.,
of Shelter Island Heights, N. Y.

MARRYING on so small an income
is a courageous undertaking... and
young Mrs. Green finds that a cramped
budget won't allow for any waste.

"I can't allow a cent more than $8 a
week for food," says Mrs. Green. "A
baking failure would be a serious matter
because I couldn't afford to throw it
away. Yet you can't keep a man healthy
and cheerful if you feed him soggy cakes
and leathery biscuits.

"Besides, you use only about a penny's
worth of Royal for a baking. Where's the
sense in trusting expensive butter, eggs
and milk to an inferior baking powder,
when the best costs so little?"

* * *

YOU'RE QUITE RIGHT, Mrs. Green.
After all, the cost of your baking powder
doesn't amount to much compared with
the cost of your other ingredients. Think
of the dozens and dozens of eggs you
use during the "lifetime" of a 12-ounce
can of baking powder—the quarts of
milk—the many pounds of butter... sugar... flour. The average woman actu-
tually trusts $10 or $12 worth of these in-
gredients to every can of baking powder.

Isn't it common sense to safeguard
those costly materials with a baking pow-
der you know won't fail—reliable Royal?

Royal is made with Cream of Tartar,
a pure fruit product derived from grapes.

This fine Cream of Tartar baking pow-
der gives tender lightness... fine, even
texture... and delicious flavor to every-
thing you bake.

Next time you buy baking powder,
remember the small cost of Royal. And
the perfect results it gives.

FREE COOK BOOK
Mail the coupon
today for your
copy of the Royal
Cook Book.

Watch for your baker's weekly "Specials"...
When you bake at home, make sure of success and delicious
flavor by using Royal Baking Powder for your cakes and hot
breads. But don't forget that you can rely on your baker for a
variety of breads, delicious coffee cakes, Parker House rolls,
crisp dinner rolls, cinnamon buns, layer cakes, cup cakes, and
other goodies to lend variety to your table. With careful
attention to the housewife's needs and wishes, the modern
bakery offers a wider and ever-increasing service to the home.

The house that hands built

(Continued from page 149)

the side of the car at one time.

And so we built the house. And we moved in when we said we would. True enough, all we had up was the four walls and the roof. We stacked screens over the rough window openings. The stove teetered around on a soap box, and we ate off a table which the feminine element had knocked together from scrap lumber. To some cold disinterested observer the place must have looked like a woodshed, but not through our rose-colored glasses.

The first finished work we did on the inside of the house was the kitchen unit which extends across the south end of the house. The HR could never understand why ice-boxes, kitchen cabinets, sinks, and all the rest of the kitchen furniture should be lifted from the floor. She felt that it was not only a waste of space, but difficult to clean under, and I agreed with her. So we built everything down flush to the floor. And I tried to make everything as compact and handy as possible, for it has been my observation that many summer cottages have an almost medieval arrangement for prepar-

WON'T SMOKE
will heat!

The BENNETT Fireplace Unit assures smokeless operation and to 5 to 6 times more heat. The only fireplace that draws fresh air, from outdoors, heat-traps, and distributes it healthfully throughout the house. Ends annoying drafts, cold floors, chilly corners—common to all other fireplaces. Saves running the furnace in moderate weather...spring and fall. Fuel savings alone pay for it. Adaptable to any architectural style. Special models for installation in existing fireplaces. 3-point guarantee of satisfaction. Owners, without exception, enthusiastic. Ask your building supply dealer. Avoid buying an expensive disappointment! Before you commit yourself on a fireplace, SEND for brochure that explains fireplace operation and Bennett Units. Bennett Fireplace Corporation, Dept.B23, Norwich, N.Y.

WHILE PRICES ARE LOW

RUNNING water at the touch of a faucet—what a gift for the family! Year after year, a hundred times a day, for as long as you live in your home, the handy convenience and sanitary efficiency of a reliable water system will increase comfort, lighten tasks and safeguard family health. Indoors its presence brings a higher standard of living. Outdoors its availability means finer lawns and gardens and better looking premises. And always, day and night, it affords your best protection against the menace of fire.

For full sixty-five years the name MYERS has been identified with the best to be had in the way of individual water service. Today MYERS Pumps and Water Systems are world famous for their absolute dependability and remarkable economy of operation. Right now, while prices are low, is the time to buy if you wish to save money. Do not delay. Models to meet all needs; for deep or shallow wells; for operation by electricity, gasoline engine, windmill or hand power.

Water Systems are one of the base improvements for which money may be foun-
damental to the home, and well worth the expense under the Federal Housing Act. See your Myers dealer for information. Write for interesting Free Booklet today.

I'LL FIX THAT CHAIR GOOD AS NEW WITH PLASTIC WOOD

Anybody can do a fine job of repairing quickly—holes in wood, broken chair, loose casters, nicks, cracks, screw holes, loose drawer pulls, etc.—with this canned wood that handles like soft putty and quickly hardens into wood. You can paint it, carve it—drive nails and screws into it. It's wonderful. Try it. Paint, hardware stores sell PLASTIC WOOD for 25c a tube, 35c a can.

circulation of air under the roof. Our dinette is rather large, as it can seat seven in a pinch and five very comfortably. The table is made from three wide white pine boards, one end being secured to the wall and the other supported by a rather ornamental leg. The benches are also made from white pine, and are so designed that there is considerable space beneath them. The Cocker lives under one, and I keep my sketching materials under the other. But this wall is the unique feature. From the top of the table to the edge of the balcony is an opening which looks into the studio, and in this opening hangs our one large light. It burns kerosene, equipped with a mantle, and sheds an excellent light. On either side of this opening or, in other words, above the seats are two panels on which I am busy putting mural decorations.

These mural decorations are a new thought in summer cottages—at least I never heard of them in one before—and ours were fun to do. The murals constitute nearly our entire decorative scheme, as the walls are wainscoted with varnished ship lap, and above that is nothing but wallboard painted a very light cool gray. The floor is yellow pine flooring finished with a varnish stain; the rafters are exposed as yet. We may leave them so, and then we may cover them with wallboard, paint the board a dark ultramarine, and scatter a few tiny silver stars around it.

The studio-den is under the balcony bedroom. The ceiling in the studio is just under seven feet, and as we have eight-foot studies there is just enough space for lockers at either end of the balcony, while the box spring and mattress rest on the floor directly under the ridge pole. It does not leak

COLONIAL YARN HOUSE 1311-K Cherry St., Philadelphia, Pa.

THE AMERICAN HOME, FEBRUARY, 1933
Re-creating an ancient Mexican hacienda

(Continued from page 171)

sidered their family and built for future generations. This hacienda gives the impression that the builder intended to live in it with pleasure and comfort and to leave it as an ideal of his generation to those who may follow. The chief feature of this room is the fireplace. Indian in influence, it looks as though it had been fashioned and smoothed by the loving hand of a Hopi potter. Irregular shelves where decorative jars and baskets of flowers may be set, flowing in line, fitting into the wall as though molded into it (as it really is), it gives dignity and does much to re-create the historic spirit of the past.

Two groups of double doors into the patio make it almost an integral part of the outdoors. The floor of this room and, in fact, of every room in the house is plank, hand pegged as in olden days. Every piece of furniture here and throughout the house, every lamp and lighting fixture, has been designed and made by Mr. May, for he is a craftsman who loves to use his hand as well as a designer of vision. The lamps were copied from one found in the old Estudillo hacienda when coal oil must be used. These have been wired of course, with a bath between, with double doors opening onto the titled corridor, these two rooms complete the spacious and romantic spirit of the whole house. Every room in the house is entered by way of the patio, as in olden days, though, naturally, it is not necessary to go outside. But this is the popular way to retire for the night: to walk beneath the corridor, or across the lawn, to see the stars marching overhead, to enjoy the perfume of the garden. Sleep shall be sweet after such beauty.

It has been said that the Princes of Italy used to call in the poets and painters to "dream" a house for them. This home has been designed by a musician, for Mr. May is the conductor of a local orchestra, and his knowledge of music no doubt accounts for much of the harmony of color, rhythm, and line. A restrained, yet easy, spirit, through and out, the tranquility and peace which hover over it all.
Campaign against "discards" for camp furnishings

[Continued from page 153]

have gone camping together is now obsolete. One never knows another until one sees his or her camp. If in its furnishings, its simple easy-going routine there is true comfort and simplicity—there is a real person. Nine times out of ten, the reason for a vacation is to "get away from it all." We do not mean getting away from friends, but away from "things." We unconsciously realize that we have become a slave and handmaiden to "things" and we long to get away from them. Then why, in the name of heaven, clutter up our summers with them? We, ourselves, campaigners though we be, shy just a bit at all this talk of things becoming functional. We dread the thought of being allowed no inconsistencies, however great a nuisance it is to dust and care for them. However, we can understand the need of simplifying life to the minimum, and if it does not appeal to us the year round, at least we can simplify living in the indolent, lovely days of summer that we may have more time to do the things we cannot afford in the winter—that we may have more time with our children, more time in the out-of-doors.

Mister, I sell them BOTH!

(And a good plumber will tell you which tank looks like this . . .)

RUST starts to attack an old-type tank the first day it's installed. Your plumber knows that. He also knows how quickly the rust is sure to eat through. And that's a day he dreads.

He is the one who gets the blame when a tank ruptures and floods your cellar. And so he gladly recommends the "Whitehead" tank made of Monel Metal.

Monel Metal can't rust. It resists corrosion from every water-borne source. It is always as clean and rust-free inside as it is outside.

Monel Metal combines these qualities with tremendous strength. That's why Monel Metal hot water tanks are 50% to 100% stronger than old-fashioned tanks and guaranteed for 20 years.

"Whitehead" tanks and water heaters are made of the same sparkling, easy-to-clean Monel Metal you find in modern kitchens ... as sinks, cabinet tops, range tops and tables.

Your plumber will gladly quote the cost of a "Whitehead" tank installed. You will find it surprisingly reasonable. Send coupon.

Monel Metal

Let this New Energy from Sunny Hawaii drive out Winter's Chilly Blasts

A brief for the broiler
(Continued from page 176)

chop must be cut at least an inch thick and broiled longer than a similar cut of beef or lamb. Fish fillets broiled on a heat-proof platter are easier to handle and better to taste than when cooked any other way.

To prevent spattering and the occasional, but disastrous, broiler fire, pour about a cupful of cold water into the pan beneath the broiler rack, and the fireworks will be reduced to a minimum. Most of the water usually evaporates, and what remains is mingled with the melted fat which makes an excellent base for gravy. Some of the newer broilers are designed to carry the fat a safe distance from the flame, thus avoiding any chance of fire. Leaving the oven door open slightly is a good way to avoid trouble with smoke.

Many women who do their own dishwashing avoid broiling food because of the large greasy pan and rack which are unpleasant to wash. It is unnecessary to regard the cleaning problem as a bugbear, as proper materials can make it easy. If the broiler is of enamelled ware, a fine scouring powder or a weak solution of a prepared drain cleanser (be sure to get one which guarantees that it will not harm your sink) will do an excellent job of grease removal for you. As you pour the solution down the drain you will know that the rest is easy. Hot water and soap will finish the job. Aluminum, however, presents a different problem which is best met with a pad of steel wool and soap. Pads of steel wool prepared with scouring soap are excellent for this purpose; followed by the inevitable hot water and soap.

Cold, glum days of winter require greater food-energy intake. When this intake is deficient, we are unable to withstand the cold wintry blasts. . . There's no winter in Hawaii.

A tropical sun shines down upon the choicest pineapples in all the world—DOLE-grown on Dole plantations. DOLE pineapples abound in readily available food-energy. For a natural lift, when you're tired, try a long, tall glass of DOLE Pineapple Juice. Pure. Unsweetened. And rich in quickly-released food-energy, so important in winter. Order half a dozen cans today. Hawaiian Pineapple Co., Ltd., Honolulu, Hawaii. Sales Offices: 215 Market Street, San Francisco, California.

WELLINGTON SEARS CO. 61 WORTH STREET, NEW YORK CITY

The new lamps (Continued from page 176)

The new lamps were still offered on their decorative merits only. But that was due to change, too. There is an organization known as the Illuminating Engineering Society. This society, to which belong the foremost authorities on lighting mechanics, has functioned for many years in the interest of better lighting. Several of the leading manufacturers came to them and asked them if they would make up a list of specifications for a reading and study lamp capable of giving a perfect light for these purposes. This the society did, with the result that there is now available a type of table lamp unexcelled in light-giving properties and still very handsome. This lamp comes in numerous period styles and finishes, as well as in a wide price range. The mechanics of the E. S. lamp, as it is known, include an inverted white glass bowl which throws the light both up and down, and a shade with a special white lining which reflects the light without glare. It is also higher than most table lamps.

Built according to the same specifications is a line of floor lamps, handsome in appearance and giving the maximum of light for any purpose to which they may be put.

As we said above, after the first experiments along lines of better lighting, there were numerous developments and improvements. One of the most interesting of these is the new "3-way" bulb, an electric light bulb which by successive turns of the switch, gives a 100-, 200-, or 300-watt light. Thus for ordinary lighting purposes, a reflector lamp equipped with this bulb can be turned on to the first wattage, while for playing bridge, doing fine sewing, or for other times when a stronger light is needed, the bulb can be turned up to the higher wattages.

The glass reflector, mentioned in the E. S. lamp, is another newer development in this "better light, better sight" campaign. At first, all reflectors came were of metal, which necessitated auxiliary candle lights for throwing light down. Why not, the manufacturers thought, make glass reflectors which will throw the light both up and down at the same time. And this resulted in the most recent development in reflector lights. Some of these lamps are made with a reflector part metal and part glass. Others have bowls made entirely of translucent glass.

In bridge lamps, too, there has been attention paid to improved lighting. Onecompany has brought out a lamp with a special metal

reflector which fits inside the regular

shade. This concentrates and

intensifies the light.

Small but nevertheless well

worth while is another mechanical

improvement in table lamps. You

know how difficult it is to find the

switch on a lamp in the dark.

This line of table lamps has the

switch on top where you can't

miss it. The ordinary finial has

become the switch which not only

turns on the lamp but turns it on
to three degrees of light! Such is

the classic urn table lamp, sec-

ond from the bottom on page 170.

The main theory of modern

design is that it has a function, or

purpose. This has been well ap-

plied to the new modern lamps

and, consequently, we see some of

the most advanced trends in light

engineering employed. Functional

design is at its best in such mod-

erm lamps as the third from the

bottom on page 170. With its
clever swinging arm, this lamp

can be used both as a regulation

floor lamp and a bridge lamp.

The height is adjustable as well,
to make the lamp better fit any

purpose. The shade, too, is speci-
fically designed to diffuse the light.

Again, in the one just above it we

see a lamp which can be adjusted
to make either a bridge lamp or a

reflector, merely by swinging the

arm around.

In modern table lamps, too, ad-

justable features and new lighting

ideas distinguish their construc-
tion. One has a unique lighting ar-

rangement. In this lamp—one of

a group designed by the famous

modernist, Frederick Kiesler—the

bulbs are placed inside the base,

reflecting against a metal plate

and, consequently, we see some of

the most advanced trends in light

engineering employed. Functional

design is at its best in such mod-

**Stenciled floors (Continued from page 159)**

Draw your design actual size, one complete section, on white paper. Make a tracing, and transfer it to the stencil paper. Heavy parchment paper, the kind used for lampshades is excellent for the purpose. The design is then cut out with a very sharp, small-pointed knife. I find a small pen-knife works well with the handle and half the blade wrapped with several windings of adhesive tape. This gives a good grip and enables you to hold it like a pencil. The nearer you hold the knife to the Chinese writing position (upright) the better it makes. Stencil-cutting is not difficult. But long lines should be broken by bridges to give them strength. That is, one long line is made up of two or three short ones, with the paper left in the gaps.

As the paint will be wet, the left side of the stencil should go down exactly in line with the right side of the previously painted pattern. That is, working from left to right around the floor. In this way you can go right around the four sides, laying the stencil down next to the preceding painted section. The stenciling by the way, is not done as you see it pursued in shipping rooms on packing cases. The stencil cuts are used as guides and the small openings are painted, not scrubbed back and forth. Any

Hem's an end to toiling with toilets. You don’t have to scrub and scour. Sani-Flush does the work for you. Does it better and quicker. Sani-Flush is made especially to clean toilets. Just sprinkle a little in the bowl (directions on the can). Flush the toilet. That’s all.

The porcelain becomes snow-white. Spots and stains vanish. The hidden trap that no other method can clean is purged and safe. Germs and colors are killed. It cannot harm plumbing. Sani-Flush is also effective for cleaning automobile radiators (directions on the can). Sold by grocery, drug and hardware stores—25 cents. The Hygienic Products Co., Canton, Ohio.
PETER HENDERSON'S
1935 CATALOGUE

The Interlude Between
Winter and Spring

In the cold and the snow and the ice of January the Henderson Catalogue comes as a harbinger of the beautiful spring days that are really only a short time away. Issued soon after January first it gives ample opportunity to plan the summer garden. Complete to the smallest detail, with dozens of exquisite color plates and hundreds of illustrations in full-tone rotogravure direct from photographs of the actual results obtained from Henderson's Tested Seeds, it is a revelation to the garden lover. It is the key that will open the door to the garden and home surroundings that you have dreamed of for many years.

It will bring to you the thought of vegetables fresh and crisp from your own garden. Have you ever realized that a space 20 by 40 feet will produce all of the fresh vegetables that a family of six needs at a cost of but a few dollars? It brings to you a vision of a home with beautiful blooms not only all round out-of-doors but in every room in the house itself; all of them your own.

We want you to join this vast host of men and women all over this great country of ours who find real pleasure and happiness and actual profit in the Henderson Catalogue. Send the coupon today, for your free copy.

The Henderson Rebate Slip, which will be sent with every catalogue where the coupon in this advertisement is sent us, will be accepted by us as 25 cents cash payment on any order of two dollars or over.

For 88 years, HENDERSON'S TESTED SEEDS have been the standard. Year after year, our constantly improving methods have enabled us to maintain our supremacy among American seed houses. The initial cost of your seeds is the smallest item in your garden's expense, and it is of advantage to plant seeds of recognized quality from a house of reputation and standing.

HENRY A. DREER

Garden facts and fancies

EVERY gardener is familiar with the common everyday garden Hybrid Petunia — good natured, floriferous, colorful, sprawling plant that it is in its multitude of varieties. Indeed, the average summer flower garden relies greatly on these spectacular hybrids of the South American P. violacea. It has even at times invaded many a rock garden where, however, it becomes an anarchonism; but that can hardly be said of another species P. parviflora.

A NEW DWARF PETUNIA

The new dwarf species of Petunia has been called to my attention by Dr. W. P. Morgan of the Indiana Central College. This Petunia parviflora is indeed quite different from its large flowered relative which is so well known.

The new Small-flowered Petunia is also suggested as a trailing plant for ledges, walls and window boxes. Late seedlings of June trailed 15 in. down the sides of a concrete box by the first of August despite the torrid heat that enveloped the Western states July of last year.

As to its growing, Professor Morgan says that it could be used as a companion plant with other trailers; for instance, introducing it into a clump of Snow-on-the-mountain (Cerastium tomentosum), the old reliable — so beautiful in spring but not so good later on. The new Small-flowered Petunia is also suggested as a trailing plant for ledges, walls and window boxes. Late seedlings of June trailed 15 in. down the sides of a concrete box by the first of August despite the torrid heat that enveloped the Western states July of last year.

LIME FOR POPPIES

Poppies need lime according to a writer in the English Garden Chronicle who strongly insists that lime is essential for the well being of the Shirley Poppy. Some strains of the common field Poppy which would, of course, include the so-called Flanders Poppies, P. rhoeas, he has never found it wild except in soils rich in lime and that on lime-free, sandy, and gravel soil it is replaced by the comparatively dowdy closely related species P. dubium. But, if you would have the Poppy really do its best, however, it wants, in addition to the lime, plenty of potash especially when this is applied in the form of ash and burnt earth from the bonfire. So, there you are!

JUST ANOTHER "OLD WIVES' TALE"

And, did you ever hear of a theory that wooly aphis can be kept off apple trees if Natasha trees were clambering through its branches? I confess that it is news to me. The belief has led to a series of careful experiments in the gardens of the Royal Horticultural Society at Wisley, England. The results have resulted in an entire disproval of the theory. In fact, photographs of a leaf browsed completely by a wooly aphis. Apparently, another survivor of those "old wives stories" that simply are not so. One wonders how they ever became current in this day of enlightenment.

Some Important Dates

Dates for your calendar—The American Rock Garden Society’s first international exhibition, at Cincinnati, May 16-17-18. . . . The American Dahlia Show will be in New York September 26 and 27. . . . Pennsylvania; Mid-West Dahlia Show, Cleveland, O., Sept. 14. 15. . . . The New York International Flower Show (22nd annual) March 18 to 23 in Grand Central Palace. . . . Also sponsored by the Horticultural Society of New York a Garden Pilgrimage (an all-expense trip) to include the annual Dahlia Show, Heemstede and the Royal Horticultural Society’s great show at London, England, sailing from New York April 30 . . . The American Rose Society’s new plan for two annual gatherings, takes recognition of the fact that June isn’t the only month for Roses. One meeting in conjunction with the Georgia State Rose Society and the annual convention will be at Rochester, N. Y., in September.

REDUCE SEED DECAY AND DAMPING-OFF

2. Develop deep, drouth-resisting roots

3. Develop larger, colorfull flowers with strong stems

Only a complete plant food can do these things for your lawn

RIGHT NOW is the time to decide to correct those flaws that have marred your lawn in other years—those bare patches and strangely areas of thin grass, those crowding weeds. Thousands of home gardeners overcome such troubles by early feeding with a needed fertilizer. Vigoro can give your grass the healthy start it needs, because it supplies all the elements growing things need from the soil . . . in scientifically balanced proportions.

Some products used as fertilizers—by-products such as bone meal, manures, also refuse—ordinarily contain only one or two of these needed mineral elements. Vigoro contains all eleven of them, in a form that plants can readily put into use. Vigoro, the complete plant food, you take no chances, as you must with cheap, incomplete fertilizers. Whatever it is that your grass needs for healthy growth, you can be sure that it will get it from Vigoro.

Vigoro has been used by home gardeners for eleven years; in fact for the largest selling plant food on the market. It is sanitary, odorless, can be applied either by hand or with an inexpensive Vigoro spreader.

To get the best results with Vigoro, some care is needed in its application. Just follow the simple directions which you will find in every bag. Vigoro is economical—apply only 4 pounds per 100 square feet.

Try Vigoro on your lawn this year, just as soon as the frost is out of the ground. See how it will help you overcome the common troubles people have with their lawns.

Gorgeous New Pink Phlox
Plant Patent 118

NEW PHLOX
Columbia
Plant Patent No. 118
Mrs. Francis King, one of America's greatest hardy plant authorities, says, "It's by far the finest phlox produced in the last 20 years."

It's a truly lovely thing in gorgeous vibrant plant with rich blue eyes. Has immense close clustered flower heads; excellent foliage that is both mildew and bug pest free. Rugged growth. Absolutely hardy. A glorious phlox in color. Prices particularly reasonable for so fine a new thing. Don't put off ordering and run the risk of being disappointed in getting word "sorry but are all sold out."

NEW BARBERRY
Mentorensis
Plant Patent No. 99

There is no Barberry like it. It is almost a broad-leaf evergreen, the way its foliage stays on practically all the year, making it ideal for hedges and foundation planting. Rich, glossy foliage. Upright growth, heavily thorned forming a most effective hedge barrier. Grows 3 1/2 to 4 feet. Requires little pruning. And, wonder of all, it thrives equally well in acid or alkaline soils. It is just a grand shrub in every way. Although we have been working up a supply of it for several years, just naturally so fine a new thing will be in great demand. So play safe and order early.

ANNUAL ORCHARD PLANTS (Illustrated)

Doubtless the most complete, complete, most complete catalogue ever printed. For the home garden, the greenhouse, the florist, the nurseryman. A complete catalogue of 1,000 pages; 1,000 species; 2,000 varieties, etc.

The American Home, February, 1935

MICHELL'S SEED HOUSE
518 Market St., Phila., Pa.
seven years old, have been perfectly content to use the entrance. Beyond the Iris (between it and the fence) is a four-inch space in which I have successfully raised Calendulas and other annuals which grow tall enough to project above the Iris. The outside of the border-bed is adaptable for Pan- tirturts, and rhododendrons. Very little anything you like. At the end of the iris-blooming season the green Iris leaves provide a pleasing background for the Nasturtiums and a handsome foreground for the Calendulas.

For a while I ran a wire around the outside of the bed but I found I wasn’t necessary. The combination of the inside fence and the Iris successfully guard the border-bed. The children love it and, to my surprise, apparently enjoy the idea of having an entrance to the sandbox. Just why they don’t pipe the Iris and the annuals I don’t know, unless it is that they consider the flowers a protective moat around their castle which should be maintained in good shape, or perhaps they like the blowing screen better into which they can build their sand castles and bake their sand cakes in comparative privacy.

And last, but not least, the sand is hot scattered, the yard is swept, and the younglings can be in the sandbox at play almost immediately after a shower.

We improvised a fountain

(Continued from page 161)

hatched out a hard-boiled replica of our model, in gleaming near-Carrara! With hammer and cold-chisel, a recess was sunk in the tier-face, and a one-inch hole drilled clear through in line with the mouth orifice. It now only remained to run the tubing from the fountain head to the nearest water pipe, mortar the tile in place, and bend the tube outlet into the desired form.

We had our fountain, and it opens the way to the queen’s task.

For setting the lining tile, we used elastic cement in preference to rigid cement in order that the shrinkage of the iron in cold weather should not crack up our ceramics. Roofing cement, stiffened by adding a small quantity of sand, suited the purpose. We spread this nutritious material with kitchen knives, covering the bottom of the fountain with a coating about an eighth of an inch thick. The drain opening was plugged and finished over flush with the bottom. No outlet was needed for the fountain.

We use only a fine jet, the overflow seeping into the ground. We set the tiles by pressing them into the cement bed and sliding them against those previously set, thus forming a regular pattern. While it is hardly advisable to don white flannels for this work, we rather enjoyed making a good, honest mess, and turpentine, soap, and water returned us to normality.

A broken-stone foundation ten inches deep was laid under the location of sink and slate border, the sink set in place and leveled off, and more stone filled in around it to carry the slate. Before setting the slate tile in cement mortar, we poured an appraising gruel of this material over the stone, to form a solid bed. When finished, the border tiles were flush with the flower-bed and the lawn.

Now the Gardening Spouse did things with Moses, Ferns, and other moisture-loving plants—two tall Arbutus's I fanned the brick pier; Violets were transplanted; and some potted Begonias gave contrasting color against the glowing green-blue of the slate.

The experiment was a grand success! It survived a hard winter without damage. Every warm evening now, the fountain sings its elfin song of coolness while our pool of liquid aqua-marine overflowed among the thirsty roots of its leafy niche.
What's new? [Continued from page 106]

than a foot tall, is a solid mass of bloom in the most magnificent
full color range, the new Linaria
Fairy Bouquet is a remarkable
strain. Even the Eschscholtzia
(California Poppy) has been bet-
ter. Instead of just the com-
mon orange type, these Poppy
varieties are now available in white,
scarlet, salmon, pink, mauve,
and other shades, as well
as in double and semi-double
flowers. Another addition to this
california Poppies is the new
dwarf-efect growth.

In Annual Scabiosa, the New
Giant Hybrids bring immense
full flowers in a complete color
range, while the Isaac House
strain of Scabiosa caucasica (per-
nennial) is highly commended.

Additional varieties of recent
origination that merit considera-
tion are: Annual Canterbury
bells in mixture and four sep-a-
ted colors: Cosmos Early Klon-
dyke Orange Flare, which can be
tooled in four months, and there-
fore will be grown where the
late flowering habit has made it
impractical; Iceland Poppies,
which the new Gartree strain has
a wide range of colors in the
art shades; with darker picotee
edgings; and Zinnia Desert Gold,
an aristocrat having an unusual
blending of gold and yellow.

STURS & HARRISON CO.

The STURS & HARRISON Co.

BOX 483, PAINESVILLE, OHIO
Wallpaper
(Continued from page 159)

The lampshade on that bridge lamp could stand replacing, couldn't it, and it wouldn't be a bad idea to do something with those naked wall lights. Wallpaper comes to your aid again! If your shade is of plain parchment paper, select a small all-over design and paste it right on the parchment. Trim the edges and for a more decorative effect, finish them with a lacing, as the French do, of worsted or colored cord. If you want to remove the present covering, do it, carefully, and trace the outline on the back of the wallpaper. To reinforce the latter, paste it to a sheet of thin Bristol board or heavy white wrapping paper. Of course, you can shellack any of the wallpaper finishes if you like a lustrous finish.

As for the wall light shields, use a border or a small patterned paper. You can buy the frames for double or single lights in any store and it is a simple matter to fasten the paper to them either with the lacing suggested above or some household cement.

If you have an old cloth-covered screen, you can remove the fabric and insert beaverboard panels. If it's already covered with wallpaper it's an easy matter either to paint it (wallpaper paints take paint beautifully) or you can get solid color wallpaper and reaper it. As for the adhesive—you can buy the regular cold water paste in any wallpaper store—and be sure that you use a wide wallpaper brush.

Cover the other side of your screen with a smart all-over design to harmonize in period and color with the rest of your room, and use a plain or striped border in the same manner as on the front. In this way, you'll have a double-duty screen which can be "about faced" whenever you like.

Learn to be CHARMING

A BOOKLET—WITHOUT COST
"The Smart Point of View"

HOW much Charm have you? Just what impression do you make? Grade yourself with Margery Wilson's "Charm-Test." This interesting self-analysis chart reveals your various personal qualities by which others judge you. The "Charm-Test," together with Miss Wilson's Booklet, "The Smart Point of View," will be sent to you without cost or obligation. This offer is made to acquaint you with the effectiveness of Margery Wilson's personal training by correspondence.

A Finishing School at Home

In your own home, under the sympathetic guidance of this distinguished teacher, you will learn the art of exquisite self-expression—how to walk, how to talk, how to acquire poise and presence, how to project your personality effectively—to enhance your appeal. Margery Wilson makes tangible the elusive elements of Charm and gives you social ease, charming manners, finish, grace—the smart point of view.

MARGERY WILSON

1455 FIFTH AVENUE, 10-B, NEW YORK, N. Y.
COUNTESS VANDAL—U. S. Plant Patent No. 38

Much of the fascination of gardening lies in the thrill of trying the most recent varieties. These unusual new roses will bring a refreshing new note to old gardens and give a thrill to the beginner. If one were limited to a single variety, COUNTESS VANDAL would undoubtedly be the loveliest "all-in-one" rose to select. A favorite of the rose garden at A Century of Progress. COUNTESS VANDAL will also be a reigning beauty in your own garden. Its slender buds of coppery bronze suffused with soft gold, are a constant delight. Superb for cutting. Vigorous, hardy grower.

BETTER TIMES—A Brilliant New Rose

A stunning new addition to your rose garden. BETTER TIMES has interesting long crimson buds opening into striking flowers of vivid cerise-red. Its large, delicately fragrant blooms are borne on long, strong stems, excellent for cutting. Leathery, dark green foliage. A free, full bloomer. BETTER TIMES is a rose every garden lover will enjoy.

AMELIA EARHART—New Everblooming Rose

Truly a lovely garden rose, producing a wealth of immense, extremely fragrant, yellow blooms. Very full flowers graduating from a deep yellow center to outer petals of cream with blush overtone. A free bloomer and strong grower with large, rich dark green leaves. AMELIA EARHART will prove the delight of garden lovers everywhere.

TOKEN—Unique in Color, Free Bloomer

TOKEN brings a rare new color to the rose garden. The exquisite, medium-full flowers are a glowing tone of rich sun-ripened apricot, gradually finishing coral— a delight at all stages. A free bloomer and strong, healthy grower with disease-resistant foliage. Every lover of beautiful roses will desire at least one bed of this unusual new rose.

SOLD BY Nurserymen, Florists, Seedsmen and Dealers Everywhere. Available also in ‘Fertil-Potted’ Packages.

Gorgeous New Colors in Double Nasturtiums

Burpee's Double Hybrid Nasturtiums

Hybrids of Golden Gleam...All Colors in a Wonderful Mixture

Here are the Gold Medal Flowers—the sensational NEW COLORS in Double Nasturtiums created at Burpee's Floradale Farms at a cost of more than $10,000 and exhibited for the first time last year. At almost every Flower Show they were given the highest award for the finest new annual flower. Every gardener has hoped for these NEW COLORS ever since the introduction of Double Golden Gleam Nasturtium. Burpee has created these hybrids of Golden Gleam in an amazing range of beautiful colors from pale primrose (almost white) through yellow, orange, salmon and gold, salmon-pink, rose, rare art shades, cerise, scarlet, crimson, blood-red, deep maroon, and mahogany. Some are solid colors, others have showy markings of contrasting colors. Semi-dwarf plants. Giant, double, or semi-double, sweet-scented flowers measuring 3 inches across. Long, strong stems hold the flowers well above the foliage. Limited supply last year quickly sold out at 10 seeds for $1.00. Now you may have these marvelous flowers at these very low new prices:

Packet (30 Seeds) 23c; 70 Seeds 30c; 150 Seeds 31c; oz. 31.73; 4 ozs. 33.00. Postpaid.

Burpee's Dwarf

Golden Giant

The parent of all the double, sweet-scented Nasturtiums is Golden Gleam, the giant double golden-yellow, and it remains one of the finest introductions of recent years. Every garden must have Golden Gleam and Burpee now offers it at very low cost. Packet 10c; oz. 25c; 4 ozs. 35c; ½ lb. $1.40; lb. $2.50. Postpaid.

Burpee's Garden Book FREE

Burpee's DWARF Double Nasturtiums

Dwarf Bush Plants - Giant Double Flowers

Burpee's Dwarf Golden Giant

This is a new flower developed directly from Golden Gleam Nasturtium. The exquisite sweet-scented flowers have the same giant double form and the same glowing golden yellow color as Golden Gleam but are borne on dwarf, compact, bushy plants ideally suited for borders. This is a new type that is a most important addition to the Double Nasturtium class and is sure of sensational popularity. The blossoms are borne profusely and held well above the foliage on long strong stems.

Be sure to try this delightful new dwarf Dwarf Golden Giant Nasturtium. Packet (15 Seeds) 23c; 35 Seeds 30c; 75 Seeds $1.00; oz. $2.50, Postpaid.
