RECIPES

# Feasts with **LOW COST MEATS!**

**T**HERE are many easy recipes for combining the cheaper cuts of meat with other inexpensive things, which produce *delightful*, different one-dish dinners. The magic of these recipes lies in a tin of Heinz Italian-style Spaghetti. Heinz cooks pure Durum wheat spaghetti and drenches it with a sauce that adds exciting flavor. It is made of prize ripe tomatoes, pure Italian Romano cheese and rare good spices . . . Today, to spare your budget and add rich variety to your menus, take these two steps:—Stock up with Heinz Italian-style Spaghetti—and send for the special Thrift Recipe Bulletin described at the right.

**MEXICAN SPAGHETTI**  
(Kitchen Time—20 minutes)  
1/2 cupful diced cooked ham  
1 medium green pepper, chopped  
1 medium onion, chopped  
1-21 oz. can Heinz Cooked Spaghetti  
Brown chopped ham, green pepper and onion in ham fat or butter. Add spaghetti and cook slowly for 15 minutes. Serve with garnish of Heinz Dill Pickles.

**FREE!** Eighteen other ingenious recipes for quick fancy feasts with low-cost meats and complete dinner menus are given in the latest Bulletin of Josephine Gibson's famous series. It is called "Feasts with the Low-Cost Meats". In it are recipes for the low-cost dishes pictured on this page. Meals that trim down food budgets, save hours in the kitchen, and lure the appetites of all the family. Send for it today, and delight your family. A post card will do. Or tear off corner of this page, write your name and address on the margin, and mail to Josephine Gibson, care of H. J. Heinz Co., Dept. 119, Pittsburgh, Pa.

*Yet Plymouth  
is one of the Lowest-  
Priced Cars!*

ANY ONE CAN SEE why it pays to "Look At All Three" leading low-priced cars... to ride in them and drive them all... before you buy!

For here is this new Plymouth... so smart... so big and roomy... so fast and powerful... so easy to handle that driving never tires you. Yet all that is only *part* of the story!

First of all, it's the safest low-priced car... with genuine hydraulic brakes, all-steel body.

Then there is the luxuriously restful *Floating Ride* based on correct weight distribution, like the famous "Airflow" cars introduced.

You never bump or bounce... even on rough roads the back seat rides as smoothly as the front. There are wider seats... lower floors... bigger doors... more room all 'round.

And then you discover Plymouth's sensational economy. It uses 12% to 20% less gas

*Beautiful*  
**TO LOOK AT.**  
*Thrilling*  
**TO DRIVE.**

FUN TO OWN a car so smart... inside and out... a car so luxurious. And it's also the safest, the most economical of "All Three" leading low-priced cars.

and oil... gives you substantial yearly savings! Drive it! Let that tell the story. See your Chrysler, Dodge or De Soto dealer... learn how easy it is to own one under the official Chrysler Motors Commercial Credit Plan.

*Only Plymouth gives  
you All Four:*

- 1. GENUINE HYDRAULIC BRAKES**
- 2. SAFETY-STEEL BODY**
- 3. WEIGHT RE-DISTRIBUTION**
- 4. 12% TO 20% LESS GAS & OIL**

## Can you give your daughter the things you missed?

In Mrs. Jenkins' case, she wanted her daughter to be popular above all else; to be liked by everyone; to be welcome everywhere; to have a girlhood filled with happiness, new contacts and new ideas. She was determined that Jane's youth should not be like her own—filled with the longing, envy, and despair of a girl who was "never invited." There were several suggestions she could make—and one in particular.

\* \* \*

### *The first lesson in fastidiousness*

There is nothing that will so quickly sink a person socially as halitosis (bad breath). Affronted by it, few people have the patience or kindness to seek other good qualities the offender may possess.

It is unfortunate that so many people have halitosis; unfortunate, too, that they have it so often; and still more unfortunate that they do not realize when they have it (that's

the insidious thing about halitosis).

Since no one is exempt, do not make the mistake of taking your breath for granted. It is wiser to assume that it may be objectionable and take steps to alter it.

It is surprising how quickly Listerine will correct an offensive breath condition. It first cleanses and sweetens the entire oral cavity, then halts fermentation, declared by one authority to be the major source of breath odors. This done, it gets rid of the odors themselves. The breath becomes clean, sweet, and wholesome as only Listerine can make it.

Do not trust your breath to ordinary mouth washes which may be devoid of deodorant power. Use Listerine and be sure—every morning and every night and between times before business and social engagements.

LAMBERT PHARMACAL CO., St. Louis, Missouri

**LISTERINE** checks halitosis [BAD BREATH]

## How a Man of 40 Can Retire in 15 Years

**I**T MAKES no difference if your carefully laid plans for saving have been upset during the past few years. It makes no difference if you are worth half as much today as you were.

Now, by merely following a simple, definite Retirement Income Plan, you can arrange to quit work forever fifteen years from today with a monthly income

### \$250 a Month beginning at age 55

Suppose you decide that you want to be able to retire on \$250 a month beginning at age 55. Here is what you can get:

1. A check for \$250 when you reach 55 and a check for \$250 every month thereafter as long as you live.

This important benefit is available alone; but if you are insurable, your Plan can also include:

2. A life income for your wife if you die before age 55.

3. A monthly disability income for yourself if, before age 55, total disability stops your earning power for six months or more.

It sounds too good to be true. But it isn't. There are no "catches" in it, for the plan is guaranteed by an 84-year-old company with over half a billion dollars of insurance in force. If you want to retire some day and are willing to lay aside a portion of your income every month, you can have freedom from money worries and

guaranteed to you for life.

Not only that, but if you should die before that time, we would pay your wife a monthly income as long as she lives. Or, if you should be totally disabled for six months or more, you would not be expected to pay any premiums that fall due while you were disabled, and you would receive a disability income besides!

you can have all the joys of recreation or travel when the time comes at which every man wants them most.

The Plan is not limited to men of 40. You may be older or younger. The income is not limited to \$250 a month. It can be more or less. And you can retire at any of the following ages you wish: 55, 60, 65, or 70.

How much does it cost? When we know your exact age, we shall be glad to tell you. In the long run, the Plan will probably cost nothing, because, in most cases, every cent and more comes back to you at retirement age.

Write your date of birth in the coupon below and mail it today. You will receive, without cost or obligation, a copy of the interesting illustrated booklet shown below. It tells all about the new Phoenix Mutual Retirement Income Plan and how it works. Send for your copy of the booklet now. The coupon is for your convenience.

## Looking Ahead

### Highlights gleaned from our coming schedules

**T**HE spring fever stage in THE AMERICAN HOME offices has been quickly swept away this year by the gigantic wave of enthusiasm over our coming summer issues. We have started by cramming July full of ideas for summer homes and summer living in all-year-round homes. There will be pages and pages of distinctive table settings for summer meals with lots of suggestions for china, glass, and linen.

"The Barn and the Barnacle" tells about an unusual summer home having lovely Early American interiors in Scituate, Mass. Then we hop across the country to a California ranch house, which we illustrate in detail.

The summer guest has not been overlooked. A delightful article about visiting children takes care of the young guest. And then there are original ideas for guest room and porch borrowed from the Japanese.

In July we start a series on antiques—the first will be on collecting old spoons.

And this will probably be the most welcome news to the housekeeper—a five-page feature on kitchens—new equipment, and remodeling ideas—readers' kitchens are included too.

The frontispiece is to be a dramatic photograph of the tiny Sedum and ties up with an article on Sedums which should prove of interest to the plant lover. . . . And Iris—in this article principal attention is paid to the problem of the amateur designer who wishes to secure the most pleasing result in a planting of mixed perennials. . . . Sunroses, too.

### —And for August

**F**OR August we have planned just the things one likes to read and look at to the tune of droning beetles. Here, indeed, is a news flash! For some thirty years Edgar Guest has found nothing more important to sing about than home and family, friends and a garden. He has never changed his tune to suit the times. When all the world was debunking, he went serenely on, caroling the old faith in home, extolling the scoffed-at virtues. Miss Plumb, who knows him intimately, has written a corking article about

him. She has also supplied us with photos of his home and his garden and Mr. Guest himself.

Old pressed glass—superb photographs and a long, interesting article on how it may be combined with new glassware. This will be our antique article for the month—now a part of our regular editorial schedule.

For houses we are showing a remodeled house in Kansas and a new one in Dayton, Ohio, actually one of the most charming small houses ever published. Also a New England farmhouse, the home of an interior decorator.

Bathrooms galore! Bathroom equipment, towels, and accessories with an all-inclusive check list—a most informative article.

Needlework that is really and truly worth while—English crewel and Jacobean upholstery textiles and fabrics—and a profitable hobby for the person with lots of spare time.

Fathers should be seen and heard is indeed a scorching story. Idea being that all most fathers get out of parenthood is the privilege of watching mother bringing up the little darlings, the fun of slipping more and more into the background of family importance and becoming of secondary interest in the mind and heart of the woman they married. Regarded as something between a week-end guest and a rather futile type of Santa Claus. A sensible article on young mothers who have gone "child study" crazy and have lost all sense of proportionate worth of husband and children. A brand of horse sense and an article of social significance as well as a mere child article.

For the gardener there will be "Violas," "Between dusk and dawn" (an article on the night blooming Cereus), "How a particular problem was met" (a gardening article for midsummer reading), and five pages of beautiful pictures of our national trees from Vermont to California.

No, no, we have not forgotten food—five pages of it—canning, salads, new uses for cream cheese—and lots of other good things to eat.

. . . We hope you'll like them all.—THE EDITOR.

For a house like this one, Brass pipe and fittings cost only \$75.30... Copper tubes even less. Both are *rustless*, therefore *economical* to own.

## Two Facts about *Rustless* Plumbing Pipe

1. *Not Expensive* to buy
2. *Costs Less* to own

**T**HOUSANDS upon thousands of homeowners are enjoying rust-free, trouble-free service provided by water pipe of durable Brass or Copper. But although most *everyone* admits the desirability of rust-proof plumbing, not all who do without it are aware that it costs so little more at first, and far less over a period of years.

### *Rustless Plumbing Not Expensive*

The total cost of Anaconda Brass Pipe and Brass Fittings for the average six-room home is \$75.30. The *extra* cost is the difference between this figure and the cost of ordinary pipe. Remember that labor, not included in the above, is the same regardless of the kind of pipe used.

For the same house, the cost of Anaconda Copper Tube and Fittings is even less! This newer type of rust-proof pipe does not require threading and may, therefore, be made lighter in weight than standard-size pipe; naturally, it costs less per foot. A *complete installation* of Anaconda Copper Tube costs very little more than one of rustable pipe.

### *Rustless Plumbing Saves Money*

Pipe of Brass or Copper does more than deliver a full flow of rust-free water year after year. Because it

eliminates all repair and replacement expense due to rust, it saves its extra cost many times over. Surely a few extra dollars spent for rustless plumbing in the beginning, or when remodeling, is a sound investment that will pay real dividends in convenience, economy and lasting value.

Your architect or plumbing contractor will tell you the kind of rust-proof pipe to use. Whether Brass pipe or Copper tube (*both are rustless*), be sure the name ANACONDA is stamped at frequent intervals in every length. For a free booklet on the subject, address our nearest office.

### *Not expensive to buy;*

### *less expensive to use*

The average six-room home with double washtub, water heater, basement lavatory, kitchen sink and one bathroom and shower requires . . .

144 feet of  $\frac{3}{4}$ " pipe

59 feet of  $\frac{1}{2}$ " pipe

56 pounds of fittings

The *total* cost of Anaconda Brass Pipe and Brass Fittings for this installation is only \$75.30. And Anaconda Copper Tubes and Fittings cost even less! Such an installation will last indefinitely, because it *cannot* rust. Copper and Brass save far more than their first cost in freedom from all upkeep expense and inconvenience due to rust!

A convenience for millions to enjoy... a full flow of rust-free water from *rustless pipe* of Copper or Brass.

## Porch side of Mexico

Nowhere else in the world can you find such inviting cool porches. Plaster and brick are used as you see it here to give an effect of age—the brick and terra cotta colors picked up again in the pleasingly crude native pottery jars and jugs

The very presence of an iced-tea set of cool, lustrous metal will make one feel super comfortable on a hot day. Tray, pitcher, glasses, and coasters from Kensington, Inc.

## Taking the discomfort out of summer at home

Mary E. Hussong

Whether one seeks the sun or the shade, beach or lawn a mattress roll on its own metal rack is an unending summer joy. From Ficks Reed Co. At left: If you are on the water, or wish you were, here's summer atmosphere in a nautical lamp, with appropriate rope and anchor. Paul Hanson Co., Inc.

OF COURSE, if your vacation is of that rare sort that stretches out to several months, and if at the sight of the first butterfly your family makes a hurried exodus to Northern lakes or Western mountains or to a Cape Cod resort, this article is not for you. But if, as for so many thousands of us, vacation time means to you merely a slipping away from town for a short two weeks of coolness, then yours is the problem of preparing your house to be an oasis in the blazing days ahead. In summer there is no sight more grateful to eyes tired of burning sun than a room stripped of its winter heaviness and coziness, lying dark, cool, and collected, appropriately dressed in summer attire.

To start with general principles, you will in summer want to do away with all superfluous pieces of furniture. Put them back in the storage room. During the hot months you want plenty of bare spaces in your rooms. Remove ornaments, pictures, and bric-a-brac wherever possible. Such articles suggest a feeling of coziness, and in July you must attempt to create an illusion of open spaces. Store away family pictures, too. Finally, buy a supply of all kinds of inexpensive flower containers and place flowers on every table, on the piano, the mantel, the bathroom shelf, and on

every chest and dressing table in the house. You can't have enough.

*The Living Room:* We'll begin with a summer dress for the living room. First, roll up all the rugs and store them away until fall. Then buy long strips of pale yellow Chinese matting, and have this matting made up into two long runners to stretch the length of the room. Or put down any of the smart and inexpensive summer rugs from your local store. You'll find all colors, all sizes—with sensible price tags. After the deep piled, velvety rugs of winter, these will be cool to see and cool to walk upon. Next, remove heavy draperies. Put up cool chintz or leave only the glass curtains.

Not many of us can store our upholstered sofas and chairs and introduce all new summer furniture. But slip covers will do a nice job. Green and white mattress ticking is smart. And as for the decorative pillows around the room, why not slip these into summer covers of brilliant red and yellow striped Turkish towel-

ing? They will be terribly smart.

Lamp shades of parchment and silk will not fit in with the informal air we are attempting. And so we recommend that you buy rolls of light green Cellophane and swathe your shades for summer. This is very simple to do; the girls in the lamp departments of the stores do this all the time.

Wrap the Cellophane as though it were a bandage. And in addition to the charm of green lights you'll have your shades spic and span when next fall arrives.

Be certain that you remove the large painting over the mantel. To take its place buy a yard of chintz with motifs of white gulls flying over green water. Frame

A very wide, hand-knotted looking net for curtains, and a closer weave are here for choice, for curtains that provide privacy, admit plenty of light, and let in the air. Both are from Quaker Lace Company

This year there are nets and nets and nets—and all charming and all conducive to summer freshness. These two are from Scranton Lace Co. Below: Runners like those on a sleigh on this garden or terrace chair will keep it from tearing up the grass when moved from place to place. Huge polka dots for style and a good angle for comfort make it a desirable adjunct for vacation days. Howell Co.

the chintz without glass and hang it above the mantel. For decoration on the mantel itself make a center ornament of interesting sea shells arranged in a pile. At the ends use two low round crystal

bowls filled with summer flowers. Charmingly cool, isn't it, after the elegance of the winter's mantel?

*Cool Dining Rooms:* After you've imaginatively created a summer living room which will be the refuge of all your friends when the thermometer soars skyward we recommend that you turn your attention to the dining room. Making food palatable in July weather is a problem. But if you can serve your food against a background that suggests coolness you have largely solved the difficulty of warm weather eating.

We will suppose that you have already removed all "display" silver and all runners and doilies from the sideboard. Bare, dark surfaces of gleaming wood appear very cool. Now we insist that you roll up the rug and store it away.

Above: There can never be too many tables at hand, wherever one is vacationing! Here are two made of cane, with walking stick handles for easy moving here or there. One can be plunged directly into the lawn and stand firmly for glasses full of iced beverages. Ficks Reed Co. Polka dots and scalloped fringe blowing in the breeze give an inviting look to country or city garden or terrace. The umbrella with its own table and the folding chair are in brown on white frames. Gold Metal Folding Furniture Co.

Since lounging is the thing for leisure hours in summertime, let us recommend three particularly new and smart ways to lounge! You can lounge on one, two or three sections, if you own the piece at the center top of the page. It is of metal, with gaily striped covering, and suggests no end of possibilities for arrangement. The Howell Co. In the center, somewhat the same idea is worked out in reed painted white with copper colored upholstery. Ficks Reed Co. In a single piece is the lounge at the bottom of the page, with chrome plate frame and covering of bone-white Moleather or summer fabric. Troy Sunshade Company

If you go to the country early and stay late, you know the problem of making your house comfortably warm! Here is an inexpensive Franklin stove that will be a practical solution to the problem, and will burn wood, coal or coke. From the Wm. H. Jackson Co.

Can you think of anything more pleasant of a summer's day, than a portable cabana like the one below, with its red and white striped canopy and cushion? It is compact enough and light enough to be placed wherever the spirit moves at the time, and is made by the Gold Medal Folding Furniture Company

A push cart of antique pine and woven bark has innumerable uses for carting things around the place easily and conveniently. From Old Hickory Furniture Co.

Leave the dining-room floor perfectly bare for summer. Take down all stuffy draperies and invest in some of those cool porch matting blinds. Roll them up fairly high (except in the middle of the day), and for further decoration hang in each window a basket of growing plants.

ter dining table that has served you so beautifully during the formal months, and emphasize summer time by dining on a real summer table. Iron or wood or any sort of porch table. Your chairs, even if the seats are uphol-

In the dining room, no matter what the season, the table must be the focal point, so we would counsel that you remove the win-

Summer curtains become a simple problem if you have "Drā-pleats." Made of stiffened fabric, with slots for the curtain rod and snaps so that pleats can be adjusted just the way you want them, big or little, these strips are stitched on the back of the curtain fabric, and that is all there is to it. United-Carr Fastner Corp.

The most delicate shade of shell pink will give an exquisite glow to summer windows, if made of this horizontally striped sheer Celanese

More summer things to think about! A Sunday morning waffle set in polished chromium with ivory colored bakelite handles includes a tray, sugar shaker, syrup pitcher, and batter pitcher. Chase Brass & Copper Co. Curtain hold-backs in white wire, fresh and crisp, from H. L. Judd Co. Both grown-ups and children will enjoy a new safety swing with its pleasant canopy. It is called the Glydo-Swing and is made by the Goshen Manufacturing Co. "Reclinabout" is the appropriate name of the canopied chair that can be wheeled from place to place, and adjusted as to backrest and arms. It comes in white with colored cushions and canopy as nearly waterproof and washable as is possible to obtain. Gold Medal Folding Furniture Co. At the very bottom is a sturdy lawn umbrella, with metal table and chairs done in canvas in colors and designs to suit every taste. Howell Co.

your home for summer comfort.

Finally, consider the table service. Tableware can be bought so inexpensively these days that we think it a good investment to put a few dollars into summer dishes. Plates with bright borders and center decorations of fruit are effective. And possibly no glassware appears so cool and refreshing as crackled crystal.

*Cool Bedrooms:* The last room for us to put into summer dress is the bedroom. And for this room we've planned a color scheme of brown and white. On the floor we would place rag rugs in plaids of large brown and white squares. We would use white shades and chintzes with a lot of white background, so popular now.

Wrap your pretty silk lamp shades in gleaming white Cellophane. Pleat a summer dressing table skirt of white argentine cloth. And for a spread, we would like snow white seersucker with an enormous brown monogram either embroidered or appliquéd right in the center.

Should your bedroom include a boudoir chair our slip cover would be made of white Turkish toweling corded in brown. And we would slip these adorable bedroom pillows into fresh summer covers of brown Turkish toweling.

stered, will do nicely, because we shall make little slips for the seat. We'll use natural colored linen and cord them in orange. They can be tied onto the backs of the chairs with little strips of the linen, and, to give a very smart touch, we'll have a three-inch box pleating for the skirt.

Should there be a Chinese store in your town, or a store handling Chinese goods, poke around for a great big lantern of orange and green. If the hanging light in your dining room is fairly small, and you are clever at manipulating, you can make the lantern fit over the fixture. And a charming sight it will be on a hot July night—truly a summer picture—to see the light glowing softly through the orange and green above your garden table.

The only decoration we would allow on the sideboard would be a large palm leaf fan placed on its side and resting against the wall. Speaking of fans, a fashionable hotel in New York that doesn't have an air cooling system in its dining room, always in summer passes a basket of fans around the tables to the guests. This is a nice custom to introduce in

If your summer decorative problem happens to be one like mine—how to fake the country in a small city flat—I should place flower boxes in every window under contract with your florist to keep them in bloom. Then I would have a garden all my own on a tiered wire stand by the fire escape door, with a bewildering mélange of potted plants. In May purple hyacinths, yellow jonquils, paper-whites, and pink primroses; in June, pink and white geraniums and blue ageratum; in August, striped petunias which I love. Flowers in summer do more for your soul than a Renaissance tapestry. A sure cure for the blues is a lily-of-the-valley. Try a spray of crabapple blossoms by the hall mirror, the reflection is better than any picture. Forget-me-nots on your breakfast table; you will glide over the stock market sheet serenely. The humble English ivy is a very dependable decorative creature. On a white wall that is a little passé waiting for fall and its fresh coat of paint, ivy may be trained into a background for any decorative scheme. Picture how refreshing, gay, and very inexpensive a room may be with ivy climbing over white walls, white slip covers on the over-stuffed chairs, gleaming white argentine curtains finished with a narrow ruche and flowers for next to nothing from the market stalls!

When you give a summer party avoid the usual in table decoration just as you do in the selection of your menu. Why have a stylized arrangement of a lily and trailing smaller flowers in a flat pottery dish or even a conventional bowl filled neatly with roses when you could have stiff bouquets of white geraniums in blue opaline cornucopias, jonquils bunched as they do in the Forest of Fontainebleau like a pineapple with the stiff green leaves up the center, or a tiered white tin pagoda filled with field flowers? When I want to be very *recherché* I spread my table with a cloth made of alternating stripes of palest blue and white satin or sheerest linen and in a

small iron urn arrange, as a center piece, a cone of pink and white carnations first a pink stripe then a white using a wire frame to hold them. A pink lace cloth with a cone of white daisies and dark ivy leaves is equally amusing.

Once I considered adding a canary to my stay-at-home summer but the trial was not a success for I secured what is known as a "roller" who had a passion for giving me my money's worth and competing with neighboring radios. A conscientious canary may be a menace. A globe of tropical fish are less exhausting and the gleam of color flicking round lazily is soothing.

Old rugs, carpets, and clothing, sent to the factory come out as fresh and summery looking as the light and dark taupe plaid or the Early American hooked rug type shown below. A practical use for badly worn rugs, etc. Olson Rug Company

The new adjustable Lazybones chair is called "Carioca," and is made in bentwood with channel back cushions. The footrest is separate. H. C. White Company

Two new valances will add interest to summer windows. The top one, with its lacy wire, can be painted any color you like. The other, looking for all the world like the siding on a house, offers a chance for two-color combination. Both are Kirsch Co. designs. An all-over honeycomb weave and wide striped border adapt this Bates bedspread, at the left, to modern or Colonial bedsteads. Designed by Virginia Hamill

White and summer colors are available in a well-balanced double "student" lamp of tôle, with picturesque chimneys and a simple painted design. From Herman Kashins

# Designed for suburban living

The home of the Misses Romer, Pleasantville, N. Y.

*James Renwick Thompson, Architect*

PART of the joy of this house is the way it is placed on the plot so that it is flooded with light and sunshine all day long. The home of the Misses Romer, at Pleasantville, New York, the living quarters face east, south, and west, kitchen and garage taking the northern exposure. The house is of clapboards painted white and whitewashed fieldstone, and shows further contrast in materials, the first-floor shutters being solid ones painted gray, those on the second floor the conventional open style, in green.

Many details of the exterior are worth careful noting. At the front, the first-floor fieldstone wall is extended beyond the actual house to form a screen for the little drying yard behind. For out-of-door living, so important in the country, two provisions have been made; an L-shaped covered porch, where one can sit to enjoy or escape the prevailing breeze, according to the season, and an open, sun-drenched, flagged terrace. The latter opens from the dining room making it available for informal out-of-door meals. At the rear, a cov-

*Demarest*

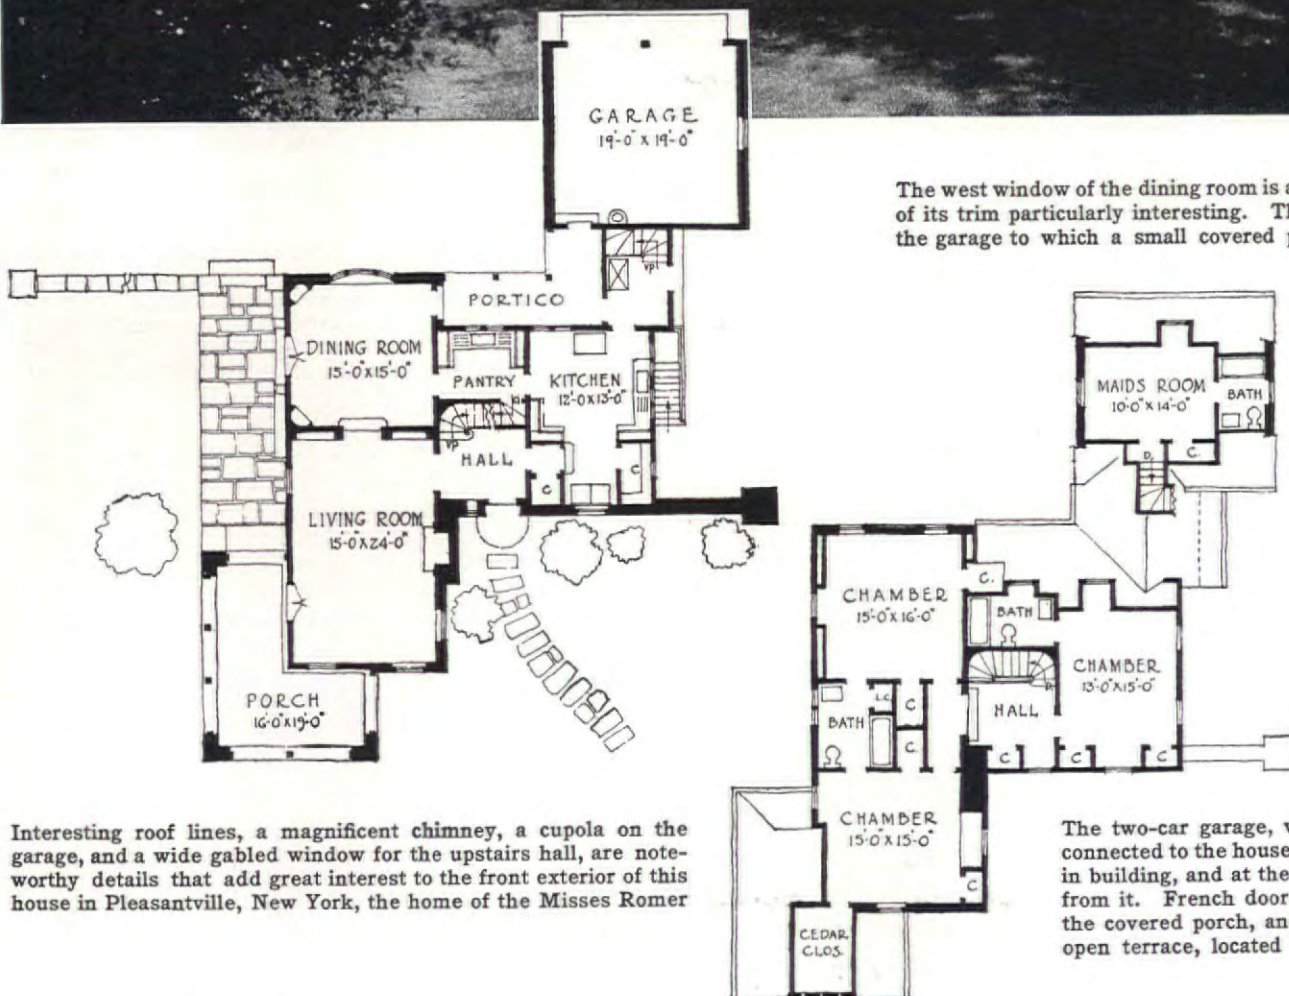

ered portico provides passage from the service end to the dining room, and at the same time a tiny cool spot for breakfast, protected from the sun on a hot, summer morning.

The floor plans are particularly well thought out. Cross-ventilation is provided in all of the rooms, in fact all rooms but one have exposure on three sides. The

kitchen opens with equal convenience on the entrance hall, pantry, and dining room, and the service entrance. Incidentally, the front end of the kitchen is set aside for laundry tubs and ironing, a convenient arrangement for the one-maid household. There is access from garage to house under cover, another essential for comfort and conveni-

ence. On the second floor, the owners' two bedrooms and bath form a suite by itself, separate from the guest room and bath on the other side of the house. Each bedroom has two closets; a hall closet provides for linen and a large cedar closet for storage. The maid's room and bath, planned over the garage, are accessible from a stairway of their own.

The west window of the dining room is a bay, its proportions and detail of its trim particularly interesting. The wing showing at the left is the garage to which a small covered porch affords sheltered access

Interesting roof lines, a magnificent chimney, a cupola on the garage, and a wide gabled window for the upstairs hall, are noteworthy details that add great interest to the front exterior of this house in Pleasantville, New York, the home of the Misses Romer

The two-car garage, with maid's quarters above, is connected to the house, for convenience and economy in building, and at the same time is entirely separate from it. French doors lead from the living room to the covered porch, and from the dining room to the open terrace, located on the south side of the house

## Pack up your family

—and turn the lock on your worries

OF COURSE the business will go to pot, you'll find the place in rack and ruin if you leave it for so much as a week. Of course it will not! In spite of your deep-seated convictions about that business or that job revolving around your august presence at all times, you'll come back to find the old job or the business managed to creak along somehow without you. In fact, there'll be almost nothing even to find fault about. So man, if you can risk this jolt to your ego, there's nothing to stop that vacation this year—and I mean a real vacation, not the jittery little stop-overs too many of us have called "vacations" these past few years. That fishing trip you've been promising yourself for so long; that trip around the world to see how the other half lives; or just a jaunt to the seashore to get clean, salt air in your lungs—they're yours for little more than the asking!

Rates, we gleefully announce, are downright sensible. They have taken cognizance of the fact that family budgets are somewhat strained these days, and recognized that the average man likes to take his family along and that

usually means a multiplication of four. But spend a half hour browsing in some travel booklets. If you're constituted as I am, you'll soon be proving to your entire satisfaction (and even quieting that still, small budget conscience) that it is actually cheaper to travel than to stay at home! You can become a "dude" rancher for as little as fifteen dollars a week; you can take your car aboard some luxury liner and travel the length and breadth of Europe for less than four hundred dollars per; or get bracing mountain air, some corking golf, or lazy days on a sunny beach for a few crisp bills.

Now before we really get into this thing, may I plead that you travel by air, travel by air-conditioned train, or sprawl about a boat deck—but *leave that car at home*. That is, if you want a real vacation. One of our pet fallacies is that traveling by car is cheaper than by any other mode of transportation. Either we don't keep a careful check of expenditures, or we just won't acknowledge the disappointing total. With fares as they are today, there is absolutely no saving, unless of course you are taking a small

Whether your ambitions be modest or grandiose, it is important that you pull yourself out of the perennial routine and get a change of scenery this summer. And, believe it or not, the office will continue to exist without you, even though you may think that impossible

army. Aside from the wear and tear—and show me a road in these United States where driving is any longer a pleasure—you lay yourself wide open for the family's persistent "itch" to go for a little drive—when you should be on some cabin porch or sports deck taking life easy. So when you turn the lock on your door, turn another lock on the garage door. Vacation means rest and change—and manipulating a car over crowded roads and packed cities is neither rest nor change.

What's your pleasure? It's a ten to one chance that you hate sight-seeing and the Missus' idea of a good time—shopping all over the face of the earth. You have a feeling that this year it should be

your party, doing something you really and truly enjoy doing.

Well, there are many things, but for the sake of argument let's consider "dude" ranching, a vacation idea that was once out of reach of the average man with a family to take along. What do you get on a "dude" ranch? Magnificent country; a chance to see your beautiful National Parks on your way; good food; comfortable quarters in your own family cabin or in an inn; riding, fishing—life in the open. How much does it cost? Well, how much do you want to spend? Fifteen dollars a week each, for a party of four, is the rate at one camp in Montana, 4,500 ft. altitude. There are local Saturday night dances and rodeos

in the vicinity. Hiking, fishing—both stream and lake. Children under twelve get half rate. Horses are 50¢ an hour. Couldn't ask to get much more out of your fifteen dollars, could you? And darned if you could contrive so much health and happiness on fifteen dollars a week at home!

Another, up in the Stillwater Canyon, gives you "all the good old ranch chuck you can put under your belt," pack trips as far as one hundred miles, roping, horseshoe pitching, swimming, and an owner who is a native, ranch-raised Texan—for twenty-eight dollars per person, party of four in log cabin. Another, for thirty-five dollars a week (dormitory) or forty dollars a week (three in a log cabin) offers to teach you the art of Western style riding and wrangling colts and calves in jerry quick time. Located at the mouth of Mission Creek Canyon, it faces a majestic mountain range, and Mission Creek, a well-stocked trout stream, flows within a few feet of the ranch buildings.

There are, of course, dozens of them. These are merely typical examples of what you get on a "dude" ranch vacation. There's bridge and the porch for the wife, if she prefers them, horses and ranch hands to occupy the children—and plenty of time and freedom to do the things *you* like to do. A solution for a he-man's vacation, if ever there was one. Here in these ranches in Wyoming, Montana, or Idaho you will find hospitable, friendly households, people of similar taste for the great outdoors and none of

the restraint which often settles down upon a fashionable resort.

And finally, but not least, is the clothes question. There too, you probably disagree with wife. Your idea of a good time is not changing your clothes three times a day. If you're going "dude" you bring along two pairs of blue denim overalls; boots—old, new, or any style; a half dozen pairs of cotton and woolen socks; old shirts, the louder the better; a medium heavy sweater; riding clothes and anything else that tickles your fancy. The point is—you bring the old clothes you feel best in, most comfortable in. Multiply by the number in your family, and at one fell swoop you've settled the family bickering about "nothing to wear." And don't forget the fishing rod, the camera (though you won't need proof you've been there; your color will do that) and if you go in the fall, your gun. The North-

ern Pacific publishes a small booklet answering all the questions you'll want on dude ranches—it's free.

And now let's talk about our own National Parks. We travel thousands of miles to see landscape and all the time a majority of Americans never know, or disregard the fact that Mother Nature has done her mightiest by our own country. An organized tour not only gives you the maximum in actual ground covered, but also assures you a net cost for seeing what you want to see. If you start from New York, one tour takes you to Gardner, Mont.; Mammoth Hot Springs; Old Faithful in Yellowstone; the Grand Canyon; Cody, Wyo.; and back, for one hundred and sixty-eight dollars per. Cost includes every item of expense. Another, to Yellowstone; Salt Lake City; Colorado Rockies; Colorado Springs; Pike's Peak; and Den-

ver. All expenses, for two hundred and twelve dollars per. Another, to Yellowstone; Rainier Park; Spokane and Seattle, Wash.; Vancouver, B. C.; and choice of returns via Lake Louise, Banff or via Jasper National Park. This costs around three hundred dollars each. Or you can see our Parks, go on to the West Coast and, perhaps most thrilling of all, make the Yukon River tour in Alaska. This adds up to about five hundred. These are some of the tours offered by Northern Pacific.

The Burlington escorted tours offer you a tour of thirteen days to the Glacier and Yellowstone parks for as little as one hundred and sixty dollars from Chicago,

two dollars more from St. Louis. A Yellowstone and Colorado tour of ten days for one hundred and forty dollars from Chicago. California and Pacific Northwest for one hundred and ninety-seven dollars from Chicago. And a tour of twenty-one or twenty-seven days to Alaska for two hundred and ninety dollars, from Chicago. When you read these rates—remember that everything is paid for—railroad fare, Pullman, hotels, meals, sightseeing side trips—every necessary expense. And of course, your way a bed of roses. Everything planned for you, all the scrambling done for you. The Burlington Route will send you details, if you are interested in these tours.

But you don't want to go so far? Since we have to start from somewhere, let's start again from New York—or Philadelphia. We have some natural glories too, at our own back door, even though not on the majestic, awe-inspiring scale they have in the West. Skytop Club, high in the heart of the Poconos has three thousand acres of wooded slopes, bridle paths, lakes, swift-flowing streams, and golf at its best to offer. Moonlight picnics, hot steak roasts, tennis, dancing, bowling, bridge, trapshooting, dog shows, horse shows, laurel blossoms—and just exactly one hundred and fifteen miles from Eastern metropolises.

The Inn at Buck Hill Falls offers very much the same thing, but almost everyone goes here for golf. The hotel is immense, the twenty-seven holes ace high. And if that sounds too strenuous—there are four thousand books in the hotel library! The Lackawanna Railroad will give you details on both these places, as well as a grand mountain and lake resort book. There you'll find farms that take in summer people, quiet spots, and smaller hotels.

Gosh, the wanderlust gets me. Here I am selling you on the great lakes! But it's not far, and there are some of us who have never seen Niagara Falls. Scoff as you will, but you'll enjoy it far more than any silly honeymooners can. From there you go on to Detroit, sightsee there, and so on to Duluth, Minn. Train, boat, and sights for a hundred and ten dollars. This is a Delaware, Lackawanna tour.

And now I guess it is high time we gave a break to those who think no vacation is a vacation unless there's a boat in it. And who can hold it against them? There's something about a boat, the moment you step foot on it, that dispels gloom and with each receding mile, your worries and responsibilities recede with them. If I have saved it for the last, it is only because boats and steamships are so temptingly romantic,

I had to get the other things off my chest first. And before I go really romantic, I shall take care of those whose time permits only a short cruise.

Some folks think Bermuda best in winter. I don't. I like it best in summer. It's never hot—those tiny isles have too much wide, blue ocean all around them for that. And there's so terribly much to do there in the summer. Again, championing the man's vacation as I am, there is first of all golf. And such golf! There are seven courses, with the famous "Bermuda grass." Rolling terrain, water areas, and the blue Atlantic all around you. There is sailing, bathing, riding, and tennis, too, of course. But take my advice and bring along the golf sticks. One thing you can't take along—and that's your car. They don't allow the things on these coral isles. And a mighty fine idea it is—for a man who really wants a vacation and a change. You can prove your prowess to the youngsters on a bicycle, or ride pompously around in a sea-going hack, but the car stays home where it belongs. The Furness Bermuda people will laden you with all the enticing literature you can absorb. And how very, very cheap you'll find it all—one of the very best vacation "buys" you'll find.

The Colombian line make eleven to eighteen day cruises to the Spanish Main, Haiti, and Jamaica. Frankly, summer is not the best time to go to the West Indies or the Spanish Main. However, few of us can get away for winter vacations, and on no account let the heat stop you from seeing the fascinating, entirely different things down there. I have been on three cruises to the West In-

The Showy Ladyslipper (*Cypripedium reginae* or *spectabile*). Study by John Kabel

# Plant orchids in your garden

Allen H. Wood, Jr.

HAVE YOU stood in front of the Orchid displays at annual flower shows and looked in envy and admiration at the vivid, flamboyant blossoms—seemingly carved from glistening wax? Perhaps one of your neighbors grows them in a moisture-laden greenhouse where you may enjoy them at will but, unfortunately, these exotic foreigners are for the specialist, not the ordinary gardener. Their culture requires care of an exacting nature and the hobby of orchid growing is not patterned for lean pocketbooks.

There is a way out, however, for with relative ease the dirt gardener can grow in his own garden numerous hardy cousins of the larger Orchids. True, these lesser blooms lack the coat-of-Joseph raiment that glows upon the aerial tropical kinds, yet they have no reason to be ashamed for they, too, are beautiful.

Probably the Ladyslippers or *Cypripediums* are the most widely known of the native terrestrial Orchids. These plants are characterized by their flowers which are vari-colored sacs, inflated, slit down the middle and folded inwardly. Through this slit the nectar-seeking bee must push his way to reach the saccharine liquid. Unable to return the way he entered, the insect, perforce, must make his exit through another passage provided, it seems, for this express purpose. In leaving, his back is combed of its clinging pollen by the overhanging stigma. Just before the bee gains his freedom, the flower's hinged anther swings down and deposits more pollen on his back that at his next call another Ladyslipper may be fertilized as a result.

Numerous species of these delightful flowers grow in America, ranging in habitat from New England to California. Most of them escape casual notice because they are complete wildlings and shrink from civilization. The Pink Ladyslipper of the East (*Cypripedium acaule*), however, has lost much of its shyness and, coming out of seclusion, has crept quite to cities and towns.

All the Ladyslippers, with the exception of the White Ladyslipper (*Cypripedium candidum*) flourish in acid soil. I have grown several of the species in neutral soil, but the results have in no way equalled the success attained by setting the plants in a mixture of leafmold, rotted oak leaves, and pine needles. Excepting the Pink and White Ladyslippers, the other species prefer moisture, yet none of them will tolerate actual water; standing water will rapidly rot the crowns. The Ladyslippers may be increased by an annual division of the crowns. Increase by seeds has proven impractical. The crowns and their divisions should be planted in the early spring or fall just under the surface of the soil, never deeply, as too deep planting invites blind growth and ultimate destruction. Any corner of the garden which is partially shaded may be acidified and these plants colonized successfully. Not all of the species will acclimate themselves in a single garden but several at least will do so; it is worth the effort to find out just which varieties are suited to each garden.

The Pink Ladyslipper or Moccasin Flower (*Cypripedium acaule*) thrives best in the East where it is native. In the other sections of the country it tends to dwindle out after a year or two. Perhaps more thorough attention to its particular needs would insure greater longevity. The rosy, veined flower of this plant rises to twelve inches or more on a hairy stem from two large basal leaves. It blooms about the first of June. This species has a white form, *Cypripedium acaule alba*, which is identical except in color. Its native habitat is more northerly than that of the pink Moccasin Flower.

The Ramshead Ladyslipper (*Cypripedium arietinum*) is also native to the East, yet it is amenable anywhere if a suitable location is provided. The red and white flowers of this species differ from the rest of the *Cypripediums*; they are smaller and lack the smooth, inflated symmetry. In its native habitat, *Cypripedium*

*arietinum* is usually found growing in heavy moss, yet it takes kindly to any acid soil in a location not too sunny and dry.

The White Ladyslipper (*Cypripedium candidum*) is an inhabitant of the Middle West. This twelve-inch Ladyslipper has numerous blossoms which double in number each year if the spot in which the plant is growing is a happy one. As many as a hundred flowers may be found on an old established clump. The White Ladyslipper requires an alkaline soil, and grows readily in the sun, scorning the shade which is a requisite of the other species.

The easiest to grow of all this genus is the Yellow Ladyslipper (*Cypripedium pubescens*). The rich yellow flowers appear in June and reach to a height of twelve to sixteen inches. The yellow pouches emanate a haunting, penetrating fragrance of such intense sweetness that to many people it is overpowering. I have a group of these plants growing in neutral soil in thin shade and another colony growing in acid soil in deeper shade. Those in the neutral soil are healthy and bloom regularly, but their blossoms are neither as large nor as fragrant as the plants in the acid corner.

Largest and most beautiful is the Showy Ladyslipper (*Cypripedium spectabile*). It rears its blossoming stalks to over two feet. This Ladyslipper grows westward to the Mississippi and delights in hiding in the most inaccessible swampy places. So well is it usually concealed that it is accounted as a rare plant. As a matter of fact it is not at all uncommon, and it is not a stranger to those who take the trouble to seek its haunts. The last of June or the first of July welcomes the exquisite flowers of white, striped with purplish pink. A generous admixture of peat is advisable where *Cypripedium spectabile* is to be planted.

On the West Coast there are three other Ladyslippers—*Cypripedium californicum*, *fasciculatum*, and *montanum*. In addition, there are two other hardy orchids, *Calypso borealis* and *Epipactis*

*gigantea*, which are not Ladyslippers, but whose flowers so closely resemble those of the *Cypripediums* that they are often mistaken for them.

The California Ladyslipper (*Cypripedium californicum*) is a native of the swamps. The 1½ to 2½-foot stems arise from strong clumps of leaves and support numerous small white flowers. *Cypripedium montanum* is at home in the deep woods and will stand dryness better than the California Ladyslipper. The plants resemble those of the Eastern Yellow Ladyslipper but the vanilla-scented flowers are white with brownish sepals. *Cypripedium fasciculatum* is closely allied to *montanum*. The flowers, however, are brown instead of white. *Calypso borealis* does not take kindly to soil. Its little bulb is found imbedded in clumps of leafmold or moss. The single flower is rosy purple. *Epipactis gigantea* bears racemes of brownish, Ladyslipper-like flowers and prefers to grow in a rich spot near, but not in, the water.

Another group of orchids which are rarely seen in the garden are the smaller bog-orchids. Though these beautifully colored gems grow wild in wet meadows and swamps, they may be acclimated in any moist garden spot rich in peat and leafmold. These little orchids are not quite as hardy as the Ladyslippers—they should be mulched in the winter. Though small in stature, the beauty of each bloom is reason enough to grow them in numbers.

The Arethusa or Indian Pink (*Arethusa bulbosa*) is the outstanding orchid in this group. It grows in northern swamps; in New England it usually chooses cranberry bogs. The gaping, two-inch flower of purple-pink rises to a height of ten inches on a smooth stem. The broad lip of the flower is mottled with purple and has three hairy ridges running down its surface. The *Arethusa* grows from a small bulbous root and its single leaf does not appear until after the flowers.

Snake-mouth or Rose Pogonia (*Pogonia ophioglossoides*) grows

*[Please turn to page 82]*

# Back to our own back yards

Clara B. Dean

Drawings by Georgia West

THE world is too much with us" might have been written by one who had spent a few days with a modern child. Go with your son to his school where there is constant movement, noise, discussion; watch him on the playground as he shouts to drown the voices of the others. Go with him to his scout troop where there is talk and tumbling with his fellows. Go with him to his summer camp where naturalness is stressed, but where the moments are filled with group activities. Add the sum of the hours when your child is conscious of the movement, the needs, and the influence of others.

We must learn to live with each other but it is just as important that we learn to live with ourselves. We want our children to be creative and original, self-expressive and self-sufficient, but the leveling process begins as soon as they leave the nursery.

For ten years I have been trying to teach children to work together but not to depend upon each other, to cooperate but not to crowd, to be contributing members of a group but to be able to work happily alone. So much a group supervisor can do. But she cannot give the child that something within himself that makes it possible for him to live with himself. He should be often alone at home with a mind full of healthy thoughts.

Every parent will agree that that is desirable. But it is difficult in a society that sponsors nursery school, pre-primary, country day school, scouts, camp, and other organizations for socialized activities for your child from the time he is less than two years old. (Each good in itself, mind you; just a sum that is too large for a youngster who needs time to grow "every which way.")

I know one mother who sends her child away to her room for

two hours every Sunday afternoon to amuse herself alone with her favorite toys and books. A very short breathing space in a week so filled with human contacts. Another sends her children to their grandfather's farm every summer and every week-end during school; there they receive little attention in an environment where the cattle, the chickens, and the crops are the responsibility of humans. I have taught these children and I know that they have an independence of soul, an originality of thought, and an inner contentment that make them leaders in the group. The world is important enough, but they are not dependent upon it as other children are.

Most of us cannot send our children to a farm. But there is

one thing that you can do that will help your child to grow away from too great dependence upon people. Teach your child to see, to know, and to understand the things in his own back yard.

That seems to be one of those statements that by its very simplicity defeats its purpose. "Easy," you say; and justify yourself for doing nothing about it by arguing, "Any observing child will learn what is in his own back yard." Can you name all the trees on your own grounds? Do you know which of the flowers in your garden the honey bee loves? Do you know the habits of your neighbor, the robin, who has built in the red oak? What animal has dug a hole under the rhododendron? How did an Indian arrowhead come to be buried near the stump of the old chestnut tree? Can you answer these questions for your child or help him to find the answers for himself? Does he want to ask questions about the very real things in his own back yard?

Perhaps you are one of those parents whom the Depression has

afternoon the children found that foamy sap was oozing from holes in our large white oak. They came running to me calling earnestly, "Come quick! The big white oak is fizzing!" We knelt on the ground to pry the dead bark from the old tree that had grown for a hundred years so independently of us. There beneath the bark we found and killed busy white grubs and we scraped the

tree until it was clean and ready to heal. Then we were satisfied and happy (though we didn't talk about it to each other) because we had been busy helping God to keep things growing.

There is a strength and a peace that comes from working with growing things that should be the heritage of the child as well as of the grown-up. We feel strong in our protection of our children,

home had something to contribute.

We began with the study of the rocks we found in our back yards. We took them to the Museum of Natural History, identified them, and labeled them for a museum of our own. We found local maps that gave the mountain ridges of the Connecticut Valley and the parents took their children to those ridges to collect rocks. We learned how the differ-

had seen the Connecticut River winding its way between the hills and he knew where the tributaries ran into the large river.

His interests widened to include the flowers, the birds, and the animals of the valley. He pressed wild flowers and mounted them for our museum. He labeled the flowers and trees and bushes on our school grounds and made a nature trail for members of the other classes. He built a feeding station just outside our classroom window and kept it filled with suet, sunflower seeds, and bread crumbs for the birds. He kept a chart of the migrations of the birds. He watched the squirrels, the chipmunks, and the rabbits and made animal habitat groups from shoe-boxes.

This was a background for the study of human history. We began, of course, with the Indians. What child does not thrill over stories of the Indians? Especially

Clara B. Dean

but we know that we weaken our children if we do not give them an opportunity to feel that responsibility for things that need their strength. Let them have gardens of their own. Let them have feeding stations for the birds and let them keep the birdbaths filled with water. Let them build bird houses for blue birds and wrens. Let them tame the squirrels. Let them share in the great urge to create, and let them feel that they have helped God to keep things growing.

There are other riches that will come to your child through his understanding of his own back yard. His curiosity will develop and he will learn how to satisfy it, provided always that you go along with him when he needs it and let him go alone when he doesn't. He will find stones that will interest him. Take him to a local Natural History Museum to identify them or ask a friend who knows something of geology. Soon he will know how the whole countryside came to be. He will be curious about the birds and the animals and the indigenous flowers. Buy him bird and animal and flower books and take him on field trips.

And as his interest grows the school should cooperate. It is astonishing that so few vital facts about the community are taught in the average school. Because of my experience with my own group I believe that every school should have at least a half year, preferably the first half of the fourth year when the child is just beginning a formal study of history and geography, when every project centers around the community.

We tried this last year in the fourth grade in a private school in Massachusetts. Other teachers, the children, and the parents contributed and grew in knowledge and appreciation of the community. No one was Authority; no one could be; but every child and every

ent mountains in our community were formed. Soon we had a working knowledge of our local geology and physiography; every child could identify the three most common rocks and name the principal ridges. He knew how the rocks looked and how they felt and he had climbed to the tops of some of the ridges and looked out over the others. He

over stories of Indians who shot their arrows from the shelter of innocent looking old trees in our own back yard? The Agawams of the Connecticut Valley became real to the child; the Indians were his friends when they sold the land for the city to William Pynchon and his band of colonists, and his enemies when they

*George L. Gilbert*

Building lattice trellises is the easiest and least expensive way of adding beauty and character to the plainest garden and, as no expensive tools are needed, and there are no complicated joints to make, any one with a little mechanical and artistic ability can make them. Full working directions on page 82

# The remodeling of RURAL HILL

## Chapter II

Charles P. Pelham

*The first chapter of "The Remodeling of Rural Hill," which appeared in the May issue of THE AMERICAN HOME, told of the improvements made in the entrance porch and stair hall*

WHEN we acquired Rural Hill, the front half of the first floor was divided into two small rooms, each 11' by 14'10"; which gave us the remodeling opportunity to prove that one room can grow beautifully where two shriveled before.

The pictures on the next page show how much was gained by this interior alteration. In place of two rooms, so small that they were neither comfortable nor attractive, we now have a living room 11 by 30 feet running across the entire front of the house and flooded with sunshine from six windows, four in the front and one at each end of the room.

There were a number of reasons why this improvement was one of the first made in the remodeling of Rural Hill, reason number one being the discovery that the original chimney had to be rebuilt, plus the fact that we wanted a fireplace in the new living room. As we were putting up with the old hot-air furnace last winter we had both a practical and aesthetic reason for adding a fireplace where crackling logs from old trees around the place furnished the needed extra warmth throughout the frigid winter months.

If a word to the wise is sufficient, you won't take remodeling chimneys lightly—not when you'll need nearly 4,000 bricks to build a generous-sized smokestack for your house. And don't think that because the chimney is of fair size it will serve for a furnace, several fireplaces, and stoves; for you will be informed, as we were, that each fire needs a flue, each flue needs a lining, and that linings cost money. But in spite of these warnings we rebuilt the chimney. Here is our confession and the costs of keeping your toes warm in the country.

In planning a chimney don't forget note number

**Determined to have a living-room fireplace that was good to look at and at the same time have an excellent draft, we found it necessary to rebuild the chimney right from the basement. To our way of thinking there is no more important decision in establishing the character of a living room than the selection of a mantel. It is a most essential focal point**

Demarest

one is: be sure to get a sufficiently large flue for the *future* furnace. We (or rather, the architect) had to look ahead and think of the *final* house, the *final* number of rooms to be heated and provide a flue large enough to insure good draft for the *final* heating plant.

Second, comes the question of fireplaces and stoves. If you wish either one in various rooms, add a flue for each fireplace, and don't think that because the fireplace or stove is small, a "nice little flue will do." For a good draft—bigger and better flues is the wise slogan.

Our determination to have a fireplace and mantel in the new living room settled any reservations we might have had about patching up the old chimney and

also made it necessary to tear it down right to the basement. The result is "a chimney what is a chimney"—something to show and make speeches about to weekend guests, as follows:

—a flue (8½" x 18") from the basement serving the present furnace and large enough for a furn-roaring heating plant as the house grows, and we put in radiators and a steam heating plant;

—a flue from the living-room fireplace which draws perfectly because of the size of the flue—8½" x 18";

—a vent flue (8½" x 8½") from the kitchen that takes off all odors and smoke. We planned to use a coal stove last winter—then decided on an electric range after the chimney was started. Result—use of the kitchen flue as a vent;

—a short flue (8" x 8") from the attic to carry off the "heat waves" in summer. Addition of this flue at top of chimney also gave size and heft to chimney's appearance above roof.

To our way of thinking there is no more important decision in establishing the character of a living room than selection of the mantel. Unless you are fairly well experienced in the intricacies of decoration, better leave this to your architect. You can spend a vast amount for a mantel or have the good fortune we had and pick up one for "a song." After looking at dozens of styles, acceptable ones running \$75 and up, we happened to mention our mantel search to a friend who, miraculously enough, had an extra one in his attic which was exactly the style and size we wanted. Jokingly, or seriously, he offered it to us for \$5 and made the fastest sale he ever experienced.

The partition between dining room and living room in the original structure was removed, producing the spacious and really livable living room which we now have—extending across the entire front of the house

First floor, original stage

First floor, first stage

Venetian blinds proved to be practical in screening the sunshine which pours into the south windows of the living room without interfering with ventilation

The floor plan at the right shows the final stage of the remodeling. A careful study of the two plans above shows that each step in the development was made with the ultimate result in mind. Davis C. Sanford, Jr. is the architect for alterations

First floor, final stage

ingly, or seriously, he offered it to us for \$5 and made the fastest sale he ever experienced.

As one building amateur to another, you may be interested in how many of the family jewels you will need to sell if you're planning on remodeling a chimney from the ground up. Here are the figures on our operation.

Demolition of the old chimney cost \$18. Labor of cutting the two floors and roof for a larger chimney opening, \$21. Lumber for refinishing floors, \$12. Bricks, flue linings and damper, \$133. Cement, sand and lime for mortar, \$60. The Verde Antique Marble, made by the Vermont Marble Co., for the fireplace facing and hearth, cost \$35, but has been well worth the price in the satisfaction it gives us each time we look at it. Flashing the chimney with 16-oz. Chase copper sheeting cost \$40 for material and labor—a good investment as it will never rust, leak, or need replacing. Reshingling the roof around the chimney came to \$15, and the attic vent in the chimney cost \$10. Finally, labor of building the chimney and fireplace, and erection of mantel came to the amount of \$113.

Add it all up and you find that the new chimney cost us \$422, the fireplace (mantel and marble) \$40—a total of \$462.

*Farewell parlor; welcome living room*—If you refer to the “before” and “after” plans you will see how the two small rooms occupying the front half of the first floor were made into a really livable living room by simply removing the partition wall. Tearing down this wall cost \$7 for the demolition work.

Equally important in attaining this improvement was the relocation of the four windows across the front of the first floor, all of these windows being in the present living room. As the same windows and trim were used, the only cost was for labor—\$50. The result of this alteration was most satisfactory. Note how the windows, now evenly spaced, improve the front appearance of the whole house, also how attractive they make the new living room.

Only a few other improvements were necessary to perfect the new living room. One was to “wall-up” a door which went from one of the two previous small rooms (the original dining room) to the kitchen. This cost \$5. The other was to replace the narrow door connecting the stair hall and the old “parlor” with a wide five-foot opening. This makes the stair hall seem a part of the living room and gives the visitor a generous glimpse of the sunny living room immediately upon entering the

Below is a view of the original house before remodeling was started. At the right is the house as it now appears—with still one more step to go in the remodeling project

Wallpaper having leaf of white and loop design of silver on a gray-green ground, white woodwork, draperies of colored flowered chintz on a white ground bound with cherry-red, lighting fixture of French Empire design—all these make us dread the day when the room will become a pantry

house. The original trim was used. The labor cost came to \$10.

Removing the partition made it necessary either to patch or replaster the entire living room ceiling. Since the room will get no further structural changes we decided to replaster. Knocking down the old plaster cost \$4.50. The new ceiling (three-coat job) cost \$32. Replastering the living-room walls (necessary because of moving windows and closing a door) cost \$22. Four electrical outlets were added at convenient locations, two being over the mantel for future candelabra. The room was also “switched.” Total electrical work, \$15.

When we got to the point of decorating the living room, we decided the wide entrance between the new stair hall and the living room made it advisable to use the same colors in decorating the living room as were used in the hall. The hall was papered, colors being white and gray pigeons on a jonquil yellow ground. In the living room the walls have been painted a yellow which repeats the yellow of the hall wallpaper. This visually connects the two rooms and thus enlarges their appearance.

All woodwork in the old house was a dismal, dark black, necessitating three coats of white in order to cover up thoroughly the black paint. Dull-finish suntone Wallhide was used on the walls and a half-and-half mixture of dull and semi-gloss white Wallhide on the woodwork. Painting

the living-room walls (three coats) cost \$18. Painting all trim and the floor totaled \$33. Both figures include the cost of materials and labor.

As the photographs of the living room show, Venetian blinds, in the windows of a Connecticut Colonial cottage, are most decorative—and they have already proved to be quite practical in screening the sunshine which pours into the southern exposure living room without interfering with ventilation. The ones we selected were made by Columbia, and cost \$7.25 a window. The slats were painted dull white, the tapes are yellow, thus effectively carrying out the general color scheme of the room.

With the exception of a few new lamps, all furniture in the living room is exactly what we had before moving to Rural Hill, the moral being that you can start with either the house or the furniture and come out with a livable home, if both are selected with a plan in mind. Of course, the world is dotted with decorators who wouldn't approve of our Victorian sofa complacently sitting in the midst of 18th-Century tables, desks, and chairs, with an American Empire table at one end of the room and home-made bookshelves at the other. But, for that matter, home to a professional decorator and home to most of us has a different meaning and purpose.

Possibly you have puzzled over how so long and narrow a living room (11' x 30') could be made to look human. So did we; my wife doing the puzzling and planning while I, and any other person who appeared on the scene, furnished the labor that goes with “now-let's-try-this-over-there-and-that-over-here.” Our best answer to the problem is seen in the photographs which show sofas, easy chairs, and table grouped in the center of the room around the fireplace. At the far end of the room another group centers around a card table and chairs,

## Revolt against the old "backyard"

*Josephine Avery Bates*

WHEN we were very young we had the audacity to face our newly-built house at a right angle to the street, so that it could eye the view instead of the traffic. It was in the days when traffic was slow motion and houses were lined up, few daring to break conventions. True, the side lines of the house were pleasing and the passer-by was more startled than offended. Our idea at the time was to leave as little space at the back as necessary for clothes yard and domestic impedimenta, so that, although the lot comprised two acres, the broad expanse extended toward the view.

Front piazzas and backyards were the order of the day and so, of course, we must have some of both. Our modest porch was ten feet wide, the wooden floor nearly level with the ground, but, when the urge came to expand, we added another five feet beyond the roofing, so that we could sit directly under the stars at night, or in the sun on chilly days. The floor was relaid in old brick and an Arborvitae hedge bound us in, screening us completely from the passer-by, but not interfering with the view, because of the low trimming of the hedge.

Huge stone slabs, rescued from the excavating, were put in place,

forming steps to the orchard below, where five old Apple trees stand in an intimate group, offering their shade for picnic parties. Here the owner remembers the days of building, when four powerful horses, with clanging chains, strained to place the time-worn slabs to form the steps. Now tall Lilacs flank their sides, with Ivy creeping stealthily along.

Other slabs were placed at the base of the trees, forming seats for family gatherings. Just out from under the shade, a stone oven was constructed and "cook outs" were sometimes in vogue.

For years we were satisfied with our piazza view, overlooking the foothills of the Berkshires, and many a gorgeous sunset has made us marvel at its beauty. For years we were satisfied that a backyard just had to be a backyard, with its clothes posts and service court. One has to live with people and things to know them and, gradually, we became better acquainted with our possessions, so that the surroundings acquired more personality.

We felt awed at times by the vastness of the great open spaces and, when the children began to leave the home nest, a feeling of

loneliness sometimes crept in, making us long for something more intimate than we had.

With the piazza at the front of the house and the kitchen at the back, we felt disjointed. Entertaining was a joy under all conditions, but carrying the food through the house was an effort, even though a willing one.

I do not know why we felt existing conditions just had to be, but it probably harked back to the old saying of "What was good enough for my grandfather is good enough for me." One bright day, however, we came out of our cocoon and woke up to the fact that the backyard could and should play a more aesthetic part on the stage of life.

How to reach it was the next thing to think about, as there was no other entrance to the garden except from the kitchen.

French doors were cut through the dining room, opening up a new and delightful vista from within. A brick terrace was added under the old grape arbor and, at last, we could step out to wine and dine in comfort, for the kitchen was unobtrusively near at hand. The clothes yard was moved farther back, the long suf-

fering laundress being very patient with our whims, and quick growing Redcedars soon made a stately screen from the more remote service court.

The tiny living room garden took on an appearance of age, owing to the Grape vines and trees planted years before. It is only a tiny plot, no bigger than a good-sized room, so that, from the farthest boundary, the distant tinkle of the telephone can be heard and answered without much effort. When one cannot totally escape the demands of the household, one is near yet far away and, from the upstairs window, one looks down on pleasantly inviting places.

The rocky sides of the pool furnished crannies for lovely green velvet moss, making a soft bed for little unexpected plants which came to visit us and lingered on, encouraging others to follow throughout the season.

Old-fashioned benches accommodate many people in a minimum space. A refectory table, improvised from a wide plank resting on saw horses and dressed gingham or colored linen, can be produced from the cellar on short notice, to be placed under the shade of the arbor or in the sunshine, according to the dictates of

[Please turn to page 64]

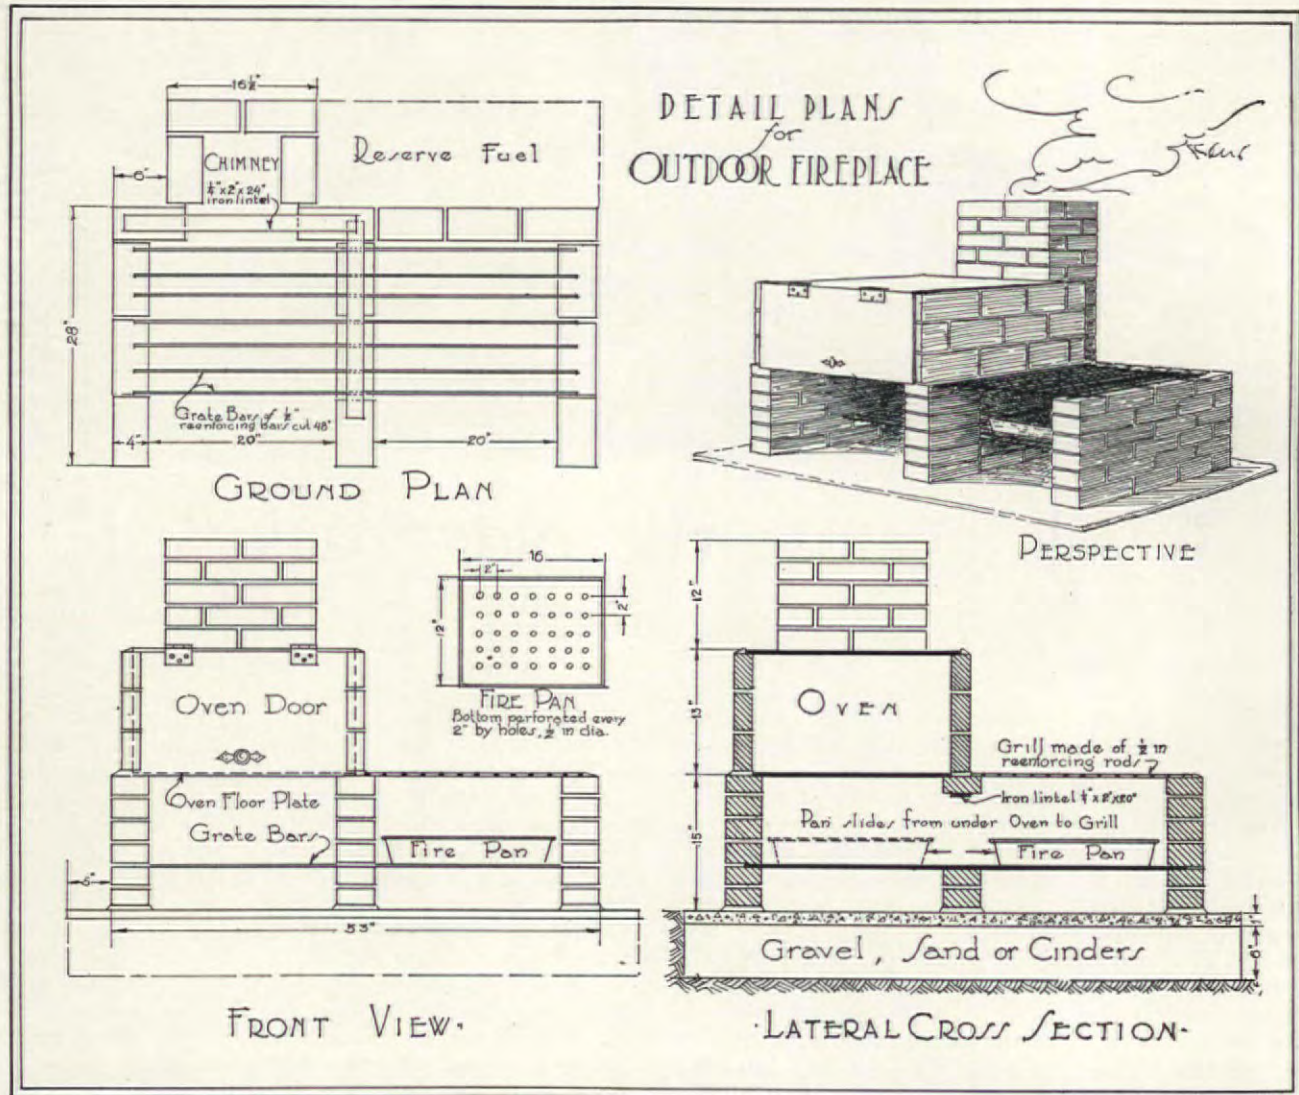

# An outdoor fireplace

Designed by Leonard H. Johnson

Have you ever longed for a meal in the open—a sizzling steak broiled on wood coals, coffee such as only the old camp pot can produce, and all the other things that make a meal in the open so good? You can have all this by building an outdoor kitchen in your backyard garden

There are any number of good practical designs for outdoor fireplaces, any one of which could probably serve our purpose well but we will limit this discussion to the details of one particular type that we believe to be very practical, economical, and easily constructed so far as utility value for outdoor cooking is concerned.

This fireplace differs from the usual design in that it offers several unique and unusual advantages for the outdoor cook, which are as follows:

(A) The fire is made off the ground and it is provided with a good under draught.

(B) Almost any type of cooking can be done.

(C) The oven can be used while the fire is in its initial stage blazing and smoking, with no harm from singeing.

(D) By moving fire pan to the grill area after the fire has been reduced to a bed of coals it is ready for grill purposes.

(E) The oven can be used to keep food warm before serving.

(F) Oven and grill can be used at the same time, if desired, by using two firepans.

We shall proceed with further data concerning the construction of this particular fireplace. Unless

the ground where it is to be located is extremely heavy a six-inch cinder, gravel, or sand foundation will be sufficient, over which a concrete floor is built one inch above the ground and three inches below. A dirt floor can be used but not so satisfactorily.

After the second brick course is up, lay on the seven, one half inch round iron bars equally spaced and running full length to allow the fire pan to slide from the open grill to the oven area. Six tiers of brick laid flat form the firebox. Three courses more are then laid with the brick on edge to form the oven; this allows a ledge to

support the bottom plate of the oven and the grill mesh over the open area. This grill may be made of one-half inch iron rods placed two inches apart in a metal frame. Should there be occasion however to use the grill for clambakes the rods should be set at least one inch apart.

A brick wall in the center of the pit separates the oven section from the grill, and an opening permits sliding the fire pan from one area to the other. To support the bricks over this opening and also the one between the firebox and chimney use iron bars one quarter inch thick, two inches

[Please turn to page 60]

# 3 outdoor fireplaces and kitchens

Designed by  
Julian Harris Salomon

Fig. 1

## I. Flat stone fireplace

IF YOU can find granite or other rocks that will not split in the heat, of the right size and shape, you can make a simple fireplace without the use of mortar. For the site pick a natural rise or make a mound of earth and stone for the foundation, the idea being to get your stove-top high enough to save a lot of bending over. Lay some flat slabs on top of this foundation mound to form the hearth, or floor, of the firebox. Two good-sized rocks, about three times as long as they are thick, are used for the sides. If one of them has a wide flat top, it will form a handy shelf to set pots and kettles on when you wish to keep them warm though not on the fire. Where single stones large enough for the sides cannot be found, use three or four smaller ones and heap earth

around the joints to make them as tight as possible. A thick slab is used for the back and this is supported at a slight angle by heaping stones in back of it. A thinner slab is used for the top. This slab has to be of some rock that will stand heat without cracking. If you have a slab handy the best way to find out is actually to test it by building a fire under it. If it breaks, and there is no other handy, use a piece of sheet iron instead. Leave a space about a foot wide between the top and the back slab. Across it place three or four iron rods or pieces of pipe. This opening is for boiling pots and it is also the chimney. Meats may be broiled or fried directly on the slab top. The drawings in Fig. 1 (at top of page) show exactly how this fireplace is constructed.

Fig. 3

The materials needed besides stone and cement are: eight iron rods or pieces of pipe about one inch in diameter; a flat bar of iron about two inches wide, and half an inch thick; two, two-foot sections of six-inch square fire clay flue lining; a "butterfly" damper, which your local tin-smith can make. If the stones in your neighborhood are not even textured and tend to crack you will also need enough firebrick to line the firebox. Firebrick and stones that come in direct contact with the fire should be laid in mortar. This is important.

The footings are laid first. When they have set, build up the front, side, and back walls to the level of the firebox floor. Fill in the center with loose rock laid dry. Over this tamp a thick layer of cinders or gravel. Slope this toward the front and smooth it off, for it is to form the base on which the firebox floor of firebrick is to be laid. The slight slope is an aid to cleaning out the firebox when it becomes full of ashes.

Next a layer of cement mortar is spread over this base and the brick laid in it as shown in the

## II. The rustic grill

A KITCHEN of more elaborate construction is shown in Fig. 2. For this and all of the other fireplaces whose walls are laid up in cement mortar it is necessary to construct footings or foundations. Footings prevent the structure from cracking or breaking due to the action of frost. For complete safety and for the larger structures, footings must extend down below frost line; for smaller fireplaces, footings eighteen inches deep will do. All footings must be wide enough to extend for six inches on each side of the wall they are to support. Where a fireplace is built on an artificial mound the footings must extend through it to below the normal ground level.

Footings may be of concrete or of wet or dry stone masonry. If they are not built down to frost line a six-inch layer of well-tamped cinders, gravel, or small stone should be used under them. If the soil is firm a trench may be dug the width of the footing and this is used as a form for the concrete or for a dry wall footing.

The latter is the cheapest and easiest to build where stone is abundant but the stone must be carefully laid and tamped down. Cement mortar for laying up the walls may be mixed in proportions of one part of cement to three parts of sand. Concrete for footings is mixed of one part of cement, two of sand, and three parts of either small-size stone or pebbles.

To get back to our grill.

Fig. 2

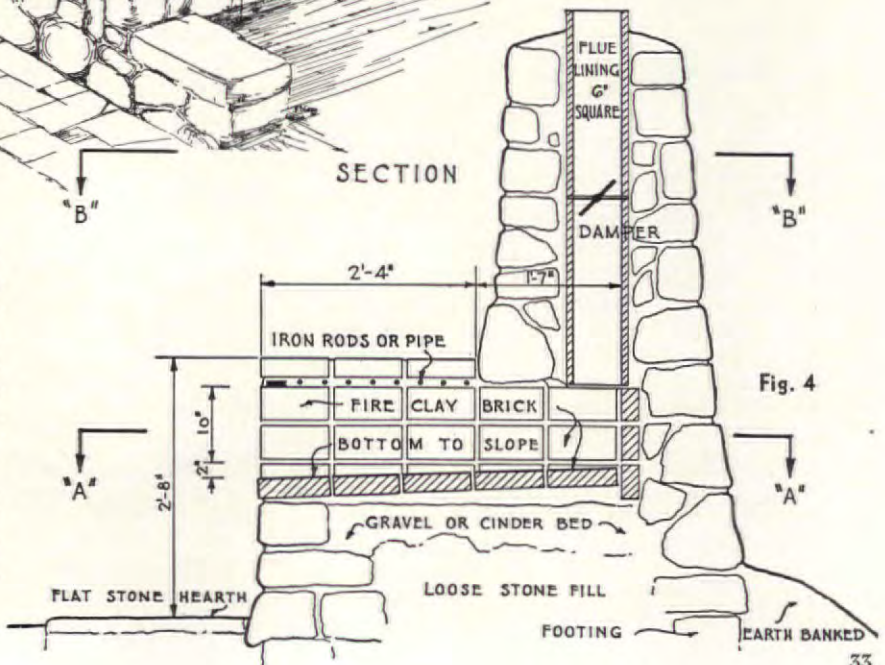

Fig. 4

section drawing in Fig. 3. Continue to build up the side and back walls and the brick lining to the point where the grill rods are to be inserted. Then let the work set overnight.

The next day the rods are set in cement and a course of firebrick is laid flat over them. The side walls are completed by building them up level with the firebrick. The first section of the fire clay flue is set plumb and the chimney is built up around it. The second section goes in place after the work around the first has set. A sloping cement cap is laid around the projecting tile at the top. This completes the grill.

This rustic grill is somewhat more elaborate than the smaller type, but where plenty of space is available it is worth constructing this type for permanence.

Fig. 5

### III. A design with stove and oven

ELEVATION

Fig. 6

**A**N OVEN adds greatly to the possibilities of your outdoor kitchen and is well worth the little extra expense and labor involved in its construction. In the stove shown in Fig. 5, the oven is built below the firebox. It is made of a piece of foot square fire clay flue lining, which is twenty inches long. The oven door is an iron chimney "clean-out" door twelve inches square. This can be purchased from a dealer in building supplies.

Separate flues are needed for stove and oven. For them buy four sections of six-inch square flue lining. Other materials needed are two "butterfly" dampers; two lids, thirteen by twenty by three eighths inches; two twenty-inch lengths of one-inch angle iron;

one flat iron bar, twenty inches long, two inches wide and three eighths thick; a door for the firebox, fifteen inches wide and five and a half high, similar to that described for the iron-topped stove. Enough firebrick will be needed to line the firebox and the oven flue connection.

The foundation above the footings and ground level is about nine inches thick. On the top of this masonry layer and as a part of it, in the front, is laid a flat slab as shown

in Fig. 6. This projects under the oven door. The oven tile is laid above it in a layer of cement so that it slopes slightly from back to front. The side and back walls are next built up around the oven tile. A flue to connect the oven with the chimney tile is built of firebrick as shown in the section and plan drawings in Fig. 6. The frame for the oven door is set in cement as the masonry on its sides is erected. Take special care to allow no stones to project in such a way that they will interfere with the full opening of the oven door.

A layer of cement is spread over the oven tile when the walls have been built up even with its top, and a layer of firebrick is laid over it to form the firebox floor. The walls are then continued upward and the lids set in the same way as those for the iron-topped stove. The firebrick

flue connection for the firebox is built next. Then the flues are erected and the chimney finished and capped.

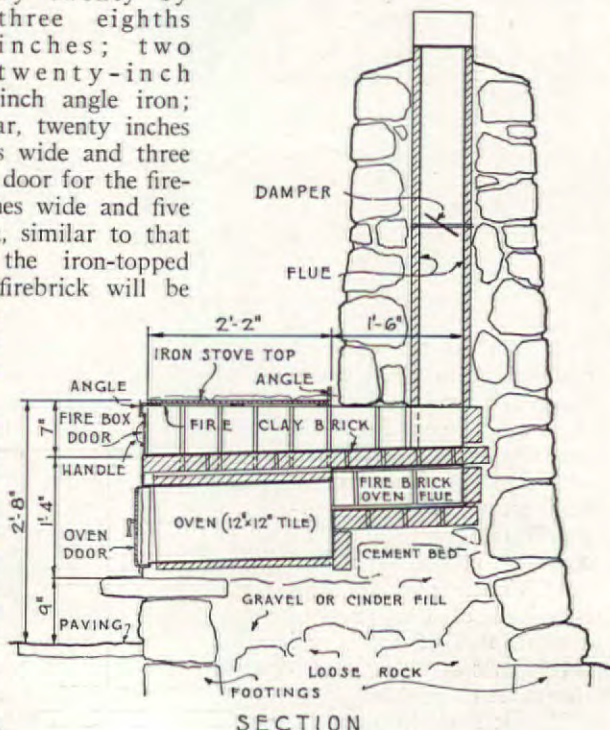

The lids can be had from the nearest structural iron works or heavy hardware dealer. You will need three, twenty inches long and ten inches wide, and from a quarter to three eighths of an inch thick. Two pieces of one-inch angle iron, each twenty inches long, and two flat bars of the same length and about a quarter inch thick should be bought at the same time. These are for the lid supports. Your tin-smith can make the "butterfly" damper for the chimney and the firebox door. The latter is simply a piece of sheet-iron as long and as wide as the firebox opening, to which a handle is attached in the center. When in use, one edge of the door is slipped under the angle iron while the other rests on the hearth as shown in the section drawing in Fig. 4 on the preceding page. The door helps to save fuel and to regulate the fire.

One of our friends used the top of an old kitchen stove for her outdoor kitchen. The lid holes and the broad, flat top are very handy but not quite so picturesque as the fireplace we've just described. If you happen to have an old stove-top or can pick one up cheap in a junk yard, its use will help keep construction costs down to a worth while degree.

#### BAKING IN A STONE OVEN

The oven is heated and used as were the Dutch fireplace ovens of great-grandmother's day. It bakes slowly and steadily and that is the secret of the outstanding flavor of its products.

A brisk fire is built in the oven and the wood allowed to burn down to coals. If you can get them, use sticks of hickory, oak,

SECTION

The growing popularity of outdoor fireplaces is due chiefly to the practical fact that they add many hours to those during which terraces and porches can be enjoyed. They are taking various forms to meet different natural surroundings and the living ways of different families. Above, you see the outdoor fireplace of Mr. Charles Gibbs Adams

beech, birch, maple, ash, elm, or chestnut. I've listed them in order of their heating value. When you have a good bed of coals, rake it evenly over the oven floor, close

the door and damper and leave the oven to heat for about forty-five minutes. Then rake the coals and ashes out. (An old garden hoe is an ideal tool for this purpose.) A swab, which is a bundle of rags tied to a stick, is next dipped into water and used to mop off the oven floor. Your bread, pie, or puddings are then placed in the oven and the door is, once again, closed tightly. Old-time housewives allowed an hour to bake bread in a Dutch oven. A little experimentation will let you know just how long your oven requires for various dishes.

As you use your outdoor kitchen you will find many ways of improving it. You may, as one of our friends did, build stone benches on each side of the fireplace to seat your guests at outdoor dinners or, if you use your outdoor kitchen in all kinds of weather, you may want a lean-to roof built over it. These improvements, may, of course, be a part of the original plan.

But whether your kitchen is simple or elaborate it has an infinite capacity for giving pleasure. Build it as soon as you can and use it often this summer!

*Santa Barbara Associates*

Above: The last word in electrically driven spits, with the drip pan for roasts at the left, and many other tricky contrivances are found at Hope Ranch in California

Above, a simple and easily constructed type that can be worked into the smallest garden space, providing many happy picnics for children and grown-ups. These two photographs from F. B. Boeckel

Included in the plans for a new house the outdoor fireplace need mean only another flue in the chimney. The one shown in the picture with the hollyhocks at the side is set into a chimney carrying a living room and bedroom fireplace indoors

## Five ways to bunk YOUR GUESTS

Summer would not be summer without guests to bunk—especially if you have a cabin in the woods or a cottage in the country. And the smaller the cottage, of course, the greater must be the demands on one's ingenuity in planning the use of available space so that it will meet one's needs adequately and comfortably. In families having several sons and daughters of school or college age the bunking accommodations must obviously be very elastic

Given one cottage, one huge stone chimney, one pleasant stairway, one hall gallery, and many friends dropping in on one, a simple solution for easy hospitality lies in an alcove under the gallery, with cot and closet of its own. Knotty pine laid vertically on the first floor walls and horizontally on the second, and simple but decorative stairway, make an inviting summer interior in a house on Candlewood Isle, New Fairfield, Conn., of which R. C. Kilborn was architect

Whether you go rustic or go modern, as in the recreation room at the right, there is always a way to make room for extra guests. Built-in wall seats in the residence of Mr. Edward Seaman, in South Orange, New Jersey, are equipped with mattresses for emergency hospitality

*Photographs by George H. Van Anda*

Built-in bunks are very interesting to design in the room having an odd shape or recess. With the well-constructed springs and mattresses available, bunks of this type may be extremely comfortable

Bunks become a real architectural feature when built in with well-designed cornices, as in a small bedroom in the Kent, Conn., home of Helen Bull. Saving of space is afforded in this way. Allan McDowell was the designer

In a house at Westport, Connecticut, a small bedroom doubles its capacity by reason of double decker bunks built in along the wall, with a huge storage drawer underneath. This is a splendid idea for Junior's room, for it will give him a place for his young over night guest within his own preserve. W. D. Foster was the architect

Just enough space has been left in a lean-to on a country house to make a bunk for lounging in the daytime, or putting up the extra guest at night. Toile de Jouy curtains, a patchwork quilt, and a quantity of small pillows give it a nice informal atmosphere. In the residence of Rodman Price, Candlewood Isle, New Fairfield, Connecticut. R. C. Kilborn, Arch't.

# Shut out the glaring sun!

Most of us in this age of health consciousness are sun worshippers, but few of us really enjoy the brilliant glare that strains our eyes and fades our furnishings. We therefore find great relief in many of the new awnings and blinds that permit adequate circulation of cooling air, yet protect against damaging glare

Metal is a new idea for awnings—and a good one, too, for it is fire-proof, rust-proof, weather-proof, and very nearly time-proof. The material is natural Revere copper, aluminum, corrosion-resisting steel, and can be painted. The photograph shows an awning folded against the house, and one let down. Metal Awning Corp.

Right: For indoor porches or windows are blinds of cedar and basswood with rustproof hardware. They come in a long list of standard colors, and can be specially colored besides for a definite effect. From Columbian Mills

The Venetian blind type of awning is made of kiln-dried slats strung on durable cotton tape, with galvanized hardware. They can be lacquered any color, with a finish as impervious to the elements as that of an automobile. T. G. Wilson Corporation (above)

Left: All the hardware and operating parts are concealed behind built-in valances in a shade of woven wood fabric, smoothly finished and painted in any color. Mayfair Shade Corp.

A new idea in awnings which goes by the name of "Lattis-Awn" consists of rows of light wooden slats staggered in construction to shut out rain

and sun while admitting air and just enough light to create a pleasant interior effect on a bright day. Bottle-green and tan are standard colors, and others, if desired, may be specially ordered

# Colorful autumn borders

Anderson McCully

WE NEED bold plants in the fall garden to hold their own above the falling leaves and dying stalks. Flaming tones in the border may even bring an illusion of warmth against the chill that steals upon our gardens. Therefore, fall borders are bold borders. They stand against backgrounds of flaming foliage and memories of summer Roses. Autumn's message is not one of whispered promise for good days to come; rather it is a crescendo of broad masses and bold colors to arm our hearts with courage for the short dark days to follow.

Chrysanthemums, preceded by the gorgeous Dahlias, are the great fall flowers. Their colors are exquisite, their range wide; their types are of harmonious contrast that make for handsome vase arrangement indoors; their habit is sturdy, with a hardihood that defies the earlier frosts. Many of the annuals hold far into the fall; and some of the best perennials will bloom then a second time if encouraged sufficiently.

Fall borders should be well supplied with plant food. Dahlias, Chrysanthemums, and Zinnias are notably hungry plants. A great deal may be done to hold beauty in the border if we will provide a little protection against those first nights of killing frost that usually precede the regular ones by several weeks. Two wires stretched the length of the narrow border, or more for a wider, can support burlap, sheets, heavy paper, or other protecting material on threatening nights. Boards laid lengthwise along the ground hold the edges more firmly than stones or bricks at intervals though, if it is windy, they may also need weighting.

Autumn effects are hardly complete without the flaming tints of turning foliage. If this is lacking, the Flowering Dogwood, Japanese Maple, Smoketree (*Rhus coccinea*), Virginia Creeper (*Ampelopsis*), and the Cotoneasters are varied material of fall brilliance that are also pleasing through other seasons.

The flowering shrubs and vines also make bold highlights in the autumn garden display. Foremost among these is the soft and feathery Five-stamen Tamarix (*T. pentandra*) that makes such handsome cloudy backgrounds of clear pink from August into October, reaching a height of fifteen feet. Other good shrubs that bloom from late summer through fall are: *Hydrangea paniculata grandiflora*—July to November—20 ft.—white turning rose. *H. hortensis*—July to October—6 ft.—blue. Must be heavily protected or winter stored in the North. *Althea* (Rose of Sharon)—August to October—8 ft.—various colors.

Lower growing are: *Buddleia*

*Isle de France*—July to September—3 to 4 ft.—purple-violet. *Spirea Anthony Waterer*—July to October—2 to 3 ft.—crimson.

Two of the best fall vines are the annual Cardinal Climber for a good warm sunny soil, and the perennial *Clematis viticella* that carries honey-scented drooping cream bells in panicles.

Late summer and fall-blooming annuals in shades of yellow, gold, and orange are among our most striking autumn flowers. Entire borders may be made of them, or

*tium Golden Gleam* and others—1 ft.—fragrant, double, clear golden yellow; *Tagetes*—9 inches; *Arctotis scapigera*—7 inches—orange, yellow, cream, salmon, carmine, terra cotta.

Perennials of similar shades that could give a backbone to such a border are the following of varying habits: *Torch Lily* (*Kniphofia*) 2 to 7 ft.—both yellow and red, also orange, protect; *Helenium*—2 to 6 ft.—*bigelovi*, *Riverton Gem*, *autumnale superba* respectively for front,

the border, while the Miniatures may be planted well forward. There are a few yellow *Gladiolus*, and if planted in summer, they will bloom in the fall. Among the Lilies the yellow October blooming *L. pyrenaicum*, and the orange-red September flowering *False and Giant Tiger Lilies* (*L. maximowiczii* and *L. tigrinum splendens*) could well be used.

For pink effects try the perennial *Hibiscus* in the background if the border is wide and partially shaded. This needs considerable

Hewitt

they can be worked in with bulbs and perennials of similar or harmonizing shades. Among the best of them are the following: *Tithonia speciosa*—6 to 10 ft.—reddish orange—hot dry border; *Rudbeckia* (Cone Flower) 1½ to 8 ft.; *Sunflowers* (*Helianthus*)—1 to 10 ft. *Monarch of the Veldt* (*Venadium fastuosum*)—2 to 3 ft.—orange; *Marigolds* in variety—8 inches to 3 ft.; *Zinnias* (also other shades)—2 to 3 ft.; *Cape Marigolds* (*Dimorphotheca*)—1 ft.—orange, also yellow; *Nastur-*

*tium* middle, and back of border; *Cone Flower* (*Rudbeckia*) 18 inches to 8 ft.; *Gaillardia*—2 ft.; *Geum*—15 inches—yellow, orange, red, *Opal* and *Lady Strathedon* very good to include.

There are a number of bulbs that might also be grouped with this golden border, the new named hybrids among the *Montbretias* toning particularly well. The taller *Cannas* need moisture and create formal effects. Dahlias are strong in these shades, the taller types doing for the back of

moisture, and sometimes has a spread of twice its height of five feet. Pink Dahlias would take less space. The Japanese *Anemones* come also in pink, and bloom from September into November. They are about thirty inches high. Some of the best pink perennials such as *Snapdragons* and *Pentstemon gloxinoides* are but half hardy North, and so treated as annuals. *Gladiolus* are particularly numerous in the pink shades, while the beautiful *Lilium speciosum rubrum* is so flecked with

[Please turn to page 83]

# Is your home really in need of REPAIR?

Walter E. Stewart

ON EVERY hand governmental agencies, banks, contractors, and building materials dealers are urging the necessity of home repairs. In the midst of so much ballyhoo you will want to determine for yourself whether the expenditure on your home of some of the freely offered loan money is really necessary. By following the systematic inspection plan given here you can make a survey which will tell you what repairs are essential to preserve your investment in a home.

Begin with the fundamentals by examining carefully all foundation walls and masonry joints for evidence of cracking or crumbling. Any weakness in this respect will affect your entire house, therefore should be repaired at once. Take advantage of the first thaw or protracted rain to look for signs of seepage through basement walls or floor, and if any appreciable amount of moisture comes through, arrange for a thorough repair job. A moist basement so often causes damage to floors, sills, and supports that even though repairs are usually fairly expensive, they are well justified. Examine particularly those floor sills which rest on masonry supports, for rot often occurs where moisture collects between the ends of the sills and the wall. Look also in these timbers for small holes about the size of the head of a pin, which are evidence of the presence of wood borers. These insect pests make a tiny entrance hole into the wood and proceed to eat away all the interior, leaving only an apparently sound outside wall. The only remedy for wood so affected

Off-color paints can be purchased at considerable saving, and they are excellent for outhouse and garage roofs where color scheme is not important

A thick, heavy paint over worn roofing paper will restore its watertightness. Outer doors require a good grade of spar varnish to preserve them from the damaging effects of sun and stormy weather

When deterioration has proceeded this far, new planks constitute the simplest repair. Painting would have made this unnecessary

Apply paint plentifully to the ends of planks and to end joints, for there water most readily gains access and deterioration takes place

If this has happened to your porch column, dig out any rotten wood, fill in with wood strips or plastic wood, sandpaper smooth, and paint

Inspection after heavy rains will expose leaky basements. A moist basement so often causes damage to floors, sills, and supports and even though repairs are fairly expensive or involved they are well justified

is replacement. The piece which has been removed should always be burned to prevent propagation of the insects.

If you find that wooden floor columns are rotten at their bases, replace them with iron and eliminate this recurring source of expense. If the basement drains and sump holes are partially clogged with rubbish and sediment, by all means have them cleaned out. In themselves not serious, they may cause a flooded basement and damage to articles stored there.

You must examine carefully all exposed electrical wiring in the basement for signs of breaks in the insulation, and for dangerously crossed wires. If repairs are necessary, you will be well advised to replace the open wiring with metal conduit, which will greatly reduce the fire and accident hazard. In any case, replace all metal lighting fixtures in the basement with those made of porcelain or composition.

When you come to inspect the heating equipment bear in mind that savings in fuel will more than offset the cost of having flues cleared of soot and heating surfaces cleaned of carbon deposit and scale. Broken or warped grates, cracked boilers, and ill-fitting furnace doors are also wasteful of fuel. Be sure that the

insulation on steam and hot water pipes is tight and complete. If the hot water tank and piping is not insulated, by all means have this work done. In one year the cost will be more than saved by reduction in the cost of fuel.

Having finished with the basement, have a discerning look at the exterior of the house; the

walls, doors, windows, stoops, and roof. If the walls are of stucco or concrete look carefully for small aging and weather cracks. Left unattended, those cracks will widen and finally make necessary extensive repairs, but while small they may be easily and permanently repaired by filling with a grouting mixture. The need of a

protective coat of paint on wooden walls is obvious, but it is well to know that paint usually fails first at plank ends around windows and doors. Often a few dollars spent on touching up these spots will extend the life of a paint job several years. Unsightly efflorescence on brick walls will be removed when washed with a weak solution of muriatic acid. Be sure to have the acid itself washed off with ammonia water. Your window frames are the next thing to check. They often rot or split at the butt joints when not adequately protected by good paint. See that all rain gutters and down spouts are free of sediment and trash, for an overflow often will cause seepage of water to the interior of the house and consequent ruin of walls and ceilings as well.

bases of porch columns with a thin knife blade to see if the interior has been destroyed by dry rot. It is better to do this than to wait until a sagging porch roof forces itself on your attention. Porch columns and their bases are subjected to extremely hard usage by the elements, and must be well protected by paint. If it is necessary to replace a base, have the new one made of concrete. Exterior floors and steps must resist ice, rain, and blistering sun. You will find that frequent painting is much more economical than occasional replacement. The underside of wooden steps is usually totally neglected, yet a coat of paint on them will extend the life of the lumber many years.

Roof leaks are usually difficult to locate from outside the house, however, in the discolored spots seen in the attic you have valuable clues. Valleys and joints give most trouble, but fortunately may be repaired at little expense by applying roof cement. This same treatment is good for leaks around chimneys and vent pipes. If your house is roofed or sided with wooden shingles, look for the tiny cracks that are evidence of excessive dryness. These cracks rapidly widen and cause leaks. The remedy, of course, is re-oiling or painting. Chimneys are likely to topple over when the mortar between bricks has been worn away by wind and rain. You will be well advised to remedy this weakness by the addition of cement to the worn spots.

Inside your house such faults as exist are more noticeable, therefore are more likely to receive their proper attention. Among the worst offenders are leaky faucets and valves, clogged drains, squeaking floor boards, rickety bannisters, and sticking windows.

Dig around the

A bird's nest in the gutter may very likely result in rust in the spout as well as the removal of varnish from the porch ceiling

See that all rain gutters and down spouts are free of sediment and leaves, for an overflow often will cause seepage of water to the interior of the house and consequent ruin of walls and ceiling

The antique business, like any other, is largely a matter of transportation. The dealer buys things where they are not wanted and takes them to localities where they are in demand

Phra  
Mullan

## Buying antiques by the wayside

THE wayside antique shops have become a permanent part of the country scenery. In spite of the large amount of good natured fun which has been directed their way, mostly because of the coy names many of them display, they have continued in business and are now firmly established. The best of them are run by responsible people and they cater to a class of trade that comes back year after year during the season. They make pleasant and interesting places to stop, and browsing around them breaks up the monotony of a long trip. The owners, for the most part, are forbearing and offer more than the usual amount of business courtesy. You can look as long as you like and ask as many questions as you like.

The experienced collector can go anywhere and buy because he is sure of his knowledge. The inexperienced must depend largely on what the dealer offers in the way of information. This information, unfortunately, will sometimes be governed by the likes and dislikes of each dealer and not altogether by historical fact. These preferences and ideas may be based on real discoveries by the dealer, but no really experienced collector will accept any new discovery about antiques as being wholly incontrovertible. About the time he decides that a piece of a certain type *was never* made in a certain locality he will

discover a well-authenticated piece of that type that *was* made there. This very uncertainty opens up the way for dealers to unwittingly, but nevertheless erroneously, mislead the customer. Some are inclined to assume that a facile use of the patois of the antique business constitutes knowledge. All this is very confusing to the beginner or those who buy for any number of reasons aside from collecting for the joy of collecting. There *is* one way which anyone can buy and still be protected.

An unusually well informed collector, Mr. W. R. Lawshe, was once asked if he did not think a certain piece in his collection was made by William Savery. His reply is a classic for the inexperienced. He said:

"There is no label on it. I don't know who made it. I could call it anything I wanted to and it would always be a good example of pre-Revolutionary American work. It exactly suits the need I have for it and it cost about what I would have had to pay for a good hand-made reproduction."

There in a nut shell is the safe way for non-experts to buy. Buy each item for its value to you as an article of use or decoration in your home. When in doubt about the authenticity of anything pay no more for it than you would pay for a reproduction just as well constructed. This is not being unfair to the dealers. Every

dealer has items in his stock that he would be glad to sell for their reproductive value, and many dealers would be satisfied if their entire stocks would sell on that basis. When you see one of those irresistible pieces, and the price is more than this, protect yourself with a receipt from the dealer giving a fair description of the piece. Any good dealer should be able to place a piece within a few years of the time it was actually made. You will find it possible to acquire many good items within this price limit. This is particularly true of many types of chairs, small stands, chests, chests of drawers, drop-leaf tables, and some types of dressers and corner cupboards. Beds are difficult to buy. The old beds vary so much in width and length that it is almost impossible to find an old bed that will take a stock size spring and mattress without considerable remodeling. This work may be so extensive as to destroy the bed's value as an antique. The other alternative is to have the spring and mattress made to order. In this case you have on your hands an odd size outfit that won't fit any other bed if you ever dispose of the original. The advantage of an old bed is in the design. Reproductions are seldom completely true to their period of design, and the new finishes and woods do not have the look of the old.

There is an old saying to this

effect, "If you want to shoot crows, go where the crows fly." Generally this may be true, but if you are looking for bargains the opposite is often the truth. The antique business, like many another, is largely a matter of transportation. The dealer buys things where they are not wanted and takes them to some place where they are in demand. If you want New England antiques you go to New England. The New England dealer goes other places as well. He may find, in Pennsylvania perhaps, pieces that were originally from New England or would be suitable for his trade. The Pennsylvania dealer sells this type at a reasonable figure because his trade will be seeking for Pennsylvania pieces. It is very much like choice fruit. North Carolina strawberries are sometimes cheaper in New York than they are in Wilmington. If you are looking for specific items it will pay you to look in all the shops no matter where they are.

All dealers have their personal prejudices about antiques. They will ask more for something they like than for something they have no fancy for, regardless of the comparative values of the items as antiques. These individual preferences can be discovered by a few minutes' conversation and result many times in finding a real buy. One dealer of my acquaintance has an antipathy for pine. He sells the pine pieces that

# Suppers simplified

To be a successful hostess without a maid one must observe the following: 1. Prepare simple and appetizing dishes that never fail. 2. Plan dishes that can be prepared well in advance. 3. Eliminate elaborate methods of serving that would cause the hostess to be away frequently from the table. 4. Cut down on all unnecessary dishes.—FAY ARMSTRONG

## ● vegetable salad

**A**RRANGE crisp lettuce to cover platter. Pile little heaps of the vegetables in any arrangement that appeals to you. Garnish with radishes. Serve with the following dressing—

- Salad dressing**
- ½ pint mayonnaise
  - 2 tablespoonfuls chili sauce
  - 2 tablespoonfuls India relish

Mix all together well and chill before serving.

Tested by THE AMERICAN HOME

- Lettuce
- Cooked cold cauliflower
- Cooked cold string beans
- Cooked cold peas
- Cooked cold asparagus tips
- Plain French dressing

## ● toasted French bread

**C**UT French bread into slices lengthwise. Toast in the broiler. Spread generously with melted butter, cut into diagonal strips and serve piping hot.

- French bread
- Melted butter

Tested by THE AMERICAN HOME

## ● chocolate cut-ups

**C**REAM butter and sugar. Add melted chocolate, then the egg yolks, then the flour sifted with the baking powder. Add nuts, vanilla and lastly the stiffly beaten egg whites. Turn into greased pan and bake 20 minutes in a 375° F. oven. Ice thickly with any desired icing and cut into small squares the size of a caramél.

- ¾ cupful flour
- ½ teaspoonful baking powder
- ½ cupful butter
- 1 cupful sugar
- 2 squares (ounces) chocolate
- 2 eggs (separated)
- 1 teaspoonful vanilla
- 1 cupful nutmeats

Tested by THE AMERICAN HOME

## ● Tallarene

**M**INCE and fry onion in butter until brown. Add meat. Stir and cook until browned. Add tomato sauce and a cupful of water. Add noodles; stir and cook until the noodles are tender. More water may have to be added to keep mixture moist. Salt to taste. Add corn and olives.  
Pour into large buttered casserole. Sprinkle with cheese. Cook 45 minutes in a 350° F. oven. Let stand in oven with heat off for about 15 minutes before serving.

- 2 heaping cupfuls uncooked noodles
- 1 pound of round steak, ground
- 1 can of tomato sauce (or soup)
- 1 can of corn
- 1 can of ripe olives
- 1 cupful grated cheese
- 1 medium onion, chopped
- 2 heaping tablespoonfuls butter
- 1 cupful water

Tested by THE AMERICAN HOME

## ● crabmeat cocktail

**M**IX all ingredients together and chill well before serving.

- Crabmeat
- Cocktail sauce
- Cocktail sauce recipe:  
½ cupful chili sauce  
1 teaspoonful horseradish  
1 teaspoonful Worcestershire sauce  
Garlic salt to taste  
Pepper to taste

### Simplified Menu

- Olives
- Toasted French bread
- Ice cream cups
- Coffee
- Crabmeat cocktail
- Stuffed celery
- Tallarene
- Crisp crackers
- Vegetable salad
- Chocoate cut-ups
- Salted nuts

Tested by THE AMERICAN HOME

## ● stuffed celery

**M**IX cheeses, cream, salt, pepper, and Worcestershire sauce together. Force through pastry bag into grooves in celery.

- Celery stalks
- Roquefort cheese
- Cream cheese
- Heavy cream
- Salt
- Pepper
- Worcestershire sauce

Tested by THE AMERICAN HOME

# Cake news flashes

What will the best dressed cake plates of 1935 wear? Frosting and icing must tell story. . . . Cakes are designed to fit the personality of the hostess or decorative scheme of the dining room—fantastic news flashes of the way in which are received the new cake designs of Mary Lyles Wilson, official cake maker to presidents, kings, and many famed celebrities.—RUTH MCINERNEY

## ● white fruit cake

- 1 cupful creamed butter
- 6 egg whites beaten stiff
- 4 cupfuls sifted flour
- 1 cupful grated cocoanut
- 2 pounds citron, cut fine
- 2 cupfuls sifted sugar
- 1 cupful sweet milk
- 2 teaspoonfuls baking powder
- 1 pound blanched, chopped almonds

**C**REAM butter and sugar together. Add flour and baking powder sifted together alternately with the milk. Stir in cocoanut, citron, and almonds. Fold in egg whites. Put into greased loaf tins and bake in 350° F. oven until done, about 3-4 hours.

Tested by THE AMERICAN HOME

## ● cameo cake

- ½ cupful shortening
- 1½ cupfuls sugar
- 2¼ cupfuls flour
- 4 teaspoonfuls baking powder
- ½ teaspoonful salt
- 1 cupful milk
- 4 egg whites, beaten stiff but not dry
- 1 teaspoonful vanilla

**C**REAM shortening and sugar. Sift flour, salt, and baking powder and add to the sugar shortening mixture alternately with the milk. Stir in the egg whites and vanilla. Pour into greased and floured cake tins. Bake in 375° F. oven for 35 min.

Frost with a boiled icing tinted a faint pink. Refrost center in plain white. Add a spray of pink and white blossoms and leaves for a decorative medallion using a pastry tube.

Tested by THE AMERICAN HOME

## ● banana cake

- 1½ cupfuls sugar
- ½ cupful butter
- 1 cupful mashed, ripe bananas
- ½ teaspoonful salt
- 2 eggs, slightly beaten
- ½ teaspoonful mace
- 1 teaspoonful soda
- 3 tablespoonfuls sour milk
- 1 teaspoonful vanilla
- 1½ cupfuls flour

**C**REAM butter and sugar; add egg. Mix and sift flour, mace, and salt, and add to mixture. Dissolve the soda in sour milk and add to batter. Stir in the mashed bananas and vanilla. Bake in 350° F. oven for 45 minutes.

Tested by THE AMERICAN HOME

## ● nut cake

- 1 cupful sugar
- ½ cupful butter
- 1 egg
- 2 cupfuls flour
- 2 teaspoonfuls baking powder
- ¾ cupful milk
- ¼ teaspoonful salt
- 1 cupful chopped nuts
- 1 teaspoonful vanilla

**C**REAM butter and sugar. Add egg. Sift flour, salt, and baking powder together and add to mixture alternately with the milk. Add nuts and vanilla. Bake in a greased pan in a 350° F. oven for about 45-50 minutes, or until done.

## Fudge topping

- 1 cupful brown sugar
- 1 cupful white sugar
- 15 marshmallows

Cook sugar and milk until it forms a soft ball when tested in cold water. Remove from fire and add butter and marshmallows. Cool before beating. Spread on cake.

Tested by THE AMERICAN HOME

## ● devil's food cake

- ½ cupful butter
- 2 eggs, beaten separately
- 3½ cupfuls flour
- ¼ cake chocolate
- 1 teaspoonful soda
- 1 cupful buttermilk
- 1 cupful white sugar
- 1 cupful brown sugar
- 1 teaspoonful baking powder
- 1 teaspoonful vanilla
- ½ teaspoonful cinnamon
- ¼ teaspoonful allspice

**C**REAM butter and sugar. Add egg and melted chocolate. Sift flour, baking powder, cinnamon, and allspice together and add to mixture alternately with milk in which the soda has been dissolved. Add vanilla and fold in the beaten egg whites. Bake in a 350° F. oven for 30 minutes.

## Orange filling

- Juice of 1 orange
- 1 tablespoonful cornstarch
- 1 tablespoonful lemon juice
- 1 egg yolk

Mix sugar and cornstarch. Add egg, then fruit juices, orange rind, and hot water. Add butter and cook in double boiler until of consistency to spread.

Tested by THE AMERICAN HOME

## ● pagoda cake

- 1 pound dates—stoned
- ½ cupful water
- 1 cupful sugar

Cook until soft but not dry. Cool.

- 1½ cupfuls Quick Quaker Oats
- 1½ cupfuls flour
- 1 teaspoonful baking powder
- ½ pound brown sugar
- ½ pound butter
- ½ cupful chopped walnuts

**C**REAM butter and brown sugar. Add flour and baking powder sifted together. Add Quaker Oats.

Pat the dough into very thin bits. Line the bottom of a square pan with the wafer thin patties, smoothing out evenly. Then spread a thin filling of the date marmalade over this. Repeat until all material is used, having dough for the top layer. Bake in a 300° F. oven for 40 minutes.

For the topping use butter frosting. Tint red with commercial food coloring. Frost only the top. Cut into small squares. Outline a pagoda on the top using pastry tube.

# Sealed in a fortress of steel!

The "ageless" mechanism of General Electric Refrigerators is hermetically sealed within walls of steel and requires no attention, not even oiling. Its dependable, trouble-free performance year after year at low cost, outweighs all other refrigerator features combined.

New G-E MONITOR TOP—Universally recognized as the standard of excellence

New G-E LIFTOP Model New G-E Model X4

New G-E FLATOP—Aristocrat of modern styling

## The mechanism that defies time

Now in all 3 types of General Electric refrigerators  
5 Years Performance Protection for only \$1 a year!

At your G-E dealer's you can see and compare all three types of refrigerators: Monitor Tops, Flatops and Liftops. All with the famous G-E sealed-in-steel mechanism. A dozen models to select from—any style, any size, and at any price.

In buying a refrigerator look to the mechanism first. It represents more than half of your investment and determines how long and how well any refrigerator will serve you. Always ask "How long will it last?"

It Costs Less to Own a G-E! Hundreds of thousands of G-E Monitor Tops now in use five, six and seven years, are in such good mechanical condition that it is impossible to place a limit on the years of service to be expected from this "ageless" mechanism. You pay no price penalty for G-E performance. Whether your

income is \$20 a week or a million a year, you can have the dependability and matchless performance of a G-E Refrigerator. There is a model to exactly suit you.

### Modern Features? Of Course!

Stainless Steel Super-freezer that cannot chip, rust or tarnish. Open and completely sanitary. Provides faster freezing of ice cubes, salads and desserts, and ample space for storing frozen foods.

- Temperature Control • Defrosting Switch • Sliding Shelves • Automatic Interior Lighting • Foot Pedal Door Opener • Vegetable Drawer.

## Six Fascinating Volumes by the Greatest Authorities Revealing the Wonderland of Nature's Marvels

- BIRDS.** By Neltje Blanchan  
Contains 257 pages, describes 124 different birds. 48 illustrations in full natural color. Also contains wonderfully helpful color key by which you may distinguish many birds by their conspicuous colors.
- ANIMALS.** By Ernest Thompson Seton  
This book by the beloved master of the woods, contains 295 pages, describes 64 different wild animals of North America. 48 full-color illustrations. Completely indexed for quick reference.
- WILD FLOWERS.** By Neltje Blanchan  
Contains 270 pages, describes 170 common different wild flowers. 48 full-color life-like pictures.

- BUTTERFLIES.** By Clarence M. Weed  
Contains 286 pages, describes 109 different butterflies, 48 pages of full-color pictures, many of them showing the chrysalis.
- GARDEN FLOWERS.**  
By Robert M. McCurdy  
Contains 311 pages, describes over 400 garden flowers. 48 full-color pictures and special color key invaluable to all wanting to know beforehand what the color scheme of any garden will be.
- TREES.** By Julia Ellen Rogers  
Contains 291 pages, describes 226 common trees, 48 illustrations of trees, with details of leaf and bud in full life-like color.

Street & No. ....

City ..... State .....

Check here if you prefer the De Luxe Artcraft binding. You may have it for only \$14.75, on the same easy terms of \$2.75 down and \$2.00 a month. (5% discount for cash. Same return privilege.)

## EXAMINE IT FREE—Send No Money

We want you to see the Nature Library and judge for yourself, without any obligation, the amazing value, beauty and fascination of these books. Mail the coupon to us today. Send no money. We will ship you the Nature Library, in 6 volumes, all charges prepaid. Read them for 5 days free. If you do not like the set, return it at our expense. If you keep it, send only \$2.00 as first payment and \$2.00 each month until the special price of \$12.00 has been paid. *This offer is for a limited time only, as our supply will not last long. Mail the coupon at once!*

# Pack up your family

## Short water cruises—South and North

[Continued from page 19]

dies, because in neither the first or second visits could I see all of that I wanted. It is tropical, a world apart from ours. You may think the picturesque natives have been overdone, but I assure you they have not been. The beautiful green of Jamaica, the intriguing island of Haiti, the South American coast and the marvelous Panama Canal—these are things which no amount of writing can exaggerate. One is in a different world, the moment one steps off one's boat. There is color and glamour here not to be duplicated in any other part of the world. And so, if a winter vacation is not on your itinerary, by all means go this summer. The sea voyage alone is worth the cost—and the rest, an ante-depression bonus. The Colombian boats are air-conditioned, have swimming pools, and every luxury to make your trip comfortable. The eleven-day trips cost from one hundred and fifteen dollars up; the eighteen-day trip, which includes the marvel that is the Panama Canal, costs one hundred and sixty-five dollars up.

### TO CANADA

Want a very, very low-cost summer trip? The Canadian Pacific is putting on nine-day holiday cruises to Quebec and Montreal, a trip up the Atlantic coast and the St. Lawrence. Rates commence at seventy dollars and no passports are required.

### TO VIRGINIA AND WASHINGTON

And another very, very low-cost trip. To Virginia Beach in Norfolk, Virginia. But a three-day trip, it gives a maximum amount of time at sea, a swim at Virginia Beach, and costs but twenty-one dollars with outside stateroom, and luncheon at the New Cavalier Beach Club. Others,

of longer duration, include historic Jamestown, Williamsburg, Washington, D. C., and Annapolis. The high on the longest trip is only forty-three dollars! Information from the Old Dominion Line of the Eastern Steamship lines.

### AND TO NOVA SCOTIA

Have you been to Evangeline Land? Rich meadows and white cottages, clean country inns and luxurious hotels, gay-colored streets and quaint houses—that is French Acadia. There are excursions from both Boston and New York, and the most you can spend, on boat fare, is under twenty dollars. An inexpensive, thoroughly delightful trip for those who like quaintness, and lovely country. Information from the Eastern Steamship lines. And while you're asking for this, ask also about Cape Cod, Nantucket, and all the other quaint places that are a short trip from Boston. Especially if you have yen for old New England and its houses.

### THE LURE OF THE MEDITERRANEAN

If you haven't more than average willpower, stop right here. For the cruise I am about to describe is probably *the* one you have always really longed for. On June 29th, the good ship *Resolute* sets sail for the lazy, languorous and blue Mediterranean, proceeds past the grim rock of Gibraltar to Africa, Sicily, Naples, France, Portugal, Spain, and thence to the bleak promontory of the North Cape. To the indescribably grandiose miracle of its Midnight Sun, through the breathless silence of fantastically beautiful fjords walled in by towering granite mountains, waterfalls that roar and froth, tiny towns and tinier villages. And that, very briefly, is the unforgettable experience that will be yours if you join the Ham-

Diving boys at Cartagena, S. A. Photo taken from the deck of the Cunard White Star liner "Georgic"

This charming Crane bathroom in Mrs. Stern's home—complete from floor to ceiling—cost but \$480.00. This included a new tile floor and gleaming walls with delightful colored mural reaching to the ceiling; also mirror medicine cabinet, modern lighting, towel bars, soap rack and all accessories.

The CORWITH bath and shower, CORWITH lavatory and LEXEL closet are the most modern fixtures produced by Crane—works of art, all of them, and telling their own story of sterling quality.

Some re-creations like this would cost more than Mrs. Stern's, some would cost less, depending on how simply or elaborately you plan your bathroom and the particular Crane fixtures used.

## You too can now have A Charming Crane Bathroom at a surprisingly low cost

Only yesterday it was just an old fashioned bathroom in the home of Mrs. M. M. Stern, prominent Chicago decorator. Today it glistens like a jewel, transformed by a modern Crane CORWITH bath and shower, CORWITH lavatory, LEXEL closet, and a full complement of accessories. The Room, complete, cost but \$480. So simple, so inexpensive was the recreation that we reproduce it here as a suggestion of what you too can do.

There's many a closet, end of a hall, or corner of a room which can be turned into just as beautiful and useful a bathroom as Mrs. Stern's—and at just as low a cost. Crane fixtures, you know, cost no more than ordinary fixtures, and what's more, a recent price reduction makes your modernization plan more feasible than ever.

Study the floor plan of your home with your plumbing and heating contractor and he will locate the most economical and logical site for that splendid new bathroom, convenient "powder room", or first floor lavatory.

### How You Can Borrow Money on an Easy Payment Plan

Any property owner can borrow the full amount of money necessary for a complete new Crane bathroom, kitchen or heating plant, repaying in three years. Your plumbing and heating contractor can arrange the loan through the Crane Finance Plan, operating under F. H. A. approval at government rates.

And if you have an unsatisfactory heating plant, or yearn for a new kitchen, your contractor can tell you how easily you can have new ones.

### Telephone Your Licensed Plumbing Contractor. He will give you full information and detailed cost

Plumbing fixtures are not complete until properly installed—by a qualified, licensed master plumber. He will not only give you detailed information and costs on Crane bathrooms and kitchen fixtures and Crane heating plants. He will also arrange to secure for you all information and costs on tile work, carpenter work, and other items necessary to carrying out your plan, including complete help in arranging for a three-year loan to pay for the labor and materials.

### Write today for "Modernizing Suggestions— A Booklet for the Home Owner"

Here is a host of ideas and suggestions on bathroom and kitchen arrangements, heating plants and other modernizing ideas—thoroughly tested as to practicability and thrilling in the beauty of their result. Write today so you can plan your improvements with an expert guide to help you attain the result you've dreamed about.

### MAIL COUPON TODAY

**KATE:** "Look, Ida. That wash of Mrs. Palmer's is full of *tattle-tale gray*."

**JOAN:** "And how! That dingy color almost shouts that her soap didn't get out *all* the dirt."

**IDA:** "You know, Kate—my clothes look terrible—but what can I do?"

**KATE:** "Just change to Fels-Naptha—and dirt can't stay behind. Smell!—that *golden soap* holds lots of naphtha."

**ERNIE:** "Wh-e-e! All dressed up for Daddy."

**IDA:** "It's an old dress—but it looks so nice and white now—you'd think it was new. I could hug Kate for making me change to Fels-Naptha Soap."

**IDA:** "Hey, you little rascal! Don't you muss up mother's silk things. Those are my best stockings and undies—and Fels-Naptha is the only thing that's gentle enough for them."

## Banish "Tattle-Tale Gray" with FELS-NAPHTHA SOAP

"WH-E-E-E!"—that's what you'll say yourself—the first time you try Fels-Naptha Soap!

Such *daisy-sweet whiteness*—with "tattle-tale gray" gone forever!

And what a cinch the wash is! For Fels-Naptha is *two* dirt-looseners instead of one. *Richer golden soap* and *plenty of naphtha* added! Fels-Naptha doesn't skip over dirt like "trick" soaps do. It gets ALL the dirt—

even the deep-down, stuck-fast kind.

Fels-Naptha is *safer, too—gentle* as can be to daintiest things. And it's kind to hands—there's soothing glycerine in every golden bar.

Get a supply of Fels-Naptha Soap at your grocer's today—and try it! It's great in tub, basin or machine! . . . Fels & Co., Philadelphia, Pa. © 1935, FELS & CO. 

burg-American North German Lloyd Line Mediterranean-Norway cruise. Forty-seven days of adventure de luxe. A swift moving panorama of palm-fringed Mediterranean beaches and pine-clad northland shores; desert sands in Northern Africa, glaciers in Norway. Camels in Casablanca and reindeer in mountain villages. Arabs in Tangier and Lapps in Lyngseidet. A luxurious palace that totes you about, fun and relaxation on board. The *Resolute*, after all this, somehow has the courage to face homeward but how one ever wants to leave such a ship, terminate such a cruise I shall never know. To me, it is the most alluring itinerary I have ever seen. In fact, I am plotting right now, as I write this, some means of convincing the firm I need that trip. I am not being facetious—I have never yearned so over a travel booklet in my life. But get it yourself, mine is not to be had for the asking. I fear I shall not go, but until the day of June 29th I am going to keep that booklet to cheer me on in hope and high faith. Reading it will be your undoing, and I advise you to rush right out and get one. Hamburg-American Line North German Lloyd is the name.

### ACROSS THE VIKING SEAS

A day before the *Resolute* sets sail on her great adventure, her sistership *Reliance* gets under way for a voyage of 12,000 miles to nine countries, calling at Iceland, across the old Viking seas to Norway and thence to Sweden. She then crosses the Baltic to Estonia from where the ship goes to Leningrad. Thence back to Finland's capital, to Copenhagen, gay, brisk and prosperous. Then cruising out of the Baltic Sea and into the North Sea the *Reliance* puts in at Boulogne-sur-Mer where one transships for home or continues on to Hamburg. If you feel you deserve a real vacation, after these years of intense work, worry, and responsibilities, I can honestly recommend either of these two cruises to you. They offer, in a short period, far more than individual travel over the continent can give you. And, of course, there is the joy of having the difficult foreign formalities taken care of, every luxury for the cruising days, and fresh, unexploited lands to see.

### THE NORTH CAPE AND RUSSIA

The Swedish American Line is also planning Viking voyages and cruises for this summer. The *Kungsholm* North Cape-Russia cruise costs from four hundred and fifty dollars for forty-two days, and the *Gripsholm* cruise of thirty-three days costs from three

hundred and forty dollar Sweden, Norway, Copenhagen, Finland, Russia—these are the allure they offer you.

We have now practically covered the globe—except that in our excitement we have given scant attention to that dreamland of a part of us—Switzerland. One feels a loss when one starts to describe the indescribable beauties of Switzerland, for they are truly indescribable. If you will go, write to the Swiss Federal Railroads, at 475 Fifth Avenue, New York, you will come out laden with beautiful photographic reproductions and descriptive matter on Switzerland. I can only tell you that the reality will far exceed your wildest flights of fancy. It is a country no one can ignore if one is to feel he has really seen the world. It is a country so awe-inspiring that words are futile. And certainly, if you can afford it, it is one treat your family is entitled to, one thing your children must see as soon as ever you can bring them to it.

### GO AROUND THE WORLD THIS YEAR

And if all this has merely whetted your appetite to see all the world—and I hope it has, then by all means drop in at your nearest Canadian Pacific or Cook's office and get their round-the-world tours. At surprisingly low rates, you can have a choice of over 200 itineraries. Can have first-class or tourist class accommodations. Can travel eastward or westward. And in ninety days or more, get your fill of the treasures and the beauties that this old world of ours has to offer. You can start by traveling across the continent to Vancouver, and go on to Japan, China, Bombay, the Suez Canal, and the Mediterranean to London and back for as little as eight hundred and sixty-one dollars, first class. Or you can start in the other direction and circle the globe.

But whether your ambitions be modest or grandiose, it is important that you get a change of scenery this summer. This is not your impractical family doctor speaking, nor your anxious wife who sees the strain of these past years beginning to tell on you. It is honest advice from one who, herself, knows how difficult it is to make up one's mind to get away, who herself has known the shock of coming back from a vacation and finding the old business tottering along somehow without her—and getting along rather well, in spite of the absence of her brains! It is, in fact, sound and honest advice from ye old editor who takes TWO vacations each year—now that the first shock of not being missed has been assimilated.—JEAN AUSTIN.

# Wouldn't you pay a dime for a movie of her?

HER FIRST ROLLER SKATES—just look at her go. Here's an event you'll want to remember . . . but don't trust it to memory alone. Ciné-Kodak Eight will make a living record of this scene—in movies—for 10¢.\*

## How can Movies cost so little?

**T**HERE'S NO MAGIC about Ciné-Kodak Eight's economy. This little camera uses a new type of film which gives you *four times as many movies per foot*. That's why movies now cost less than ever before.

A twenty-five foot roll of Ciné-Kodak Eight Film runs just as long on the screen as 100 feet of any other home movie film. And there is no loss in quality—the movies are bright

and clear. Ciné-Kodak Eight is a full-fledged movie camera, beautifully made. It fits into your pocket. As simple to use as a Brownie. Low in first cost as well as upkeep, it brings home movies within the reach of the more modest budget. Price, only \$34.50.

For real movie economy, see the Ciné-Kodak Eight—and the pictures it makes—at your dealer's . . . Eastman Kodak Co., Rochester, N. Y. . . . *Only Eastman makes the Kodak.*

# Ciné-Kodak EIGHT

\* Ciné-Kodak Eight makes 20 to 30 movie scenes—each as long as the average scene in the news reels—on a roll of film costing \$2.25, finished, ready to show.

## Buying antiques by the wayside

[Continued from page 42]

come his way very reasonably even though pine may be in great demand. Let him find a piece made of fine burl walnut and you could hardly buy it at any price. Another dealer won't sell a good piece until he has "looked at it for a while." Many times people complain of dealers having three prices. Well, they have. They have a price when they have just bought something they think is good. The same item goes down a little when some friends have criticized it. It goes down still more when the dealer tires of it, or locates something he wants more and needs the money to go get it. Often a dealer buys something he thinks is rare, so until he has a chance to find out he puts on a high price to see what kind of offers he can get. Many dealers have certain regular customers to whom they always give a better price and other dealers have people that they don't like on their lists to whom they never sell except at the top price. No matter what peculiarity any dealer has, the rule still holds good. Get a fair description of the piece in writing or else pay no more than you would for a good hand-made reproduction.

### MISREPRESENTING ANTIQUES

A word about fakes. It is the writer's opinion that there is more harm done misnaming and misrepresenting genuine antiques than there is by faking. A good Swedish piece may be sold as Pennsylvania Dutch. This is done because the trade will pay more for American pieces than for foreign ones. This piece has definite merits which do not change no matter what it is called and if bought for itself, and not for its name, will certainly satisfy the customer. Dealers are more apt to change old pieces into better ones rather than build fakes outright. These remodeled pieces are usually sold by the better dealers for what they are. Before remodeling they are not acceptable; after remodeling they are. They satisfy modern needs and also give pleasure to the purchaser because they have the look and design of rare pieces that would otherwise be beyond the average person's pocketbook. This, of course, further shows the value of protecting yourself with a statement from the dealer, or pay for the article what you would pay for a good hand-made reproduction. In determining this reproduction cost you must bear in

mind that the old pieces were solid wood, hand made and of sound construction.

There is one practice that is annoying to dealers and if the buyer is repeatedly guilty soon gets around to his ultimate harm. It is an error that is made with the best of intentions. You are either starting or finishing a trip. Or perhaps a tire blows out or the battery has to be replaced. Whatever the reason, you are short of money. You see a shop that you can't resist and in it there is a piece that you simply must have. The dealer agrees to hold it and you leave a minute deposit which is truly all you can spare. Then, for some reason or other, you never return for it. The dealer holds it indefinitely and misses a chance to sell it for cash. If you can't claim a piece within a reasonable length of time drop the dealer a card and tell him so. It really isn't fair to raise people's hopes and then let them down. Good dealers deserve this much courtesy and they respect you for it.

## Back to our own back yards

[Continued from page 23]

attacked the settlers in King Philip's War. The colonists were his own people; he realized this when he began to write a book called *Our New England History* and filled it with stories of his own ancestors. Gathering material for these stories was great fun for the children and their parents, and from some of the stories brought in for "publication" I suspected that under the spur of a good audience family traditions had sometimes grown in the telling. But fact and fiction are hard to separate even in the most authentic history, and our book was gloriously and righteously full of red-blooded ancestors.

We made a mural, too, to cover one side of our wall. Here the ancestors appeared to be somewhat spread-eagled as to arms and legs and dumpy of body—perhaps that came from living in squat houses with leaning walls. But, in spite of faults in drawing, the mural told its story of Springfield on one side of the river and the village of the Agawams on the other.

The final great event in the study of our region was the play that we gave in assembly for the instruction and amusement of the rest of the school. We selected the three most dramatic events in the history of Springfield and wrote them into a three-act play. The children acted gravely the

"Let's see now-

I want to use **PLENTY** of **GLASS**  
in our new home. It makes the  
house so **BRIGHT** and **CHEERFUL.**"

● When you plan your new house or your spring improvements, remember that a generous use of glass will give your home an atmosphere and personality impossible to achieve with any other building material or decorative medium. Everywhere, you see more of it than ever before. Clear, bright windows . . . bigger ones. Brilliantly beautiful mirrors . . . more of them. Glass or mirror panels . . . screens . . . table-tops. There are a hundred ways in which glass can make your home more attractive. A majority of them qualify as repairs or improvements that may be financed under the FHA. Ask any contractor, builder or L-O-F glass distributor. You will get many helpful and practical ideas in addition to that of a beautiful and effective Picture Window, suggested above. ## speaks frankly on the subject of toilet tissue

*Mrs. France, graduate of a leading New York hospital, an authority on health, explains the importance of soft, non-irritating toilet tissue*

"I AM FREQUENTLY ASKED why toilet tissue is so important to health.

The answer is in the appalling amount of rectal trouble existing today—as revealed in the records of hospitals, clinics and insurance companies.

I DO NOT MEAN to say that harsh toilet tissue is responsible for these ailments. But it aggravates the condition—frequently to the point of serious trouble.

SOMETIMES, it is not until a member of the household is afflicted with extreme discomfort that the importance of this daily health precaution is fully realized.

PROCTITIS is no respecter of persons nor is it confined to any particular age group. It is far more prevalent than is generally known.

OFTEN A FRETFUL BABY or irritable child is called 'disagreeable' when the

Only 2 Scott Tissues—Scott Paper Company makes only two brands of toilet tissue. Remember the names. Accept no substitutes.

truth is that he or she is annoyed by a skin eruption which has been inflamed by the use of a harsh toilet tissue.

THE VERY DELICATE SKIN of a young child, coupled with low resistance to infection, makes it highly important for mothers to equip their bathrooms with only those toilet tissues which have the qualities approved by health authorities.

EVERY HOME, every office, every hotel, in fact—every public or private lavatory should be equipped only with toilet tissues which are perfectly safe and harmless.

Good Health is too precious to run any risk of losing it."

\* \* \*

**MOTHERS! Protect your family!** When you buy toilet tissue, insist on ScotTissue or Waldorf. These two health tissues are extremely soft, absorbent, chemically pure. Scott Paper Company, Chester, Pa.

story of the purchasing of the land from the Indians. Trading with the Indians became so real to them that one of the "Early Settlers" patted an "Indian" on the back and called him by the affectionate name of "Old Tom-Tom." The final act, the history of witchcraft in Springfield, was full of joyous and dramatic moments. It was an impressive ending for the study of our fascinating home country.

All this was group work. What has this to do with teaching your child to live with himself? Just this: it begins and it ends in your own back yard. With the knowledge these children have gotten from their group and individual work they are equipped to see, to wonder, and to seek for understanding; to want to help things to grow; and to be happy alone. Let us help them to swing back to the sanity of the earth and of growing things—back to our own back yards.

### A NEW KIND OF ALMANAC FOR YOUR LIBRARY

JUNE third: Now the slow-breathing land lies listening to the summer hum, that steady outpouring of sound that is like the drone of bagpipes from over the hill. Whoever has stopped to listen carefully to the field in full sunlight, will have noticed how many very fine sounds there are, and trained ears have sorted them out for us. . . .

"June Sixth: They came very secretly, in the night, perhaps; or it may have been that for several days they had been assembling, emerging like bad, buried deeds, out of the earth. I realize now that for several days I had been seeing strange, transparent shards of insects upon the pavement. . . . But only today when the children came in, bright-eyed with excitement, and interrupting each other with a tale of enormous bugs everywhere, did I suspect of what they spoke. . . .

"June Twenty-fourth: If I were going to make a specialty of one family of birds I would certainly begin with the swallows. . . . easily one may master this little group, which has in common certain family characteristics. . . . But the name of the bird is nothing but the opening of a door to knowledge. . . .

"July Fifth: When a single slave ant is introduced into the nests of its masters, even loaned only for an hour or a day, it will still make shift to serve the entire colony of its natural overlords. . . .

"July Fourteenth: Bees droning; white clouds in full sail for an open sea of blue, and the odor of clover, honeyed and familiar and reminding one of all the summers gone by—that is July. . . .

"July Twentieth: The bobolink is the only bird who never seems to know how to put a period to his musical sentence. All other Aves have a note, three notes even a phrase that they utter. . . . he still has more to tell. . . . until he performs a smile spreads over our furrows and frowns, and we say, 'Well, well, WELL, little fellow, is the world really as fine as all that?'

"November Fifteenth: We grow a double larkspur in the garden, and exaggerated double dahlias so heavy that they cannot hold up their own heads. But these are like idle, childless women demanding to be young perpetually. . . .

"February Second: On Groundhog Day that chubby marmot is supposed to poke his head out of winter quarters, to see if his shadow lies upon the snow. . . . a New World variant of the badger myth of England. . . .

"February Third: I woke in the depths of night; deep frost was on the panes, and above the brittle winter boughs the quarter of a moon was swinging low. . . . And then the owl called, and I wondered why that sound had ever inspired fear or horror. It was bird song, and I thanked God for it, in the night and silence and the cold winter's nadir. Bird song in February darkness! A voice, out in the open, like an old crier going about and saying 'All's well, and a fine frosty night.'"

Turn any page of *An Almanac for Moderns*, and you find the charm and beauty that we quote here—and there's a page for every day of the year, to read yourself, and to read to those inquisitive nature loving children of yours. A book to live with and become a family treasure, answering those questions your children will ask, fostering their sense of the beauty and strangeness that is nature. From the first frog trill in spring, it guides you through the year with illuminating comment. Nature opens as under a lens. You scrutinize the bee in the orchard, the migrating bird, the underworld of the fungus, the stars in Orion's belt, and all the great naturalists in a brilliant biographical appraisal upon their respective birth dates.

To live this coming year through with Mr. Donald Culross Peattie is to gain a grasp upon life that satisfies your modern mind, and fascinatingly reveals to children's minds a nature as lovely and bright as the sunlight's prismatic colors. And if this article has inspired you to come closer to your children, to instruct them in the ways of nature and its beauty, we cannot too highly recommend this book. It is already among my most treasured collection of books. Published by G. P. Putnam's Sons. \$3.—J. A.

Gerald K. Geerlings

# Transforming an ugly duckling

THE small drawing at the top of the page is a composite one embracing the worst faults of two general types of houses. One contributes a porch which has no relation to the balance of the house, and which is "plumb-ugly" because there is no rule or rhythm to the glass divisions; the heavy corners contrast incongruously with the thin intermediate verticals, and the high-out-of-the-ground appearance of the entire porch is deplorable. The other type of house has a square mass that is gloomy with dark-stained shingles and restless with irregularly spaced windows set off with glaring white trim. At the right side the projecting bay is made all the more conspicuous because of the awkward, gabled roof.

The suggested alterations are all of a simple remodeling nature, entailing no structural changes, with the exception of removing the roof of the bay and the roof of the porch. None of them are expensive, nor other than can be effected by the average carpenter with good judgment, working under the direction of an owner with good taste. At the outset the main problems to be reckoned with are: (1) the house must be changed from being gloomy to cheery, (2) windows on the side elevation must be made to seem orderly in arrangement, and (3) the dark color of the porch glass units must somehow be brought into harmony with the rest of the first floor exterior.

*Detail Number 1.* The first of these three problems is solved by painting the shingles white—at once the house will appear radically changed when the dreary brown aspect vanishes. The second and third difficulties are ameliorated by means of the trellis shown in Detail Number 1. When the trellage is covered with vines, the dark color of the porch glass

ROOMS HARD TO HEAT IN WINTER

WILL BE SWEATING THIS SUMMER

Make your home up to 15°  
Cooler this summer—save  
up to 35% on Fuel in winter  
with J-M Home Insulation.

FREE BOOK TELLS HOW!

WERE the rooms in your house cold, drafty, hard to heat last winter—and fuel bills excessive? If they were, it was probably because your walls and roof leaked heat like a sieve and you were trying to heat "all outdoors."

And houses like that are sweltering, equally uncomfortable, in summer. For where precious heat leaks out in winter, unwanted heat seeps into a house in summer. Now this can be corrected.

Thousands of home owners have

stopped this waste and discomfort with J-M Rock Wool Home Insulation. Rock Wool (rot-proof, fire-proof), when blown into empty attic and wall spaces, provides a barrier against heat and cold equal in efficiency to a solid wall of stone 11 feet thick.

YOU CAN FINANCE THE JOB through the Johns-Manville "\$1,000,000-to-Lend" Plan—under the terms of the National Housing Act—the lowest terms in the history of home financing. You'll be surprised how much more comfortable Rock Wool will make your home... how quickly it will pay for itself in actual fuel savings!

J-M ROCK WOOL, blown into empty attic-floor spaces and into hollow walls, keeps precious heat from leaking out in winter—shuts out unwanted heat in summer.

## NOW FOR THE FIRST TIME

... priced for the Average Home

SO you've never been able to afford the kind of china you want for your home? Well, milady, now you can have it . . . and at a price you can easily afford. Syracuse China is now available at popular prices.

This is true china. China that is perfectly lovely in its rich color tones . . . its soft egg-shell sheen . . . its delicate modeling. China that you can, and will, be honestly proud of whenever you entertain.

Weight for weight, Syracuse China is the strongest, most durable china made. And while it is so dainty that you will find it equal to the most important occasion, yet it is so sturdy you needn't be afraid to use it regularly for the family meals. And if you should break a piece, remember that these are all open-stock patterns made in America . . . that replacements will be quickly available for many years to come.

See this Syracuse China at your favorite china shop or department store. If it's not there, we'll gladly send you the names of the nearest stores which have it.

\*We use the word "true" because the term "china" is often applied to dishes which are not china. Ask the salesperson or china buyer of your favorite store to explain the difference between true china and just dishes.

## More summer ideas

In the first circle is an open-work net with ombre stripes, F. A. Foster & Co. Below it is a sheer cotton, with modern broken stripe printed design, William J. Stuebe

The plaid is on which Celanese with grass and strawberry pine plaid. A striking coarse meshed net with shaded vertical stripe has adjustable "buttons" so that the curtain can be made any width desired. New York Twine Co.

For the nautically minded and for the cottage by the sea, nothing could be nicer than curtain rods tipped with anchors. H. L. Judd Co.

THE need of a change from something to almost anything possesses you at this season of the year. You shift the living-room furniture uneasily and glare at the red damask curtains nervously. Rooms that looked right in November, look all wrong in June. Like everything else, they are frantically in need of change.

Rugs and curtains are the first salient points of attack in the summer transformation — and then, of course, the addition of the refreshing slip covers for furniture. Slip covers should never be entered into lightly but discreetly and in a "hold-on-to-

yourself" spirit. Cellophane, Argenentine cloth, sateen, cretonnes, oilcloth, Belgian linens, any old linen, satin piped in colors, satin not piped at all, and even material with Lastex woven in are urged in bewildering varieties. Perhaps cretonnes make the most noise about their slip cover charms. They are easy to fit, accommodating to all purses. But cretonnes should be chosen with crossed fingers for they are often of aggressive design. Of course

Just as fine designing skill goes into the useful part of flat silver as into the handles! Above are the blades of knives shown on page 24

Two delightful tôle lamps for summer bedrooms come in pastel colors, with decoration of gold. Herman Kashins

Bracket and ring for draped and festooned valances make possible new and interesting window treatments. From the Kirsch Company

that are nice and not at all expensive which may be dressed up with matching or contrasting pipings but linen requires a great deal of pressing and care to keep in order. Tossed, creased slip covers are never alluring. A very humble, inexpensive, cream color cotton Oshaburg cloth, which washes, cleans, fits, and does its duty valiantly for several seasons is best of all.

A clutter of ornaments on a warm day is always a disturbing note. Somehow they make you feel hot. Look about you and see what you can do without. Of course, one must have lamps in simple, very simple light shades, a clock perhaps, and a generous supply of ash trays, but it is surprising how easily one can dispense with things that add so much to a room in winter.

there are stripes and geometrical designs that have their appeal, but to be conscious of anything in decoration is not amusing and an honest stripe is very insistent. There are linens in plain colors

The smaller sterling cake dish has a pierced border, while the larger one, with alternate wooden cheese board and glass relish dish centers, is severely plain. From Gorham Co.

A square dish for sandwiches or cake is a nice change, and this one will go particularly well with accessories of modern derivation. A sauce dish is divided in two for convenience in serving, and has two ladles. From Reed & Barton

The summer bride will be delighted with these graceful sterling candlesticks. The sterling bowl, with its pierced gallery edge, besides being highly decorative is practical too. Both from International Silver Co.

What a gift...for this June's bride or, for that matter, the brides of any other Junes!

There's an irresistible charm in the lovely lines of Fostoria's famous Westchester shape in this newest design... Regency. Made in all sizes and for all purposes from water goblets to liqueur glasses.

And the Regency motif, justly famed for its grace, is the very latest vogue. Nothing is more timely...more suitable to all types of decorative schemes.

This new Regency design is typical of a large array of strikingly

beautiful Fostoria patterns. And it is also typical of the fine craftsmanship and quality of all Fostoria handmade glassware. There are countless pieces to stimulate your imagination...and at prices that are surprisingly low. For instance, Regency stemware sells for only \$12.00 per dozen pieces.

See them all at your nearest glassware store, and for helpful advice on entertaining today's guests, send for your copy of "Correct Wine and Table Service". Just write Fostoria Glass Company, Dept. A, Moundsville, W. Va.

Illustrated above—the Regency water goblet, sherbet cup and cocktail glass.

**IMPORTANT REMINDER!** Fostoria dinnerware is made in "open" sets. New pieces may be added or broken ones replaced at any time. Inquire of your Fostoria dealer.

## Capturing the good, old summertime

Wanda Moore

WE ARE apt to speak of old-fashioned gardens as if they were memories of the past, but there was nothing about grandmother's perennial garden which we cannot duplicate today in all its charm; with the exception of its box-border—box having refused to "go modern."

To be sure, we all love our hardy gardens during their time of blooming, but most of us do not get the lasting benefit of their aromatic fragrance, as did housekeepers of old. It was a delightful custom, bringing the garden indoors, so that in nearly every room of the house one thought of lavender or musk, or caught the breath of June roses, though snow lay deep outside.

Let us look over a few yellowed recipes of long ago, that we, too, may keep June's bounty all year.

The third day repeat the process but this time when the syrup comes to a boil after flowers are added, stir flowers lightly till syrup granulates, then pour upon sheets of waxed paper. Breakage can best be avoided by separating the flowers with a silver fork.

These sweets add a festive touch to frosted cakes, and decorate charmingly any dessert with whipped cream. They may also top any sweet fruit salad, in combination with chopped nuts, dates, or preserved ginger.

### ROSE BUTTER

"Take a glass jar, put a layer of butter on the bottom and each day put in rose leaves, adding layers of butter, and when full cover tight. Use the butter for articles to be flavored with rose."

This recipe comes from an ancient cook book, but a later and more explicit recipe sounds less messy. "To impart the breath of roses to butter, bury it in a mixture of rose petals and salt. Sprinkle layers of rose leaves with salt, cover closely and let stand three days. In this bury your pats of butter, leaving them closely covered for two days. Other sweet flowers will yield their scent to butter, such as clove, pinks and old-fashioned honeysuckle."

### POTPOURRI

There are numerous methods of making an old-fashioned potpourri jar, but this one has been found satisfactory:

If you have a wealth of roses and wish to make stock enough for several small jars, use a large jar first, and transfer the stock to your ornamental jars later.

The vessel selected need not be

### CRYSTALLIZED FLOWERS

Candied rose leaves and violets can be made at home by anyone who can make good fondant. To make the syrup use a pound of sugar to half a pint of water and boil till it will form a "ball" when a little is dropped in cold water. Remove from fire.

Drop selected rose leaves and violets into the syrup, pressing down without stirring (be sure they are free from moisture). Bring syrup to boil again, pour into a bowl, and set away.

The next day drain the flowers into a fine sieve. Add a fourth of a pound of sugar to the syrup and boil again to the ball stage. Put in the flowers again, bring to the boiling point, and set away.

A new air condition indicator records temperature and relative humidity. It is encased in Bakelite with contrasting chromium plate trim. Made by Fee & Stemwedel, Inc.

The Annex Towel Rack can be slipped on any regular permanent fixture, thereby adding two extra full-length towel bars. To be had at John Wanamaker's

## A RICH SOURCE OF Food Energy FOR GROWING CHILDREN

● If we trace the source of energy and alertness, it is invariably revealed that the FOOD we eat and drink contributes most to the physical reactions of the body... Karo Syrup contains a rich store of food energy in the form of Dextrose and other readily assimilated carbohydrates. Dextrose, as your doctor will tell you, is the important

fuel ingredient without which no one could move a single muscle... Make Karo a part of your children's daily diet—serve it on pancakes, waffles, bread, hot biscuits, etc. And, remember, what is good for children is good for grown-ups, too.

### FREE TO MOTHERS!

An interesting booklet which simply and clearly explains why Karo is so valuable a food. Write Corn Products Sales Company, Dept. A.H.-6, P. O. Box 171, Trinity Station, N. Y. C.

expensive, an earthenware one will do, but it must have a cover. Wash it thoroughly, air, and dry in the sunshine so it has no trace of mustiness. Drop five drops of oil of geranium and two of glycerine into the empty jar, and tip the jar from side to side. Gather rose petals after the sun has dried them of dew, and let them stand in a sunny window, spread on newspapers, or out in the sunshine, protected by netting so they will not blow away. A day's drying should shrivel them enough for use.

There are two ways of starting potpourri. If you have a large supply of petals put a layer of petals in the jar and sprinkle with salt. Continue, covering the jar at night, and shaking or stirring with a wooden spoon each morning for three days. Then pour contents of jar out, shake petals free from salt, which will seem moist in spite of having dried petals, and replace rose leaves

now ready for other ingredients.

This method is an added guard against mould or mustiness, but cannot be used if petals accumulate slowly, as other ingredients would be absorbed by the salt instead of by the rose leaves.

On the fourth day, if you have four cupfuls of rose leaves pour four drops of oil of rose geranium on stock and a teaspoonful of fine alcohol. This helps to hold the fragrance and keep stock in good condition. Continue to add dried petals each day, and every fourth day add a teaspoonful of alcohol and four drops of rose geranium. Cover the jar each night, and shake each morning.

When the jar is half full (the leaves settle so fast that it takes longer than you think) add the following mixture: One ounce of allspice, one ounce each of ground cinnamon, cloves, and powdered orris root. At this time, also, add two drops of glycerine and four of attar of roses, stirring the stock to its very depth. This precious fragrance seems to bring out the rare delight of the rose. When the stock is thoroughly blended add another tablespoonful of alcohol. Do not fill the jar more than half full or contents cannot be stirred. Some people add a quarter of a pound of dried lavender blossoms, or a few drops of oil of lavender, but this makes a more

The Hamilton Beach Company has just brought out an iceless freezer, to make old-fashioned frozen desserts in mechanical refrigerators. Motor-driven paddles stir the mixture constantly while it is freezing

In a cabinet of walnut and chrome is a new portable air conditioner designed especially for single room application. It provides for cooling, dehumidification, cleaning, and freshening of the air in a room. It is made by the York Ice Machinery Corp.

## Towels you don't have to WASH!

2 large rolls 25¢

*These pure white paper towels are always fresh, clean and ready to use*

HERE'S a new convenience for your kitchen! A roll of Scot-Towels fastened right beside the sink!

When something spills on the table, the floor or in the ice box . . . when you have bacon to drain, greasy pots and pans to clean, glasses to polish . . . reach for a Scot-Towel. The job is done in a jiffy.

Always clean and dry—these white, absorbent paper towels are useful in dozens of daily tasks. Zip . . . you tear a ScotTowel off the roll. Use it. Throw it away. No mess. No bother. Nothing to wash afterwards!

Made of thirsty cellulose, Scot-Towels are soft and very absorbent. And inexpensive. 150 towels in every roll. 2 big rolls—25¢. Put ScotTowels in your kitchen—today. See for yourself how practical they are. How many messy little tasks of housework they make easier.

ScotTowels are on sale at grocery, drug and department stores. Or write Scott Paper Co., Chester, Pa.

Handy in 157 Different Ways

—that's what one woman told us about ScotTowels. Here are some of them:

- DRAINING FRIED FOODS
- CLEANING SAUCEPANS
- POLISHING MIRRORS
- WIPING CLOTHESLINES
- DRYING VEGETABLES
- WIPING MILK BOTTLES
- DRAINING LETTUCE
- CLEANING ICE BOX
- GREASING CAKE PANS
- WIPING SINK
- CLEANING STOVE
- DUSTING

### SPECIAL OFFER—SCOTT PAPER CO., CHESTER, PA.

If your dealer does not sell ScotTowels, send us 50¢ (money or stamps) and we will send you postage paid—

These MOTHWORMS  
have got me licked!  
They chew up  
ALL our CLOTHES!

## Dear madam: Don't give up! Help is at hand.

**D**ON'T give up! Don't surrender to the moths! If all the old ways have failed, remember there is a *new way*, and its name is *Larvex*. It will change all your ideas concerning the prevention of moth damage.

If you have been trying to *hide* your clothes away from the moths in boxes or bags, you will be surprised to find that *Larvex* faces the danger *out in the open*, so you can let your clothes hang anywhere, ready to use without wrinkles.

On the other hand, if you have been trying to "smoke the moths out" with fumes or bad smells, you will be glad to find that *Larvex* is absolutely odorless, which is good news if you decide, in late Spring or early Summer, to wear again some garments you have already "put away." The secret is that *Larvex*

does not act on the mothworm directly. It protects the *wool itself!* It penetrates to the heart of the wool and then mothworms *can't* eat.

So you see, you need not hunt the *mothworm* at all. No fear that you may miss a few. No fear of the moth eggs! One treatment by *Larvex* and the cloth is *mothproofed* against all these dangers.

*Larvex* is thorough and final. It will save you hundreds of dollars in moth damage and it is economical to buy. Think of it: *Larvex* lasts a whole year!

Ask for *Larvex* at drug and department stores. Odorless; non-injurious. It's a scientific triumph, in a class by itself. The *Larvex* Corporation, Chrysler Building, New York, N. Y. (In Canada: The *Larvex* Corporation, Ltd., Sainte Therese, P. Q.)

NO ODORS; NO PACKING AWAY;  
... ALWAYS READY TO WEAR.

I GET AHEAD  
of the Moths

# LARVEX

## PREVENTS MOTH DAMAGE

pungent potpourri and the rose scent is no longer dominant.

This is the stock. Cover and set aside, but stir well every few days until there is no danger of mustiness. This will last for years but fresh rose leaves and other ingredients can be added to increase its fragrance, when other Junes come round.

To be transported to a garden in memory one has only to stir, and leave the jar open in a room for a time. Then cover. This stock may be transferred to small ornamental jars with covers. They make unusual gifts which are always appreciated.

### ROSE CONSERVE

Gather fragrant roses and chop the petals in a wooden bowl while fresh. Add to each cupful of petals a cup and three fourths of granulated sugar. Put in a glass jar and cover carefully to keep out all air.

Let stand for a month or more. By that time a clear liquid will have formed on top which should be poured off and bottled for use in flavoring delicate sauces, custards, and ices. The solid part is saved to use in cakes, puddings, and pies. Two tablespoonfuls of this pulp will give a delicious tang and aroma to special desserts.

### OTHER FLAVORS

Cultivate mint in a damp corner of the garden, not only to have mint sauce with lamb, but to preserve through the winter as mint jelly.

Tender pods of nasturtiums are delicious pickled, and may be used in any recipe which calls for capers. Many prefer them to capers. The fresh pods can also be chopped to use as a relish in sandwiches or in salads.

Grandmother used to pick a few leaves from a peach tree to drop into the milk which was heating for custards. Later in the summer when peaches were ripe, a peach pit was cracked for the same purpose. This was, of course, only home-made almond flavoring, but it seemed to taste better coming from the homestead garden.

Up in the attic were long stalks of dried catnip. Yes, they did drink catnip tea and we don't, but Pussy of any generation, even the most modern, loves it.

Then there were the cup-cakes grandmother baked over buttered rounds of paper, and under each paper a rose geranium leaf, or a bit of lemon verbena. Oh how good they were, and no other flavoring was needed.

Old-time housekeepers dried all fragrant and pungent leaves for use in sachets. Why don't we do it too? Fill net bags with dried lavender, rose petals, lemon verbena, clove pinks, and rose gera-

nium, separately or combine the different fragrances, as preferred.

These can be hung from ribbons in the clothes closet, or made into flat foundations for bureau drawers. Lavender blossoms alone, or with rose leaves, can be tufted between lengths of net and bound with ribbon, for use in the linen closet.

All these memories of the garden make good and inexpensive gifts, and one has the assurance that any friend who has not saved her garden's fragrance down the year, or who has no flowers to save, will be pleased with a share of good old summertime.

## An outdoor fireplace

[Continued from page 32]

wide, twenty-four inches in length.

The front and top of the oven are covered by two plates of galvanized iron  $\frac{3}{32}$  inch thick and hinged at the front edge. The top plate of the oven should be seated in neat cement but removed before it hardens. This will allow the plate to be free and can be easily removed when necessary. The metal floor and top of the oven can be used for keeping food warm while serving if desired.

An important feature of this fireplace is the movable firepan. It has proved much more convenient than having a fire built on the floor. The newly made and rapid burning fire with its smoke and flames is used under the oven, the smoke being drawn up the chimney. After the fire has been reduced to a bed of hot coals the pan can be moved over under the grill where it furnishes an ideal source of heat.

It has been found by actual experience that the cost of materials for such a fireplace does not exceed ten dollars if purchased new. A saving no doubt can be effected if one has no particular aversion to rummaging through a junk heap or visiting a second-hand dealer of building supplies and materials.

### MATERIAL NECESSARY

- About 200 bricks—new or second hand.
- 1 bag cement
- 3 cu. ft. sand
- 1 piece  $\frac{3}{32}$ " galvanized iron for oven top—24x29"
- 1 piece  $\frac{3}{32}$ " galvanized iron for oven front—24x13"
- 1 iron plate  $\frac{3}{16}$ " thick for oven bottom—29x24"
- 7 iron bars (cut from  $\frac{1}{2}$ " reinforcing rods) 48" (grate)
- 12 iron bars (cut from  $\frac{1}{2}$ " reinforcing rods) 24" (grill)
- 1 iron lintel  $\frac{1}{4}$ x2x24"
- 1 iron lintel  $\frac{1}{4}$ x2x20"
- 1 firepan (heavy material) 3" deep 12" to 14" by 16"

## The remodeling of Rural Hill

[Continued from page 29]

he opposite end of the room being furnished around a desk and chair and large library table. Thus, the room has lost its lengthy, narrow look, and become attractive through purposeful grouping of the furniture.

### FROM MAID'S ROOM TO DINING ROOM TO PANTRY

The small room at the right rear of the first floor gives access to the kitchen from the living room. It was originally used as a maid's room, is now doing duty as a dining room, and will eventually become a pantry. Such is the life of a small, connecting room.

Not a single alteration was necessary in step one of our remodeling plan to make the changes you see in the photograph of this room on page 29, which proves that wonders can be wrought with paint, paper, draperies, and attractive lighting fixtures. The ceiling was rough, but two coats of white Wallhide made it smooth. The woodwork, black, was painted dull white, all painting totaling \$12. The walls were a dirty looking yellow, but an \$8.30 investment in wallpaper (plus \$8 to hang it) has made this room so attractive that we dread the day when it will become a pantry. The Imperial paper has a gray-green ground, the loop design being in silver and the formal leaf decoration in white.

Inspired by the necessity of removing the old ceiling fixture and patching the hole with plaster, we found a new lighting fixture which in design and finish makes our *petite salon de manger* a classic modern picture. It is of

French Empire design, finished in eggshell white with dull gold decorations, is a Chase fixture and cost \$37.50. To complete the story—the draperies are made of a gaily colored flowered chintz on a white ground, bound with a deep fold of cherry red.

\* \* \*

So endeth the second chapter of the remodeling of Rural Hill. Other chapters will follow in the months to come, the next article having to do with the remodeling of the bedrooms.

To those interested in tabulations we present a record of our remodeling expenses to date, this to be carried forward from month to month as help to all those who are tempted to buy a nice little place that can be fixed up for "next to nothing."

Decorating entrance porch including painting, papering and lantern .....	\$ 64.35

## When Summer Sun Keeps Beating Down

## LET *Insulite* INSURE YOUR LIVING COMFORT

**GUARD** against discomfort in your home this summer while the sun beats relentlessly on your roof. Make your home cooler by day, and refreshingly comfortable at night to insure restful sleep. You can do it easily with Insulite, the original wood fiber insulating board.

Use Insulite to build delightful added sleeping or recreation rooms in your attic. If your attic is too shallow to add extra rooms, have the summer comfort that Insulite assures by covering your upstairs ceilings with Insulite.

In one simple step you accomplish several results at low cost. You can cover dingy, cracked plaster with a permanent, attractive decoration. Insulite's rich cream color requires no further finishing treatment. You will keep the heat of the sun's rays from

making your bedrooms veritable bake-ovens. Insulite's full half-inch thickness gives high insulation efficiency. You will provide quieter rooms. Insulite absorbs sound. And the insulation efficiency that Insulite will bring to your home during hot summer months will be helpful in making your home snug and cozy during the cold weather at a considerably lower cost for fuel than you have previously experienced.

Insulite is available in several forms to meet various needs in new construction and modernizing. Sold by retail lumber dealers everywhere.

Write for our beautifully illustrated book, "Building for the Future With Insulite." The Insulite Company, Dept. AH3, Builders Exchange, Minneapolis, Minn.

[ *Insulate with Insulite* ]

IT WILL PAY YOU TO SEE AN ARCHITECT WHEN YOU BUILD OR REMODEL

A corner fireplace just outside the dining-room door on an uncovered terrace creates a center around which to gather for after-dinner coffee. For other outdoor fireplace ideas see page 35

## Transforming an ugly duckling

[Continued from page 55]

units will be continued around the side of the house by the dark color of the foliage. Also, the fact that the side windows do not align vertically will go practically unnoticed because of the foliage making a solid band of green. Even the awkward stair window will not be as much of a "sore thumb" as previously.

*Detail Number 2.* In the existing windows there are muntins dividing the glass in the upper half, but none in the lower. The stair window is most unfortunately subdivided. Until all the windows, in both upper and lower halves, have muntins dividing the panes of glass into approximately the same size, there can be no harmony established. Detail Number 2 shows a window with six glass divisions in both upper and lower sash, as typical of what should occur throughout the house. If the glass unit should happen to be 9 by 12 inches, for example, then this same unit should be used in the new casement sash for the porch, and as nearly as possible for the stair window, which may be larger than the others.

*Detail Number 3.* The Number 3 detail shows a corner column of the porch as revised. The existing porch corner is made "flush" and even, then plain 7/8-inch boards are applied as pilasters. Stock moldings and strips are added to serve as capitals. The width of these newly formed pilasters is taken as a gauge for the two intermediate columns on the front (between the wide corner piers). It is suggested that all woodwork between columns (i.e., the sash, sills and below the sills) be painted a pearl gray, because this will make the columns predominate, and make the glass appear less like a series of black voids in contrast with the surrounding frames.

*Detail Number 4.* In the existing house the sloping roof of the porch serves no purpose except to shed water. Detail Number 4 suggests that a flat deck be used instead, having a simple parapet. If there are any children in the family this will afford them a dry place to play when the ground is wet from rain or snow. On exceptionally hot nights it will serve as a cool place to sleep. During hot summer days it will frequently be cooler than the downstairs porch, and altogether more airy than close to the ground. An awning is shown, covering this upper terrace, mounted on iron pipe framework. The latter will advantageously appear light and it will

## Compare..

ORDINARY SCREENS

BRONZE SCREENS

The reproductions above show two pieces of screening after identical exposure.

**SCREENS** that rust give only temporary service. In a few years they must be replaced. Their cost is high. Compare such protection with the long years of protection which Bronze screens provide. Barring accidental breakage, strong, rustless bronze lasts indefinitely, and actually saves you money. (The first cost of Bronze screens is only about 40¢ more for a full length window.)

All bronze screening is not alike. For "life-time" service, make certain that yours is made of standard gauge wire, which is .0113" in diameter, and makes up into 16-mesh screening which weighs no less than 15 pounds per 100 square feet.

Although we do not make screens, Anaconda Bronze Wire is used by leading weavers of screen cloth. This dependable, economical bronze screening may be obtained from your local dealer or screen maker.

An interesting booklet free on request

**THE AMERICAN BRASS CO.**  
General Offices: Waterbury, Connecticut

Screens of **ANACONDA**  
**ANACONDA BRONZE**

be inexpensive—both important considerations. Without much additional cost the awning can be made to roll upward against the house, either housed in a boxlike affair, or left exposed. In the latter case it should be unwound after each rain so that the canvas may dry out and not rot.

*Detail Number 5.* The Number 5 Detail shows the porch windows as casements which swing outward. Rolling screens on the inside will serve best because in the winter they will not have to be removed, nor will special hardware be necessary to open and close the windows as when rigid screen frames are in place. When casements swing inward they are often in the way, curtains are difficult to hang, and less air is admitted than if they were to swing outward (because at the corners some of the windows will necessarily have to overlap).

*Detail Number 6.* At the right in the existing house the bay is roofed by a gable which is both out of character with the rest of the roof, and unfortunate because it is square in plan while the bay is half of an octagon. While it would be possible to rebuild the bay to fit the roof, the reverse is much easier—hence Number 6 detail shows the old roof removed and a new one substituted. The simpler the cornice the better.

Shown in the large drawing but not in the details, is an open first-floor terrace at the extreme right, with a simple iron railing. The existing house is too box-like in its proportions, and anything which will increase its apparent length will improve it. In summer for entertaining purposes it is often useful to have an open terrace where the initial or the final course of a dinner may be served, instead of in the dining room. The enclosed porch will have its uses and advantages, but so will an open one as an auxiliary outdoor living room in the summer.

As with every urban and suburban house, the planting is of paramount importance, and the less cut up the front garden, the better. Since there is a garage drive at the left of the house, the former walk from porch to front sidewalk is dispensed with, and the entrance to the porch is from the side, leading off the drive. This will permit a better arrangement of porch furniture, instead of the usual scheme when a doorway divides a porch into left and right segments. Flowering or clipped shrubs should flank the entrance steps. Base planting will help hide the basement windows around the entire house. This should be judiciously handled, striving for simplicity of grouping and evenness of height, rather than to plant a large variety of plants which will make for restlessness.

# Experiment at Nela Park

IN THE belief of Mr. T. W. Frech, a former vice-president of General Electric, it is possible to build far greater values into new houses than has been done in the past, and for less money. To demonstrate this theory, General Electric recently opened the experimental house here illustrated. Built on a lot 60' wide x 150' deep, it was designed by Hays & Simpson, architects, and built by Keyes-Treuhaft.

Since the house was to be a modern home, it necessitated a frank solution to the problem of modern living, planned and equipped to decrease the labor of housekeeping and add to the general enjoyment of life.

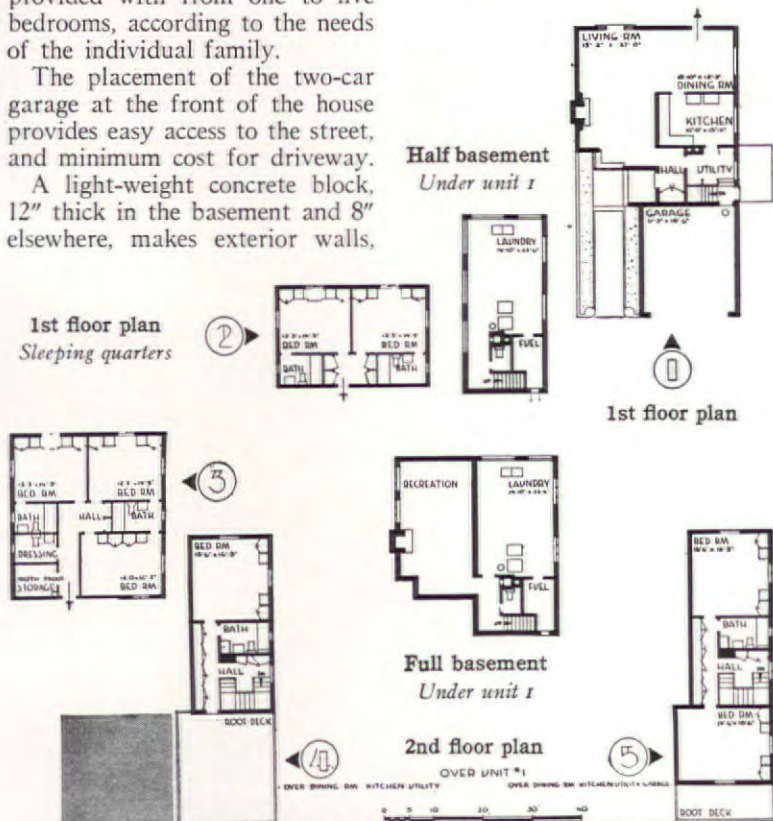

To express its importance in the family life, the living room has a high ceiling, large vertical windows, and generous floor space, including a small dining room portion with lower ceiling. The kitchen is placed between dining and utility rooms, the latter serving as means of access to the front hall, or of egress to the garage, basement, or outside door. The half-basement, containing laundry tubs, heating equipment, and toilet is placed only under the dining room, kitchen, and utility room. The finished house may be provided with from one to five bedrooms, according to the needs of the individual family.

The placement of the two-car garage at the front of the house provides easy access to the street, and minimum cost for driveway.

A light-weight concrete block, 12" thick in the basement and 8" elsewhere, makes exterior walls,

directly upon which are applied a number of coats of Portland cement. On the interior, wood furring strips are nailed to the blocks and to these strips rock-lath, with aluminum foil insulating surface and two coats of plaster applied. There are linoleum floors in the baths, kitchen, and utility rooms. Built-in wardrobes and closets are used in the bedrooms and closets are used in the bedrooms to save floor space. A large linen closet is provided in the rear hall, as well as the moth-proof storage closet. Other built-in features include a coat closet in the entrance hall, and towel closets of ample size in the bathrooms. Linowall covers the kitchen walls and the lower walls of bathrooms; Sanitas the upper bathroom walls and ceiling of utility room and kitchen.

Walls and ceilings of living room, dining room, and bedrooms are papered, while all interior trim is of yellow poplar finished with four coats of enamel. All windows are steel casements protected with bronze screens. Heating is supplied by a de luxe General Electric gas furnace. In all rooms except the living room there is a central lighting fixture and wall outlets, and all windows have Venetian blinds.

## SCHOOLS that make old age beautiful

A CENTURY ago only twelve Dentists were practicing in this country. Sunken, toothless jaws, rheumatic joints and twisted limbs were the natural, almost inevitable heritage of old age.

Don't depend upon any dentifrice to do this. Don't be lulled into a false sense of security by the exaggerated claims often made for dentifrice. Acquire the Dental Prophylaxis habit. See your Dentist every three months.

Since the first United States dental college was established one hundred years ago, a modern miracle has been wrought. While still too prevalent, these characteristic badges of old age are today largely due to neglect of the Dental Prophylaxis habit. The great dental colleges have developed and given to a great army of Dentists the scientific skill to make old age beautiful.

And then help him, by using a safe, honestly advertised tooth paste — one recommended by Dentists.

The American Dental Association maintains a group of scientists known as the Council on Dental Therapeutics. This body carefully tests dental products intended for professional and home use — awarding the "Seal of Acceptance" to those found safe and honestly advertised.

Medical authorities reveal that more than 85% of bodily ills have their inception in the mouth. Today your ethical Dentist can protect you against many of these diseases by means of an important treatment called Dental Prophylaxis. This involves a thorough inspection and cleansing of the teeth at least every three months in his office. This is something you cannot possibly do yourself — something your Dentist cannot do unless you acquire the Dental Prophylaxis habit and see him regularly.

Dentists depend upon it. You, too, may use this dependable guide to the right tooth paste.

Both Iodent No. 1 — for teeth easy to Bryten — and Iodent No. 2 — for teeth hard to Bryten — bear this coveted A.D.A. Seal of Acceptance. And by continuing to make Iodent the safest and most effective tooth paste scientific skill can produce, we shall always strive to merit this Seal — our most prized possession.

# IODENT

## MILLIONS LOST YEARLY BY IMPROPER CLEANING METHODS

*A Timely Message to  
Thinking Women Who Value  
Their Possessions*

**T**HE beauty of household possessions is actually "skin deep" and remains only as long as the surface lasts. This is true regardless of the more durable finishes and the new beauty of today's products.

Bathroom fixtures, stoves, refrigerators, washing machines and kitchen utensils—the splendid paint and lacquer finishes applied to walls and woodwork—cannot stand the abrasive action of ordinary cleansers. Tiny scratches appear; gradually the surface becomes dulled and dingy and, in due time, the beautiful finish is ruined.

You can't blame the manufacturer or the decorator if many dollars worth of surface beauty is soon scratched away. The fault lies with the cleanser used.

No woman would knowingly subject her possessions to the damaging effects of ordinary cleansers that disfigure millions of dollars worth of household property every year. Be on the safe side! Remember when you buy—it pays to use Old Dutch, the *one* cleanser made with Seismotite.

### *Old Dutch is made with surface-saving Seismotite*

This special cleaning and polishing agent that is the base of Old Dutch, is scientifically processed and combined with other valuable ingredients. Its flat-shaped particles do not scratch. They contact the surface completely and *slide* the dirt off. As a result, Old Dutch protects surfaces with scratchless cleaning.

In addition, Old Dutch saves time and energy because it cleans quicker and polishes as it cleans; saves your hands because it is non-irritating; saves cleaning dollars because it goes further; saves plumbers' bills because it doesn't clog drains.

### *Attractive holder offered*

The beautiful new holder for the Old Dutch package is made of durable Plaskon, a modern, molded material. Supplied in four colors: orchid, ivory, blue, green. Send 10c and windmill panel from an Old Dutch label for each holder. State color desired. Address Old Dutch Cleanser, Dept. H-303, 221 N. La Salle Street, Chicago, Illinois.

*My dear Kate,*

Alec is washing dishes! He has some letters for me to type and, as I am anxious to get this off in the morning mail, we are helping each other. I must hustle right along, for Alec will not be long. His idea of doing dishes is to wave them negligently back and forth under a stream of lukewarm water. When his dish towel is completely soaked he will be entirely happy! He calls washing dishes in a pan of hot, sudsy water "stewing 'em in their own juice!" Now really! However, I find it exceedingly restful to be blind to some of the lesser things of life occasionally!

I have completed my millinery task and Judy is equipped with two new hats—a sunbonnet for the beach and a large hat to wear with her gingham. I have purchased an organdy bonnet to go with her dimity and dotted swiss. I made the hat in the usual manner, a six-piece shaped crown and large, flopping brim. The hat band is the cunning part of it. I stitched a piece of the material (I used linen instead of the usual piqué) about an inch and a half wide and then decorated it with a wreath of appliqué flowers in pink, blue, and yellow with green leaves, the stems of the flowers are outlined in green and the button-hole stitch, edging the flowers and leaves, is done in blending and not contrasting colors. I am enclosing a sketch.

Have you tried adding a quarter of a teaspoonful of cinnamon to each cupful of milk called for in your recipe for chocolate bread pudding? Served warm, with hard sauce, it is quite nice enough for a company dinner. It is amazing, but I have noted that a very small change frequently whets a jaded appetite. When we have carrots, which is seldom, I usually cut them in circles, but when I occasionally cut them in long strips they *do* seem to have an entirely different flavor. Likewise, instead of the usual whole leaves of lettuce, I occasionally shred it, add sliced eggs, tomatoes and bacon and mix the whole together in a large bowl, with a little French dressing.

I have found that training a dog is very like training a child. The thing is to remain always calm and collected and to speak

TO WHO?  
TO WHOM?

For  
savings' sake  
**IT'S WISE**  
to make  
YOUR OUT-OF-TOWN  
CALLS IN THE  
EVENING

NIGHT time is bargain-time for telephone visits with far-away friends. At 7 P. M., station-to-station rates to most points drop about 15%, and after 8:30 P. M., they're as much as 40% less than daytime rates. About 75 miles for 35c; 150 miles for 50c; 275 miles for 75c.

Whose voice would you like to hear tonight? Whose birthday, whose anniversary is this? Settle down in your easy chair and chat across the miles.

in a firm, well modulated voice. To become excited and shriek at Cocoa is fatal. He instantly develops a bite and I find myself completely ignored. However upon entering the living room and finding him blandly gnawing upon my pet Oriental rug I have an immediate picture of Alec's undershirt after a few moments' contact with Cocoa's sharp teeth and I shriek in my very best fish-wife voice, "Stop it, Cocoa, stop it!"—and Cocoa gives the rug a merry jerk! To the person who can react in a calm manner to this situation, I curtsy deeply and reverently! Fortunately, this sort of thing is the exception and I usually get on very well with my grand-duchess manner. Cocoa is doing nicely. He has learned to keep his choice bones in the kitchen and is trained not to touch Greyboy's dinner until he has finished his meal. Do you know that Grey is celebrating his eighth summer? Quite a middle-aged experience for a cat! By carefully letting Cocoa out at hourly intervals we have gotten him fairly well house-broken and by supplying him with an old shoe of his own we have taught him to some degree not to nip at passing ankles—except when Judy's shoestrings are flapping and then he simply cannot resist temptation! When he is a little bigger we shall break him to the lead and then I hope we shall have a pooch that we can be proud of! A few balmy days have put the gardening itch into my finger tips. How I wish we might go out for jack-in-the-pulpits as we used to in our younger days!

Always affectionately,  
Lib.

## Revolt against the old "backyard"

[Continued from page 31]

the weatherman at any time. One thing bothered me extremely. I could not get away from the fact that the driveway passed through to the garage, going under the arbor, thus separating garden from terrace. What to do?

If I could not move the driveway or do away with it, I must make the best of what I had to work with. The answer was to lay the driveway with stone slabs, matching those around the pool. Morning and night, cars have to pass over the stone paving, but at no other time is it absolutely necessary, so that, people coming in are unaware that it is a driveway at all, for to all appearances it is just another terrace.

Here card tables and chairs take care of the overflow from the

Gray-white toilets gleam again

The most unpleasant job in the house becomes one of the easiest! Sani-Flush takes all the rubbing and scrubbing out of cleaning toilet bowls. Just sprinkle a bit of Sani-Flush in the bowl (directions on the can), flush the toilet, and the porcelain sparkles like new. Stains and incrustations disappear. Odors go.

Sani-Flush is made especially to clean toilets. It purifies the hidden trap that no amount of scrubbing can reach. Sani-Flush is handy and economical. It also cleans out automobile radiators (directions on the can). Sold by all grocery, drug, and hardware stores—25c. The Hygienic Products Company, Canton, Ohio.

**Sani-Flush** Cleans Toilet Bowls Without Scouring

Resurface your **LINOLEUM** this easy way

with **GLIDDEN FLORENAMEL**

You can resurface your worn linoleum with a colorful finish for less than \$1.95 per average floor. A special stippling sponge gives an attractive finish—a lasting job at a remarkably low cost. See your local Glidden dealer or write us. This is a true enamel—not just a floor paint. Flows on smoothly and evenly, leaving a tough, durable coating that withstands scrubbing and the constant scuffing of feet. Use also on furniture, woodwork and other interior surfaces. THE GLIDDEN COMPANY • Cleveland, O.

brick terrace, slightly above. Chinese red chairs, blended with those covered gayly with awning cloth, make the scene shift quickly, giving a Continental tone. It can take on the air of the sidewalk café, with none of the turmoil and commotion of the city street.

When the grapes are ripe, they hang in glorious purple bunches over our heads, but through the long process of their maturity, they give us decorative shade.

At last we are connected—house with garden!

## The parade of the backyard activities

Daniel R. Neal and Ruth E. Neal

YOUR backyard, which seems to be just a green spot of ground with vegetables and flowers in part, a garage and a driveway, can be used to wonderful advantage for the entire family, in this joy of living, if only a little thought and care are used in the planning of it.

Let us think of the backyard in terms of a circus, a three-ring circus with activities and interests for the very young, the adolescent, and the parents. Like a circus, one ring will be the main attraction for your youngest, while another ring will hold the attention of other members of the household, and you can pause in your interest and enjoy everything that is going on.

As the circus opens its show with a grand parade of all principals and properties of the show, we must have on hand those principals and properties of the show in the form of games and equipment. Each individual of the family will organize his activities according to the particular impulses of his age.

In the backyard more than anywhere else you will realize that your child's life is more than just a process of "growing up," that his play is more than using up his surplus energy. Every impulse he has towards doing is along a definite path experienced by every child; and these impulses stimulate a definite parade of activities; and the stage of development which the child has reached at any time determines the type of activities which lead the procession.

Adulthood will show the completed parade of the varied interests, with the activities that carry over from childhood, up in front, and the others stringing along according to their importance.

Activities so important to us as children are soon forgotten as the

# WATER, WATER EVERYWHERE

*Because he didn't think—*

*—to buy a tank that wouldn't rust*

Of course he didn't give rust a thought. Nobody ever does, until the day of the tragedy. Then, try to think about anything else!

"Can't the holes be plugged?" you ask. "Has rust eaten out the whole tank? Is it dangerous? Can't rust be prevented?"

*Of course rust can be prevented. At a cost surprisingly*

"Whitehead"® Monel Metal Hot Water Tank (range boiler) 50 to 100 per cent stronger than the ordinary tank. Available in a complete range of sizes... a size for every family's need. You can also obtain the "Whitehead" Gas Automatic Storage Water Heater, and leading makes of electric water heaters with Monel Metal Tanks. Monel Metal is absolutely rust-proof and resists corrosion from every water-borne source.

• Reg. U. S. Pat. Off.

small. Put in a tank of Monel Metal. It can't rust. And it's 50 to 100 per cent stronger than the average tank even before rust starts to attack.

Ask your plumber about a Whitehead Monel Metal tank ... or sink or other kitchen equipment, or write to the Whitehead Metal Products Co. of New York, Inc., 304 Hudson St., New York, N. Y., or any of their branches in the principal cities of the U. S.

THE INTERNATIONAL NICKEL COMPANY, INC.  
73 Wall Street, New York, N. Y.

*Guaranteed 20 Years*

**MONEL METAL**

Monel Metal is a registered trademark applied to an alloy containing approximately two-thirds Nickel and one-third copper. Monel Metal is mined, smelted, refined, rolled and marketed solely by International Nickel.

## Termites Tunnel into the Finest Homes

If you want the true facts about termites and their costly damage, mail the coupon below. You will be amazed at the way these wood-eating insects cleverly tunnel into the finest homes, and without noise or sign eat away the inside of timbers. Ignoring the ravages of termites is costing home and building owners more than \$50,000,000 a year. You may have to pay part of this bill.

You cannot see—nor hear termites at work, and only an experienced inspector can discover the extent of their destruction. It is best to have your property inspected for termites—and if there is infestation, secure the service of a reliable and nationally recognized termite control organization.

Terminix is a product of and is guaranteed by E. L. Bruce Co.—also the world's largest maker of hardwood floorings. It is a termite control chemical, proved successful in more than 15,000 homes and buildings. Applied with special pressure equipment by trained men, it stops termites. Both a five year written guarantee and a surety bond are issued to doubly protect each Terminix customer. Terminix is nationwide in scope. No matter where you live Terminix Service is readily available. Sign and mail the coupon for interesting termite literature and—if you wish—free inspection of your property.

instinct for them fades away. They either leave no impression, or form habits that survive although we do not realize it. Nature will provide the child's impulses to do. It is important that you see that your children have a favorable environment for the manifestation of the activities concerned with their various instincts, and also the equipment needed for each new stage of development. To do this you must understand the play impulses of your children, their transience of interest as this parade through life goes on.

You must keep in mind that a child's life cannot be definitely divided into age periods, so it is important to guard at every point against any thought of abrupt transition from one particular period to another.

It is our purpose to present this parade of activities by starting with the baby and his interest at the head of the procession. We will then show the changes in the order of the line of march as he progresses through life.

THE CIRCUS GROUNDS  
*Color, Sand, Blocks, and Mud*  
(Age 1 to 3)

Baby is attracted by bright color, he expresses a predominate love of motion, pulling, pushing, swinging, and rocking. He derives extreme pleasure in getting acquainted with the immediate world around him. He experiments with the material available, making mountains, valleys in sand or even mud. A sand box is the most popular piece of equipment you can offer him at this time. And although other interest will replace this activity, it will stay up near the front of the parade until his tenth birthday.

Such playthings as rattles, spoons, spools, tin dishes, bells, bouncing balls, blocks, and wooden animals, you will find an important part of the child's play.

A sand box for his creative interest, a swing and slide for his love of motion will make up the parade for this age.

NOW THE CIRCUS CLOWNS  
*"Make Believe"*  
(Age 4 to 6)

Like the clowns the children of these ages are experiencing the imitative period, and their imagination is very active. All that is required of parents is to supply new properties as the need for them arises.

Old wearing apparel you have wished many times to make use of will serve a good purpose, and fill many of the children's hours with happiness, while they impersonate innumerable characters. Anything on wheels such as carts, express wagons, scooters, and

## HOW TO GIVE NEW OR OLD HOMES MODERN COMFORT AT MODERATE COST

If you're planning to build or modernize, don't buy your heating blindly—it's too important for that. Send 9¢ in stamps for the new 32-page illustrated book, that tells you what the different heating systems are and do . . . what makes good installations good . . . what to look for in equipment. It will help you to plan your heating for lifetime service and satisfaction.

### INVISIBLE WARMTH

You'll want to learn, also, about *Invisible Warmth*—National Radiator's latest contribution to modern heating. It removes heating units completely from view . . . stops soiling of walls, ceilings and drapes . . . gives new opportunities for modern window treatment . . . the widest latitude in furniture arrangement.

### A PROTECTIVE PAYMENT PLAN

National Radiator Corporation not only offers the best in heating, but the most liberal terms. No red tape . . . no down payment . . . up to three years to pay . . . FHA rates . . . a FREE Life Insurance Policy to any insurable purchaser . . . and a FREE Boiler Bond. Ask about all these features.

roller skates will supply a need for both girls and boys. Drums, ball bean bags, garden tools, paints, crayons, scissors, paste, sewing material, and other kindergarten material will be greatly appreciated.

Both the girls and boys will discard their baby swing for a larger board swing or an inexpensive tire swing and see-saw.

THE WILD WEST SHOW  
*"Big Injun"*  
(Age 7 to 10)

The "Big Injun" age is when interest awakens in competition and the child makes a beginning at playing games according to form and rule with other children. Games of climbing, hunting, and chasing seem to predominate.

Play equipment should consist of skates, cooking utensils, dolls, weaving materials, electric trains, construction sets, quoits, printing outfits, and similar material.

The gymnasium will step to the head of the parade and right behind it active tag games, jumping rope, jackstones, hopscotch, and possibly mumblepeg.

### GYMNASIUM

A combination gymnasium will give a number of added attractions, will be inexpensive, and will conserve space. Any part of the apparatus may be eliminated according to the space or discretion of the parents. The completed gymnasium contains a trapeze, rings, swing, horizontal bar, and horizontal ladder. The trapeze has elements of danger and should be used with supervision.

The swing, rings, and trapeze will form the center piece of the gymnasium. You will need two pieces of 4" x 6" x 14' for the uprights and one piece the same size for the crossbar. The uprights should be placed in the ground to a depth of three feet and braced with 2" x 4" pieces. Set the crossbar on the uprights, mortise and bolt with 1½" x 6" carriage bolts. If the uprights are set in concrete it will be unnecessary to brace.

Thirty-eight feet of bulldog chain is best to use, divided in the following lengths: two nine-foot lengths for the swing, two five-foot lengths for the trapeze and the same lengths for the rings. The swing seat will take a board 2" x 8" x 24" preferably hard wood. The trapeze will need a 1" pipe 24" in length, and two 1" rings (iron) 8" in diameter for the rings. One half by eight inch eye bolts will make excellent hangers to attach the chains to the crossbar. Eye bolts of shorter lengths will do in attaching the swing board and bar to chains.

*Horizontal bar:* The horizontal bar may be added to either end

**safe-  
guards  
health**

"Bake oven" bedrooms are made cool as the evening breeze . . . and, instead of tossing feverishly, kiddies sleep in comfort on the hottest nights . . . where fluffy Gimco Rock Wool protects the home from the blistering summer sun.

This amazing insulation makes the entire home more comfortable in any weather . . . and reduces winter fuel bills 30% to 50%.

**Deferred Payment Plan**

The Gimco Finance Plan places home comfort within the reach of every home owner. Ask the Gimco dealer to explain the many advantages of this simple plan.

**Write for New Gimco Catalog**

"New Comfort for the Modern Home," the attractive new Gimco catalog, tells an interesting story about Gimco Rock Wool.

**GENERAL INSULATING & MFG. CO., Alexandria, Ind.**  
WORLD'S LARGEST EXCLUSIVE MANUFACTURERS of ROCK WOOL PRODUCTS

**NON-SKID MAT for TUB or SHOWER!**

**FOOTSURE** in the tub or under the shower prevents SLIPPING—FALLING! INSURES SAFETY for the whole family! Patented vacuum cups molded in the mat cling tightly to the slippery surface. Highest quality rubber, safety tread, beautiful colors—Green, Orchid, Yellow, Blue, White. Standard Model, 18x24 inches, \$1.95; De Luxe Model, 18x32 inches, \$2.95. At leading department, house furnishing and hardware stores, or direct from us. Illustrated circular free. **FOOTSURE CO., INC.,** 8-2, 1220 Maple Avenue, Los Angeles, California.

**SONNY! PLASTIC WOOD HIDES THE NICKS**

Home owner's delight! That's what they call this amazing canned wood that handles like soft putty and quickly hardens into wood you can carve, paint, drive nails or screws into. It makes repairs around the house—ugly nicks, loose caster, hole in floor, loose drawer pull, wood-rot, cracks in wood—easy and simple to repair. It's PLASTIC WOOD. And you'll say it's wonderful when you try it. Sold in 9 colors by paint, hardware, department stores. 25c a tube, 35c a can.

of the swings. Only one other upright will be needed as the upright of the swings will serve as the other upright. You will need one piece 4" x 6" x 9' for this upright. Place this piece four feet in the ground and five feet and six inches from the first upright. Bore an inch hole near the top of the uprights and use one-inch pipe six feet in length for the crossbar.

**Horizontal ladder:** On the other side of the swings the other upright may be utilized in erecting a horizontal ladder. Since the rounds of the ladder should be easy on the hands it would probably be better to purchase a ten-foot ladder, sixteen inches wide. Three uprights 2" x 4" x 9' will be needed to erect the ladder about five feet from the ground.

**PLAYHOUSE**

A playhouse is an attractive addition to the backyard parade for both the boys and girls. It may serve as a playhouse for the girls or a clubhouse for the boys. The house can be made from furniture crates or wooden boxes. Tar paper will be easy to use and inexpensive for the walls as well as the roof. For lack of anything better a small space walled off in the garage will fill the needs of the children.

**USES FOR THE DRIVEWAY**

If your driveway is made of concrete, the children can use it for roller skating or riding their scooter or tricycles. Here the hopscotch and sidewalks games courts may be painted. There is lots of fun playing with old automobile tires, hurdling them or rolling them toward each other rolling them up inclines, etc.

**THE SIDE SHOWS "The Show-offs" (Age 11 to 14)**

Up to this age there is very little difference between the sexes in their interest in activities. But now boys and girls part company for a while. There is more interest in team games and love to show-off. Boys are inclined to move in herds, and girls in cliques instead of teams.

Interest in reading is strong at this age. Great interest is shown in pets and exploring, fishing, collecting, and handicraft.

Girls excel in basketball in modified form, tennis and playground ball, they also enjoy swimming, dancing, and hiking, while the interest of boys centers on football, baseball, volley ball, and similar games.

Probably up to now the use of your garage has been a place to house your car, but you will see that the garage is an important factor in the backyard parade.

**GOOD LIGHT was never so cheap!**

The price history of the popular 60-watt MAZDA lamp is typical of the reduction in price on all lamps of General Electric manufacture. These reductions have been accompanied by consistent improvements in lamp quality . . . which, in turn, have brought about tremendous savings in the cost of light.

With the drastic reductions announced on April 1st, you can now save as much as 25 per cent on popular sized MAZDA lamps that bear the famous GE monogram . . . and buy them with the assurance that their uniformly high quality will be guarded by General Electric's hundreds of processes, inspections and tests to give you good light at low cost.

**A CONTRIBUTION TO SIGHT SAVING**

It is the aim of the General Electric Company, in again lowering lamp prices, to help in the nation-wide movement for better sight.

The new prices make it inexpensive to replace worn-out and under-sized bulbs with MAZDA lamps of sight-saving sizes. They make it even more economical to use the new table and floor I. E. S. Better Sight Lamps, scientifically designed to minimize the dangers of eyestrain.

Check over the lighting in your home. Fill the empty sockets and replace old lamps with new so that you will always have good light when you read, sew or study. General Electric Company, Nela Park, Cleveland, Ohio.

## Dollar Ideas

We are desirous of publishing the useful dollar ideas submitted by readers just as quickly as space will permit. But, due to the great number on hand, we must request that no more ideas be submitted until the supply has been used up, when we shall publish a request for more. We cannot enter into correspondence regarding material submitted, nor can we return any rejected copy.

### FILE THE CONTENTS PAGE

Recently I wanted the directions for making curtains that were given in THE AMERICAN HOME some time ago. As I have saved copies of the magazine for the last four years, it took quite a little time to find the directions I had in mind. It occurred to me then that it would be a good idea to clip the contents page each month and file it for ready reference. MRS. F. R. HAUBRICH, Claremont, N. H.

### OIL CLOTH IN CLOTHES BASKET

I find that lining my clothes basket with oilcloth saves changing wet papers and tends to keep the moisture in the clothes when they are sprinkled to iron. MRS. PAUL E. GRIFFITH, East Chicago, Indiana

### TO REMOVE CAR GREASE FROM HOSEIERY

If you have gotten car grease on hosiery or silk dress first rub plain lard or Vaseline on the spot and let remain on a short time—say fifteen minutes—then rinse with white soap and cold water. MRS. D. L. FAIR, Louisville, Mississippi

### COLORED HANDKERCHIEFS

To sterilize and make sanitary colored handkerchiefs which cannot be boiled, wash and rinse well, then place in a pan or bowl of cold water in which has been thoroughly mixed about three drops of Lysol to the gallon of water. Let stand for about five minutes, ring out and hang in the air, if convenient, to dry.

Lysol will not stain the handkerchiefs if it is mixed well in water, and the odor does not linger after drying. Miss I. L. BURDICK, Cleveland, Ohio

### WASHING HOOKED RUGS

To clean hooked rugs, wash them. The rug may be immersed in hot soapsuds and gently rubbed, or it may be laid out flat and scrubbed with a brush and soapy water. It must then be thoroughly rinsed either by being

## BUG BEARS

by "Quick Henry" the FLIT man  
As seen by Helen Hokinson

M-M-M-LITTLE NEWBOLD'S CEREAL LOOKS GOOD TO THIS BABY

CRY BABY!

WA-A-O-W-BIG FLIES!

DON'T CRY, ANGEL. GRANDMA CLOSE WINDOWS AND FIX NASTY OLD FLIES!

SEE, DARLING, HOW FLIT KILLS ALL THE BAD OLD FLIES

IT KILLS THEM ALL THE COST IS SMALL

### HOW TO USE FLIT FOR KILLING FLIES AND MOSQUITOES

- 1 Shut all windows and doors.
- 2 Spray Flit upwards 50 to 100 times in each room.
- 3 Leave rooms shut 5 minutes.

Flit kills quicker and it won't stain. Won't harm you or the children. Pleasant to use.

Try Flit Powder for fleas and all crawling insects. It kills!

Copr. 1935, Stanco Inc.

FLIT MUST SATISFY, OR MONEY REFUNDED

dipped in the tub or by having water thrown over it. It must not be hung up to dry, for wet burlap sags and the rug will lose its shape. Lay the wet rug out flat to dry. When it is dry size the back with a fairly thick starch. When the sizing is dry the rug is ready for use. BERTHA NEWHOFF Versailles, Ky.

### HANDIEST CLOTHESPIN BAG

It is made of any strong material over a wire clothes hanger. The material is cut to cover the hanger from the hook at top to about twenty inches below the cross wire at bottom of hanger. This is turned up as far as the wire; sew each side and through center to form two pockets, and you will have a bag that never sags and as it hooks over the clothesline it is always just where wanted. MRS. WM. OSWALD, Flint, Mich.

### RUGS THAT CURL UP

I've found a good way to keep my kitchen and baths rag rugs from curling up on the ends. After I wash them I dip the ends in weak starch. This gives more body to them and keeps them flat on the floor. MRS. H. W. BUCKNER, Battle Creek, Mich.

### STEADIER FROGS

If a little melted paraffin is poured in the bottom of a flower bowl and the frog pressed firmly into it, the frog will not slip around, and longer-stemmed, heavier flowers may be nicely arranged. MARY F. DONER, Seattle, Washington.

### NEW USES FOR A 10c DISH DRAIN

Oblong wire dish drains from the "5 and 10" are one of my favorite housekeeping aids:

As a carrier for fruit jars, fruit, etc. to the basement.

As a toy basket.

Inverted over tender plants out of doors to protect against marauding cats and dogs.

To carry small washings to the line.

To gather flowers.

As a garden basket to carry trowel, gloves, seeds, bulbs, etc. MRS. M. K. ROGERS, Sacramento, California

### THE VERSATILE WRINGER

Perhaps some of the owners of electric washing machines with roll wringers have not discovered that ironing day may be relieved greatly of its labors by putting those wringers to a novel use. In our home we make a practice of taking all our bath and hand towels from the line just before

they are really dry. Sometimes, when they have become too dry, in warm weather, we sprinkle them a little. We fold each towel, lengthwise, twice. Then, screwing the rolls of the wringer tightly, we pass the towels through a couple of times, hanging them, then, on a rack to dry. For our family use we think they look well, and what we like best is that the freshness of the outdoor air is still in them. FLORENCE R. MUTTY, Bangor, Maine

#### IMPROVED RHUBARB PIES

An egg well beaten, added to rhubarb pies, will thicken the rhubarb and improve the taste. MABEL SWANSON, Flint, Michigan.

#### TREATING IVY

My small Ivy vines have never lasted though I purchased at frequent intervals the waxy and healthy plants for several years now. I flatter myself that I handled them with intelligence, yet they died. However, through experience I discovered a sure treatment.

I put the little pots in deep enough vases or small jardinières in which water can be placed to reach just to the bottom of the pot. The porous pot absorbs water as it needs it—no more, no less. As a result I have the loveli-

est of vines in my windows all the year around. MRS. EVA SHELLY VORIS, Dayton, Ohio

#### A KITCHEN WINDOW GARDEN

In gay enameled tin buckets, I grow chives, parsley, water-cress, and shallots in my kitchen window. They are as attractive looking as any foliage plant, and I always have a bit for flavoring or garnishing convenient. MRS. J. G. NELSON, Courtland, Miss.

#### MUSTY BOTTLES

To remove musty or stale odors from a vacuum bottle or any receptacle which has not recently been used, pour in a half cupful of vinegar and rinse well. MRS. ROGER SPRAGUE, Glendale, California

#### SNAP FASTENERS ON POTS AND PANS

Small holes in pans and kettles can be mended by placing an ordinary small snap-fastener through the hole and pressing tightly together with the use of a hammer. MRS. C. D. SITTLER, Omaha, Nebraska

#### WASHING OILY GLASSES

During my practise as a registered nurse, I discovered, that to wash a medicine glass, that a dose of castor oil or other oily medicine has been in, without using a cloth or touching your hands to the oily mess, simply take an ice cube from the electric refrigerator or any small chip of ice, put it into the medicine glass and set it in the sink under the hot water faucet, turn on the warm water and let it run over the ice in glass until the ice is melted. Like magic, your glass will be cleaned of the oil. MRS. J. S. BUSSY, R. N., Margaretville, N. Y.

#### START PLANTS ON THE WINDOW SILL

If you are one of those persons who never have luck with house plants try giving them a start on the window sill above the sink. The humidity which rises from the sink is beneficial to them. Besides, it lends a cheery note of decoration to the kitchen. P. M. GERWITZ, JR., Normandy, Mo.

#### BOBBED SWEET ALYSSUM

When in midsummer your Sweet Alyssum becomes straggling just "bob" it about one inch from the ground and you will have a beautiful compact "carpet of snow" until the frost comes. ZOIE FRYBERGER, Warsaw, Ind.

# VALSPAR PAINT SURVIVES BRUTAL THIRD DEGREE!

The Midget House was drowned and battered with water.

## Grilling Tests on Midget House Prove Valspar is Weather-Armored Paint

VALSPAR PAINT on your house is literally a coat of armor against every kind of weather. To prove this we made a miniature house, painted it with standard Valspar house paint and put it through the "Third Degree."

### Water, Ice, Sun, Wind, Grit

We drowned the Midget House with water; we froze it solid in ice; we grilled it for hours in the most intense artificial sunlight, from the kind of lamp your doctor won't let you stay under more than 15 minutes at a time; we blew grit at it—like a desert sandstorm.

Inferior paint would give way, crumble, flake and peel. But the Valspar Paint on the Midget House came through bright, fresh, intact, ready for years of service. That's what *Weather-Armoring* does.

### The "Invisible Quart"

If you use Valspar Paint you get more coverage and far longer life—it's like an extra quart in every gallon—an "invisible quart" of long-run economy.

Your house stays painted for years longer. That's why it is true economy to specify Valspar *Weather-Armored* Paint. It's economy, too, to engage a Master Painter. Valspar and a good painter are an unbeatable combination.

Caked in Ice . . . the Weather-Armored finish did not split or crack!

Grilled in Artificial Sunlight . . . not a sign of weathering. Colors undimmed!

Stormed in Grit . . . no breaks, no mars, no scoring of surface.

## How to Have a COOLER Home This Summer

### At Amazingly Low Cost—

Blistering hot days are near—days which endanger health and vitality. Have a COOLER house this summer. It is simple, and amazingly inexpensive. In a few hours, any carpenter can apply BALSAM-WOOL Blanket Insulation to your attic floor or rafters. Then you'll stop sweltering heat at the roof line—keep it outside!

Insulated homes are comfortable homes the year 'round. BALSAM-WOOL is the modern insulation—water-proof, wind-proof, vermin-proof, non-settling and highly fire-resistant. We guarantee satisfaction; your lumber dealer sells the material. Mail the coupon NOW for full information.

**DOMESTIC  
HOT WATER**  
*all Summer*  
FOR AS LITTLE AS  
**\$5 OR \$6**

**AUTOMATIC  
HOME HEAT**  
*all Winter*  
AT SAVINGS AS HIGH AS  
**40%**

Have an abundance of piping hot water all summer long for as little as \$1.63 a month. Then, with the first chilly day of autumn, start enjoying automatic home heat. In addition to continued low hot water costs, you can also save up to 40% on fuel bills. Delco-Heat Boiler makes both of these amazing economies possible.

Completely automatic, built from the ground up as one compact unit, Delco-Heat Boiler harmonizes the famous Delco-Heat principle of burning lowest cost domestic fuel oil with a super-heat-absorbing boiler. All available heat is distributed into the rooms at remarkably low cost.

Now offered at the lowest price in all Delco-Heat history, Delco-Heat Boiler may be financed under N.H.A. terms. Pay nothing down. Take up to 3 years to pay. Summer is the best time to install Delco-Heat Boiler. All work is done without inconvenience to you.

Backed by Delco Appliance Corporation, General Motors' subsidiary, sold by a responsible local business man, you can install Delco-Heat Boiler with complete confidence.

## Dish gardening

Blossom Thomas

DISH gardening is a fascinating pastime that has been enjoyed in this country for a comparatively short time. In Japan, it is considered one of the fine arts and many of their people are skilled in making them.

Usually the garden scene is inspired by the main feature to be used. Very often this is a miniature figure. It has to be taken as the keynote and everything else must be kept in proportion to it. One object out of proportion can make the whole scene absurd. This is an error, however, that most of us will make unless very careful. To find attractive miniature figures is sometimes quite a problem. One who is clever in using his hands may model and paint his own by the use of Moldolith, a self hardening clay. Figures, in any case, should be used with discretion. Too many of them tend to detract rather than add interest to the scene.

The next most important thing to be considered is the container, which acts as the frame of the picture. It is safer to use something neutral in color and plain in design, then you are free to use any colors you wish in the garden. On the other hand, a very good effect may be obtained by using a brightly colored dish and repeating the color in the garden, either with figures or with plants. Never use a baking dish as a container, for no matter how it is painted or camouflaged, it will still look like nothing more than a baking pan.

The woods scene which you see illustrated here is made in a dull green pottery bowl. This is the most satisfactory color and shape of any that I have ever found. The pool in this dish is constructed of cement, made of two parts sand to one part cement and a little black coloring. The entire back side of this pool or stream is formed by a moss covered rock, held in place by the cement. The split rail fence is made of pieces of an old weathered chip. The huntsman is the main feature of interest in this scene and the little man's red coat adds just the touch of color that is needed.

The other garden we have illustrated here represents just the corner of a cottage garden. It is made in a little wooden chopping bowl painted white to match the picket fence.

**Procedure:** 1—Arrange all materials to be used and things to work with on a table. The necessary implements are: (a) A pair of small tweezers to be used in picking up and placing small plants; (b) Small sharp knife to

## VUDOR Porch Shades

VUDOR Porch Shades enable you to immediately transform your porch into an ideal out-of-door living room protected from the heat of the sun, secluded and comfortable.

The ventilator at the top of each VUDOR Porch Shade promotes a constant circulation of fresh air.

VUDORS are all made in beautiful, permanent oil colors and give distinction to any porch.

Write us for printed matter in colors and name of your local dealer.

cut moss; (c) Small scissors to clip plants and moss; (d) Very small hairpins to hold moss and plants firmly in place; (e) Wire clippers to cut hairpins and wire.

2—Melt paraffin wax and spread over inside surface of bowl.

3—Paint bowl outside and let dry thoroughly.

4—Put few ashes or small pebbles in bottom of bowl for drainage and sprinkle with little sulphur to prevent molding.

5—Put layer of good garden soil on top of ashes, at least one inch thick.

6—Lawn: Flat growing moss makes a very nice lawn. Moss with longer nap may be used if clipped short and smooth to give effect of well kept lawn. Or seed of a very fine grass may be planted after the flower beds are laid off. As soon as it is firmly rooted, it may be clipped short. A spray should be used for watering.

7—Place little fence at the back, forming a right angle. The fence is made of flat toothpicks, pointed at the top by clipping with scissors. To make it the desired height, the little palings may be cut off at the bottom. The top and bottom rails are made of swab sticks and the toothpick palings are fastened to them by means of a very fine wire which comes on spools. The gate is also wired on to the fence so that it can be opened and shut. The fence, of course, is painted white too. It is held firmly in place by the use of hairpins stuck behind and between the rails.

8—Cut the shape of the flower beds with a little knife: Scoop out the moss or grass and fill the beds with black soil.

9—Plant the beds, using red Lichens and little cup-shaped ones for flowers. Little sprigs of Sedum are used in this one for foliage. They will put out roots and the plants will need to be pinched off as they grow too tall.

10—Use little Redcedar seedlings behind the fence as trees, planting them firmly in the soil so they will live and grow. Use little bushy plants and long-napped Moss around the seedlings, anchoring them with hairpins to hug the trees up close to the fence and to give a finished and neat appearance to the back of the garden arrangement.

11—The birdbath was modeled of clay, but an equally effective one may be made of a golf tee painted white.

12—Tiny little pieces of gray slate are used for the flagstones. A bit of the moss should be clipped out from under the stones so they can fit down in, giving the appearance of real stepping stones with grass growing between them.

After this, the garden is finished. In order to keep it fresh

# Savory secrets from diplomatic tables

## VI. Japanese secrets

Gretchen Smith

THERE is nothing more mysterious to the Occidental than the culinary methods, the strange, delectable dishes, and the house-keeping customs of the Orient. Every American at some time, has enjoyed the wonderful, flaky rice with noodles and delightfully flavored sauces, the crispy, golden rice cakes and the fragrant, aromatic tea of Japanese or Chinese chefs, but the recipes for these dainties, as well as many of the ingredients used in their concoction, remain as deep a secret to the uninitiated as the ancient and honorable processes of making satsuma or lacquer.

No more valuable contribution was passed to this table of savory secrets than the recipes of a delightful little lady from far away Nippon. As the wife of a member of the Japanese Embassy staff, Mme. T— is in every sense a diplomat, having mastered the languages of the countries in whose capitals her husband serves his country, and through her linguistic knowledge, has done much to cement a friendly bond between her country and those countries which she visits.

Even to the foreigner who has lived in Japan, many of the domestic habits are unknown and all those little bits of information dear to the feminine heart, "what do they eat," "how do they do their marketing," etc., remain veiled in the mists of the unknown.

Glimpses into the everyday life of domestic Japan are offered in the words of young Mme. T—:

"In the ordinary Japanese homes, the cooking is usually done by a female servant assisted by the housewife. It is not always necessary to shop for the vegetables, meat, or fish, as order-takers come to the house regularly every morning.

"The fish man, with his fresh fish in flat wooden boxes hanging from both ends of a pole balanced on his right shoulder, is the first to call us with his merry good morning. Next, comes the vegetable vendor, then the meat shop boy, and, after him, the small *kozo* (apprentice) from the shop that sells provisions like *shoyu* (soya bean sauce) sweet flavored wine for flavoring, sugar, etc. We close the kitchen door, only to be called back again by the shrill whistle of the bean curd seller. The bean curd is made

from the soya bean and is said to have the same nutritious qualities as the egg.

"In Japan when we buy meat, chicken, and fish it is all prepared for cooking. The meat, if desired, will be sliced by hand into thin slices suitable for *sukiyaki* (the recipe for this popular dish is given among the recipes), bones of the chicken will be picked clean and the meat sliced into required length, and the fish will be prepared in any way we desire.

"The breakfast of an ordinary family consists of miso soup, eggs cooked in different ways, beans cooked in sugar, pickles, and rice.

"The lunch consists of a clear soup, fried fish or meat, some boiled vegetables, pickles, and rice.

"The dinner usually consists of five courses or more. These are placed on an individual tray and served at the same time. An ordinary menu would be as follows for about six persons:

- Suimono* (clear soup)
- Osashimi* (sliced raw fish—boiled vegetables)
- Fried or boiled fish or meat
- Osunomono* (salad)
- Chauanmushi* (thick soup)
- Pickles
- Rice

"There are, of course, a great many restaurants and tea houses serving rare dishes fit for any gourmand but I should like to tell of the houses which specialize in foods eaten every day by the ordinary citizen of Japan. All the shops will deliver these foods on short notice, piping hot. Perhaps that is why calling is not restricted to the hours between four and six. One may expect guests at any time in the morning and at meal time.

"Perhaps the most famous food specialty shops in Japan are the *Unagiya*, or eel shops, which specialize in serving slices of broiled eels dipped in sauce made of *shoyu* (Japanese wine) and sugar. Rice is served with this dish. The fame of these houses is sustained by the sauce, made from *shoyu* and other flavorings, which is served with the eels. The sauce is kept year after year and new ingredients added from day to day as required, and boiled over again and again.

"During the great earthquake of 1923, it is said that the proprietor of an eel shop fled, not

The Radcliffe Tray, 6 7/8 in. x 9 3/4 in. \$2.00. Just right for a few cocktails, for serving the cream and sugar. A dignified card tray for the reception hall.

# TALL TREE FERNS OF HAWAII

So graceful and lovely... cool  
and refreshing as a tall glass of  
DOLE HAWAIIAN PINEAPPLE JUICE

TO STROLL through the famous tree ferns of Hawaii is a rare experience. Perhaps some day it will be your privilege to enjoy it. However, in the meantime you can revel in a truly Hawaiian delight by drinking DOLE Pineapple Juice. It is vacuum-packed by the exclusive DOLE Fast-Seal System; thus, the original goodness of the pure unsweetened juice of sun-ripe DOLE Hawaiian pineapples is brought to you.

You get the important vitamins A, B, and C. The digestible fruit sugars. The alkaline reacting minerals which tend to offset acidity caused by other foods. Order a week's supply today from your grocer. Then let the family help themselves to this grand Hawaiian drink. Hawaiian Pineapple Co., Ltd., Honolulu, Hawaii. Sales Offices: 215 Market Street, San Francisco, Calif.

 **DOLE**   
PINEAPPLE JUICE

with money or jewels, but with the basis of his sauce, which had been in his family for sixty years."

Hearing Mme. T— tell these interesting items about the strangely different dishes and dining customs of her native land, the American housewife is forced to sigh with envy at the thought of shops which may be called at a moment's notice and send over a piping hot dinner for unexpected guests who may have "dropped in" at the luncheon hour.

Any traveler in Japan is familiar with the little square wooden boxes, filled with the flaky rice as prepared by Japanese cooks, which may be purchased at any railroad station for picnic meals at any hour, for rice is to the Japanese what potatoes are to the Irishman or American. Therefore it seems particularly appropriate in whispering a few of the culinary secrets from far away Japan, to tell first how the Japanese cooks prepare rice.

## RICE

3 cupfuls of rice  
4 cupfuls of water

Wash rice in cold water several times until water is clear. Then put in saucepan with a tightly fitting lid and place on a high flame. When the water begins to boil, turn the flame down to medium. In about five minutes, turn flame still lower and let cook for about ten minutes. Then turn off flame and let pan remain on stove for about 20 minutes without removing the lid.

## VINEGARED RICE

6 cupfuls rice  
8 cupfuls water  
¼ cupful vinegar  
½ cupful water  
½ teaspoonful salt  
1 teaspoonful sugar

Boil the rice according to directions given above. Empty the rice into a flat container and while fanning the hot rice, mix in the seasoned vinegar.

## SAUCE

(Served with seafood or noodles)

1 quart Japanese soup stock, seasoned with saki or wine  
2 teaspoonfuls ajinomoto  
1 teaspoonful salt  
16 tablespoonfuls shoyu sauce  
1 tablespoonful sugar

The above ingredients are allowed to simmer slowly together and the sauce is served very hot. Plain boiled noodles served in a deep bowl over which is poured this sauce, is one of the favorite dishes served in the noodle shops, which are among the food specialty shops of Japan.

## TEMPURAYA (Fried seafood)

Shrimp  
Panfish or sea eels  
1 egg  
1 tablespoonful flour  
Sesame oil  
Noodles  
White radish

Break one egg in a bowl. Stir slightly. Add one heaping tablespoonful flour. Pour in the flour slowly and stir at the same time as much water as the liquid contents of the egg. Flour can be added if needed. If the batter does not run off a spoon, it is the right consistency. Do not stir the batter too much or the fried food will be heavy.

Dip the seafood in this batter and fry quickly in hot sesame oil. Any vegetable oil can be substituted. They are eaten with a sauce, which is also served with noodles, and fresh grated white radish.

## CHAWANMUSHI (Thick egg soup)

1 quart water  
4 tablespoonfuls shoyu  
⅓ teaspoonful salt  
1 teaspoonful ajinomoto  
4 eggs  
6 slices chicken  
6 portions cooked spinach  
Mushrooms, if desired

The eggs are beaten up and added to the soup made from the other ingredients. The entire mixture is allowed to simmer over a slow fire for 20 minutes.

## SUKIYAKI (One of the most famous national dishes of Japan)

2 pounds of sirloin or tenderloin of beef, sliced into pieces about three inches long or shorter  
6 bunches spring onions, sliced diagonally into one-inch pieces  
1 can shirataki paste of arum root  
Shoyu sauce  
Wine  
Chicken soup

Other vegetables like spinach, celery, and yellow onions can be added. The above ingredients are cooked in a skillet with shoyu sauce and sweet flavored wine. Chicken soup stock can be used to dilute the shoyu sauce in which to simmer the meat and the vegetables. Allow all the ingredients to cook until the vegetables are thoroughly cooked.

[Note: All the Japanese sauces and seasonings given in these recipes may be obtained in Japanese specialty shops.

Previous articles on savory secrets from diplomatic tables appeared in the following issues of the magazine: I. Italian, September, 1934; II. Swedish, October, 1934; III. French, November, 1934; IV. German, April, 1935; V. Mexican, May, 1935.]

## Dish gardening

*Continued from page 70*

and lovely, it should be placed in a spot where it will get some sunshine each day, and watered regularly. If this is done, it will live indefinitely and be a great source of pleasure.

Dish gardens make a very nice feature for flower shows. If they are cleverly made, they will always attract a great deal of attention and interest. One which I have put on exhibit was very similar to the one which I have just described. It was made on such a small scale that I attached a reading glass to the dish so that it might be examined more closely. The scene represented a geranium bed in the planting. The little white fence was used as a background, just as in this one. The beds were filled with sifted black dirt and were about half planted with red geraniums (red Lichens with little green foliage). Sticking in the dirt beside the last plant was a tiny trowel. Beside the trowel was a geranium in a pot, the next to be planted. Out on the grass plot was a tiny wheelbarrow, holding three more pots of geraniums. The pots were made of tile colored pencil rubbers trimmed with a razor blade into the shape of flower pots.

There is another value in making miniature gardens other than the pleasure that is derived from it. If you are thinking of starting a real garden, or of making a change in the one you already have, try working it out first in miniature. In this way you will know whether your plans will give the desired effect and also avoid making mistakes that might take weeks of hard work to rectify.

Then, too, it is such a satisfaction to see in a tangible form what you have only visualized before. You will find this interesting as well as profitable.

After becoming engaged in dish gardening, you will be surprised at your ingenuity in designing scenes. The subconscious mind is always alert in observing small things that suggest original pictures for reproduction.

If you find it difficult to get materials from the woods, numbers of them may be found at nurseries which specialize in rock garden plants. For trees, of course, the real Japanese dwarf trees are best. They resemble large old oaks with spreading branches and tiny leaves. If these cannot be obtained, there are others that make good substitutes. For instance: *Lonicera nitida*, *Hypericums*, small *Azaleas*, dwarf *Rhododendrons*, and one that is exactly like a tree is *Erica compacta nana*. All the small *Sedums* make satisfactory plants because each little piece puts out roots when pinched off and stuck in the ground. The nurseries, however, afford a wide selection of other plants suitable for miniature planting, such as: *Mentha requieni* (has a dense green foliage with tiny lavender flowers), *Bellis perennis* (small white Daisy), *Lithospermum prostratum* (deep sky-blue flowers), and many others both with and without flowers. The number of plants used would depend on the size of the garden, but it would not be possible to use many in a very small garden, so the cost would not be great even though all the plants came from a nursery. However, it is such an interesting pastime and the finished product is so gratifying that the cost, whatever it is, seems trivial.

*Photographs by the author*

At right is shown a corner of a cottage garden with little picket fence, bird bath, etc. Below is a woods planting showing figures of dog and horse and rider

# Mother!.. WHY DON'T YOU EVER MAKE JELLY... LIKE BOBBY'S MOTHER?

SHE THOUGHT SHE COULDN'T UNTIL —

BILLY SAYS YOU MAKE JELLY... AND IT'S WONDERFUL! I WISH I KNEW HOW TO MAKE IT!

AS EASY AS THAT? I'LL GET SOME CERTO TO-DAY

**NEXT DAY**

ADD CERTO — AND BOIL ONLY ½ MINUTE!

Just the thought of making jelly frightened young Mrs. Martin. She remembered the long hours her mother spent over the preserving kettle . . . stirring until her jelly reached the jelling point. And often, even then, she had a failure!

How different with Certo! Following the simple Certo recipe, she just brought her fruit juice and sugar to a boil . . . added Certo at once . . . brought to a boil again, and boiled hard exactly ½ minute . . . Then quickly took the kettle off the fire!

ALL DONE . . . AND SO QUICKLY!

JUST THINK! 11 GLASSES FROM ONLY 4 CUPS OF JUICE!

How easy that was! Mrs. Martin's jelly was all made, skimmed and poured in less than 15 minutes after she had her juice ready! Jams are just as easy . . . And with Certo *any* fruit (even strawberries and pineapple) makes perfect jelly or jam.

With Certo you get half again more glasses, too, from the same amount of juice. (With that short boil, none of the juice boils away.) The flavor is finer for this same reason . . . just like the fresh fruit itself. The color clearer, more sparkling!

## WHY CERTO MAKES JELLY MAKING SO EASY!

CERTO is just natural fruit pectin . . . the jelling substance in fruit.

Fruits vary in the amount of pectin they contain . . . Many don't contain enough to make them jell. When you use Certo, with the special Certo recipe for each fruit, you are getting just the balance of pectin, sugar and fruit juice needed for perfect jam or jelly. You can buy Certo at any grocer's. It is a product of General Foods. © G. F. Corp., 1935

**COOKS FASTER  
DIGESTS FASTER  
THAN CORNSTARCH  
OR TAPIOCA PUDDING**

This delicious Royal  
Chocolate Pudding is made  
with healthful arrowroot

ONLY 5 MINUTES—that's all you need to cook Royal! And you have a smooth, creamy pudding that digests much faster... easier... than cornstarch or tapioca pudding.

You see, the base of Royal Chocolate Pudding is arrowroot—a superfine form of starch that cooks quickly. When it comes to a boil, it's fully cooked... completely digestible. Free from all trace of "starchy" taste and raw lumps.

Best of all, Royal Chocolate Pudding tastes homemade!

So why bother with old-fashioned methods? Save yourself that long cooking over a hot stove... that melting of chocolate... that pile of dishes to wash up.

Your children will benefit by the wholesomeness and easy digestibility of Royal Pudding, and the whole family will love its fine homemade flavor.

The bride  
becomes a wife

Beatrice Clark Campbell

How wonderful it would be if, by some feat of magic, when the sweet and happy bride was gaily swooped over her own threshold, she instantly became the most cheerful and competent of housewives! But alas! The transition from orange blossoms to orange juice is not always so easily accomplished. Unless given a guiding hand, the new bride is very likely to feel that the foibles and idiosyncrasies of the late boss are as naught compared to the intricacies of managing a home and concocting appetizing meals from the family larder, or that translating a page from Cicero is preferable to solving the jargon of the modern cookbook.

Much too often the young husband is dismayed to find that his cheerful companion of pre-marital days has suddenly become irritable, exhausted by attempting too much in one day. The solution of this problem is the household schedule. Remember always that there is more to being a good wife than just being a good housekeeper! If your husband wanted only a good housekeeper, he'd have hired one, not married you! Arm yourself with a nice long sheet of paper, a good pencil, and a handy watch or clock. Are you ready, little bride? Here we go on your own particular schedule. List all the daily tasks such as washing the dishes, making the beds, and going over the rooms. For a few days keep your eye on the clock and jot down the amount of time required for each task. Check up on yourself and see if you can't shorten the time and still do the task thoroughly. Maybe you need to change the order to save steps or perhaps you can save time by having your equipment at more points in the house. Next do the same with the weekly cleaning such as the laundry and ironing, the silver, and the thorough cleaning of all the rooms. Now we come to the most exciting part, the putting together of the plan. Set a definite time to be finished. Shall we say twelve o'clock? Fit your weekly tasks into your daily schedule so that they will be well distributed over the week. The rest is up to you. All I can say is this: Be sure to have a good eraser on your pencil, develop a grand sense of humor, lots of perseverance, and before you know it you'll have a time-saving, absolutely smooth-running household.

During your first weeks as a housewife, learn to be an amateur mechanic! Nothing is more pro-

**NEW  
IRONING  
COMFORT**  
FOR ONLY \$39.95\*

*"It's simply miraculous,"  
women say.*

Here at last is the perfect home ironer that anyone can use—at a price anyone can afford.

Off your feet on ironing day at last! It's really fun to sit comfortably and feed the clothes to this wonderful THOR.

Anyone can do flatwork—the long tiresome part of the ironing—the first time the Thor is tried, and in less than half the time.

Try it!—at your Thor dealer's. Name and address of nearest Thor dealer on request.

\*Slightly higher at far distant points. Approved by U. S. Gov't for FHA loans.

Starch."

voking than blowing a fuse and neither knowing the location of the fuse box nor how to install new fuse. It's as bad as running out of gas ten miles from a filling station and on a little traveled road. Your equipment will serve you much more efficiently if you know how to oil and care for it correctly, and knowing how to fix the broken wires in a plug will sometimes be as balm to a ruffled spirit.

Now for the most fun of all for the new bride: meals and menu making. Plan your menus several days or if possible for a week in advance. In so doing you can have greater variety and be much more economical. Plan to have food carry over from one menu to another, for example: a can of sliced pineapple can be put through its paces by appearing as a garnish for the meat course if broiled, the basis of a salad later in the week, and what remains could be chopped and added to a fruit cup for breakfast some day. Keep a file of your favorite menus, then arrange them in weekly units and before long you will have only to alternate your weeks.

For breakfast, set your table the night before with your gayest cloth, arrange the bowl of fruit or flowers for the centerpiece, and now that's off your mind. Are you having grapefruit? Very well, prepare it, sprinkle it liberally with sugar, and cover it with a "night-cap" of Cellophane or waxed paper and put to bed in the refrigerator. Oh, you're having fruit juice? Well, if it's of the canned or bottled variety be sure it's set to chill or if it's to be orange juice have the juicer and glasses set out ready for instant use when you greet your sunny kitchen in the morning. Cereals are usually of the packaged variety and even the most inexperienced of brides can hardly go wrong there. If you're a muffin family, mix the dry ingredients the night before and have your oven regulator all set, but if you lean toward crispy waffles, they may be completely mixed and stored in a covered pitcher or jar. Coffee can make or break an otherwise happy home so be sure to get a good brand, have it always fresh, and the water fairly leaping from its metal prison. If you're at all timid about your ability as a coffee-maker you'd better try a drip-olator. For bacon, crisp and crunchy, flatten it with the back of a broad knife and broil, or if you're loyal to the frying pan be sure to start the bacon in a cold pan, pour off the fat frequently and drain well on paper towels. Eggs can be boiled to perfection if a timer is used but be sure the water is really boiling before you start to time them. Have you seen

**KALAMAZOO VEGETABLE PARCHMENT CO.**  
PARCHMENT (KALAMAZOO COUNTY) MICHIGAN

the poacher with four square sections tailor made for a slice of toast? Simply butter, break in the egg, set in the pan of boiling water, and there you are.

Dinner is the crowning event of the day and should be well-endowed with quiet, beauty, and charm. Be your own best guests at dinner and use your loveliest china and linen. Too many brides hoard their nicest things for "company" and some day awake with a start to find that they are out of date and are a liability instead of an asset. Remember too that you probably won your husband under the flattering glow of candles and that no matter how low the budget they can still do magical things for you at your own table.

Now for the practical business at hand. Prepare as much of your dinner as possible in the morning. Desserts can very often be made, biscuits of prepared flour can be made ready for the oven, vegetables prepared, scalloped dishes and à la kings cooked ready for a final heating and salad greens washed and set in the refrigerator to chill.

**Menu terms**

À la—According to the style of a standard vogue; à la française, in the French way.

À la Carte—Foods prepared to order—each dish priced separately.

À la King—Foods served in a white cream sauce which contains mushrooms, green peppers, and often pimientos.

À la Mode—Usually refers to ice cream served on top of pie, but may be other dishes served in a special way.

Ambrosia—Cold dessert of bananas, shredded cocoanut, and oranges.

American fried potatoes—Boiled, chopped fine, and sautéed brown on both sides.

Anchovy—Small fish of the herring family.

Antipasto—Mixture made of tuna fish, mushrooms, and pimientos.

Aspic—Clear meat or poultry jelly.

Au Gratin—Sprinkled with cheese and baked brown.

Baked Alaska—Brick ice cream on sponge cake covered with meringue and quickly browned in the oven.

Bar Le Duc—Famous jam made of red currants.

William Longyear

HERE is a compact, practical potting and sorting table for the gardener. There are no legs to build and no joints or fittings to complicate the construction of the bench illustrated. A half dozen tools, a few boards, and the two barrels "join hands" in the final result, as you see.

This is the type of table which may be fitted into a corner of the small, one-car garage; in the cellar at the foot of the outside stairway. If there is room for one or more barrels there is ample space for this table.

First, secure the necessary number of barrels. While they are not as easy to obtain as in the past, inquiry at local stores will lead to the supply. The type of barrel does not matter as much as having them the same height. Dealers in electric refrigerators dispose of excellent shipping cases which will serve in place of the barrels. These cases are usually burned and as they are so well made demolishing them for firewood is not practical. Place the barrel or case in position against the wall and it serves as a support for the

table top and also as a bin for chemical fertilizer, cement, peat moss, and a number of other dusty products which should be kept in closed quarters.

An ordinary barrel is the right height for the table so automatically determines this measurement. Next secure a number of boards. Tongue and groove make the best back board and top as it is cheap and tight. Measure the width and length of the top and back boards and determine the amount of lumber needed. These are joined together by cleats.

Lay the top board on the barrels and nail the back board to the wall, the lower edge of it meeting the table top. Six-inch strap hinges permanently join these two and still give access to the bins below. A hook and screw eye hold this top up if desired (see illustration).

The top of any work bench should be kept clear and ship shape. A shelf just above the table top takes care of miscellaneous tools and materials. Ordinary shelf brackets support this ten- or twelve-inch board.

 SPECIAL APARTMENT FLOORS FOR PERMANENT GUESTS

The back board will hold small tools as shown. These should be carefully arranged and then supported in place by large projecting nails. Hold the tool against the wall, trace around it with a black carpenter's pencil, and place the spikes in such a position as to hold the tools. The tracing will show you and others where the tool belongs.

A word about the garden schedule which may be tacked to the back board! Each amateur gardener develops his own technique and schedule of doing annual garden jobs. Different localities suggest varied time for spraying, fertilizing, lifting plants, etc. A large piece of white cardboard or the back of a show card will serve. Rule this in columns leaving a few extra for future ideas. Head the columns according to your needs and letter in the dates with a coarse black pencil; letter the bins below at the same time.

Beside the barrels is a basket which I have found most useful. These shallow baskets are sold for garden purposes. A box (four inches deep) with a handle nailed across its center will serve the same purpose.

I have assembled the half-dozen most useful tools, a few plant stakes, and markers. These are always kept in one end of the utility basket and this basket is always with me as I work about the garden. Many trips to the tool house have been saved and many small jobs done on the spur of the moment because the tool was handy. The basket also serves as a receptacle for weeds or flowers which may be collected as one works along the border.

You will find the little time required to carry out these plans well invested.

**Colorado's yellow ladyslippers**

Lerah G. McHugh

A RANCH cabin situated 6,500 feet above sea level in the Rockies was the scene of a gay picnic party one day in June. The walk that followed the lunch was one long to be remembered. From the cabin we descended a steep hillside to a cold spring whose water formed the beginning of a stream which emptied, some miles away, into the mountain river.

We followed this stream with its gulches, beautifully green and abloom with many kinds of wild flowers. Then going higher into the shaded groves of Aspen and Spruce trees we came upon a colony of the Yellow Ladyslippers (*Cypripedium pubescens*). The dappled sunshine coming through the Pines was reflected on the

MOP-IT-ON The Varnish that Needs No Brush!

brilliant yellow of their moccasin pouched blooms and shining broad green leaves. We gazed spellbound upon one of the few remaining patches of these Slippers, where formerly many were to be found. Ruthless picking and uprooting has practically exterminated these rare plants, except in protected ranches such as this.

#### AND FAIRY SLIPPERS

Not far away was also found some of the Fairy Slippers (*Calypso borealis*), growing in the deep carpet of pine needles. Farther down the trail we again found clumps of the Yellow Lady-slippers, these growing in a more open meadow and along the stream. The cabin owner carefully dug up a few of these choice flowers and gave them to me. I took them to my town garden, 1,500 feet lower in altitude and prepared a new home for them in a protected place, with some shade and plenty of moisture. The bed was deeply spaded and made up of leaf mold, sand, good garden loam, with a quantity of pine needles added. Care was used not to set these plants too deep for, like the Peony, the Lady-slipper resents such treatment.

Their dainty blossoms have come each succeeding summer, while the plants have enlarged to good sized clumps.

In my wild flower beds I also have other Yellow Ladyslipper plants which originally came from Vermont and the Island of Mackinac, respectively. All have done surprisingly well in their new home, so different from their native habitat.

The plants are mulched with leaves and evergreen boughs during the winter and early spring. Division of the plants can be made in spring or fall.

The Yellow Ladyslipper may be used as a specimen plant in a protected situation in a rock garden, and supplied with adequate moisture and shade, or as clumps among other wildings. There seems no reason why these beautiful and attractive flowers should not be more extensively grown as they may now be obtained from many nurseries.

To find the little blossoms filled

with rain or dew drops in the early morning, before the sun has found them, or to observe an angry bee trying to extricate himself from one of the "slippers," are sights quite worth while.

## "Common sense for mothers"

by Mrs. John S. Reilly

(Literary Digest Books, Funk and Wagnalls)

MRS. REILLY has written a thoroughly practical book on bringing up children from babyhood through adolescence. With a much needed sense of humor and a lot of common sense, she points out methods to improve both children and parents so that both can live together in harmony. She gives the mother the dominant position in the home, and rightly too. There is no reason why a child who has not had time to acquire good judgment should run the family, as is often done in one form or another. The "will to fight" sounds very belligerent but without strength of mind to say what she means and mean what she says, the mother may lose the battle before she starts. A tiny baby knows just what it can get away with, never doubt that, and if it is permitted to do so, will continue this unfortunate start until its own life is upset for years, and sometimes forever. This is hard on the child when discipline would straighten out the matter. Mrs. Reilly does not give up after habits are formed but believes they can be corrected at any time if enough thought is given to it and of course plenty of "stick-to-it-iveness." Perhaps it will give the mother a hard time for a month or two but it will prevent years of unhappiness and the final judgment of the child against her, for not giving him the best training. Mrs. Reilly's ideas and methods show deep understanding and they evidently bring results, for she has seven children to prove them.—B. H.

## Garden facts and fancies

*Edward Barron*

IF YOU would add to your garden library there is no lack of temptation in the new offerings of the publishers this season. There has been a great accumulation of books for the gardener on my desk though one might think that almost every phase of garden activity has had its textbook or manual, yet the publishers are constantly adding to the output. There is a very definite tendency to supply a lower priced market which should really be a step in the right direction particularly where the objective audience is among garden amateurs who just garden for the fun of the thing and are not deep students of the different ramifications of science that bear in one way or another upon this growing recreation.

The tendency to supply a lower priced market is noticeable in price reduction of books that have standard value and are accepted reference volumes and without particular competition such for instance as Bailey's *Hortus* and Rehder's *Manual of Cultivated Trees and Shrubs*. The new editions appear at about one half of what they were originally. The Macmillan Company has also issued a 100-page supplement to *Hortus* covering the five current years including 1930. Both these books are practical plant dictionaries for the studious gardener.

To begin with the more practical of the newer books, Mr. Putz, following up his first success has given us *Another Garden Notebook* (Doubleday, Doran & Co.) which is simply a continuation of the manner of the earlier volume. Some little practical chapter about something to be done in the garden or with some plant—one subject for each week of the year; so, now with the two volumes there are two things to be done and about which you are very definitely shown how by the graphic line drawings.

IN A similar manner, from the same publishers, there comes *House Plants—Modern Care and Culture* by Mrs. Marjorie Norrell Sulzer, who abandons the idea of trying to show how you may, more or less painfully, succeed with a great multitude of plants in the modern dwelling house conditions and picks thirty of the toughest and most resistant plants that almost anybody can grow anywhere with a minimum of trouble and, after all, why not simplify the problem by picking out the easy things? There is a convenient monthly calendar and concise discussion of plants in Wardian or glass gardens.

In the broader appeal to the outdoor garden, as a whole, Mrs. Louise Beebe Wilder steps in once again with *What Happens in My Garden* (Macmillan). Like her other recent

books it is a gathering together of chapters of her experiences with particular groups and types of plants and written with the same subtle charm of word painting that characterizes this charming and yet thoroughly practical writer. Even though you do not want particularly to study the subject she treats, you will enjoy reading the language in which she expresses her thoughts and describes the progress of the plants in her garden. She begins with the Snowdrops in spring and runs through the gamut of the seasons. Naturally, Mrs. Wilder talks largely about what happens in her rock garden which occupies about one half the pages. From the lesser bulbs you are introduced to the little and the taller Irises, to the true blue flowers, the cream of rock garden Daisies, creeping plants for the rock garden. Silenes, Evening Primroses, Hollyhocks, the Shrub species of Rose, Thistles, Funkias, Mulleins, with a good measure of Honey-suckles, Clematis, and other shrubs. She describes feelingly a white garden that she saw abroad, and that will at once strike a sympathetic cord in the minds of many gardeners with whom color scheme is still a vital though not so acrimonious an issue as it once was.

MESSERS. Ortloff and Raymore who have collaborated together in several other practical books in which practice and design are artfully blended give us a new volume *Color and Succession of Bloom in the Flower Border* (Doubleday, Doran) and the double-barreled appeal ought to capture the sympathetic interest of a multitude of inquirers who perennially ask for "information" on just those points—continuous bloom and color harmony. Mr. Ortloff who is responsible for the text has achieved something really different in his presentation of the color argument. It is a book for the studious minded and is packed full of information and thoughtful analysis, even though it may be somewhat involved in the presentation. The style is somewhat confused but there is a fund of information for you if you want really to dig it out and then there are supplementary lists of plants which are always a sort of "royal road to achievement" for those who don't want to do too much thinking out for themselves.

SCRIBNERS' gives us a new edition of *Lady Martineau's Herbaceous Garden* which discusses the herbaceous garden mostly from the viewpoint of color effectiveness, the varieties and the plants themselves being entirely incidental to the picture as a whole. An English book, it is not to be adopted "in toto"

### "OHARA"—A Book of Japanese Flower Arrangements.

On a modern school of arranging flowers well suited to Occidental homes, yet with that restraint and dynamic simplicity characteristic of Oriental composition. This book contains 50 full-page beautifully colored illustrations accompanied by brief English text. Bound in album style with green silk covers, 6x9 inches.

\$2.00 net. Add 15¢ postage.

An attractive booklet A2 on containers, tools and holders for Japanese arrangements will be sent upon request.

NEED THE PROTECTION of

## Wilson's O. K. PLANT SPRAY

It will safeguard your roses from insect damage . . . will not discolor blooms or foliage. Invaluable for all types of flowering plants as well as ornamental trees, shrubs and evergreens. Your dealer sells O.K. or can get it for you. Used and recommended by officers and members Garden Club of America. Booklet (H) on request.

Andrew Wilson, Inc., Springfield, N. J.

without an intelligent interpretation. Mr. William Robinson, that fine old gardening champion, in a characteristic introduction has this to say of color schemes: "They need never be thought of if we take care to have good plants which, grown in the natural forms, do not need the considerations given to schemes of carpet gardening. People who make tiles and colored cottons and the advertisements which disfigure our streets, may have reason for thinking of semi-chemical laws of color, but in the garden the most beautiful color can only be got by natural ways." A sentiment with which I am entirely in accord. The color scheming obsession that has pervaded so much of our dilettante garden writing in the last few years, to put it somewhat baldly, "is just a headache." I think that Professor Waugh was quite right when he said that the color scheme of a garden, after all, was a green scheme and the flowers were merely accents.

Another English book in a lighter vein, designed to be useful to the amateur whose time is limited, *Week End Gardening* by Sterling Patterson (Macmillan) is good and entertaining reading—entertaining and informative at the same time, chats lightly clean through the year. It might well have borrowed the title of Mrs. Wilder's book, already mentioned, because it really more thoroughly covers the thought of what happens in a given garden. It is a kind of garden diary punctuated with practice and philosophy.

And, in somewhat the same manner, is *Everyman's Garden* by Max Schling (Macmillan) who has turned from his craftsmanship of floristry to chat intimately about a fictional suburbanite whom he calls Peter Martin who buys a place and awakens to a new joy of living in the discoveries and thrills he has over the problems of planting and keeping a garden. He plants, he builds a greenhouse and a summer house; he constructs a rock garden, he trains hedges, he does everything that every other beginner gardener does and Mr. Schling uses Peter Martin and Johnnie Garden, the experienced craftsman, as the vehicles to give some little bits of advice.

MORE intense and in its own way a masterfully comprehensive handbook or rural living is *Five Acres* (Greenberg). Mr. M. G. Kains has a wonderful knack of gathering together the essential factual matter of horticultural research from Experiment Stations, etc., etc. *Five Acres* is designed to help the man who wants to get out into the country and start all over again on an entirely new manner of living. The points to be considered in the selection of the plot, how to finance the venture, how to plant it and stock it, and how to make the soil yield a living to the owner make the theme. Mr. Kains is fully conscious of the actual problems of the proposition and gives an unvarnished and practical statement of what you may do, a discussion of the problems that are likely to arise and balances the "pros" and "cons." It isn't propaganda but a serious helpful volume of 360 pages of sound advice.

Two new books for the herb growers, presenting the subject of

## MANURED PEAT MOSS A Real Beauty Food FOR LAWNS AND GARDENS

A HEALTHY looking garden is always beautiful, but health comes only from the right kind of food.

Manured Peat Moss is nature's own plant food. It is droppings from poultry where peat moss was used for bedding. The moisture-absorbing cells of the peat moss release the nitrogen slowly without burning or leeching, placing a constant supply of essential nitrogen and other plant food elements in solution to make lawns and gardens thrive.

The Peat Institute of America has registered poultrymen in nearly every community who will gladly supply this inexpensive by-product. Mail coupon for free booklet and nearest source of supply.

Free VALUABLE FOLDER

herbs in a somewhat different manner from the previous comprehensive books of last season. The two books this year *Herbs and the Earth* by Henry Beston (Doubleday, Doran) and *The Physick Garden* by Edith Grey Wheelwright (Houghton Mifflin) may both be called more literary than dirt gardening although Mr. Beston does give some attention to the planting and growing of the crops—a little bit. He gives us the human side and the historical and romantic association of the herbs and the earth. It isn't a large book, 140 pages, but is written with real charm of manner and yet is also descriptive in a friendly way of the commoner herbs and is also largely practical. A gardener, poet, and philosopher describes and gives the history of his herbs.

EDITH GREY WHEELWRIGHT'S contribution is more official and treats largely of medicinal plants and their history—even their pre-history, is entertainingly argued. Written in England for an English audience it refers liberally to the English and European Herbals and catalogs in detail medicinal herbs and drugs, and their associated uses in English pharmacy. The book might well be called "a human side of herbs of the garden."

And here is yet another little herb contribution in danger of being overlooked because of its smallness—just thirty-two pages, *30 Herbs Will Make a Herb Garden* by Mrs. Helen Lyman from Oakland, California. It condenses to the almost irreducible minimum the most useful Herbs for everyday knowledge and how to use them.

As usual, the American Rose Society's Annual, prepared by Dr. J. Horace McFarland for the American Rose Society, came to us in the spring season just before the Roses began to grow. This annual visitor has achieved a practical utility that needs very little further description. Besides the few individual chapters on a multitude of topics touching on the practices of Rose culture, cultivation, pruning, etc., even to making rose soup, there is to many the far more useful in the long run section of the volume "The Proof of the Pudding" in which is the behaviorism of modern Roses as reported by many observers. Out of the multitude of counsel there is much wisdom and just as often just as much confusion, which adds to the gayety of Rose growing. There is always your own experience that may differ from everybody else's.

The New England Gladiolus Society has given us in its Yearbook *The Gladiolus* a rich piece of book-making bound in royal purple that looks like plush. To see it is to remember it, which is perhaps the object. In the manner that is characteristic of the annuals of various flower societies this is also a gathering together of comments, observation, criticisms of the chosen flower and discussion of the modern varieties. One interesting chapter is an index of selected list of articles on Gladiolus breeding, culture, uses of, etc., published since 1929.

And yet, another Rose book—and yet, not just that either—but a welcome addition indeed to the Rosarian's library is Mrs. Keays'

## A Better Lawn Sprinkler

Now RAIN KING, for 11 years the national favorite, comes with double water column and new patented nozzles which set instantly for any spray you want—fine, medium, coarse. Use it revolving or stationary as you need. Throws more water farther on the same pressure and spreads it more evenly. Attractive, 9 inches high. Columns, arms and nozzles of gleaming brass. Look for the name RAIN KING on the sprinkler you buy. Only \$2 at your dealer or write us, Chicago Flexible Shaft Company, 5697 Roosevelt Road, Chicago, U.S.A. 46 Years Making Quality Products.

## Fertilize as you water

WITH  
"FERTILMIST"  
Easier! Better!  
Costs less!

Fertilmist is a concentrated plant food that works wonders on lawns, gardens. Easy to apply with the Fertilmist sprayer.

**No Dust or Odor! No Burned Spots!**  
No hard work. Just put can of Fertilmist in the sprayer and attach to your hose. Fertilmist dissolves in water and sprays on evenly as you water your lawn. To fertilize plants, attach hose to top of sprayer. One can treats lawn 50 x 50. Two applications insure rich, evenly green lawn.

**Satisfaction or Your Money Back!**  
Fertilmist Sprayer and can of Plant Food sent COD or on receipt of \$3.95 money order. We pay shipping charge. Additional Plant Food, 30c can, \$3 doz. Sprayer is rust-proof, lasts years; makes an ideal lawn sprinkler.

TOQUET Mfg. Co., 34 State St., Westport, Conn.

3321 Elston Avenue, Chicago

## Electrimmer

IT'S FUN—NOT WORK!

Old Roses which is not only a nice piece of old rose writing but a nice piece of appropriate bookmaking with the illuminated title page carrying Redoute's wreath of old Roses that has been seen on some other recent publications. Mrs. Keays has made the study of old roses an acute interest for a number of years past and has headed a committee on Old Roses of the American Rose Society. These old roses, the Moss, the Scotch, Sweetbriar—the roses of poetry and ancient garden literature—not alone find their sympathetic treatment here; but the Hybrid China, Lady Banks' and others that take the lines of history back to the very beginnings of rose culture where is set the foundation of the rose interest of today and its change is completely traced. *Old Roses* is more than a mere study of the old forgotten roses. Mrs. Keays has hunted them in all parts of the country. She has revived discoveries of the old gardens of the South. She has traced the progress of the modern roses from its original sources which carry through the whole field of rose industry up to the most modern types but it is, after all, with a thought of keeping alive some of these old disappearing roses of sentiment—Maiden's Blush, the common Moss, the old Cabbage, that we talk of so much and yet see so little, Mrs. Keays has made her chief interest. A book for the rose student as well as the rose lover.

*THE Book of Garden Magic* by R. E. Biles (Garden Aid Co., Cincinnati) is a selection of chapters on various garden topics put together in a loose-leaf manner and gives selected references and excerpts from books, magazines, and other features in a comprehensive index and bibliography. It is a really quite rich fund of information about a multitude of routine details that the amateur dirt gardener usually manages to stub his toe over and here it is all gathered together for complete convenience and often with exceptionally good drawings.

The 1935 Annual of the English publication "The Studio," *Garden and Gardening* is again before us. A wonderful collection of actual garden pictures. The feature this year is a selection of portraits of gardens from all countries—a few are done in color. Mr. Clarence Fowler of the American Society of Landscape Architects contributes a stimulating and highly informative chapter on the decorative value of Ferns, of which the eastern part of the United States provides a great wealth of material available for garden use and particularly adapted to that ever-present problem of what to do in the shade.

You might hardly think it is necessary at first thought but, after all, it is a fundamental matter to the horticulturist and even to the ornamental plant grower—weeds and what to do about them. Weeds flourish with a too violent persistence in too many gardens and yet it may surprise you to find that it is a subject for a whole volume, *Weeds* by W. C. Muenscher (Macmillan). Most people's interest in weeds is to simply get them under control—down with them—but here is a book that not only gives their habits, control, and destruction but there is an elaborate guide by which you can trace down the identity of your enemy. The book is fully illustrated, contains 470 pages. Mr. Muenscher is Professor of Botany at Cornell and he certainly knows his weeds.

## New — DAFFODILS — TULIPS

Several hundred new Daffodils and new Ideal Darwin Tulips (these new Ideal Darwins are giants which are taking the country by storm), are just a few of the treasures to which our new bulb catalog is the key. Send for it.

The new Ideal Darwins give you at least two weeks longer blooming time. Lovely things, all of them, and immense in size. 40 or more are shown in full color in catalog.

The Daffodils are indeed unusual. Some exquisite. Others just plain beautiful. A few are weird and strange. 30 or more are shown in full color.

Bulbs for Naturalizing, rare kinds, as well as Standard sorts. All are choice. Rare ones are only obtainable from Wayside.

The Prices on all these highly desirable things are moderate. The catalog, believe you will agree, is quite the finest, most helpful import bulb book ever offered in America. It's yours for the asking.

Like the maid of long ago,  
Use Peat Moss in your garden  
And watch the flowers grow!

Perhaps you, too, have heard wonderful things about Peat Moss, but haven't tried it because you found them hard to believe.

It's amazing the way Peat Moss improves the soil—makes everything grow better. It lets plants breathe, makes the earth they grow in more porous and absorbent. Discourages weeds. Cuts down on water bills and labor.

But, be sure you get Premier vacuum cleaned Swedish Peat Moss—free from excessive dust, dirt and fibre. Its live, relatively undecayed cell-structure guarantees greater absorbency and more useful bushels per bale. Undecayed Peat Moss cannot cake—requires no labor to break up. Premier's careful processing insures finer and more uniform granulation. Mail coupon for new authoritative leaflet and dealer's address.

## Lacy lattice work

[Continued from page 26]

THERE are several kinds of wood that may be used for lattice construction. Pine, if it is painted before being nailed together, lasts well, but redwood is probably the easiest as it needs only a stain and even weathers beautifully when left unstained. Use galvanized nails or screws. Cypress is another enduring wood.

The trellis should be fastened two or three inches away from the wall, so that vines can climb around it and so it will cast a shadow on the wall, the latter adding much to its decorativeness.

### TRELLIS DESIGNS ILLUSTRATED ON PAGE 26

1. Well-designed lattice work is a decoration in itself but is still more effective when used as a support for vines or as a background for plants. The outer rectangular framework of this one is made of ½ inch by 1½ inch strips, while the inner portion of the design is made with ½ inch by 1 inch strips, the whole being stained with autumn brown.

2. Although appearing complicated, the spiderweb trellis is really quite simple to make. The wheel-like framework is made of 1 inch by 2 inch strips, each "spoke" being of a different length, the longest 7½ feet and the shortest 3½ feet. The "web" is made of ½ inch by 1 inch strips, nailed to the frame about 3 inches apart the vertical way and 1½ inches apart the horizontal way. The chief charm of this type of web-like design consists in its irregularity.

3. The fan design is the easiest of all to make and, although old-fashioned, it has the advantage of being the best shape for vines which remain small at the bottom while expanding at the top. Cut two 1 by 2 inch strips seven feet long and lay them edgewise, the lower ends almost touching, the upper ends diverging to a distance of two feet. Nail ½ by 1½ inch strips horizontally two inches apart. The vertical strips should be nailed on last close together at the bottom and spreading fanwise at the top as illustrated.

4. Interesting variations may

be worked out by combining different types of lattice work designs. The supports in this one being of the "ladder" variety are connected with a fan-shaped section at the top. Four 1 by 2 inch pieces seven feet long are used for the ladders and the fan is of ½ by 1¼ inch slats, the horizontal ones being nailed on 2 inches apart. The vertical slats are placed over these almost touching at the lower edge and spreading 3 inches at the top.

5. For breaking up large wall spaces, this simple trellis works wonders. This one was made in panels 3 by 8 feet, but may be made to fit any space. The foundation consists of two 1 by 2 inch strips 8 feet long, which should be laid edgewise horizontally on the floor. To these should be nailed ½ inch by 1¼ inch upright strips in pairs, each pair being spaced 5 inches apart. The horizontal strips should be nailed to the uprights, using the same spacing. The use of narrow strips in pairs 1 inch apart, gives a light airy appearance without losing strength.

## Plant orchids in your garden

[Continued from page 21]

from Canada to Florida and west to the Rockies. It, too, is small, seldom exceeding sixteen inches. It is a common wild flower and may readily be found in swamps and along the banks of small streams where its brilliant pink flowers gladden the early days of July. The flower, usually solitary, attains a height of ten to sixteen inches. There are one to three leaves and the plant grows from fibrous roots, not a bulb. Plant these roots about two inches below the surface and in the sun.

### A GROTESQUE LITTLE FLOWER

The Grass-pink Orchid (*Calopogon pulchellus*) is another little bog orchid of purplish hue. The grotesque flower has a tapering lip which is thickly covered with hairs of yellow, white, and magenta. Several blooms are carried on each stalk, accompanied by a single grassy leaf. June to July is the flowering period that may vary a little throughout this plant's range which is quite extensive—Canada to Florida and west to the Mississippi. The small bulb should be planted about three inches deep. It is an easy plant to grow, and each year the old bulb produces a new bulb to insure an unbroken line.

If, in your garden, there is a moist shaded spot where the soil is of rich lustrous black you may grow successfully some of the Fringe-orchids. They are larger and more showy than the little

Bog-orchids, and are just a little more particular where their feet are planted. In midsummer the closely-flowered spikes of bloom are an addition to any garden.

The yellow-green, lacinated flower of the Ragged Fringe-orchid (*Habenaria lacera*) is a common sight in New England. It grows to twelve inches and blooms in June or July. Its lack of spectacular color is made up for in part by its ease of culture.

Of more imposing stature and coloring is the Large Purple Fringe-orchid (*Habenaria fimbriata*). The flowering stalks of this orchid grow from one to two feet high and the blooms are very fragrant. It is quite easy to establish anywhere in rich garden soil that is partially shaded. *Habenaria fimbriata* has a smaller sister, the small Purple Fringe-orchid, which is similar except that it blooms several weeks earlier, lacks the fragrance, and prefers deeper shade than does the Large Purple Fringe-orchid. The flowers are also somewhat deeper in color.

#### THE SHOWY ORCHID

For general garden use it is difficult to find a more valuable little Orchid than the Showy Orchid (*Orchis spectabilis*). Two delightful blooms of fragrant white and lavender perch atop a six-inch stem which rises from between a pair of glaucous ovate leaves. Neutral soil pleases this April to June blossom and it makes a fine companion for the Maidenhair fern. Once established, the Showy Orchid will colonize rapidly and rear its welcome flowers in increasing numbers each spring.

While it is best to duplicate where possible the actual conditions in which these various wild orchids grow in their own habitats, it is surprising how rapidly they will adapt themselves to ordinary garden conditions. Some, indeed, seem to prefer their new home and give thanks in larger size or more prolific bloom.

### Colorful autumn borders

[Continued from page 39]

carmine, the entire effect is pink. Pink annuals for the border in fall:

Larkspur Giant Imperial (various shades and colors)—3 ft. Zinnias—2 to 3 ft. Snapdragons—4 in. to 3 ft.—pinch back to make bushy plants. Pentstemon gloxinoides—2 ft.—rose. Start early indoors. China Asters—1 to 3 ft.—Late Branching sorts for very late bloom. Petunia—1 to 2 ft. also trailing—June to October—massed foreground color, porches. Verbena—8 in.—July to November—should be started early under glass.

The pinks may verge at one end into deeper tones, though reds must always be handled with care. Most of the plants mentioned above also come in red shades. Frequently the pink border carries many white flowers, or may run through mauve to violet, purple, or blue. This purple group also foils the golden flowers well. Chrysanthemums may of course be had in any color except the blues, while Dahlias and Gladiolus come in lavender shades. Little known, but very striking if well placed, are the lavender and mauve Autumn Crocuses (*Colchicum*) that bloom without their leaves in September and October. They are from four to eight inches high, and considerably larger than those of spring. Fall perennials in white, violet, and blue include:

Boltonia—4 to 6 ft.—white, mauve—July to September—native. Azure Monkshood (*Aconite fischeri*)—3 to 4 ft.—blue—moist, rich soil. Michaelmas Daisies—2 to 4 ft.—September to November—Good to mass in poor soil. Cimicifuga simplex—3 ft.—white—September and October. Balloon Flower (*Platycodon*)—2 ft.—blue, white—July to November—

In 2 days

### MOLES VANISH

No traps, no messy disposal job. Quick, clean, easy method used by estates, parks, golf clubs. Punch holes in ridges. Fill with NOMOLE, chemically-treated mole food. They devour it, die. ## Have Lovely Gardens with Less Labor

### Astonishing Soil Sponges Capture Escaping Plant Food, Water Your Gardens, Promote Root Growth . . . .

THE DAY of garden magic is not over. You, too, can have a lovely lawn and beautiful blooms and with such ease your neighbors will envy you. The secret is Emblem-Protected Peat Moss, which promotes root growth, keeps soil porous and loose so that the air circulates, and the sunshine penetrates.

Every bale of this remarkable soil improver contains millions of tiny sponge-like cells that virtually absorb as much as 200 gallons of natural, life-giving moisture for thirsty plants. These sponges also suck in and store plant food in solution that would otherwise escape and be wasted, which gives you more value for your fertilizer dollar.

This amazing soil conditioner is sold under various trade names by high-grade dealers of horticultural supplies. Send for our interesting booklet, "Peat Moss for Lawns & Gardens," free test tablets, and name of your local dealer. All will be forwarded postpaid if you mail the coupon.

**LOOK FOR THE  
 P. I. C. TRIANGLE  
 AND SAVE MONEY!**  
 You pay more per bale for Emblem-Protected Peat Moss but it actually costs you less. Each bale is fully compressed, contains less air, more peat. The moss is of matchless quality, clean, uniform, and fully aged. Holds life-giving moisture longer, makes soil-building humus faster.

## Emblem-Protected PEAT MOSS

INTERESTING CORRESPONDENCE

MADE IN THE  
BERKSHIRES

sand—will stand shade. Eupatorium—18 in.—blue—September and October—full sun.

Fall annuals in white, violet, and blue:

Cosmos—3 to 5 ft.—white (also rose)—Late Double for fall. Salpiglossis—3 ft.—various, gold veined, purples very attractive. Larkspur Giant Imperial—3 ft.—purple-blue, various. China Asters—1 to 3 ft.—various colors—late types for fall. Ageratum—1 ft.—blue, lavender, white—June to November—edgings.

Sometimes Fuchsias, Heliotropes, or Geraniums are happily introduced into borders. One very attractive combination was planted around a large tree with the tall feathery pink Tamarisk for backing, and a massing of pink Snapdragons as the main planting. This was edged with Jersey Gem Viola, and accented with Fuchsia standards at intervals of eight feet. Another garden massed mixed Petunias in front of Tamarisk that was backed by coniferous evergreens. Japanese Anemones in both pink and white stand out against a background of young California Redwoods. Fir, Yew, Cedar, Hemlock, or Arborvitae would all give much the same effect. Along the country lane that skirts the shore to my home, Japanese Anemones make an entirely different effect nodding over a white picket fence. My neighbor pins his faith on massed Dahlias in every size, shape, form, and color; while Zinnias greet the fall for me, with here and there a tall Torch Lily, then massed Chrysanthemums of every type to carry on to swirling snows against the green of Holly and Fir.

### Four service booklets you will want

A NEW AMERICAN HOME service booklet is NEWS! Here is a foursome—good news quadrupled! Compiled by the Editorial Staff of THE AMERICAN HOME and reprinted from material published in recent issues, these booklets are full of information concisely presented.

MISS DE MUMM'S HOSTESS COAT BY HATTIE CARNEGIE DEMONSTRATES THE COOL ELEGANCE OF THE NEW PIQUÉS

## “Camels certainly make a difference—”

SAYS

### MISS MARY DE MUMM

IN NEWPORT, where she made her début, Miss de Mumm is one of the most popular of the smart summer colony, just as she is among the most fêted of the younger set during the New York season.

“Both in the enjoyment of smoking and in its effect, Camels certainly make a great difference,” she says. “Their flavor is so smooth and mild that you enjoy the last one as much as the first. And I notice that Camels never affect my nerves. In fact, when I’m a bit tired from a round of gaieties, I find that smoking a Camel really rests me and gives me a new sense of energy. I’m sure that’s one reason they are so extremely popular.”

People do welcome the renewed energy they feel after smoking a Camel. By releasing your latent energy in a safe, natural way, Camels give you just enough “lift.” And you can enjoy a Camel as often as you want, because they never affect your nerves.

*Among the many distinguished women who prefer Camel's costlier tobaccos:*

MRS. NICHOLAS BIDDLE, Philadelphia  
 MISS MARY BYRD, Richmond  
 MRS. POWELL CABOT, Boston  
 MRS. THOMAS M. CARNEGIE, JR., New York  
 MRS. J. GARDNER COOLIDGE, II, Boston  
 MRS. HENRY FIELD, Chicago  
 MRS. JAMES RUSSELL LOWELL, New York  
 MRS. POTTER D'ORSAY PALMER, Chicago
