A NEW GOODWIN RESEARCH DEVELOPMENT — NOW AVAILABLE IN
LIGHT RANGE
MEDIUM RANGE
DARK RANGE

The new Goodwin Greys' is an extremely warm grey wirecut face. The standard size units are produced by Des Moines Clay Company. Each of the three color ranges offers a distinct opportunity for special design effects.

A Reminder: Any brick in the Goodwin line may be ordered with the distinctive Rock Face feature.
The Plus Values of Creative Heating and Air Conditioning

Green Colonial quality heating and air conditioning delivers much more than the mere heating or cooling of the structure.

The plus values offered by Green Colonial quality are numerous. Luxurious quietness is assured because air delivery to each room is achieved without excessive velocity. Each installation is carefully regulated to assure the desired temperature in every room.

Such superior performance requires more than just a well designed installation. It demands the "after installation service" for which Green Colonial is noted.

The services of the Green Colonial Engineering Department are available to you for Creative Heating and Air Conditioning for homes, schools, churches and commercial installations.

There are over 400 Dealers and 15 Factory Representatives ready to serve you in Iowa.

GREEN COLONIAL INC. · DES MOINES 6, IOWA
Louvers give a new beauty twist to concrete curtain walls!

Precast concrete curtain walls have given Henry Ford Hospital an off-the-street parking structure that blends attractively into a residential area. 1,716 hyperbolic paraboloid panels, precast from white cement, white quartz and sand aggregates, form the unique walls. An intriguing visual effect is obtained from these louvers which seem to change shape and position, depending on lighting and angle of view. Practicality is everywhere. In the light, open feeling of the interior . . . in the enduring solidity of the concrete frame and floors. The versatility of concrete is today winning new appreciation as architects express fresh concepts in design.

THE COVER
Entrance area the Inter-Ocean Reinsurance Company, Cedar Rapids, Iowa. An Award of Merit winner in the 1962 Honor Awards competition of the Iowa Chapter, AIA. Designed by Brown, Healey & Bock, Cedar Rapids.

The "Iowa Architect" is published bi-monthly for the Iowa Chapter, American Institute of Architects, and mailed without charge. Appearance of names and pictures of products or services in editorial or advertising copy does not constitute endorsement of either the A.I.A. or this chapter.
To help you do bold new things with light
...Kalwall translucent walls

In creative hands, light is “a many-splendored thing.”

And with translucent Kalwall you can translate this “many-splendored thing” into design, most imaginatively and dramatically.

You get softly diffused light with Kalwall Translucent Walls — light that’s shadowless and pleasantly glare-free.

You also get great structural strength. For lightweight as Kalwall is (1.5 lbs/sq ft), it is so strong that no intermediate support is required. Shatterproof. Weather-tight. Available in panels up to 4' x 20', white or colored — with a choice of modern, functional patterns produced by aluminum grid cores. Write for details on this new way to “build with light.”

Honors to owners

Building owners and practicing architects joined student award winners in receiving honors at the 1962 Awards Banquet of the Student Chapter, A.I.A., at Iowa State University, April 16.

Robert L. Johnson was awarded the School Medal of the A.I.A., and Robert M. Lee was recipient of the Book Award from the Henry Adams fund of the A.I.A. Richard Kruse was awarded the Alpha Rho Chi medal.

Charles Burnidge, John Sharratt and Robert L. Lee were judged winners in that order on the basis of exhibits hung by fifth year students for judging by a team of members of the Iowa Chapters, A.I.A.

Stanford Griffith, son of Stanford Griffith, A.I.A., Fort Dodge, received the Durrant and Bergquist award; the Karl Keffer award was presented to Don S. Wheeler and the Leo A. Daly award to James Dwinnell. The faculty prize for sophomores went to James Lammers, and for freshmen to A. L. Bridge.

In the Iowa Chapter awards, made during the student program, Herbert C. Tucker and Ray Crites stepped forward to receive the Award of Merit plaques for the Tucker residence, Cedar Rapids, and Frank E. Fulkerson, representing the Inter-Ocean Reinsurance Co., Cedar Rapids, and E. H. Healey, Brown, Healey and Bock, received Award of Merit plaques. The awards were a result of the 1962 Honor Awards Competition of the Iowa Chapter, A.I.A., conducted in conjunction with the Chapter convention in January.

Dick McConnell received an Honorable Mention plaque on behalf of the firm of Crites and McConnell for the design of the Crites' residence.

Honorable Mention plaques also were presented to Boyun Platt, representing Iowa State University, and Jesus Artiaga, representing Brooks-Borg, for the design of the press box at the ISU stadium, and to Burt Livingston, representing the Maytag Co., and John Rice, representing Brooks-Borg, for the design of the Maytag Building, Newton. Presentations were by Iowa Chapter President Robert Savage.

The firm of Crites and McConnell also received plaques for the First Honor Award of the Fisher Community Center, Marshalltown, and another Honorable Mention for the Church of the Resurrection, Marion. Representatives of the owners of these last named buildings could not attend the banquet.

A. Quincy Jones, Jr., Los Angeles, Cal., was principal speaker at the banquet. Mr. Jones, noted for his architecture in housing, used a series of quad-mounted slides to illustrate his points.

Jim Bragonier, student, handled the m.c. duties for the bulk of the program, and Prof. Leonard Wolf, F.A.I.A. presented the student awards before a crowd that met size anticipations.
CHAPTER BUSINESS will be important, but will take a back seat to entertainment at the annual summer outing to be held August 3-4-5 at Davenport, it appears from the outline of activities submitted by Vice-President Doug Robison, who also is handling the chores of general chairman for the summer meeting.

Preliminary sketches of the weekend show an entry of a cocktail hour at 5 p.m. on Friday, dinner at the El Rancho Villa (which will be the meeting headquarters motel) and at 7:30 p.m. a bus will take architects and their ladies to the Quad City Musical Guild production of "Bye Bye Birdie."

Robison also says amateur guides will be available to lead "twist" and "stomp" devotees (or spectators) to such Rock Island night life spots as the "Yankee Clipper," "The Plantation," and others.

Saturday's program will begin with a chapter meeting at 10 a.m. and a noon luncheon at the El Rancho Villa, with an afternoon bus tour set for a number of recently completed structures (Robison explains that to avoid provincial jealousy, none of the buildings on the tour will have been designed by an Iowa architect. He also implied that guides would be available to take visitors to projects designed by Iowa architects.)

Projects on the list include: Steepmeadow by S.O.M., the John Deere Plant, Saarienem, Moline Public Hospital Chapel, Kruse; Unitarian Church, Lundeen & Toline, and the Davenport Museum & Art Gallery, Swanson.

There is a swimming pool at the Motel, and there is a golf course directly across the highway. The "Duck Creek Plaza" is nearby for shopping.

Cocktails are slated for 7 p.m. Saturday, followed by dinner at the Davenport Club in downtown Davenport. At 10 p.m. the group will embark on the new excursion craft "Thunderbird" for a charter cruise through the locks on the Mississippi and among the many islands of the "Might Messy River." There will be dancing and refreshments, moonlight and music . . .

After the craft returns at midnight, the hardy will again venture toward Rock Island . . . but no guides are promised.

The Sunday program sets a poolside brunch for the hours from 9:30 to 11:00 a.m., and that will close the scheduled portion of the program.

There are plenty of other places to visit however and some of them are the ALCOA plant, the Arsenal Museum, Studio 15, and the Blackhawk State Park & Museum.

Registration cards will be distributed along with additional information for chapter members.
MURAL IN EXPOSED AGGREGATE

PHOTOGRAPHER: TORKEL KORLING, CHICAGO

Working in the plant, Artist Bill Hammon prepared molds for these panels. Relief is plus 3 inches and minus 1 inch from panel face. Finish is 3/4" milky quartz in light grey matrix.
Cooperation is planned

EXECUTIVE COMMITTEES of the Iowa Chapter and Student Chapter of the AIA conferred April 16 at Iowa State University on the express point of creating mutual understanding and engendering greater cooperation between the two groups. The student group was headed by Presidents Val Satko (1961-62) and Perry Bolin (1962).

The students were told by Chapter President Robert Savage that the Executive Committee of the Iowa Chapter normally meets on the second Friday of each month, and that it would be very willing to consider subjects which may be presented by the student chapter.

A subject of prime interest to the student group was that of learning of the actual activities in the office of an architect, and of the day-to-day life of the practicing architect. As one discussant said, "We want to learn how an architect spends his time—or uses it."

Discussion covered the possibilities of students visiting the offices of architects, spending time with the principals, as well as with subordinate members of the firms. Others indicated that great value would accrue to the students if practicing architects would visit student chapter meetings and engage in "bull sessions" about the practice.

Emphasis also was placed on the possibility of having architects, who hire students and graduates, conduct discussions before the student chapter on the qualities and characteristics which are sought in employees who are to be trained to assume major responsibilities in a firm.

In a mechanical step re-instituted this year, the applications of 42 students for student associateship were forwarded to the Iowa chapter, and were approved. This was done to help create an official record in the chapter office for those students who participate in the university chapter activities. It will provide a basic mailing list from which the Iowa Architect can be sent to the student chapter members, and will provide a basis upon which a student chapter directory can be made a part of the Iowa Chapter directory in future years. It also provides a basis upon which the Iowa Chapter can base answers to queries which sometimes come from other states regarding persons who apply there for association with an AIA chapter.

The Iowa Chapter purchased 20 tickets to the student banquet for the use of the architects and building owners who received awards at the Student Chapter Banquet April 16.

The judging team for the student awards was comprised of Eugene C. O'Neil, chairman, John Rice, and Walter Hotchkiss, all of Des Moines.

Articles say "non-profit"

IOWA CHAPTER members expressed a feeling of opposition to proposals which would create "Councils" affiliated with the A.I.A. for various types of design and construction, and then approved another "sense of the meeting" motion which would permit the inclusion of professional affiliates in the chapters.

These two actions were among those taken as members of the Iowa Chapter met April 11 at the Des Moines Golf & Country club to act on a formal change to the articles of incorporation by inserting a new paragraph which says: "No part of the net income of this corporation shall inure to the benefit of any private member or individual." This became Section 3 of Article III, upon approval of the membership.

In other formal action, the Government Relations Committee under Chairman George Russell was instructed to proceed on its present course of attempting to determine the need, and the possibility of success, for changes in the Iowa Code which would eliminate loopholes by which technically unqualified persons can present themselves to the public as capable of handling design, structure and observation duties which for protection of the public require application of the skill and technical training of architects and engineers.

Some of the needs and scope of such legislation was discussed at a morning meeting April 11, at which representatives of the Iowa Engineering Society, the Board of Engineering Examiners, the Board of Architectural Examiners, the Master Builders of Iowa, and legal counsels were present.

It was agreed that all groups were interested in securing legislative proposals which would first protect the interests of the public.

Architectural Photography Contest

PRIZES TOTALLING $320 are offered in a color slide photography contest being sponsored by the Iowa Chapter A. I. A. for students in architecture and architectural engineering at Iowa State University. Details of the contest were distributed at the Department of Architecture and to the Student Chapter A.I.A.

Intended to create an interest in existing Iowa structures and to help inform students about structures of historical value, the contest has prizes for color slides of structures which were built prior to 1930, and for those built since 1930.

Prizes also are offered for interiors and exteriors of such buildings.

First prize in each of the two major categories is $50, there are six second prizes of $25 each, and 12 third prizes of $5 each.

The contest is limited to students in the department of architecture and architectural engineering, and to photos made after May 1, 1962.

Walter Hotchkiss, AIA, Des Moines, headed a subcommittee of the Education Committee which prepared the contest outline, reports James Bentley, AIA, education committee chairman, Waterloo.
ADJUSTABLE ANCHORING SYSTEMS

SOLVES PROBLEMS OF SECURING RAILINGS TO CONCRETE BY BECOMING AN INTEGRAL PART OF THE STAIR STRUCTURE

- INSURES EXTREME RIGIDITY
- REDUCES COSTLY FIELD LABOR
- ELIMINATES BREAKAGE IN MASONRY

Award exhibit is traveling

Exhibits prepared by Iowa Chapter members for the 1962 Honor Awards competition are on the go most of the time. Advance schedules have them in Marshalltown during the month of June, in Waterloo during November and at Iowa City in December.

Mrs. F. A. Gordon, president of the Central Iowa Art Association, has asked that the exhibit be scheduled for the Fisher Community Center for the month of June, with the exhibition to be ready for viewing by June 4.

Mrs. Rae Bartnek, public relations director of Younkers, Des Moines, had the exhibit scheduled for the sixth floor gallery beginning May 11.

Approximately two-thirds of the mounts were on display during the month of April in the educational wing of the Des Moines Art Center.

Public relations chairman Harold Payne collected a crew comprised of Dave Frevert, Clarence Olson, Jim Wilkins, Don Johnson, and Bob Bonomi, chapter executive-secretary, who spent an afternoon attaching identification labels to the mounts.

Historical committee meets

William Wagner, AIA chairman of the Iowa Chapter Committee on the Preservation of Historic Buildings, was present for a meeting of the national committee in Washington, D.C., March 15, for the initial showing of a travelling show "The Heritage of Progress" which has been prepared by the National Trust for Historic Preservation.

The national committee heard remarks from two representatives of the U. S. National Parks Service, and Charles Peterson, representative for the eastern half of the U. S., said that the U. S. is losing many landmarks because of urban renewal programs. He urged chapter preservation officers to press the recording of architectural landmarks.

Wagner has also completed a report on the life and architectural accomplishments of William Foster who practiced architecture in and around Des Moines from 1868 to 1896. It is to appear in the Annals of Iowa published by the Iowa Historical Society.

Two bus loads of architecturally interested people were conducted on a tour of Des Moines landmarks and little known points of architectural interest on April 2. The tour, sponsored by the Adult Education Division of the Des Moines Public School program, will be repeated.

Wagner was a principal speaker before the Polk County Historical Society meeting, March 21, at the IPALCO auditorium in Des Moines.
Lightweight Haydite Concrete reduces deadload more than 7 million pounds

The 20-story Traders National Bank Building, Kansas City's newest skyscraper, is an outstanding example of lightweight Haydite concrete construction.

To date approximately 7,000 yards of this lightweight concrete have been poured in the erection of this three and one half million dollar structure.

It is estimated that the use of Haydite concrete instead of heavy aggregate concrete, will reduce the deadload of the structural frame and floors approximately 7½ million pounds. This is substantial evidence of the basic economy of lightweight Haydite concrete.

If you would like more information about lightweight Haydite concrete, see your local Ready-Mix plant or contact—
Discriminating consideration of design essentials is a part of the architect's art. Part of the architect's science is the selection of elements of construction to fulfill his design intent. The Sheffield Clay Tile Beam System should be a part of your thinking when specifying floor and roof systems.

Selected for this building, the Sheffield Clay Tile Beam System offers high rigidity at low cost. It is a shallow system, making available more useful volume and allowing greater freedom in ducting. And, ease of installation results in savings of construction time and costs.

Accurately pre-sized, The Sheffield Clay Tile Beam System is a skillful balance of the basic qualities of hard-burned clay tile, steel and poured concrete . . . AN OBVIOUS GOOD DESIGN.
Iowa schools in the sixties

School administrators and school board members from throughout Iowa are to be invited to a conference in Des Moines, October 1, on the theme “Iowa’s Schools in the Sixties,” sponsored by the Master Builders of Iowa in conjunction with the Iowa Chapter, AIA, the Iowa Association of School Boards and with the assistance of representatives of the Iowa Department of Public Instruction.

Bob Ramsey, Chairman of the chapter Schools Committee, Cliff Prall, Stan Ver Ploeg and President Bob Savage have met with the public relations committee of the MBI in relation to the conference, and Ramsey reports that a list of outstanding speakers has been compiled to help bring information to the schoolmen on the changes which can be expected in teaching and construction techniques.

Sponsors of the program are anticipating an attendance of about 200 persons. Sessions are expected to be included regarding school planning, school board relations with architects and builders, what is ahead in curriculum and construction, and a tour of one or more new schools.

Fred Mast, Waterloo, heads the MBI public relations committee. Representatives of other groups working with the MBI are Don Foster, Iowa Association of School Boards, Dr. Virgil Marcino of Iowa State University, Dr. Willard Lane, State University of Iowa, Dr. Howard Knudson, State College of Iowa, Arch Grimes of the Department of Public Instruction, Dr. Arthur Templeton, assistant superintendent of Des Moines public schools, and Ken Lewis, executive secretary of the MBI.

The Proper Use of Concrete Masonry

For many years, the lowest cost of masonry walls could be accomplished by the use of concrete blocks. However, it is very important that the concrete blocks are properly manufactured, cured, stored and delivered in order to get a first-class finished building.

We — at Iowa Concrete Block — have made improvements over the years until now we believe we can furnish blocks that will give you fine, trouble-proof buildings.

◆ MIXING. We have the best machinery to proportion and mix the materials so it will produce the very best blocks. Within 30 days, all of this will be electronically and automatically done—doing away with manpower mistakes entirely in this division.

◆ MANUFACTURE. Our two three-block machines not only use vibrations for compacting the blocks, but they are the only ones in this section using both bottom and top vibration.

◆ CURING. We have a large, automatically controlled, high pressure steam boiler which enables us to get just a right temperature and moisture to cure the blocks properly.

◆ STORAGE. We have a large all steel building in which more than 150,000 units can be placed under cover to keep them out of the rain and snow. Orders for large buildings are placed under this roof.

◆ DRY UNITS. We have our own testing equipment not only to test the strength but also the moisture content of our blocks. If the moisture content is too high we have a drying kiln in which the blocks can be brought down to the proper dryness for satisfactory use.

Liaison committee appointed

Appointment of Robert Bergland, Thomas Waggoner, and Gordon Gjelten to an Architect-Engineer Liaison committee was announced by President Robert Savage following a March meeting with representatives of engineering groups which asked the formation for the purpose of discussing problems which affect both professions.

Bergland is a member of the firm of Bergland and Bianco, Mason City. Waggoner is a member of Waggoner and Waggoner, Mason City. Gjelten is with Thorson, Gjelten and Schellberg, Forest City.

Engineering representatives are:

Richard Grant of DeWild, Grant, Reckert & Stevens, Rock Rapids; Ralph Wallace of Mason City, chairman of the Board of Engineering Examiners; Noel L. Tweet, executive director of the Iowa Engineering Society, and Donald Zarley, an I.E.S. member who also is an attorney.

The group held its first meeting April 4 at the Hotel Hanford, Mason City, and began exploration of areas in which a liaison group could serve the professions. Discussion centered for the day on proposals for strengthening registration laws and it was mutually agreed that most architects and engineers were probably not aware of reasons for mutual concern over the other's registration laws.

A report was prepared which asked the architectural and engineering groups to consider the possibility of regulating the architectural and engineering professions through a single law, administered by a joint board.

Bolin heads student chapter

Perry Bolin of Ames was elected president of the Student Chapter of the AIA at ISU to serve until the beginning of 1963. Under revised operational plans, student chapter officers will take their posts at the beginning of the calendar year, instead of at the close of the academic year as in the past. Bolin said he expects the new schedule to permit better scheduling for all events on the part of the student chapter officers.

Serving with Bolin throughout this year will be:

Mark Engelbrecht, external vice president, Gary Hayden, LaPorte City, internal vice president, Jarratt Griffith, Ft. Dodge, secretary, Bill Roe, treasurer, Jim Bragonier, Ames, and Roger Olenburg, Ames, engineering council representatives, and Bob Kendall, freshman representative.

Jim Dwinell and Tom Clark were the co-chairmen for the Student AIA banquet and Roger Olenburg and Bill Voorhees were co-chairmen for the Veishea open house.
Yes, now the stone-like qualities of Johns-Manville "Colorlith" come in intricate extruded shapes. The window sill illustrated shows the benefits of J-M's "ACE" (asbestos-cement extrusions) process. Engineered into the shape's cross-section are a built-in slope, masonry keys and a drip groove. And, being extruded, the shape can be provided in one continuous length across the two windows. This six-inch sill is a standard shape, as are interior stools from three to thirteen inches, and many other shapes. Some are illustrated below. All are available in pleasing shades of gray, green or brown. ACE shapes are strong, weather resistant, economical. Representing ACE products for J-M in the upper-midwest:

w.e. neal slate co. 1215 SECOND AVENUE NORTH • MINNEAPOLIS 5, MINNESOTA • FR 7-8100
Des Moines section formed

To provide Des Moines architects with a "local" voice with the official arm of the American Institute of Architects, the architects of the city met April 10 at the Hotel Fort Des Moines and officially formed the "Des Moines Architects' Council" as a section of the Iowa Chapter of the AIA.

M. E. Jensen was chosen president of the new group. George Russell was elected vice president, and Rich Goewey Secretary-treasurer. Charles Herbert and Paul Skiles were named directors.

Stated purpose of the organization, as adopted at the preliminary meeting, is:

To create greater interest and participation as a body in local civic affairs and issues. To foster recognition of the profession as an organized unit in the community among local civic organizations.

The group plans to hold regular monthly meetings, now scheduled for the second Tuesday of each month. Special meetings may be held at the call of the Executive Board, and the Executive Board—which consists of the officers named above—are held at the call of the President.

The group set a quorum as one-third of the membership, and decided that it would hold its 1963 elections in February. Under the by-laws adopted by the group, one of its five executive board members also is to be a member of the Executive Committee of the Iowa Chapter of the AIA.

To assure a tie with the American Institute of Architects, the group adopted as its name the title "The Des Moines Architects’ Council, a section of the Iowa Chapter of the American Institute of Architects."

Official notice of the formation of the section, with the full approval of the state chapter will be forwarded to the Octagon for the information of the officers and directors of the Institute.

The first meeting of the new organization was set for May 15 at the Hotel Fort Des Moines with Richard Bryan, chairman of the Des Moines Special Housing Action Committee, John Hart, a committee member, John Grubb, a builder, and City Manager Elder Gunter each to discuss a specific phase of the Des Moines housing problem. A question and answer period was planned.

Formation of local architectural sections to provide local outlets for architectural group action was approved by the Iowa Chapter at its convention in January.
Three principals in the student awards banquet at Ames, April 16, conferred briefly at its close. Shown here are A. Quincy Jones of Los Angeles, widely known architect who was the principal speaker, Student James Bragonier, who was master of ceremonies, and Robert Savage, president of the Iowa Chapter, A.I.A.

NEW SPECIFICATIONS

Technical details of the new AISC Specifications for the design, fabrication and erection of structural steel for buildings were explained for the benefit of engineers, architects and other interested individuals at a one-day conference at the Hotel Savery, April 6.

Described as the most significant changes in steel construction since the original specifications were published in 1923, the new specifications permit greater use of imagination in design plus more economy and greater convenience.

New, high strength steels were described by John Gilligan of United States Steel; working stresses I and II were discussed by A. J. Oudheusden of Bethlehem Steel; Ned L. Ashton discussed composite design; Prof. J. H. Senne, Jr., covered column stresses and column interaction formulas, and W. D. Rudeen discussed plate girder design.

Now it is practical to insulate nearly any block wall with ZONOLITE® Masonry Fill

Zonolite Masonry Fill was specifically designed to fully satisfy the requirements for insulating block and cavity walls. Its low installed cost makes it possible to insulate buildings which formerly didn't warrant the cost of other insulating methods.

- Cuts insulating costs in half—Both material and labor costs are less.
- Doubles the insulation value—Block and cavity walls are twice as efficient.
- Water repellent—Won't draw moisture across cavities. Can’t rot or decay.
- Won't ever settle—Fills to solid, uniform, tamper-proof density.

McGinn Transfers

Donald P. McGinn of 865 Kirkwood, Dubuque, has transferred his membership from the Wisconsin Chapter, A.I.A., to the Iowa Chapter, and action by the Institute has made the transfer retroactive to January 1 of this year.

McGinn is a 1950 graduate of ISU and has been in practice in Dubuque for about one year. He previously had been an architectural draftsman for William Stuhr of Rock Island, Ill., and then had been in the firm of Durrant & Bergquist at Dubuque from May of 1952 until he began his own practice in 1961. He is registered in Iowa, Wisconsin and Illinois.

Goodwin Establishes National Sales

A major color insert in the most recent copy of the AIA Journal is introducing architects throughout the nation to the Goodwin Companies of Des Moines and Minneapolis.

C. T. Bridgman, head of the firm’s research and engineering department, says the firm was forced by demand to create a national distributorship for its “designer selections” of face brick. The distributor organization now makes the brick available in almost every section of the nation.

A. C. Frisk is president of the Goodwin Companies and also is president of the Structural Clay Products Institute, Washington, D.C.

Products listed for national distribution include: Glazed Provincials, Frosty Wirecut, Queen Anne, Goodwin Greys, Orleans Antique, Ivory Wirecut, Antique Colonials, Fall Festival, and Red Rock Face Romans.

Nine additional new products and refinements on four existing products are presently subjects of research.

R. H. Vandercook

Royal H. Vandercook, 72, of Marshalltown, an architect, died April 15, after having been in practice there since 1916. He had headed his own firm since 1938.

Student to Dallas

The Student Chapter, AIA, at Iowa State University was subsidized to the extent of $75 for the purpose of sending one representative to the National convention of the American Institute of Architects at Dallas.

For several years the chapter has provided a fund of approximately this size to the student group to be used to assist one or more students, as the student chapter determined, to attend the national meeting. In some cases, the fund was used to subsidize transportation for more than one student.

Calvin Knight Resigns

Calvin Knight, Iowa City, who had been a member of the Iowa Chapter, AIA, since November of 1946, resigned from the Institute in April explaining that he is no longer engaged in the practice of architecture.
Structural Steel STANDS for the Future

Home Federal Savings & Loan Assoc. Office Bldg., Des Moines, Iowa

The new higher-strength steels, A36, A373, A440 and A441, allow the designer to select the appropriate strength steel for the loading conditions, thus reducing tonnage, footings and building height, and resulting in substantial cost savings. In the 539 ton framework pictured above, 170 tons of A36 steel were specified for beams 24" deep and over. A36 steel now is priced identically with A7.

RUDI TO CRANBROOK

Prof. Leonard Wolf, FAIA, head of the Department of Architecture and Architectural Engineering at ISU has announced designation of Norman Rudi, AIA, to attend the 1962 Seminar for instructors in Architecture at Cranbrook in June.

The seminar is jointly sponsored by the American Institute of Architects and the Associated Collegiate Schools of Architecture. The Iowa Chapter has provided $200 to assist meet expenses of the trip.

Rudi, formerly with the firm of Crites and McConnell, Cedar Rapids, joined the ISU faculty during the 1961-62 year.

ENLARGE QUARTERS

Durrant & Bergquist, Dubuque, have moved a portion of the firm's staff into an "annex" office in Dubuque. Enlargement of the staff also is anticipated.

RAILING ANCHOR SYSTEM

A solution to the problem of attaching metal railings has been proposed by Blumcraft of Pittsburgh which has devised an adjustable malleable iron anchor which is welded to the reinforcing rods before the stair is cast. For mounting through the tread, Blumcraft has sleeves which are built into the precast treads.

Blumcraft asserts the suggested solution avoids the costly field labor of systems which call for drill and tap of steel anchors at the job-site. Use of the malleable iron permits accurate vertical alignment of the posts.

Blumcraft will provide details of the system.

STUDENTS HEAR MURPHY

Joseph D. Murphy, FAIA, of the firm of Murphy & Mackie, St. Louis, discussed architecture before the ISU Department students on April 6.

He illustrated his talk with color slides showing the Washington University Library, the new Federal Building in St. Louis, several churches and the Reynolds Award winning structure, the Climatron.

NEW EXIT LAMP

Cold light exit lamps which use but 5 watts of electricity have been announced by Prescolite Manufacturing Corp. The miniature, plastic sealed Lumescent lamps contain a rare neon gas which, when energized, becomes a glowing bridge between the electrodes and yields a soft, diffused light equal to about 15 watts fluorescent or 50 watts incandescent. The lamps are guaranteed for 44,000 hours (five years) of use.

Marley Double-Flow AQUATOWER®

...the cooling tower that changed Iowa's skyline

Out-of-sight in appearance, out-of-mind so far as maintenance and operation are concerned, and out-of-this-world when it comes to performance is the Marley Double-Flow Aquatower. In the field of intermediate capacity cooling, the Double-Flow Aquatower is "the real thing"—the first and only complete low-silhouette tower.

Diffusion decking, drift eliminators, access doors, adequate fan cylinders—every cooling tower component that contributes to better performance, greater economy and simpler maintenance is standard equipment on Double-Flow Aquatowers. Such quality explains why this unique tower is the overwhelming first choice of architects, contractors, engineers and owners who require water cooling on a commercial and institutional scale.

Represented in Iowa by

r. s. stover COMPANY
HANDLES EXTRUSIONS

W. E. Neal Slate Co., of Minneapolis has been appointed exclusive representative for the Johns-Manville ACE Extrusions in the Upper-Midwest.

Wally Neal, firm operator, said the new extrusions are an inorganic mixture of synthetic calcium alumino-silicate binder reinforced with finely dispersed asbestos fibers and mixed with chemically resistant inorganic pigments and fillers. One extrusion is a six-inch window sill which incorporates masonry keys and dip groove and built-in slope. Interior stools, base and cove moldings, coping and other shapes are available. Some shapes are in Colorlith, some in Transite.

NAMED DISTRIBUTOR

Appointment of the Goodwin Companies, Des Moines, as southern and eastern Iowa distributor for the Robco line of structural ceramic glazed tile and vitrIiNeer has been announced by the Robinson Brick & Tile Co., Denver.

SETS SCHOLARSHIP

Blumcraft of Pittsburgh has established a $3,000 scholarship fund which will be administered by the AIA Foundation.

PAIRED HARDWARE MEET

Dr. Eric Grant, director of research and product development for Devoe paints, Louisville, Ky., was the principal speaker to more than 40 Des Moines area architects in April at the Kirkwood hotel.

Paint Expert Talks

The Nebraska Chapter of the A.I.A. has moved to 1103 Omaha National Bank Building from a former location at 810 W.O.W. Building. Warren Johnson is executive secretary of the Nebraska group which is planning a "real show" for the 1963 Regional Convention of the Central States, A.I.A.

PAINT EXPERT TALKS

Dr. Eric Grant, director of research and product development for Devoe paints, Louisville, Ky., was the principal speaker to more than 40 Des Moines area architects in April at the Kirkwood hotel.

Dr. Grant discussed the epoxy resins and polyurethane coating materials and told of developments and new products in protective coatings for steel and construction materials.

G. M. Melton, Mel Wills and Charles Wheeler represented the host firm, Devoe & Raynolds.

NEW "PRODUCTS REGISTER"

The A.I.A. has announced the 1962 issue of the Building Products Register will be available immediately after January 1, 1962.

Price of the book to A.I.A. members is $15, to non-members it is $25.00.

The Register is a single-source reference of technical product descriptions and comparative performance data on building products.

The Register is available on a 30-day trial period, and may be ordered from the Institute.

TALK ROOFING PROBLEMS

Architects throughout Iowa were invited to attend an afternoon session of the Iowa Roofers Association May 12 at Waterloo at which roofing problems, failures and corrective measures were to be discussed.

The program indicated a hospitality hour at 11 a.m., followed by a luncheon (dutch) and the discussion of roofing techniques.

Jim Lenzner, president of the roofers' group, said an outstanding presentation was planned to help architects and roofers solve problems of mutual concern.

EUROPEAN TOUR

A 56-day tour of Europe to see art and architectural points of interest will be headed by J. E. Aronia, AIA, architectural author and lecturer, is being promoted by University Travel Co. Price of the tour (including all meals except in Rome, Paris and London) is $1,678 by air from New York.
What do you expect of the finishes you specify...

- Durability?
- Low Maintenance?
- Accuracy of Color?
- Long-Lasting Beauty?

You will find all these qualities, and more, in IPM scientifically formulated finishes. The correct coating for every type of surface.

The services of our finishing material experts and research staff are at your disposal. Contact us if we can assist on any problem. No obligation.

A STATEMENT OF PURPOSE

SCPI disseminates current and pertinent clay products information to the architectural profession.

SCPI acts as technical consultants to architects, contractors, and owners in all phases of clay masonry construction.

SCPI assists clay masonry utilization research.

SCPI aids in the adoption and maintenance of high standards and specifications for the manufacture, sale and delivery of clay products.

These four maxims guide our work.

You are encouraged to call upon us often for service.
