All single ply roofs are not created equal.

Aerial view of the Carlisle roof on the new Milton, Pennsylvania Distribution Center

The roof that's got the future covered.

You probably already know about the many benefits of single ply roofs over traditional built-up roofs. Benefits that are making "single ply" the new industry standard. But you should also know that all single ply roofs are not the same. Carlisle offers you all these major exclusives:

Carlisle produces and applies Sure-Seal® elastomeric membrane—the single ply sheet we pioneered more than 23 years ago.

Carlisle has single ply roof applications successfully in place for over 20 years now. Roofs that stubbornly refuse to crack or leak after two decades of punishment by the sun, rain, wind, hail and snow.

Carlisle produces factory-fabricated single ply sheets in super huge dimensions. In fact, we offer single sheets as big as 45 feet by 150 feet, which minimizes field seaming.

Carlisle provides one-source reliability. Everything you need—membrane, sealant, flashing and accessories—comes from one reliable American source.

Carlisle operates an ongoing and mandatory two-day training school for single ply applicators, to assure top quality workmanship in every Sure-Seal roof.

Carlisle single ply roofs receive a five-year "watertight warranty" that can be extended for an additional five years!

Carlisle single ply roofs are backed by nationally respected Carlisle Tire & Rubber Company—leader in the research, engineering and manufacture of waterproofing materials for almost three decades.

These are some of the features that have made the Carlisle Sure-Seal roof *the single best, single ply system*. You owe it to yourself to find out more. Call or write today!

Save time, money and friends.

Please call 48 hours before you dig.

Northwestern Bell has thousands of telephone lines running underground. Usually, they're buried along main roads, property lines, and right-of-ways. But they could be anywhere on private or public land.

If you break one, you could cut off personal conversations, business calls, police, fire, and medical services for your family, your neighbors—even your entire community. In addition, a broken cable can create costly delays in your work schedule.

So, if you're digging, excavating or pushing pipe, take a couple minutes to save yourself a lot of time, money, and friends. 48 hours before you dig, call 1-800-292-8989 for the location of any cables buried near your site.

Thank you from Northwestern Bell and the rest of
your community.

WORKS IN PROGRESS

St. Joseph Hospital St. Charles, Missouri

The new addition to St. Joseph Hospital in St. Charles, Missouri, will provide space for ancillary services including surgery recovery, laboratory and business offices.

The design by Hansen Lind Meyer Architects, Iowa City, responds to required connections to the existing facilities and parking. To connect at appropriate levels the four-story structure is partially underground. Because a low percentage of building shell is above ground, the building is very energy efficient.

Light is brought into lower levels through the light courts at the new main entrance and emergency entrance. Twenty-four medical/surgical, ICU and cardiac ICU beds are located on the upper level to take advantage of available natural light.

The overall design projects a new image befitting this 400-bed medical center.

Congregation to Relocate

The Congregation of the Humility of Mary is planning to relocate its headquarters from Ottumwa to a Davenport site it left on 1918. Brooks Borg and Skiles, the architects and engineers, were directed to design a building that would be compatible with the adjacent Diocese Headquarters and its residential neighbors.

The 45,000 square foot facility proposed for the 10 acre sloping site will house administrative offices, 30 bedrooms for retired sisters, a 16 bed infirmed care wing, 11 apartments, 2 guest rooms, dining facilities, a chapel, and crafts and recreation spaces. An elevated walkway leads to the buildings main entrance on two story greenhouse space.

Several energy efficient considerations will be incorporated in the masonry, steel and wood structure. These include passive solar space heating, earth berming,

natural ventilation, insulating glass and natural daylighting. Active solar heating is being considered for domestic water and the enclosed swimming pool. Construction is scheduled to start in the spring of 1982.

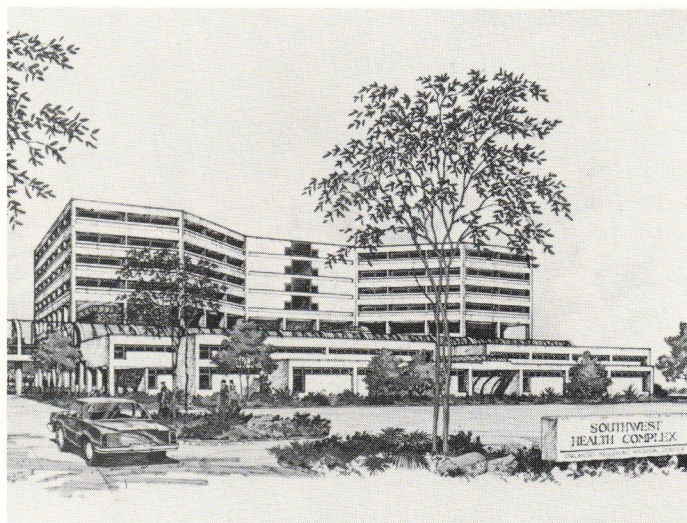

Southwest Medical Complex

A 48 acre site overlooking Big Sand Lake in southwest Orlando, Florida will be the location for the new Southwest Medical Complex of the Orlando Regional Medical Center.

Featured is the new 150 all-private bed medical/surgical hospital. A full complement of ancillary and support departments is developed in a 2-story base, with four 35-bed nursing floors above. Expansion capability and flexibility are key criteria to allow future growth to 300 beds.

A medical office building, providing office suites for 35 physicians, will be connected to the hospital by an enclosed pedestrian mall.

Future phases of the medical complex designed by Hansen Lind Meyer, Architects, Iowa City, will include a wellness center and a life-care housing facility, which will take advantage of the scenic lakeside views.

Condominium Community

Bloodgood Architects have completed design work on *FOX CHASE*, a proposed cluster condominium residential community on Park Avenue just west of Southern Hills, Des Moines. Comprised of 33 units on 10 acres, the project is planned in 3 mini-neighborhood clusters along the various land form elevations. It includes a Clubhouse/caretakers residence, plus swimming pool and tennis court. There are 4 housing unit types, ranging from 1958 sq. ft. (1 bedroom + library/guest room) to 2900 sq. ft. (3 bedroom + library); all with two-car attached garages and basements. The character of the design derives from village-like clustering, heavy roof shakes, natural stained cedar shingle sidewalls above brick veneer, romantic forms and staunch detail. Selling prices, including elaborate, high quality finish and equipment, and a share of amenities and landscape augmentation, will approximate \$100/ sq/ ft.

Marquart Corduroy Block Adds Interest

The new corduroy concrete block series from Marquart can add a new dimension to any construction project.

The texture of corduroy block walls adds interesting light and shadow contrasts to any interior or exterior wall. The insulative, durability and fire-safe advantages of concrete block are an added bonus.

Eight different corduroy block units are shown below. The series can be laid in either running or stacked bond.

"then someone said, 'Why not let Hockenbergs design the food service?'"

'Why not?' After all with technology advancing so fast, only a specialist can select the right equipment from hundreds of alternatives. And it takes a specialist to develop plans and specifications for efficient food service using limited budgets. That's why architects and restaurant chains regularly use Hockenbergs' designers. And that's why Hockenbergs has Iowa's largest and most experienced commercial food service design department.

More Pavement Per Dollar

Asphalt Paving!

APAI and Quality Paving

The ultimate quality of your asphalt paving project is directly related to the experience, skill and equipment of the contractor doing the work. That's why the Asphalt Paving Association of Iowa urges you to contact an APAI member in your area about your project. All APAI members are experienced and reliable. Check your Yellow Pages under Asphalt & Asphalt Products.

It doesn't happen often that you can get a better product by paying less! But that's exactly what happens when you specify Full-Depth Asphalt for your paving projects.

In the past, asphalt paving has cost only about 70 per cent as much as its competitor. Yet, in surveys of city and county officials, and studies conducted on the state level, it's been shown that Full-Depth Asphalt outperforms other pavement types.

And that's not all. Full-Depth Asphalt has many other advantages:

- Smooth, quiet, thump-free ride.
- Less energy use, and 100% recyclable.
- Faster and easier construction. Traffic may use the pavement immediately following rolling of each asphalt layer. This capability of "stage construction" keeps equipment out of the mud and provides for storage of construction materials.
- Safety features include high visibility of lane markings, less reflected glare from sunlight and headlights, reduction in noise, quicker melting of ice and snow, and the chance of dangerous and costly blow-ups are lessened.

So if you have a paving project — whether it's streets, highways, airport runways, parking lots/drives, or recreational projects — specify Full-Depth Asphalt. It offers the "best buy" . . . for the Iowa taxpayer!

A Framework for Decision Making

by John A. Rice

In 1975 John Rice was appointed to serve on the Architectural Advisory Committee to the Des Moines Urban Renewal Board. This Committee is asked to review proposals for redevelopment projects when public urban development funds are involved. Its task is to advise the Urban Renewal Board on architectural concerns. Based in part on this advice, but coupled with financial, tax, social, and other concerns, the Board makes recommendations to the City Council. The Council incorporates the final political considerations and votes approval, rejection, or re-submittal

From its inception the Architectural Review Committee has had difficulty in its evaluations because of a general lack of existing and proposed context in which to make judgements. So it isn't surprising that its efforts have been largely ineffective and have had little influence on the quality of our urban environment. In fact, the discouraging experience is largely responsible for the resignation of several architects from the Committee.

Comments made before the Committee indicate that professionals and nonprofessionals alike seem to look to land use and zoning controls as THE PLAN for redevelopment and growth in the City. My perception indicates that land use and zoning plans must be categorized as "flexible plans"; and in any operational circumstance a "flexible plan" is not a plan at all. The

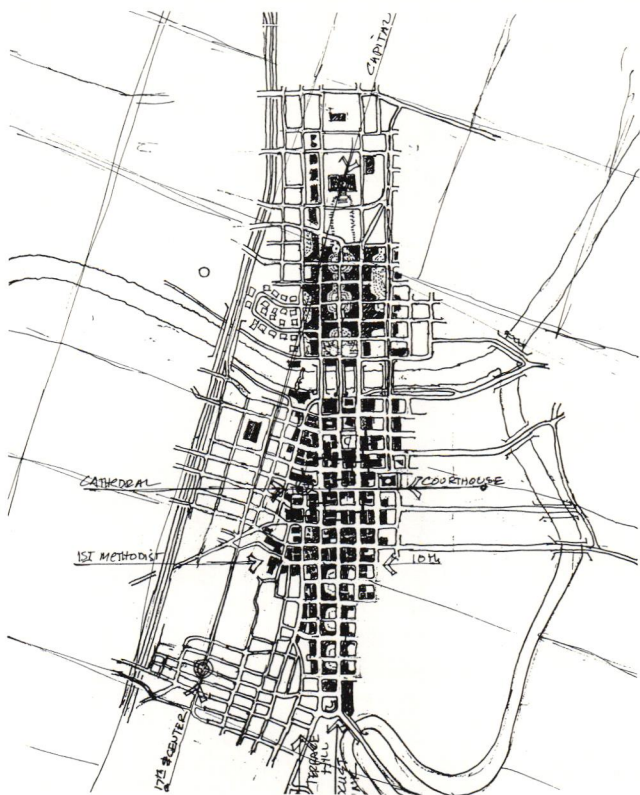

WILL of a designer is required to transform passive inactive "flexible plans" into active operational directions from which real environments can be built, good or bad.

Critical review by the Committee of past projects demonstrates that the lack of a clear overall direction or image for City development allows the quality of the unfolding environment to suffer. A set of specific large scale design concepts is long overdue. Our development has been largely a matter of placement or replacement of buildings within the 16-block-to-the-mile street grid established by a surveyor over 130 years ago. The river, the courthouse, and the State capitol contributed their support to the grid in its noble but unsuccessful effort to provide the guidance necessary to make the kind of rich urban environment we expect. But in a world of skyscrapers, skywalks and superhighways, the grid alone is simply inadequate to the task.

The Committee has watched as each developer invents his own notion of the future of Des Moines to justify his project. We've watched the developers and architects do it. We do it. The planning staff and Council do it. More often than not, the notions are shallow and esoteric and produce dispute rather than support and agreement. Further, comments before the Committee and by the Committee and staff suggest that development is controlled and motivated by one or two rich guys based on their short term objectives and the City Hall is in their service. This may be. Nevertheless, we need to remember that the State gives to the City the right and responsibility to incorporate, elect a Board of Directors (Mayor and Council), own, operate and lease property, and generally shape and control its own destiny.

That this logical process hasn't been boldly exercised by elected representatives or demanded by the electorate does not validate such behavior. The management of a city have the duty and responsibility to make sure that major long range **design concepts** are proposed and vigorously aired in public. Management (Mayor and Council) must see to it that bold ideas and images of the City are known, debated, and embraced by the community. The images should be clear and basic, allowing enrichment to come from individual projects taking their place in support of the whole. It should be ongoing process. The concepts and images will test and be tested by each new project. Such free and open debate can occur only BEFORE the personalities, urgencies, and politics of individual projects surface.

The Committee's unsuccessful search for strong images has emphasized that project-by-project private parking lots offer no guidance. In fact, the randomly scattered lots well may be the most disruptive element in the central City. But the "love affair with the car" that fostered such parking patterns may have blinded us to its great potential as an urban form giver. Cars by

themselves aren't the real problem. It's the left-over spaces allotted to them for parking that are often inconvenient to the user almost always uncomplimentary to the Cityscape.

Way back in the 1920's the community committed itself to accommodating the automobile. In the downtown this commitment included parking, first on the streets and later in lots. In the 60's and 70's a series of multi-storied parking ramps located around the west side loop were completed. This positive commitment, first proposed in the 50's demonstrated the form giving potential of parking by spawning a new high density upward thrust of office building in their midst. Skywalks followed.

A more effective device for shaping the downtown lies in City controlled surface parking combined with sidewalks, streets and landscaping. In addition to street parking, typical two and three story downtown buildings use surface parking lots about equal to the ground area of the buildings. These scattered parking lots when added to already City owned streets and alleys provide ample area to allow a restructuring of property shapes within the existing grid. Redevelopers can and will be motivated to build to the new lot lines. In this way, hand-somely shaped areas for people, trees walks, streets and properly distributed parking will spawn correspondingly handsome spaces. These spaces (ovals, rectangulars, circles, etc) might be called PARKING PARKS. They will frame views, reinforce axes, invite fountains, and make the "squares" that give a sense of place within the City.

In the course of looking for existing context by which proposed developments might be judged, several places and special vistas stand out. They need to be made part of the public consciousness and the official plan in order that they are not inadvertently violated. The vista from 6th and High to Terrace Hill; the steps and dome of the First Methodist Church looking north up Tenth Street; the dramatic vista from the pinnacle of Sherman Hill at 17th and Center east on axis with Center, past the Veterans Auditorium, to the Capitol dome; looking north from the west side of the Courthouse up Sixth Avenue to the tower on the cathedral at High Street. There are others. Maybe their existence is an accident. But, they are just a small taste of the rewards that should be expected in an expertly exploited urban setting. We do not want "accidents" to destroy them.

Certain excellent concepts from the 19th century need reinforcement or revitalization to be a strong influence today. The turn of the century concept for the downtown riverfront languishes a little. A specific plan should be developed, debated and adopted so that adjacent projects can support it.

The original Court Avenue idea has been nearly killed by the wrong way one-way street. The already wide, right-of-way could be turned into a two-way boulevard that would not turn its back on the Courthouse.

A revival of the 1890's concept of a block wide mall approach from the riverfront municipal center to the

west capitol steps would do wonders as a guide for evaluating redevelopment projects on the east side. This monumental idea recurs often because it is the kind of dream that captures our hearts.

A current planning and zoning proposal for a landscape plan for all of downtown has as its centerpiece a proposal for reinforcing with street trees that long, long vista from west 17th street two miles east to the capitol. This attenuated vista, even with the recently added interruptions of skywalks, is a nice but tenuous link that needs a succession of strong ideas along its path to sustain it. The first reinforcement could be the capitol mall created by combining several City controlled formally landscaped "parking parks" described earlier.

Such an undertaking has the substance to turn a token axis into a highly memorable event. And the payoff is that just knowing of the intent provides the context in which individual projects can be created and judged as supportive or disruptive to the City's image.

That is not all. The long link could narrow at the riverfront development as Locust extends west across the river between the YMCA and library. Then it would burst upon the recently developed Nollen Plaza and Civic Center. Another narrow gate-like section in the link could extend to 7th Street where public cooperation with a private effort may one day make another street level landscaped node along the capital vista. Farther west, at Fleur and Locust, the west "gateway to downtown" is already contemplated for development in the planning and zoning study.

None of this sounds radical of course. Most of it has been around a long time awaiting the leadership to bring it to the public and cultivate its support. We tend to forget that a thousand times more eyes and ears and feet partake in the urban center than in suburbia.

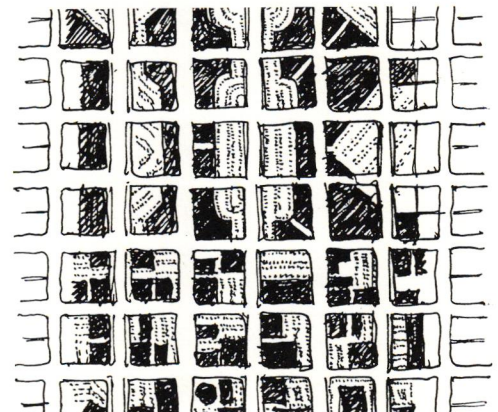

Certainly the initiative, patience and encouragement of the Mayor, the City Council and the planning director deserve accolades for shepharding a diverse set of projects through to completion -- one-by-one. We nevertheless lack a commonly-held vision of the form we want Des Moines to take; and without it there is no way that that one-by-one projects (no matter how startling) can combine in a synergetic way to make the quality of urban environment to which we aspire -- and deserve.

The answer is gas.

Now, what's the question?

Which type of heating system provides the most favorable life cycle costing figures? Which system enjoys the highest owner acceptance? Which heating fuel is readily available now and will continue to be well into the next century? Which fuel is most efficient — providing more useable heat per energy dollar? And which fuel is not only the best buy today, but will remain most economical in coming years?

The answer to all of these questions is natural gas. Efficient, available, affordable — gas is the best choice for the buildings you design.

Without question!

Gas: The future belongs to the efficient.

TEAK and KARPAWOOD for parquet floors

The warm, natural look of a Teak or Karpawood parquet floor is treasured now more than ever before. These two imports are a delight to those who love the rich-grained beauty of wood.

TEAK is the ultimate in beauty, elegance and prestige . . . yet, it is very hard and will last for *decades*.

KARPAWOOD, known in Thailand as ironwood, is harder than oak, and has an extremely low coefficient of expansion.

Both woods are available from our Chicago warehouse in many UNfinished and PREfinished patterns.

Phone (collect) for free samples, brochures of 80 floor designs, technical information, prices. Or, write:

Thailand Teakwood Importers, Inc.

645 North Michigan Avenue, Chicago, Illinois 60611
(312) 337-3938

(We are Midwest distributors for Bangkok Industries, Inc., Philadelphia)

HAYDITE and CITY CENTER SQUARE

. . . naturally . . .

1. Pumpability—with vacuum saturated Haydite.
2. Significant deadload weight reduction.
3. Greater fire resistance.
4. Improved insulation rating.
5. Total overall project savings.

CITY CENTER SQUARE—another example of how light-weight concrete made with Haydite can make a big difference in your project. For more details, contact your local supplier, or call us direct.

Financial Security For Your Future

Make plans now with Bankers Trust to provide stability for your family in years ahead.

Our Trust Department, located on the 7th floor, offers expert financial counseling and services that include investments, trust, estate planning and others, all individually tailored to your success and wishes.

One very attractive service, called IDEA (Invested Dollars with an Extra Advantage) Annuity, enables you to build a retirement income for the future that you cannot outlive. The \$10,000 minimum premium accumulates tax-deferred at high-yielding, current money market rates until you draw on it as retirement income.

To learn more about IDEA Annuities, or our trust and investment services, call or stop in and visit with our financial consultants.

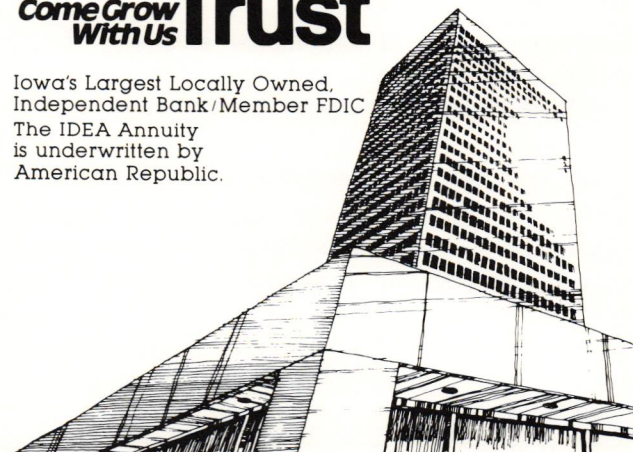

We'll work with you and your attorney to make the most of your success now, and assure your family's financial security in the future.

Trust Department, Seventh Floor

Administrative Management "Offices of the Year" Awards

"Administrative Management" magazine announced its annual Offices of the Year Award selection in its February issue.

Instituted by the magazine 32 years ago, the Awards encourage higher standards of business effectiveness through good office design.

The "Offices of the Year" for 1981 are:

Honorable Mention: Preferred Risk Insurance Co., West Des Moines, Iowa, Brooks Borg and Skiles Architects and Engineers.

Award of Merit: Citicorp Homeowners Inc., St. Louis, and Sheraton Corp. Travel Trade Center, Raleigh, N.C.

First Award: The Harvest Companies, Middleburg Heights (Cleveland), Ohio.

Selection of the offices was made by the Editorial Board of "Administrative Management," which sought nominations, advice and suggestions from the magazine's executive readership and from the general community of professional office systems consultants, designers, and architects.

The board's judgment is based on careful comparison and analysis of the scores of new offices nominated, giving particular attention to:

Suitability-in terms of operational efficiency, space allocation, work and traffic patterns, accommodations for required equipment, energy conservation, and so forth.

Flexibility-to permit efficient change and expansion.

Habitability-through features designed to heighten human efficiency, such as lighting, sound and climate conditioning, decor, and employee facilities of various kinds.

Advancement-of the administrative function through new and improved concepts of office design, systems planning, and the like.

Administrative Management is a national magazine subscribed to by more than 54,000 executives with

responsibility for office operations, planning, equipment, and personnel.

Faithful Courthouse Restoration

"The courthouse looks superb, but why didn't you do something to the outside?"

That's a question often directed to preservation architect Wilbert R. Hasbrouck whose firm, Historic Resources has just completed an extensive two-year conservation program on the Grand Traverse County Courthouse in Traverse City, Michigan.

Faithful restoration is seldom dramatic. It leads to an enhanced appearance rather than a bold change. In this case, not only was the courthouse faithfully restored, but it was also given a new, more functional life.

Originally constructed in 1899 by Bowman and Rush, by the 1970's the courthouse was also jammed with the county government in badly overcrowded, jerry-built spaces. There was an amalgam of makeshift partitions, dropped ceilings, missing trim, window air conditioners and mismatched hardware.

Deteriorating outside, uninspiring and inefficient inside, the courthouse presented the inevitable dilemma of whether to destroy the magnificent historic building and replace it, or restore the old structure and make it work.

The conservation program is an example of recycling at its best. The project was completed in June, 1981, on schedule, at a cost of \$49.00 per square foot, which compares favorably to the costs of new courthouse construction.

Some of the advantages of the conservation program are:

1. The historic/architectural landmark was saved and restored.
2. Court functions were made more efficient in more adaptable space.
3. A comprehensive life safety program was instituted.
4. An accessibility program was provided.
5. Two thousand square feet of additional floor space

Wilbert R. Hasbrouck, Principal of Historic Resources, is a graduate of Iowa State College, receiving his B.S. in Architectural Engineering in 1954. His firm was the preservation consultant for the restoration of the presidential birthsite of the Hoover Homestead in West Branch, Iowa. Also, the firm has just completed a preservation plan for the County Building for Woodbury County in Sioux City, Iowa which was constructed between July 1916 and March 1918 by William Steele, in association with George Elmslie and William Purcell.

Caterpillar Standby Power

The Ready Reserve

A Caterpillar Standby Power system could be the only thing standing between you and severe economic loss. For hospitals, computer centers or any operation that depends on an uninterrupted supply of electricity, a ready power reserve is a must. And your Cat Standby Power system is ready, willing and able when you need it most. You can also plug it in to meet peak demands or provide economical supplementary power.

Cat Standby Power has its own back-up system in the form of Total Product Support from Gibbs/Cook. We handle the design and installation of your system and provide any maintenance needed to keep it in top condition.

The Ready Reserve . . . from Gibbs/Cook. Sales and service facilities in Des Moines, Ft. Dodge, Mason City and Postville.
