

The image shows a close-up, low-angle view of a highly ornate architectural detail, likely a ceiling or a large wall panel. The design is symmetrical and features intricate carvings in a light-colored material, possibly plaster or wood, which are highlighted with gold leaf. The central element is a large, rectangular panel with a complex, interlaced pattern. This panel is flanked by two vertical sections: the left one has a repeating circular motif, and the right one has a repeating chevron or zigzag pattern. Below the central panel is a large, circular medallion with a sunburst or floral design. The entire composition is set against a dark, possibly green or black, background. The lighting is dramatic, casting shadows that emphasize the three-dimensional quality of the carvings.

CARLISLE

The roof that's got
the future covered.

You probably already know about the many benefits of single ply roofs over traditional built-up roofs. Benefits that are making "single ply" the new industry standard. But you should also know that all single ply roofs are not the same. Carlisle offers you all these major exclusives:

Carlisle produces and applies Sure-Seal® elastomeric membrane—the single ply sheet we pioneered more than 23 years ago.

Carlisle has single ply roof applications successfully in place for over 20 years now. Roofs that stubbornly refuse to crack or leak after two decades of punishment by the sun, rain, wind, hail and snow.

Carlisle produces factory-fabricated single ply sheets in super huge dimensions. In fact, we offer single sheets as big as 45 feet by 150 feet, which minimizes field seaming.

Carlisle provides one-source reliability. Everything you need—membrane, sealant, flashing and accessories—comes from one reliable American source.

Carlisle operates an ongoing and mandatory two-day training school for single ply applicators, to assure top quality workmanship in every Sure-Seal roof.

Carlisle single ply roofs receive a five-year "watertight warranty" that can be extended for an additional five years!

Carlisle single ply roofs are backed by nationally respected Carlisle Tire & Rubber Company—leader in the research, engineering and manufacture of waterproofing materials for almost three decades.

These are some of the features that have made the Carlisle Sure-Seal Roof the single best single ply roof system. Investigate for yourself.

IN PROGRESS

Birdland Park Bathhouse Des Moines, Iowa

Bussard/Dikis Associates, Ltd. has completed construction documents for a new bathhouse for Birdland Park in Des Moines. The project includes a pool equipment building, including public toilets for the park; a concession structure, which serves the pool and tennis courts; and the bathhouse which houses a basket area, change areas, showers, and a first aid room. Vandalism concerns resulted in the selection of a glazed tile exterior. The design incorporates three colors of tile in various bands. Colors were selected for their relationship to water sports. Building forms and color patterns are playful and used to offer a variety of scale to the rectilinear buildings. Natural ventilation and lighting are used to minimize energy requirements.

Mall for Plano

Construction will soon begin on the Outlet Mall of America in Plano, Texas. Designed by Engelbrecht and Griffin Architects, P.C., the one-story, 317,000 square foot structure will be built on a 27-acre site in a suburban area north of Dallas. The Plano Mall is the fourth and

largest project of the type designed by the architect for Tapp Development Co. of Oklahoma City.

The tenants of the Outlet Malls are a combination of direct factory outlets and discount stores. The design responds to their unique tenant identity through the development of a factory theme. Structural steel is left exposed and painted throughout the mall interior. A narrow band of clerestory windows lining pedestrian areas of the mall reinforces the factory idea. Industrial type fixtures and metal siding extend the theme.

The long, narrow site sloping gently to the east demanded a linear plan solution. Three cruciforms are linked together with ramps and stairs. The skylit intersections of the cruciforms are primary planting and seating areas, designed to visually reduce the 1000 foot length of the major pedestrian-way. Tenant storefronts, a major part of the design package, will transform the mall corridors into a pedestrian main street through the use of exterior forms and materials.

Construction will be of steel frame with exterior tilt-up concrete wall panels. The mall entrys consist of steel frame with glazed block infill. Grand opening of the \$7,500,000 project is scheduled for mid-October, 1983.

National Balloon Museum Indianola, Iowa

The design of the building is in direct response to the site configuration. It is designed as a series of partially open pavilions oriented towards the prime view - the water tower and the ascension area. The scale of the building is enlarged by having it be a part of a series of broad terrace areas that extend the floor area out into the natural environment. Museum space can be effectively lit with natural light, if that light can be controlled effectively to stop degradation of artifacts.

A more informal plan solution is appropriate due to the character of the site and the fact that the building will not be built in one phase. Each phase is designed to exist as a solution by itself. The total square footage is 10,500 square feet with 7,500 square feet of that total being on the main floor. By developing a pattern of smaller elements, the majority of trees will be left undisturbed. The steeply sloping roofs in metal with heavy timber framing fit well within the design vernacular of the region. Project architect is Herbert M. Stone of Brown Healey Bock, Architects, Engineers, and Planners.

Oxboard.[®]

Everything it takes to replace plywood, and more.

Move over plywood—here comes Oxboard, with American Plywood Association Certification as a rated sheathing panel, designed for roofing, flooring and sidewall application.

Waferboard it is not!

Don't let Oxboard's appearance fool you—it's not a waferboard. It is Oriented Strand Board. It's made of long strands of wood oriented in five alternating layers perpendicular to each other (like plywood) and bonded with phenolic resin. Oxboard is a structural panel that's superior to waferboard in every way—in strength, stiffness, weight, and dimensional stability.

Stiff as a board, strong as an ox!

Oxboard carries the same spans by thickness as softwood plywood, and it is price competitive with plywood. There the resemblance ends. Oxboard has no core voids or knot-holes, and it does not delaminate or buckle. What's more, in roofing, Oxboard 7/16" panels span 24" on center without H clips—that means faster completion at a lower cost.

Oxboard is a proven product already accepted by the construction industry and in extensive use. Over 150 million square feet has been shipped since its introduction in 1981, and demand is growing.

COMPARATIVE SPANS¹

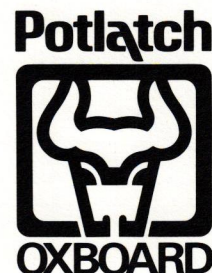

Sheathing Thickness		Oxboard and Plywood	Waferboard
3/8"	Sheathing—span index Max. roof span/no clips	24/0 20	NA NA
7/16"	Sheathing—span index Max. roof span/no clips	24/16 24	24/0 16
1/2"	Sheathing—span index Max. roof span/no clips	32/16 28	24/16 24
5/8" ²	Sheathing—span index	40/20	NA
3/4" ²	Sheathing—span index	48/24	NA

1— Left-hand number is maximum recommended spacing of roof framing in inches. Right-hand number is maximum span between floor joists.

2— 5/8" and 3/4" Oxboard panels are APA certified for Sturd-I-Floor applications with the same span ratings as plywood.

Fully Code approved for plywood replacement.

Oxboard is available with scuffed surface for roofing and sheathing, and sanded and tongue-and-grooved for Sturd-I-Floor applications. It's recognized by ICBO, BOCA, SBCC building codes, and is covered by HUD/FHA materials release #838. Further information is available from Potlatch Corporation, West 222 Mission, P.O. Box 5414, Spokane, WA 99205. 509/458-4500.

Lowest Life Cycle Cost Fuel Storage Tanks

Fiberglass fuel storage tanks mean lower total cost and greater dependability over the life of your storage system. Without maintenance.

There's one basic difference between Owens-Corning Fiberglass underground tanks and tanks made from steel. Fiberglass tanks won't corrode.

A Fiberglass underground tank will last the life of most facilities without corrosion-caused leaks or failures.

Corrosion-caused replacement costs are eliminated, as are periodic corrosion testing procedures, and the additional expense and concern over environmental problems due to leakage.

CALL FOR A VALUE ANALYSIS BEFORE YOU SPECIFY THAT NEXT TANK AND PIPING.

Quality & Service

**"I know aviation...and
I know Elliott Beechcraft
is a first-class operation."**

"You can't beat their 46-year reputation for quality, no matter who you are in the world of aviation."

*Sherm Booen
Minnesota's Mr. Aviation*

When Sherm Booen talks flying, he knows whereof he speaks. His "World of Aviation" was the world's longest, continually produced television program. He has published the "Minnesota Flyer" since 1962. And, until recently, he practically lived in his 1949 Beechcraft A35 Bonanza.

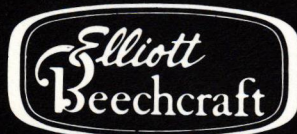

"Elliott is a first-class operation. They have a strong service orientation...a real pride in the way they go about servicing an aircraft. They've been in the aviation business since 1936...and they've never let me down," says Sherm. "They're also an award-winning dealer, carrying the complete Beechcraft line and standing firmly behind every plane they sell.

If you're looking for a first-class operation to handle your corporate or private aircraft needs, talk to Elliott Beechcraft today. Just call us at one of our convenient locations.

Make the first easy Move Now

TEAK and KARPAWOOD

for parquet floors

The warm, natural look of a Teak or Karpawood parquet floor is treasured now more than ever before. These two imports are a delight to those who love the rich-grained beauty of wood.

TEAK is the ultimate in beauty, elegance and prestige . . . yet, it is very hard and will last for *decades*.

KARPAWOOD, known in Thailand as ironwood, is harder than oak, and has an extremely low coefficient of expansion.

Both woods are available from our Chicago warehouse in many UNfinished and PREfinished patterns.

Phone (collect) for free samples, brochures of 80 floor designs, technical information, prices. Or, write:

Caterpillar, Cat and  are registered trademarks of Caterpillar Tractor Co.

Our Telemarketing operation is lowering the cost of a sale. And that's raising a lot of interest.

It seems like everyone is interested in how we're boosting sales, increasing productivity and cutting expenses at the same time. How do we do it? We're using Bell Telemarketing to systematically sell and service our customers by phone.

We're using WATS lines to contact out-of-town customers and cut back on travel.

Our 800 Service is helping us penetrate new markets. Prospects see our toll-free number, they call, and we have a new customer.

We're using our data system to keep customer information at our fingertips. We keep track of when they should be contacted for

re-orders, when accounts are overdue, and more!

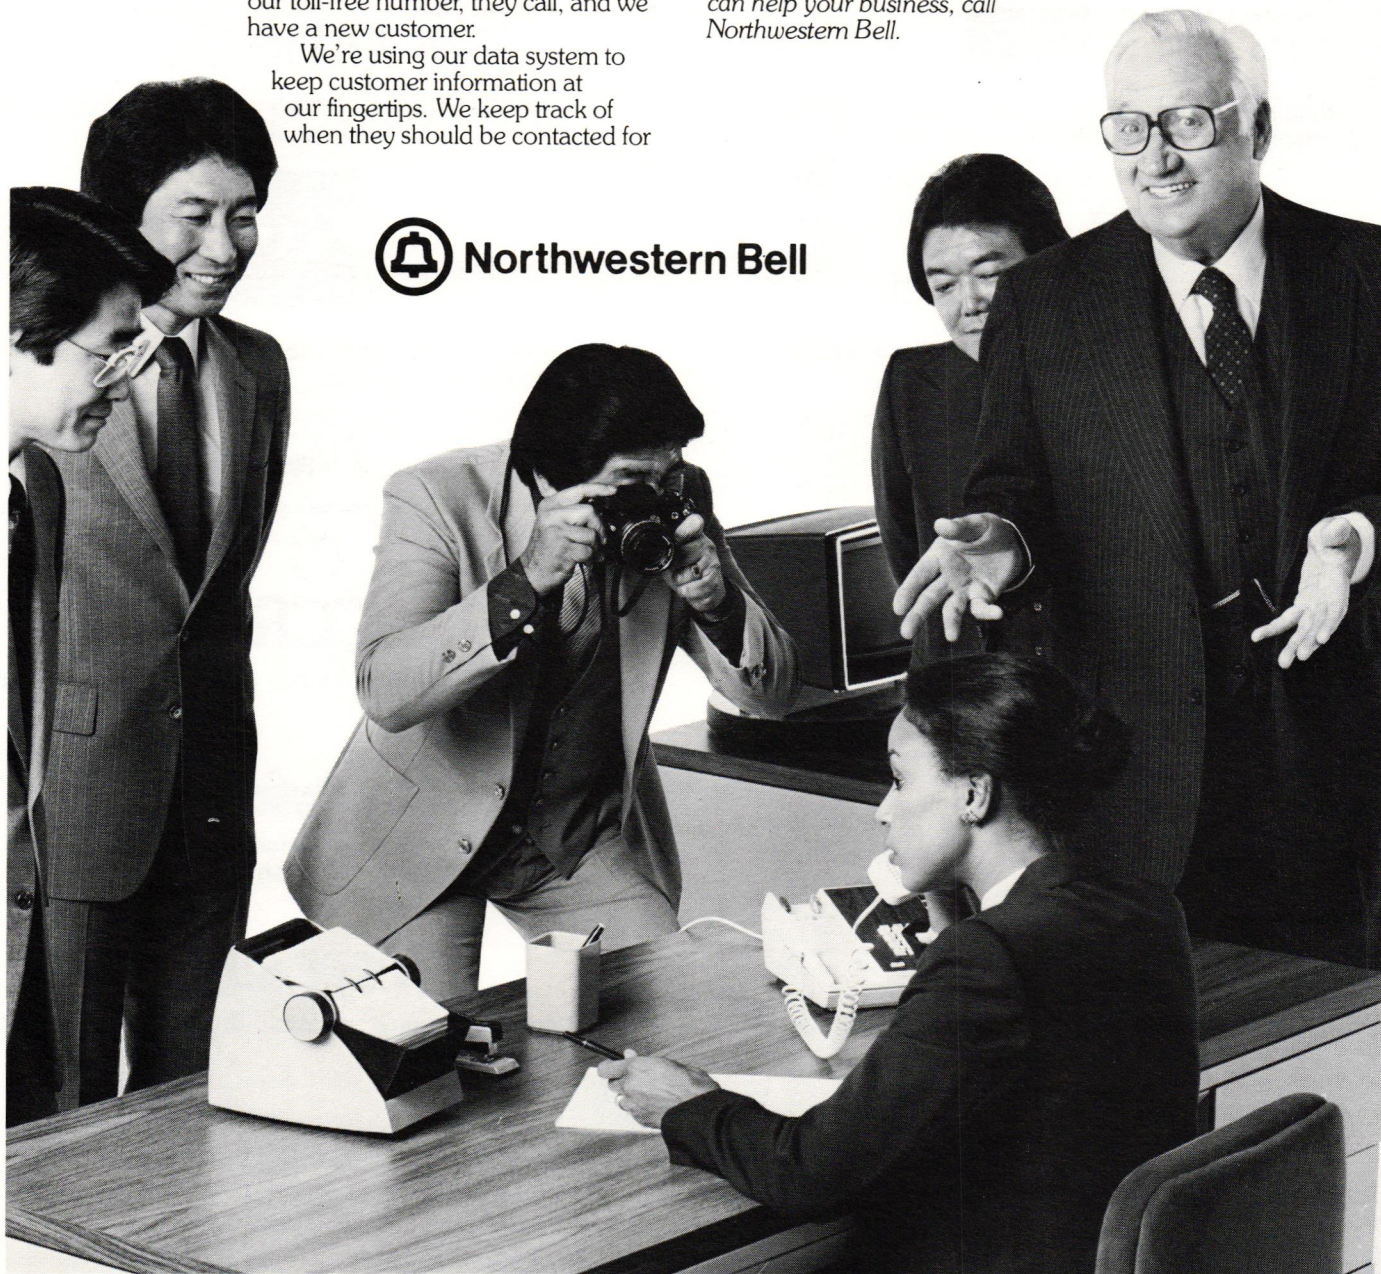

And instead of the high cost of opening branch offices, we maintain a "local presence" for our out-of-town customers with Remote Call Forwarding.

Put all this together and it spells Telemarketing. A productive approach to lowering the cost of doing business.

To find out how Bell Telemarketing can help your business, call Northwestern Bell.

Northwestern Bell

LLumar® Solar Control Window Film

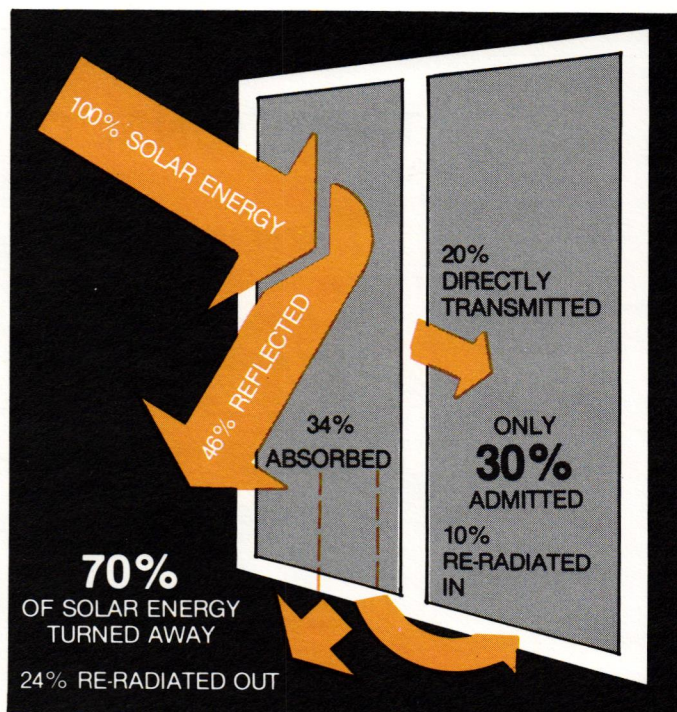

- cuts harmful ultraviolet radiation
- cuts air conditioning costs
- conserves interior heat in winter
- works in addition to thermal glass
- adds a touch of beauty
- lessens danger from broken glass
- reduces glare
- looks and works like expensive tinted glass
- returns investment in lowered utility costs

For more information write or call

IN REVIEW

Richard F. Hansen Elected to College of Fellows

Richard F. Hansen of Iowa City has been elected to the College of Fellows of the American Institute of Architects.

Fellowship is a lifetime honor bestowed for notable contributions to the profession of architecture. Ninety-four new fellows will be invested in the 60-year old College on May 22 at the 1983 AIA National Convention in New Orleans.

Hansen is a principal of Hansen Lind Meyer, P.C., a firm he helped to found 20 years ago in Iowa City. Today, HLM has a staff of almost 300, offices in Chicago and Orlando, and an engineering affiliate in Cedar Rapids and Orlando. For the last three years, **Modern Healthcare** magazine has listed HLM in the top ten designers of health care facilities in the country.

Mr. Hansen has directed the designs of many major hospital projects including the University of Iowa Hospitals and Clinics in Iowa City and Rush-Presbyterian-St. Luke's Medical Center in Chicago. His design for the Capitol Mall for the State Capitol in Des Moines received a national award from the American Society of Landscape Architects.

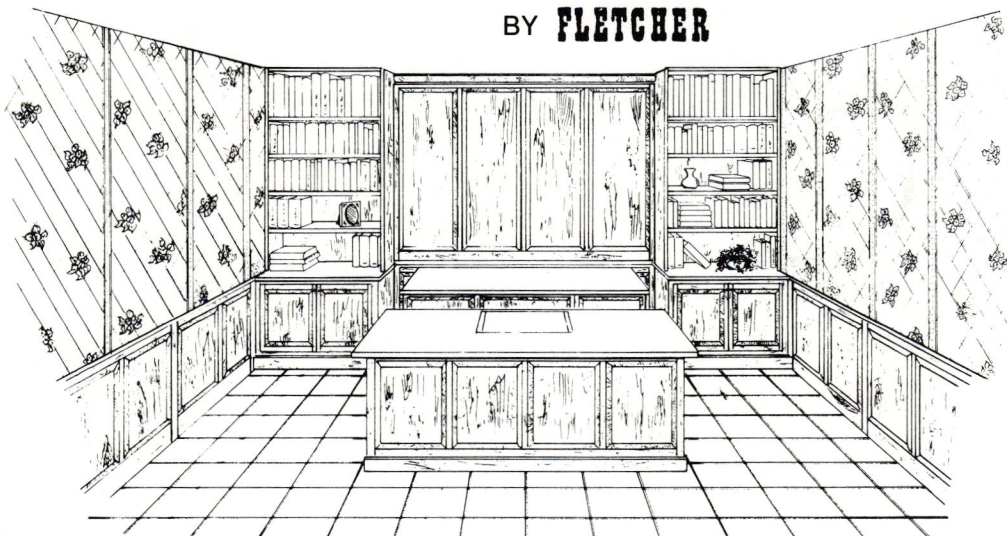

Richard F. Hansen

Throughout his career, Richard Hansen has been active in both state and national activities of the American Institute of Architects. He was President of the Iowa

TRADITIONAL OFFICE SYSTEMS

BY **FLETCHER**

Custom-designed and manufactured desks, credenzas, bookcases and wainscoting offer a prestigious alternative to today's modular office systems.

FLETCHER KITCHENS

Chapter of the AIA in 1971. As chairman of the AIA Continuing Education Advisory Council and as President of the Iowa Board of Architecture Examiners, Mr. Hansen has been responsible for helping to establish many continuing education programs for the architectural profession.

Mr. Hansen, a native of Mason City, Iowa, is a graduate of Iowa State University in Ames and a long time resident of Iowa City.

Urban Film for TV

AIA Members and Components Are Urged to Ask Local Public TV Stations to Air "Urban Preserve" in Their Communities.

Preservation of the elements which give a city its own unique identity is the focus of "Urban Preserve," a 30-minute film coproduced by San Francisco architect John Louis Field, FAIA, and KPBS-TV, San Diego.

On Feb. 13, this film was made available via satellite to public television stations across the nation. Individual stations had the opportunity to record it for airing whenever they wish.

To get this important urban film aired in your community, you should call or write local public TV stations and ask them if they programmed "Urban Preserve."

The airing of "Urban Preserve" provides an opportunity to increase public awareness of architecture and the

built environment in your community. When calling your local station, speak to the assignment editor and suggest that the station follow the presentation with a community talk show. If there's interest, provide the station with names of architects specializing in preservation or urban development and other experts.

If your station did not tape the program, you or your chapter may purchase a 3/4-inch "dub" of the film by sending a check for \$63 (plus shipping fees) to: KPBS-TV, San Diego State University, San Diego, Calif. 92182.

For additional information, contact: AIA public relations, (202) 626-7460.

Prize To Unbuilt Iowa

The Iowa Chapter will be receiving a limited edition print of Richard Morris Hunt's "New York Stock Exchange" from the AIA Foundation as a result of President Gordon E. Mills' presentation on Unbuilt Iowa to the Component Ideas Exchange at Grassroots. The session provided the opportunity for chapters to show and tell and swap good ideas. By a vote of the group, the Iowa Chapter won, with its exhibit "The Best Laid Plans," a traveling exhibit of architects work which never got off the drawing board.

The exhibit is available for scheduling to your local museum or gallery. Have them contact Bruce Williams, Iowa Arts Council, (515) 281-4451.

IAC Grant to Iowa Chapter

The Iowa Arts Council has awarded the Iowa Chapter, AIA, a matching grant for the implementation of an exhibit entitled "Historic American Buildings Survey: A Photographic Exhibit of Iowa Architecture". Bill Wagner, FAIA, who has been actively involved in HABS since 1950, was the originator of the idea to develop an exhibit of approximately thirty 11" x 14" black and white photos of HABS buildings in Iowa, plus various architectural artifacts which will be available to sites around the state.

The exhibit will start its tour at Polk County Heritage Gallery here in Des Moines in November to celebrate the 50th anniversary of HABS in Iowa.

Plans Announced For Fifth Annual Convention Run

Owens-Corning Fiberglas Corporation and the New Orleans Chapter of The American Institute of Architects will host the fifth annual AIA convention run in New Orleans, LA, May 22.

This year the event is named "Heritage Run", a reflection of New Orleans' rich architectural history.

The 1.8- and 3.6-mile runs are scheduled to begin in Audubon Park and Zoological Garden near the city's

Garden District at 8:30 a.m. May 22, the day before the AIA convention begins. Winners will be named in 10 age group categories and 10 prediction categories.

Registration forms for the races may be obtained by writing Hank Harrell at the Owens-Corning Fiberglas branch office in New Orleans at 3525 N. Causeway Blvd., Metairie, LA 70002.

Marston on National Register

Marston Hall, headquarters for the College of Engineering at Iowa State University recently was entered in the National Register of Historic Places. The register is the official list of the nation's cultural resources considered worth of preservation. It recognizes properties of historical, architectural and archaeological significance.

Marston is the only building on the Iowa State Campus for which architectural firms competed for the design work. The Des Moines firm of Proudfoot, Bird and Rawson (now Brooks, Borg & Skiles) was the winner with its neo-classic style. This firm also designed the Memorial Union and Curtis Hall, among others on campus.

Marston Hall was constructed of Indiana limestone and cost approximately \$160,000. Four statues grace the front of the building and represent the four curricula of engineering at the time—geology, mining, civil engineering and mechanics.

Jaques works underground...where it doesn't show.
But where it counts!

The
Part
You See
Depends
Upon
The Part **You Don't**

Perfect design and engineering is only as strong as the earth on which it rests. Jaques works underground to fill voids, stabilize loose soils, control groundwater flow and increase the bearing strengths at your project site. Whether it is already constructed or soon to be built, we can apply a wide range of pressure grouting techniques and materials to upgrade marginal conditions beneath your structure.

Put your project on solid ground with our methods.

W. G. **JAQUES** COMPANY

When Costing Natural Gas, Look at the Dollars... Not the Percents.

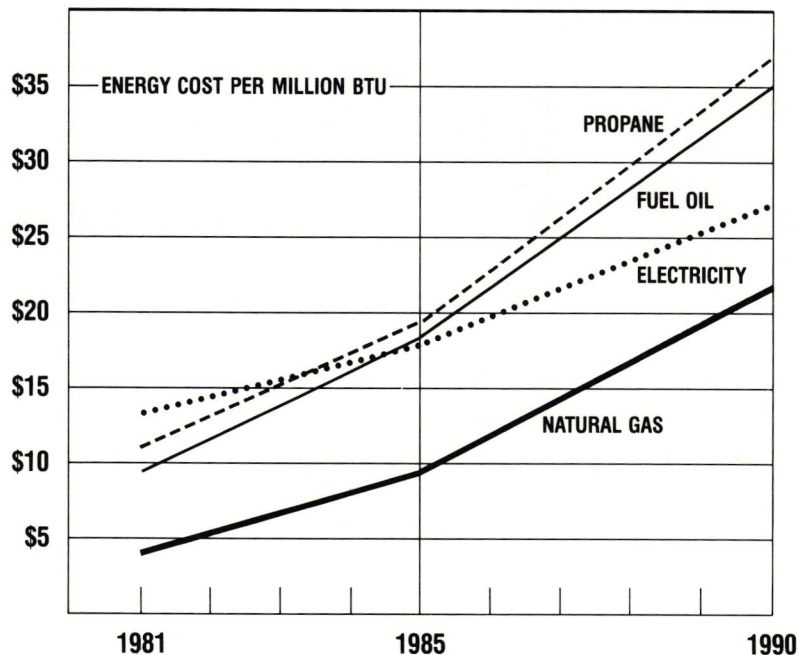

Everyone talks about the big percentage increases in the cost of natural gas over the past few years. But what often gets lost in all that talk is the fact that natural gas still provides more Btu's per dollar — significantly more than any competitive energy source. And the forecast is for that advantage to continue into the future.

If you want a heating system that offers long-term comfort, efficiency and economy, depend on natural gas. And depend on Iowa Gas to provide you with reliable, cooperative service.

For more information, call us today.
