- Interior Design

At The Pink Companies you will find one-source responsibility. We offer space planning and design services supported by inventories of furniture, open office systems and commercial carpet. We will follow your project from start to finish with skillful buying, state of the art products, expert installation and a firm commitment to service.

In an industry where customers often change sources of supply, we grow because we retain our customers. It's a reflection on our care for service and concern for quality.

# The Snap-on Roof is here!

The Mercer Area High School, Mercer, PA  
Roofing Contractor: J.A. Burns & Sons, Mercer, PA

## Carlisle introduces America's first mechanically attached single-ply roof that doesn't penetrate the membrane.

It's here...M.A.R.S. Design NP™ (Mechanically Attached Roofing System—Non-Penetrating). This is the ultimate single-ply roof system, combining the lightweight advantage of adhered systems with the low cost holding power of ballasted systems. But with a plus! It also offers the economical advantage of mechanically attached systems *without penetrating the membrane!*

Used in Europe for nearly a decade, this innovative system will save you time, money, materials and weight.

### Fast, easy installation.

Carlisle's performance-proven Sure-Seal™ membrane is held in place by simple three-part assemblies. These are a snap to install...as easy as one, two, three. No special equipment. Even in marginal weather. A small crew of Carlisle approved applicators can install an entire roof in record time.

**1** Roll membrane over knobbed base plate.

**2** Roll and snap on white retainer clip.

**3** Snap and screw on threaded black cap.

### Flexible design.

Goes right over failing built-up roofs and those that can't support much weight. The system fastens to most substrates and can even be moved to another location.

### Best of all, it's from Carlisle.

Trust Carlisle to bring you the best and most innovative roofing systems. We

promise single-source responsibility, trained professional applicators and over 20 years experience. Best of all, we offer a watertight warranty of up to 15 years.

For more information on our snap-on roof, call toll-free, (800) 233-0551, in PA (800) 932-4626. Call today, this is one snap decision your roof...and budget...will never regret!

## Marquart Introduces Shadow Stone

Every building is an original with Shadow Stone Designer Series. Each two-block combination provides six different shapes. Randomly selected and laid in running bond, Shadow Stone creates a unique exterior that ensures no two buildings will ever have exactly the same pattern! Shadow Stone has been used successfully in residential, industrial and office developments, as well as in religious and commercial buildings. Shadow Stone is available in a variety of sizes, and color may be integrally mixed into the block or applied with conventional surface treatments.

Shadow Stone is versatile, beautiful and economical. It's also virtually foolproof, since it can be laid right side up or upside down to achieve unique patterns. Shadow Stone, a copyrighted pattern from Designer Blocks, Inc., is available today at Marquart. For details, call us at the number below, or visit our Waterloo location today.

Caterpillar Standby Power

## The Ready Reserve

A Caterpillar Standby Power system could be the only thing standing between you and severe economic loss. For hospitals, computer centers or any operation that depends on an uninterrupted supply of electricity, a ready power reserve is a must. And your Cat Standby Power system is ready, willing and able when you need it most. You can also plug it in to meet peak demands or provide economical supplementary power.

Cat Standby Power has its own back-up system in the form of Total Product Support from Gibbs/Cook. We handle the design and installation of your system and provide any maintenance needed to keep it in top condition.

The Ready Reserve . . . from Gibbs/Cook. Sales and service facilities in Des Moines, Ft. Dodge, Mason City and Postville.

**"You just know you're going to get  
special care at Elliott Beechcraft."**

**"When I call, they make me feel I'm the only customer  
they have that day...no matter how busy they are."**

Henry L. Reichert, Jr., M.D.  
The Eye Clinic of North Dakota, Bismarck, ND

Hank Reichert is an enterprising ophthalmologist who uses his airplane to travel to his clinics in North and South Dakota and to promote his new eye implant nationwide.

Dr. Reichert originally went to Elliott Beechcraft because of their Beech affiliation. (He bought a Bonanza from Elliott in 1980, followed by a Baron in 1981 and a Duke in 1982.) He keeps going back to Elliott because of their first-class service.

"I have a lot of respect for the people at Elliott Beechcraft," Dr. Reichert says. "I like the way they treat me...and the way they treat my aircraft. You know you're going to get extra special care."

If you think you and your aircraft deserve extra special care, call Elliott Beechcraft at one of their convenient locations:

# WHAT IS SO SPECIAL ABOUT THIS COPIER?

**Minolta Beta 450Z**

The Minolta 450Z is the only copier which has ZOOM REDUCTION AND ENLARGEMENT and it can be easily programed to any scale you choose. This is a great benefit in a profession which involves sizing of visual materials. Zoom reduction and enlargement together with Minolta's quality makes the 450, not just an office copier, but a valuable graphics, design and drawing tool.

Here are some examples of how the Minolta 450Z can save you time and money:

- Use repro or overlay drafting techniques and instantly copy to the exact size you want.
- Take standard details, such as doors, windows and millwork, and then size them to scale.
- Enlarge letters or graphics up to 11 x 17.
- Reduce or enlarge floor plans or elevations for use in repetitive drawing requirements, such as site plans.

These are only a few of the ways you can utilize the 450Z, it is only limited by your imagination.

We do not ask you to take time to consider every new product that we sell. We would like, however, to make you aware of the "NEW CAMERA COPIER", The MINOLTA 450Z.

Doesn't it make good sense to see the Minolta 450Z? This is not an ordinary office copier, but a "CAMERA COPIER" that will save you hours of drafting time, which translates into "PROFIT".

## KOHLER ELEVATES THE WASHROOM.

Now Kohler brings high fashion to new heights. With the beautiful Kingston Set™. It's a lavatory, urinal and toilet that's designed to be installed together in your commercial and public buildings. It's a trio of Kohler products that gives washrooms a consistent, coordinated look.

Because they're three of a kind. All have the same sleek cosmopolitan styling. All are up, up and away... wall-hung to ease cleaning. All are made of durable vitreous china. But above all, The Set is available in the boldest colors around town: Swiss Chocolate (shown), Parchment,

Country Grey, Black Black, Mexican Sand, French Vanilla and White.

Look into the new Kingston Set. Its style/color coordination gives you the key to the executive washroom.

See us for more information on this and all Kohler products for kitchen, bath and powder room.

### Rolscreen Corporate Office

Savage & Ver Ploeg Inc. are the Architects for the Rolscreen Corporate Office Building in Pella, Iowa. The 60,000 sq. ft. building utilizes a three-story skylighted Atrium to introduce natural light to the interior. A skywalk at the second floor connects the new Executive Offices and Board Room to the existing building. The first floor features a conference institute with classrooms, backscreen video projection, product displays, cafeteria, and computer complex. The remaining building is private offices around the perimeter and open plan areas on the interior. Many of the various Rolscreen window and door products are an integral part of the design. Construction is scheduled to begin in the spring of 1984.

### Private Residence Castle Pines, Colorado

Charles Herbert & Associates, Inc. have completed the design for a private residence located in Colorado. The densely wooded 1.24 acre site is secluded in the hills south of Denver. With the consideration for the regional vernacular and environment the use of stone, wood siding and metal roofs were used as a gentle response to the natural surrounding.

A central spine enhanced with a continuous skylight for indirect lighting forms the circulation space for the plan. A series of spaces on the south side adjoining the central spine uniformly step back to fully accommodate the views and sun exposure. The project is to be completed next summer.

### Entrance, Educational and Zoological Center Blank Park Zoo of Des Moines

Bussard/Dikis Associates, Ltd. are architects for the Entrance, Educational and Zoological Center for the new Blank Park Zoo of Des Moines. Part of a master plan designed by Crose-Gardner Associates and their consultants, the center will house administrative offices and support space, multi-purpose room, gift shop and ticket sales. The structure will be clad in cedar siding and features an open beam arcade. Construction on the zoo is underway, while construction on the entrance center is expected in the summer of 1984.

# We have the solution!

## When 'typical' isn't enough.

### GERKIN

### RESIDENTIAL

Elegance, versatility and economy make Gerkin a natural choice for building or remodeling.

### COMMERCIAL

Gerkin's unique investment payback has proven it to be ideal for most any commercial application.

# Natural gas is your best decision now... and for the future.

When you consider the facts, gas computes as the natural choice. Here's why:

**1 Prices have stabilized.** In fact, natural gas prices are lower today than they were in 1983. While costs of other fuels are expected to continue to climb, it is anticipated that gas prices will remain stable.

**2 Supply is up.** Natural gas supplies are plentiful, and the long-term outlook is bright.

**3 New gas equipment is more efficient.** The new generation of natural gas equipment has introduced a new era of operating efficiency and design flexibility. And, combined with highly efficient electric air conditioning systems, you are assured of the most attractive life cycle costing.

For efficiency, availability, affordability and predictability...specify gas on your next project.

Gas...it's the natural choice.

**EDO SYSTEM SIX HUNDRED  
A BRAINY BEAUTY**

Who says brains and beauty cannot come in one package? While modern communication and information systems are seldom referred to as "sexy," that is precisely the adjective assigned to the EDO System Six Hundred by a U.S. business editor.

The EDO System Six Hundred is more than just a handsome leather veneer. This multi-function microprocessor console embodies several integrated technologies that set new standards. Beneath that smooth exterior is a hands-free speaker phone with a 112-number automatic dialer and a dual purpose call timer/stop watch. Incorporated into EDO is a three-memory business calculator with audible feedback entry capabilities. The system also features a perpetual calendar, a digital clock and an appointment timekeeper. The EDO hands-free telephone boasts new circuitry that automatically adjusts the call's transmission volume to the distance and direction of the speaker's voice

in the room. Therefore, the EDO user is able to walk freely about his office, retrieving files from one end of the room and then his briefcase from another, without interrupting his conversation. Because of the EDO speakers' unique design and spatial location, the person on the other end will barely be able to detect the speaker's movements.

Since EDO was designed with the time-pressed business executive in mind, there is an ancillary electronic memory storage for 112 telephone numbers of up to 30 digits each. This telephone directory has a "Quick Access" file that will display any one of the 12 often-rung numbers with the punch of the appropriate button. The other 100 numbers in the main directory can be recalled by typing in the individual two-digit code assigned to each number. For verification purposes, the number is displayed on the console prior to its being automatically placed.

The EDO telephone system has other

innovative and time-saving devices. The last number dialed is automatically stored in EDO's memory and can be redialed at the press of a button. If a line is busy, the user can relegate the tedium of redialing the number to EDO. The system will automatically redial the number every minute for ten minutes or until the connection is made.

The EDO calculator has a three-memory capability. Two of the memories are fully independent and one is reserved for data constants. While the calculator is sufficiently sophisticated to handle practically every business application, it was designed for ease of use. With its unique "backspace" button, incorrectly entered numbers can be changed without clearing the screen. The screen has a large, easily-read 12-digit display.

The EDO System Six Hundred has perfected several technologies that have become indispensable within the working environment. ■

# DES MOINES ART CENTER

**James T. Demetrian**  
*Director*

Over the past dozen years or so it has become fashionable — and almost mandatory — for Boards of Trustees of major art museums to commission vanguard architects of international stature to design their new buildings and additions. In fact, during recent years one could scarcely pick up an art magazine (or even a general interest periodical, for that matter) without reading about Pei in Washington, Bloomington or Boston; Barnes in Minneapolis, New York or Dallas; Kahn in Fort Worth or New Haven; Isozaki in Los Angeles; Graves in New York or Fargo; Venturi in Oberlin; Tange in Minneapolis; Johnson in Miami; Pelli in New York; etc. etc. The marriage of art museum to famous architect was not always a happy one, admittedly, and some of the above combinations have not yet seen the light of day, but the trend continues unabated.

What generally is overlooked is that, as far back as the 1940s, the Trustees of the Des Moines Art Center became early pioneers in fostering the kind of matchmaking cited above. Its selection of the Finnish-American Eliel Saarinen to design a museum in a relatively small Midwestern city was a radical departure from the

norm. The stylistic norm for art museums at that time was the "First National Bank Style" with its solid, stolid neo-Classical facade of pediment, post, and lintel (shades of post-Modernism!).

But Saarinen's design was linear in nature and his building, which opened its doors to the public in 1948, angles across the northwestern perimeter of Greenwood Park, hugging the ground all the way. Its unpretentious main entrance "resembled that of an elementary school, not a real museum" as one of the above-mentioned luminaries referred to it condescendingly during his interview for the commission to the present project. Needless to say, he didn't get the commission, for what he apparently failed to grasp was that Saarinen's modest entrance was his effective way of mitigating the forbidding, threatening character which many museum build-

ings have. Instead, the deep overhang above the doorway and the curved sides which splay outward beckon the visitor to come inside.

As the Art Center's collection grew and its activities increased, it became apparent that the building would have to keep pace as well, and in the 1960s Saarinen's firm (he himself had died in 1950) was approached to design the addition. But the firm declined the opportunity, purportedly because the commission was not large enough. I. M. Pei obviously felt otherwise, and his design became a reality in 1968. It proved to be an immediate popular success. Visitors remarked on how well Pei had "blended" his building into Saarinen's. In terms of color they were right, but in terms of pure architecture the two could hardly have been more different. Pei's use of natural light and his volumetric "carving" of space create a powerfully dramatic sculptured form which contrasts sharply with Saarinen's understated linear design. And it is the differences (not the "blending") of ceiling heights, light sources, materials and formation of space which make the entire structure more interesting as a whole.

With the exception of a mechanical

Saarinen Building photographs courtesy of the Des Moines Art Center and Brooks Borg and Skiles, Architects-Engineers

© 1968 Ezra Stoller Esto

equipment room, Pei's addition consisted only of sculpture galleries and an auditorium. The Art Center was still left with its original storage rooms, offices, library and other support areas virtually unchanged and these were very obviously inadequate. And the transformation of the old Saarinen auditorium into three intimate galleries — designed by Charles Herbert, one of the Midwest's leading architects — added only a small amount of space in which to install two-dimensional works. Just as it had in the 1940s and again in the 1960s, the Art Center's Board decided to commission a leading figure for its addition in the 1980s. Richard Meier of New York was selected (his recently completed museum in Atlanta and his plans for a museum in Frankfurt can be added to the litany in the first paragraph), and his distinctive design promises to be worthy of the architectural heritage of the Des Moines Art Center.

Meier's task is incomparably more difficult than was Saarinen's (starting from scratch is always easier than adding on) or Pei's (Saarinen had left a gap between two sections of his building which Pei simply filled). Rather than "blending in" coloristically to the existing structure — the architect's white panels are virtually his trademark — Meier's relationship to the building will be manifested in a more subtle way, since it will involve less obvious elements such as proportions and roof lines.

Instead of locating the entire addition in one place, Meier's design calls for three structures: a one-story dining facility in the northwest part of the Maytag Reflecting Pool and Courtyard; a two-story section to the west housing a gallery of African art above and maintenance shop areas below; and, balancing Pei's addition to the south, a three-story section to the north for changing exhibition galleries, permanent collection galleries, storage facilities and an outdoor terrace. Also included in the project is the renovation and/or relocation of the library, museum shop, some classrooms, administrative offices and the Maytag and West Galleries. Most of the renovation will be completed by the beginning of 1984, and it is expected that the new addition will be ready by the end of the year.

The combination of Saarinen, Pei and Meier promises to be an exciting one. It also will be a unique opportunity for lovers of architecture to observe a visual dialogue by three masters of 20th century architecture in one location, making the Des Moines Art Center not only a museum with significant holdings of paintings, sculptures and prints, but a museum of living architecture as well. ■

The following remarks were presented by Richard Meier in Des Moines as an introduction to a discussion of his work. Mr. Meier is a Fellow of the American Institute of Architects and has been honored with numerous national Design Awards. His work has been featured in every important architectural magazine and exhibited in over thirty national and international locations. His design for a major addition to the Des Moines Art Center is under construction and expected to be completed in the Fall of 1984.

I am very pleased to be here today to discuss several of my more recent projects and to reflect on some of the inclinations, aims and implications of my work.

As an introduction to a discussion of my work, I am going to present to you a kind of nutshell summation of the state of the art of architecture. I can claim no objectivity in this endeavor. I bring to it a mind burdened with bias and a dangerous proximity to the issues. I have not the distance and cool consideration of the critic. My comments are conditioned by the heat of close involvement and strong beliefs. With that grain-of-salt word of warning, I feel I can proceed with more or less impunity.

Pluralism, eclecticism, populism, post-modernism, all the isms abroad today in

architecture speak of the break-down of the ideological base of the modern movement.

Some would say that we have happily escaped the spectre of modernist dogma; the huge, petrifying responsibility of the making of a better world through Architecture. Some would say that finally we have liberated our art, secured its autonomy, wrested it from enslavement to a utopian determinism, an enslavement that seems unreal and inappropriate and which has proven disastrous more often than not. The great faith in the miracle of technology and the great faith in the architect as a provider of global solutions is dead.

Essentially what this means is that the specific subject of our art has changed; it is no longer the ideal, the future...but the real, the present and the past. If one

thinks of architecture as the treatment of meaningful forms, then the rigorous absolutism of modernism looms as a period in which many fundamental meanings were forgotten or proscribed.

It is the aim of this new pluralism to make the totality of significant human experience potentially available again. In this way, history becomes a dimension of fundamental importance.

The revival of the neoclassical tradition is essential to the new wave in architecture, post-modernism, a remarkably uninformative name, which covers a multitude of styles. They do have certain things in common. In the language of elements and meaningful forms, architecture can be seen as commentary on the condition of man in relation to his object world.

The basic difference between the post-modernists and their modernist progenitors comes from attitudes about the expressive, didactic role of architecture. Whether architecture should speak to man about man, or about architecture, about the object itself.

Within the neoclassical tradition, the architect used forms that referred to man's physical reality; a building had foot, body and head. The architecture subsumed the object within the man-nature relationship.

Modernism, with its technological libera-

tion and abhorrence of the past, sought to differentiate man from nature, man from machine, machine from nature. This new abstraction let the building speak for itself. It was an abstraction that celebrated the potential realization of a condition of objecthood that served man but was distinct from him. Modernism strived for a primal statement. In it, all elements are reduced to raw material, dehistoricized in order to become reconstituted as structure. That is not to say that modernism did not deploy both archetypal and historical references in its symbolism, but it was never representational.

Essentially post-modernism is a return to the neoclassical tradition, to the representational in architecture. It is a return to the anthropomorphic notion of architecture as a reflection or image of man himself. It is architecture as a vehicle of expression for meanings and evocation of memory. At its best, this can mean an architecture of rich collage; a complex layering of meaning, symbol and metaphoric imagery. At its worst, which is unfortunately all too frequent, it becomes a literal reading of historical quotes and allusions which are ultimately either so accessible that they become uninteresting or so esoteric that they become unintelligible. The danger of this is that it reduces architecture to a jabber of styles, a process of mere pack-

aging. This is a world in which there are no standards, no good or bad, everything and anything is acceptable.

Under the post-modernist umbrella is found a multitude of directions. They range from an espousal of the incoherent and illogical clothed in the commonplace; a kind of chaotic game in which rules are never really established and order is nowhere to be found, to subtle and complicated linguistic play that sets up its own cerebral and labyrinthine structure that very few will understand. In between we find the romance of the familiar, the adulation of the everyday. The messiness and disorder of life, scorned by the modernists, are catapulted to a place of honor. We are to learn from the pop idols and the instant aesthetics of the highways. We are to look to MacDonald's and Caesar's Palace for inspiration. Architecture is no longer seen as timeless, but ephemeral, a throw-away, subject to the caprice of commercial culture and the exigencies of the market-place.

Decoration is in. Facades are either laden with classical mouldings, keystones and columns or masked in super-slick mirrored glass or high-tech color and chrome.

The post-modernists have a very high visibility. Apparently they are much better

Schematic Design Drawings

publicists than their predecessors. Or perhaps it is simply that this relinquishing of responsibility, this no-rules, anything-goes attitude makes this architecture a prime expression of the me-generation of the seventies. And we all know the media love icons.

Another phenomenon that seems peculiar to this time and place is the emergence of the architectural drawing as art object. Indeed, drawings seem to be post-modernism's major output; the movement can claim very few built examples. New York galleries are full of sketches from the masters, bold visionary cartoons, highly mannered color elevations and even working drawings. Since the Museum of Modern Art in New York presented a stunning show of Beaux Arts watercolor drawings in 1978, everyone has been busy churning out precious paper.

Architectural drawings, especially the visionary sort, have a long and celebrated tradition. From Piranesi to Le Corbusier, drawings have always had a special power and profound influence. The difference here is that a market has been created. The drawings are sold and collected not, for the most part, because they are seminal and important but because they are

thought to be pretty. These potent and seductive images have a tendency to distance one from the architecture. Most of these alleged projects will not be built and were never intended to be built. They occupy a no-man's land; they aren't really architecture and not really painting, they are merely pictures. The danger here is that they are still very powerful, very influential, especially for students of architecture.

Specifically, the preponderance of the elevation as the most accessible two-dimensional expression of the design incites a kind of obsession with the facade. This in turn de-emphasizes the plan and section, the more abstract drawings, in which spatial exploration is the subject.

This again is quite within the neoclassical tradition. The representational, the pictorial dominate the scene. It seems regrettable to me that we must return to a former time so wholeheartedly, putting aside the technological advances that have freed us to such an unprecedented extent. The free plan, the free facade, the separation of structure and skin, the whole formal basis of the modern movement, fostered a new kind of volumetric exploration, one that seems to hold even more possibilities. ■

## WHY THE PROS CHOSE ELECTRIC FOR THE CARRIERS BUILDING

**The Pros:** Architects — Kendall Griffith Russell Artiaga; General Contractor — Neumann Brothers; Electrical Contractor — ABC Electric; Mechanical Engineer — Cutler Corporation.

**The Structure:** 252,000 sq. ft. on 14 floors

### Here's what they said...

**The Architect:** "The water-to-air heat pump was selected for this particular building based on six major advantages. It has the lowest initial cost. Additionally, the heat pump system offers easy add-on flexibility for both heating and cooling cycles, high heat transfer and storage capability, and takes up the least amount of building space of any system we considered."

**The Engineer:** "When all applicable heating and air conditioning systems were studied, the water-to-air heat pump system was selected. This system incorporates low energy costs, lowest initial installation costs, and thermal storage capacity when building energy gains exceed comfort heating requirements. In addition, it affords the greatest flexibility for tenant development and allows for unit multiplicity that can provide virtually individual comfort within any major occupied space."

### The Pros design for the future with electric.

For more information about costs and ideas for efficient heating systems, contact Bill Bloethe, Manager, Technical Services, Iowa Power, 515-281-2395.

Means Value Year After Year

# When it's time to talk decorating, talk to Hirshfield's.

Dial 612-332-6511 and one of us in Hirshfield's Contract Dept. will go right to work for you.

If it's paint you want, we'll give you two top brands — Fuller-O'Brien and Hirshfield's — in a total of 2,000 colors, very attractively priced.

Ready to order wallcoverings? We have thousands and thousands of patterns in stock right in Minneapolis/St. Paul, including our "Halls & Walls" vinyl textures and "Wallsource" 54" vinyls.

Plus, we now offer a complete line of commercial fabrics for curtains, draperies, bedspreads, and upholstery.

So, you can order practically all of your decorating products thorough one source — Hirshfield's.

For consulting, quotations, and personal attention and service concerning every last detail of your job, call Hirshfield's . . . the Twin Cities' largest, most complete decorating products supplier . . . since 1894.

Hirshfield's. We go out of our way to be helpful.

Contract Sales Showroom: 824 Hennepin, Mpls., Hours: Mon.-Fri. 8 AM-5 PM  
Harmon Court Designer Showroom: 1128 Harmon Place, Mpls., Hours: Mon.-Fri. 9AM-5PM.

## International Collection Accessories

Smokador introduces an award winning collection of European office and boardroom accessories that sets new standards of aesthetics and functional elegance. These exceptional plastic accessories were conceived by the internationally recognized industrial designer Erik Magnussen. They offer an option to the often banal solutions for executive and conference room functional requirements. Molded and assembled in Denmark in red, white or black ABS, the collection features a carafe, ice bucket, serving tray, creamer and sugar bowl. The stainless carafe is also available in all of Smokador's standard metal finishes, bronze, mirror chrome, mirror brass, antique brass and satin bronze. These designs were first awarded for design excellence by the Danish Society of Industrial Design in 1977.

## Steelcase Introduces Bentwood Chair

A bentwood side chair designed by Warren Snodgrass is being introduced by Steelcase as part of a new line called the Snodgrass Collection. The chair is offered in light oak, dark oak and walnut finishes and in five models: open and full back with or without arms and full back with fully upholstered arm inserts.

# SPECIFY THE BEST

Visit our showroom or call us for specifications on any of these products.

For the "built-to-order" kitchen. Unlimited cabinet sizes, styles, finishes and special features. Can be designed for storage most anywhere.

## Artists' Postcards '84

Forty-eight original postcard-sized art works have been selected from a record 424 entries to the third biennial Iowa Artists' Postcards 1984 competition, sponsored by the Iowa Arts Council, a state agency.

Works selected from the competition will become part of a touring exhibition which will be circulated by the IAC. The 48 works are by 37 Iowa artists who met the challenge of working in original media while creating postcard-sized (4¼" × 6") art reflecting the land, people, heritage, industry and other aspects of Iowa life. A selection of the 48 works traveling in the exhibition will also be reproduced in a postcard packet which will serve as a catalog for the show. The catalog will also be available for purchase by the public.

A total of 247 artists participated in the biennial competition, which was juried by Lynette Pohlman, Director, Brunnier Gallery, Iowa State University, Ames; Peggy Patrick, Assistant Director, Des Moines Art Center, and Bonnie Percival, Percival Galleries, Des Moines.

### Hansen Lind Meyer, P.C.

Hansen Lind Meyer, P.C., architects/engineers, has been listed among the top five designers of health care facilities in the nation. *Modern Healthcare*, which conducts an annual ranking of the top 100 health care architects, has placed HLM in

the top 10 for the last three years. This year the firm, which has offices in Iowa City, Iowa, Chicago, and Orlando, ranked #1 in dollar volume and #4 in square footage. Of the top five firms listed, HLM was the only one to show an increase in business during 1983.

## TEAK and KARPAWOOD

for parquet floors

The warm, natural look of a Teak or Karpawood parquet floor is treasured now more than ever before. These two imports are a delight to those who love the rich-grained beauty of wood.

TEAK is the ultimate in beauty, elegance and prestige ... yet, it is very hard and will last for *decades*.

KARPAWOOD, known in Thailand as ironwood, is harder than oak, and has an extremely low coefficient of expansion.

Both woods are available from our Chicago warehouse in many UNfinished and PREfinished patterns.

Phone (collect) for free samples, brochures of 80 floor designs, technical information, prices. Or, write:

### International Art Exposition

One hundred sixty-two galleries have been selected as exhibitors at the fifth annual Chicago International Art Exposition, the largest juried world-class art forum of its kind. Held at Navy Pier, May 10-15, this year's exposition will include 53 foreign dealers representing galleries from Western Europe, Japan, Canada, South America and Asia. For the first time, the Soviet Union will be represented by an exhibition showing work of contemporary Russian artists.

Critically acclaimed as the world's preeminent art exposition, it is an unparal-

leled market and viewing place for art. It is held each year at Navy Pier, an architectural wonder with a stunning cast-iron rotunda, and attracts tens of thousands of patrons to view paintings, sculpture, drawings, prints, video and the best work of nearly every important 20th century artist.

In addition to the vast display of art covering 200,000 sq. feet at Navy Pier, The Exposition offers seminars sponsored by *Art In America* and the outdoor MILE OF SCULPTURE, a spectacular international sculpture exhibition mounted alongside Navy Pier, and against the backdrop of Chicago's skyline and Lake Michigan.

### New Executive Director

Kate S. Campbell has been selected as the new Executive Director of the Iowa Chapter AIA. Kate has a Bachelor of Arts degree with a major in Urban and Regional Planning and a Master's degree in Public Administration. Related work experience included the position of Development Director for the Charter Oak Temple, a not-for-profit organization involved in the preservation and restoration of the first synagogue built in Connecticut, and as a budget analyst working in support of the Connecticut General Assembly's Appropriations Committee. Her resume of community involvement is impressive and includes service on the Hartford Board of Education with a term as president. Kate has a broad base of experience and education that, when combined with her warm personality and enthusiasm for not only the position, but the issues that architects are concerned about, make her an outstanding choice. Kate and her family moved to Des Moines from Hartford, Connecticut in the fall of 1983.

### Correction

The Designgroup was omitted as the client for the Agri-Gamble, Living History Farms Project (Iowa Architect, Honor Awards Issue, Nov./Dec. 1983). Architect for the project was Thomas Baldwin, Charles Herbert and Associates.

# Wasco introduces a major innovation in Architectural Skylighting

## MODEL SBV

This simple but expansive application of Wasco's new architectural system shows how greatly these products can facilitate on-site assembly and glazing of structural vaulted skylights. The unique new Wasco tubular concept permits versatility in engineering to meet climate conditions as well as today's (and tomorrow's) heating, ventilating and air conditioning requirements.

The wide variety of extrusions made available through the Wasco manufacturing capability provides components to fit specific needs precisely. Their broad interchangeability permits a nearly infinite detail specification capability.

## TYPICAL APPLICATIONS

Model SBV applications include all types of buildings, residential as well as commercial and institutional. Apartment and condominium complexes; retail, office and manufacturing facilities; and schools, libraries, hospitals, museums, galleries and many other structures of all kinds form a partial list of Wasco barrel vaulted skylight installation possibilities.
