# Why make a good impression when you can make a Grand Entrance?

Interlocking concrete pavers give a class appearance while providing a durable, flexible, load spreading pavement that is superior to monolithic systems. Pavers must pass high standards set by ASTM C936: 8000 p.s.i. minimum compressive strength, low water absorption, and resistance to freeze-thaw cycles.

For access to underground utilities, concrete paver units are simply unzipped for excavation and zipped back. Mortarless joints make removal fast and easy. No unsightly patches when the repair is completed. No cracks when the pavement settles. Make a grand entrance to your next project.

**Join those who have used over 300 million square feet of interlocking concrete pavements since 1980.**

For complete information on concrete pavers contact, Masonry Institute Of Iowa,

## Quality Tells

At EAGLE, quality means finding ways to make good products better. Which is why you can design almost any shape or combination of windows your imagination can picture — and still benefit from pre-finished exterior aluminum extrusions, warm wood interiors and true insulated glass. Or choose the EAGLE Maximizer with its R-4 insulating value (like a 2x4) with its Low-E coating which protects your interior furnishings from ultra-violet damage.

Compare EAGLE's features with any other product on the market. Choose cheap windows and pay forever in higher utility and maintenance costs. Choose the superior quality of EAGLE for years of lasting beauty — because quality tells.

**Size:** 220,000 sq. ft. on four levels

## Why an electric HVAC system?

**Architect:** "Since energy requirements for  
this type of facility are very demanding in  
terms of humidity and temperature control  
and heat gain and loss, I sought ways to  
minimize the building's energy consumption."

**Engineer:** "...the favorable electric rates that  
could be obtained when cost of system  
operation and lighting and equipment are  
combined...better and possibly the best  
maintenance costs when compared with  
traditional VAV systems."

For information on economical HVAC systems,

# Introduction

## A Word From the President

On behalf of the Iowa Chapter of the American Institute of Architects, I am pleased to present this 1990 edition of the Iowa Chapter Directory of Architects. Within these pages you will find something more than the mere listing of names and addresses. You will find a dedicated body of competent professionals, committed to an unyielding vision of the future of this great State of Iowa. As architects, we are all partners in a process which is rich in heritage and unlimited in potential. As Iowans, we share with our neighbors a profound respect for the values and traditions which so fundamentally shape this magnificent heartland.

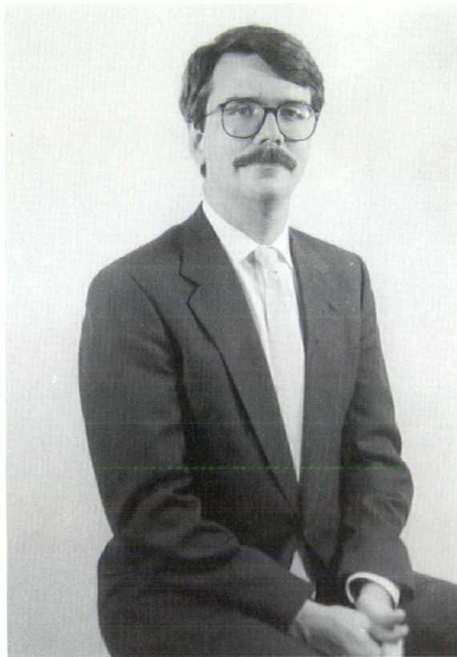

In this directory, we describe not so much "who" these architects are, but "what" they are. You will find articles defining the manner in which architects work, the ethical codes which bind them as a professional entity, and hopefully, some sense of the great ambitions they share for the continued prosperity of their state.

We believe this directory will become a valuable resource for each of its readers. As we enter a new decade, we offer our resolute commitment to the greater ambitions and dreams of every Iowan.

Sincerely,

Craig Nelson AIA  
President, Iowa Chapter, AIA

# The Work of the Architect, A Users Guide

## The Architect

The architect is, by both training and temperament, a generalist. In an age noted by its ever-consuming passion for specialization, the architect must remain one who steadfastly perceives "the whole picture."

The art of building can rarely be coerced into a singular train of thought. Architecture is, above all else, a richly interwoven tapestry of aims, interests and ideals. A building may not be only technological, or artistic, or functional, or humane. It must be each and all of these things. The architect alone is uniquely qualified to perform the complex and multifaceted task of creating a building.

There persists a romantic notion about the work of the architect; that the design of a building results from some flash of inspiration, hastily scratched on the back of an envelope or napkin, which is then miraculously transformed into physical reality. The true reality of architecture is somewhat less poetic. For most architects, architecture is a patient process of examination, analysis, and evaluation. It is an act they can best describe only as the "process of design."

Each building begins as a problem which must be solved. Though the problems presented to architects are varied, they all share common characteristics. A client has needs; a space for a particular use, an environment requiring repair, an expansion of what is or the recreation of what was. More over, the needs of a client are rarely limited simply to the physical characteristics of the anticipated building. Each client has scheduling limitations and the constraints of an over-riding budget. These needs form the seed from which the fruits of architecture ultimately blossom.

Buildings do not, however, exist in a vacuum. Any construction project, regardless of its scope, has a significant physical and economic impact on the environment in which it is placed. The architect is compelled to consider not only the narrowly defined desires of the client, but the interests of the public at large. In the long run, a building unsuited to its context serves neither the best interests of its owner or its neighbors.

Regardless of the specific aims of client and context, each building must recognize, at its most basic level, the fundamental characteristics of nature; gravity must be resisted, topography

must be accommodated, climates must be modified. Above all else, the architect should be keenly aware of the consequences of time. Buildings are not, after all, a momentary experience. They are objects that will be with us for a considerable length of time.

These then are the "problems" of architecture; the issues with which architects must contend. The architect understands full well that the success of any building depends upon striking an appropriate balance between each of these requisite requirements.

The resolution of the problems of architecture is embodied in an architect's "process of design." For most, the process begins with a statement of "Program." The Program is a written description of the client's needs, ambitions, goals and aspirations for a given project. A Program may be as simple as the listing of spacial requirements. Or it may be a highly detailed treatise, quantifying very specific ambitions. In either instance, the Program becomes the basis upon which the value of an architect's performance is judged.

A program, however, may not be judged in isolation. It is always considered with respect to the intended location of a project, the building's site. The architect will begin by analyzing the "fit" between a prospective program and the context in which it is placed. The architect must ask very specific questions: "What are the physical characteristics of this property? What are the legally binding restraints on the site in question"? Simply put, "Will the intended program "fit"?"

From here, the architect prepares a series of preliminary proposals. These are, in reality, sketches which suggest a variety of options and opportunities inherent in a client's program and siting intentions. Architects typically describe this preliminary activity as "Schematic Design." It is characterized by a free-flowing exchange of concepts and ideals between client and designer that should clarify the fundamental objectives of the project at hand. Alternative proposals are reviewed in consultation with the client and ultimately, a preferred strategy for continued development is selected.

In the Design Development phase, the schematic proposal is examined in considerable

detail. At this point, the materials and methods of construction are selected, planning layouts are refined and construction costs are projected with increasing reliability. Most important, the image of the building as a concrete work of architecture becomes evident.

Throughout this phase of development, the architect must continually re-assess the initial objectives of the project. "Does the developed proposal conform to the initial requirements of the program? Are the interests of the client preserved? Does this proposed building "speak" in some manner to the community into which it is placed"? It is this constant re-evaluation of constraints and motivations that distinguishes the responsible work of the architect.

Construction Documents are prepared only after both architect and client agree that the objectives of the program have been fulfilled by the developed design. In this phase, detailed drawings and specifications are drafted allowing a contractor to establish fixed building costs and initiate construction. In creating these documents, the architect will rely on the assistance of specialized consultants: engineers, landscape architects, graphic designers or others as required to contribute their expertise to the evolving design. The completed documents become, in effect, a legal contract, compelling the finished building to be constructed in accordance with the client's express desires.

During construction the architect continues to evaluate the ongoing evolution of the design process. Through periodic site visits and consultation with the client, the architect assumes an advisory role, noting the general progress of the work and its compliance with the overall intentions of the design concept.

Most architects consider the process of design complete only after the client has moved in and become accustomed to the new or renovated surroundings. In this "Post-Evaluative" phase of design the architect again asks the same questions that have characterized each preceding step in the process. "What were the client's needs? Does the completed building meet those expectations? Is this in fact a "balanced" work of architecture"?

To be fair, only a handful of buildings ever

## Ethics, An Architect's Standard of Conduct

fulfill each and every expectation demanded of them. Such perfection may be realized only under the best of circumstances. Still the process of design as employed by the architect, provides the broadest, most reasonable means of achieving a successful, satisfying building that equitably represents the best interests of its users.

The architect seeks solutions to frequently complex problems in ways as imaginative as they are structured. The architect's process of design is formulated to clarify the ambitions of a client in a manner which produces buildings that are unique, productive and testaments to enduring value. ■

By mutual consent, members of the American Institute of Architects conform to a Code of Ethics. To quote the "Architect's Handbook of Professional Practice" an architect is committed to the "highest standards of professionalism, integrity and competence. The Code of Ethics provides members with reasonable guidelines for fulfilling their obligations to the public, to clients and users, to the building industry, to the profession and to their professional colleagues."

The Architect's Code of Ethics is based on five fundamental Canons, each of which represent broad principles of conduct:

### General Obligations

*Members should maintain and advance their knowledge of the art and science of architecture, respect the body of architectural accomplishment and contribute to its growth: learned and uncompromised professional judgement should take precedence over any other motive in the pursuit of the art and science of architecture.*

### Obligations to the Public

*Members should embrace the spirit and letter of the law governing their professional affairs and should thoughtfully consider the social and environmental impact of their professional activities.*

### Obligations to the Client

*Members should serve their clients competently and in a professional manner and should exercise unprejudiced and unbiased judgement on their behalf.*

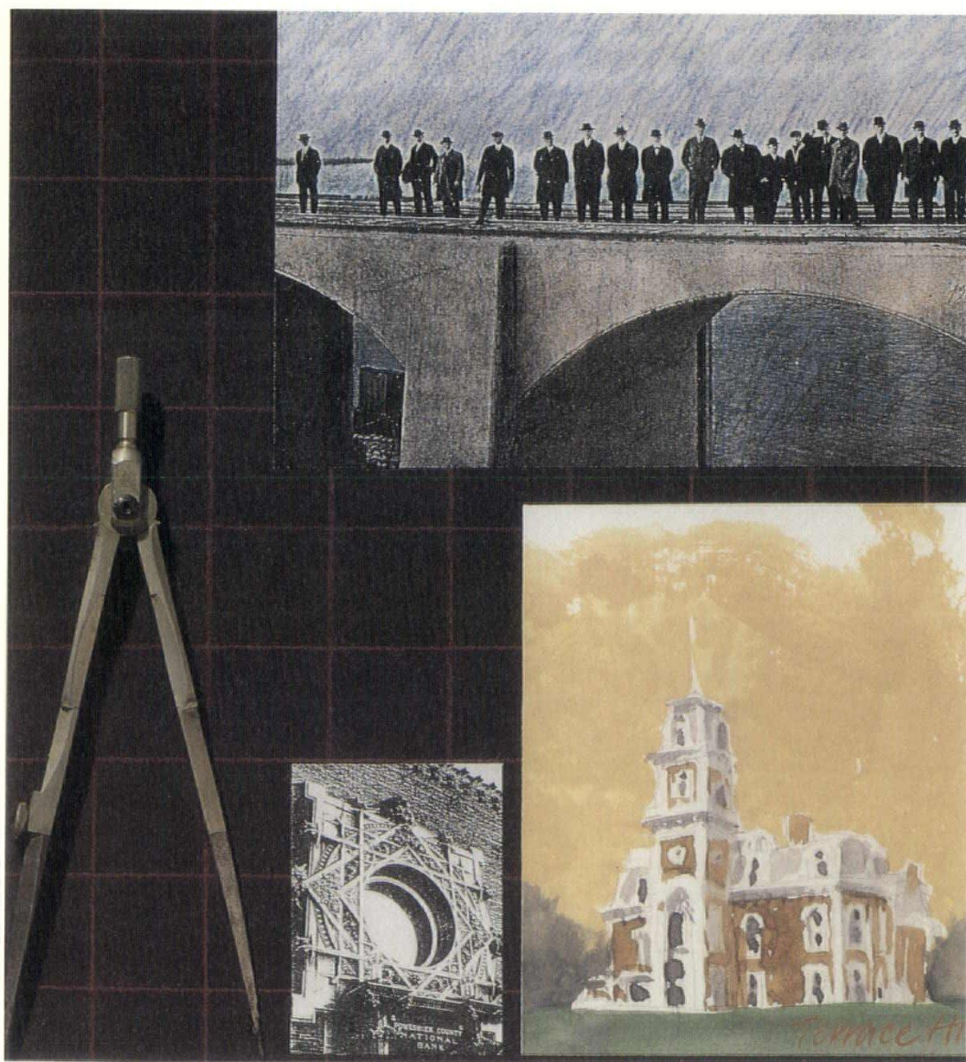

### Obligations to the Profession

*Members should uphold the integrity and dignity of the profession.*

### Obligations to Colleagues

*Members should respect the rights and acknowledge the aspirations and contributions of their colleagues.*

The Code in its entirety, covers a wide range of pertinent issues confronting the practicing architect. It does not, however, address specific compensatory disputes which may arise in the relationship between an architect and client. The Code does not, in other words, have the force of law. It does, however, establish a consistent standard of conduct to which a member of the American Institute of Architects may be held accountable. The AIA's Code of Ethics and Professional Conduct prescribes the moral obligations of the practicing architect. It is a standard which defines the highest ideals of the profession and serves as the foundation upon which each architect must weigh the considerable influence of his or her own professional judgements. ■

## The Architectural Practice Act

The Architectural Practice Act, Chapter 118 of the Iowa Code, defines and regulates the practice of architecture in the State of Iowa. It is not the sort of document one would casually browse for entertainment value. Nonetheless, its provisions should be of keen interest to architects, for it concisely defines their qualifications, obligations, and responsibilities as practicing professionals. For the general public, particularly those wishing to employ an architect, the Act constitutes a standard of professional conduct which establishes expectations of an architect working in the public interest. The Act empowers the State to recognize certain individuals as particularly qualified in the design of buildings, authorizing those persons to assume the title "Architect".

The Act begins by establishing a Board of Examiners, consisting of five members possessing a certificate of architectural registration and who have been in the active practice of architecture for "not less than five years...". Two additional board members representing the general public require no formal training in architecture. The members are appointed by the governor and confirmed by the Iowa Senate for three year terms.

The Board regulates the day to day practice of architecture in Iowa. It maintains a current roster showing the "name, place of business, and residence, and the date and number of the certificate registration of every registered architect..." The board administers the architect's professional exam, establishes fees for the annual renewal of registration and may, when warranted, revoke or suspend the license of an architect found guilty of professional misconduct.

The Act further defines both the profession of architecture and its practice; "the practice of architecture means performing . . . professional architectural services in connection with the design, preparation of construction documents or construction of one or more building structures or related projects which have as their principal purpose human occupancy or occupation. . ." The Act does, however, exempt certain types of construction from the required participation of an architect: detached residences with twelve or fewer units, and not more than three stories and their accompanying out buildings; most agricul-

tural buildings; nonstructural changes to existing buildings which do not change the use of a building to specified other uses; one-story commercial buildings of less than 10,000 square feet, or if two storied, of an area not to exceed 6,000 square feet; factory-built buildings not more than two stories and not more than 20,000 square feet; and churches not more than two stories and under 2,000 square feet.

The Act goes on to establish a set of definitions which clarify the responsibilities of the practicing architect. Although the general language of these definitions is familiar to most professionals, several key interpretations are worth restating, (quoted here directly from the Iowa Code):

*"Professional architectural services" means consultation, investigation evaluation, programming, planning, preliminary design, and feasibility studies designs, drawings, specifications, administration of construction contracts, observation of construction site progress, or other services and instruments of service related to architecture.*

*"Direct supervision and responsible charge" means that the architect has the exercising, directing, guiding, and restraining power over the design of the building or structure and the preparation of the documents and exercises professional judgement in all matters embodied in the documents. . . . Merely reviewing the work prepared by another person does not constitute "direct supervision and responsible charge" unless the reviewer actually exercises supervision and control and is in responsible charge of the work."*

*"Observation of construction site progress" means intermittent visitation to the construction site by an architect or the architect's employee for the purpose of general familiarity with the progress and quality of the construction and the general conformance of the construction documents and general compliance with the applicable building codes . . . such as observation does not imply exhaustive or continuous on-site inspections to check the quality or quantity of construction work."*

Section 118.21 of the Architectural Practices Act recognizes the practice of architecture by business entities. The Board of Architectural

Examiners must authorize a corporation, partnership, or sole proprietorship to practice architecture as an entity. This authorization does not however "relieve a person of liability arising out of negligent supervision of the work of subordinates."

Although the Act specifically prohibits the exclusion of an individual seeking registration on the basis of age, citizenship, sex, race, religion, marital status, or national origin, it does demand that an applicant be of "good moral character". The Board is instructed to consider an applicant's trustworthiness, honesty, and adherence to professional standards of conduct.

Finally, the Act defines the circumstances for which the architect's seal of registration must be utilized. "Technical submissions prepared by the architect or under an architect's direct supervision and responsible charge, shall be stamped with the impression of the architect's seal... A public official charged with the enforcement of the . . . building code . . . shall not accept or approve any technical submissions involving the practice of architecture unless the technical submissions have been stamped with the architect's seal... "A building permit . . . which (does) not conform to the requirements of this section is invalid."

This summary of the Architectural Practices Act is intended solely for informational purposes. It should not be construed either as commentary on or interpretation of the legal implications of the Act itself. A copy of the Act may be obtained from the Iowa State Board of Architectural Examiners. ■

## The Education of the Architect: Iowa State University

The Department of Architecture at Iowa State University offers several degree programs in order to accommodate the diverse needs and backgrounds of students wishing to study architecture.

The undergraduate program is a five-year professional program leading to the Bachelor of Architecture degree. There are two graduate degrees offered in the department: Master of Architecture includes professional education in the practice of architecture as well as graduate studies in design research interactions utilizing university-wide resources. For students with degrees in other fields, three years and one summer of study are required. For students holding BA or BS degrees in architecture, two years of study are necessary. For students holding a BArch degree, requirements may be met in one year of study.

The Master of Science in architectural studies is a program designed for students holding degrees in architecture or other disciplines enabling them to conduct scholarly work and research in architecture. ■

## The Intern Development Program

Internship has long been a fundamental component of architectural education. It provides a logical transition from academic training to professional registration. The internship period begins after graduation and lasts for a minimum of three years until the intern successfully passes the Architect's registration exam.

The Intern Development Program was created in the mid-1970s by the AIA and National Council of Architectural Registration Boards. Its goal is the establishment of uniform standards designed to aid interns in gaining comprehensive experience that will prepare them for architectural practice.

Prior to IDP, there were few consistent guidelines for the training of an intern. Merely working in an architectural office did not necessarily guarantee a well-rounded exposure to the diverse aspects of professional practice. The Intern Development Program provides an effective framework for structuring the educational experience of the architect-in-training.

IDP training encourages experience in four basic categories: design and construction documents, construction management, office management, and related special activities. An intern may obtain credited exposure in each category either by direct participation, observation, or by simulation through supplementary education. Credit for IDP activities is measured in "value units", each equivalent to eight hours of exposure. Seven-hundred value units are required to satisfy the requirements of the training standard. Of this total, half represent training minimums, the balance may be acquired in any approved area of exposure. The intern's progress in the program is monitored by a professional sponsor, typically a registered architect in the intern's place of employment. The sponsor provides opportunities for diversified training and assesses the acceptability of the work and experience gained.

In addition, a professional advisor, usually an architect outside the intern's firm, is assigned to discuss each individual's development and offer guidance toward the goal of registration. Together, intern, sponsor, and advisor define the path of professional experience necessary to

## Selecting an Architect

satisfy the state registration board's internship requirements.

Interns participating in the IDP are required to keep accurate records of their involvement in the program. This documentation of experience must be both certified by the intern's employer and acknowledged by the professional advisor. The record can then be permanently registered by establishing an IDP Council Record through the NCARB.

Though formal participation in the Intern Development Program is not yet mandatory in Iowa, the training requirements which are encompassed by IDP are the same as those of the State Examiner's Board.

For more information on the Intern Development Program in the State of Iowa, contact the Iowa Chapter of the American Institute of Architects. ■

An architect may be chosen for many of the same reasons one might use to select any other responsible professional; commitment, experience and expertise. Such criteria does not, however, recognize the unique contribution an architect makes in personifying the specific ambitions of a given project or client.

A more reasonable approach might first begin with a clear understanding of the role an architect will play in the creation of the building at hand. The process of design is a long and demanding endeavor. A successful project is most often the consequence of an open and engaging collaboration between designer and client. Accordingly, it is important that the client select an architect with whom they feel both compatible and comfortable. An architect who shares either the sensibilities or the eccentricities of the client will invariably be better suited to realize the client's aims than one who does not.

In either instance, the critical issue remains the quality of communication between client and architect. It is a responsibility shared equally by both parties and should be a preeminent concern in the selection of an architect.

Beyond mere compatibility, it is also worthwhile to consider the varied ways in which architects practice their profession. An architectural firm may be composed of only a single practitioner; as a partnership among several associated architects or as a full-fledged corporation. Firms, in addition, come in a variety of sizes. Size, in and of itself however, may not be nearly as important a consideration as a firm's productive capabilities. A small office, for example, may chose to concentrate on a limited number of substantially-scaled projects, while the larger firm might divide its resources among many more modestly sized buildings. Some architectural firms, in addition, offer engineering consultation on an "in-house" basis. Others prefer to draw upon the judgement of independent consultants appropriate to the needs of each project.

Regardless of the specific means, each office chooses methods of organization that best reflect its own particular combination of skills, expertise, interests and values. The prospective client should consider not only the individual elements of a firm's composition, but their collective

impact on a firm's ability to perform the work required.

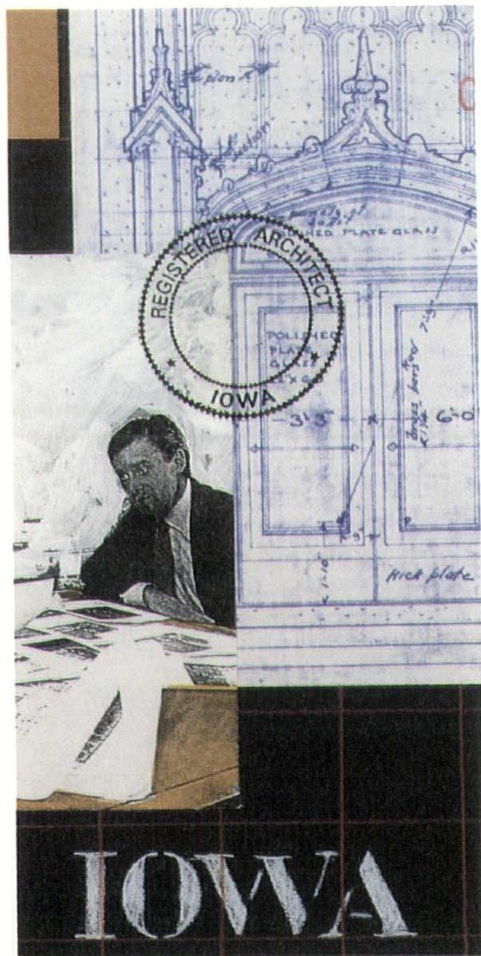

Many aspects of a firm's character may be judged from the promotional literature routinely prepared by architects. Such brochures may be either slick and corporate or humble and unassuming. What is important is not so much the style of the presentation as its content. A typical brochure should, for example, describe an architect's philosophy of design, the firm's methods of work and where applicable, areas of specialization. Examples of representative projects should be included as well as a listing of references.

A brochure, however, can only suggest the general characteristics of any architect's practice. A more comprehensive and reliable understanding of the architect's capabilities is best determined in the context of a personal interview. An interview gives the client the opportunity to focus on the specific goals of his or her project. It is, as well, a good time to gauge the temperament and personality of the architect under consideration. Clients should begin to sense the kind of rapport they might expect of this individual in an ongoing professional relationship.

Clients should, in addition, be prepared to ask detailed questions of the architect. "How are your abilities best suited to the needs of my project? What approach will you take in resolving my particular problems? Which members of your firm will handle this job?" These are important questions and the architect will strive to answer them in a fair and objective manner. Most architects, in fact, relish the opportunity to describe their work at this level of detail.

Impressions drawn from an interview may be reinforced by consulting with the present and former clients of an architect. Their experiences should offer a reassuring confirmation of attitudes portrayed by the architect during the interviewing process.

Finally, and most simply, a prospective client should just look around. The work of an architect is, by its very nature, profoundly conspicuous. A well-conceived, thoughtful building is always an architect's best form of reference. ■

## Qualifications Based Selection

When a building project is initiated by an agency representing the public, the selection of a qualified design professional becomes of paramount importance. The architect's work in the public realm will have an overwhelming impact on the ultimate success of the undertaking. Critical issues of feasibility, fiscal accountability, design, functional efficiency and imagery all hinge upon the prudent, professional judgement of the selected architectural designer.

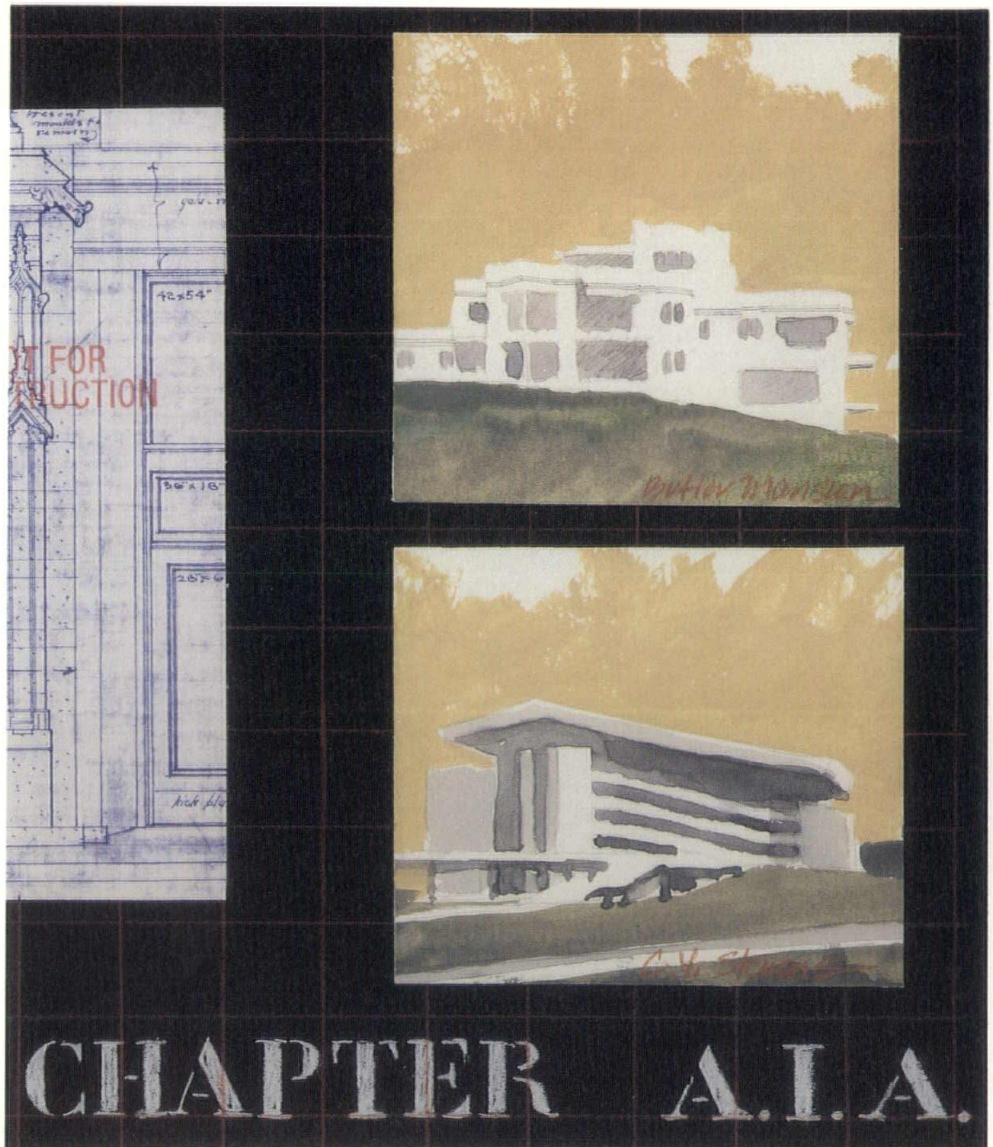

Qualifications Based Selection (QBS) is an objective, flexible procedure for obtaining architectural design services on public projects. It assists an owner in the selection process when the owner does not already have a professional design consultant. The QBS process is helpful to frequent users of design services as well as one-time users with little or no past practical experience in working with design professionals. QBS provides owners with a selection process that is straightforward and easy to implement, is objective and fair, can be well documented, and is open to audit.

QBS has received national attention in the public sector through legislation. In October, 1972, the federal government enacted Public Law 92-582 covering the selection of architects and engineers based on qualifications. This bill since has been known as the Brooks Selection Bill, as it was introduced by U.S. Representative Jack Brooks of Texas.

The QBS procedure is delineated by the following series of sequential steps:

1. The scope of work is defined by the project's owner
2. A schedule for the selection process is established
3. A list of professional firms is assembled
4. Letters defining the qualifications of the firms are requested
5. These qualifications are evaluated
6. A shortlist of firms to be interviewed is assembled
7. Interviews are conducted
8. On the basis of the interview, firms are ranked in order of their respective qualifications
9. A contract is negotiated with the top ranked firm. If an agreement cannot be reached, then negotiations are begun with the second-ranked firm, and so on until an agreement is reached and a firm is selected.
10. Firms involved in the process receive post-selection communication

Information regarding the implementation of the Qualifications Based Selection process may be obtained from the Iowa Chapter of the American Institute of Architects. ■

**WHEN IT COMES TO  
CUSTOM WINDOWS,  
WE FILL SOME PRETTY  
TALL ORDERS.**

This custom window is just one example of how unique ideas take shape at The Pella® Custom Plant. Which is why if you're in the market for custom windows, you should set your designs on Pella. Our craftsmen will manufacture practically any window you can imagine, as long as it meets our high standards. Standards that include energy efficiency, low maintenance and durability.

Visit The Pella Window Store® soon. And see how our custom windows can turn out even better than you imagined.

**BUILT TO IMPOSSIBLY HIGH STANDARDS. OUR OWN.™**

# Service to the Public and Profession

## The Iowa Chapter of the American Institute of Architects

Iowa architects are fortunate to be served by a component chapter which continues to receive a 100% performance rating from the AIA for service to its members. Under the capable stewardship of Executive Director, Suzanne Schwen-gels, the Iowa Chapter is an invaluable resource for Iowa's practicing architects and the public they serve.

Some aspects of the Chapter's work are purely administrative: maintaining a roster of active membership, processing the applications of new AIA members and accounting for the receipt and disbursement of all Chapter funds. More important though than these ongoing responsibilities are the Chapter-sponsored services which significantly enhance the architect's professional practice. The Chapter serves as a vital link between its members and the National AIA, and related industry organizations.

The Chapter is, as well, a clearinghouse for information about architects and architecture. For example, the Chapter publishes the Iowa Architect and this annual Directory. It publishes a monthly newsletter, "The Addenda", which keeps members up to date on issues affecting the practice of architecture in Iowa. The Chapter is also the source for numerous publications about architecture. The Iowa Chapter, AIA, Bookstore carries over 250 titles for immediate purchase and can, when requested, procure virtually any other architectural text currently under publication.

All of the industry-standard AIA Construction Documents consisting of more than 120 different contracts and forms are available through the Chapter office, as well as a wide array of other AIA resource publications. This collection of materials, moreover, is not limited solely to the interests of architects. The Chapter, for example, has available the recently published "A Beginner's Guide to Architectural Services" and "You and Your Architect", both effective brochures providing the general public with guidance in utilizing the services of an architect.

Throughout the year, the Chapter conducts programs designed to advance the practice of architecture. These events are excellent opportunities for architects to exchange views with their fellow practitioners and augment their pro-

fessional training. The annual State Convention, held in the fall, combines professional development workshops and topical lectures by esteemed architects with the year's premier social gathering of Iowa's architectural practitioners. It is the setting for the Annual Chapter Design Awards Program, created to recognize outstanding examples of architecture produced by Chapter members. While the state convention is the most conspicuous of these activities, Chapter-sponsored events in the preceding year have included the annual Winter Meeting, titled "Healthy Buildings/Heartland Traditions" and "The Young Architects Seminar." In addition to being informative, many of the programs conducted by the Chapter offer opportunities for gaining required continuing education credits.

In the realm of public relations, the Iowa Chapter has initiated services intended to promote a better understanding of the contributions of architects. The Chapter sponsors the highly popular "LEGO" exhibit yearly at the Iowa State Fair. In conjunction with last year's state convention it helped bring the "AIA National Women in Architecture" exhibit to Des Moines. The Chapter has recently participated in the Main Street program for the Iowa Department of Economic Development, Governor Branstad's Retreat on the Homeless and presented the second Iowa Chapter Educational Scholarship, created to assist students of architecture attending Iowa State University.

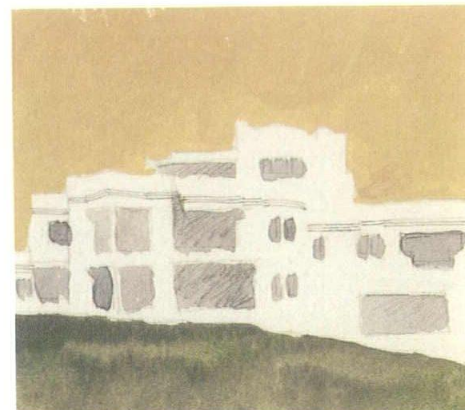

In addition, the Chapter sponsors the publication of the Iowa Architect, a quarterly review of regional architecture with a circulation in excess of 4,500. The magazine is distributed to area schools, public agencies, museums, cultural institutions, chambers of commerce, corporations, newspapers, broadcast news organizations, legislators, cities, and of course, architects in an eight state region.

Among the more innovative of the Chapter's projects is "Architecture in the Schools", a program which introduces the basic concepts of architecture into the teaching curriculum of area schools. "Buildings Speak: The Language of Architecture", a 25 minute slide presentation and "Architext", a compendium of lesson plans for class use are both examples of the Program's

contributions in this effort. To date, nearly 250 Iowa teachers have participated in the project's workshops and it is estimated that as many as 12,000 students will be exposed to the fundamentals of architecture this year alone.

On the political front, the Iowa Chapter actively lobbies the state legislature on issues affecting the built environment and the practice of architecture. In 1989, Chapter initiatives included monitoring over 2,000 bills introduced during the session and registering direct positions on seventy-five. During the 1990 session, the Chapter effectively opposed an amendment to the Architectural Practice Act and filed multiple amendments to the State Energy Bill. Other Chapter activities have included involvement with The Alliance for Tort Reform, the Rebuild Iowa Coalition, and participation in Grassroots, the AIA's national leadership and governmental affairs workshop.

All told, the Iowa Chapter is an indispensable resource for the architects it serves. Many of the tools of professional practice that architects routinely take for granted are immeasurably enhanced by the efforts of the Chapter. It represents the power of a united profession established to deal with the issues and concerns facing every practicing architect. ■

## The Iowa Architectural Foundation

In 1988, the Iowa Architectural Foundation was established. It was founded to advance both the practice of architecture in the State of Iowa and enhance the quality of its built environment. The objectives of the Foundation are summarized in the following statements of purpose:

1. The Foundation is charged to "seek, investigate, and enable programs and projects for the improvement of the human environment for work, for recreation (and) for living."
2. "to solicit, receive and expend gifts, grants and legacies for the education, exhibition, publication, research and preservation of architecture and its allied arts and sciences."
3. "to establish recognition and awards for meritorious work."
4. "to provide architectural scholarships, establish teaching and research chairs in architecture and assist" architectural education and research.
5. "to provide for the dissemination of literature and information of beneficial use to architecture..."
6. "to assist . . . any activities which will result in better architecture and in improvement of the architectural profession."

The following individuals are presently active in the Foundation's work, serving on its board of directors: H. Kennard Bussard, Chairman, Robert Broshar, Vice-Chairman, Gordon Mills, Secretary, Joseph Borg, Treasurer, with Glen Huntington, Dale McKinney, Michael Underhill, and John Bloodgood, Directors.

The Foundation is currently seeking financial support for its endeavors from within the architectural and building trades industry. It is registered as a non-profit corporation organized for charitable purposes as defined by the Internal Revenue Service Code.

Support, be it financial or personal, is encouraged of all Iowans wishing to improve the quality of their built environment. Inquiries may be made either to any of the Foundation's directors or to the Iowa Chapter of the American Institute of Architects. ■

## Iowa Architect

The *Iowa Architect* is intended to educate its readers about the importance of architecture and related architectural issues through a review of newly constructed and historically significant projects, and to promote the value of design excellence in all areas of our public and private environment. It is also a resource for noteworthy events and achievements in the arts, literature, graphic design, music, landscape architecture, and product design.

The *Iowa Architect* is published four times a year by the Iowa Chapter of the American Institute of Architects. Its editorial policy, content, graphic design, and production is directed by a volunteer board of editors comprised of state wide members of the Iowa Chapter, AIA.

The editorial staff determines projects and events to be covered, solicits contributions by free-lance Iowa writers, and assembles photographic and graphic support materials. Each issue is focused around a central idea or issue such as historic preservation, waterfront development, residential design, educational facilities, urban design, etc.

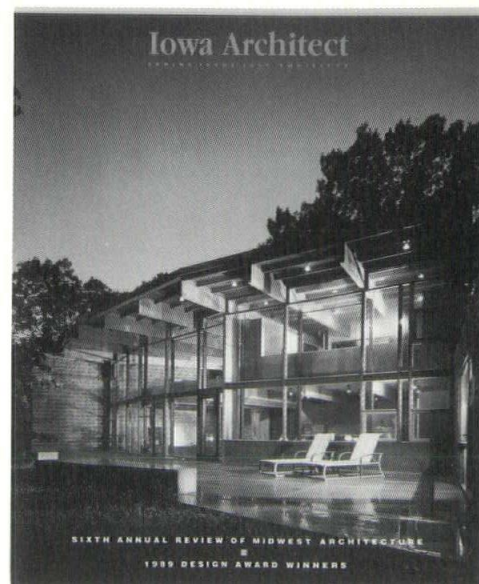

The magazine is published by Kimberley Press, Urbandale, Iowa and is supported by a combination of advertising revenues, subscription fees, and Chapter contributions.

Since 1980, the circulation has been expanded to 4,500 with a concentration in the eight state area including Iowa, Missouri, Nebraska, Kansas, Oklahoma, Wisconsin, Minnesota, and Illinois. By subscription, the magazine currently is mailed to over 35 states.

In support of its educational goals, the *Iowa Architect* is distributed without cost to schools and university libraries in the state of Iowa. It also provides free subscriptions to public officials at the local and state levels who routinely make decisions regarding the built environment in Iowa.

While the main focus is on Iowa architecture and design issues important to Iowa, the magazine has consistently worked to broaden the scope of its interests and coverage. This has included the development of a yearly review of midwestern architecture and an expansion of circulation throughout the central states region. It has also resulted in features that explore and

review performances, art exhibitions, product design, interior and graphic design. Since 1987 the magazine has commissioned fictional writing pieces from Iowa writers and accompanied them with specially commissioned original art work by Iowa artists. ■

The following themes are planned for upcoming issues of the *Iowa Architect*:

|             |  |
|-------------|--|
| Summer 1990 | Residential Projects                       |
| Fall 1990   | Education and Schools/<br>Convention Issue |
| Winter 1990 | The Rural Environment                      |
| Spring 1991 | Design Awards                              |
| Summer 1991 | General Works                              |

## The Bureau of Historic Preservation

The Bureau of Historic Preservation, located in the State Historical Building, coordinates the following programs: The National Register of Historic Places, Architectural and Historic Survey, Grants for Preservation Activities, and Investment Tax Credits and Proper Rehabilitation.

### The National Register of Historic Places

The National Register is often described as the keystone of the State Historic Preservation Bureau operation. Additions to the National Register, with the exception of federal properties, are made through the State Historic Preservation Bureau. The program, at its heart, creates and maintains Iowa's list of culturally significant properties. As a result, the National Register properties warrant some degree of consideration when federally funded projects threaten them directly or indirectly. The list encompasses every conceivable type of property ranging from individual buildings or archaeological sites to public fountains to large historic districts.

Persons interested in placing a property on the National Register should contact the Bureau to obtain a nomination packet. All properties non-federally owned may be nominated to the National Register through this office. If accepted they become places listed in the National Register of Historic Places, different from National Historic Landmarks, which is a select group of properties of special national significance.

For more information on the National Register contact: Bureau of Historic Preservation at (515) 281-4137

### Architectural and Historical Survey

The architectural survey is charged with identifying buildings, structures, and districts which best express the range and variety of the built environment of Iowa. Two types of surveys are conducted by the Bureau. Reconnaissance level surveys identify buildings and structures in a particular locality which are 50 years of age or older with potential eligibility for the National Register of Historic Places. The second, intensive level surveys involve indepth research enabling the surveyor to recommend whether or not a property or district is eligible for listing in the National Register.

For more information on the Survey contact: Architectural Historian, Ralph Christian at (515) 281-8697

### Grants for Preservation Activities

National Park Service funding provides Iowans with matching grants for various historic preservation activities. Unfortunately, the most popular federal grants program has been suspended — the program providing matching funds to property owners for preservation structures listed on the National Register of Historic Places. The current federal grants program assists Iowans to survey and identify outstanding historic, architectural and archaeological sites throughout the state, to nominate sites or districts to the National Register and to prepare public education programs about historic preservation and related activities designed to identify and preserve the history and pre-history of Iowa.

A new state-funded program provides historic property owners (or would-be owners) with matching grants to acquire or rehabilitate historic buildings and sites. The Historic Resource Development Program has about \$1 million dollars each year from lottery revenues which can also be used for libraries, archives and historical museums.

For more information, contact: Historic Resource Development Program Coordinator, Lynda Wessel, at (515) 281-8719.

For more Grants or Certified Local Governments information contact: Certified Local Governments Coordinator, Kathy Gourley, at (515) 281-6826.

### Investment Tax Credits and Proper Rehabilitation

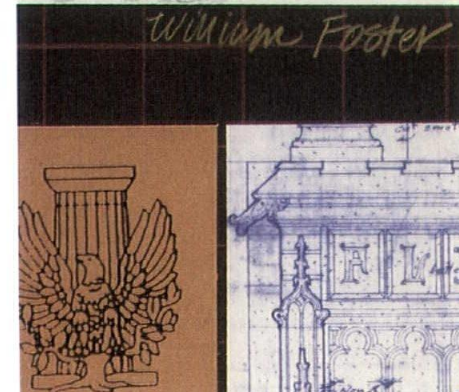

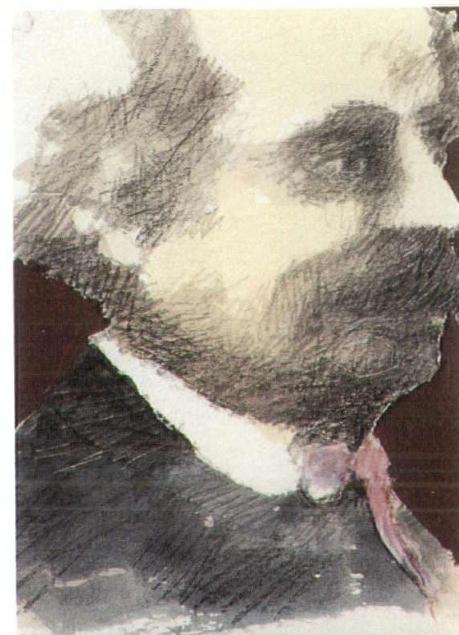

Certain property owners may qualify for investment tax credits by rehabilitating Certified Historic Buildings. The Bureau of Historic Preservation reviews and approves these applications. A Certified Historic Building is any structure, subject to depreciation as defined by the Internal Revenue Code, that is:

1. Listed individually on the National Register of Historic Places;
- OR
2. Located in a registered historic district and certified by the Secretary of the Interior as

contributing to the historic significance of the district.

Rehabilitation work must be consistent with the historic character of the building and meet the Secretary of the Interior Standards and Guidelines for Rehabilitation. The Bureau supplies applicants with technical information about various work areas, including problems with window replacement, storefront replacement, storm windows and brick/stone cleaning and repair. Technical assistance is given by phone, mail or through site inspections.

For more Tax Credits or Rehabilitation information contact: Architect, Judith Ann McClure at (515) 281-6825 or 281-8637. ■
