## ***For walls that can stand up to a small army***

***Only Stark.  
Only SGFT.***

Defend against vandalism and plain old wear and tear with Stark Structural Glazed Facing Tile (SGFT) — the only faced masonry material manufactured as a single unit from clay. Its permanent, fired-on ceramic surface stands up to graffiti, harsh disinfectants, scratching and staining far better than alternatives. Yet thanks to Stark's award-winning Rhapsody Color Collection, you never have to sacrifice appearance for durability. Here's what users and specifiers are saying about SGFT:

"We use Stark Glazed Tile in all our Hy-Vee meat cutting areas. We are very pleased with its appearance and how easily the tile cleans up in a sanitary area."

*Tom Jones, Director of Architectural Design  
Hy-Vee Food Stores*

***Only in Iowa at Sioux City  
Brick and United Brick***

Many Iowa facilities feature SGFT that we have furnished over the years. We are proud to be Stark's Iowa representative, and invite you to ask us about SGFT buildings in your area.

Glazed tile doesn't cost — it pays! Before your next construction project, arm yourself with the facts! Call us at:

## SWANSON GENTLEMAN INC.

Insulated aluminum wall panels prefinished with custom blue Kynar. Thermally improved custom curtain wall and windows glazed with clear insulated glass with titanium coating on #2 surface. Kalwall translucent canopy and skylight. We furnished and erected the precast prestressed structure and erected the canopy steel.

# When the specs are demanding—

## and the task is huge—

The painting contractor needed 15,000 gallons of paint in Minneapolis for the Veteran Administration's largest Hospital. And the Government specifications were stringent.

The job was so huge, the contractor needed a full month to estimate needs — epoxies, alkyd enamels, undercoaters, exterior paints, pastel colors, accents, and on and on.

Mautz delivered its quality paint precisely to specifications and right on time — to supply thirty painters who worked 1½ years to cover 4,985 doors, miles of corridors, hundreds of rooms, three giant atriums, an energy facility and a maintenance building.

Every job you do is a big one — so trust your specs to Mautz.

## call Mautz Paint

Distributors of high-tech coatings including DuPont, Insl-x, Rust-Oleum and Sonneborn in Mautz factory stores throughout the Midwest.

"NOW EVERYONE CAN  
ENJOY ORIGINAL WORKS OF ART  
IN THEIR OWN HOME"

Finely crafted by hand, one at a time, each Marvin window is a true piece of art and one of lasting beauty. But art is a very personal thing. So at Marvin we build each window to your specific order, in any shape or size. That way, every window is an original piece created just for your home. A work of art that merely confirms everyone's feelings about your good taste. For more information write or call Moehl Millwork, Inc. at (515) 276-6791.

# Three Ways To CHANGE YOUR VIEW

## Introducing EAGLE Modern Divided Lights™.

**W**hen craftsmen first constructed windows with divided lights, they weren't concerned with energy efficiency or expense; they didn't have any alternatives. You do. Today, the cost of true individual insulated low-maintenance divided lights is nearly prohibitive. And the thought of all those individual panes springing leaks or even painting the muntins is frightening.

However, EAGLE engineering has brought some substantial common sense to the demand for true divided lights. The exterior muntins are pre-finished aluminum extrusions and the interior muntins are ready-to-finish wood. The entire glass unit is two panes of true insulated glass, not a single pane or multi-panes; even though it has the look of true divided lights. And of course, Modern Divided Lights are built to the impeccable standards you've come to expect from EAGLE.

# The Work of the Architect, A Users Guide

## The Architect

The architect is, by both training and temperament, a generalist. In an age noted for its ever-increasing, all-consuming passion for specialization, the architect must remain one who steadfastly perceives "the whole picture."

The art of building can rarely be coerced into a singular train of thought. Architecture is, above all else, a richly interwoven tapestry of aims, interests and ideals. A building may not be only technological, or artistic, or functional, or humane. It must be each and all of these things. The architect alone is uniquely qualified to perform this complex and multifaceted task.

There persists a romantic notion about the work of the architect; that the design of a building results from some flash of inspiration, hastily scratched on the back of an envelope or napkin, which is then miraculously transformed into physical form. The true reality of architecture is usually less poetic. For most architects, architecture is a patient process of examination, analysis, and evaluation. It is an act they can best describe only as the "process of design."

Each building begins as a set of problems to be solved. Though the problems presented to architects are varied, they all share common characteristics. A client has needs; a space for a particular use, an environment requiring repair, an expansion of what is or the recreation of what was. More over, the needs of a client are rarely limited simply to the physical characteristics of the anticipated building. Each client has scheduling limitations and the constraints of an overriding budget. These needs, constraints and desires form the seed from which architecture ultimately blossoms.

Buildings do not, however, exist in a vacuum. Any project, regardless of its scope, has a significant physical and economic impact on the environment in which it is placed. The architect is compelled to consider not only the narrowly defined desires of the client, but the interests of the public at large. In the long run, a building suited to its context serves both the best interests of its owner and its neighbors.

Regardless of the specific demands of client and context, each building must respond, at its most basic level, to fundamental characteristics of nature. Gravity must be resisted, topography

accommodated, climates modified. Above all else, the architect must be keenly aware of the consequences of time. Buildings do not have a momentary existence. They are objects that we experience repeatedly; they will be with us well into the future.

These then are the "problems" of architecture; the issues with which architects must contend. The architect understands full well that the success of any building depends on striking an appropriate balance between each of these requisite requirements.

The resolution of the problems of architecture is embodied by the architect's "process of design." For most, the process begins with a statement of "Program." The Program is a written description of the client's needs, goals and aspirations for a given project. A Program can be a simple list defining space requirements. Or it may be a highly detailed treatise, quantifying very specific ambitions. In either instance, the Program becomes the basis upon which the value of an architect's performance is judged.

A program also may not be judged in isolation. It must always be considered with respect to the intended location of a project: the building's site. The architect will begin by analyzing the "fit" between a prospective program and the context in which it is placed. The architect must ask very specific questions, "What are the physical characteristics of this property? What are the legally binding restraints on the site in question?" Simply put, "Will the intended program 'fit'?"

From here, the architect prepares a series of preliminary proposals. These are, in reality, sketches which suggest a variety of options and opportunities inherent in a client's program and siting intentions. Architects typically describe this preliminary activity as "Schematic Design." It is characterized by a free-flowing exchange of concepts and ideals between client and designer that should clarify the fundamental objectives of the project at hand. Alternative proposals are reviewed in consultation with the client and, ultimately, a preferred strategy for continued development is selected.

In the Design Development phase, the schematic proposal is examined in considerable detail. At this point, the materials and methods

of construction are selected, planning layouts are refined and construction costs are projected with increasing reliability. Most important, the image of the building as a concrete work of architecture becomes evident.

Throughout this phase of development, the architect must continually re-assess the initial objectives of the project: "Does the developed proposal conform to the initial requirements of the program? Are the interests of the client preserved? Does this proposed building 'speak' in some manner to the community into which it is placed?" It is this constant re-evaluation of constraints and motivations that distinguishes the responsible work of the architect.

Construction Documents are prepared only after both architect and client agree that the objectives of the program have been fulfilled by the developed design. In this phase, detailed drawings are drafted, allowing a contractor to establish fixed building costs and initiate construction. In creating these documents, the architect will rely on the assistance of specialized consultants: engineers, landscape architects, graphic designers or others needed to contribute their expertise to the evolving design. The completed documents become, in effect, a legal contract, compelling the finished building to be constructed in accordance with the client's express desires.

During construction the architect continues to evaluate the ongoing evolution of the design process. Through periodic site visits and consultation with the client, the architect assumes an advisory role, noting the general progress of the work and its compliance with the overall intentions of the design concept.

Most architects consider the process of design complete only after the client has moved in and become accustomed to the new or renovated surroundings. In this "Post-Evaluative" phase of design the architect again asks the same questions that have characterized each preceding step in the process: "What were the client's needs? Does the completed building meet those expectations? Is this in fact a 'balanced' work of architecture?"

To be fair, only a handful of buildings ever fulfill every expectation demanded of them. Such

## Ethics, An Architect's Standard of Conduct

perfection may be realized only under the best of circumstances. Still the process of design, as employed by the architect, provides the broadest, most reasonable means of achieving a successful, satisfying building that equitably represents the best interests of its users. The architect seeks solutions to frequently complex problems in ways that are as imaginative as they are structured. The architect's process of design is formulated to clarify the ambitions of a client in a manner which produces buildings which are unique, productive and testaments to enduring value. ■

By mutual consent, members of the American Institute of Architects conform to a Code of Ethics. Quoting the "Architect's Handbook of Professional Practice" an architect is committed to the "highest standards of professionalism, integrity and competence. The Code of Ethics provides members with reasonable guidelines for fulfilling their obligations to the public, to clients and users, to the building industry, to the profession and to their professional colleagues."

The AIA's Code of Ethics is based on five fundamental canons, each of which represents broad principles of conduct:

### General Obligations

*Members should maintain and advance their knowledge of the art and science of architecture, respect the body of architectural accomplishment and contribute to its growth: learned and uncompromised professional judgement should take precedence over any other motive in the pursuit of the art and science of architecture.*

### Obligations to the Public

*Members should embrace the spirit and letter of the law governing their professional affairs and should thoughtfully consider the social and environmental impact of their professional activities.*

### Obligations to the Client

*Members should serve their clients competently and in a professional manner and should exercise unprejudiced and unbiased judgement on their behalf.*

### Obligations to the Profession

*Members should uphold the integrity and dignity of the profession.*

### Obligations to Colleagues

*Members should respect the rights and acknowledge the aspirations and contributions of their colleagues.*

The Code, in its entirety, covers a wide range of pertinent issues confronting the practicing architect. It does not, however, address specific compensatory disputes which may arise in the relationship between an architect and client. It does not, in other words, have the force of law. The code does, however, establish a consistent standard of conduct to which a member of the American Institute of Architects may be held accountable. The AIA's Code of Ethics and Professional Conduct prescribes the moral obligations of the practicing architect. It is a standard which defines the highest ideals of the profession and serves as the foundation upon which each member must weigh the considerable influence of his or her own professional judgements. ■

## The Architectural Practice Act

The Architectural Practice Act, Chapter 118 of the Iowa Code, defines and regulates the practice of architecture in the State of Iowa. It is not the sort of document one would casually browse for entertainment value. Nonetheless, its provisions should be of keen interest to architects, for it concisely defines their qualifications, obligations, and responsibilities as practicing professionals. For the general public, particularly those wishing to employ an architect, the Act constitutes a standard of professional conduct which establishes expectations of an architect working in the public interest. **The Act empowers the State to recognize certain individuals as particularly qualified in the design of buildings, authorizing those persons to assume the title "Architect."**

The Act defines both the profession of architecture and its practice; "the practice of architecture means performing ... professional architectural services in connection with the design, preparation of construction documents or construction of one or more building structures or related projects which have as their principal purpose human occupancy or occupation..." The Act does, however, exempt certain types of construction from the required participation of an architect.

The Act goes on to establish a set of definitions which clarify the responsibilities of the practicing architect. Although the general language of these definitions is familiar to most professionals, several key interpretations are worth restating, (quoted here directly from the Iowa Code):

*"Professional architectural services" means consultation, investigation, evaluation, programming, planning, preliminary design, and feasibility studies, designs, drawings, specifications, administration of construction contracts, observation of construction site progress, or other services and instrument of service related to architecture.*

*"Direct supervision and responsible charge" means that the architect has the exercising, directing, guiding, and restraining power over the design of the building or structure and the preparation of the documents and exercised professional judgement in all matters embodied in*

*the documents... Merely reviewing the work prepared by another person does not constitute "direct supervision and responsible charge" unless the reviewer actually exercises supervision and control and is in responsible charge of the work.*

*"Observation of construction site progress" means intermittent visitation to the construction site by an architect or the architect's employee for the purpose of general familiarity with the progress and quality of the construction and the general conformance of the construction documents and general compliance with the applicable building codes ... such as observation does not imply exhaustive or continuous on-site inspections to check the quality or quantity of construction work.*

*Technical submissions prepared by the*

*architect or under an architect's direct supervision and responsible charge, shall be stamped with the impression of the architect's seal ... A public official charged with the enforcement of the ... building code ... shall not accept or approve any technical submissions involving the practice of architecture unless the technical submissions have been stamped with the architect's seal.*

The licensing of architects in Iowa is intended to protect the health, safety and welfare of the public. This summary of The Architectural Practice Act is intended solely for informational purposes. It should not be construed either as commentary on or interpretation of the legal implications of the Act itself. A copy of the Act may be obtained from the Iowa State Board of Architectural Examiners. ■

## The Education of the Architect: Iowa State University

The education of an architect is unique. Architects need a solid grounding in liberal arts, in technical subjects and in the art of design. The principle vehicle for synthesizing these inquiries is the design studio.

Architecture-related studies have been part of Iowa State University for a century. Professional programs in architecture have been offered for over forty years. Iowa State architecture graduates have been engaged in the practice of architecture in all the major cities and regions of the United States and, of late, across the globe.

Currently, the Department of Architecture has professional programs of study at both the undergraduate and graduate levels. Admission to either program is competitive. The undergraduate program entails five years of study and leads to the Bachelor of Architecture degree. The graduate degree, Master of Architecture, is open to students with or without previous experience in architecture. The department also offers a Master of Science in Architectural Studies designed for students holding degrees in architecture or other disciplines who wish to conduct research in the discipline. ■

## The Iowa Architectural Examining Board

Architects and the day-to-day practice of architecture in Iowa are regulated by a Board of Architectural Examiners, part of the Professional Licensing and Regulation Division of the state. Board composition consists of five licensed architects (active for "not less than five years...") and two members representing the general public, who are not required to have any formal training in architecture. The members are appointed by the Governor for three-year terms and confirmed by the Iowa Senate.

Every year the board administers two examinations (in June and December), which are part of a national registration system for architects. Knowledge of site planning, structure, environmental systems, construction methods and details, etc. are tested during a four-day exam. Design competence is tested separately from the rest in an intense, twelve-hour session. Persons who pass all portions of the test may apply to become registered as "architects." Further, Iowa is the only state that requires licensed architects to complete an approved course of continuing education, in order to remain licensed. The Architectural Examining Board reviews and approves these education programs

for each architect on a bi-annual basis.

While prohibited from excluding an individual seeking registration on the basis of age, citizenship, sex, race, religion, marital status or national origin, the Board is instructed to consider that an applicant be of "good moral character", trustworthy, honest and adherent to professional standards of conduct. When warranted by complaint or inaction of the architect, the board investigates his or her activities and may revoke or suspend the license of any architect found guilty of misconduct. Further, the Board disciplines violators of the Iowa Architectural Practice Act. It must authorize a corporation, partnership or sole proprietorship to practice architecture as a business entity. Generally, this requires that any organization doing business as an architectural firm is actively controlled by registered architects.

Thus, the Iowa Architectural Examining Board's goal is to assure the public that those who practice architecture as defined in the Architectural Practice Act and/or who call themselves architects actually have received the professional education, passed the required tests, continue their education and licensure in such a way that justifies the title of architect. ■

## The Intern Development Program

Internship has long been a fundamental component of architectural education. It provides a logical transition from academic training to professional registration. The internship period begins after graduation and lasts for a minimum of three years until the intern architect successfully passes the Architect's registration exam.

The Intern Development Program was created in the mid-1970s by the AIA and National Council of Architectural Registration Boards. Its goal is the establishment of uniform standards designed to aid intern architects in gaining comprehensive experience that will prepare them for architectural practice. This is mandatory in Iowa since 1990.

Prior to IDP, there were few consistent guidelines for the training of an intern architect. Merely working in an architectural office did not necessarily guarantee a well-rounded exposure to the diverse aspects of professional practice. The Intern Development Program provides an effective framework for structuring the educational experience of the architect-in-training.

IDP training encourages experience in four basic categories: design and construction documents, construction management, office management, and related special activities. An intern architect may obtain credited exposure in each category either by direct participation, observation, or by simulation through supplementary education. Credit for IDP activities is measured in "value units", each equivalent to eight hours of exposure. Seven-hundred value units are required to satisfy the requirements of the training standard. Of this total, half represent training minimums, the balance may be acquired in any approved area of exposure. The intern architect's progress in the program is monitored by a professional sponsor, typically a registered architect in the intern architect's place of employment. The sponsor provides opportunities for diversified training and assesses the acceptability of the work and experience gained.

In addition, a professional advisor, usually an architect outside the intern architect's firm, is assigned to discuss each individual's development and offer guidance toward the goal of registration. Together, intern architect, sponsor, and advisor define the path of professional experience necessary to satisfy the state registration board's internship requirements.

Intern architects participating in the IDP are required to keep accurate records of their involvement in the program. This documentation of experience must be both certified by the intern architect's employer and acknowledged by the professional advisor. The record can then be permanently registered by establishing an IDP Council Record through the NCARB.

For more information on the Intern Development Program in the State of Iowa, contact the Iowa Chapter of the American Institute of Architects. ■

## Selecting an Architect

An architect may be chosen for many of the same reasons one might use to select any other responsible professional: commitment, experience and expertise. Such criteria do not, however, recognize the unique contribution an architect makes in the creation of a work of architecture.

A more reasonable approach might first begin with a clear understanding of the role an architect will play in fashioning the building under consideration. The process of design is a long and demanding endeavor. A successful project is most often the consequence of an open and engaging collaboration between designer and client. Accordingly, it is important that the client select an architect with whom they feel both compatible and comfortable. An architect who shares either the sensibilities or the eccentricities of the client will invariably be better suited to realize the client's aims than one who does not.

In either instance, the critical issue remains the quality of communication between client and architect. It is a responsibility shared equally by both parties and should be a pre-eminent concern in the selection of an architect.

Beyond mere compatibility, it is also worthwhile to consider the varied ways in which architects practice their profession. An architectural firm may be composed of only a single practitioner, as a partnership among several associated architects, or as a full-fledged corporation. Firms, in addition, come in a variety of sizes. Size, in and of itself, however, may not be nearly as important a consideration as a firm's productive capabilities. A small office, for example, may chose to concentrate on a limited number of substantially-scaled projects, while the larger firm might divide its resources among many more modestly-sized buildings. Some architectural firms, in addition, offer engineering consultation on an "in-house" basis. Others prefer to draw upon the judgement of independent consultants appropriate to the needs of each project.

Regardless of the specific means, each office chooses methods of organization that best reflect its own particular combination of skills, expertise, interests and values. The prospective client should consider, not only the individual

## Qualifications Based Selection

elements of a firm's composition, but their collective impact on a firm's ability to perform the work required, as well.

Many aspects of a firm's character may be judged from the promotional literature routinely prepared by most architects. Such brochures may be either slick and corporate, or humble and unassuming. What is important is not so much the style of the presentation, as its content. A typical brochure should, for example, describe an architect's philosophy of design, the firm's method of work and, where applicable, areas of specialization. Examples of representative projects should be included, as well as a listing of references.

A brochure, however, can only suggest the general characteristics of any architect's practice. A more comprehensive and reliable understanding of the architect's capabilities is best determined in the context of a personal interview. An interview gives the client the opportunity to focus on the specific goals of his or her project. It is, as well, a good time to gauge the temperament and personality of the architect under consideration. Clients should begin to sense the kind of rapport they might expect of this individual in an ongoing professional relationship.

Clients should, in addition, be prepared to ask detailed questions of the architect: "How are your abilities best suited to the needs of my project? What approach will you take in resolving my particular problems? Which members of your firm will handle this job?" These are important questions and the architect will strive to answer them in a fair and objective manner. Most architects, in fact, relish the opportunity to describe their work at this level of detail.

Impressions drawn from an interview may be reinforced by consulting with the present and former clients of an architect. Their experiences should offer a reassuring confirmation of attitudes portrayed by the architect during the interviewing process.

Finally, and perhaps most simply, a prospective client should merely look around. The work of an architect is, by its very nature, profoundly conspicuous. A thoughtful, well-conceived building is always an architect's best form of reference. ■

When a building project is initiated by an agency representing the public, the selection of a qualified design professional becomes of paramount importance. The architect's work in the public realm will have an overwhelming impact on the ultimate success of the undertaking. Critical issues of feasibility, fiscal accountability, design, functional efficiency and imagery all hinge upon the prudent, professional judgment of the selected architectural designer.

Qualifications Based Selection (QBS) is an objective, flexible procedure for obtaining architectural design services on public projects. It assists an owner in the selection process when the owner does not already have a professional design consultant. The QBS process is helpful to frequent users of design services as well as one-time users with little or no past practical experience in working with design professionals. QBS provides owners with a selection process that is straightforward and easy to implement, is objective and fair, can be well documented, and is open to audit.

QBS has received national attention in the public sector through legislation. In October, 1972, the federal government enacted Public Law 92-582 covering the selection of architects and engineers based on qualifications. This bill since has been known as the Brooks Act, as it

was introduced by U.S. Representative Jack Brooks of Texas.

The QBS procedure is delineated by the following series of sequential steps:

1. The scope of work is defined by the project's owner
2. A schedule for the selection process is established
3. A list of professional firms is assembled
4. Qualifications of the firms are requested
5. These qualifications are evaluated
6. A shortlist of firms to be interviewed is assembled
7. Interviews are conducted
8. On the basis of the interview, firms are ranked in order of their respective qualifications
9. A contract is negotiated with the top ranked firm. If an agreement cannot be reached, then negotiations are begun with the second-ranked firm, and so on until an agreement is reached and a firm is selected.
10. Firms involved in the process receive post-selection communication.

Information regarding the implementation of the Qualifications Based Selection process may be obtained from the Iowa Chapter of the American Institute of Architects. ■

# Living With an Architect

Susan Allen Toth

"Of course that toaster-oven will have to go," James said casually, as he leaned against the door and surveyed my kitchen.

Illustrations James Stageberg

"It certainly won't," I snapped back. "I use it every day to make toast and heat muffins and lots of other things." I had agreed to marry an architect, James Stageberg, FAIA, with 30 years' acquired tastes and convictions, and I was just beginning to learn what that meant.

"But it's so ugly!" James protested. I looked at my oven. True, the metal was no longer shiny, the glass door was coated with burned-on grease, and it was not a thing of beauty. But I had used it in my kitchen for several years, and one just like it before that. I had lived here with my daughter for more than ten years, mistress of my own house, and I was not going to give up my autonomy — or so I thought.

"Look," I said firmly. "I know you only buy appliances if they happen to be sleek, German, and in the Museum of Modern Art. I buy them if they work."

"You don't need it," James argued. He was digging in his heels too. "For toast you can use my toaster and you can heat up muffins in my oven." His toaster was sleek, German, and probably in the Museum of Modern Art. My thick slices of homemade bread always got stuck in it.

"Certainly not," I said disdainfully. "I'm not going to heat up the whole kitchen in the middle of summer just to warm a muffin."

"I have central air conditioning," James

pointed out. This was a telling remark; it was one of the reasons I claimed I had agreed to marry him.

"That's not the point," I veered and tacked. "It's just too expensive to use a big oven to heat one little muffin."

"I'd rather pay the utility costs than have that ugly rusty thing in my kitchen," James said firmly. When he left that night, I was unconvinced. I didn't sleep well. How could I survive without my toaster-oven? What was I getting into? What was I giving up? Whose kitchen was this going to be, anyhow? By the time dawn came, I was almost convinced that we would have to call the whole thing off. Then the phone rang.

"Good morning," James carolled cheerfully. He is far too happy in the morning. "Well, I've solved the problem. I can put a little shelf just between the oven and the wall, where nobody can really see it."

"See what?" I asked crossly. I am not happy in the morning.

"That hideous toaster-oven," James replied smugly. "If it's that important to you, we'll find room for it. But maybe," he added hopefully, "when you see how it looks over here, you'll change your mind." Though I had no intention of changing my mind, I was mollified. So the engagement was still on.

The battle of the toaster-oven was, in fact, only a preliminary skirmish in a long and continuing struggle. Architects are not like other husbands. Most men, other wives tell me, still cling to one part of the old-fashioned marriage contract: the woman is in charge of the house. She arranges its decoration and its furnishing, visits the decorators' studios, haunts the showrooms. Even if she brings home samples or persuades her husband to look at a sofa or carpet, she is asking for assent, not for advice. And in the end, she tells her husband where to put the sofa and hang the pictures.

Architects, on the other hand, would never dream of merely advising. Far from relinquishing control of their living spaces, they assume, naturally, that by education and training they are superbly fitted to command. Indeed, an architect surveying plans for a house often has a military air, mapping a campaign and deploying troops.

If he or she happens to be a gifted designer, the results can be marvelous. Since I barely passed plane geometry and can never visualize anything in three dimensions, I was delighted by the airy, well-lit spaces James created for my daughter and myself in an addition he designed for his house. I was grateful that he could see just where windows ought to go, how to fit closets into unused corners, and even where to place my ficus tree.

But I somehow imagined that once the spaces were created, I would be in charge of the details. I was wrong. Of course, when James insisted that we choose all our major pieces of furniture together, I understood; this was, after all, our joint house. But I was surprised when I realized we also had to confer on picture frames, magazine racks, and canisters.

The day I wanted to hang a fuchsia plant, matters came to a head. It was a simple problem, I thought; the fuchsia plant on our roofdeck was slung over a railing, its hook twisted at an angle. Not only did this angle crush the flowers against the wall, but the fuchsia plant wasn't getting enough light. Why not dangle it instead from a bracket? In my own house, I'd hung lots of plants that way. I hurried out to the nearest hardware store. Its selection of brackets wasn't extensive,

but I was able to reject a fake-bronze one and another that was painted gold. I was quite proud of my acumen as I bought a black bracket, almost like wrought iron, and took it home. I laid it on the kitchen counter so that James could hang it that afternoon.

Only he didn't. "What *is* that thing?" he asked in dismay, when he arrived home for dinner. "A bracket," I said defensively, immediately realizing that I was in trouble. "You don't expect me to hang *that* anywhere, do you?" he said. I became indignant. "It's the simplest bracket I could find," I said, "and I want to give that fuchsia plant on the roof a chance in life." Patiently, James pointed out that this bracket had fanciful scrolls; if it had been completely unadorned, it might have been suitable. It was also not real wrought iron. Overall, he pointed out in conclusion, it was not very attractive.

"Brackets don't HAVE to be handsome," I shouted. "I've never SEEN a handsome bracket." Nonsense, James said encouragingly; obviously I just hadn't looked in the right places. I was sure to find the right bracket somewhere. I groaned. Since I needed to locate a bracket that was sleek, German, and in the Museum of Modern Art, my search might take years. Meanwhile I returned to the hardware store for a refund, explaining that my husband found the bracket ugly. I wondered how the salesman would record that complaint.

Next evening, when we were entertaining another architect and his wife, I asked her advice. "Oh boy, I know what you mean. I've been there," she said feelingly. "Next step is the architectural hardware catalogs. If you can find them. Actually, the best thing is to hope that maybe someday when you're in New York, you'll see something in some little shop on Madison Avenue. But I think maybe you ought to give up on the fuchsia and get a potted begonia instead."

Of course, if I'd noticed the unnecessary curves on that bracket, I could have saved myself some trouble. I had early learned from James that form should follow function. And I should have known better about the phony wrought-iron finish. Phony was unforgivable. I rather liked that touch of moral rigor; it had an idealistic purity.

I had seen that quality on our second date. James had craftily invited me to have a drink at his house before going out to dinner, and when I walked through his soaring entrance hall, I could see why. He was a good architect. Glancing around the main floor in admiration, I saw a gleaming oak table with a vase filled with dewy daffodils, a bright yellow note of cheer on this snowy winter afternoon. But they looked too fresh to be real; after all, this was January in Minnesota. Nobody could find live daffodils. They had to be artificial.

My heart sank. I am a snob too. I had recently become a convert to natural this and natural that, and I associated silk daffodils with fussy matrons who laid beige sculptured wall-to-wall carpeting over their wood floors. How could I respect a man who had artificial flowers on his table? I had liked him so much, and his house was so enchanting. But now it was all over.

Dispirited, I slouched to the table and said, "How can you stand to have phony flowers around?" (I had also recently become Refreshingly Frank, or as my daughter puts it, Embarrassing.) James smiled but said nothing. Close up, the daffodils looked even less real. I reached

out and plucked one out of its vase. Astonished, I realized that its stem was dripping. My fingers were wet. James smiled again. "I always make it a point to have some fresh flowers around," he said. I fell in love with him on the spot.

So I should have known about the phony finish on the bracket. But I hadn't sorted out the criteria for phoniness yet. I had been confused by the penguin. Just before James and I got married, I had been walking with my daughter past a gift-store window, mainly filled with junk. But in the corner I saw something that made me press my nose to the glass. It was a wooden cut-out of a penguin, life-size, painted in spiffy black-and-white and holding out, like a smug butler, a small white tray just large enough for a cup of tea. It was unexpected and charming, and I wanted it.

"Tell James to buy me this penguin for Christmas," I directed Jennifer. "Are you kidding?" she asked incredulously. By this time she had gotten to know him well too. I sighed and walked on. Jennifer was right; a phony penguin would never fit into our modern environment. I forgot about my short-lived passion until Christmas morning, when James, beaming, unearthed the penguin from the hall closet. He liked it, he told me; it

was so frankly fake that it qualified as real.

So phony-fake was out, frankly-fake could be in. Between these parameters was a gray area, which I would only learn about when I brought home the wrong accessory, or telephone, or bedspread. The telephone looked fine to me, exactly like the one James had had on the wall, except push-button instead of dial. It was a little thicker, a touch heavier, with more of a base, but who cared about that? It was an older model, and cheap. James cared, that's who. One look was enough. "It doesn't *look* like a telephone," he said decisively. "It looks like an orthopedic shoe." When I returned the phone, that's what I said to the salesman.

The bedspread problem was a bit nastier. All summer I had researched bedspreads, when I might well have been doing something more productive. I had finally found an acceptable color and material, but the made-to-order spread would have to be quilted for heft and drapability. Without much thought, as he complained later, James let me pick the quilting pattern. When the spreads arrived, he was appalled. "No," he said. "Yes," I said ominously; "these spreads cost enough to take us to New York, and last week you told me not to buy lobster because it was too expensive." "No," James shook his head sadly, "I can't have those spreads in our bed-

room." "And why not?" I asked, realizing too late that I was giving ground. "They look," he said with a finality I had come to realize was impenetrable, "like chenille bathrobes."

But if James has won several of these small battles, I am sure he often feels he may have lost the war. Whenever he walks into our study, or carries groceries down to the basement — he calls it "the lower level," — he has to face a major fact of our marriage. I store things. I file *National Geographics*, I save my daughter's first grade drawings and my college notebooks, and I buy extras of everything from fear we might some desperate day find ourselves out of tin foil, tuna fish or toilet paper. Worse, I refuse to hide some of my collections; I want immediate access to books, magazines, stationery, tape, paper clips, recipes, records, pencils, perfume. Any modern architect hates clutter, and James is more passionate than most. So we have had to negotiate each visible container, stack or tray of miscellany with the skill and tact of summit politicians.

When he was designing our study, James promised I could do what I wanted with it. "This will be the one room where I promise I won't interfere," he said innocently. "Just tell me what you need, and put anything where you like." Gesturing eloquently towards piles of books waiting for a new home, I asked for shelves, shelves, and more shelves. James delivered magnificently. In his remodeled bedroom, now a study, he found a perfect place for my desk and word processor, under a window overlooking a nearby lake. He put his own desk against a blank wall. Then he filled the opposite wall with handsome oak shelving. He even magically turned what had been a plant niche into a step-up book nook, lined with yet more shelves. On the floor we put an intricate Oriental rug, rich with reds and blues. What he envisioned, I know, was something like an English library. Understated but impressive. Elegant rows of books, gilt bindings, an aura of quiet.

What I had in mind was something else entirely. After shelving all my books, most of them dog-eared paperbacks, I had lots of space left. Just what I'd wanted. Carrying home from Target heaps of clear plastic boxes, as well as some

plastic-covered wire under-shelf baskets, I began to lay out my supplies. One basket for tape and shipping labels; one for old snapshots; another for maps. Between baskets I happily fitted boxes of envelopes, a layer of computing magazines, cartons of rough-draft manuscripts. On my desk I had room for not only my word processor, but a letter box, a computer-disc file, a bowl of paper clips, a flowered-glass paper-weight and neat little piles of correspondence and miscellany. Surveying my domain, I could see that everything I would need was there at my fingertips, ready for instant use. I loved it.

James found it painful. Clear plastic boxes were more offensive to him than orthopedic-shoe telephones or fake-wrought-iron brackets. The day I finished moving into the study, he came

and stood silently on the Oriental rug for a while. Then, looking gloomily over the shelves, he wondered aloud if perhaps he should have a cabinet-maker fit doors over everything to hide the mess. No, I reminded him, this was just the way I wanted it, and besides, it wasn't a mess. It was highly organized. I pointed out the pile of typing paper next to the stack of yellow pads next to the row of computer manuals. He kept staring at the plastic boxes. I reminded him of his prom-

ise. "I don't suppose you'd like me to put a new filling cabinet somewhere, so you could get rid of some of this stuff?" he asked hopelessly. I remembered our conversation about bedspreads. "No," I said, firmly but gently. "This is perfect the way it is."

I knew James had never seen any clear plastic boxes in an English library. A few days later I relented and removed everything from the one shelf that is visible from the door. Remembering the daffodils, I put a green plant there instead. Now someone has to actually enter the room, turn, and stare in order to admire my working-writer's heaven of memorabilia and supplies. James doesn't come in often; I find he tends to work now on the dining-room table.

The process of adjustment continues. Three

Vision

times I've rescued from the garbage can the cracked plastic dust cover for my hi-fi turntable. Although James feels it is an eyesore, I find it useful. When it reappears, he says nothing, and neither do I. After all, we love each other. Quietly I've filled the kitchen cabinets with ingenious turntables and little plastic shelves. Equally quietly James carries some of my pots and pans down to the basement (or lower level, take your choice) and hides them in the laundry room.

Sometimes we find compromises. When summer faded, we decided we would use comforters on our beds, rather than the new bedspreads; we are both pleased with the way the comforters look. Next summer, we will re-open negotiations.

But I know I will never be the same again. My point of view has been irrevocably altered, and my attitude towards my environment has been sensitized. I have become addicted to light, airy space, fresh flowers, and real wood. I too distinguish between the frankly-fake and the phony.

Not long ago, I met an old friend for lunch downtown. We thought we might try a new Chinese restaurant. But when we walked in the door, I took one look at the decor — wood-grained plastic tables, a rubbery tree in the corner, and gilt ornaments on the fake-pagoda beams — and turned to my friend. "This won't do," I said, in a definitive tone she probably didn't recognize.

"But we only have an hour!" she protested. "What's wrong? We haven't even seen the menu!"

"We don't have to," I said. "Look how dark it is in here. We'd get depressed. Let's walk down the block to Ginty's."

"Ginty's?" she repeated, puzzled. "But that's even worse. I mean, it's just an old diner with a counter and plastic stools."

"I know," I said patiently. "But it's authentic. Remember the wood floors? Come on, I'll explain everything as we walk. It all comes from living with an architect." ■

Susan Allen Toth wrote about her Iowa childhood in her first book, *BLOOMING: A SMALL TOWN GIRLHOOD*. Her latest book, written with her husband, Minneapolis architect James Stageberg, is *A HOUSE OF ONE'S OWN: AN ARCHITECT'S GUIDE TO DESIGNING THE HOUSE OF YOUR DREAMS* (Clarkson Potter, 1991). "Living with An Architect" was reprinted from *How to Prepare for Your High School Reunion*, a collection of essays, by permission of the author. It had previously appeared in *AM architecture minnesota*, July/August 1986.

# Service to the Public and Profession

## The Iowa Chapter of the American Institute of Architects

In 1990, the Iowa Chapter of the American Institute of Architects again received a 100% performance rating from the National AIA for service to its members. The Chapter, under the capable stewardship of Executive Director, Suzanne Schwengels, remains an invaluable resource for Iowa's practicing architects and the public they serve.

In 1904, eight architects in Des Moines elected to form a subgroup of the national American Institute of Architects. Today over 475 individuals are members of the Iowa Chapter. Located across the state, the membership currently divides itself into five sections: Des Moines Architects Council, Cedar Rapids-Iowa City Architects Council, Eastern Iowa Section, Northwest Iowa Architects Council and Southwest Iowa Section. Individual membership falls into one of three categories: Member or registered architect; Associate Member or intern architect (a person with an architectural degree pursuing registration); or Professional Affiliate Member - one who works in a related design profession. Architectural firms may also elect to become a Firm Member of the Chapter.

While a portion of the Chapter's work is purely administrative (maintaining membership rosters, processing applications and accounting for the organization's funds) a more important responsibility is its sponsorship of a variety of services and activities which enhance the architect's professional practice. The Chapter is the key link between its members and the National AIA, as well as other related industry organizations.

The Chapter is, first, an unparalleled source of information about architects and architecture. It publishes the "Iowa Architect", a quarterly review of Midwestern design; and the "Addenda", a monthly membership newsletter; as well as this annual Directory. In addition, in 1990 the Des Moines Architects Council produced "Architecture at Hand", an 84 page architectural guidebook to the capital city.

The Chapter is also a clearinghouse for a variety of other publications about architecture. The AIA Bookstore, located in the Chapter office in Des Moines, carries over 250 titles ready for immediate purchase and will gladly order virtually any other architectural text currently in print.

All the industry-standard AIA Construction Documents, consisting of over 125 different contracts and forms are available, as well as a wide array of other AIA resource literature. Three such publications; "A Beginner's Guide to Architectural Services", "You and Your Architect", and "Building Relationships" are all effective brochures offering the general public sound guidance in utilizing the services of an architect.

During the year, the Chapter conducts many programs designed to advance the practice of architecture throughout the State of Iowa. These events are excellent opportunities for architects to exchange views with their fellow practitioners while augmenting their professional training.

This fall, for example, Iowa's practitioners will welcome architects from a five-state region when the Iowa Chapter serves as host for the 5-State Central States Region Convention. Titled "Encore", this gathering of Midwestern architects will feature a roster of distinguished speakers: Peter Eisenman, Michael Graves, Charles Gwathmey and Robert Stern, along with Diana Agrest and Mario Gondalsonas and the annual presentation of State and Regional architectural design awards. In conjunction with the convention, the Iowa Chapter will also sponsor "Architecture Week", October 7-13, envisioned as a state-wide, week-long celebration of the art of architecture.

And while the fall convention is by far the most conspicuous of Chapter events, other important activities slated for this year include the annual Winter Meeting in Ames, "Poetics and the Profession", a summer retreat for architects in Davenport, and a host of additional professional development seminars structured to maintain the high standards of Iowa architects' continuing education.

The Iowa Chapter also offers programs intended to promote a better understanding of the contributions of architects. A good example is the highly popular LEGO exhibit staged for the last four years at the Iowa State Fair. Fair-goers were invited to create constructions fashioned from their choice of thousands of LEGO bricks in a setting which showcased the best of Iowa's architecture. Other programs include presentation of the American Institute of Architects

National Photography Competition, participation in "Town Squares", (a community development project of the Iowa Department of Economic Development) and a local "Search for Shelter" program to aid America's homeless, funded by the National AIA. In addition, the Chapter continues to support architecturally-related programming on Iowa Public Television and has, for the third consecutive year, granted an Iowa Chapter Educational Scholarship to assist students of architecture at Iowa State University. For elementary and secondary students, the Chapter has created "Architecture in the Schools", an innovative learning program which introduces the basic concepts of architecture into the teaching curriculum of area schools.

In the political arena, the Iowa Chapter actively lobbies state and federal representatives on issues affecting the built environment and the practice of architecture. Chapter initiatives in 1990 included monitoring over 2300 bills and 2200 amendments introduced in the Iowa State Legislature and registering direct positions on 110 bills, many of which dealt with issues of public health, welfare and safety. Other Chapter activities include involvement with the Alliance for Tort Reform, the Rebuild Iowa Coalition, and participation in "Grassroots", the AIA's national leadership and government affairs workshop.

All told, the Iowa Chapter is an invaluable resource for the architects and the public it serves. Many of the tools of professional practice architects routinely take for granted are immeasurably enhanced by the efforts of the Chapter. It represents the power of a unified profession established to deal with the issues and concerns facing every practicing architect. ■

## The Iowa Architectural Foundation

In 1988, the Iowa Architectural Foundation was established. It was founded to advance both the practice of architecture in the State of Iowa and enhance the quality of its built environment. The objectives of the Foundation are:

1. The Foundation is charged to "seek, investigate, and enable programs and projects for the improvement of the human environment for work, for recreation (and) for living."
2. "to solicit, receive and expend gifts, grants and legacies for the education, exhibition, publication, research and preservation of architecture and its allied arts and sciences."
3. "to establish recognition and awards for meritorious work."
4. "to provide architectural scholarships, establish teaching and research chairs in architecture and assist architectural education and research."
5. "to provide for the dissemination of literature and information of beneficial use to architecture..."
6. "to assist . . . any activities which will result in better architecture and in improvement of the architectural profession."

The following individuals are presently serving on its board of directors: Gordon Mills, Chairman, John Bloodgood, Vice-Chairman, Brad Bevers, Secretary, Joseph Borg, Treasurer with Robert Broshar, Ken Bussard, Dale McKinney and Craig Nelson, Directors.

During the past two years the Foundation has expanded its base of support. With the help of its many contributors, it has been able to provide strong financial support for the Architecture in the Schools Program, sponsor the Iowa Public Television Program "Skyscrapers", and prepare to look beyond the architectural and building trades industry for financial assistance. The Foundation is registered as a non-profit corporation organized for charitable purposes as defined by the Internal Revenue Service Code.

Support, be it financial or personal, is encouraged of all Iowans wishing to improve the quality of their built environment. Inquiries may be made either to any of the Foundation's directors or to the Iowa Chapter of the American Institute of Architects. ■

## Architecture in the Schools

How do children learn to value their built environment and its impact on society? The answer many times is that they do not!

The Iowa Chapter, AIA, hopes to aid this learning process through the innovative Architecture in the Schools (AIS) program. AIS introduces the basic concepts of architecture into the teaching curriculum of state schools. Two basic methodologies are followed.

During the summer, three-day teacher workshops are conducted in selected communities around the state. The activities in which the attendees participate include walking tours of the area, bus tours of architectural sites, public forums focusing on the architectural history of the community and hands-on learning activities which can be translated to the classroom.

Staff Development Courses take a different format. Teachers meet for two-hour sessions once a week for six weeks in architecturally interesting locations to study basic concepts of architecture. The subsequent three weeks are spent in their classrooms implementing an architectural lesson of their own design. These plans are shared at the last session. "Architext," an educational resource, is an outgrowth of these staff development courses. This compendium of detailed lesson plans offers options in architectural learning to teachers in a variety of subjects, grade levels, and time frames.

"Buildings Speak: The Language of Architecture," a 25-minute slide presentation explaining five basic elements of architecture is an additional resource available through the AIA for use in the classroom. The Chapter currently has under production a new slide show to be entitled "Global Influences on Iowa's Architecture."

To date over 255 Iowa teachers have taken advantage of the Architecture in the Schools program and it is estimated that as many as 9,000 students have been influenced by the program over the last three years. Students and teachers alike develop an awareness, understanding and appreciation of the built environment, but they also use architectural concepts in solving learning difficulties in other subjects.

The AIS program has flourished through the energies of Barbara Schmidt, Education Consultant to the Chapter, and while teacher programs

and resources are the major impetus of the program, many other activities also take place under the auspices of AIS. A Career Day is scheduled to coincide with the chapter's annual convention in October each year, children have participated in the annual Design Awards program since 1988, and a myriad of requests for resources and guest speakers for schools are coordinated.

Funding for the program has been achieved by the successful acquisition of grants from the Iowa Arts Council and the National Endowment for the Arts, The Iowa Humanities Board and the National Endowment for the Humanities, The Iowa Architectural Foundation, the Sheet Metal Contractors of Iowa, and through administrative support from the Iowa Chapter, AIA.

For more information about the program contact the Iowa Chapter, AIA, office at 512 Walnut Street, Des Moines, Iowa 50309, 515-244-7502. ■

## The State Historic Preservation Bureau

The Bureau of Historic Preservation, located in the State Historical Building, administers the following programs: the National Register of Historic Places; Architectural, Historic and Archaeological Survey; Grants for Preservation Activities; the Review of the Impact of Federal Undertakings on historic properties; Federal Investment Tax Credits Program and review of projects using State financial incentives for proper rehabilitation.

### The National Register of Historic Places

The National Register is often described as the keystone of the State Historic Preservation Bureau operation. Additions to the National Register, with the exception of federally owned properties, are made through the State Historic Preservation Bureau. The program, at its heart, creates and maintains a national list of culturally significant properties. As a result, the National Register properties warrant some degree of consideration when federally-funded projects threaten them directly or indirectly. The list encompasses every conceivable type of property ranging from individual buildings or archaeological sites to public fountains to large historic districts.

Persons interested in placing a property on the National Register should contact the Bureau to obtain a nomination packet. All properties non-federally owned may be nominated to the National Register through this office. If accepted, they become places listed in the National Register. A separate and more select group of properties with national significance are designated as National Historic Landmarks.

For more information on the National Register contact: National Register Coordinator Lisa Linhart at (515) 281-4137.

### Architectural, Historical and Archaeological Survey

The architectural survey is charged with identifying buildings, structures, and districts which best express the range and variety of the built environment of Iowa. Two types of architectural surveys are conducted through the Bureau. Reconnaissance level surveys identify buildings and structures in a particular locality which are

50 years of age or older with potential eligibility for the National Register of Historic Places. Intensive level surveys involve indepth research enabling the surveyor to recommend whether or not a property or district is eligible for listing in the National Register.

For more information on Architectural Survey contact: Architectural Historian Ralph Christian at (515) 281-8697.

For information on historical or archaeological surveys, contact: Historian Lowell Soike at (515) 281-3306 or Archaeologist Kathy Gourley at (515) 281-8744.

### Grants for Preservation Activities

The Certified Local Government (CLG) Program, through federal funding from the National Park Service, provides Iowans with matching grants for various historic preservation activities. The current grants program assists Iowans to survey and identify outstanding historic, architectural and archaeological sites throughout the state, to nominate sites or districts to the National Register and to prepare public education programs about historic preservation and related activities designed to identify and preserve the history and pre-history of Iowa. Iowa leads the nation in the number of counties and towns that are CLG's.

For more CLG Grants information contact: Certified Local Governments Coordinator Kerry McGrath at (515) 281-6826.

Historic Resource Development Program (HRDP) provides state funds for the owners or would-be owners of historic properties with matching funds to acquire or rehabilitate historic buildings and sites. These funds amount to almost 1 million dollars per year from lottery proceeds and can also be used as matching grants to do work in historical museums and library/archive collections.

For more HRDP Grant information, contact Historic Resource Development Coordinator Lynda Wessell at (515) 281-8152 or 242-6194.

### Investment Tax Credits and Proper Rehabilitation Incentives

Certain property owners may qualify for Federal investment tax credits by rehabilitating Cer-

tified Historic Buildings. The Bureau of Historic Preservation reviews and approves these applications. A Certified Historic Building is any structure, subject to depreciation as defined by the Internal Revenue Code, that is:

1. Listed, individually on the National Register of Historic Places; or
2. Located in a registered historic district and certified by the Secretary of the Interior as contributing to the historic significance of the district.

Other incentives are available such as temporary property tax exemptions for the increase in valuation due to the approved "substantial rehabilitation" of historic buildings. The Main Street Linked Investments for Tomorrow Loan Program provides below market interest loans in CLG's or Iowa Main Street communities for exterior restorations or rehabilitations of historic buildings, up to \$50,000 per property in central business districts.

All these incentive programs are available to projects which are consistent with the historic character of the building and meet the Secretary of the Interior Standards and Guidelines for Rehabilitation. The projects must be reviewed and approved through the Historic Preservation Bureau. The Bureau supplies applicants with technical information about various work areas, including window repair techniques and problems with window replacement, storefront replacement, storm windows guidelines and brick/stone cleaning and repair. Technical assistance is given by phone, mail or through site inspections.

For more Tax Credits or Rehabilitation Incentives information contact: Preservation Architect Judith Ann McClure at (515) 281-8719 or 281-8637. ■

## Iowa Architect

The Iowa Architect is intended to educate its readers about the importance of architecture and related architectural issues through a review of newly constructed and historically significant projects, and to promote the value of design excellence in all areas of our public and private environment. It is also a resource for noteworthy events and achievements in the arts, literature, graphic design, music, landscape architecture, and product design.

The Iowa Architect is published four times a year by the Iowa Chapter of the American Institute of Architects. Its editorial policy, content, graphic design, and production is directed by a volunteer board of editors comprised of state wide members of the Iowa Chapter, AIA.

The editorial staff determines projects and events to be covered, solicits contributions by free-lance Iowa writers, and assembles photographic and graphic support materials. Each issue is focused around a central idea or issue such as historic preservation, waterfront development, residential design, educational facilities, urban design, etc.

The magazine is published by Kimberley Press, Urbandale, Iowa and is supported by a combination of advertising revenues, subscription fees, and Chapter contributions.

Since 1980, the circulation has been expanded to 5,500 with a concentration in an eight state area including Iowa, Missouri, Nebraska, Kansas, Oklahoma, Wisconsin, Minnesota, and Illinois. By subscription, the magazine currently is mailed to over 35 states.

In support of its educational goals, the Iowa Architect is distributed without cost to school and university libraries in the state of Iowa. It also provides free subscriptions to public officials at the local and state levels who routinely make decisions regarding the built environment in Iowa.

While the main focus is on Iowa architecture and design issues important to Iowa, the magazine has consistently worked to broaden the scope of its interests and coverage. This has included the development of a yearly review of midwestern architecture and an expansion of circulation throughout the central states region. It has also resulted in features that explore and

review performances, art exhibitions, product design, interior and graphic design. Since 1987 the magazine has commissioned fictional writing pieces from Iowa writers and accompanied them with specially commissioned original art work by Iowa artists. ■

The following themes are planned for upcoming issues of the Iowa Architect.

Summer 1991	Interior Design
Fall 1991	Convention
Winter 1991	Mega Clients
Spring 1992	Design Awards

### 1991/1992 EDITORIAL CALENDAR

#### **SUMMER- INTERIOR DESIGN**

*From bathrooms to boardrooms, this issue will feature the best and brightest of the world within.*

#### **FALL-1991 CONVENTION**

*The Iowa Chapter, AIA is host to this year's Central States Region Convention. This issue will focus on a retrospective of 1978 and the 1978 Chapter Regional Convention. Included will be features on each of this year's jurors, internationally renowned architects who participated in the 1978 convention: Peter Eisenman, Michael Graves, Charles Gwathmey, and Robert Stern.*

#### **WINTER-MEGA CLIENTS**

*This issue, which focuses on projects commissioned by institutional clients, will also delve into the inner workings of these large entities and gauge their impact on our built environment.*

#### **DIRECTORY**

*In addition to membership and firm listings, the Directory also features a users guide to the work of the architect and an outline of services important to the public and profession.*

#### **SPRING-DESIGN AWARDS**

*This Eighth Annual Review of Midwestern Architecture will present the Central States Region and Iowa Chapter, AIA's 1991 award winning projects.*

**The Iowa Architect is a quarterly publication of the American Institute of Architects, Iowa Chapter.**

# IOWA'S NATURAL HERITAGE

## 1992 Calendar

Extend your advertising dollars while supporting your community and area cultural events and the Iowa Natural Heritage Foundation...

**T**he Iowa Natural Heritage Foundation, in cooperation with Kimberley Press Ltd., is producing a calendar highlighting the natural beauty and heritage of Iowa. In addition to the features and benefits described below, your 1992 calendar purchase will help to support the work of the Iowa Natural Heritage Foundation.

- New photography selected from leading Iowa photographers
- Easy reference dates each month of selected cultural, entertainment events and festivals that are important to Iowans.
- Twelve full color scenes, attractive in an office, shop or home
- Open size, 11"x 19", a large square each day
- Includes an always visible 11"x 2" area to imprint your bank, organization or company name, and up to 3 lines of copy.

The 1992 Iowa Natural Heritage Foundation calendar effectively advertises your product, service or cause to your customers. And this calendar is available to you at a very special rate reduced from the \$5.75 suggested retail price. The price to you is less because you are ordering in quantities of 200 or more.

### PRICE SCHEDULE

Quantity:	200-499	500-999	1000-2499	2500-4999	5000 - up
Your cost per calendar	\$1.95	\$1.80	\$1.65	\$1.55	\$1.40

Bulk packed in cartons. This year's prices include delivery.

## New ways to reduce energy costs... now and in the future

Design buildings and systems for maximum energy efficiency, and your clients will save on energy costs well into the future. But we also realize you're concerned about the initial cost.

That's where Power Options<sup>SM</sup> come in. These innovative programs offer *cash rebates* to help offset the cost of new, energy-efficient equipment. And that helps us reduce summer peak demand.

Rebates are available for new heating, air conditioning, or lighting equipment that meets program guidelines. There are programs for both new and existing construction—and the reduction in costs can be significant.

Power Options make it easier to save on energy costs...both now and in the future. To learn more, call Iowa Power at 515-281-2468.

**IOWA POWER<sup>®</sup>**

Smart service...Bright ideas.<sup>®</sup>

*Transforming clay  
and idea into reality.*

ConAgra Corporate Complex—Omaha, NE  
Architect: Opus Corporation—Minneapolis, MN

Shape D

Medium Ironspot #77

*Through ingenuity and innovation, Endicott transforms what's perceived in the mind's eye into structures that defy description.*

*The aesthetically beautiful ConAgra Corporate Complex personifies Endicott's capabilities taken to new heights—900,000 face brick; 35,000 sq. ft. of tile; 50,000 special shapes; 550,000 pavers (approx. 122,000 sq. ft.).*

*Regardless of project application, the unmatched elegance, durability and versatility of Endicott products provide exciting design possibilities that are virtually limitless.*

*For samples and the name of the distributor in your area, contact Endicott Clay Products Company today.*
