You're standing on the most efficient heating and cooling system on Earth...

The most efficient heating and cooling source on Earth is the earth. And geothermal ground source heat pumps can put it to work for you.

Tap the Earth's constant temperature—right beneath your feet—and promote clean, safe heating and cooling. Ground source heat pumps also provide hot water.

Iowa's home buyers are more energy minded than ever, and

they'll appreciate your commitment to conserving our natural resources.

Call any one of Iowa's electric cooperatives or 712-297-5411 today for more information on ground source systems. You have a standing invitation.

Turn Your Client's Home Into A Showplace!

Easy, Affordable Employee Benefits From The AIA Trust

We don't see this type of help-wanted ad - yet. When you consider that health care costs just keep getting higher and the fact that employee benefits are an essential part of your practice, it begins to seem like the only solution. **But it's not.**

Consider The AIA Trust's Major Medical Plan

As the only plan for firms sponsored nationally by The American Institute of Architects, it is designed specifically for architectural firms including sole practitioners.

- Comprehensive coverage including a number of options, so you can fit your program to your situation.
- Employee Benefits including life insurance to help you attract and keep talented people.
- Prompt claims processing by a professional staff.
- Affordable rates. In fact, comparisons show that The AIA Trust Plan premiums are competitive with other plans available to members, and lower than most.
- A toll-free number to call when you have questions, so it's easy to administer.

For more information about The AIA Trust Major Medical Plan, mail the coupon to: The AIA Trust, Plan Administrator, P.O. Box 93206, Des Moines, IA 50393. Or call the plan administrator toll free

A word from the President

The Iowa Chapter of the American Institute of Architects is proud to present the 1992 AIA Iowa Directory.

As president I have been honored to represent AIA Iowa at many state, regional and national events and have become increasingly inspired by the network of available resources, programs, records of achievement, and knowledge base brought together in our collective AIA. Never before has there been a more acute need for immediate informative communication in the practice of architecture and in the pursuit of an improved built environment. This directory is a resource assembled to assist you in the understanding and utilization of our network of members, committees, programs and manifestations.

AIA Iowa is the key link between its members, National AIA, NCARB (National Council of

Architect

Architectural Registration Board), NAAB (National Architectural Accreditation Board), state and national legislators, allied industry organizations and our general public.

Proudly, AIA Iowa has steadily become recognized nationally for the achievements and accomplishments of our many fine members. As we face the challenges of tomorrow, let us build on the strengths of today.

Sincerely,

Philip A. Hodgin, AIA President, AIA Iowa

THE WORK OF THE ARCHITECT

The Architect

The architect is, by both training and temperament, a generalist. In an age noted for its ever-increasing, all-consuming passion for specialization, the architect must remain one who steadfastly perceives "the whole picture."

The art of building can rarely be coerced into a singular train of thought. Architecture is, above all else, a richly interwoven tapestry of aims, interests and ideals. A building may not be only technological, or artistic, or functional, or humane. It must be each and all of these things. The architect alone is uniquely qualified to perform this complex and multifaceted task.

There persists a romantic notion about the work of the architect; that the design of a building results from some flash of inspiration, hastily scratched on the back of an envelope or napkin, which is then miraculously transformed into physical form. The true reality of architecture is usually less poetic. For most architects, architecture is a patient process of examination, analysis, and evaluation. It is an act they can best describe only as the "process of design."

Each building begins as a set of problems to be solved. Though the problems presented to architects are varied, they all share common characteristics. A client has needs; a space for a particular use, an environment requiring repair, an expansion of what is or the recreation of what was. More over, the needs of a client are rarely limited simply to the physical characteristics of the anticipated building. Each client has scheduling limitations and the constraints of an over-riding budget. These needs, constraints and desires form the seed from which architecture ultimately blossoms.

Buildings do not, however, exist in a vacuum. Any project, regardless of its scope, has a significant physical and economic impact on the environment in which it is placed. The architect is compelled to consider not only the narrowly defined desires of the client, but the interests of the public at large. In the long run, a building suited to its context serves both the best interests of its owner and its neighbors.

Regardless of the specific demands of client and context, each building must respond, at its most basic level, to fundamental characteristics of nature. Gravity must be resisted, topography accommodated, climates modified. Above all else, the architect must be keenly aware of the consequences of time. Buildings do not have a momentary existence. They are objects that we experience repeatedly; they will be with us well into the future.

These then are the "problems" of architecture; the issues with which architects must contend. The architect understands full well that the success of any building depends on striking an appropriate balance between each of these requisite requirements.

The resolution of the problems of architecture is embodied by the architect's "process of design." For most, the process begins with a statement of "Program." The program is a written description of the client's needs, goals and aspirations for a given project. A program can be a simple list defining space requirements. Or it may be a highly detailed treatise, quantifying very specific ambitions. In either instance, the program becomes the basis upon which the value of an architect's performance is judged.

A program also may not be judged in isolation. It must always be considered with respect to the intended location of a project: the building's site. The architect will begin by analyzing the "fit" between a prospective program and the context in which it is placed. The architect must ask very specific questions, "What are the physical characteristics of this property? What are the legally binding restraints on the site in question?" Simply put, "Will the intended program 'fit'?"

From here, the architect prepares a series of preliminary proposals. These are, in reality, sketches which suggest a variety of options and opportunities inherent in a client's program and siting intentions. Architects typically describe this preliminary activity as "Schematic Design." It is characterized by a free-flowing exchange of concepts and ideals between client and designer that should clarify the fundamental objectives of the project at hand. Alternative proposals are reviewed in consultation with the client and, ultimately, a preferred strategy for continued development is selected.

In the Design Development phase, the schematic proposal is examined in considerable detail. At this point, the materials and methods of construction are selected, planning layouts are refined and construction costs are projected with increasing reliability. Most important, the image of the building as a concrete work of architecture becomes evident.

Throughout this phase of development, the architect must continually re-assess the initial objectives of the project: "Does the developed proposal conform to the initial requirements of the program? Are the interests of the client preserved? Does this proposed building 'speak' in some manner to the community into which it is placed?" It is this constant re-evaluation of constraints and motivations that distinguishes the responsible work of the architect.

The Code of Ethics provides members with reasonable guidelines for fulfilling their "obligations to the public, to clients and users, to the building industry, to the profession and to their professional colleagues."

Construction Documents are prepared only after both architect and client agree that the objectives of the program have been fulfilled by the developed design. In this phase, detailed drawings are drafted, allowing a contractor to establish fixed building costs and initiate construction. In creating these documents, the architect will rely on the assistance of specialized consultants: engineers, landscape architects, graphic designers or others needed to contribute their expertise to the evolving design. The completed documents become, in effect, a legal contract, compelling the finished building to be constructed in accordance with the client's express desires.

During construction the architect continues to evaluate the ongoing evolution of the design process. Through periodic site visits and consultation with the client, the architect assumes an advisory role, noting the general progress of the work and its compliance with the overall intentions of the design concept.

Most architects consider the process of design complete only after the client has moved in and become accustomed to the new or renovated surroundings. In this "Post-Evaluative" phase of design the architect again asks the same questions that have characterized each preceding step in the process: "What were the client's needs? Does the completed building meet those expectations? Is this in fact a 'balanced' work of architecture?"

To be fair, only a handful of buildings ever fulfill every expectation demanded of them. Such perfection may be realized only under the best of circumstances. Still the process of design, as employed by the architect, provides the broadest, most reasonable means of achieving a successful, satisfying building that equitably represents the best interests of its users. The architect seeks solutions to frequently complex problems in ways that are as imaginative as they are structured. The architect's process of design is formulated to clarify the ambitions of a client in a manner which produces buildings which are unique, productive and testaments to enduring value.

Ethics, An Architect's Standard of Conduct

By mutual consent, members of the American Institute of Architects conform to a Code of Ethics. Quoting the "Architect's Handbook of Professional Practice," an architect is committed to the "highest standards of professionalism, integrity and competence. The Code of Ethics provides members with reasonable guidelines for fulfilling their obligations to the public, to clients and users, to the building industry, to the profession and to their professional colleagues."

The AIA's Code of Ethics is based on five fundamental canons, each of which represents broad principles of conduct:

General Obligations — Members should maintain and advance their knowledge of the art and science of architecture, respect the body of architectural accomplishment and contribute to its growth: learned and uncompromised professional judgement should take precedence over any other motive in the pursuit of the art and science of architecture.

Obligations to the Public — Members should embrace the spirit and letter of the law governing their professional affairs and should thoughtfully consider the social and environmental impact of their professional activities.

Obligations to the Client — Members should serve their clients competently and in a professional manner and should exercise unprejudiced and unbiased judgement on their behalf.

Obligations to the Profession — Members should uphold the integrity and dignity of the profession.

Obligations to Colleagues — Members should respect the rights and acknowledge the aspirations and contributions of their colleagues.

The Code, in its entirety, covers a wide range of pertinent issues confronting the practicing architect. It does not, however, address specific compensatory disputes which may arise in the relationship between an architect and client. It does not, in other words, have the force of law. The Code does, however, establish a consistent standard of conduct to which a member of the American Institute of Architects may be held accountable. The AIA's Code of Ethics and Professional Conduct prescribes the moral obligations of the practicing architect. It is a standard which defines the highest ideals of the profession and serves as the foundation upon which each member must weigh the considerable influence of his or her own professional judgements.

The Architectural Practice Act empowers the State to recognize certain individuals as particularly qualified in the design of buildings, authorizing those persons to assume the title "Architect."

The Architectural Practice Act

The Architectural Practice Act, Chapter 118 of the Iowa Code, defines and regulates the practice of architecture in the State of Iowa. It is not the sort of document one would casually browse for entertainment value. Nonetheless, its provisions should be of keen interest to architects, for it concisely defines their qualifications, obligations, and responsibilities as practicing professionals. For the general public, particularly those wishing to employ an architect, the Act constitutes a standard of professional conduct which establishes expectations of an architect working in the public interest. The Act empowers the State to recognize certain individuals as particularly qualified in the design of buildings, authorizing those persons to assume the title "Architect."

The Act defines both the profession of architecture and its practice: "the practice of architecture means performing ... professional architectural services in connection with the design, preparation of construction documents or construction of one or more building structures or related projects which have as their principal purpose human occupancy or occupation..." The Act does, however, exempt certain types of construction from

the required participation of an architect.

The Act goes on to establish a set of definitions which clarify the responsibilities of the practicing architect. Although the general language of these definitions is familiar to most professionals, several key interpretations are worth restating, (quoted here directly from the Iowa Code): "Professional architectural services" means consultation, investigation, evaluation, programming, planning, preliminary design, and feasibility studies, designs, drawings, specifications, administration of construction contracts, observation of construction site progress, or other services and instruments of service related to architecture.

"Direct supervision and responsible charge" means that he architect has the exercising, directing, guiding, and restraining power over the design of the building or tructure and the preparation of the documents and xercises professional judgement in all matters embodied in he documents... Merely reviewing the work prepared by mother person does not constitute "direct supervision and esponsible charge" unless the reviewer actually exercises upervision and control and is in responsible charge of the

"Observation of construction site progress" means ntermittent visitation to the construction site by an architect r the architect's employees for the purpose of general amiliarity with the progress and quality of the construction nd the general conformance of the construction documents

and general compliance with the applicable building codes ... Such observation does not imply exhaustive or continuous on-site inspections to check the quality or quantity of construction work.

Technical submissions prepared by the architect or under an architect's direct supervision and responsible charge, shall be stamped with the impression of the architect's seal ... A public official charged with the enforcement of the ... building code ... shall not accept or approve any technical submissions involving the practice of architecture unless the technical submissions have been stamped with the architect's seal.

The licensing of architects in Iowa is intended to protect the health, safety and welfare of the public. This summary of The Architectural Practice Act is intended solely for informational purposes. It should not be construed either as commentary on or interpretation of the legal implications of the Act itself. A copy of the Act may be obtained from the Iowa State Board of Architectural Examiners.

The licensing of architects in lowa is intended to protect the health, safety and welfare of the public.

Architecture at Iowa State

The diversity of professional and postprofessional programs at Iowa State University is bound by the common thread of academic excellence and a commitment to life-long learning as the basis for architectural practice. Each program graduate, undergraduate or continuing education is an instrument for confirming the importance of societal change. Through excellence in teaching and research and extension faculty actively seek to extend and elevate the standing of architecture and the role of the architect.

The Undergraduate Program, a five-year curriculum, leads to the degree Bachelor of Architecture and is both an intense professional course of study as well as a broadly conceived educational experience. The design studio is the armature of the program through which students explore the possibilities of design as a highly synthetic practice, the assembling of elements of their own experience, the complexities of the building as both system and as artifact, and the engendering constructions of culture. In this synthesis the curriculum mirrors contemporary practice while at the same time seeking a critical and inquisitive position relative to professional work. In the Undergraduate Program design is also considered an essential mode of learning, of interpretation and understanding, and, through design, students engage a range of subjects in the humanities, the arts, and the sciences which constitute the foundation of the professional experience. Having obtained the professional degree the graduate is prepared to either Continuing education and the lecture series and symposia are exemplary of the Department's commitment to a healthy reciprocity between the university and the profession and the citizenry it serves.

enter practice or continue in graduate study.

The Graduate Program in Architecture offers opportunities for both professional and post-professional study leading to the Master of Architecture degree. In each of its three options the program emphasizes the relationship between professional education and architectural research, culminating in a thesis as a demonstration of both professional competence and a deep understanding of the discipline of architecture.

The Three and One-half Year Option is designed for individuals with an undergraduate degree in a subject other than architecture. Students explore a full range of architectural subjects through seminars, an intensive sequence of design studios, and thesis. 100 Credits are required.

The Two Year Option is for individuals with a pre-professional undergraduate major in architecture. Following the completion of the requisite professional courses the student is expected to develop an individualized course of study leading to the thesis. 60 credits are required.

The One Year Option is a post-professional course of study leading to the Master of Architecture and is designed for individuals with an accredited professional degree in architecture (B.Arch. or M.Arch.). The post-professional option affords the opportunity for advanced study in architectural theory and design leading to the thesis. 30 credits are required.

The Graduate Program also offers a course of study leading to the degree Master of Science in Architectural Studies. This course of study is designed for students with non-architecture backgrounds and students with previous degrees in architecture wishing to conduct specialized graduate level research in architecture. Students work closely with faculty who are engaged in high-level research and scholarship. 34 credits are required.

Double-degree programs are currently offered with the Department of City and Regional Planning (M.Arch./M.C.P.) and the College of Business Administration (M.Arch./M.B.A.).

The Department also conducts a year-round program of continuing education as support for the State of Iowa's professional education requirements and as a way of extending the research and scholarship of the University to a using public. Continuing education and the lecture series and symposia are exemplary of the Department's commitment to a healthy reciprocity between the university and the profession and the citizenry it serves.

For more information contact Robert Segrest, Chairman, at the Department of Architecture, Iowa State University, Ames, Iowa 50011 or at (515) 294-4717. Architects and the day-to-day practice of architecture in Iowa are regulated by a Board of Architectural Examiners, part of the Professional Licensing and Regulation Division of the state.

The Iowa Architectural Examining Board

Architects and the day-to-day practice of architecture in Iowa are regulated by a Board of Architectural Examiners, part of the Professional Licensing and Regulation Division of the state. Board composition consists of five licensed architects (active for "not less than five years...") and two members representing the general public, who are not required to have any formal training in architecture. The members are appointed by the Governor for three-year terms and confirmed by the Iowa Senate.

Every year the board administers two examinations (in June and December), which are part of a national registration system for architects. Knowledge of site planning, structure, environmental systems, construction methods and details, etc. are tested during a four-day exam. Design competence is tested separately from the rest in an intense, twelve-hour session. Persons who pass all portions of the test may apply to become registered as "architects." Further, Iowa is one of two states that requires licensed architects to complete a course of continuing education, in order to remain licensed. The Architectural Examining Board reviews the education programs submitted for renewal by each architect on a bi-annual basis. The Board does not pre-approve courses but provides guidelines in their Administrative Rules 193B-Chapter 3.

While prohibited from excluding an individual seeking registration on the basis of age, citizenship, sex, race, religion, marital status or national origin, the Board is instructed to consider that an applicant be of "good moral character," trustworthy, honest and adherent to professional standards of conduct. When warranted by complaint or inaction of the architect, the board investigates his or her activities and may revoke or suspend the license of any architect found guilty of misconduct. Further, the Board disciplines violators of the Iowa Architectural Practice Act. It must authorize a corporation, partnership or sole proprietorship to practice architecture as a business entity. Generally, this requires that any organization doing business as an architectural firm is actively controlled by registered architects.

Thus, the Iowa Architectural Examining Board's goal is to assure the public that those who practice architecture as defined in the Architectural Practice Act and/or who call themselves architects actually have received the professional education, passed the required tests, and continue their education and licensure in such a way that justifies the title of architect.

The Intern Development Program

Internship has long been a fundamental component of architectural education. It provides a logical transition from academic training to professional registration. The internship period begins after graduation and lasts for a minimum of three years until the intern architect successfully passes the Architect's registration exam.

The Intern Development Program (IDP) was created in the mid-1970s by the AIA and National Council of Architectural Registration Boards. Its goal is the establishment of uniform standards designed to aid intern architects in gaining comprehensive experience that will prepare them for architectural practice. This has been mandatory in Iowa since 1990.

Prior to IDP, there were few consistent guidelines for the training of an intern architect. Merely working in an architectural office did not necessarily guarantee a well-rounded exposure to the diverse aspects of professional practice. The Intern Development Program provides an effective framework for structuring the educational experience of the architect-in-training.

IDP training encourages experience in four basic categories: design and construction documents, construction management, office management, and related special activities. An intern architect may obtain credited exposure in each category either by direct participation, observation, or by simulation through supplementary education. Credit for IDP activities is measured in "value units", each equivalent to eight hours of exposure. Sevenhundred value units are required to satisfy the requirements of the training standard. Of this total, half represent training minimums, the balance may be acquired in any approved area of exposure. The intern architect's progress in the program is monitored by a professional sponsor, typically a registered architect in the intern architect's place of employment. The sponsor provides opportunities for diversified training and assesses the acceptability of the work and experience gained.

In addition, a professional advisor, usually an architect outside the intern architect's firm, is assigned to discuss each individual's development and offer guidance toward the goal of registration. Together, intern architect, sponsor, and advisor define the path of professional experience necessary to satisfy the state registration board's internship requirements.

Intern architects participating in the IDP are required to keep accurate records of their avolvement in the program. This documentation of experience must be both certified by the intern

architect's employer and acknowledged by the professional advisor. The record can then be permanently registered by establishing an IDP Council Record through the NCARB.

For more information on the Intern Development Program in Iowa, contact AIA Iowa.

Selecting an Architect

An architect may be chosen for many of the same reasons one might use to select any other responsible professional: commitment, experience and expertise. Such criteria do not, however, recognize the unique contribution an architect makes in the creation of a work of architecture.

A more reasonable approach might first begin with a clear understanding of the role an architect will play in fashioning the building under consideration. The process of design is a long and demanding endeavor. A successful project is most often the consequence of an open and engaging collaboration between designer and client. Accordingly, it is important that the client select an architect with whom they feel both compatible and comfortable. An architect who shares either the sensibilities or the eccentricities of the client will invariably be better suited to realize the client's aims than one who does not.

In either instance, the critical issue remains the quality of communication between client and architect. It is a responsibility shared equally by both parties and should be a pre-eminent concern in the selection of an architect.

Beyond mere compatibility, it is also worthwhile to consider the varied ways in which architects practice their profession. An architectural firm may be composed of only a single practitioner, as a partnership among several associated architects, or as a full-fledged corporation. Firms, in addition, come in a variety of sizes. Size, in and of itself, however, may not be nearly as important a consideration as a firm's productive capabilities. A small office, for example, may choose to concentrate on a limited number of substantially-scaled projects, while the larger firm might divide its resources among many more modestly sized buildings. Some architectural firms, in addition, offer engineering services on an "in-house" basis. Others prefer to draw upon the judgement of independent consultants appropriate to the needs of each project.

Regardless of the specific means, each office chooses methods of organization that best reflect its own particular combination of skills, expertise, interests and values. The prospective client should consider, not only the individual elements of a firm's A successful project is most often the consequence of an open and engaging collaboration between designer and client.
Accordingly, it is important that the client select an architect with whom they feel both compatible and comfortable.

Qualifications Based Selection (QBS) is an objective, flexible procedure for obtaining architectural design services on public projects. composition, but their collective impact on a firm's ability to perform the work required, as well.

Many aspects of a firm's character may be judged from the promotional literature routinely prepared by most architects. Such brochures may be either slick and corporate, or humble and unassuming. What is important is not so much the style of the presentation, as its content. A typical brochure should, for example, describe an architect's philosophy of design, the firm's method of work and, where applicable, areas of specilization. Examples of representative projects should be included, as well as a listing of references.

A brochure, however, can only suggest the general characteristics of any architect's practice. A more comprehensive and reliable understanding of the architect's capabilities is best determined in the context of a personal interview. An interview gives the client the opportunity to focus on the specific goals of his or her project. It is, as well, a good time to gauge the temperament and personality of the architect under consideration. Clients should begin to sense the kind of rapport they might expect of this individual in an ongoing professional relationship.

Clients should, in addition, be prepared to ask detailed questions of the architect: "How are your abilities best suited to the needs of my project? What methodologies do you use to monitor costs and schedule? What approach will you take in resolving my particular problems? Which members of your firm will handle this job?" These are important questions and the architect will strive to answer them in a fair and objective manner. Most architects, in fact, relish the opportunity to describe their work at this level of detail.

Impressions drawn from an interview may be reinforced by consulting with the present and former clients of an architect. Their experiences should offer a reassuring confirmation of attitudes portrayed by the architect during the interviewing process.

Finally, and perhaps most simply, a prospective client should merely look around. The work of an architect is, by its very nature, profoundly conspicuous. A thoughtful, well-conceived building is always an architect's best form of reference.

Oualifications Based Selection

When a building project is initiated by an agency representing the public, the selection of a qualified design professional becomes of paramount importance. The architect's work in the public realm will have an overwhelming impact on the ultimate success of the undertaking. Critical issues of feasibility, fiscal accountability, design, functional efficiency and imagery all hinge upon the prudent, professional judgement of the selected architectural designer.

Qualifications Based Selection (QBS) is an objective, flexible procedure for obtaining architectural design services on public projects. It assists an owner in the selection process when the owner does not already have a professional design consultant. The QBS process is helpful to frequent users of design services as well as one-time users with little or no past practical experience in working with design professionals. QBS provides owners with a selection process that is straightforward and easy to implement, is objective and fair, can be well documented and is open to audit.

QBS has received national attention in the public sector through legislation. In October 1972, the federal government enacted Public Law 92-582 covering the selection of architects and engineers based on qualifications. This bill since has been known as the Brooks Act, as it was introduced by U.S. Representative Jack Brooks of Texas.

The QBS procedure is delineated by the following series of sequential steps:

- The scope of work is defined by the project's owner
- 2. A schedule for the selection process is established
- 3. A list of professional firms is assembled
- 4. Qualifications of the firms are requested
- 5. These qualifications are evaluated
- 6. A short list of firms to be interviewed is assembled
- 7. Interviews are conducted
- 8. On the basis of the interview, firms are ranked in order of their respective qualifications
- A contract is negotiated with the top ranked firm.
 If an agreement cannot be reached, then
 negotiations are begun with the second-ranked
 firm, and so on until an agreement is reached and
 a firm is selected.
- Firms involved in the process receive postselection communication.

Information regarding the implementation of the Qualifications Based Selection process may be obtained from AIA Iowa.

SERVICE TO THE PUBLIC AND PROFESSION

The Iowa Chapter of the American Institute of Architects

The Iowa Chapter of the American Institute of Architects has a proud tradition of service and has again received a 100% performance rating from the National AIA in 1991 for service to its members. The Chapter remains an invaluable resource for Iowa's practicing architects and the public they serve.

In 1904, eight architects in Des Moines elected to form a subgroup of the national American Institute of Architects. Today over 525 individuals are members of AIA Iowa. Located across the state, the membership currently divides itself into five sections: Des Moines, Cedar Rapids-Iowa City, Eastern Iowa, Northwest Iowa and Southwest Iowa. Individual membership falls into one of four categories: Member (registered architects); Intern Member (a person with an architectural degree pursuing registration); Associate Member (employed by an architect in a technical capacity); or Professional Affiliate Member (one who works in a related design profession). Architectural firms may also elect to become a Firm Member of the Chapter.

While a portion of the Chapter's work is purely administrative (maintaining membership rosters, processing applications and accounting for the organizations's funds), a more important responsibility is its sponsorship of a variety of services and activities which enhance the architect's professional practice. The Chapter is the key link between its members and the National AIA, as well as other related industry organizations.

The Chapter is, first, an unparalleled source of nformation about architects and architecture. It publishes the "Iowa Architect", a quarterly review of nidwestern design; and the "Addenda", a regular membership newsletter; as well as this annual Directory. In addition, in 1990 the Des Moines Architects Council produced "Architecture at Hand", in 84-page architectural guidebook to the capital bity.

The Chapter is also a clearinghouse for a variety of other publications about architecture. The AIA Bookstore, located in the Chapter office in Des Moines, carries over 250 titles ready for immediate burchase and will gladly order virtually any other rehitectural text currently in print. All the industry-tandard AIA Construction Documents, consisting of over 125 different contracts and forms, are available, s well as a wide array of other AIA resource iterature. Three such publications, "A Beginner's Guide to Architectural Services", "You and Your trehitect", and "Building Relationships" are all

effective brochures offering the general public sound guidance in utilizing the services of an architect.

During the year, the Chapter conducts many programs designed to advance the practice of architecture throughout the State of Iowa. These events are excellent opportunities for architects to exchange views with their fellow practitioners while augmenting their professional training.

Last fall, for example, Iowa's practitioners welcomed architects from a five-state region when the Iowa Chapter served as host for the 5-State Central States Region Convention. Titled "Encore", this gathering of Midwestern architects featured a roster of internationally distinguished speakers: Peter Eisenman, Michael Graves, Charles Gwathmey and Robert Stern, along with Diana Agrest and Mario Gondalsonas. In conjunction with the Chapter's 1991 convention, AIA Iowa also sponsored its first "Architecture Week", a state-wide, week-long celebration of the art of architecture.

While the fall convention is by far the most conspicuous of Chapter events, other important activities slated for this year include the annual Winter Meeting in Ames, a summer retreat for members in the Amanas, and a host of additional professional development seminars structured to maintain the high standards of Iowa architects' continuing education.

AIA Iowa also offers programs intended to promote a better understanding of the contributions of architects. A good example is the highly popular LEGO exhibit staged for four of the past five years at the Iowa State Fair, and again in 1992. Fair-goers are invited to create constructions fashioned from their choice of thousands of LEGO bricks in a setting which showcases the best of Iowa's architecture. Due to the success of 1991's "Architecture Week," September of 1992 has been designated "Architecture Month" in Iowa. Other programs include presentation of the American Institute of Architects National Photography competition and participation in "Town Squares", a community development project of the Iowa Department of Economic Development. In addition, the Chapter continues to support architecturally-related programming through its support of the Iowa Architectural Foundation, and for the fourth consecutive year, has granted an educational scholarship to assist students of architecture at Iowa State University. For elementary and secondary students, the Chapter has created "Architecture in the Schools", an innovative learning program which introduces the basic concepts of architecture into the teaching curriculum of area schools.

In the political arena, AIA Iowa actively lobbies

In 1988, the lowa
Architectural Foundation was
established. It was founded
to advance both the practice
of architecture in the State of
lowa and enhance the quality
of its built environment.

state and federal representatives on issues affecting the built environment and the practice of architecture. Chapter initiatives in 1991 included monitoring over 2300 bills and 2200 amendments introduced in the Iowa State Legislature and registering direct positions on 110 bills, many of which dealt with issues of public health, welfare and safety. Other Chapter legislative activities include involvement with the Alliance for Tort Reform, the Rebuild Iowa Coalition, and participation in "Grassroots", the AIA's national leadership and government affairs workshop.

All told, AIA Iowa is an invaluable resource for the architects and the public it serves. Many of the tools of professional practice architects routinely take for granted are immeasurably enhanced by the efforts of the Chapter. It represents the power of a unified profession established to deal with the issues and concerns facing every practicing architect.

The Iowa Architectural Foundation

In 1988, the Iowa Architectural Foundation was established. It was founded to advance both the practice of architecture in the State of Iowa and enhance the quality of its built environment. The objectives of the Foundation are:

- 1. "to seek, investigate, and enable programs and projects for the improvement of the human environment for work, for recreation (and) for living."
- 2. "to solicit, receive and expend gifts, grants and legacies for the education, exhibition, publication, research and preservation of architecture and its allied arts and sciences."
- 3. "to establish recognition and awards for meritorious work."
- 4. "to provide architectural scholarships, establish teaching and research chairs in architecture and assist architectural education and research."
- 5. "to provide for the dissemination of literature and information of beneficial use to architecture..."
- 6. "to assist...any activities which will result in better architecture and in improvement of the architectural profession."

This year in addition to members from the architectural community, two non-architects serve on the Board of Trustees to broaden the base of idea generation. The following individuals are presently serving on its board of trustees: Bradford Bevers, Chairman; John Bloodgood, Vice Chairman; Joseph Borg, Treasurer; Craig Nelson, Secretary; with Thomas Baldwin, Robert Broshar, Ken Bussard, Arnold Levine, Gordon Mills, Robert Segrest and Walter Walsh, Directors.

The Foundation has continued to expand its base

of support. With the help of its many contributors, it has been able to provide strong financial support for the Architecture in the Schools Program, sponsor a major session at the AIA Winter Meeting to serve as a catalyst for increased planning at the local level, and prepare to look beyond the architectural and building trades industry for financial assistance. The Foundation is registered as a non-profit corporation organized for charitable purposes as defined by the Internal Revenue Service Code.

Support, be it financial or personal, is encouraged of all Iowans wishing to improve the quality of their built environment. Inquiries may be made either to any of the Foundation's directors or to AIA Iowa.

Architecture in the Schools

How is our sense of quality in the visual environment developed during our youth? How do our children learn to value their built environment and its impact on society?

AIA Iowa aids this learning process through the innovative Architecture in the Schools (AIS) program. AIS introduces basic concepts of architecture into the teaching curriculum of Iowa schools.

During the summer, three-day teacher workshops are conducted in selected communities around the state. The activities in which the attendees participate include walking tours of each area, but tours of architectural sites, public forums focusing or the architectural history of the community and hands-on learning activities which can be transferred to the classroom.

Teachers meet in architecturally interesting workshop locations to study basic concepts of architecture. They formulate architectural lesson plans tailored to fit their individual curricula, and these lesson plans are shared at the final session.

An outgrowth of the staff development courses i "Architext," a notebook of lesson plans which during the past year, has been doubled in size with over 30 new lesson plans. The detailed lesson plan offer to teachers options in architectural learning in variety of subjects, grade levels, and time frames.

Another new resource developed by AIS durin the past year is "Global Influences on Iowa' Architecture." This slide program wit accompanying audio tape provides a historica background with images of architecture from th classical Greek, Roman and medieval periods to th present. Iowa architecture is featured with example from the origins of the state to the contemporar modern period. The program is narrated by Morga Halgren and is 35 minutes in length but is easil

The 'state' architectural survey is charged with identifying buildings, structures, and districts which best express the range and variety of the built environment of Iowa.

ivided into four parts.

Several other audio-visual resources are available or loan through the AIA. These include: "Buildings peak — The Language of Architecture", "Why Buildings Stand Up", "Places as Art" and more.

The AIS program has flourished through the nergies of Barbara Schmidt, Education Consultant o the Chapter, and while teacher programs and esources are the major impetus of the program, nany other activities also take place under the uspices of AIA. A Career Day is scheduled to oincide with the Chapter's annual convention in etober. Each year, children have participated in ie Chapter's annual Design Awards program since 988, and a myriad of requests for resources and uest speakers for schools are coordinated through

Funding for the program has been achieved by ne successful acquisition of grants from the Iowa rts Council and the National Endowment for the rts, the Iowa Humanities Board and the National ndowment for the Humanities, the Iowa rehitectural Foundation, the American rchitectural Foundation, the Sheet Metal ontractors of Iowa, and through administrative

ipport from AIA Iowa.

For more information about the program, contact ie AIA Iowa office at 512 Walnut Street, Des loines, IA 50309, 515/244-7502.

he State Historical Society of Iowa istoric Preservation Bureau

The State Historical Society of Iowa, Historic reservation Bureau, located in the State Historical uilding, administers the following programs: the ational Register of Historic Places; Architectural, istoric and Archaeological Survey; Grants for reservation Activities; the Review of the Impact of ederal Investment Tax Credits Program and review projects using State financial incentives for proper

he National Register of Historic Places

The National Register is often described as the eystone of the Historic Preservation Bureau eration. Additions to the National Register, with e exception of federally owned properties, are ade through the State Historical Society and istoric Preservation Bureau. The program, at its art, creates and maintains a national list of Iturally significant properties. As a result, the ational Register properties warrant some degree of nsideration when federally-funded projects

threaten them directly or indirectly. The list encompasses every conceivable type of property ranging from individual buildings or archaeological sites to public fountains to large historic districts.

Persons interested in placing a property on the National Register should contact the Bureau to obtain a nomination packet. All properties nonfederally owned may be nominated to the National Register through this office, and, if accepted, they become places listed in the National Register. A separate and more select group of properties with national significance are designated as National Historic Landmarks.

For more information on the National Register, contact: National Register Coordinator Lisa Linhart at (515) 281-4137.

Architectural, Historical and Archaeological

The architectural survey is charged with identifying buildings, structures, and districts which best express the range and variety of the built environment of Iowa. Two types of architectural surveys are conducted through the bureau. Reconnaissance level surveys identify buildings and structures in a particular locality which are 50 years of age or older with potential eligibility for the National Register of Historic Places. Intensive level surveys involve research enabling the surveyor to recommend whether or not a property or district is eligible for listing in the National Register.

For more information on Architectural Survey, contact: Architectural Historian Ralph Christian at (515) 281-8697.

For more information on historical or archaeological surveys, contact: Historian Lowell Soike at (515) 281-3306 or Archaeologist Kathy Gourley at (515) 281-8744.

Grants for Preservation Activities

The Certified Local Government (CLG) Program, through federal funding from the National Park Service, provides Iowans with matching grants for various historic preservation activities. The current grants program assists Iowans to survey and identify outstanding historic, architectural and archaeological sites throughout the state, to nominate sites or districts to the National Register and to prepare public education programs about historic preservation and related activities designed to identify and preserve the history and pre-history of Iowa. Iowa leads the nation in the number of counties and towns that are CLG's.

For more CLG Grants information, contact: Certified Local Government Coordinator Kerry

The program, at its heart, creates and maintains a national list of culturally significant properties. As a result, the National Register properties warrant some degree of consideration when federally-funded projects threaten them directly or indirectly.

McGrath at (515) 281-6826.

Historic Resource Development Program (HRDP) provides state funds for the owners of historic properties with matching funds to acquire or rehabilitate historic buildings and sites. These funds amount to almost 1 million dollars per year from lottery proceeds and can also be used as matching grants to do work in historical museums and library/archive collections.

For more HRDP Grant information, contact Historic Resource Development Coordinator Loren Horton at (515) 242-6194 or (319) 335-3938.

Investment Tax Credits and Proper Rehabilitation Incentives

Certain property owners may qualify for Federal Investment tax credits by rehabilitating Certified Historic Buildings. The Historic Preservation Bureau reviews and approves these applications. A Certified Historic Building is any structure, subject to depreciation as defined by the Internal Revenue Code, that is:

- 1. Listed individually on the National Register of Historic Places, or
- 2. Located in a registered historic district and certified by the Secretary of the Interior as contributing to the historic significance of the district.

Other incentives are available, such as temporary property tax exemptions for the increase in valuation due to the approved "substantial rehabilitation" of historic buildings. The Main Street Linked Investments for Tomorrow Loan Program provides below-market interest loans in CLG's of Iowa Main Street communities for exterior restorations or rehabilitations of historic buildings, up to \$50,000 per commercial property in central business districts.

All these incentive programs are available to projects which are consistent with the historic character of the building and meet the Secretary of the Interior Standards and Guidelines for Rehabilitation. The projects must be reviewed and approved through the Historic Preservation Bureau. The Bureau supplies applicants with technical information about various work areas, including window repair techniques and problems with window replacement, storefront replacement, storm windows, guidelines and brick/stone cleaning and repair. Technical assistance is given by phone, mail or through site inspections.

For more Tax Credits or Rehabilitation incentives information contact: Preservation Architect Judith Ann McClure at (515) 281-8719 or 281-8637.

lowa Architect

The *Iowa Architect* is intended to educate its readers about the importance of architecture and related architectural issues through a review of newly constructed and historically significant projects, and to promote the value of design excellence in all areas of our public and private environment. It is also a resource for noteworthy events and achievements in the arts, literature, and product design.

The *Iowa Architect* is published four times a year by AIA Iowa and is supported by a combination of advertising revenues, subscription fees and Chapter contributions. Its editorial policy, content, graphic design and production are directed by a volunteer board of editors comprised of statewide members of AIA Iowa.

The editorial staff determines projects and events to be covered, solicits contributions by free-lance Iowa writers, and assembles photographic and graphic support materials. Each issue is focused around a central idea or issue such as historic preservation, waterfront development, residential design, educational facilities, urban design, etc.

Since 1980, the circulation has been expanded to 5,500 with a concentration in an eight state area including Iowa, Missouri, Nebraska, Kansas, Oklahoma, Wisconsin, Minnesota and Illinois. By subscription, the magazine currently is mailed to over 35 states.

In support of its educational goals, the *Iowa* Architect is distributed without cost to school and university libraries in the state of Iowa. It also provides free subscriptions to public officials at the local and state levels who routinely make decisions regarding the built environment in Iowa.

While the main focus is on Iowa architecture and design issues important to Iowa, the magazine has consistently worked to broaden the scope of its interests and coverage. This has included the development of a yearly review of midwesterr architecture and an expansion of circulation throughout the central states region. It has also resulted in features that explore and review performances, art exhibitions, product design, and interior and graphic design. Since 1987 the magazine has commissioned fictional writing pieces from Iowa writers and accompanied them with specially commissioned original art work by Iowa artists.

The following themes are planned for upcoming issues of the *Iowa Architect*.

Summer 1992 — Small Scale/High Design Fall 1992 — Building for Education Winter 1992 — Design Awards

The lowa Architect is intended to educate its readers about the importance of architecture and related architectural issues through a review of newly constructed and historically significant projects.

New ways to reduce energy costs... now and in the future

Design buildings and systems for maximum energy efficiency, and your clients will save on energy costs well into the future. But we also realize you're concerned about the initial cost.

That's where Power Optionssm come in. These innovative programs offer cash rebates to help offset the cost of new, energy-efficient equipment. And that helps us reduce summer peak demand.

Rebates are available for new heating, air conditioning, or lighting equipment that meets program guidelines. There are programs for both new and existing construction—and the reduction in costs can be significant.

Power Options make it easier to save on energy costs...both now and in the future. To learn more, call Iowa Power at 515-281-2468.

Smart service...Bright ideas.®
