“Manhattan, with its many granite buildings and curtain walls of reflective glass, is quite gray. With brick, we could guarantee an incredibly articulated, world-class design at the cost of plain stone. The bonus of brick color and patterning was essentially free.”
—Malcolm Roberts
Cesar Pelli & Associates

Sioux City Brick's Grand Canyon was the material of choice for New York City's Carnegie Hall Tower, a soaring new landmark with strong ties to tradition.

Brick allowed the architects to forge a powerful link between new and old buildings, while introducing dramatic color, patterning and articulation.

Iowa's oldest and largest brick company, providing the finest quality materials for award-winning projects.

The graceful arcs of new Andersen® Arch Windows can add an unexpected element of elegance to your clients’ homes.

The arches are in perfect proportion to the windows’ sizes. And the windows come in eight widths and 11 heights.

Andersen Arch Windows also offer the practicality of Perma-Shield® exteriors, a weatherproofing system that all but eliminates window upkeep. And their energy efficient High-Performance or High-Performance Sun Glass is standard.

To learn more about new Andersen® Arch Windows, call your Andersen distributor, listed below.

Glenna Goodacre is not shy about expressing herself. Her larger-than-life bronzes are acclaimed for the way they capture the poignancy of everyday life.

In 1991, she received the most prestigious commission available to sculptors at that time: the Vietnam Women's Memorial in Washington D.C. Following its official dedication on November 11, 1993, Glenna began work on another masterpiece: the new home she was building in Santa Fe. Glenna Goodacre could have had any windows she wanted. She chose Marvin.

Marketplatz Mall Shopped Around And Chose Wells.

Single Source. Wells gives you a total concrete system by designing, fabricating, and installing your building. Quick Installation. Concrete components can be precast during foundation preparation and assembled directly from the delivery truck. Your on-site construction time and your costs can be dramatically reduced. Multiple Finishes. Your options of patterns, textures, and colors are nearly limitless. Exterior finishes may be designed to achieve a specific color or effect. Wells' Advantages. Over thirty years of experience, along with computer-aided drafting, an in-house engineering staff, and a team of highly trained craftsmen, ensure you a quality structure. Rely on Wells for a building that's durable, energy efficient, fire-resistant, and flexible for expansion.
Transform Your Client's Home Into A Showplace!

Satisfy your desire for elegance.

PC GlassBlock® products offer the radiance and beauty of glass...the strength and security of thick, break-resistant glass block. This beautiful, versatile building material inspires imaginative designs that can transform your home into an elegant showplace! And it's available in a choice of patterns to provide the amount of light transmission and privacy you desire.

Enhance and enliven your entryway, kitchen, bath, bedroom, gameroom, stairwell...PC GlassBlock® windows, walls and partitions add dazzle to any part of your home...both inside and outside!

Ask us how American-made PC GlassBlock® can turn your home into a showplace.

FROM MINNESOTA TO NEW YORK...

OUR CLIENTS THINK WE'RE TOPS!

One reason that more architects and building owners specify Fabcon panels is that they recognize the benefits don't end with speedy construction and long term savings. Fabcon's precast prestressed panels allow greater freedom of design.

A wide range of aggregates, extensive choice of patterns and decorative banding enable you to match a building to its character. Tops International Super Center in Niagara Falls, New York, is one example of how our panels in combination with other materials create a striking building.

Fabcon custom manufactures each order. All product is installed by experienced Fabcon crews. From Minnesota to New York, we get the job done, on time and on budget, even in winter weather.

"The service we received from Fabcon was outstanding. We saved time, money, and it looks great."

Full Capability to Produce Quality Precast/Prestressed Concrete Products.
"We imagine the architectural achievements of the future... and if the future spaces we build can elevate the quality of life, if they can inspire, our mission will have been accomplished."

Project: Des Moines Area Community College Polytechnic, Newton, Iowa
Architect: RDG Bussard Dikis
STO Distributor: Jack E. Beavers and Associates, Inc.
EIFS Contractor: Allied Construction Services

STO’s reputation as the leader in exterior research and rigorous testing allow for the most effective building construction, protection, beauty and endurance. The result of our research and development is a continuous advancement in product design and function.

Project: 3801 Grand Board and Care, Des Moines, Iowa
Architect: Frevert-Ramsey-Kobes Architects-Engineers
STO Distributor: Jack E. Beavers and Associates, Inc.
EIFS Contractor: Olympic Wall Systems

With 3801 Grand Board and Care, STO was able to conform to rigid H.U.D. specifications and still achieve the owner’s and architect’s desired design and appearance. The flexibility and features of STO Industries Exterior Wall Systems, such as the marble aggregate and soft clean colors, has helped this new structure blend in with surroundings that demand character and charm for the future.

Jack E. Beavers & Associates, Inc., is proud to be associated with STO Industries. With 14 years of continuous service to and affiliation with the EIFS industry, with hundreds of successful installations, and with a continuing education program for our applicators, you are assured of a quality application and professional assistance through project completion. Contact Jack E. Beavers & Associates for all your exterior wall system needs.
The public perception of the architect's leadership role is changing. The mythical image of the heroic architect, the singular leader, is no longer valid. The technical requirements of building have become so varied that no one person can control all aspects of the design and building process. Instead, the architect is an essential component of a leadership team, comprised of design and construction professionals, who join together in a collaborative effort to plan, design and construct our buildings and cities. The architect provides leadership in the organization of this collegial effort.

AIA Iowa has been a leader in fostering collaboration in the building process. One approach has been through partnering. Last year, AIA Iowa published a manual on partnering entitled Partnering: A Concept for Success. Partnering is a team-building process for construction involving design professionals, contractors, owners and material suppliers. This year, we will continue the process by holding partnering workshops with allied professional and construction groups. This collaborative process promises to be an effective vehicle for sharing information with our colleagues; we can learn much from each other.

The American Institute of Architects provides a wealth of resources and programs to better inform the design profession and the public we serve. This Directory is filled with useful information, from articles on historic preservation, accessibility and ethics, to the services an architect provides, how to select an architect, and a roster of AIA Iowa members and firms. The American Institute of Architects, Iowa Chapter, is pleased to present this 1995 AIA Iowa Directory. We trust you will find the information beneficial.

Sincerely,

Michael Broshar, AIA

ACKNOWLEDGMENTS
Iowa Architect magazine would like to thank the following individuals for their contributions to the 1995 AIA Iowa Directory: Sherwood Adams, AIA; Jason Alread, AIA; Mike Broshar, AIA; Elizabeth DeCrescenzo; Michelle Kaufmann; Stephen Knozel; Paul Mankins, AIA; Judith McClure, AIA; Barb Mitchell; Arvid Osterberg; Gregory Palermo, FAIA; Kelly Roberson; Barb Schmidt; Marcy Schulte, AIA; Suzanne Schwengels; Kate Schwennsen, AIA; Robert Segrest, AIA; Lon Sinclair, AIA; Rob Smith, AIA; Steve Strassburg, AIA; K. Marie Thayer; Scott Tillman; Rob Whitehead; and Patricia Zingsheim, AIA.
The architect is, by both training and temperament, a generalist. In an age noted for its ever-increasing and all-consuming passion for specialization, the architect must remain one who steadfastly perceives "the whole picture."

The art of building can rarely be coerced into a singular train of thought. Architecture is, above all else, a richly interwoven tapestry of aims, interests and ideals. A building may not be only technological, or artistic, or functional, or humane. It must be each and all of these things. The architect alone is uniquely qualified to perform this complex and multifaceted task.

There persists a romantic notion about the work of the architect, that the design of a building results from some flash of inspiration, hastily scratched on the back of an envelope or napkin, which is then miraculously transformed into physical form. The true reality of architecture is usually less poetic. For most architects, architecture is a patient process of examination, analysis and evaluation. It is an act they can best describe only as the "process of design."

Each building begins as a set of problems to be solved. Though the problems presented to architects are varied, they all share common characteristics. A client has needs — a space for a particular use, an environment requiring repair, an expansion of what is or the re-creation of what was. Moreover, the needs of a client rarely are limited simply to the physical characteristics of the anticipated building. Each client has scheduling limitations and the constraints of an overriding budget. These needs, constraints and desires form the seed from which architecture ultimately blossoms.

Buildings do not, however, exist in a vacuum. Any project, regardless of its scope, has a significant physical and economic impact on the environment in which it is placed. The architect is compelled to consider not only the narrowly defined desires of the client, but the interests of the public at large. In the long run, a building suited to its context serves the best interests of both its owner and its neighbors.

Regardless of the specific demands of client and context, each building must respond, at its most basic level, to fundamental characteristics of nature. Gravity must be resisted, topography accommodated, climates modified. Above all else, the architect must be keenly aware of the consequences of time. Buildings do not have a momentary existence. They are objects we experience repeatedly; they will be with us well into the future.

These, then, are the "problems" of architecture and the issues with which architects must contend. The architect understands full well that the success of any building depends on striking an appropriate balance between each of these requisite demands.

The resolution of the problems of architecture is embodied by the architect's "process of design." For most, the process begins with a statement of "program." The program is a written description of the client's needs, goals and aspirations for a given project. A program can be a simple list defining space requirements, or it may be a highly detailed treatise, quantifying very specific ambitions. In either instance, the program becomes the basis upon which the value of an architect's performance is judged.

A program, however, may not be judged in isolation. It always must be considered with respect to the intended location of a project, the building's site. The architect will begin by analyzing the "fit" between a prospective program and the context in which it is placed. The architect must ask very specific questions: What are the physical characteristics of this property? What are the legally binding restraints on the site in question? Simply put, will the intended program "fit"?

From here, the architect prepares a series of preliminary proposals. These are, in reality, sketches that suggest a variety of options and opportunities inherent in a client's program and siting intentions. Architects typically describe this preliminary activity as "schematic design." It is characterized by a free-flowing exchange of concepts and ideals between client and designer that should clarify the fundamental objectives of the project at hand. Alternative proposals are reviewed in consultation with the client and, ultimately, a preferred strategy for continued development is selected.

In the "design development" phase, the schematic proposal is examined in considerable detail. At this point, the materials and methods of construction are selected, planning layouts are refined and estimates of construction costs are projected with increasing reliability. In developing the design, the architect will collaborate with specialized consultants: engineers, landscape architects, graphic designers and others needed to contribute their expertise to the evolving design.

Most important, the image of the building as a physical work of architecture becomes evident.

Throughout this phase of development, the architect must continually reassess the initial objectives of the project: Does the developed proposal conform to the initial requirements of the program? Are the interests of the client preserved? Does this proposed building "speak" in some manner to the community into which it is placed? It
is this constant reevaluation of constraints and motivations that distinguishes the responsible work of the architect.

Construction documents are prepared only after both architect and client agree that the objectives of the program have been fulfilled by the developed design. In this phase, detailed drawings are prepared, allowing a contractor to establish fixed building costs and initiate construction. The completed documents become, in effect, a legal contract, compelling the finished building to be constructed in accordance with the client's programmatic, economic and aesthetic intentions.

During construction, the architect continues to evaluate the ongoing evolution of the design process. Through periodic site visits and consultation with the client, the architect assumes an advisory role, noting the general progress of the work and its compliance with the overall intentions of the design concept.

Most architects consider the process of design complete only after the client has moved in and become accustomed to the new or renovated surroundings. In this "post-evaluative" phase of design, the architect again asks the same questions that have characterized each preceding step in the process: What were the client's needs? Does the completed building meet those expectations? Is this, in fact, a "balanced" work of architecture?

To be fair, only a handful of buildings ever fulfill every expectation demanded of them. Such perfection may be realized only under the best of circumstances. Still, the process of design, as employed by the architect, provides the broadest, most reasonable means of achieving a successful, satisfying building that equitably represents the best interests of its constituents.

Professional Ethics

By mutual consent, members of The American Institute of Architects conform to a Code of Ethics and Professional Conduct. Quoting The Architect’s Handbook of Professional Practice, an architect is committed to the "highest standards of professionalism, integrity and competence." The Code of Ethics provides members with reasonable guidelines for fulfilling their obligations to the public, to clients and users, to the building industry, to the profession and to their professional colleagues.

The AIA's Code of Ethics and Professional Conduct is based on five fundamental canons, each of which represents broad principles of conduct.

CANON I
General Obligations

Members should maintain and advance their knowledge of the art and science of architecture, respect the body of architectural accomplishment and contribute to its growth. Learned and uncompromised professional judgment should take precedence over any other motive in the pursuit of the art and science of architecture.

CANON II
Obligations to the Public

Members should embrace the spirit and letter of the law governing their professional affairs and should thoughtfully consider the social and environmental impact of their professional activities.

CANON III
Obligations to the Client

Members should serve their clients competently and in a professional manner, and should exercise unprejudiced and unbiased judgment when performing all professional services.

CANON IV
Obligations to the Profession

Members should uphold the integrity and dignity of the profession.

CANON V
Obligations to Colleagues

Members should respect the rights and acknowledge the professional aspirations and contributions of their colleagues.

The code, in its entirety, covers a wide range of pertinent issues confronting the practicing architect. The five canons are the first tier of three statements in the code. Of the remaining two, "Ethical Standards" defines more specific goals to which members of The American Institute of Architects should aspire in the areas of professional performance. The third component consists of "Rules of Conduct," violations of which may become grounds for disciplinary action by the Institute. A copy of The American Institute of Architect's Code of Ethics and Professional Conduct may be obtained from the AIA Iowa office in Des Moines.

The Architectural Practice Act

The Architectural Practice Act, Chapter 544A of the Iowa Code, defines and regulates the practice of architecture in the state of Iowa. It is not the sort of document one would casually browse for entertainment value.
Architects and the day-to-day practice of architecture in Iowa are regulated by the Iowa Board of Architectural Examiners, part of the Professional Licensing and Regulation Division of the state of Iowa. The board is comprised of five licensed architects (active for “not less than five years...”) and two members representing the general public who are not required to have any formal training in architecture. The members are appointed by the Governor for three-year terms and are confirmed by the Iowa Senate.

Every year the board administers two examinations (in June and December), which are part of a national registration system for architects. Knowledge of site planning, structure, environmental systems, construction methods and details and other elements, are tested during a four-day exam. Design competence is tested independently from other elements of the exam in an intensive, twelve-hour session. Persons who pass all portions of the test may apply to become registered as “architects.” Further, Iowa is only one of two states that requires licensed architects to complete a course of continuing education in order to remain licensed. The board reviews the education programs submitted for renewal by each architect on a biannual basis. The board does not preapprove courses but provides guidelines in its Administrative Rules 193B-Chapter 3.

While prohibited from excluding an individual seeking registration on the basis of age, citizenship, sex, race, religion, marital status or national origin, the board is instructed to consider that an applicant be of “good moral character, trustworthy, honest and adherent to professional standards of conduct.” When warranted by complaint or inaction of the architect, the board reviews the architect's activities and may revoke or suspend the license of any architect found guilty of misconduct. Further, the board disciplines violators of The Architectural Practice Act. It must authorize a corporation, partnership or
The Department of Architecture at Iowa State University is a comprehensive center for teaching, research and public service in architecture.

Architecture at Iowa State University

The Department of Architecture at Iowa State University is a comprehensive center for teaching, research and public service in architecture. As an element of the College of Design, together with the Departments of Landscape Architecture, Art and Design and City and Regional Planning, it forms a unique and innovative interdisciplinary environment. Two professional degrees, the Bachelor of Architecture and the Master of Architecture, are offered, as well as a postprofessional graduate degree in advanced studies in architectural theory.

Though both programs are grounded in the requisites of a professional education, they also are distinctly different. The five-year undergraduate program positions architectural design as an armature within a broad-based field of general studies. The graduate program is research-based and allows the student to explore special areas of interest in addition to the core curriculum in architectural design. Student work is supported by an array of research in architectural theory, computer technology, health facilities and materials technology.

At all levels, the department is committed to the study of architecture as a cultural discipline in which issues of practice, the multiplicity of social formulations in which buildings exist and environmental effect are enfolded with the subject matter of building design — construction, space, material, form and use. The complexity of architectural production is mirrored in an intentionally diverse student body and faculty.

A full range of teaching and research facilities, including Apple and IBM-PC laboratories and the Architecture Technology Laboratory (ATL) (containing computers, environmental simulation instruments and the Wood Shop, a fully equipped fabrication facility), are available to students. A photographic darkroom and a lighting studio are located in the college.

Other facilities include a satellite library, audiovisual collection and the College Exhibition Gallery.

The university offers financial assistance in the form of grants, scholarships, loans and part-time employment. Scholarship recipients are selected on the basis of academic merit or other demonstrated talent. The department also awards a number of scholarships on the basis of academic achievement. Graduate students are eligible for either teaching or research assistantships. Positions are awarded on the basis of merit and departmental needs, and are currently given to the majority of entering students.

UNDERGRADUATE PROGRAM

Philosophy Statement

The undergraduate curriculum is both an intense professional course of study as well as a broadly conceived experience in general education. The design studio is the armature of the program; through it, students explore the possibilities of design as a synthesizing practice. In the most general sense, the work of the studio is an assemblage of the elements of experience and intention, of the subject matter of building design, and of the engendering effects of a diverse and pluralistic cultural field. In this assemblage, the curriculum mirrors contemporary practice as it simultaneously constructs the broad historical range of architecture as both discipline and practice.

Program Description

The undergraduate curriculum is composed of a pre-professional program (two semesters) followed by a professional program (four years). At the end of the pre-professional year, applicants are reviewed for admission into the professional program. Admission is currently limited to 48 students.

The professional curriculum is structured by a progressive and sequential involvement in the elements of the field of architecture: design and technology (construction and materials, structure, environmental systems); history, theory and criticism; human behavior; and a design communication (drawing, modeling, computer-generated representation). Each element is composed of a set of interactive courses which draw on the other levels in the student’s learning experiences.

From the beginning, the student is involved in the construction, representation and simulation of architecture; extensive use is made not only of the design studio but also of the wood shop, the various computer laboratories and the ATL. All students are expected to be computer literate by the completion of their course of study.

A series of courses in architectural history and in

sole proprietorship to practice architecture as a business entity; generally, this requires that any organization doing business as an architectural firm is actively controlled by registered architects.

Thus, the Iowa Board of Architectural Examiners’ goal is to assure the public that those who practice architecture as defined in The Architectural Practice Act or who call themselves architects actually have received the professional education, gained the practical experience, passed the required examination and continue their education and licensure in such a way that justifies the title of “architect.”

For further information regarding the work of the Iowa Board of Architectural Examiners, call 515/281-5596.
the history of theory in architecture provide a broad, substantial basis for the consideration of the student's own work. Similarly, courses in design methods and human behavior elucidate the various ways in which buildings are produced and used.

The curriculum concludes with a semester-long Diploma Project, in which each student explores the design possibilities of a particular area of interest.

GRADUATE PROGRAM

Philosophy Statement

Graduate study in architecture requires the mature student to combine the requisites of a professional education with the opportunities of focused research and scholarship. As in the undergraduate program, the design studio is the organizing element of the curriculum, but additionally, the graduate studio also is the place of experimentation and exploration. Students investigate the problematic relations between theory and practice, the applicability of new technologies and the changing reciprocities of architecture and culture. The student's work progresses toward the completion of a thesis, which is dedicated to a specific area of inquiry.

Program Description

The graduate program offers opportunities for both professional and post-professional study leading to the Master of Architecture degree. In each of its three options the program emphasizes the relationship between professional education and architectural research, culminating in a thesis as demonstration of both professional competence and a deep understanding of the discipline of architecture.

The "Three and One-Half Year Option" is designed for individuals with an undergraduate degree in a subject other than architecture. Students explore a full range of architectural subjects through seminars, an intensive sequence of design studios and thesis. The "Two Year Option" is for individuals with a pre-professional undergraduate major in architecture. Following the completion of the requisite professional courses, the student is expected to develop an individualized course of study leading to the thesis. The "One Year Option" is a post-professional course of study leading to the Master of Architecture and is designed for individuals with an accredited professional degree in architecture (BArch or MArch). The post-professional option affords the opportunity for advanced study in architectural theory and design culminating in the thesis.

For more information, contact the Department of Architecture, Iowa State University, Ames, Iowa 50011, 515/294-4717.

The Intern Development Program

Internship has long been a fundamental component of architectural education. It provides a logical transition from academic training to professional registration. The internship period begins after graduation and lasts for a minimum of three years, until the intern architect successfully passes the architect's registration exam.

The Intern Development Program (IDP) was created in the mid-1970s by the AIA and the National Council of Architectural Registration Boards (NCARB). Its goal is the establishment of uniform standards designed to aid intern architects in gaining comprehensive experience that will prepare them for architectural practice. The IDP has been mandatory in Iowa since 1990.

Prior to the IDP, there were few consistent guidelines for the training of an intern architect. Merely working in an architectural office did not necessarily guarantee a well-rounded exposure to the diverse aspects of professional practice. The Intern Development Program provides an effective framework for structuring the educational experience of the architect-in-training.

IDP training encourages experience in four basic categories: design and construction documents, construction administration, management and related activities. An intern architect may obtain credited exposure in each category, either by direct participation, observation, or simulation through supplementary education. Credit for IDP activities is measured in "value units," each equivalent to eight hours of exposure. Seven hundred value units are required to satisfy the requirements of the training standard. Of this total, two-thirds represents training minimums; the balance may be acquired in any approved area of exposure. The intern architect's progress in the program is monitored by a professional sponsor, a registered architect in the intern architect's place of employment. The sponsor provides opportunities for diversified training and assesses the acceptability of the work and experience gained.

In addition, a professional advisor, usually an architect outside the intern architect's firm, is assigned to discuss each individual's development and offer guidance toward the goal of registration. Together, intern architect, sponsor and advisor define the path of professional experience necessary to satisfy the state registration board's internship requirements.

Intern architects participating in the IDP are required to keep accurate records of their involvement in the program. This documentation of experience must be both certified by the intern architect's employer and acknowledged by the professional advisor. The record then can be permanently registered by establish-
ing an IDP Council Record through the NCARB.
For more information on the Intern Development Program in the state of Iowa, contact AIA Iowa at 515/244-7502.

Selecting an Architect

An architect may be chosen for many of the same reasons one might use to select any other responsible professional: commitment, experience and expertise. Such criteria do not, however, recognize the unique contribution an architect makes in the creation of a work of architecture.

A more reasonable approach might first begin with a clear understanding of the role an architect will play in fashioning the building under consideration. The process of design is a long and demanding endeavor. A successful project is most often the consequence of an open and engaging collaboration between designer and client. Accordingly, it is important that the client select an architect with whom they feel both compatible and comfortable. An architect who shares either the sensibilities or the eccentricities of the client will invariably be better suited to realize the client’s aims than one who does not. In either instance, the critical issue remains the quality of communication between client and architect. It is a responsibility shared equally by both parties and should be a preeminent concern in the selection of an architect.

Beyond mere compatibility, it also is worthwhile to consider the varied ways in which architects practice their profession. An architectural firm may be composed of only a single practitioner, as a partnership among several associated architects, or as a full-fledged corporation. Firms, in addition, come in a variety of sizes. Size, in and of itself, however, may not be nearly as important a consideration as a firm’s productive capabilities. A small office, for example, may choose to concentrate on a limited number of substantially scaled projects, while the larger firm might divide its resources among many more modestly sized buildings. Some architectural firms, in addition, offer engineering services on an “in-house” basis. Others prefer to draw upon the judgment of independent consultants appropriate to the needs of each project.

Regardless of the specific means, each office chooses those methods of organization that best reflect its own particular combination of skills, expertise, interests and values. The prospective client should consider not only the individual elements of a firm’s composition, but their collective impact on a firm’s ability to perform the work required.

Many aspects of a firm’s character may be judged from the promotional literature routinely prepared by most architects. Such portfolios or brochures may be either slick and corporate, or humble and unassuming. What is important is not so much the style of the presentation as its content. A typical portfolio should, for example, describe an architect’s philosophy of design, the firm’s method of work and, where applicable, areas of specialization. Examples of representative projects should be included, as well as a listing of references.

A brochure, however, can only suggest the general characteristics of any architect’s practice. A more comprehensive and reliable understanding of the architect’s capabilities is best determined in the context of a personal interview. An interview gives the client the opportunity to focus on the specific goals of the client’s project. It is, as well, a good time to gauge the temperament and personality of the architect under consideration. Clients should begin to sense the kind of rapport they might expect of this individual in an ongoing professional relationship.

Clients should be prepared to ask detailed questions of the architect: How are your abilities best suited to the needs of my project? What methods will you use to monitor costs and schedule? What approach will you take in resolving my particular problems? Which members of your firm will handle this job? These are important questions and the architect will strive to answer them in a fair and objective manner. Most architects, in fact, relish the opportunity to describe their work at this level of detail.

Impressions drawn from an interview may be reinforced by consulting with the present and former clients of an architect. Their experiences should offer a reassuring confirmation of attitudes portrayed by the architect during the interviewing process.

Finally, and perhaps most simply, a prospective client should merely look around. The work of an architect is, by its very nature, profoundly conspicuous. A thoughtful, well-conceived building is always an architect’s best form of reference.

Qualifications Based Selection

When a building project is initiated by an agency representing the public, the selection of a qualified design professional becomes of paramount importance. The architect’s work in the public realm has an overwhelming impact on the ultimate success of the undertaking. Critical issues of feasibility, fiscal accountability, design, functional efficiency and imagery all hinge upon the prudent, professional judgment of the selected architectural designer. Accordingly, the means of selecting reliable, professionally competent design professionals for service in the public interest is of considerable importance.
Qualifications Based Selection (QBS) is an objective, flexible procedure for obtaining architectural, engineering, land surveying, and other related professional design services on public projects. It assists an owner in the selection process if the owner does not already have a professional design consultant. The QBS process is helpful to frequent users of design services, as well as one-time users with little or no past practical experience in working with design professionals. QBS provides owners with a selection process that is straightforward and easy to implement, is objective and fair, can be well documented, and is open to public scrutiny.

The QBS process recognizes that design professionals play a critical role in the public building process. The quality of the services provided by the architect is the single most important factor in determining the overall construction and life-cycle costs of a building.

As the first steps in the construction process, pre-design and design dictate everything that follows: the size and layout of the proposed facility, its aesthetic character and relationship to its surroundings, the type of construction materials utilized and the capacity of its mechanical and electrical systems, in addition to many other vital factors.

It is unfortunate, but true, that even the most competent builder using the finest materials cannot overcome the effects of a poor or ill-conceived design. The contribution of knowledgeable design services in such circumstances can hardly be underestimated.

Moreover, professional design services represent only a small percentage of the construction budget of any building, and an even smaller proportion of its life-cycle cost. Accordingly, it is in the best interest of the taxpayer to ensure only the most qualified individuals and firms are selected for the design of public facilities.

How Qualifications Based Selection Works

Every construction project is unique, with its own technical challenges. Yet at the onset of most projects, the owner often may not fully grasp the complexities of the project, nor recognize the variety of design services required to transform the generalized concept into reality. A knowledgeable and thoroughly qualified design professional can expertly shepherd an owner through the intricacies of schematic and developmental design.

Later in the construction process, the architect serves as the agent of the owner, representing the owner’s interests in day-to-day dealings with governmental agencies, contractors, suppliers, equipment manufacturers, and others providing regulatory reviews or services to the project. For this reason, it is crucial that the owner and the architect share a professional relationship characterized by trust, respect and effective communication.

Qualifications Based Selection fosters this type of relationship by bringing the owner and design professional together as a team, enabling them to define the project’s scope in detail and agree upon the services required to make the project a reality. It is no wonder that QBS is the most widely endorsed method for selecting professional design consultants.

Since the early 1970s, all agencies of the federal government have been required to use the QBS procedure for selecting design professionals. This qualifications-based approach to procuring architectural and engineering services on publicly funded projects was codified into law (P.O. 92-582) in 1972 by the United States Congress.

The law requires architects and engineers to be selected for all federal government projects on the basis of qualifications, subject to fair and reasonable compensation. Nearly 40 states now mandate the use of a similar procedure.

The QBS process usually involves the following steps:

1. The owner prepares a description of the project to be built or problem to be solved, referred to as a preliminary “scope of services.”
2. The owner invites design professionals to submit statements of qualifications for the project at hand.
3. Statements of qualifications are evaluated and several individuals or firms are selected, or “short-listed” in the standard nomenclature, for further consideration.
4. The individuals or firms then are interviewed and ranked according to an evaluative scoring system.
5. On the basis of these evaluations, the top-ranked professional or firm is notified of their selection for the project and opens discussions with the owner, leading to agreement on a final scope of services and culminating in a contract between the two parties.

A detailed manual, QBS: A Guide for Selecting an Architect or Engineer for Public Owners, describing procedures applicable to agencies wishing to implement a QBS process, is available through the offices of AIA Iowa in Des Moines.
Under “Recent Projects,” an “N” behind the project name indicates it was the recipient of a national award, an “S” indicates a state award, and an “R” indicates a regional award.

Firm Description
Lynch & Quick Associates formed as a corporation in 1995 after a strong association for 15 years, and is a successor to firms started by Mr. Lynch in 1956. Collective expertise of the principals provides vast experience in nearly all architectural endeavors. Many clients have returned for additional service over the years, resulting from our concern for their interests as well as our technical expertise and professionalism. We employ consultants to supplement our staff in a variety of skills, making us able and competent to work on nearly any size project. Our recent experience and projects include automotive, office, retail, commercial, building renovations, alterations and additions to a series of supermarkets, historic preservation and single- and multi-family residential. We make every effort to serve our clients with timely, cost-effective, professional service.

SERVICE TO THE PUBLIC AND PROFESSION

AIA Iowa

AIA Iowa Mission Statement

Improve the built environment through service to members, the profession and the public.

The American Institute of Architects, Iowa Chapter (AIA Iowa), has a proud tradition of service and continues to receive 100 percent performance ratings from national AIA for service to its members. In responding to its mission statement, to "improve the built environment through service to members, the profession and the public," the chapter, and its 16 standing committees, remains an invaluable resource for Iowa's practicing architects and the public they serve.

In 1904, eight architects in Des Moines elected to form a subgroup of The American Institute of Architects. Today over 565 individuals are members of AIA Iowa. Located across the state, the membership currently divides itself into five sections: Central Iowa, Cedar Rapids-Iowa City, Eastern Iowa, Northwest Iowa and Southwest Iowa. Individual membership falls into one of four categories: Member (a registered architect), Associate Member (one who does not hold a license to practice but holds a professional degree in architecture or is employed by an architect in a technical capacity), Professional Affiliate Member (one who works in a related design profession) or Allied Member (those employed by firms in the construction industry). Architectural firms also may elect to become a Firm Member of the chapter; AIA Iowa currently lists over 85 firms.

While a portion of the chapter's work is purely administrative (maintaining membership rosters, processing applications and accounting for the organization's funds), a more important responsibility is its sponsorship of a variety of programs and activities that enhance the architect's professional practice. In addition, the chapter is the key link between its members and national AIA, as well as other related industry organizations.

Addressing the chapter goal to "build public awareness of the value of design," the chapter is, first, an unparalleled source of information about architects and architecture. It publishes Iowa Architect magazine, a quarterly review of Midwestern design; the Addenda, a regular membership newsletter; and this annual Directory. In addition, the Des Moines Architects Council has produced Architecture at Hand, an 84-page architectural guidebook to the capital city. The chapter has additionally co-authored QBS: A Guide for Selecting an Architect or Engineer for Public Owners and Partnering: A Concept for Success.

The chapter is furthermore a clearinghouse for a variety of other publications about architecture. The AIA Iowa Bookstore, located in the chapter office in Des Moines, carries over 250 titles ready for purchase and can order virtually any other architectural text currently in print. All industry-standard AIA Construction Documents, consisting of over 125 different contracts and forms, are available, as well as Uniform Code Books and a wide array of other AIA resource literature. Three such publications, A Beginner's Guide to Architectural Services, You and Your Architect and Building Relationships, are effective brochures offering the general public sound guidance in utilizing the services of an architect.

During the year, the chapter conducts many programs designed to advance the practice of architecture throughout the state of Iowa. These events are excellent opportunities for architects to exchange views with fellow practitioners while augmenting their professional training, and also to respond to a second chapter goal, "promote learning about the art and science of architecture."

Last fall, for example, Iowa's practitioners attended the 1994 AIA Iowa Annual Convention, featuring a roster of distinguished speakers and entitled Art/Life, to discuss theory versus practice. In conjunction with the annual convention, the original "Architecture Week," a series of public events celebrating the contributions of architecture to Iowa's built environment, has grown to "Architecture Month," to be celebrated across the state in September of 1995.

While the fall convention is by far the most conspicuous of chapter events, other important activities slated for 1995 include the annual Spring Meeting, held this year in Des Moines. The Spring Meeting is the last in a four-year series dedicated to encouraging Iowa's community leaders to think about design as a catalyst for revitalization of their towns. A 1995 summer event for members is scheduled in the Amanas and will include a continuing education workshop. A host of additional professional development seminars are structured throughout the year to maintain the high standards of Iowa architects' continuing education. National AIA recently has adopted a new Continuing Education System. By 1996 all AIA members must acquire continuing education credits to maintain membership in the AIA, and AIA Iowa participated in the pilot program to help design the system.

AIA Iowa also offers programs intended to promote a better understanding of the contributions of architects. Two examples are the highly popular AIA/LEGO, Inc., exhibit staged for six of the past
eight years at the Iowa State Fair, and Box City, a children's activity designed to teach about site planning, design, scale and construction. Two traveling photographic displays also are available and move around the state, illustrating contemporary projects of AIA Iowa member firms. A Speakers' Bureau has been developed to provide presentations in a number of industry-related issues. In addition, the chapter continues to encourage programming through its support of the Iowa Architectural Foundation and has, for the seventh consecutive year, granted an educational scholarship to assist students of architecture at Iowa State University. For elementary and secondary students, the chapter created Architecture in the Schools, an innovative learning program which introduces the basic concepts of architecture into the teaching curriculum of the state's schools.

In the political arena, AIA Iowa actively lobbies state and federal representatives on issues affecting the built environment and the practice of architecture, responding to a third mission statement goal, "promote a better climate in which to practice." Chapter initiatives in 1994 included monitoring over 750 bills, 2,100 amendments and 500 study bills introduced in the Iowa State Legislature, and registering direct positions on many which dealt with issues of public health, welfare and safety. Chapter legislative activities include involvement with the Alliance for Tort Reform, the Rebuild Iowa Coalition, and participation in Grassroots, the AIA's national leadership and government affairs workshop. Additionally, AIA Iowa, in conjunction with the Iowa Engineering Society, has developed a workbook, A Guide for Selecting an Architect for Public Owners, to aid public entities in the selection of design professionals.

All told, AIA Iowa is an invaluable resource for the profession and the public it serves. Many of the tools of professional practice architects routinely take for granted are immeasurably enhanced by the efforts of the chapter. It represents the power of a unified profession established to deal with the issues and concerns facing every practicing architect.

The Iowa Architectural Foundation
The Iowa Architectural Foundation (IAF) invites Iowa's citizens, communities and business leaders to invest in a vision that recognizes the role of architecture in enhancing the quality of life in our state. Architecture is a public art which touches all of us, all the time. It helps determine the quality of our lives. It defines where and how we work, play, worship, heal and learn; it offers home and shelter. As a public art, architecture demands public understanding and public participation. To make better architecture and a better world, architects, public officials, private enterprise, and people from all walks of life must unite in a partnership of excellence committed to creating quality environments that strengthen communities and serve public needs.

It is in that spirit that the Iowa Architectural Foundation was formed in 1989 as a nonprofit organization for charitable purposes. The Foundation solicits, receives and expends gifts, grants and legacies for the education, exhibition, publication and research of architecture and its allied arts and sciences. As the Foundation enters its seventh year, its commitment to education and understanding of design and the built environment is building momentum.

Since its inception, the Iowa Architectural Foundation has undertaken numerous initiatives to increase the public awareness of architecture, contributing directly and through leveraged grants over $50,000 in project funding. A description of accomplishments follows.

- On January 1, 1995, the IAF became the parent organization of AIA Iowa's Architecture in the Schools (AIS) program. The IAF has provided over $27,000 in funding for the program, in collaboration with the Iowa Humanities Board, The American Architectural Foundation, and the AIA College of Fellows. As the parent organization, the IAF will proudly begin underwriting all program costs. So far, the IAF's support has helped to:
  1. develop a third-grade social studies curriculum in the Des Moines Schools;
  2. develop a second-grade social studies curriculum in the West Des Moines Schools;
  3. sponsor staff development workshops for teachers across the state;
  4. enable publication of Iowa by Design, a newsletter for teachers with articles about AIS programs and resources and information about architecture;
  5. sponsor an annual Career Seminar for high school students and a Children's/Teachers' Jury in conjunction with the AIA Iowa Annual Convention;
  6. host an exhibit table and provide architecture guides at the 1994 Art Educators of Iowa State Conference;
  7. sponsor the featured speaker, Peter London, at the 1994 Art Educators of Iowa State Conference;
  8. provide funding to reproduce color in an article about the Architecture in the Schools program

Since its inception, the Iowa Architectural Foundation has undertaken numerous initiatives to increase the public awareness of architecture.
The IAF has successfully sponsored a four-conference series, The Planning of Iowa: Our Towns and Cities. This program invited community leaders, planners, architects and interested citizens to actively discuss the contribution quality design makes to Iowa’s communities. The program served as a catalyst for thoughtful planning and design at the local level. The fourth segment, Designing on the Edge, was held in partnership with the American Society of Landscape Architects and the American Planning Association in March 1995.

The IAF sponsored the Iowa Public Television Series Pyramid, Castle, Roman City and Cathedral, all hosted by author and illustrator David Macauley. Each examined a different building form. The IAF also sponsored Skyscraper on Iowa Public Television. This five-part series provided a first-hand glimpse of the art and science of designing and building a skyscraper, using the 47-story Worldwide Plaza in New York as the model.

A series of History for Lunch Walking Tours of downtown Des Moines was sponsored by the IAF. The IAF sponsored a public lecture by R. Nicholas Loope, AIA, CEO and Managing Principal of Taliesin Architects, at the Des Moines Art Center.

With the Sheet Metal Contractors of Iowa and Midwest Power, the IAF co-sponsored an Iowa Committee on the Environment Section in Issue 94:210 of Iowa Architect. The special section showcased projects that attempt to lessen the impact of building on the natural environment.

The IAF launched a Public Associate Membership drive in conjunction with Architecture Month and the AIA Iowa Annual Convention.

The Iowa Architectural Foundation thanks the following firms and individuals for being a part of the Iowa Architectural Foundation’s mission of education about architecture.

---
Almost ten years ago, the Architecture in the Schools program was conceived with the goal of incorporating built environment education into curricula.
promotes the value of design excellence in all areas of the public and private environment. It also is a resource for noteworthy events and achievements in the arts, literature and product design.

*Iowa Architect* is published four times a year and is supported by a combination of advertising revenue, subscription fees and AIA Iowa chapter contributions. A fifth issue of the magazine, this Directory, is produced during the first quarter of each year. The magazine's editorial policy, content, graphic design and production are directed by a volunteer editorial board comprised of statewide members of AIA Iowa.

The editorial staff determines projects and events to be covered, solicits contributions by freelance writers and assembles photographic and graphic support materials. Each issue is focused around a central idea or topic such as historic preservation, waterfront development, residential design, educational facilities or urban design.

The magazine's current readership of 12,000 is concentrated in an eight-state area including Iowa, Missouri, Nebraska, Kansas, Oklahoma, Wisconsin, Minnesota and Illinois. By subscription, the magazine is currently mailed to approximately 35 states.

In support of its educational goals, *Iowa Architect* is distributed free of charge to school and university libraries in the state of Iowa. The magazine also provides free subscriptions to private and public officials at the local and state levels who routinely make decisions regarding the built environment in Iowa.

While the main focus is on Iowa architecture and design issues important to Iowa, the magazine consistently has worked to broaden the scope of its interests and coverage. This has included the development of a yearly review of Midwestern architecture, and features which explore and review performances, art exhibitions, product design and interior and graphic design.

For information regarding the publication of *Iowa Architect*, topics for forthcoming issues, subscriptions, its editorial policy and advertising rates, please write Editor Paul Mankins, AIA, in care of the AIA Iowa office.

**The State Historical Society of Iowa — Community Programs Bureau**

Within one state agency, the State Historical Society of Iowa, the Community Programs Bureau administers several programs that relate to historic preservation activities and concerns. Staff of the Community Programs Bureau also serve the State Historic Preservation Officer (SHPO).

The first of these programs is the identification and evaluation of historic resources through architectural, historic and archaeological surveys. The nomination of properties through a state review committee to the National Register of Historic Places provides the list of significant historic resources in the state. The bureau has an important role in the protection of historic properties, which takes several forms: providing educational materials; reviewing federally assisted projects during the planning stage to assess their impact on historic properties; maintaining partnerships with Certified Local Governments (CLG); and administering grants and incentive programs for preservation activities. A listing of the individual program areas follows. It includes a more detailed description of each and the individuals most actively involved with the specific program area.

**Educational Materials About History and Historic Preservation**

Educational materials that can assist teachers, historical societies and other interested individuals and groups in understanding more about the history of Iowa, the significance and care of cultural resources in interpreting that history, and many historic preservation topics are available for loan from the State Historical Society of Iowa's Resource Center. These materials include audio tapes and video presentations, books, hands-on classroom materials and lesson plans.

For more information on educational materials, contact Resource Center staff at 515/281-6860.

**Architectural, Historical and Archaeological Surveys**

The architectural survey specializes not only in the identification and evaluation of buildings and other structures, but also in districts that best express the range and variety of the built environment of Iowa. Two types of architectural surveys are assisted, conducted or reviewed through the bureau, depending on the various origins of the survey funds. Reconnaissance level surveys, typically once-over-lightly windshield fieldwork and a review of published information, identify types of buildings and structures in areas of a particular locality that are 50 years of age or older and may have eligibility for the National Register of Historic Places. Evaluation surveys involve more detailed research, enabling the surveyor to recommend whether or not a specific property or district is actually eligible for listing on the National Register.
Similarly, historical surveys and archaeological surveys of prehistoric and historic archaeological sites are assisted, conducted or reviewed through the bureau.

For more information on architectural surveys, contact Architectural Historian Ralph Christian at 515/281-8697. For more information on historical or archaeological surveys, contact Historian Lowell Soike at 515/281-3306 or Archaeologist Kathy Gourley at 515/281-8744.

The National Register of Historic Places

Additions to the National Register of Historic Places are made through the State Historical Society's Community Programs Bureau. The program maintains a national list of culturally significant properties. As a result, National Register properties warrant some degree of consideration when federally funded projects threaten them directly or indirectly, and are eligible for state and federal incentives. The list encompasses every conceivable type of property, including individual buildings, archaeological sites, objects, structures and historic districts.

Persons interested in placing a property on the National Register should contact the bureau to obtain a nomination packet. Any non-federally owned property may be nominated to the National Register through the State Historical Society and, if accepted, become listed on the National Register. A separate and much more select group of properties with national historical or cultural significance are designated as National Historic Landmarks by the U.S. Department of the Interior.

For more information on the National Register, contact National Register Coordinator Beth Foster at 515/281-4137.

Section 106 of the National Historic Preservation Act

To eliminate unnecessary harm to historic resources that may result from activities of the federal government, its agencies follow a review process established under Section 106 of the National Historic Preservation Act of 1966. Federal agencies have the responsibility to take into account their programs' impact on specific historic resources when providing funds or licenses. They consult with the SHPO regarding direct or indirect effects on identified historic properties and determine the extent of the effect. Consultation with the SHPO to consider alternatives may eliminate or minimize many adverse effects, so projects may proceed after the "second look" process.

For more information on Section 106 Review, contact Review and Compliance Coordinator Beth Foster at 515/281-4137.

Certified Local Governments

The Certified Local Governments (CLG) program is a federal and state partnership program, administered by the National Park Service and State Historical Society of Iowa, that assists cities and counties in establishing local historic preservation programs. Through passage of an ordinance or resolution, participating cities and counties establish local historic preservation commissions to administer the program, and also agree to follow the Secretary of the Interior's Standards and Guidelines in all preservation activities. Participants are encouraged to survey and identify outstanding historic, architectural and archaeological sites within city and county limits, nominate properties to the National Register or establish local registries of historic places, and develop public education programs and other related activities. Participating certified city and county governments receive technical assistance from the Community Programs Bureau and qualify for a competitive matching grant program.

For more information on CLG, contact Local Governments Coordinator Kerry McGrath at 515/281-6826.

Grants for Historic Preservation Activities

In addition to Certified Local Government Grants, the State Historical Society of Iowa provides Iowans with other matching grants for various historic preservation activities. Through the Resource Enhancement and Protection Act, the Historical Resource Development Program (HRDP) provides state funds for surveys and nominations of historic properties, and matching grants to acquire or rehabilitate properties that have been evaluated as eligible for the National Register. These funds amount to almost a half-million dollars per year and also can be used as matching grants to do work in museums and documentary collections.

For more HRDP grant information, contact Historical Resource Development Program Coordinator Lavon Wickett at 515/242-6194.

Investment Tax Credits and Rehabilitation Incentives

Some property owners may qualify for Federal Investment Tax Credits by "substantially" rehabilitating Certified Historic Structures according to nationally accepted Standards for Rehabilitation. The Community Programs Bureau and the National...
SERVICE TO THE PUBLIC AND PROFESSION

Some property owners may qualify for Federal Investment Tax Credits by rehabilitating Certified Historic Buildings.

Park Service review these applications. A Certified Historic Structure is any structure, subject to depreciation as defined by the Internal Revenue Code, that is listed either individually on the National Register of Historic Places or located in a registered historic district and certified by the Secretary of the Interior as contributing to the historic significance of the district. Structures to be listed in the near future, either individually or in a historic district, may qualify on a provisional basis.

Other incentives for preservation are available. An eight-year Temporary Property Tax Exemption may be applied to any increase in valuation due to the Bureau-approved “substantial rehabilitation” of historic buildings. The Main Street Linked Investments for Tomorrow Loan Program provides below-market interest loans in Iowa towns that are CLGs or Main Street communities. These loans of up to $50,000 per property are only for exterior restorations or rehabilitations of commercially used historic buildings in central business districts.

All these incentive programs are available to projects that are consistent with the historic character of the building and meet the Secretary of the Interior’s Standards for Rehabilitation. The projects must be reviewed and approved through the Community Programs Bureau.

The bureau actively encourages use of multiple programs and supplies applicants with technical information regarding preservation, including window repair and weatherization techniques, problems with window replacements, storefront repair or replacement, guidance on accessibility strategies for historic structures and guidelines for brick/stone cleaning and repair. Technical assistance is given by phone, mail or through site visits.

For information about Historic Preservation Rehabilitation incentives, contact Preservation Architect Judith Ann McClure, AIA, at 515/281-8637.

The Americans With Disabilities Act

January 26, 1993, heralded a new era within the construction industry. From that day forward, as decreed by the Americans With Disabilities Act of 1990 (ADA), all buildings that serve as “places of public accommodation” or “commercial facilities” must be accessible and usable by persons with disabilities. Influenced in part by the Architectural Barriers Act of 1968 and Section 504 of the 1973 Rehabilitation Act, the original proposal for the ADA began in 1986 and was brought forth by the National Council on Disabilities, an independent federal agency whose statutory functions include making recommendations to Congress about the rights of individuals with disabilities. The U.S. Department of Justice, which issued the ADA and the regulations it encompasses, estimates that five million buildings will be affected, including hotels, retail stores, restaurants, recreational venues, theaters and medical facilities.

The ADA’s purpose is described as a “clear and comprehensive national mandate for the elimination of discrimination against individuals with disabilities” (Jones, 1991, p. 33). A congressional finding in 1988 discovered 43 million Americans have one or more physical or mental disabilities, and that they are a discrete and insular minority faced with unfair and unnecessary discrimination (Jones, 1991, p. 32). The term “disability” is defined in respect to an individual as: “(A) a physical or mental impairment that substantially limits one or more of a major life activity of such individual; (B) a record of such an impairment; or (C) being regarded as having such an impairment” (ADA Handbook, 1991, p. 1-25).

The ADA is divided into five sections called titles. Each title summarizes a different aspect of disability rights. Title I deals with employment issues. Title II covers public services and public transportation. Title III addresses public accommodations and services operated by private entities. Title IV outlines telecommunication issues and Title V contains miscellaneous provisions such as construction guidelines, state immunity, attorney’s fees, technical assistance, federal wilderness areas and those who are excluded from coverage under ADA.

Probably the most important title for the architecture profession is Title III, “Public Accommodations and Services Operated by Private Entities.” Title III prohibits discrimination on the basis of disability in places of public accommodation and commercial facilities that are designed, constructed or altered in compliance with the accessibility standards (ADA Handbook, 1990, p. III-9). “A public accommodation is a private entity that owns, leases or leases to, or operates a place of public accommodation” (ADA Handbook, 1990, p. III-10). There are two exemptions, private clubs and religious entities, a carryover from the Civil Rights Act of 1964, that do not have to comply with this definition of public accommodation. Title III of the ADA affects three sets of requirements pertaining to buildings.

Readily achievable barrier removals means all architectural and communication barriers to people with disabilities that can easily and cheaply be removed must be removed. This may mean installing grab bars in bathroom stalls, making cutbacks in sidewalks and constructing accessible ramps in places where only stairs exist. Removal of barriers does not
necessarily mean that a solution to a problem within an existing building must be in the built form. For instance, a shoe shop may have a clerk available to reach the upper shelves for a customer in a wheelchair, rather than lower all the shelves.

Alterations to existing buildings undertaken after January 26, 1992, must be accessible and usable by people with disabilities to the maximum extent possible. The additional cost of accessibility provisions need not exceed twenty percent of the underlying alteration cost.

New construction that had a building permit granted after January 26, 1992, and was occupied after January 26, 1993, must adhere to the new construction requirements set forth by the Justice Department. These requirements address not only the building itself, but also parking areas, pathways leading to and from the building and equipment rooms serviced by building personnel.

Title V, "Miscellaneous Policies," is also important to the architecture profession. It states that if there are more stringent federal, state or local laws concerning accessibility, then they shall supersede the ADA. Under the eleventh amendment, no state shall be immune from a violation of the act. Title V allows for provisions to qualifying historic properties if the alteration threatens the historic significance of the building or facility. This provision can be applied to sites that are eligible for listing on the National Register of Historic Places (ADA Handbook, 1991, Appendix A, p. 41). However, it is anticipated that exceptions only will be granted in extremely rare circumstances. Title V also provides information on assistance and on the legalities that may occur if the ADA is not implemented (Terry, 1992, p. 29) (ADA Handbook, 1990, Appendix A, p. 40).

For owners or managers of a business, it is important to determine the responsibilities and obligations presented by the ADA, both to employees and the general public. The technical requirements of the ADA can be confusing, and if you are planning a new building or alterations to an existing building, you may be wise to consult an architect. Compliance with the ADA need not represent extraordinary expense for new construction, and accessibility features normally add up to less than one percent of the construction cost. An architect can assist in preparing building or renovation proposals that both satisfy the requirements of the ADA and represent sound economic planning. Besides being conversant with the law’s requirements, an architect also can advise small businesses how to take advantage of tax benefits for the removal of architectural barriers in existing construction.

**Americans With Disabilities Act Accessibility Guidelines (ADAAG)**

The Americans With Disabilities Act Accessibility Guidelines (ADAAG) is the publication by the federal government that establishes a basis for evaluating the existing environment and all related issues stated in the ADA. ADAAG provides information on subjects ranging from accessible parking to elevators. It is a comprehensive document that provides precise dimensions and tolerances in both written and illustrated form. However, ADAAG also is written in bureaucratic language and can be confusing at times.

On June 20, 1994, Federal Register Volumes 58 and 59, No. 117, were published, indicating important alterations to the original technical provisions outlined in ADAAG. Most importantly, provisions were added for swimming pools subject to Title II of the ADA, laundry facilities serving one or more accessible dwelling units and pedestrian overpasses and underpasses. Provisions also were altered regarding platform lifts, TTYs, public sidewalks and curb ramp designs. It is important that these documents be examined to determine which changes will affect individual projects.

**References**

Editor’s note: This explanation of the Americans With Disabilities Act and the Accessibility Guidelines was prepared by architecture students Scott Tillman and Barbara Mitchell and Professor Arvid Osterberg at Iowa State University, and Stephanie Stubbs with information from the American Institute of Architects News Service. Specific questions regarding the ADA may be directed to the Architectural and Transportation Barriers Compliance Board, 202/272-5435, or the ADA Hotline, 800/USA-ABLE (800/872-2253).

When a system really works

Like the delicate balance of nature, all EAGLE units work together in flawless harmony. Our full line of accessories makes it possible to build a smooth, complete window system both inside and outside the home. Lines are clean and precise. No unfinished spaces exist between units. Up close and from a distance, there is unity. Balance. Unspoiled beauty.
