Why revisit brick?

It's a material you've long known, specified and used successfully.

You know its design flexibility, durability and low maintenance and how its endless array of colors, shape, textures, and sizes set the standard for beauty.

What you may not know is that it's a natural for today's new emphasis on sustainable design—made of the most abundant material on the planet, clay and shale, it is “of the earth” in the most basic way.

Choose brick to help you achieve environmentally friendly, sustainable, LEED™ certified projects.

Stacey Eben won the 2010 Iowa Architect Directory cover and layout competition with her design based on the theme “profile.” She applied the concept of the profile of a building as you walk around it and the angles you see. The photographs are images of the Woodbury County Courthouse in Sioux City.

Stacey graduated from Briar Cliff University in 2000 with a Bachelor of Arts Degree in Mass Communications. She lives in Sioux City with her husband, Brian and three children, Elizabeth - 6, Andrew - 4 and Abigail - 6 months. She is the Marketing Coordinator for FEH Associates Inc. (Architecture | Structural Engineering | Interiors) which has offices in Sioux City and Des Moines.

Stacey enjoys spending time with her family and friends and doing some freelance graphic design on the side.
YOU OUGHTA BE IN PIXELS.

Wait until you see how impressive you look on Polycom video conferencing systems. They're intuitive, cost-effective, work with your infrastructure, and make you look like a star.

AVI Systems and Polycom solutions connect people, ideas and insights via integrated video, voice, data, and web, in any combination on a single call.

Whatever your needs, AVI Systems designs and integrates them all with our design-build process. Call AVI Systems today at 515.254.9850 for a demonstration.

focused on your success

LinkedIn, Twitter, Facebook, My Space, and blogs are certainly the hot and techie methods to understand the profile of a person or organization. Are you LinkedIn to an architectural firm? Have you been tweeted by an architect lately? Or maybe there is a better chance of being a Facebook fan of an architectural firm?

The directory issue of Iowa Architect is our way to provide the profile of every AIA architectural firm in Iowa. Webster’s II Dictionary defines profile as "A biographical essay presenting the subject’s most remarkable characteristics and accomplishments".

The most remarkable characteristic of the typical Iowa architectural firm is one ready to serve its client. Architects were born with the inherent trait to listen and work through all sorts of issues. We are knowledgeable about sustainable design principles, building costs, building systems and much more. Most importantly, we care about the impact a building’s design can have on people and our communities.

The directory profiles all kinds of firms. Very small firms to the largest in the state. Firms which specialize in one area of expertise and firms that specialize in another. Firms which have been around for over a century and new start-up firms. The directory has them all.

We urge you to look through the profiles and decide which firms may serve you best. Give them a call and get to know them better. Then make your selection based on their qualifications, negotiate a fair fee, and get started designing a great project.

Enjoy!!!

Robert A Smith, AIA, LEED® AP
President, AIA Iowa

AIA Iowa Mission:

To improve the built environment through service to members, the profession and the public.
Resources that matter

Your practice is at risk every day. Your reputation is always on the line. That's why you need a professional liability risk management program specifically designed for A/Es and customized to protect your practice.

That's where our agency comes in. We are dedicated advisors providing solution-oriented service that includes risk management guidance, insurance coverage placement, training, and more. You can benefit from our experience and local expertise with the unparalleled resources from XL Insurance. Together, we can help you make good decisions and improve your firm's risk management practices:

**Expert claims handling** by professional liability specialists who understand the importance of preserving your reputation as well as your assets.

**Specialty underwriting** to provide you with customized insurance solutions.

**Industry leading education** developed by XL Insurance and backed by 30 years of front-line claims experience to positively impact behavior.

And there's peace of mind knowing you have a trusted partner who anticipates your needs by keeping up with the A/E industry. We understand the intricacies of protecting your practice, assets and reputation. You can be confident in our knowledge.

For free risk management tools, visit www.xldp.com/tools.

Architecture and D
architecture matters

It’s a fact of American life in the early years of the 21st century that most individuals seldom have reason to consult an architect directly. But it’s also true that we—both as individuals and as a society—are very aware of the design that is around us. From entire cable television networks based on home improvement to the huge success of retailers like Home Depot, IKEA, and Target, the American consumer is now considerably more design savvy than just a decade or so ago.

Design is fundamentally about choice. Architecture—generally defined as the design of buildings—is about some of the biggest choices that we make. Purchasing, or even remodeling a home, is likely to be an individual’s largest single investment.

Architects—as designers of significant and usually public structures—have been in business since ancient times. But it is only in the past century and a half that architecture has developed as a true profession, its practitioners demarked by formal education and licensure by the state to ensure the protection of public health, safety, and general welfare.

The earliest known architect-writer, Vitruvius, stated three principles of architecture: firmness, commodity, and delight. In the more than two millennia since Vitruvius’ time, these fundamental criteria have proved remarkably durable ideas about the nature of architecture.

The 20th century Philadelphia-based architect Louis Kahn was an avowed modernist who spent a great deal of time looking at ancient and classical models of architecture. Kahn observed, “The street is a room by agreement.” Seldom articulated so eloquently, this rather elementary idea lies at a broader conception of architecture, where different things can come together and become part of a shared environment.

Kahn’s “agreement” can be thought of as a continuing, yet constantly changing, conversation between buildings and other constructed objects. It’s important that Kahn’s definition blurs the lines usually stated between public and private realms. Good design may reinforce certain societal hierarchies, but the best design is a shared experience that doesn’t differentiate between rich and poor, young and old, healthy and disabled.

Shelter magazines are so popular because they pose us—the readers—as voyeurs into the places where other people live their lives. There’s an illicit thrill in the exposure of these essentially private places. But it’s often just as interesting to look at the exteriors of these buildings and how they relate to one another at the larger level of the community.

Seen individually, a single building is the physical manifestation of a particular architect and client’s conversation—their needs, their dreams and aspirations, their personal and combined taste. Put together a series of such objects—built by different individuals for different needs at different times—and you’ve created a physical conversation that transcends both time and each building’s individual creators.
client may desire classical columns in their home to project a particular sense of style, but an architect must be aware of their structural properties as well as the historical applications of scale and proportion relating to each different type of column. Without a broad understanding of these seemingly simple building elements, it's likely that they will appear cheap and insubstantial rather than elegant and tasteful.

Much architecture today seems disposable. This may seem an unfortunate symptom of our change-obsessed, consumer-oriented society. But, consider the following. What happened to the homes that surrounded the great medieval cathedrals of Europe? Most of those thatch and earth and stick structures have vanished with nary a trace. They served their purpose—protecting their inhabitants from the elements—and then they fell apart, were torn down or burned to the ground. Mostly, they were replaced by more sturdy and durable structures. Architecture at the scale of the city—or more simply, groups of buildings—is always in an evolutionary period of growth and regeneration. Villages become towns, towns become cities and vice versa. These changes may take years or centuries, but it is a perpetual process in the history of human habitation and migration.

Architect Michael Graves began his design of consumer products with a $10,000 coffee and tea service that he designed for Italy's Alessi in 1983. Two years later, Alessi and Graves went upscale with his iconic Kettle with Bird teapot that has since sold over one million units. But it wasn't until 1999, when Minneapolis-based Target introduced Graves to middle America, that he truly became a household name. With over 500 of his products now available for the household, many priced at less than $20, Graves is easily the most ubiquitous architect in the American home.

But where is the place for architects in society today? Some—like Frank Gehry and Philippe Starck in addition to Michael Graves—are in our bathrooms and kitchens with sleekly designed products. They live as celebrities on stages in front of large crowds and in the pages of...
glossy magazines. Whether it’s Bilbao, Spain or Milwaukee, Wisconsin, cities bet their future on the buzz these stars generate with their signature buildings. But to be successful, places need more than a single new structure to remain vibrant.

Simply put, architecture should be understood as the community of all things—buildings and objects—arranged in space. Things have intrinsic value in every culture, accumulated over time, and understandable on multiple levels to different viewers. They are often created through a rich stew of pragmatic need, individual artistic vision, municipal regulation, public commentary, and sometimes even private avarice.

Architects are uniquely placed by their training and practice to understand these complex forces and their many potential resolutions. But the model of the architect as a grandiose and omniscient creator is just another myth of our popular culture. Architects—even those celebrated for their particular artistic flare and genius—create their work only through a complex team. Clients, contractors, engineers, manufacturers and others—many with no formal education in architectural matters—are critical participants in the process.

Architecture matters to everybody. If you care about the look of your shirt or your desk clock or your coffee pot, you care about architecture. The next time you rearrange the things on your desk, from stacks of files to pens and pencils and paper clips—remember that this is what architects do with the landscapes where you live your life. If you care where that paper clip goes when it’s not holding together some papers, you already care about architecture. Move it and you’ve performed your own small-scale act of architecture!
selecting an architect

We take it for granted that the design of our own homes affects how we function, and yet often underestimate the effects our surroundings have on us at work. Why? In part, decisions about the nature of the workplace are viewed by many organizational leaders as technical decisions, best left to experts like architects, engineers and facility managers; as financial decisions, in which cost is the primary concern; or as political decisions, definitely within the purview of organizational leaders but made as much on the basis of power and influence as on information about how the decisions are likely to affect organizational performance.

If the goal is to have the corporate image reflect the values that guide how the organization really functions (or would like to), then the thrust of the questions asked when starting a building project should be on what you want to be as an organization, not on what you want to look like.

The work of an organization is affected by environmental characteristics, such as degree of enclosure, layout, lighting, acoustics and air quality. Thoughtful design of the workplace can increase employee satisfaction and performance, and support organizational image and identity. Therefore, it is imperative that business leaders and architects increase their understanding of the relationship between the design of the workplace and the successful operation of organizations. Good design is good business.

You may select an architect for the same reasons you select any other responsible professional: commitment, experience and expertise. By hiring an architect to design a project, you will realize the unique contribution an architect makes to the creation of architecture.

An architect should have a broad knowledge of design and construction, and can work with you on a variety of projects, from remodeling your house to building an office tower. An architect should also work through your ideas from beginning to end, analyzing costs and completion time.

An architectural firm may be composed of a single practitioner, a partnership or a corporation. Firms also come in a variety of sizes, but size may not be as important as the firm’s capabilities. Some firms have interior designers, engineers and other consultants on staff; others rely on collaborations with independent firms.

When you select an architect, you should consider not only the individual elements of a firm’s composition, but their collective impact on a firm’s ability to perform the work required. By finding an architect that understands your goals, you will enhance your project. It is important that you select an architect with whom you feel both compatible and comfortable, and with whom you are able to communicate. You should also understand the role the architect plays in your design team, and the skills and responsibilities they have in the design process.

The first step to take when selecting an architect is to decide your goals and vision for the project. Ask yourself what functions will be fulfilled with the new project. Make a list of the ideas you have, your budget, the project’s planned location and your time frame. Ask for recommendations from friends, relatives and colleagues who have worked with an architect, and have had successful and rewarding experiences.

Next, compile a list of possible firms for your project (AIA Iowa publishes this Directory each year as a guide, listing architectural firms across the state). Use it to begin narrowing the field. Select the firms that meet your requirements. After you have compiled a short list, call each architect and schedule an appointment for an interview.

During the interview, an architectural firm should describe their philosophy of design, the firm’s method of work and, where applicable, areas of specialization. Ask for a list of former clients and recent projects, and discuss the architect’s fee. You should also discuss your goals and ideas with the architect.

Finally, and perhaps most simply, you should look around. A thoughtful, well-conceived building is always an architect’s best form of reference.

An architect has the education, training, experience and vision to take you through design and construction from beginning to end. Good design adds to the beauty and life span of your building, but it will also work to enhance your community and enrich your life.

---

Good Design is Good Business

Much of the business of architecture is about providing a service to business. Architects are hired by businesses to assist in the visualization and realization of transformation and success. Architecture affects the success of businesses in countless ways. The following information, an excerpt from Good Design is Good Business, illustrates the relationship between good design and good business. It reports recent research findings and showcases the work of some AIA Iowa firms. It provides interesting and valuable information for discussion and decision-making between AIA Iowa architects and their clients.

For a copy of Good Design is Good Business, please call the AIA Iowa office.
qualifications-based selection

Every construction project is unique, yet the owner or public agency often may not fully grasp the complexities of the project, nor recognize the variety of design services required to transform the generalized concept into reality. A knowledgeable and thoroughly qualified design professional can guide an owner through the intricacies of schematic and developmental design.

The means of selecting reliable, professionally competent design professionals for service in the public or private interest is crucial. The quality of the services provided by the architect is the single most important factor in determining the overall construction and life cycle costs of a building. Qualifications Based Selection (QBS) is an objective, flexible procedure for obtaining architectural, engineering, land surveying and other related professional design services for public projects. The QBS process is helpful to frequent users of design services, as well as one-time users with little or no past practical experience working with design professionals. It provides owners with a selection process that is straightforward and easy to implement, is objective and fair, can be well documented, and is open to public scrutiny.

QBS is the most widely endorsed method for selecting professional design consultants. In 1972, the U.S. Congress required all agencies of the federal government to use QBS. Nearly 40 states now mandate the use of a similar procedure for public work.

the architectural process

Architecture is a tapestry of aims, interests and ideals. For most architects, theirs is a profession of examination, analysis and evaluation, described by most as the process of design. Through this process, an architect creates a successful building that strikes a balance between client interests, the community at large and the demands of nature.

In an age of specialization, the architect is required by training and temperament to be a generalist. Because the art of building is not a singular action, an architect must be able to perceive the whole picture, and create a building that is technological, artistic, functional and human.

Each client has a problem to be solved. Each building, while unique in its final creation, has common characteristics: to satisfy a need, to adhere to a schedule and budget, and to fit within the parameters of a site. Any project, regardless of its size and scope, has a significant physical and economic impact on its environment and the surrounding community.

When designing a building, an architect must not only consider the client’s interest, but the interests of the public at large. A building that satisfies its client’s needs and is suited to its context serves the best interests of both its owner and its neighbors.

Each building must also respond to fundamental characteristics of nature. Not only must gravity and topography be accommodated, but the architect also must be aware of the consequences of time. A building is not momentary in its existence, but is experienced well into the future.

The process of design typically begins with a statement of program, which is a written description of the client’s needs, goals and aspirations for a project. It may be a simple list defining space requirements or it may quantify specific ambitions, but it must ensure a “fit” on the intended site. The program is the basis upon which the value of an architect’s performance is judged.

From the program and site overview, the architect prepares a preliminary proposal in the stage typically described as schematic design. These sketches suggest various options and opportunities inherent in the program and site. These are created through a free-flowing exchange of concepts and ideas that clarify the project’s fundamental objectives. Only after a preferred strategy is selected does development continue.

Next, the schematic proposal is further examined at the design development stage. Construction materials and methods are selected, planning layouts are refined, and increasingly, estimates of construction cost are projected. In design development, the architect collaborates with consultants, including engineers, landscape architects and graphic designers who contribute their expertise.

Throughout this phase, the architect continually reassesses the initial project objectives, ensuring the proposal conforms to the initial program requirements and preserves the client’s interests. The architect must also assess the building within the context of the surrounding community.

Only after both architect and client agree that the design fulfills the program objectives are construction documents prepared. Detailed drawings allow a contractor to establish fixed building costs and begin construction. The completed documents are a legal contract compelling the finished building to be constructed in accordance with the client’s programmatic, economic, and aesthetic intentions. As construction proceeds, the architect becomes an advisor, continuing to evaluate the design’s evolution and compliance with intentions through site visits and client consultations.

Most architects consider the design process complete only after the client moves in and becomes accustomed to the surroundings. In this post-evaluative phase, the architect reevaluates whether the project is a balanced work that met the client’s needs.
Through the process of design and collaboration with an architect, a client will enjoy a successful, satisfying building that fulfills a specific goal while enhancing its community.

**Hiring a Residential Architect**

There is a common misconception that architects are a luxury in the home-building industry. The truth is that an architect combines budget, function, and aesthetics into a design about which everyone can feel good. Whether building a new home or renovating an older one, architects play an important role in combining your desires, your needs and your budget into a home that fits your lifestyle.

**What Does an Architect Do?**

Architects are trained problem solvers. Just a few of their tasks are to help define needs, present options that may have not been considered, plan for the future, design around a budget and help obtain contractors and permits. One of the most important services an architect can provide is monitoring construction. Typically a small part of the architectural fee, this service can be the most valuable.

Having a qualified professional reviewing the contractor’s work, ensuring that the design is followed through, and identifying construction problems early in the process can save time and money down the road.

**How Do I Select an Architect?**

Each architect has an individual style, approach to design and method of working. Start with getting recommendations from those you know have worked with an architect. The AIA Directory is also a resource for finding architects who specialize in custom homes. Make a short list and call each firm, asking the firm’s qualifications and experience. Most importantly, interview each firm. Meet the people you would be working with to learn their design philosophy and methods of working. Personal chemistry will have a great deal to do with process. Talk about your budget and the range of fees the architect anticipates for your project. Feel free to ask any question, including how interested the firm is, and what they will charge. Ask for a reference list of past projects and follow-up. Past clients will give you an excellent idea of how well the architect listened and responded to their needs. Remember, an architect provides a service, not a product. Your final selection should be based on the architect’s technical expertise, creative skills and ability to communicate with you.

**What is an Architect’s Fee?**

Every project’s fee is set differently, based on the type of project and scope of service desired from the architect. Common methods of compensation include: hourly rates, a stipulated sum or a percentage of construction costs (which range from 5-20%). The basis for the fee, the amount and the payment schedule are issues to be worked through and are commonly set in writing with use of a legal AIA agreement.

For a new house, home renovation or addition, hiring an architect is a wise investment.

---

The QBS process usually involves the following steps:

1. The owner prepares a description of the project to be built or problem to be solved, referred to as a preliminary scope of services.
2. The owner invites design professionals to submit statements of qualifications for the project at hand.
3. Statements of qualifications are evaluated and several individuals or firms are selected, or short-listed in the standard nomenclature, for further consideration.
4. The individuals or firms are then interviewed and ranked according to an evaluative scoring system.
5. On the basis of these evaluations, the top-ranked professional or firm is notified of their selection for the project and opens discussion with the owner leading to agreement on a final scope of services culminating in a contract between the two parties.
The Department of Architecture at Iowa State University is a comprehensive center for teaching, research and public service. The architecture program offers two accredited professional degrees, the bachelor of architecture and the master of architecture, as well as a post-professional master of science in architecture.

Undergraduate program
The undergraduate curriculum combines an intense professional course of study with a broad experience in liberal education. Through the design studio, students explore the elements of experience and intention, the subject matter of building design, and the effects of a diverse and pluralistic cultural field.

The undergraduate program is composed of a preprofessional program of two semesters followed by a professional program of four years. At the end of the preprofessional year, applicants are reviewed for admission into one of the 85 openings in the professional program. Once in the program, students have many opportunities. The College of Design maintains a studio in Rome, Italy and many fourth-year architecture students participate in the program during their spring semester. The curriculum also includes two semesters of option studio in which each student can select their faculty and work with other disciplines in the College of Design.

Graduate program
The graduate program combines a professional education with focused research and scholarship. Students investigate the relationship between theory and practice, the application of new digital and material technologies, and the changing needs of architecture and cultures. The graduate program offers opportunities for both professional and post-professional study. The three and one-half year program is designed for individuals with an undergraduate degree in a subject other than architecture. Advanced standing may be offered to students with non-credited degrees in architecture. The MS in Architecture program is designed for graduate students with or without architectural backgrounds who pursue individualized research in areas of preservation, universal design, community design, building diagnostics, digital technologies, sustainable design, advanced building design, and architectural theory. It provides an opportunity for advanced study and also culminates in the scholarship of a thesis.

For more information, contact the Department of Architecture at Iowa State University in Ames at 515.294.4717 or at www.design.iastate.edu/arch/.
The licensing of architects in Iowa is intended to protect the health, safety and welfare of the public. It is the state of Iowa that authorizes persons to assume the title “architect,” and it is the state that defines and regulates the architectural profession by the Architectural Practice Act, Chapter 544A of the Iowa Code. The act concisely defines qualifications, obligations and responsibilities as practicing professionals. The act also constitutes a standard of professional conduct that establishes expectations of an architect working in the public interest, and empowers the state to recognize certain individuals as qualified in the design of certain buildings.

The Intern Development Program (IDP) was created in the mid-1970s by the AIA and the National Council of Architectural Registration Boards (NCARB) to establish uniform standards to aid intern architects in gaining comprehensive experience to prepare for architectural practice. The IDP has been mandatory in Iowa since 1990.

An internship is a fundamental component of architectural education, providing a logical transition from academic training to professional registration. A professional supervisor mentors the intern architect and defines the path of professional experience necessary to satisfy the state registration board’s internship requirements. The internship period begins after graduation and lasts for a minimum of three years, until the intern architect successfully passes the Architectural Registration Examination.

For more information about the IDP in Iowa, contact Naura Heiman-Godar at 515.283.5101 or naura@struxture.com. Also visit the AIA National IDP webpage at www.aia.org/professionals/idp/index.htm.

Iowa is one of several states that currently require architects to complete a course of continuing education in order to remain licensed; many other states are in the process of passing enabling legislation. As a prerequisite for membership, The American Institute of Architects also mandated continuing education.

The Iowa Architectural Examining Board’s goal is to assure the public that those who practice architecture, as defined in the Architectural Practice Act (see next page) and/or who call themselves architects actually have received the professional education, gained the practical experience, passed the required examination and continue their education and licensure in such a way that justifies the title of “architect.” The board, part of the Professional Licensing and Regulation Division of the state of Iowa, regulates architects and the practice of architecture in Iowa. It is comprised of five licensed architects, active for “not less than five years,” and two members representing the general public who are not required to have any formal training in architecture. The members are appointed by the Governor for three-year terms and confirmed by the Iowa Senate.

The board is instructed to consider that an applicant be of “good moral character,” trustworthy, honest and adherent to professional standards of conduct, but is prohibited from excluding an individual on the basis of age, citizenship, sex, race, religion, marital status or national origin. The board may review an architect’s activities when warranted by complaint or inaction of the architect, and may revoke or suspend the license of any architect found guilty of misconduct. The board also requires that any organization doing business as an architectural firm is actively controlled by registered architects, and authorizes a corporation, partnership or sole proprietorship to practice architecture as a business entity.

For further information regarding the work of the Iowa Architectural Examining Board, call 515.281.5910. A copy of the practice act may be obtained from the Iowa Architectural Examining Board.
sustainability

Buildings and their construction account for nearly half of the greenhouse gas emissions and energy consumed in the United States each year. This includes energy used in the production and transportation of materials to building construction sites, as well as the energy used to operate buildings. Globally, the percentage is even greater.

Buildings have a lifespan of 50 to 100 years throughout which they consume energy and produce emissions. By the year 2035, three quarters of the built environment in the United States will be either new or renovated. This transformation over the next 30 years represents a historic opportunity for sustainable, environmentally friendly building design to make a major impact on United States energy independence and reduction of greenhouse gas emissions.

In response to this opportunity, the American Institute of Architects (AIA) has adopted a position statement calling for the immediate energy reduction of all new and renovated buildings to one-half the national average for that building type, with increased reductions of 10 percent every five years so that by the year 2030, all buildings designed will be carbon-neutral, meaning they will use no fossil fuel energy.

AIA architects know how to design buildings to operate with far less energy at little or no additional cost. This can be accomplished through careful design and study of elements such as proper site location, building form, glass properties and use, material selections, natural day lighting, heating and ventilation systems, and other strategies.

In addition to being good for the environment, sustainable buildings reduce energy and water bills and protect budgets from future increases in energy prices. Research has also shown that environmentally friendly buildings raise employee retention and productivity rates, improve retail customer experiences, generate higher average revenues and increase student learning.

For more information about the AIA’s sustainability initiatives and resources, visit www.aia.org.

professional ethics

By mutual consent, members of The American Institute of Architects conform to a Code of Ethics and Professional Conduct. The Code of Ethics provides members with reasonable guidelines for fulfilling their obligations to the public, clients and users, the building industry and architectural profession and professional colleagues. The code is organized with five fundamental canons, each of which represents broad principles of conduct, and covers a wide range of pertinent issues confronting practitioners. Two types of statements further define each canon. Ethical standards describe more specific goals to which members of the AIA should aspire in the relevant areas of professional performance. The second component consists of Rules of Conduct, violations of which may become grounds for disciplinary action by the AIA.

CANON I
General Obligations
Members should maintain and advance their knowledge of the art and science of architecture, respect the body of architectural accomplishment and contribute to its growth. Learned and uncompromised professional judgment should take precedence over any other motive in the pursuit of the art and science of architecture.

CANON II
Obligations to the Public
Members should embrace the spirit and letter of the law governing their professional affairs and should thoughtfully consider the social and environmental impact of their professional activities.

CANON III
Obligations to the Client
Members should serve their clients competently and in a professional manner, and should exercise unprejudiced and unbiased judgment when performing all professional services.

CANON IV
Obligations to the Profession
Members should uphold the integrity and dignity of the profession.

CANON V
Obligations to Colleagues
Members should respect the rights and acknowledge the professional aspirations and contributions of their colleagues.
According to Donovan Rypkema, author of The Economics of Historic Preservation, historic preservation is "the careful management of a community's historic resources; avoidance of wasted resources by careful planning and use; the thrifty use of those resources—to use or manage those historic resources with thrift or prudence; to avoid their waste or needless expenditure; to reduce expenses through the use of those historic resources." If you need information about historic preservation in Iowa, there are several good sources available.

- Within state government, turn to the Department of Cultural Affairs, State Historical Society of Iowa, specifically the community programs bureau and the staff of the state historic preservation officer. See the society’s website at www.iowahistory.org.

1. Educational materials, lesson plans and media presentations about history and historic preservation are available for loan from the State Historical Society of Iowa's Resource Center at 515.281.6200.

2. National Register of Historic Places is the national listing of historic properties that are significant. For information on the National Register of Historic Places and new state investment tax credits for rehabilitation of qualified historic buildings or barns built before 1937, contact the National Register coordinator, Beth Foster Hill at 515.281.4137 or email at Beth.Foster@iowa.gov. You may also check out the website at www.iowahistory.org.

3. Matching grants are available for a variety of historic preservation. Contact grants manager Kristen Vander Molen at 515.281.4228 or kristen.vandermolen@iowa.gov.

4. Across the state, some counties and cities have local historic preservation programs and historic preservation commissions. For information about the Certified Local Government Program, contact the bureau's local governments coordinator, Paula Mohr at 515.281.6826 or email at paula.mohr@iowa.gov.

5. Some owners of historic buildings may qualify for additional financial incentives, such as federal investment tax credits for “substantial rehabilitation” of income-producing buildings, the state temporary property tax exemption program and a new state tax credit for rehabilitation of historic properties and barns built before 1937. Contact Tax Incentive Programs manager Beth Foster Hill for information on the federal and state tax-credit programs at 515.281.4137 or email at Beth.Foster@iowa.gov. You may also check out the website at www.iowahistory.org.

- The National Park Service has a wonderful website, full of information about what standards for treatments of historic buildings and cultural landscapes exist and how to apply them. Start at www.nps.gov and go through the many other topics on these pages.

- Preservation Iowa is a statewide historic preservation advocacy membership group. Contact them at info@preservationiowa.org or P.O. Box 814, Mount Pleasant, Iowa 52641.

- The Iowa Barn Foundation can help owners of historic barns. For information regarding the foundation and grants, contact The Iowa Barn Foundation, Sherry Gribble, 3109 155th Street, Fort Atkinson, Iowa 52114, 866.575.8483 or www.iowabarnfoundation.org.

- The National Trust for Historic Preservation is a national membership and historic preservation advocacy group. They have grant programs and publish information about economics and technical subjects regarding historic preservation. Visit their website at www.nthp.org.
The Iowa Architectural Foundation (IAF) is a charitable organization established in 1989 to promote awareness of the contribution of architecture and community design to the quality of life in Iowa.

The organization is governed by a volunteer Board of Trustees composed of architects and business leaders statewide with daily administration of the Foundation and its programs entrusted to a full-time Executive Director.

IAF receives direct financial support from individuals, businesses, corporations, foundations, and architectural firms who believe in the Foundation's mission. Contributions made to the Foundation are tax-deductible as allowed by law.

For the latest news and updates on the Foundation and its programs, visit www.iowarchfoundation.org

2009 program highlights

The Architecture in the Schools (AIS) Committee refocused its efforts on youth education in 2009. After a comprehensive review of programs, the committee decided to create and implement new programs that reached out directly to Iowa’s schoolchildren.

The Architecture by Children Drawing Contest was launched in late February as a statewide contest for children in grades K-6 to draw their favorite public building. More than 360 announcement packets were sent to all members of the Arts Educators of Iowa, community-based arts councils, as well as to those public libraries with a dedicated children/youth section in the top 100 Iowa communities by population. Both Iowa Energy and First Federal Savings Bank of Iowa served as prize sponsors. When the contest concluded, the Foundation received nearly 250 entries from 42 communities across the state.

ArKIDtec-Sure! is a new program designed to bring an introductory presentation on architecture and design to students in 4th through 6th grades. The goal of ArKIDtec-Sure! is to bring the concepts of architecture, engineering, and sustainability to a basic level of understanding that is fun and entertaining. The program was unveiled at the Art Educators of Iowa annual conference in early October. Over 200 students were reached in the first year of this program.

A condensed version of ArKIDtec-Sure! was presented as a breakout session to those schoolchildren attending the George Washington Carver programs at the State Historical Museum in April. Another breakout session on Iowa Architecture was presented in October. Nearly 500 elementary school children from the Des Moines metropolitan area participated in these sessions.

In June, AIS partnered with another Foundation committee to support an IAF presence at ArtFest Midwest, an art show held at the Iowa State Fairgrounds the same weekend as the Des Moines Art Festival. The booth featured an interactive children’s activity – asking children to draw what they thought the school of the future would look like. The organizers of ArtFest Midwest were so impressed with our booth that IAF has been invited back in 2010.

Architectural Walking Tours finished 2009 with an expanded scope of work and a new name. Now known as Architecture in the Community (AIC), the group concluded the walking tour season with an annual attendance of 119 – making 2009 the 3rd-highest year for attendance since tours started in 2002.

AIC’s newest program — the Architecture Month Lecture Series — was launched in April and May to commemorate Iowa Archi-
tecture Month with partial underwriting from Humanities Iowa. The topic for the inaugural series was 100 Years of Iowa Architecture. Originally designed to promote awareness of the summer walking tours of downtown Des Moines, the committee has decided to continue the program in coming years as yet another way to educate the public about the contributions of architecture and design.

The **Community Design Excellence Awards** were founded in 2000 to recognize governmental organizations or subdivisions, nongovernmental not-for-profit organizations, and/or local citizen groups for significant achievements in the promotion of new quality architecture, preservation of existing quality architecture, or community design. The 2009 nomination cycle resulted in four nominations. A three-person jury unanimously awarded this year's honor to the Conrad Public Library with the award presented during the annual banquet of the Iowa League of Cities in late September.

Conrad Public Library constructed a new building and was selected for the building's impact upon the community and the quality of life. Since opening, the library created new jobs, has been used for an increasing number of community-based events, and exceeded visitation estimates within the first five months of operation.

The **Community Design Program (CDP)** started in 2001 to assist rural communities with urban planning and design issues by recruiting volunteer teams of design professionals, including Iowa State University students, to assist community leaders with design challenges using a transparent and inclusive charrette process.

CDP assisted the community of Macedonia (population 321) in July on ways to revitalize their downtown area. Crescent (population 537), a community along the Old Lincoln Highway, was visited in late October for conceptual ideas for improvements throughout the community.
Special Thanks

Every effort has been made to list all of our contributors accurately. We apologize for any omissions and errors. Please contact the Foundation with any corrections. An asterisk (*) designates a firm who supported the Foundation by making the suggested contribution for each employee.

The Iowa Architectural Foundation wishes to thank the following individuals, architectural firms, and corporate entities for their financial or in-kind support received between January 1 and December 31, 2009:

Firm Description
Heery International, Inc. is a full-service A/E firm comprised of architects, engineers, interior designers, and landscape architects and is consistently recognized as a national leader in healthcare and justice facility design. Our commitment is to effective, appropriate design and a high standard of service. Our expertise includes healthcare facilities, medical offices, research facilities, and justice projects, such as courthouses, jails, and prisons. The firm has a track record of projects dating back to 1962 and has worked on over one billion square feet of buildings and hundreds of planning and feasibility studies. Heery is a 1200-person professional services firm with thirty offices throughout the United States and overseas.

Firm Description
Neumann Monson Victor is a firm that provides comprehensive services in the areas of education and public projects. With over 26 years of experience in the Midwest, we believe our firm's long history of repeat clients speaks volumes about our dedication to client service and competence in aesthetic and technical skills in architecture. Our project experience includes programming, feasibility studies, master planning, graphics, interior design, repairs, renovations and remodels, building additions and new construction. Specialized projects have included K-12 facilities, college campuses, recreational and vocational facilities, multi-use conference and support facilities, libraries, banks, fire/police stations and science centers.

Firm Description
Substance is a collaborative design practice that brings together the talent and expertise of some of the region's most recognized design professionals engaged in the disciplines of Architecture, Interior Architecture, Master Planning and Design. We are committed to enduring architectural values rather than ephemeral notions of style and are committed to advancing the discipline in service to our clients.

Woodruff Design offers extensive experience with Design-Build delivery process as our preferred solution for construction projects. This cooperative process includes the owner, design team and builder from the beginning. The team works together to fulfill parallel objectives, including aesthetic and functional quality, budget, schedule oversight and ease of changes during construction. To learn more, please visit us @ woodruffcompanies.com.
AIA-M Member
A licensed architect who is entitled under state law to practice architecture.

A Associate Member
Without architectural license, who is employed, enrolled or participating in circumstances toward licensure; a technical employee under the supervision of an architect; a faculty member in a university program; or a holder of a professional degree but without architectural license.

AIA-E Emeritus Member
A licensed architect retired from the profession.

AIAA-A Member
An AIA Member elevated to Fellowship.

PA Professional Affiliate
Professionals affiliated with design.

Hon. Member
Membership bestowed on persons outside the profession. (Hon. AIA-National; Hon. AIA Iowa-Iowa Chapter)

* Members with an asterisk after their name are the 2010 participants of the Citizen Architect Program. These participants represent AIA's value to their communities through public service and have met the program qualification criteria.

NOTE:
Architect members with the AIA or FAIA designation after their name are licensed as an architect in at least one state. To verify license in Iowa, visit the Iowa Architectural Examination Board at www.state.ia.us/government.com/prof/home.html

~Integrated~

Since 1888, the AIA has been leading the industry with the most widely accepted construction and design contracts. In 2008, there's a new standard – Integrated Project Delivery (IPD). IPD encourages intense collaboration among contractors, owners, architects, and engineers; it’s right from a project’s inception. Maximize efficiency and build on the strengths of your construction and design team using the AIA's new IPD Agreements.

To learn more, visit www.aiacontractdocuments.org to download free copy of Integrated Project Delivery: A Guide, and to purchase the IPD Agreements today.

Concerns regarding climate change have had a tremendous impact on the building industry. Balancing budgetary and ROI demands within a sustainable design framework can be a challenge. AIA Architects stand ready to help you make the most of new techniques, materials, and processes that are as mindful of the environment as they are for your bottom line.

AIA Architects have solutions that can help you reduce energy usage, use more environmentally responsible materials, improve indoor air quality, lower emissions, and create a greener footprint. It is all part of the responsibility we have to ensure a more sustainable future.

AIA Architects walk the walk on sustainable design.
It’s not funny when it happens to you.

Protect your project with AIA Contract Documents. No one likes to be left pointing the finger. Having the right contracts in place can reduce risks, prevent conflicts and with our Integrated Project Delivery (IPD) Multi-Party Agreement, create more successful collaborations. Easy to use, widely accepted and balanced fairly for all parties involved – get off to a smart start with AIA Contract Documents.

LATEST DOCUMENTS INCLUDE IPD MULTI-PARTY AND FEDERALLY FUNDED PROJECT AGREEMENTS.
To learn more, call 800-242-3837, visit aia.org/contracdocs or follow us on Twitter @AIANational.

Get the LATEST VERSION at aia.org/contracdocs

"We need to talk."
The Chapter

Over 100 years ago, in 1904, eight architects in Des Moines elected to form a subgroup of The American Institute of Architects. Today, more than 800 AIA Iowa members belong to five sections: Central Iowa, Cedar Rapids-Iowa City, Eastern Iowa, Northwest Iowa and Southwest Iowa. Individual membership consists of: Member (registered architect); Associate Member (does not hold a license to practice, but holds a professional degree in architecture or is employed by an architect in a technical capacity); Professional Affiliate Member (affiliated design professional), or Allied Member (allied to the architectural field). AIA Iowa currently list 97 architectural Firm Members.

AIA Iowa Mission Statement

I. Build Public Awareness of the Value of Design
   a. Provide educational opportunities, concepts and materials to the public
   b. Promote and chronicle Iowa architects and architecture
   c. Recognize public contribution to architecture
   d. Celebrate and protect Iowa's architectural heritage

II. Promote Learning of the Art and science of Architecture
   a. Provide opportunities for learning
   b. Encourage the pursuit of knowledge
   c. Promote high quality architectural education

III. Promote a Better Climate in which to Practice
   a. Provide information about selection of design professionals
   b. Interact in legislative and regulatory processes
   c. Encourage dialogue between members of the construction industry
   d. Provide access to information
   e. Assist members to identify future opportunities and threats and help them plan for change

IV. Encourage Diversity within the Profession, and Build an Appreciation of that Diversity
   a. Recognize and encourage diversity of professional pursuits
   b. Foster greater demographic and cultural diversity within the profession

V. Service to the Public

Work of the Chapter

Communications - AIA Iowa serves as a link between chapter members, national and regional AIA and other related industry organizations, such as:

- Allied Member program
- Iowa Construction Industry Forum
- Architectural Examining Board
- Construction-related associations
- Iowa Architectural Foundation
- USGBC, Iowa Chapter
- Iowa Environmental Council

Information - The chapter provides information about architecture, hiring and working with architects, design and the chapter and its activities to members and the public.

AIA Iowa Publications

- Iowa Architect, a quarterly review of Midwestern design that includes this annual Directory
- *Addenda*, a regular electronic membership newsletter
- *ARCH-E-NEWS*, a weekly electronic newsletter for members
- *QBS: A Guide for Selecting an Architect or Engineer For Public Owners*
- *Partnering: A Concept for Success*
- *Good Design is Good Business*
- *A Century of Iowa Architecture*, a book about 20th Century Architecture in Iowa

Clearinghouse - other publications about architecture

- AIA Construction Documents
- Code Books
- National Booklets - how to use the services of an architect
- *You and Your Architect*
- *Home Delivery*

AIA Iowa Web site: www.aiaiowa.org

Programs and Activities - AIA Iowa sponsors programs and activities throughout the year for architects' education and public awareness about design, and to recognize contribution to the profession.

- 2010 AIA Iowa Convention, "Push | Pull", September 30-October 1
- "Architecture Month", April 2010
- 2010 Spring Meeting, "Reconnect"
- Cedar Rapids/Iowa City/Architects Golf Outing
- Allied Member Spring & Fall Events
- Professional Development Seminars
- Excellence in Design Awards
- Medal of Honor
- Citizen Architect Program
- Habitat for Humanity

Outreach - The chapter sponsors programs to build awareness of design issues and recognize the public's contribution toward design excellence.

- Construction - a design/build competition to create structures made of canned items
- Insert in the *Iowan* magazine
- Photography Exhibit at the Iowa State Fair
- Traveling photographic displays
- Insert in seven Iowa newspapers
- Honorary Member Award
- Education Award
- Educational scholarships - presented to architecture students at Iowa State University

Legislative Activity - AIA Iowa works to promote state laws that enhance the business environment for members and protect the health, safety and welfare of the public.

- Lobby state and federal representatives on issues affecting the built environment and the practice of architecture
- Grassroots - AIA's national leadership and government affairs conference
- Architects Day on the Hill

Administration - The chapter office handles routine administrative tasks for the chapter and the programs it promotes.
AIA Iowa is an invaluable resource for the Iowa architects and the public they serve. It represents the power of a unified profession established to deal with the issues and concerns facing every practicing architect.

2010 AIA Iowa Committees

2010 AIA Iowa Annual Convention
Chair: John Darveau, AIA
Phone 515.283.5101; john@struxture.com
To organize all aspects of the annual convention, which features architectural products and is highlighted by nationally-recognized speakers.

Intern Development Program (IDP)
Chair: Craig Shannon, Assoc. AIA
Phone: 515.633.2941; craigs@invisionarch.com
To guide architectural interns through their apprenticeship via the IDP, which establishes a council record to monitor the training process.

Iowa Committee on the Environment (ICOTE)
Chair: Jonathan Ramsey, AIA
Phone: 515.974.6462; jramsey@bnim.com
To promote environmental leadership. Seek to make environmental considerations and sustainable design integral to the practices of Iowa Architects.

2010 AIA Iowa Committees

2010 AIA Iowa Annual Convention
Chair: John Darveau, AIA
Phone 515.283.5101; john@struxture.com
To organize all aspects of the annual convention, which features architectural products and is highlighted by nationally-recognized speakers.

Awards and Recognitions
Chair: Jeff Wagner, AIA
Phone: 515.288.9536; jwagner@hlkb.com
To recognize those whose talent and/or service are exemplary in the field of architecture or a related field.

Construction Industry
Chair: Robert Carlson, AIA
Phone: 319.338.0066; rcarlson@cdt-pc.com
To increase communication between architects and the construction community.

Disaster Assistance
Chair: Thomas Hurd, AIA
Phone: 641.423.6395; spatialdesigns@earthlink.net
To maintain a resource kit, volunteer group and contacts concerning disaster assistance.

Diversity
Chair: Danielle Hermann, AIA
Phone: 515.309.0722; dhermann@opnarchitects.com
To explore and address relevant issues related to diversity within the Iowa architectural community, and make recommendations toward and actively assist in the development of programs and initiatives that foster and sustain cultural breadth and inclusion.

Emerging Professionals
Chair: Jesse Bulman, AIA
Phone: 319.338.7878; jbulman@neumannmonson.com
To provide interns and young architects guidance, information and a network for intellectual and social interaction.

Government Affairs
Chair: Bill Dikis, FAIA
Phone: 515.229.3446; bildikis@msn.com
To communicate legislative concerns and lobby on behalf of the members and their practices for public health, safety and welfare.

Intern Development Program (IDP)
Chair: Craig Shannon, Assoc. AIA
Phone: 515.633.2941; craigs@invisionarch.com
To guide architectural interns through their apprenticeship via the IDP, which establishes a council record to monitor the training process.

Iowa Committee on the Environment (ICOTE)
Chair: Jonathan Ramsey, AIA
Phone: 515.974.6462; jramsey@bnim.com
To promote environmental leadership. Seek to make environmental considerations and sustainable design integral to the practices of Iowa Architects.

Iowa Architect Magazine
Editor: Tim Schroeder, AIA
Phone: 319.338.7878; tschroeder@neumannmonson.com
To showcase the best in Iowa and Midwest architecture, and to serve as a guide for design, the arts, literature and innovative products and technology for its readers.

Membership
Chair: Linda Schemmel, AIA
Phone: 515.222.3620; linda.schemmel@wdm-ia.com
To increase and maintain the membership of The American Institute of Architects, Iowa Chapter (AIA Iowa).

Professional Development
Chair: Pete Evans, AIA
Phone: 515.288.3141; pevans@rdgusa.com
To provide continuing education and intellectual discussion on important issues concerning the profession.

Public Relations
Chair: Tim Hielkema, AIA
Phone: 515.974.5162; timhielkema@msn.com
To improve the public’s awareness of the value of design through special events, literature, displays and the Internet.

2010 Spring Meeting
Chair: Rick Seely, AIA
Phone: 515.309.0722; rseely@opnarchitects.com
To organize the 2010 Spring Meeting, “Reconnect”.

Tom Kaldenberg is a Power Thinker who has played a crucial role in implementing Kirkwood Community College’s (KCC) energy-efficiency plan. During the last three years, KCC has used Alliant Energy’s Commercial New Construction (CNC) program to complete five projects and has saved over 2,300,000 kilowatt hours (kWh) of electricity, $172,000 in annual energy costs and received $327,000 in incentives. At Alliant Energy, we’re Power Thinkers, too — always looking for ways to help our business customers save energy and work smarter. CNC provides free energy design analysis to help your customers select a package of cost-effective, energy-efficient strategies for new construction projects.
