Wiring board operation

Board room lighting

Planned Lighting Essential for Accuracy In Fort Wayne Manufacturing Operation

Light as a tool for seeing enters into practically every phase of work at Fort Wayne Tool & Die, Inc., manufacturers of stator winding equipment. From the time the intricate drawings for the equipment are prepared, until the piece is produced, detailed eye-work is required. Proper lighting here helps accuracy, speed, and safety.

When shadows come between people and their work, they are less productive and less efficient. Shadows cause eyestrain, and eyestrain causes fatigue, tension and errors. The remedy in most cases is evenly-distributed lighting. Buy the right equipment and install it right.

In the office, good diffused lighting wipes away harsh contrasts. Shadows force clerical help to bend closer to their work and the result-

ing fatigue will increase chances of error. Proper illumination can improve morale and reduce such errors.

In the shop, accidents go down and production goes up as lighting improves. Case after case of actual experiences have proven this. Shadows slow down worker's seeing speed and time is wasted. Proper lighting eliminates these drawbacks and reduces accidents.

There just isn't a blanket answer to shadows and other lighting problems. The right quality and the right quantity of lighting are important. Proper placement of proper fixtures means a lot, too. Before you make any changes in your lighting system, we suggest you invite your I&M Power Engineer in for free consultation. He'll help you get the best lighting for the job and the best lighting for your money.

Accuracy in seeing can prevent costly mistakes in drafting rooms. Uncontrolled or improper light drapes work in shadow—an important line on a drawing may be left out. Evenly distributed lighting chases the shadow.

For Information!

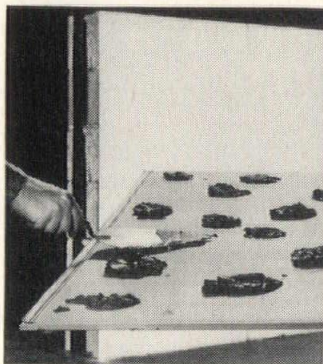

Directions for a new method of insulating masonry structures when you specify quality, simplicity, longevity and economy

1. Apply Styrotac™ bonding cement.

2. Press Styrofoam® into place.

3. Apply Styrotac bonding cement.

4. Press wallboard into place.

This new method—developed by Dow—gives you the quality of double-laminate walls with just a single thickness of wallboard; the excellent insulating values of Styrofoam brand insulation board without furring strips or other time-consuming preparations. It's so simple. No more unsightly "nail pops" or nail holes to fill, because there are no nails. No more insulation "hollows." No more wallboard warping or bowing. All this at a savings in time and money!

TO THE POINT

WHY NOT BE SLIM WITH YOUR TRIM?

Something New Under The Sun happened when architects began specifying the use of thin trim on metal door frames. In many cases, they've asked for trim as thin as one inch.

Why? Narrow trim offers the architect far superior aesthetics. With new, narrow line frames, he can design more graceful entranceways to offices and other rooms—and he is able to vary the dimensions of the frame to the exact size he needs—often to suit the building module.

Heavy, old-fashioned door frames with 2" or more trim can stand out obtrusively in hallways of the modern building.

Last, but not least, narrow line trim is somewhat less expensive, proving you often can get a superior product for less money.

You can get almost any Overly door frame with narrow line trim. For more information, write for our Door and Frame Catalog.

* * *

There's Too Much Hot Air in the trade press by self-indulgent manufacturers complaining that architects ask for too much specification information and technical data in catalogs and other literature. Overly does not agree. You'll find you can make direct take-offs from Overly catalog details. We believe this is one of the most important services we can offer architects.

* * *

"Hooray," We Said when we read a newspaper story of how a metal fire door saved \$200,000 of products from being destroyed by fire at the Knowles-Fisher Corporation in Silver Creek, New York. Fire doors save lives, too. We've been telling people for years. We wish more people would listen.

***Specify* TROUBLE-FREE COMFORT!**

***Specify* LOW-COST OPERATION!**

***Specify* GAS AIR CONDITIONING!**

In addition to a wide choice of equipment (3 to 1000 ton sizes), GAS Air Conditioning offers other important advantages.

Flexibility of Location

Minimum vibration and low noise level of Gas equipment permits installation from basement to roof top.

Structural Savings

Dead loading can be used with Gas equipment as opposed to live loadings required by large, high speed equipment.

Year-Round Use of Boiler

Using Gas-fired heating boiler to supply steam or high temperature hot water to summer air conditioning equipment improves annual load factor of boiler.

Awards in Architecture

Seven Indiana architects have been honored for their outstanding designs in the Indiana Society of Architect's second Triennial Awards in Architecture competition. The awards were announced at the ISA's annual banquet on May 25th.

Jury members were Mr. Charles Graves, AIA, head of the School of Architecture at the University of Kentucky at Lexington (chairman); Mr. Joseph D. Baker, AIA, well-known Newark, Ohio, architect; and Mr. Charles Vaughn, business editor of the INDIANAPOLIS NEWS. Harry Hunter was overall chairman of the Honor Awards program this year, assisted by H. Roll McLaughlin, Charles Lowe, Roger Frey and John Guyer.

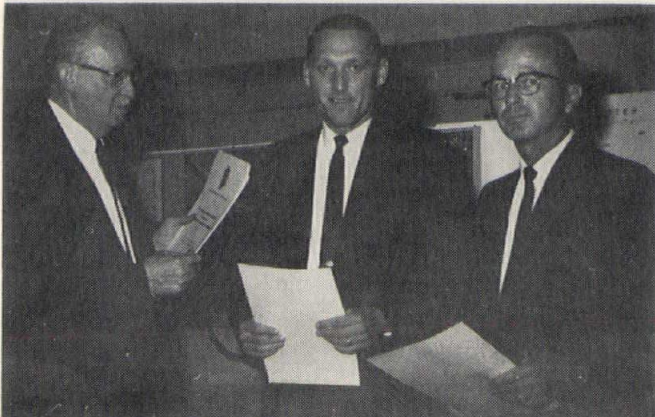

In making the presentations at the banquet, Chairman Graves quoted from the preceding Triennial Awards report in his general remarks:

"The need and use for an Honor Awards Program that will bring to the public recognition within the profession of outstanding works of architecture fulfills one of the important aspects of public information for the American Institute of Architects. The greatest awareness of the program by the general public and the influence of the awards make it essential that the jury recommend only those solutions which do in fact encourage and enlarge the visual environment through good architecture."

The specific citations for each award were:

FIRST HONOR AWARD: IRVING CONCRETE MATERIALS OFFICE BUILDING, Greenfield; Owner: C. C. Irving; General Contractor: A. G. Oster Company, Wilkin-son; Architects: Johnson, Ritchart & Associates, Anderson.

"The architect, with clarity and simplicity, has provided a recognizable image for his client in symbolizing his product through the use of form and material. The jury was par-

President Wayne Weber presents First Honor Awards to architect Jim Johnson and owner C. C. Irving, for the Irving Materials Office Building near Greenfield.

ticularly pleased with the use of lighting and the sculptured wall in the solution."

FIRST HONOR AWARD: DELTA ZETA SORORITY HOUSE, Greencastle; Owner: Delta Circle, Inc.; General Contractor: Ostram Construction Company; Architect: Evans Woollen, AIA, Indianapolis.

"The solution is a direct and positive architectural statement, expressing in simplest terms the complex functioning of group living but still possessing appropriate dignity and serenity. The jury wishes to commend the clarity of structure and the selection and use of materials."

Jerry McCarthy accepted both a First and a Second Honor Award for Evans Woollen & Associates. Jury Chairman Charles Graves read all citations.

SECOND HONOR AWARD: RESIDENCE FOR DR. AND MRS. SYLVAN H. PERLOV, Indianapolis; Owner: Dr. and Mrs. Sylvan H. Perlov; General Contractor: Harold Honderick, Indianapolis; Architect: Evans Woollen, AIA, Indianapolis.

"The jury was impressed with the simplicity in which the clients' program was fulfilled and especially in the quality of the central living space and the enclosed court, providing a light and spacious area for contemporary living."

SECOND HONOR AWARD: DENTAL OFFICE BUILDING, Lafayette; Owner: Dr. Paul E. Draper; General Contractor: Casper Rausch, Lafayette; Architect: Elliott H. Brenner, AIA, Lafayette.

"This solution shows a warm, thoughtful use of materials without elaboration throughout the building. The jury particularly commends the architect's recognition of site in present and future development."

Awards in Architecture

(Continued from Page 7)

Robert Knapp, AIA, accepts his firm's Second Honor Award for the Faith Evangelical Lutheran Church in Evansville.

SECOND HONOR AWARD: FIRST UNIT, FAITH EVANGELICAL LUTHERAN CHURCH, Evansville; Owner: Faith Evangelical Lutheran Church; General Contractor: Nix Construction Company, Evansville; Architects: Hironimus, Knapp, Given Associates, Evansville.

Gil Jacobs receives a Special Mention Award from President Weber for McGuire & Shook, Compton, Richey & Associates' Hellenic Orthodox Church, Indianapolis.

"The jury would like to recognize the use of materials in this well-modulated, architectural statement softened by the use of natural stone and wood."

SPECIAL MENTION AWARD: HELLENIC ORTHODOX CHURCH, Indianapolis; Owner: Hellenic Orthodox Church; General Contractor: Gwaltney Construction Company, Indianapolis; Architects: McGuire & Shook, Compton, Richey and Associates, Indianapolis.

"The jury wishes to commend the architects for interpreting the "feeling of traditional Byzantine, the architectural inheritance of the denomination" into contemporary form. The richness in ornament and use of materials are especially thoughtful and indicate the success of what the jury felt to be considerable research and study."

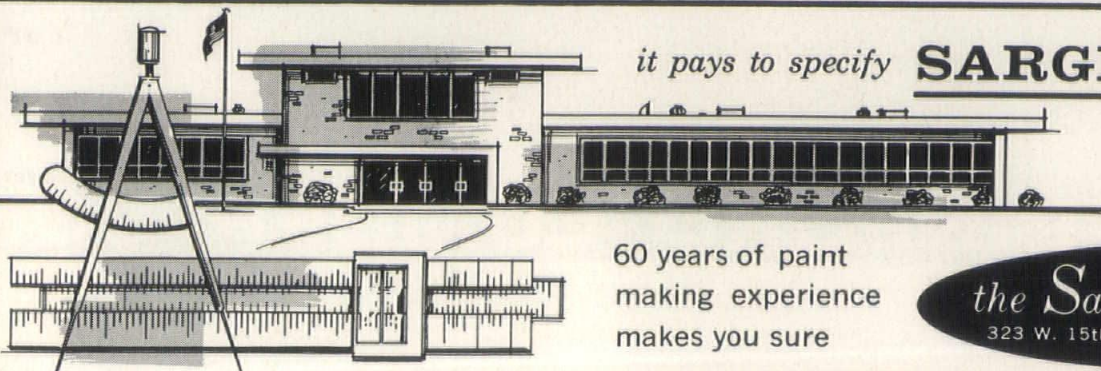

SPECIAL MENTION AWARD: FIRST PRESBYTERIAN CHURCH, Elkhart; Owner: First Presbyterian Church; General Contractor: Sollitt Construction Company, South Bend; Associated Architects: Wiley & Miller, Inc., and Harold E. Wagoner, South Bend and Philadelphia, Pa.

"The jury wishes to especially commend this solution for appropriateness of the interior space as a place of worship. Thoughtful form, architectural detail and materials, in association with the work of other artists has provided a dignified, yet warm and inviting space for religious activity."

President Weber congratulates Architect Richard P. Miller, of Wiley & Miller, and Orban Workinger, a trustee of the church on their awards for the First Presbyterian church.

A total of twenty-five submissions were considered by the jury: all buildings constructed in Indiana during the last three years and designed by resident Indiana architects were eligible.

ISA Convention Notes

Nearly 100 members of the Indiana Society of Architects, plus their wives, guests, and other members of the construction industry, attended all or parts of the three-day Annual Convention of the Indiana Society of Architects, held Thursday, Friday and Saturday, May 24-26, at the Marott Hotel in Indianapolis.

Mr. Walter Scholer, Jr., AIA, of Lafayette, was selected as the 1962-63 President of the ISA; Mr. Scholer has been a member of the Society's Board of Directors for the past three years, and during the last two years he served as Vice President and chairman of the ISA-AGC Joint Committee.

Elected ISA Vice President was Mr. Alfred J. Porteous, AIA, of Indianapolis, a member of the Board for the past two years, and chairman of the ISA Scholarship Committee.

Mr. Charles J. Betts, AIA, of Indianapolis, was elected Secretary; Mr. Betts is a former president of the Society and has been a member of the Board for several years.

The newly-elected Treasurer of the ISA is Mr. Ivan Ray Dahlgren, AIA, of Ft. Wayne. All officers were elected by the Board of Directors, as provided for in the by-laws, during the annual convention.

An intensive and stimulating program was presented under the direction of Mr. Don Fisher, AIA, program chairman, covering changes in educational techniques and their resultant effect upon school design; urban affairs and civic

planning; and expanded architectural services.

Among the outstanding speakers at the convention were Mr. Harold B. Gores, president of Educational Facilities Laboratories, Inc., New York City; Mr. Grady Clay, Honorary AIA, real estate and building editor of the Louisville, Kentucky, "Courier-Journal" and editor of LANDSCAPE ARCHITECTURE; Mr. Robert F. Hastings, FAIA, of Smith, Hinchman and Grylls, Detroit, Michigan; Mr. Eugene J. Mackey, AIA, of Murphy and Mackey, St. Louis, Missouri; Mr. Linn Smith, of Linn Smith Associates, Inc., Birmingham, Michigan; and the staff and students of the graduate school of civic planning of the University of Illinois.

Excerpts from the remarks made by each speaker will appear in future issues of the INDIANA ARCHITECT.

* * *

Don Gibson, executive secretary of the Indiana Society of Architects, has been made an Honorary Associate Member of the Society in recognition of his work for the architectural profession. Announcement of the honor was made at the Society's annual banquet on May 25th by ISA President Wayne M. Weber.

Speaking of our Executive Secretary, he is also the very proud father of a son, Charles James Gibson, born 4:30 A.M., June 11th, in Indianapolis. Son and mother, Dee, are both doing well, and father is slowly recovering.

Mrs. Wayne Weber, the Society's first lady for the past two years, and her husband listen to Program Chairman Don Fisher's welcoming remarks at the annual banquet.

Attending the ISA convention were a number of Kentucky architects, including James Allan Clark of Lexington, Ky., AIA Director of the East Central Region. At right is Mrs. Fisher.

Republic Savings and Loan Association Building, Dallas, Texas. Architects: Fisher & Jarvis, AIA, Dallas. Engineer: Edward L. Wilson, Dallas

Cited for design excellence by the Texas Society of Architects . . .
**modern concrete building blends
 spectacular beauty with practical economies**

Selected as an outstanding example of contemporary Texas architecture, the new Republic Savings and Loan Association Building was chosen for exhibition during the State Fair of Texas.

Among many interesting features, the 4-story structure with lower-level parking is distinguished for its graceful honeycomb cast concrete solar screen. It shields the massive southern exposure against peak solar heat loads—yet admits plenty of daylight. Its design reduced air-conditioning requirements by 10 tons, saving \$6,000 in equipment plus continuing savings in operating costs.

Fashioned with white portland cement, the lacy solar screen provides a pleasing contrast with adjacent precast concrete panels of brown and cork-colored marble aggre-

gates. Even the concrete terrace steps and floors add decorative interest with their exposed aggregate surfaces.

Structural strength, fire-safe qualities and construction economies were important factors in the choice of concrete for this building. Time, labor and money were saved with the multiple use of forms in the building of concrete frames and pan joist floors. And because of concrete's ready availability, there was no time lost in scheduling.

From every point of view—construction efficiency, beauty, durability and low maintenance costs—modern concrete delivers more for the money!
