

INDIANA ARCHITECT

JUNE 1964

GALAXY
PAT. NO. 193-002

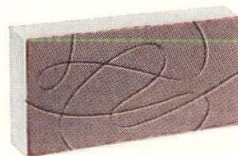

STARK

SCULPTURED STRUCTURAL GLAZED FACING TILE

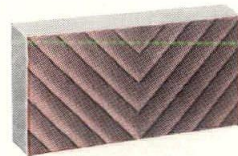

... DESIGN VERSATILITY

Starks' exclusive deep-sculptured patterns provide a new dimension to structural tile walls. These 5 contemporary designs offer design flexibility, permanent glazed finish, initial economy and the lowest possible maintenance. Stark Sculptured Glazed Tile is available in 8W series with face dimensions of 8" x 16" and in all of Stark's engineered colors. Galaxy pattern is also available with 2-color glazing . . . indented stars may be accented with harmonizing or contrasting glaze.

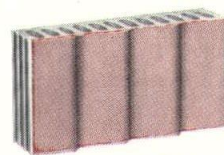

FREE FORM

. . . Indented free-form line makes continuous pattern when installed running bond.

HERRINGBONE

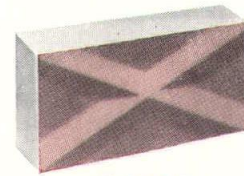

May be installed running or stack bond. Forms attractive overall pattern.

LOUVER

Pat. No. 195-334

Strong vertical form may be installed running or stack bond. Ideal to create feature strips.

CLASSIC

Ideal pattern for stack bond. Particularly suited for decorative inserts and panels.

FULL SERVICE

We will be most happy to be of service at any time during your planning, specifying, bidding or building. Full information including sizes, colors, samples and prices are available . . . You'll find us convenient to write or call.

LUTHER LEE ODA—INDIANA REPRESENTATIVE

P. O. Box 17

BLUFFTON, INDIANA (Indianapolis ME 4-1361)

Mr. Architect:

...for interiors that are compatible with your original concept of the building...

Advertising Director

L. D. KINGSBURY

The Indiana Architect is the sole property of the Indiana Society of Architects, AIA, and is edited and published monthly in Indianapolis by Don E. Gibson & Associates, P.O. Box 55594, Indianapolis 5, Indiana. Phone TI 9-2103.

Current average monthly circulation, 3,400, including all resident Indiana architects, school officials, churches and hospitals, libraries, selected public officials, and members of the Indiana construction industry. Further information available on request.

The traditional and picturesque "tools of the trade" are presented in the artistic grouping on this month's cover. Originally the basic requirements for any Architect's office, these implements have been largely replaced by more modern and complex instruments, less photogenic but far more practical for today's modern and complex architectural practice.

This Roster Issue cover is an original created by Mr. Robert Willis of Design Associates, Indianapolis, art consultant for the INDIANA ARCHITECT.

why do creative architects call on Belden Brick?

8

6-64

***because Belden Brick provides
over 200 imaginative variations
in color, texture and size!***

Architectural creativity is most effectively interpreted when distinctive colors, textures and sizes are available. And that's why creative architects call on BELDEN. Because BELDEN provides over 200 imaginative variations of brick, perfectly adaptable to offices, churches, schools, factories and homes. Your nearest BELDEN Dealer will gladly provide samples and new color brochure.

Plan for Tomorrow with Year-Round **GAS** Air Conditioning

■ In the design of modern structures with unusual shapes or large room areas, architects and engineers are turning more and more to GAS for year-round air conditioning. Only GAS provides a low cost energy source, quiet operation, fewer moving parts, long life expectancy, economical installation and proven performance.

■ Because of its unique flexibility, GAS air conditioning maintains all rooms at constant temperature all year, whether large or small or with high or low ceilings.

■ GAS air conditioning offers dependable, silent performance with maintenance and operating costs far below those of any other fuel.

■ Whether you are designing a building or a home, *do it tomorrow's way . . . with GAS year-round air conditioning.*

■ Citizens Gas Air Conditioning Department is ready to assist you with engineering and design service.

**Put the man from BARCOL
in your starting lineup!**

**HE WILL PREVENT COSTLY DOOR PROBLEMS
FOR YOU . . . SAVE MONEY FOR YOUR CLIENT!**

Your Barcol dealer will work directly with you, or as your representative to your client — to help analyze and establish the performance requirements of overhead-type door equipment *at the preliminary planning stage.*

Consider him a member of your staging team.

Using the exclusive Door System Analysis Planning Guide, the man from Barcol will *analyze client requirements; identify the penalties of inadequate, inferior-quality doors; justify initial cost of door equipment and determine a firm, accurate budget figure (with alternate choices, if required.)*

Get to know the man from Barcol, he'll help you solve client door problems **BEFORE THEY HAPPEN!**

There's a BARCOL man near you...

4-WAY FLOOR DECKING

**Sub-flooring, Sound Deadening, Underlayment
and Weatherproof Protection ALL IN ONE APPLICATION!**

For garden and low-rise apartments—for the better quality home

SAVE ON SUB-FLOORING—These 1 11/32" panels are installed right on floor joists, even over crawl space (they're termite and fungus-protected). All edges are tongue and grooved—precision cut for uniform load bearing.

SAVE ON SOUND DEADENING—Each 2' x 8' panel materially reduces floor-to-floor noise transmission . . . rooms are quieter.

SAVE ON UNDERLAYMENT—No additional material to fit and install! "4-Way" Decking is the underlay-

ment for wall-to-wall carpeting. Composition flooring or resilient and ceramic tile can be laid sooner!

SAVE ON WEATHERPROOF COSTS—"4-Way" has famous Homasote weatherproof construction that provides constant resistance to cold and dampness. Precision tongue and grooving - draft-free floors.

Approved by B.O.C.A. (#54-15), S.B.C.C. (6330) and I.C.B.O.

TEE-FLOOR

CONCRETE JOIST FLOOR AND ROOF SYSTEM

No Forming . . . Rigid . . . Fire-safe . . . Attractive . . . Acoustical . . . No Maintenance

THE TEE-FLOOR SYSTEM, developed by the American Block Company is a simple economical method of constructing fire-safe floors and roofs. It is suitable for small as well as large areas, is very versatile and can be adapted to many types of construction. Any competent contractor can install TEE-FLOOR without difficulty.

TEE-FLOOR consists of reinforced concrete T-shaped joists and lightweight concrete filler block, over which a minimum 2-inch concrete slab is cast,

resulting in a monolithic concrete structural floor or roof. Available in two styles . . . one has a flat ceiling, the other a recessed or beamed ceiling.

Write or phone for folder and detailed information at once. No obligation.

63 Bodies Taken From Rest Home

NORWALK, O. (UPI) — The last body of the 63 elderly patients who died in a fire at a rest home here has been removed from the ruins.

An investigation has been launched by Gov. James Rhodes into the cause of the tragedy. Authorities continue the grisly and difficult task of identifying the charred bodies.

YOU CAN STOP SUCH TRAGEDY

Specify TOTAL FIRE SAFE Concrete Products by General Dredging Company

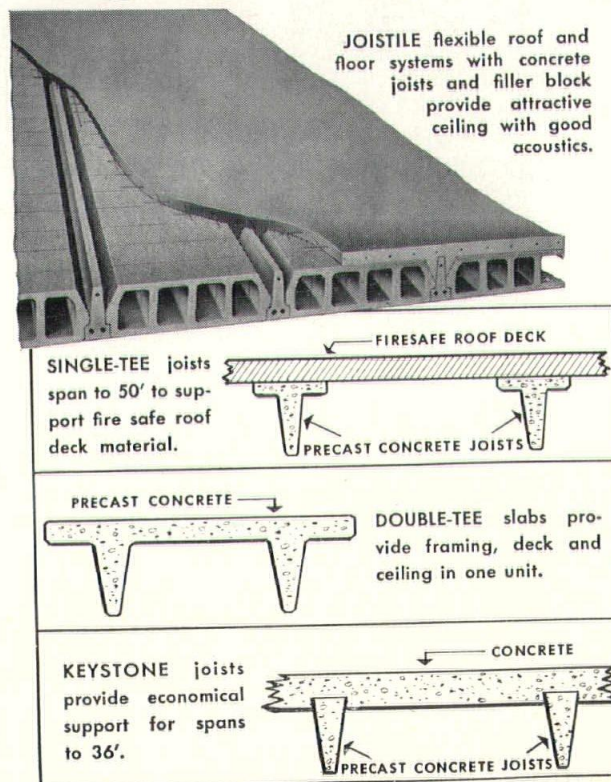

63 persons died in this tragic fire which destroyed a rest home near Norwalk, Ohio on November 23, 1963. Such a catastrophe is unnecessary because buildings can be constructed of fire safe materials that cannot burn. Particular attention must be given to roof and ceiling materials and architects who specify fire safe floor and roof systems or precast concrete columns and beams can be assured that such a tragedy will never strike.

Call or write for complete details now. Detailed literature and engineering assistance available.

INDIANAPOLIS, INDIANA

A new architectural club the "Essayons" has been formed by students in the Architectural Engineering Technology program at the Purdue University Indianapolis Regional Campus. Advisor for the new club is Mr. William E. Davis, AIA, registered architect and instructor at the regional campus.

The purposes of the new organization officially recognized recently are:

1. To study architectural design, structural mechanics, and landscaping.
2. To provide information concerning the Architectural Engineering Technology curriculum to members of the AIA.
3. To provide counseling for students interested in the Architectural program.
4. To promote plans for a School of Architecture in the state of Indiana.
5. To provide extra curricular activities.

Membership is open to students interested in architecture at the regional campus. Officers include Wayne Schmidt, President; John Boice, Vice President; and David Yager, Secretary-Treasurer.

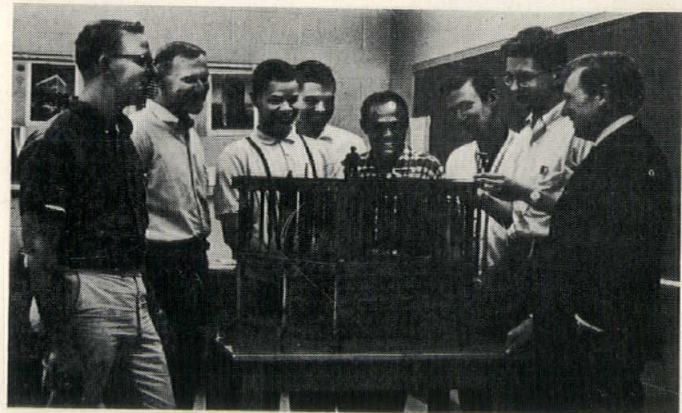

The new club is concerned about the lack of knowledge about the practice of architecture on the part of high school students and expect to initiate a program of personal contact to inform high school seniors.

One project in the near future will be the presentation of an award for the most complete set of house plans done in class. Judging of the project would be done by area architects and contractors.

Future plans also include informal talks or seminars by members of the building trades, prominent architects and contractors. Field trips, movies and other visual aids will be used to develop professional interest and appreciation for architectural achievement.

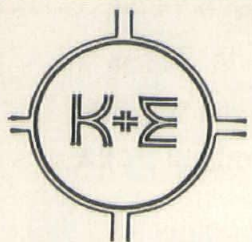

The name of the club, "Essayons," sums up the central focus of its purposes, it means "We dare, we try, we do."

Architectural Club Formed at Purdue Extension

Essayon Club Members examine a scale model of a poured concrete structural frame. Left to right: Wayne Schmidt, Charles Sells, Charles Smith, George Trosky, John Boice, Dave Snowberger, David Yager and Faculty Advisor, William E. Davis, AIA.

A-E Technology Program Offered

Over fifty students are now enrolled in the Architectural Engineering Technology program at the Indianapolis Regional Campus. There was a 25% increase during the last year and another 25% increase is expected for the next academic year.

In addition to the fifty-three students who have declared their major, there are a substantial number of students who are taking Architectural Engineering Technology courses to determine their interest in an effort to make a decision on their major area of study. Thirteen students will graduate this year with the graduating class expected to grow rapidly in future years.

Intelligent professional architects have known for years that an architect should be backed up by two or more highly skilled technicians who can produce working drawings and specifications. In the past many of these technicians came from the drop-outs of engineering colleges. But, more and more, training in engineering has changed in character and these drop-outs are no longer prepared for the technician role.

The architectural engineering technician should know how a building goes together and be prepared to make structural calculations; he

should have knowledge of various structural systems together with a background of architectural history to understand the long and fascinating process of human achievement. The technician should know the strong points and limitations of building materials and should know the fundamental problems of heating, cooling, and lighting a modern building.

Purdue's program at the Indianapolis Campus is one of three, with others located at the Calumet and Ft. Wayne Regional Campuses. Recent moves have incorporated the program within the Division of Applied Technology which is now a part of the newly formed school of technology.

A department head, Professor Charles Hut-ton, at Calumet has been designated to provide administrative direction for the expected rapid growth of the program.

The program leads to an associate degree in Applied Technology at the end of two years. It is expected that top-flight students of the program will be able to continue toward a baccalaureate degree in the new school of technology if they so desire.

Architectural firms in Indiana should be aware of this source of trained personnel which Purdue is now providing. This program which is filling the gap between high school and complete professional training is of high quality and consists of the following courses:

Architectural Drawing, English Composition, Algebra, Physics: Mechanics and Heat, Psychology, Systems of Construction, Frame Construction, Building Materials, Mechanics of Materials, Slide Rules and Graphs, Trigonometry, Physics: Electricity—Sound and Light, Building Regulations, Concrete and Masonry Construction, Elementary Surveying, Electives, Principles of Speech, Introductory Analysis I, Specifications and Contract Documents, Elements of Law, Technical Report Writing, Estimating, Electives, Introductory Analysis II.

*For outstanding
wall performance . . .*

MASONRY CEMENT

Bring out the best in your wall designs. Specify mortar made with masonry cement. Precision-made, masonry cement encourages good workmanship. It takes the guesswork out of making mortar as specified, makes tighter joints with uniform color and good bond strength. Simplifies and speeds work because everything except sand and water is delivered in one bag . . . and no special skills are needed for mixing. Masonry cement has excellent workability and high water retentivity thus assuring good wall performance. More and more architects are specifying mortar made with masonry cement for use with the newer forms of concrete masonry, as well as brick, tile, stone and glass.

no

Neither termites, nor pests, nor vermin of any kind can penetrate a wall built of durable concrete block. Its barriers are insurmountable to insect denizens.

Of course, this is simply another of the multitude of advantages offered by this versatile material. In fact, modern architects are freshly discovering and investigating the possibilities of concrete masonry. Their

efforts have virtually turned it into a new building medium.

Today's concrete masonry offers structural durability, excellent insulating qualities, and above all, an exciting creative challenge.

When all is said and done, its only disadvantage seems to be its complete indigestibility.
