WHO'S RESPONSIBLE FOR FICKLE BUILDINGS?????

MECHANICAL CONTRACTORS PROGRESS Startling statements are now commonplace. So

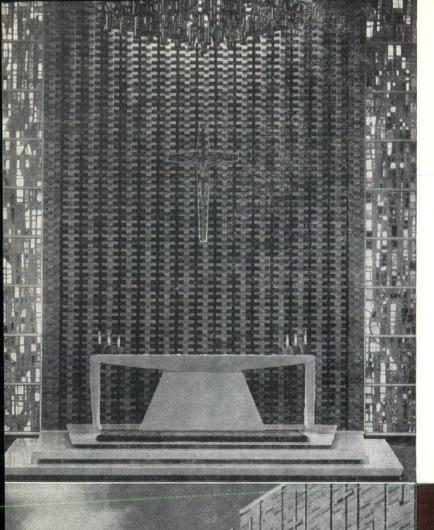

COUNCIL OF CENTRAL INDIANA We'll make a commonplace statement startling. ■ Briefly, today's modern structures have achieved a new height of sophisticated fickleness. How's that for a start? Now, if you would, let us explain: The typical commercial or industrial building contains several thousand human machines in addition to the mechanical equipment you normally associate with buildings. Each one requires fuel, generates heat, discharges a variety of waste products and desires certain levels of creature comforts. Truly, the buildings must be fickle. And the MECHANICAL **CONTRACTOR** is responsible! ■ Through his efforts and the vital systems which he

installs and maintains, the building is heated, cooled and ventilated; elaborate transportation systems carry an amazing array of fluids and gases for remarkable distances under extraordinary extremes of temperature and pressure. Complex controls govern these systems, making their response automatic to the needs of the building. ■ Thus, the modern building is not only fickle-it's dependably fickle. The MECHANICAL CONTRACTOR is uniquely qualified to accept the responsibility for making and maintaining dependable fickleness in buildings - particularly yours. ■ Call him and see! ■ AND RE-MEMBER: When considering construction, it's wise to first see a Registered Architect and Consulting Engineer.

MECHANICAL CONTRACTOR'S PROGRESS COUNCIL OF CENTRAL INDIANA

Indianapolis, Indiana 46220

Belden makes the decorative difference inside & outside

The architect specifies BEL-DEN BRICK for many reasons. Product quality is a prime consideration. Dependability . . . the ability to produce and deliver is another factor. But of equal importance, the architect specifies BELDEN because of the unlimited selection — over 200 variations in color, texture and size of brick. It makes the decorative difference . . . inside and outside.

Your nearest BELDEN Dealer will gladly provide samples and our new full color brochure.

The INDIANA ARCHITECT is the sole property of the indiana Society of Architects, a state association of The American Institute of Architects, and is edited and published every other month in Indianapolis, Indiana (editorial-advertising office address 300 East Fall Creek Parkway, N. Drive, Indianapolis, Indiana 46205; phone 925-4484). Current average circulation per issue, 3,200, including all resident registered Indiana architects, school officials, churches and hospitals, libraries, public officials, and members of the construction industry. Detailed information available on request.

The Cover: Circle, square and triangle: Artistic and architectural symbols here expressing "Man in his Man-made Environment"; an original design by Indiana Architect Artist Larry Roesler.

AMERLITE® BLOCK HAS BEEN SELECTED FOR MANY EDUCATIONAL FACILITIES BECAUSE OF ITS ECONOMY, BEAUTY AND STRUCTURAL STRENGTH...

INDIANAPOLIS PUBLIC SCHOOL NO. 110: Architect—C. Wilbur Foster & Associates
General Contractor—Glenroy Construction Company, Inc.

AMERLITE BLOCK (American's lightweight cinder block) is being specified more and more as a building material in educational buildings throughout Marion County. There are many reasons why AMERLITE Block is being used, not the least of which is economy. Cost of building materials is always an important consideration in any school construction project.

Secondly, AMERLITE Block is easier to handle, goes up faster and has structural strength which makes it usable for load-bearing walls. And because it is lightweight, structural steel framework and other building materials can often be lighter and more economical.

Thirdly, AMERLITE Block gives a clean, modern, pleasing appearance. Each block is manufactured from completely processed cinder aggregates and offers excellent fire-resistance, compatibility with other building materials, proven durability and better thermal insulation.

Specify AMERLITE Block on your next project and get the finest quality lightweight cinder block made . . . and remember IT COSTS NO MORE!

CONVENTION PROGRAM ANNOUNCED

THE PROGRAM COMMITTEE for the 1967 ISA Annual Convention has firmed up the program for the October 12-13-14 state architectural gathering at the Dorchester Inn near Hammond. The professional theme for the program will be "New Techniques in Architecture," with emphasis on the technological revolution now occuring in architectural practice.

The convention will start swinging Wednesday evening with a reception for the early-comers, and arrangements for the golfers are being made for Thursday morning. All business sessions, Chapters and State, will be cleared out of the way Thursday afternoon in time for an outing to Washington Park Racetrack that night.

Friday the 13th has been set aside for the professional seminars morning and afternoon, with the Society's annual banquet Friday night. Hopes are high that a travelling theatrical road show can be booked into the Dorchester's delightful and unusual theater-dining room for the banquet entertainment, reminescient of the highly-successful presentation by the IU Players at French Lick three years ago.

Saturday morning buses will depart from the Dorchester to the famous Notre Dame stadium at South Bend for the Notre Dame-Southern California football game. Following the game, the buses will return to the Dorchester for dinner and an evening of light entertainment.

Sunday has been reserved for quiet meditation, relaxation, enjoyment of the Inn's ample recreation facilities (both indoor and outdoor swimming pools, sauna baths, health club, etc.), and perhaps a committee meeting or two.

The Inn's proximity to Chicago provides opportunity for a full ladies' program, which will include a bus excursion to Chicago's Merchandise Mart and world-renowned State Street stores, and another excursion to Chicago's Old Town.

The entire Inn has been reserved for the convention, so there will be no problems in reservations or meeting rooms. Exhibit space will be available to building product manufacturers and distributors, and information on this can be secured from the ISA office in Indianapolis.

Arrangements for the convention are being handled by the Northern Indiana Chapter as Host Chapter, with direction provided by Jim Turner, Ray Kastendieck, George Hall, Nate Carras, Tom Keene, Dick Barton and Don Sporleder.

Built-in fire resistance. USS GARYLITE is an expanded lightweight aggregate formed from molten blast furnace slag which contains no volatile or combustible materials and, thus, has excellent fire resistance. Blocks made from expanded slag gave the highest fire resistance values of all materials tested by the Portland Cement Association . . . 82 minutes for 4-inch walls and 238 minutes for 8-inch walls. It was also found that by filling the hollow masonry units with granulated slag, the fire endurance period is materially improved. USS GARYLITE Slag also gives concrete units proven dura-

bility, better thermal insulation, good looks and greater sound absorption.

For more information on USS GARYLITE Slag—call or write United States Steel, Raw Materials Sales, at any of the following offices: 208 South LaSalle Street, Chicago, Illinois 60690 (Area Code 312) 236-9200; 209 Broadway Building, Lorain, Ohio 44052 (Area Code 216) 245-6897; 525 William Penn Place, Pittsburgh, Pa. 15230 (Area Code 412) 391-2345. USS and GARYLITE are registered trademarks of United States Steel.

Hamilton Dial-A-Torque Drafting Tables

If you'd like to add more draftsmen, but your drafting room is overcrowded, you need Hamilton Dial-A-Torque drafting tables. "Piggyback" reference desks provide up to 43% more floor space . . . eliminating the need for space-hogging separate reference desks, reference and storage area.

These high-production Hamilton tables also have exclusive Dial-A-Torque mechanism for fingertip board-tilt control. "Set-it-and-forget-it" board

adjustment ends time-wasting "firming-up" forever.

To increase drafting efficiency still more, select Hamilton PowerShift Dial-A-Torque tables that adjust board height at the touch of a toe... or Dial-A-Torque or PowerShift "L" tables which trim 90° from every reference turn. And to protect valuable drawings, insist on Hamilton UnitSystem files, with the exclusive tracing lifter that makes every drawing as easy to withdraw as the top drawing.

Get higher profits across the board! Phone or write today for all the details on the complete line of Hamilton drafting equipment.

You do, if you want a good one! The quality of workmanship you get on your job is just as important as the quality of materials. Specify ZONOLITE® VERMICULITE INSULATING CONCRETE by approved Zonolite Applicators. Get years of trouble-free service with an effective heat barrier of the "U" value you specify, and flexibility of construction that allows it to conform to any size, shape or contour. This lightweight economical material weighs just ½ as much as structural concrete, yet makes a permanent, rotproof, fireproof roof deck, poured all in one piece so there are no seams to calk.

Approved Zonolite Applicators observe strict quality control, following rigid industry standards. Upon completion of your roof you get a certificate signed by the applicator and by Zonolite that your concrete was mixed and applied as specified.

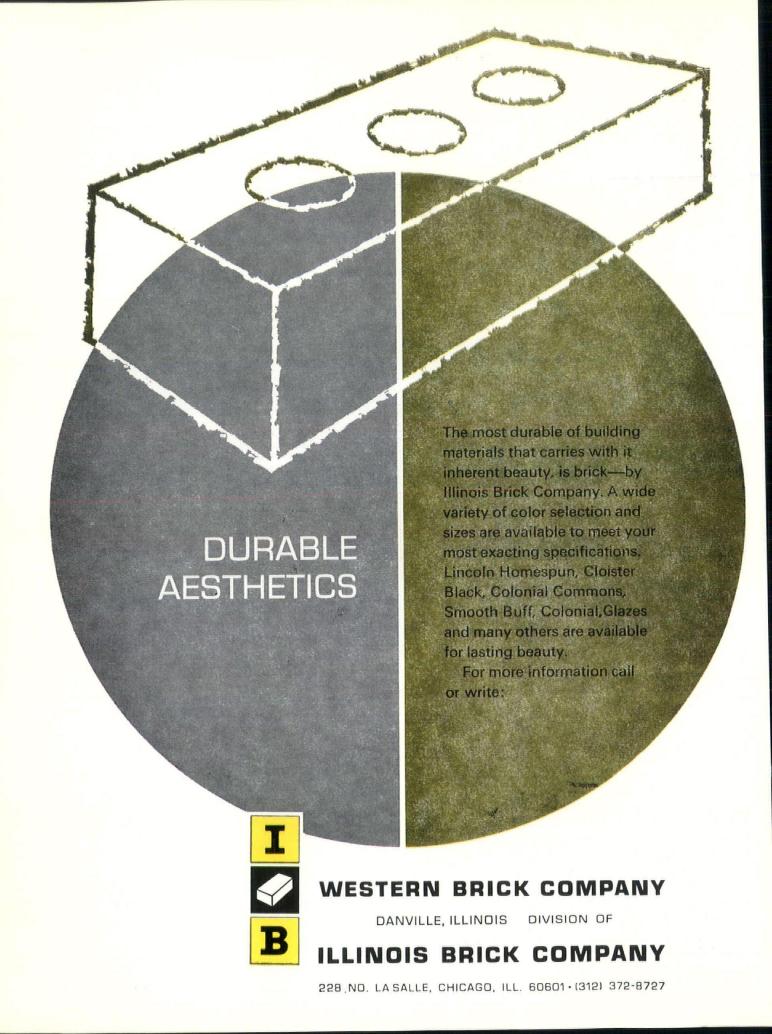

Avoid the risk of substandard materials and workmanship. On your next job specify a roof deck of Zonolite Vermiculite Concrete

-by an approved Zonolite Applicator.

Make Your

Building Project

A "Happy Job"

Inefficient management of your construction projects makes for unpleasant disputes, dissension, unproductive workers, waste, delay — even bad faith. The result is unhappy owners, architects, engineers.

The "happy job", in construction lingo, is one in which materials, skilled manpower, and proper equipment are carefully programmed in advance and brought into action under experienced supervision at exactly the right moment — everything falls into its proper place — no unnecessary delays, wasted time or money. In the end a job well done and happy people all around.

Owners, Architects and Engineers can assure themselves of a HAPPY JOB by vesting the sole responsibility for the happy result in the hands of a professional general contractor — an AGC CONTRACTOR — who is noted for his SKILL, INTEGRITY, and RESPONSIBILITY, and who knows how to plan and execute HAPPY JOBS.

Better Service through Responsible Management

AMERICA PROGRESSES THROUGH CONSTRUCTION Construct by Contract

Scholer-Hall Honored with Fellowship

TWO INDIANA ARCHITECTS, Walter Scholer Jr. and George N. Hall, have been elected to Fellowship in The American Institute of Architects. The honors will be conferred at the AIA Annual Banquet in New York May 18th.

Excepting only the AIA Gold Medal awarded one recipient each year, Fellowship is the highest honor the architectural profession grants to one of its members; previous to this year's awards, eleven Indiana architects had been so honored.

GEORGE HALL

WALTER SCHOLER

Walter Scholer Jr., a principal in the Lafayette firm of Walter Scholer & Associates, received his Fellowship for Service to the Profession. He is just now completing a three-year term as Director on the Board of The American Institute of Architects from the East-Central Region (Indiana and Kentucky), and also currently chairs the national AIA Commission on Education and Research. He formerly served as director, vice-

president and president of the Central-Southern Indiana Chapter, AIA, chaired the Architectural School Visitation Committee in assisting in the establishment of the Ball State College of Architecture, and has served on a number of Chapter and State architectural committees, including a chairmanship of the liaison committee with the Indiana General Contractors Association.

Mr. Scholer's elevation marks the first such

important memo to planners of large building projects

generate your own Power, Heat, Light, at major dollar savings

For schools . . . hospitals . . . shopping centers . . . housing projects . . . office buildings . . . and many types of commercial projects, Oil Total Energy uncovers great new horizons in year-in and year-out operating savings of a very substantial nature.

With Oil Total Energy you generate ALL your own electricity — at amazingly low cost, and you are completely independent of utility blackouts. The same equipment makes doubly efficient use of Oil by furnishing all heating, air conditioning and hot water.

Oil Total Energy has proved itself exceptionally dependable and astonishingly economical in all parts of the U.S.

Ask any oil company for the fast-breaking story of Oil Total Energy.

Always remember:

OIL

Is magically clean — Bright, clear heating oil burns clean. No particles of oil can or does get into the rooms of you house.

Heats water — Oil heats water four times faster than any other fuel or energy, at lower cost.

Warms swimming pools — An oil-powered system heats your pool economically and rapidly.

Air conditions the year 'round — Oil gives you summer cooling or winter heating from the same unit — at the flick of a finger — and at low, low cost.

for heat, hot water, air conditioning, incineration, total energy . . . for perennial comfort and ease.

OIL FUEL INSTITUTE OF CENTRAL INDIANA, INC.

2201 EAST 46TH STREET INDIANAPOLIS, IND. 46205

father-son honor in Indiana, and one of the very few in the country. Walter Scholer Sr. received his Fellowship in 1960 for Service to the Public.

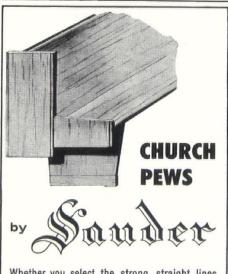

George N. Hall, partner in Beine, Hall, Curran & Kane, Inc., Gary, received his Fellowship in Public Service and Service to the Profession. Mr. Hall is a charter member and former president of the Great Lakes Regional Planning Commission (Indiana, Illincis, Michigan and Wisconsin); first president and a former director of the Northern Indiana Chapter, AIA; a member of the Gary Committee of 100; and currently a member of the Board of Directors of the Indiana Society or Architects. He served two terms as a member of the national AIA Committee on Aesthetics, and has authored a number of articles on regional and area planning.

The other Indiana Fellows in addition to Mr. Scholer Sr., are Raymond S. Kastendieck, Gary; Frank Montana, Scuth Bend; and Paul Frank Jernegan, Mishawaka; Wayne M. Weber, Lafayette; Warren D. Miller, Terre Haute; Edward D. Pierre, George Caleb Wright, Edward D. James, Merritt Harrison, and Charles J. Betts, all of Indianapolis.

The Annual Banquet, at which the Fellowships will be bestowed, is part of the AIA National Convention opening Sunday,

May 14th. "The New Architect" is the convention theme, and participants will include Dr. Marshall McLuhan, author and professor of English, St. Michael's College, University of Toronto, Canada; Dr. Harold Taylor, author, educator, former college professor (Sarah Lawrence College) and president of the American Ballet Theater Foundation: Charles Luckman FAIA, architect, former Pepsodent Company and Lever Brothers Company president and now head of one of the largest architectural companies in the world; The Honorable John V. Lindsay, 103rd Mayor of New York City; and Arthur (Clark, astronomer, science fiction writer. lecturer and inventor.

Social events included in the program are a Ballet Theater—Champagne Reception — Dancing affair at the new Metropolitan Opera (Wednesday evening); F. W. Dodge Company reception at the Whitney Museum of American Art (Sunday afternoon); Honor Awards Luncheon (Monday noon); President's Reception (Monday evening); Ladies' Tours (Tuesday afternoon); Architects-At-Home Night (Tuesday); Boat Tour (Tuesday night); Prayer Breakfast (Wednesday morning); School Tours, Housing Tour and Office Tour (Friday); and Fashion Show (Thursday morning).

Whether you select the strong, straight lines of contemporary design, or the elegance of traditional, Sauder church furniture is solidly built to stay beautiful for several generations. Discerning architects, clergy and church boards, east of the Mississippi, have specified it since 1930.

And, Sauder delivery schedules assure shipment when needed. Send your requirements for prices and colorful catalog.

A-201 ACCORD REACHED

AT LONG LAST, The American Institute of Architecst and the Associated General Contractors of America jointly have announced total accord on AIA Document A-201, the General Conditions of the Construction Contract. The remaining items of discord, quite minor by comparison to the formerly-resolved "Hold Harmless" dispute, were settled at a joint meeting April 10th.

The amendments have now been mailed to all architects, and their inclusion in General Conditions should be effected immediately. The substance of the changes is as follows:

1.2.3, page 4: Delete "those things" in line 7 and substitute therefore "all work."

4.5, page 6; Delete "AND GUARAN-TEE" in the heading.

4.5.1, page 6: Delete "and guarantee" in line 1; delete "by the Owner or the Architect." in lines 7 and 8 and insert a period (.) after the word "defective" in line 7.

4.5.2, page 6: Delete "warranties and guarantees" in line 1 and substitute therefore "warranty."

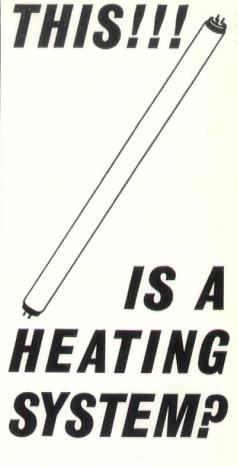

4.7.2, page 6: After the word "on" and

before the word "the" in line 3, insert the words "the performance of."

4.8.1, page 7, after the word "expenses" in the fourth line from the top of page 7 and before the word "shall," insert the words "contemplated for the original allowance"; delete the period after the word "Order" in the last line of the paragraph and add the words "which will include additional handling costs on the site, labor, installation costs, overhead, profit and other expenses resulting to the Contractor from any increase over the original allowance."

4.9.1, page 7: In line 4, delete the words "and assistants"; in line 9 and 10, delete the words "shall have full authority to act on his behalf." and change the capital "A" at the beginning of the next sentence to a lower case "a."

4.18.3, page 8: Delete the entire existing paragraph in the printed form and substitute therefore the following: "The cbligations of the Contractor under this paragraph 4.18 shall not extend to the liability of the Architect, his agents or employees, arising out of (1) the preparation or ap-

You bet it is! This is a revolutionary new *ELECTRIC* climate conditioning system called, "Heat with Light". It's only one of many advanced concepts offered by modern *Electric* heating and cooling to allow architects and engineers with imagination greater flexibility in design and construction.

Costs on equipment, installation and operation are available on actual installations in the Indianapolis area.

WHAT'S TOTAL ENERGY?

Total Energy is when your system ..

- . . is so integrated that the three major uses of electricity—lighting, cooling and heating—are coordinated in their design and operation.
- . . uses electricity, the one source that can provide energy for every function in your building—lighting, heating, cooling, motor power, business machines, elevators, water heating and a hundred others.
- . . can rely on the business experience and know-how of the local electric utility to deliver energy to your building during its entire life, in any quantity required, at high reliability and continuing low cost.
- . makes use of a single distribution system within the building electric wiring to deliver energy to every energy-using device in the building even the coffee maker in the employees lounge and the clock on the wall.

... is designed around the **electric space conditioning** concept, to take advantage of lower annual owning costs for the owners and lower annual operating costs for the occupants.

For more information on Total Energy and its applications to your own building designs, please call or write James C. Zeiler, Indiana & Michigan Electric Co., 2101 Spy Run Avenue, Fort Wayne, Ind. 46801. Phone Area 219, 743-0331.
