OBJECTIVES OF THE AMERICAN INSTITUTE OF ARCHITECTS

The objectives of The American Institute of Architects shall be to organize and unite in fellowship the architects of the United States of America; to combine their efforts so as to promote the aesthetic, scientific, and practical efficiency of the profession; to advance the science and art of planning and building by advancing the standards of architectural education, training and practice; to coordinate the building industry and the profession of architecture to insure the advancement of the living standards of our people through their improved environment; and to make the profession of ever increasing service to society.

THE KANSAS CITY CHAPTERS OF THE AMERICAN INSTITUTE OF ARCHITECTS AND THE PRODUCERS' COUNCIL

On November 9, 1923 the American Institute of Architects entered into an agreement of affiliation with the Producers' Council, Inc. in order to bring about a closer and more professional relation between architects and the producers of materials, and to issue reliable information regarding materials and their use.

This relationship has proven to be of great value to both Architects and their clients.

Through this affiliation more appropriate and economical use of construction materials has been promoted. And, the quality of building industry services continues to be advanced.

Now available for Kansas City area architects!

DORIC ARCHITECTURAL ROOF TILE

This modern, concrete roofing tile is now being manufactured locally, assuring prompt delivery of all designs and colors. DORIC has been time-tested on more than 200,000 homes, motels, churches and commercial buildings, and offers more distinct advantages than any other roofing material in current use.

MEETS OR EXCEEDS ALL F.H.A. SPECIFICATIONS

ECONOMICAL . . .
 prices are comparable to shake roofs.

BEAUTIFUL . . .
 available in standard colors and a wide range of custom colors.

FIREPROOF . . .
 the special DORIC concrete formula is completely fireproof.

PERMANENT . . .
 a DORIC roof actually improves with age and will last the lifetime of any building.

Provides insulation . . .
 Dead air space between tile and sheeting (or old roof) provides added insulation on all roofs.

All DORIC applications will be handled by certified installers . . . free factory training available to recognized contractors.

In today's business world, a popular formula for growth says a company must diversify rather than specialize. We've done both. Carter-Waters has strived for nearly half a century to become what you might call a diversified specialist. We specialize in the construction materials used in industrial and commercial structures, homes, and so on...materials for bridges, highways, dams, airports, and other such useful things that must endure. Today we are perhaps the most diversified specialist in our field—proving, if nothing else, that there is still a need for the bona fide specialist. We've stayed in the field we know best in order to provide the best service to all our customers. Call us next time you need an estimate, bid, or rush delivery on construction materials.
Tectum
roof deck systems
The lightest structural wood fibre board available.

- Tectum structural wood fibre board combines the primary qualities of a roof deck system in one homogeneous material.
- Tectum offers strength, acoustical control, and prefinished decoration.
- Tectum Plank and Tile is rated non-combustible by the National Board of Fire Underwriters.
- Tectum may be installed over standard framing with or without sub-purlins for flat or pitched construction.

electronomical

Start with a building of economical construction. Add a total-electric concept that will light, heat, light-and-heat, cool, and even melt snow. Consider the economy of low cost electricity. Now you have an "electronomical" building with all the comfort and efficiency of the most expensive type of commercial construction.

This was done for Lee Way Motor Freight, 5036 Gardner, by architects Folger & Pearson, engineers L. W. Morris, and electrical contractor Monarch Electric. You can do it, too. Give us a call at GR 1-0060 and we'll tell you how.

Infra-red lights heat people in dock area...melt snow on outside walkways, too.

Top efficiency is promoted by office lighting 150 candles above average.

Perimeter baseboard heaters supplement the primary heating system.

Infinite electronic controls keep temperature within ½ degree in all offices throughout the building.

Kansas City Power & Light Company
SPECIFY “PCI CERTIFIED” — A NEW SYMBOL OF QUALITY IN PRESTRESSED CONCRETE!

This symbol, displayed by a producer of prestressed or precast concrete used in structural applications, tells you that his plant has demonstrated the capability to produce quality products in accordance with the prescribed PCI Plant Certification requirements.

These requirements are based on the PCI Manual for Quality Control.

Under the program, a certified plant is subjected to 3 inspections by a nationally recognized, independent consulting engineering firm during the course of each year the symbol is retained.

Membership in the Prestressed Concrete Institute is not a prerequisite since any U.S. producer can participate in the program.

Administration of the PCI Plant Certification program is in the hands of a specially qualified PCI Committee working under the direction and supervision of the Institute's Board of Directors.

The PCI Plant Certification program is additional evidence of this industry's characteristic devotion to quality.
USED IN HALLMARK'S NEW ADDITION

PSC CONCRETE CURING COMPOUND

Cures, Seals, Dustproofs...
In a Single Application

When 1,000,000 sq. ft. were recently added to its Kansas City headquarters, Hallmark Cards wanted to move in quickly. And, by using PSC Chlorinated Rubber Curing Compound, access to the new wing was accomplished in just 24 hours.

PSC Chlorinated Rubber Concrete Curing Compound quickly cured, hardened, sealed and dustproofed the 800,000 square feet of fresh cement in a single application. In addition, the single, tough coating protects against freeze-thaw cycles, salts, petroleum products, most acids, alkalies and water. Applied by a low pressure spraying unit, the PSC Curing Compound also permitted tile to be laid over much of the area without special surface preparation.

There's nothing new or exciting about brick schoolhouses...

except... Double Wall Systems by Acme Brick.

Brick wall outside. Brick wall inside. Put them together and gain double helpings of:

**BEAUTY.** The color, texture and pattern of interior brick walls create a classroom environment that invites better attendance, better attention.

**QUIETNESS.** Brick Double Walls provide improved sound control that makes it easier for teachers to teach, easier for students to learn.

**ECONOMY.** Brick placed back-to-back provide superior insulative qualities that hold down heating/cooling costs. And the more brick you have, the less work there is for the maintenance crew.

**PERMANENCE.** Brick's warm beauty endures. It's there for everyone to enjoy. Now. And generations from now.

**SAVINGS.** Construction is simpler because you have fewer crafts to coordinate. Faster, too, because the walls are finished when you top them out.

Nothing new about brick schoolhouses? Don't you believe it! Write for literature on Acme Brick Double Wall Systems. Technical assistance is yours for the asking.
