DETROIT AREA

DETROIT METROPOLITAN AREA

THE ARCHITECTS CIVIC DESIGN GROUP

The Architects Civic Design Group of the Detroit Metropolitan Area, a group of architects voluntarily preparing studies of some of the general city planning problems of the Detroit area for public educational purposes, held its regular monthly meeting in the Rackham Memorial Building on January 17th.

At this meeting were reviewed and discussed street pattern layouts prepared by Leslie M. Lowry, Robert Kremer, Dirk Van Reyendam, Eberle M. Smith, Louis G. Redstone and Suren Pilafian.

One of the many questions discussed in connection with these studies related to the amount of physical separation by means of so-called “greenbelts” which should be considered appropriate between the various types of sub-communities. Eliel Saarinen, the Group’s consultant, expressed the opinion that such separation should be in proportion to the size of the area being separated. Just as an individual house needs a certain amount of “free space” around it, each neighborhood, each junior high school group, each senior high school group and each community needs a proportionate amount of surrounding open areas. This, Mr. Saarinen explained, has been found to be of definite value in practice and is essential for the preservation of the initial advantages of “organic decentralization,” on which principle the Group’s studies are being based.

Another question raised referred to Detroit’s proverbial smoke nuisance. One of the studies presented at the meeting showed a group of several residential neighborhoods surrounded on three sides by proposed industrial developments. One of the members wondered if this would not aggravate the smoke condition and suggested that if the relationship between residential and industrial areas were determined by the prevailing direction of winds, the smoke problem would be eased considerably. Reference was made in particular to Ludwig Hilberseimer’s recently published book on city planning in which he stresses the value of designing industrial areas as strips so located that prevailing winds would blow the smoke away from the residential areas. Mr. Saarinen thought that in the case of Detroit it would be of greater advantage to eliminate smoke at its source by mechanical means since then the restrictions on the planner would be reduced considerably. It is one of the basic principles of the Group that, in planning the city’s development, provision should be made for the population to live as closely as possible to their places of work and that this can be achieved largely by planning industrial areas pleasantly.

After the discussion of these studies Phil Brezner, one of the members of the Group, gave a brief account of his recent trip to Boston where he took an intensive two-weeks course in city planning at the Massachusetts Institute of Technology. Brezner mentioned that he was particularly impressed with the varying conceptions of appropriate densities between the planners in the east and those in the middle west. Apparently the eastern

cities are accustomed to a much more intense use of land.

Branson V. Gamber, chairman of the Group, gave a report on a presentation of the work of the Group that he had made the previous night at Cincinnati at the request of the Cincinnati chapter of The American Institute of Architects.

The Group then viewed a model of Detroit's proposed Cultural Center which Buford L. Pickens, one of its members, had prepared as architectural consultant on the Cultural Center to the Detroit City Plan Commission.

Herewith are reproduced some additional examples of the work of the Group. These supplement the studies published in the October 10, 1944 issue of the WEEKLY BULLETIN.

—SUREN PILAFIAN, A.I.A.

The plans shown here represent studies prepared as part of the Architects Civic Design Group program by Louis G. Redstone, A.I.A. Plans on page one are diagrams at the scales of 2300 and 1000 feet to the inch, respectively, showing symbolically the distribution and relative densities of population proposed for the area. The other plan is a more realistic diagram at the scale of 1000 feet to the inch showing the actual shapes and locations of proposed blocks and streets.

This area covers about 7 square miles and is designed here to accommodate a maximum population of 110,000 divided into three communities each of which would be subdivided into 8, 10 and 11 neighborhoods, respectively. A high school serves each community, an elementary school and nursery serves each neighborhood and five junior high schools serve the entire area.

The northern boundary of this area is formed by a proposed expressway, cutting across eight mile road, parallel to Davison Avenue and leading directly to Mount Clemens. The other boundaries are

formed by existing thoroughfares. The principal north-south street within the area is Livernois Avenue. The continuous, curved "belt" street which connects the three communities with each other and with the existing large "green areas" on the east is proposed to be built by utilizing portions of several existing streets.

The triangular area at the northwest extremity formed by the intersection of three thoroughfares is planned as a setting for a stadium and as a large recreational center.

At the southern extremity, adjacent to existing railroad lines and to Davison Avenue, is proposed an area devoted to light industries.

NOW! A New No-Leak Method
For Glazing Wood Sash

Out of the Plastic Products Laboratory has come a revolutionary advance in glazing wood sash—a better method and a better material. The glass is bedded in Plastoid Elastic Bedding Cement making a rubbery bond that will allow for all contraction and expansion and absolutely prevent leaks. Then the facing is applied in the usual way, with Glazawood. The method and the material produce no-leak glazing, and eliminate the other faults characteristic of the old procedure... Write for descriptive literature.

USING EXCESSIVE COMMERCIAL FRONTAGE

By N. Chester Sorensen, A.I.A.

THE JANUARY ISSUE of the Planner by the Detroit City Plan Commission, under the subject of "excessive commercial frontage," states that, "An alternative use must be found for the frontage along major thoroughfares." Also, "Commercial centers need deeper frontage for parking space."

The writer submits the following analysis and illustration as a solution for this problem.

In our post-war planning there is general agreement among city planners as to the diagnosis and cure for decaying portions of our cities. The general elements of the plan briefly consist of:

1. The breaking up of the decaying portions of the city into orderly replanned communities that would be, to a large extent, self-contained, having their own schools, shopping centers, etc.
2. That these neighborhoods be separated by transportation arteries, express and local; that these arteries be well screened and insulated from adjacent communities, both as to noise and view.
3. Transportation planners are further in general agreement that a comprehensive system of limited access highways must serve these superblocks or neighborhood communities, with emphasis being placed on speed yet noiseless operation of these expressways.

What is not clear is how this can be achieved, economically, socially and politically. You perhaps will not make much progress unless your program in its last analysis is for the best interest of land owners involved. These are the hurdles:

1. The replanning of whole communities is an evolutionary process, requiring several years, yet the new highway construction, that cannot wait, must be so flexible that it will also serve properly the new planned communities in the future.
2. In a grade or sub-grade freeway, where it is necessary to cut off cross streets, the abutting property owners for a block or two back are entitled to property damage according to the Supreme Court decision. Notwithstanding that, at some future time when these same neighborhoods are organically decentralized and replanned, it would be for the best interests of abutting property owners to have their streets closed. In the meantime, it is not for their best interests, hence the huge right-of-way cost.
3. Ultimately, additional minor freeways will be built to serve properly new planned communities. These may or may not follow the present streets. The main thoroughfares, however, that now carry or attempt to carry the bulk of the load, are perhaps organic in their location and it would be well to have freeways in these locations or in proximity to them.

However, if a grade or sub-grade type of freeway is established, it may do away with the business frontage and present shopping facilities or pushing them further back if that were desirable. If you put a freeway or parkway in the center of a block, the main thoroughfare may prevent, in the future, an organic development of property between it and the center of block freeway. This procedure would tend to obstruct future good planning of neighborhood communities and fail in establishing stable values.

Here is where a motorway of a cantilever design, as illustrated, could give some relief to these hurdles.

Mr. S. B. Barnes, well-known consulting structural engineer of Southern California, confirms this point of view in the following letter:

"I have examined the typical section and plan of the center pier, four-lane highway you propose and have made sufficient calculations to show that this type of construction is practical and feasible from an engineering standpoint. The sizes of members indicated on the drawing submitted to me are approximately correct for high strength concrete. The center pier footing will of course need to be slightly larger to comply with California Earthquake requirements."

The cantilever and suspended apron design is economical and stable. Slight differential settlements do not cause trouble in this type of structure and the single center pier similarly permits slight settlement without the detrimental distortions that would occur with the multiple column type of structure.

Where land values are high, it is doubly important not to destroy the use of the land under such elevated motor highways, as has been done in other cities. It is also important that the materials of structures of such freeways be in harmony with business buildings to which they come in proximity. It requires careful study, which, by the way, is more of an architectural problem than an engineering one.

By taking over one side of a thoroughfare necessary parking can be provided under. On the other hand part or all of the land under and behind Elevated Construction could be leased back for business purposes if desired, but the city would have complete control of this right away for future use. This would be one way of using excessive commercial frontage.

National Council Appoints State Correspondents

THE NATIONAL COUNCIL of Architectural Registration Boards, as sponsor of The Weekly Bulletin, has set about to appoint representatives in each state to be known as correspondents, whose duty it shall be to furnish up-to-date lists of registered architects and to supplement such lists when new names are added to the rolls, to furnish news items and photographs of architects, that will be of interest to the profession, and to perform such other duties as may be assigned from time to time.

Through the Council, it is the aim to send The Weekly Bulletin to every architect in the United States. From the first mailing to 15,000, hundreds of changes of address have already been received and, through correspondents already appointed, several supplemental lists have been received, as well as many news items.

Mr. William L. Perkins, of Chariton, Iowa, secretary-treasurer of the Council, states that response to his first request for state representatives has been very encouraging and that he anticipates no difficulty in obtaining complete coverage.

Mr. Perkins states, "I believe the more we can get behind us the better, as we will have just that many more who have a personal interest in the publication, and that kind of help is the kind that makes things go." "When the organization of state correspondents and their assistants is completed, all architects receiving the Weekly Bulletin will be requested to send news items about the profession to their state correspondents and also keep them informed promptly of changes of addresses, of new architects coming into the field, or other pertinent information."

The mailing of the first issue to go nationally has brought many favorable comments. A few excerpts follow: Harry B. Tour, president of the Tennessee Chapter of The American Institute of Architects, writes: "I enjoyed very much the first issue of the Weekly Bulletin of the National Council of Architectural Registration Boards and am anxious to have it in the hands of all of the members of the Tennessee Chapter. When it comes to unification, the national distribution of the Weekly Bulletin will probably do more good in really uniting the profession than anything that has been done since the Institute was born." Mr. Fred F. Martin, of Doylestown, Pa., writes: "I was very much pleased to receive the Weekly Bulletin of the National Council. To insure receipt of future copies of this Bulletin, I would suggest that my address be corrected to that as shown on this letterhead (West and Pine St., Doylestown, Pa.)."

Mr. G. Stanley Smith, Jr., Paducah, Kentucky: "I am pleased at prospect of receiving this publication. Am I supposed to pay for it? If so, bill me." Kenneth Reid, editor of Pencil Points: "Welcome to you to the national field and want to express sincere good wishes for the future career of the publication. Good luck to you in your new venture!"

The advertising matter certainly has so far accepted is as follows, the second named being assistant:

RUBEROID
PERFORATED
Air-Vent Felt

THE ANSWER TO ROOF BLISTER PROBLEMS

- The "Double Valve" action of Ruberoid Air-Vent* Felt averts many annoying roof failures. Air, trapped under roofing, expands with the sun's heat, causing blisters that bulge and lift. Patented Air-Vent Felt has pinpoint perforations—punched alternately from top and bottom—that form "Outlet" and "Inlet" valves. When Air-Vent is laid, the air or vapor beneath is forced out through these tiny "Outlet" valves. Asphalt seeps through the "Inlet" valves giving a better bond between the layers of felt. Result: freedom from blister problems because there are no air bubbles to expand and lift the felt from below.

Ruberoid Air-Vent Felts (available in both Asphalt and Asbestos types) have proved themselves through years of use on industrial and commercial buildings in all weathers. Specify Air-Vent for built-up roofs... it reduces roofing failures... it reduces roofing failures and costly repairs. Ask your approved Ruberoid roofing contractor or write us for full specifications.

WM. S. ALT & SON
Painting Contractors
3818 North Kenneth Avenue, CHICAGO, ILLINOIS
General Motors Building, DETROIT, MICHIGAN

FOUNDED IN 1876
The original company was founded sixty-six years ago—in 1876—by Wm. S. Alt and was skillfully carried on by his son Wm. S. Alt. Since January 1928, and at the present time, the company's operations have been successfully accomplished through the able management of Harold F. Alt, sole owner and grandson of the original founder. From the time of its organization the company's policy has always been and will continue to be 100% satisfaction for all clients.

Note the representative projects listed on opposite page. They typify the variable kinds of contracts for which this company is so well adapted.

FINANCIAL STANDING
For more than sixty-five years WM. S. ALT & SON have justly enjoyed the well-merited confidence of business underwriters, bankers and others in the general financial field. And throughout the years the company's own financial resources have been an added guarantee for the successful completion of all contracts. For further reference: Pioneer Trust and Savings Bank, Chicago, Illinois.

ESTABLISHED PRODUCTION RECORD IN DEFENSE
Within the past thirteen years the company has successfully executed many of the largest painting contracts in the nation. Such work has been particularly noteworthy during the past two years in industrial defense construction. In 1941 the company simultaneously concluded their portion of work on five major aircraft defense projects in various parts of the United States.

PERSONNEL
Under the competent management and supervision of the following practical and experienced artisans, the company is unusually well prepared to give nation-wide service for any type of painting work—brush or spray—from a residence to a skyscraper—from a bridge to a battleship.

Harold F. Alt, Owner.
Leroy H. Alt, Assistant Estimator.

FEBRUARY 13, 1945
This Drop of Water is the DANGEROUS one

It leaked outside the drain...inside the building

A drop of water is a very insignificant thing...under most conditions. But the first drop of water leaking through a dike, through a pipe or through a ceiling is dangerous...for it is the evil evidence of disaster yet to come.

The drop of water that leaks outside a drain is dangerous too, for it opens the way for other drops to follow it into walls and floors where, in warm weather they rot the interior, and in cold weather they freeze and crack the finest foundation wide open.

You tamper with the life and beauty of a building...with the health and safety of its occupants...unless you use drainage products that are recognized to provide the greatest protection. A drain costs so little in comparison with the structure it serves that it is folly to use anything but the best. You always use the best when you specify Josam drains, for then you have the exclusive qualities of these recognized products on guard duty day and night. Over a thousand different types for every drainage condition.

If you have an unusual drainage problem, call the Josam representative in your community or write direct to the Josam Manufacturing Company, Empire Bldg., Cleveland 14, Ohio.

Josam non-clog triple drainage drains provide advantages offered by no other drain. Their 3-way performance guarantees better floor drainage, as well as positive protection against leakage. Sediment containers intercept the debris allowing clear water to pass into the drain line (normal drainage). If water seeps into the floor around the drain, it is returned directly into the drain line...does not spread into floor or walls (double drainage). If sediment container should become filled with debris, drainage continues through holes in auxiliary rim, signalling a need for cleaning (triple drainage). For complete description of these modern type floor drains send coupon below.

See the Josam Catalog in Sweets

Oberwarth Reports on Institute Membership

C. Julian Oberwarth, F. A. I. A., of Frankfort, Ky., membership secretary of The American Institute of Architects, has issued some interesting statistics on Institute membership, as of Nov. 1, 1944. In tabulated form, he shows the number of architects in each chapter area, number of Institute members and percentage of architects who are corporate members.

Listing the total number of U. S. architects as 14,477, the chart shows Institute corporate membership as 4,618, or 31%. The breakdown of this by chapters is as follows:

INDIANA BOARD 100% REGISTERED WITH NCARB

The Indiana State Board of Registration for Architects has become the first such board in the United States of which all members have been certified by the National Council of Architectural Registration Boards, it is announced by William L. Perkins, of Chariton, Iowa, secretary-treasurer of the Council.

Members of the Indiana State Board are August C. Bohlen, of Indianapolis, chairman; Warren D. Miller, Terre Haute; Alvin M. Straus, Fort Wayne; Oswald A. Tislow, Indianapolis, and Joe H. Wildermuth, Gary.

HOSPITAL COMPETITION

Winners in two architectural competitions conducted by the Modern Hospital Publishing Co., Chicago, have been announced.

Winners in the community health center competition are:

Second prize, $750: Roslyn Itelson, designer, and Leonard Greenburg, M.D., public health officer, New York City.

Third prize, $500: Fisher and Fisher, Denver.

Winners in the 40-bed hospital competition are:

First prize, $1,000: Fisher and Fisher, Denver.

Third prize, $500: H. P. Van Arsdall, Cincinnati.

Honorable mention and $100: Robert J. Rouse, New York City; George Blumenauer and Associates, architect, and Paul H. Feeler, hospital administrator, Oklahoma City; Janet and Milton H. Caughey, West Los Angeles.

BEST REAL ESTATE PAGE

Winners in the second annual competition of the National Association of Real Estate Boards for "The Best Real Estate Page of the Year (1944)" were announced by the association as the following:

Class A, for cities of more than 500,000 population: The New York Times, Lee E. Cooper, real estate editor; honorable mention, The Detroit News, E. A. Baumgarth, reality editor.

Class B, for cities of 100,000 to 500,000 population: The Cincinnati Enquirer, John F. Cronin, financial and real estate editor; honorable mention, The Providence Journal, John W. Hawkins, real estate editor.

Class C, for cities of less than 100,000 population: The Cedar Rapids Gazette, Dr. E. Todd Wheeler, real estate editor; honorable mention, The Schenectady Gazette, Edward Themak Jr., real estate editor.

SPERRY MEMORIAL PRIZE

A collaborative competition for the design of a memorial to Dr. Elmer A. Sperry, inventor of the gyro-compass, is announced jointly by the Sperry Gyroscope Co. and the Alumni of the American Academy in Rome.

The competition, which closes May 14, is open to teams comprising no fewer than two nor more than four representatives from the fields of architecture, landscape architecture, painting and sculpture. Applications may be made to the alumni association, 101 Park Ave.
Letters—

May I say that we have got a lot of inspiration here from your publication, along with a lot of interesting information about what is happening in the profession.—Frank Chouteau Brown

I was pleased to see the R.I.B.A. letter in the Bulletin. I have heard a number of our boys say the same thing as Walker did.—Clement Fairweather

Will you please have my address changed (to 1235 N. Dearborn Ave., Chicago) on your mailing list of the Weekly Bulletin. My negligence in not advising you to date of this change has resulted in my missing the last two issues and that is a worse catastrophe than ones radio out of commission for a like period.—Alfred P. Allen

I have been in receipt of your Weekly Bulletin since my election as secretary of the Brooklyn Chapter, A.I.A., in 1942, and although I have been negligent in sending along a dollar for a year’s subscription, I now do so and can assure you that I enjoy reading every article from front to back and that I also have a file of copies in my office.—Harry L. Welsh

The Weekly Bulletin under your able editorship is most stimulating and enjoyable. It is extremely interesting to be kept informed in the wider field. I am most grateful to you for the courtesy of this publication. It is read from cover to cover and available to teachers coming to the art office.—Mabel Arbuckle, Director of Art Education, Detroit Public Schools.

May I acknowledge with expression of appreciation the kindess of you and your publication in publicizing the plea of the Committee on Standards and Tests of the City of Chicago, for submissions for their consideration. This publicity, supplied in such a conspicuous manner, is certain to extend to you my gratitude.

I was both surprised and pleased to receive the December 5 issue of the Weekly Bulletin and find that you had given the better part of two pages to our lecture series on "Building or Buying a Home." Needless to say, we would be pleased to furnish any other school or organization with more details about the program.—B. K. Johnstone, Head, Dept. of Architecture, Penn. State College.

Ever since last spring you have been kind enough to send me the Weekly Bulletin. I am very much pleased with the publication and to date I have not paid for it. I am wondering how much longer this goes on.

Perhaps it would be a good idea if I sent you a dollar for a year’s subscription. May I have your views on this subject?—Conrad Fred Keck

EDITOR’S NOTE:

Your consideration is appreciated.

In order to send the Weekly Bulletin to all architects in the United States, as of Jan. 1, 1945, we surrendered our second class mailing permit and are now mailing third class instead—at a cost of approximately ten times as much.

We would be glad to accept your dollar for 1946 subscription, with a view to becoming reinstated as a second class publication.

As Secretary of the Maine Chapter, I have had the pleasure of receiving the Bulletin for the past three years, but I have been "kicked upstairs" to President for 1945, and our new secretary is William D. Tuttle, A.I.A., of the firm of Wadsworth, Boston & Tuttle, 57 Exchange Street, Portland, Maine.

I regret that the Maine Chapter is unable to reciprocate in kind, but, if you wish to continue sending the Bulletin to our Secretary, you can be assured that it will be much appreciated.—John Howard Stevens

As past editor of "The Tennessee Architect," I wish to thank you for your kindness in sending me your weekly paper.

I think that your objective in sending this paper to the architects over the entire nation is very commendable and I do second Mr. Tour’s notation to you in regard to each chapter of the A.I.A. in at least helping to defray some of the expenses.

You are doing a fine job and I do know from my past experience just what you have to put up with.

With best wishes for the coming year and continued success with your paper, I am—Guy H. Warner, Jr.

I wish to thank you most sincerely for having been the recipient of the Weekly Bulletin of the Michigan Society of Architects. I assure you I have enjoyed it very much. The very fine special articles of interest to the Architectural profession, news items concerning the Detroit Chapter of the A.I.A. as well as other Chapters throughout the United States, has been of considerable help to me this year.

Knowing what you fellow architects are doing in California, New York, Michigan, etc. has been of considerable assistance in outlining a program for the Columbus Chapter in 1944.

Mr. C. Curtiss Inscho has been elected President of the Columbus Chapter for 1945, to succeed me. I am sure he would enjoy the Weekly Bulletin very much.—Raymond D. Goller

Your Weekly Bulletin of December 26, 1944, has just arrived, and I note that on Page 5 you again give California credit for taking the lead, this time in the Home Planning Institute idea.

Credit for the present strength of the Home Planning Institute in California should go to Vincent Palmer, Allan Sheet and Walter Hagedohm, all of Los Angeles, who worked with the California Edison Company and the various leading institutions in the Los Angeles area to promote the Institute in 1943 and 1944. Here, in the northern part of the State, we have modeled the program on that set up in Southern California, and, at the present time, a series is being given in about twenty High Schools and Junior Colleges under the Adult Education Program. If any State or Community wishes information about the setup we will be happy to furnish copies of our program and organizational procedure.

With every good wish for you and your publication for the New Year, I remain—John S. Bolles.

A friend and brother architect, Mr. Frederick Mathiesius, showed me his copy of the "National Architectural News Weekly."

After reading it from cover to cover, I must compliment you on the work, and particularly the news coverage of vital information to the architect.

I enclose my check for one year’s subscription. If there are any other requirements for receiving the publication, please inform me.—Herman M. Cole, 415 Lexington Ave., New York 17, N. Y.

Yesterdays my first copy of the Weekly Bulletin arrived. The address, however, was incorrect. Please send future copies to 627 Carondelet Street, Los Angeles 5, Cal.—Paul Hunter

I assure you that the architects of this section are grateful indeed for the interest shown, and with warm regard from both Messrs. Cady and Harkness, our retiring and new presidents, respectively, Rhode Island Chapter—F. Ellis Jackson, of Jack­son, Robertson & Adams, 1216 Turks Head Building, Providence 3, Rhode Island.

Received your January 9 copy of the Weekly Bulletin. Looks like all good news.

Enclose please find one dollar (post office money order) for I want it every week. Good Luck!—Frederick W. Bohl­meyer, Point Pleasant Beach, New Jersey.

We received the first issue of the National Weekly Bulletin and read it with interest. I think you are doing a fine job and your publication seems to fill a needed place.—Walter F. Martins, President, West Virginia Chapter, A.I.A.

I have just received my first copy of the "Bulletin" and believe that it will be of much interest to architects throughout the country.—Walter M. Weber, Decatur, Ill.
LADY WITH THE HANDBAG

Excerpts from a talk before the recent annual meeting of the Iowa Chapter A.I.A.

By ROGER ALLEN, president Grand Rapids Chapter, A.I.A.

Reprinted from the Monthly Bulletin of the Washington State Chapter, A.I.A.

I have made a somewhat hysterical study of prophecies about the manner in which prefabricated housing will be conducted, and it goes about like this:—We will take an average American (let us call him J. Scratch) who desires to purchase a new house. To be correct, Mr. Doakes is in no particular sweat to buy a new house but his wife is and after she has told him so in clear, firm tones for several months he gets the idea that his wife would like a new house. So he decides to get one. Naturally, he does not call up an architect, that's old-fashioned. He says the house will be delivered right after dinner at 6. It won't be necessary to survey the lot because if the house gets built too close to the lot line, you can show it over with an auto-jack. There goes the land surveyor over the hill because if the house house purchasing somewhere and they get this straightened out, and he tells her he wears a size 15 collar and he says he doesn't know. So she asks him if his is the average American family consisting of two adults and 2½ children and he says right back at her that if she is insinuating that his children are not all there, he will take his house purchasing somewhere else. One word leads to fifty thousand and they get this straightened out, and he tells her he wears a size 15 collar and she says that means he needs a model 22-BX house and she will send it up right after lunch.

Then she enquires where Mr. Doakes' lot is because she feels it is always nicer if they see it in person, and he says the house will be delivered right after noon and they can get it assembled by 2:15 and two unskilled laborers will do the job. The wall is plywood construction; the windows are of plywood construction; the roof is plywood construction; and the walls are of plywood construction; the roof is plywood construction; and the walls are of plywood construction; the roof is plywood construction; and the walls are of plywood construction; the roof is plywood construction; and the walls are of plywood construction. The telephone operator asks him what size house he wants and he says he doesn't know. Turpin Bannister, dean of the School of Architecture, Alabama Polytechnic Institute, is the new president of the Alabama Chapter of The American Institute of Architects.
California's Ernest J. Kump is Honored

Ernest J. Kump, A.I.A., San Francisco, has been awarded the Meritorious Civilian Service Emblem by the Navy Department, it was disclosed recently. The award was made for "recognition of excellent services rendered over and beyond those normally required" in architectural work by Kump for the Navy during the last 18 months.

The work included design and expansion of air bases and theaters of operation facilities and technical reports and surveys, to the extent of $35,000,000. Mark Falk, structural engineer, also of San Francisco, was similarly honored.

Whitney R. Smith, architect, has been re-elected president of the Pasadena Citizens' Council for Planning.

Receiving his license to practice architecture in 1940, he conducted a private architectural practice in San Marino. He was instructor in advanced planning and housing at the U. S. C. College of Architecture, 1941-42. He also has served as associate architect on two Federal Housing Authority projects, one at San Diego, one at Chula Vista.

Mr. Smith's work has been prominently published in Architectural Forum, Architectural Record, Pencil Points, California Arts and Architecture and Sunset.

His Linda Vista (San Diego) Shopping Center was featured in early issues of Collier's, Better Homes and Gardens, and Madamoiselle, and the American Builder.

For the general practice of architecture Henry H. Gutterman has opened new offices at 85 Second Street, San Francisco. Architect George requests recent catalogues and samples.

Justement on Codes

Washington, D. C.—Louis C. Justement, A.I.A., as chairman of the Committee on Building Codes, of the Washington Building Congress is making a strong plea for the creation of a building code board of appeals, to free architects from the "straight jacket" of detailed regulations.

Mr. Justement said that "in practice architects find that they are being placed in a straitjacket of regulations and sometimes prevented from achieving rational and effective planning which would meet the spirit of the law because the logical design for a given problem is in violation of one or more regulations."

The proposed board would consist of a practicing architect, a structural engineer, two mechanical engineers, and a contractor appointed by the Commissioners from nominations made by local chapters of national architectural, engineering and building associations. It was emphasized that the board was not intended to reflect upon the building inspector, "but to strengthen his position by giving to the board far greater discretionary power than could rightly be allowed to any one individual."

Thomas Locraft, A.I.A., of the architectural firm of Murphy and Locraft, has been named by the Commissioners to a five-year term on the Board of Examiners and Registrars of Architects to succeed Frederick V. Murphy of the same firm.

Mr. Murphy's term on the board ended Jan. 2 and Mr. Locraft's began the next day. He was recommended by Nathan C. Wyeth, Municipal architect.

Mr. Locraft received his Ph.D. at Catholic University where he later served as critic in design. He went to Fontainebleau in 1927 and studied in Europe as Paris Prize Scholar from 1928 to 1931.

After working for Frederick Vernon Murphy, F.A.I.A., about a decade ago, he became a partner and the firm has conducted a successful practice in the field of schools, churches and institutional buildings.

Also scheduled to speak was Arthur B. Heaton, an architect here for more than 30 years. The institute is open to the public, and weekly meetings will be held through February.
Exhibitions at U. of M.

Currently at the Rackham Building in Ann Arbor are two one-man shows. In one gallery is being shown the work of Alden B. Dow, of Midland, Michigan and Houston, Texas; in another, the work of Ernest J. Kump, of San Francisco, California. These interesting exhibitions will remain there throughout this week.

WANTED

Architect in Battle Creek is in need of an experienced architectural draftsman; and a junior draftsman, for permanent employment. Inquire of Weekly Bulletin.

Bonderized GALVANIZED SHEET STEEL

Now, architectural sheet steel for outdoor exposure can have triple protection — Galvanizing, Bonderizing and Paint. Bonderized Galvanized, mill-treated sheets for roofing, flashing, siding, gutters — wherever exposed sheet metal is used — provides rust proofing and an absorptive base for paint. It holds the finish, retaining color, luster and protective qualities. Chemical action between paint and galvanizing is neutralized — prevents peeling and scaling.

WEEKLY BULLETIN
**Cerny Speaks in Duluth**

Robert G. Cerny, professor of architectural design at the University of Minnesota, visited Duluth recently to speak at the Duluth Home Planners Institute, held Jan. 16. Mr. Cerny received his master's degree in architecture at Harvard University and spent a year abroad studying architectural trends.

He discussed solar heating, the trend to use more modern architectural designs, and illustrated his address with slides of various styles of domestic architecture.

**Timlin, St. Louis, Retires**

After 40 years with the Southwestern Bell Telephone Company, I. R. Timlin, architect and co-designer of the telephone building in St. Louis, retired Jan. 1. Timlin, who has designed about 140 telephone buildings in Southwestern cities, started in 1904 as a draftsman, was made assistant equipment engineer in 1907 and was appointed Architect in 1911.

He served as vice president of the St. Louis chapter of The American Institute of Architects for two years and treasurer for seven, was a member of the commission to revise the St. Louis building code and served on the St. Louis Smoke Abatement Commission.

**Boller Heads Kansas City Chapter**

At its annual meeting on Dec. 14 the Kansas City Chapter, A.I.A., elected Robert O. Boller president; Herbert V. Pennington, vice president; Albert B. Fuller, secretary, and Franklin P. MacArthur, treasurer. Dwight Brown, retiring president, presided.

Harold Vagtberg, president of the Midwest Research Institute, told members that great opportunities are ahead for Kansas City and the middle west.

**North Carolina Chapter Elects Weeks President**

H. Raymond Weeks, of Durham, was elected president of the North Carolina Chapter of The American Institute of Architects at the annual meeting Jan. 6 in Charlotte.

Other officers elected include Ross Shumaker of Raleigh, vice president, and W. H. Dietrich, of Raleigh, secretary-treasurer. Earl Stillwell of Hendersonville, retiring president, presided over the meeting, attended by about 35 members.

Walter W. Hook, of Charlotte, has been appointed as a member of the state board of architectural examination and registration for a term expiring April 8, 1947.

Chairman of the board is Erle Stilwell of Hendersonville, Hook is vice chairman, and Ross Shumaker of Raleigh is secretary-treasurer. Other members of the board are James B. Lynch of Wilmington and J. Burton Wilder of Greensboro.
U. of Ill. "Firsts" Record Impressive

UNIVERSITY HAS PIONEERED IN EXPERIMENTS ON SMALL HOME CONSTRUCTION

The University of Illinois, which completed 75 years of activity on March 2, 1944, has an outstanding record of achievement and service in education and research, returning in benefit manifold the funds which the people of Illinois have expended on it.

Listed among some 37 instances in which the University has been first, are included: First architectural instruction west of the Alleghanies, 1868. First architectural graduates in America, 1872. First professor of civic design (city planning), 1912.

Bloomington's Home Planning Institute was lauded by Rexford Newcomb, dean of the school of Fine Arts at the University of Illinois, speaking at the recent quarterly meeting of the Central Illinois chapter of The American Institute of Architects in Bloomington.

Mr. Newcomb said the idea of the institute, a pioneer in Illinois, is taking root to the point where the university is helping start similar institutes in other cities throughout the state. Mr. Newcomb led discussions on postwar planning for small homes and cities.

Representatives were present from Champaign, Urbana, Decatur, Springfield, Peoria and Bloomington. Archie Schaefer of Bloomington, president of the chapter, conducted the installation of two new members, Richard Belsterling and Rudy Kelly of Peoria. Edgar E. Lundeck had charge of arrangements.

Elbert I. Harrison of Peoria, formerly of Bloomington, remained to visit with his father, E. G. Harrison.

In commenting on the University's Small Homes Council, Dean Newcomb said, "For over a quarter of a century the University has been engaged in experiments having to do with small homes: heating and ventilation, sanitation, plumbing, insulation, home management, house planning, and the like. We now have, as you may know, two experimental houses devoted to heating research alone.

"The results of much of this research has been published in high-technical bulletins of little use to the small home builder. These researches, together with current and future findings the Council proposes to disseminate in a form available to the small home owner and builder.

"In collaboration with the Illinois State Chamber of Commerce, 10 Home Planning Institutes are being organized in cities throughout the State. The expenses for these are raised by local agencies under the leadership of local chambers. Organization, programs and materials are being furnished under the direction of the Council.

"Manufacturers, materials dealers, trade associations and architects and builders have shown wide interest in the program of the Council of which Professor William Scheick of the Department of Architecture has been named coordinator."

Chicago—Home owners planning repairs, insulation work, or remodeling of attics, basements, or other parts of their dwellings, have been cautioned against the building racket operated in Chicago by certain contractors. The warning was given in a report published by the Chicago Better Business bureau.

Cooperating with the bureau in advising the public were Paul Gerhardt, Jr., A.I.A., building commissioner, the Chicago Metropolitan Home Builders' association, and the federal housing administration. Gerhardt started a campaign last summer against the "attic racket."

The "attic racket," which flourished in Chicago until publicity slowed it up, was worked as follows (with variations): A contractor persuaded a home owner who had a vacant attic to sign a contract to have it remodeled into an apartment which could be rented to a worker at a fair return on the investment.

After the job was completed the owner learned that it failed to comply with the building code and he was forced to make necessary structural alterations for which he had to pay extra.

Samuel A. Marx, A.I.A., has bought the 12 story apartment building at 1325 Astor St., Chicago, at the southeast corner of Banks St., to prevent his nine room and 5 bath apartment building from small apartments. He was highest bidder of several who wanted the property and paid the New York Life Insurance company $300,000.

Marx's purchase ended a long period of uncertainty and unrest among the 12 families which occupy the building over the possibility of being forced out through purchase by interests planning to remodel it.

L. Morgan Yost, North Shore architect, who is also on the staff of American Lumberman as associate editor, states that in spite of a civilian shortage today there will be plentiful high quality lumber as soon as war needs are satisfied, because there is an abundant supply of raw timber still standing in the United States forests.

The present scarcity of lumber for civilian needs is due, in part, to the shortage of skilled workers in forest and mill. The industry has lost between 70,000 and 80,000 experienced men. It suffers too from a shortage of equipment—fewer power saws, tractors, trucks and tires. Lumber production is no longer measured in mill capacity but rather by available manpower equipment. Yet despite the shortage of manpower and machinery the industry today is producing much more lumber than is normally required for civilian consumption.

Charles W. Nicol and associates, architects and engineers, have moved their office to 23 E. Jackson Blvd., Chicago.

Philip Duke West, architect and designer, has opened an office at 185 N. Washington Ave., Chicago.
Massachusetts Elects Gray President

John M. Gray, A.I.A., of Salem, was elected 1945 president of the Massachusetts State Association of Architects at its annual meeting, Jan. 10. He succeeds Richard Shaw, of Boston.

Charles D. Maginnis, Jr., was awarded a certificate of honor for his contribution to the war effort in shipbuilding, and Charles P. Hoyle of Worcester, former vice president of the State Association, was given a similar honor for his activities in educational affairs in his area. Robert Allen Cook of Milford and Delmar L. Lambert of Worcester were continued as directors of the association, representing the Worcester area.

The Container Corporation of America has retained famed architect Walter Gropius, once with the Bauhaus in Germany, as its "architectural consultant." Among other things, he will draft "a dream factory plan" for the company, giving the structures a family resemblance and hence some plausible value.

Mr. Gropius is chairman of the Department of Architecture in the Graduate School of Design at Harvard University, and is a member of The American Institute of Architects and an honorary member of the Royal Institute of British Architects. He is also vice president of the Institute of Sociology of London and is author of "New Architecture and the Bauhaus.

"Architects seem to be something like Cape Codders—where you find three of them together, you get four opinions," writes Barbara Bigelow, in the Boston Traveler.

Starting with the idea of conducting a poll of architectural thought on the best and worst public structure in the city, she interviewed 15 of Boston's leading architects.

The Boston Public Library and the Boston Traveler got two votes each as the best and worst respectively.

Pulling no punches in his survey of the Hub, Dean Joseph Hudnut's accusing eye falls on the Customs House.

"Sensible, crude and arrogant, this building crushes at its base a fine relic of the community. I am unacquainted with any public building in Greater Boston that, by comparison, expresses most pleasingly and satisfactorily the admirable initiative and cultural aspirations of a traditionally distinguished community. I am unacquainted with any building in Greater Boston that, by contrast, can successfully challenge in any field the aristocratic qualities of the Boston Public Library."

Kingscott Succeeds Allen As President G.R. Chapter

Louis C. Kingscott of Kalamazoo was elected to head the Grand Rapids chapter, American Institute of Architects, at the annual meeting held Jan. 27. Clarence H. Rosa of Lansing was elected vice president, and Warren L. Ringe of Grand Rapids is the new secretary-treasurer.

Roger Allen, retiring president, was elected to the executive board, which consists of the new officers, Allen, and Adrian N. Langius, state director of buildings and construction at Lansing.

The Grand Rapids Mr. Kingscott chapter, whose territory includes all western Michigan and the upper peninsula, now has within its membership 57 percent of all practicing architects in its territory, Allen pointed out in his annual report. This compares with a national percentage for all chapters of 31 percent.

The publication, Scholastic Coach of New York, for January, carries an article, "A Modern Stadium," by William C. Zimmerman, A.I.A., of Pontiac, Michigan. This excellent Wisner Memorial Stadium in Pontiac, of which Mr. Zimmermann was the architect, is a tribute to the progressive people of that city. In another article in the same issue, Mr. Marshall Simpson discusses the floodlighting installation of this stadium, under the title "There's Light in the Siginav Valley."

Wisconsin Architects Meet Jointly

The State Association of Wisconsin Architects and the Wisconsin chapter of The American Institute of Architects held a joint meeting Jan. 24 in Milwaukee. The purpose of the meeting was to discuss unification of the profession.

Leigh Hunt, vice chairman of the institute's committee of unification, explained the unification program, how it is being developed and what action is necessary to be taken by Wisconsin architects in order to have one state organization.

Rudolph Adler

Atlanta, Ga.—Rudolph S. Adler, 56, a member of the firm of Shutze, Armistead & Adler, architects, died Jan. 19.

Born in Atlanta, he attended schools in Atlanta and New York. He was graduated from the Columbia School of Architecture in New York and studied in Europe.

A lieutenant in World War I, he served for a while as a major in the present war, but was discharged because of ill health.

Mr. Adler was a member of The American Institute of Architects.

West Virginia Chapter Renames Martens

Officers were elected by the West Virginia chapter of The American Institute of Architects at an annual meeting Jan. 9.

President Walter F. Martens and Secretary-Treasurer Robert H. Daley, both of Charleston, were re-elected, and Albert F. Tucker of Huntington was named vice president. James W. Montgomery of Charleston was elected to serve as director for a three-year term.

Rudolph J. Nedved has assumed his new duties as director of Milwaukee's Housing Authority, it is announced by Leigh Hunt, F.A.I.A., authority chairman.

Nedved, a native of Czecho-Slovakia, came to the United States at the age of 9. He was reared in the blighted west side area of Chicago known as "the valley." A graduate of Armour Tech in architecture, he later was an instructor in architecture at that school. In 1923 he won the Chicago Architect's club foreign scholarship and spent 13 months in Europe studying housing. Since the early 30s he has served with various federal housing agencies and in accepting the Milwaukee position he leaves the job as chief of site and dwelling standards for the NHA.
N. Y. Chapter's Holden Sees Need For Early Planning

Arthur C. Holden, president of the New York chapter of The American Institute of Architects, recently said: "We must bear in mind that not buildings alone must be designed; entire communities and cities must be rebuilt." Yet the war has greatly complicated the task of the architect.

Daniel Paul Higgins of New York city, a prominent member of the profession, has pointed out that a huge program of postwar building is still a program until it is actually recorded on a set of blueprints. He said larger projects require approximately a year from the beginning of the planning to the initiation of construction. Small jobs still require three to four months for preparation.

The old slogan of "Taking the city to the country" will be reversed after this war, according to J. M. Berlinger, architect. That means, Mr. Berlinger says, creating new urban housing to accommodate the shift. New York, he points out, already has all it needs such as streets, parks, schools, police and fire houses, sewers and public facilities, etc.

"Potential housing such as old-law tenements and early built new-law structures already exists," he says. "Let us alter them without interference and create super-blocks and slab clearance developments opposite by the city with state and federal aid."

Mayor F. H. LaGuardia has given unqualified indorsement to the Mitchell-Coudert bill which provides tax exemption for owners of old-law tenements who modernize their premises to alleviate the present housing shortage.

Maxwell A. Cantor, of the New York State Division of Architects, recommends amending the multiple-dwelling law to permit remodeling of one-family frame dwellings to two or three-family homes.

There seems to be considerable difference of opinion on this subject among architects.

Problems of sound financing and construction of dwellings by private interests after the war were discussed by several hundred bankers, realtors, architects, city planners and housing experts at a recent one-day conference of the National Committee on Housing at the Biltmore hotel in New York.

Miles L. Coleman spoke of the minimum standards of sound construction as set up by the FHA as a rational approach to an "important element of mortage, lending policy."

Ralph T. Walker, F.A.I.A., warned against too much standardization or centralized control in housing standards and urged constant change of these standards to keep up with changing conditions.

Henry J. Kaiser, whose shipyards have played a major role in producing war material, believes that "residential building after the war can do for American economy what the automobile did for us in the early Nineteen Twenties." Mr. Kaiser was speaker at the luncheon meeting of the conference.

Eggers & Higgins are architects for a proposed memorial to the late Gov. Alfred E. Smith which is to be announced by a committee of 36 prominent New Yorkers.

Otto R. Eggers, partner in the firm, has accepted a three-year appointment to the Municipal Art Commission, of New York City.

Delano & Aldrich have won first place in a competition to select an architect for the postwar building program at United States Military Academy at West Point.

Second, third and fourth places in the competition were won, respectively, by these New York firms: Shreve, Lamb & Harmon, Alfred Hopkins & Associates, and Skidmore, Owings & Merrill.

The competition was authorized by the War Department and was under the direction of Colonel Edwar W. Garbisch, the Army's New York District Engineer.

Charles W. Stoughton, a member of the architects' firm of Stoughton & Stoughton, New York, for the last fifty years, died Jan. 9 in Mount Vernon Hospital after a brief illness at the age of 84.

Mr. Stoughton was graduated as a civil engineer from Columbia University in 1882, and immediately entered the architectural field. In 1884 he and his brother, Arthur A. Stoughton, his only immediate successor, formed the firm of Stoughton & Stoughton.

William Francis Dominick, A.I.A., with offices in New York, died at Greenwich, Conn., on Jan. 17, of a heart attack. He was 69 years old. Mr. Dominick, who held degrees from Yale (1898) and Columbia (1901), received from the American Institute of Architects its 1941 certificate of merit for "excellence in small-home design" for his remodeling of the home of Mrs. Archer F. Brown in Greenwich.

G. Morton Wolfe has been elected president of the Buffalo-Western New York chapter of the American Institute of Architects. He succeeds James S. Whiteman. Other officers are: Vice president, Raymond Freeburg of Jamestown, and secretary-treasurer, Earl Martin.

Mr. Stoughton was graduated as a civil engineer from Columbia University in 1882, and immediately entered the architectural field. In 1884 he and his brother, Arthur A. Stoughton, his only immediate successor, formed the firm of Stoughton & Stoughton.

Appointment by Buffalo Public and Gloversville Library Boards of Eliel Saarinen and James W. Kidney as architects for the proposed combined library to be located at Buffalo-Western New York Chapter, American Institute of Architects, Jan. 12. Executive Secretary Earl Martin informed the council. The chapter recommended the council confirm the appointment.

With the advent of the New Year, the Brooklyn chapter, A.I.A., has started on its first milestone.

"We feel that if the architectural profession follows the philosophy of the defeatist school it will soon become weak and lose its rightful place among the highly skilled professions of the modern world," says E. J. Gambaro, chairman of the chapter's Current Work Committee.

We hope that these observations, as expressed by the Chairman, will serve, even in a small way, to unify all of us in a more friendly, sympathetic and understanding spirit.

"This is the time to keep up the collective spirit and develop our usefulness as an architectural organization," says Cy Tucker, secretary of the Rochester Society of Architects.

"Rochester has suffered, as many other cities, from an economic depression. Are you familiar with what steps can be taken to counteract this trend? Station WHEC is sponsoring 20 weeks of broadcast on Tuesday nights at 9:30 on subjects of civic interest. The program is being handled by the Junior Chamber of Commerce, and the first one will be titled "City Planning," with Mr. William A. Kuebler and Mr. Blake McKelvey will take prominent parts."

Hunter McDonnell, A.I.A., of New Rochelle, died on Dec. 27, at the age of 52.

Indiana Seeks Registration

Through the cooperation of N. Roy Shambleau, architect, one of the sponsors of The South Bend Home Planners' Institute, Howard Myers, architectural editor of Life magazine and editor of Architectural Forum, spoke to the Institute recently.

Besides being an authority on home building and a leader in emphasizing good style and convenience in moderately priced houses, Mr. Myers has been a pioneer in better city and town planning.

He is now devoting his attention, thought and editorial space to the practicability of prefabricated houses. The program, the third in a series sponsored by the Home Planners' institute to encourage interest in postwar home building, remodeling, decoration and refurbishing, included a question-and-answer forum conducted by Mr. Myers after his talk.

Maine Seeks Registration

Presentation to the Legislature of a bill for registration of all architects in the state was decided on at the annual meeting of Maine Chapter, American Institute of Architects, Jan. 12.

This will be the fourth time such a bill has been submitted, John Howard Stevens of Portland, newly elected president of the chapter, explained.

Architects in the State numbered about 30 a year ago but there probably are few today, he said.

Other officers elected were John S. Larson of Bangor, vice-president, and William B. Tuttle of Portland, secretary-treasurer. Royal Boston, Jr., retiring president, presided.

WEEKLY BULLETIN
Pickering President Cincinnati Chapter

Annual Meeting Looks To Overall Long-time Planning

Cincinnati Chapter, The American Institute of Architects, elected Prof. Ernest Pickering, head of the department of architecture of the College of Applied Arts, University of Cincinnati, as its president Jan. 16. He succeeds Standish Meacham. Those named with Pickering were Edward H. Kruckemeyer, vice president; Ramsey Findlater, secretary, and George E. Porter, Jr., treasurer. This group also will act for Cincinnati Section, Ohio Architects' Society.

Meacham became a member of the executive committee and chairman of the board of the Architects' Civic Design Group of Metropolitan Detroit, of which he is chairman. Pickering was introduced by Charles R. Strong and Bernard Pepinsky. As chairman of the membership committee, Roth reported that the chapter has 97 corporate members and 97 associate and student members which, for 1944, showed an increase of 21 per cent.

A report by the building code committee was accepted by the chapter and will be discussed at another meeting. The report opposed a standardized set of regulations for all communities.

Branson V. Gamber, F.A.I.A., of Derrick & Gamber, Detroit, spoke on the work of the Architects' Civic Design Group of Metropolitan Detroit, of which he is chairman. Gamber was introduced by Charles F. Cellarius, Great Lakes Regional director of the institute. John W. Becker was chairman of the Program Committee.

A real effort to get down to the grass roots of public preference in city planning is being made by the Citizens Planning Association, the Engineering Society of Cincinnati, and the Cincinnati Chapter, American Institute of Architects.

These organizations are sponsoring monthly forums with the hope of getting real break-down discussion of what went wrong with what in the Cincinnati of tomorrow. At each forum there will be speakers on the topics of discussion, after which there will be questions and talks from the floor. At one of the sessions, Mrs. John W. Becker, of the Modern Art Society, will speak on "What do Cultural Facilities mean to Cincinnati—Have we more than we can afford?"

Harry Hake has been selected as architect for a new McKicken Hall at the University of Cincinnati, to cost about $1,900,000.

Hake and his associates have been architects for many important buildings in Cincinnati and in Ohio. These include the Student Union and Taft Law School on the University campus, all of recent construction, and Cincinnati and Suburban Bell Telephone Co. buildings.

Clifford M. Stegner, 67, building commission chairman, Columbus, from 1927 to 1943, died of a heart attack Jan. 18. A native of Cincinnati, he received engineering degrees from the University of Cincinnati and Cornell University. From 1912 to 1926 he had a private practice in Cincinnati, specializing in electrical engineering.

Active in many engineering societies, he was past president of the Building Officials' Conference.

Cleveland—A proposed ordinance to require architects on every building job in Shaker Heights, has caused a fight between architects and home builders.

Francis K. Draz, chairman of a committee which represented the Cleveland Chapter of The American Institute of Architects in studying the proposed ordinance, defended it as a protection to the Shaker Heights public.

"The required use of an architect will protect public health and safety," he said. "Another good feature is the insistence that the architect supervise the construction and that he certify to the city that work was completed according to approved plans and specifications."

"If an architect is to be put in the driver's seat on every home construction, the best operative builders—who build homes for sale after completion—will get out of Shaker Heights," warned A. A. Treuhaft, vice president of the Home Builders Association.

Columbus Chapter, A.I.A., elected G. Curtis Inscho as president for 1945. About 30 years ago his father, Charles L. Inscho, was presiding over the same chapter.

Father and son now practice together, this year's president having been married on the last five years following the attendance of the new president at Ohio State University.

Thomas E. Brand, state architect, was re-elected vice president. The duties of the secretary were placed in the hands of Gilbert Coddington of the Department of Engineering Drawing at Ohio State.

Marion A. Carter, associated with the office of Ohio State University architect, was elected treasurer and Raymond D. Goller, the retiring president, was elected as a member of the executive committee.

All officers of the new student branch of The American Institute of Architects at Ohio State University are women. They are Eloise Killian, Wapakoneta, president; Ellen Tubbs, Westerville, vice president; Barbara W., Frincke, secretary, and Leota McDaniel, '32 S. F. Penal, public relations officer. Advertisers at the monthly meetings are Prof. Wilbert C. Ronan and Todd Tibbals, architect.

The American Commission for Living Memorials, of which Howard Dwight Smith, Ohio State University, is architectural advisor, has issued a booklet, "Memorials that Live." Of 59 pages, it is beautifully illustrated of many types of memorials.

Regardless of any feeling concerning so-called living memorials, the profession at large will be interested in the Commission's acceptance of the policy which was insisted upon by its architectural advisors, namely, that the brochure should be confined to stimulating ideas for setting ideals rather than to promulgating specific types or plans of possible memorial projects. This policy is distinguished from the one already adopted by the American Recreation Association, some branches of the American Legion, the Recreational Division of the Community War Service, and others, who have published booklets containing drawings of suggested structures. Some of these drawings have been dimensioned and described in such manner as to suggest their possible use as working drawings.

The Commission has been importuned on numerous occasions to publish drawings of types of structures, but has refrained because of the belief, as expressed recently in the testimony, that even the smallest of community memorial projects should grow from the life of the community which it serves, and that specific professional service is desirable, if not essential.

It should be apparent that the Commission's concern for American physical fitness is deeply sincere. Its respect for, and reliance upon, the architects and engineers is the country in the whole matter of living memorials are indicated by this recent publication.

Toledo—Alfred A. Hahn was elected president of Toledo Chapter, American Institute of Architects, at its annual meeting Jan. 16. Other officers chosen are Carl C. Britsch, vice president; Mark B. Stopple, secretary; Roy Peterson, treasurer.

Willis A. Vogel, the retiring president, was elected a director for a three-year term, representing the Architects' Society of Ohio. Horace W. Wachter, retiring treasurer, was also elected a director, with Charles B. O'Shea an alternate director, and Charles H. Stark and Charles H. Wachter, members of the board of directors.

Hahn, a member of the firm of Hahn & Hayes, has been actively interested in his professional organizations, as well as civic affairs, for many years. Among the many creditable jobs his firm has done are the $2,000,000 Toledo Public Library and $1,500,000 Hillcrest apartment hotel.

Over 400 persons of Toledo and environs attended the first annual dinner of the Toledo Regional Planning Association on Jan. 9. The topic was "Status of Planning in Toledo," Harold H. Munger spoke on "An Architect Looks at Toledo."

John Richards, Toledo architect and artist, is currently holding a one-man show at the Toledo Artists' Club. The exhibition contains watercolors and lithographs of European scenes, the Smoky mountains and eastern states, as well as local views.

A one-time instructor of watercolor at the University of Pennsylvania, Mr. Richards is one of Toledo's outstanding architects and a member of the Firm of Bellman, Gillette and Richards. He also is a member of the Toledo Art Club and the Toledo Artists' club and the A.I.A.
Central Pennsylvania Names Johnstone

The annual meeting of the Central Pennsylvania Chapter, The American Institute of Architects, was held at the Harrisburger hotel Jan. 11. President William Lynche Murray, Harrisburg, was in charge.

The chapter acted on a motion to join with architects throughout the Commonwealth in forming a Pennsylvania Society of Architects.

Officers elected were B. Kenneth Johnstone, State College, president; Harry E. Yessler, York, vice-president; Daniel S. Readinger, Harrisburg, secretary; John W. Greiner, Lancaster, treasurer; William L. Murray, Harrisburg, executive committee member.

Mr. Johnstone has been most actively interested in his professional organizations for many years. Last year he completed a study of the distribution and availability of architectural services in the Commonwealth of Pennsylvania.

Lemont H. Button, has been elected president of the Pittsburgh Chapter, Institute of Architects, for 1945. Roy L. Hoffman was elected vice-president; J. Phillips Davis, secretary; D. Donald McGervey, treasurer; and Raymond A. Fisch, director, 1945-47.

Prof. Whitaker ture, and other staff members of a forthcoming book entitled "Building or Buying a Home."

Thirty-one years of outstanding service as head of the school of architecture and building construction at the International Correspondence Schools were completed last week when William S. Lowndes, A. I. A., announced his retirement.

During his long tenure of teaching, Mr. Lowndes saw many of his students reach postwar life.

Washington State Elects Jones President

Victor N. Jones, prominent Seattle architect and member of the firm of McElvain and Jones, was elected president of the Washington State Chapter of The American Institute of Architects, at its annual meeting in Seattle Jan. 20.

Lt. Col. Ivan Meyer, assistant chief of staff, army intelligence, 41st Division, spoke on "Architecture of Australia." William F. Gardner, of the Architectural Journal, of British Columbia, was a guest.

Other officers elected include: vice president, Mr. Jones Seattle district; George Wellington Stoddard; treasurer, Paul Hayden Kirk; secretary, Perry Johnson; district vice president, Yakima district, John W. Maloney; vice president, Washington; Charles Pearson; vice president, Olympia district, Joseph Wohleb. Convention delegates are George Wellington Stoddard, Ralf Decker and Frank Smith. Henry J. Olszewsky was elected to the board of the chapter for a three-year term.

Mr. Jones' firm is preparing to open offices also in Boise, Idaho, announcing that several million dollars worth of postwar work in the Boise valley had already been secured.

Twelve engineering and architectural societies covering western Washington and the entire state have formed the Puget Sound Council of Engineering & Technical societies patterned after the Oregon Technical Council in Portland.

Nathan A. Carle, former Seattle city engineer and a fellow of the American Institute of Electrical Engineers, has been elected chairman of the council which will represent the state's engineering and technical profession in a manner similar to that in which the state bar represents lawyers.

The Council expects eventually to encompass 20 societies and have a total membership of 300 engineers and architects.

The Washington Chapter, A.I.A., is represented by A. M. Young.

Oregon Elects

Francis B. Jacobberger was elected president of the Oregon chapter, American Institute of Architects, at the annual meeting Jan. 16.

Other officers included: Van Evera Bailey, vice president; Thayle J. Logan, secretary, and John K. Dukehart, treasurer.

Pietro Belluschi, retiring president, was named to the board of directors to succeed Clarence H. Wick.

In a talk on "Redesign for Social Order" Rev. Thomas J. Tobin urged co-operation between labor and management to the end that government intervention would not be necessary.

South Texas Chapter, A. I. A. Votes Werlin President

Eugene Werlin has been elected president of the South Texas chapter of The American Institute of Architects.

Other new officers include Jack W. Knostman, first vice president; Thomas Fitz Patrick, second vice president; C. H. Kiefner, secretary; and Lewis J. Woodruff, treasurer.

Milton McGinty was elected to a three-year term as a director. Holdover directors are A. F. Finn, Jr., and James Chilman.

John B. Danna has been elected president of the Dallas section of the Texas Society of Architects succeeding Tom Broad.

Other new officers of the organization are Robert Goodwin, vice president; John P. Wiltshire, secretary, and Wade Klamberg, treasurer. Arthur Thomas was elected as a director and Broad and Hal Yoakum, retiring secretary, became members of the executive board.

Hugo Leipziger, instructor in architecture at the University of Texas, has been invited by the city of Galveston to serve as consultant on housing and city planning for its postwar period.

Planning for Galveston will include consideration of the city's historic and cultural background and recognition of the sort of community it wants to be, Leipziger said. He emphasized the importance of attention to housing as an integral part of any well-rounded city plan.

Members of the community council who are working with the architect are representatives of Galveston's city and county organization. Leipziger has also assisted with postwar planning in Dallas and Fort Worth.

Members of the Dallas Architects' Wives Club, assisted by the Women of Rotary entertained men from Ashburn Hospital, who were in Dallas for the week end.

Arriving here at 3:30 p.m. Saturday, the veterans were met by members of the Architects' Wives' entertainment committee and taken to the homes of club members, where they were week end house guests. Mrs. Thomas D. Broad and Mrs. John B. Danna, assisted by Mmes. John D. Carsey, Terrell R. Harner, Mark Lemmon, Arthur Thomas, Wade Klamberg, Horace R. Willson, Walter J. Schlagger, J. Murrell Bennett and Roy E. Lane, were in charge of arrangements. Mrs. Marion Fooshee, president of the club, is general chairman of the city-wide project.

Hugo F. Kuehne, Jr., is not only following his father's professional footsteps, but is taking time out in his leisure from navy duties in the South Pacific area to do some occasional architectural sketches. Recently he spent his father's an architectural drawing he made of a chapel in New Guinea.

Young Kuehne is the son of Mr. and Mrs. Hugo F. Kuehne. Kuehne is an Austin architect and a member of the architectural firm of Giesecke, Kuehne and Brooks.

WEEKLY BULLETIN
Safeguard design
with the permanence of steel

Stran-Steel, the light steel framing member with the patented nailing groove, has taken its place as a universal building material, bringing new efficiency and flexibility to building design. Small homes, apartment buildings, factories and other commercial structures may be built economically and quickly with Stran-Steel—by builders who are accustomed to other types of construction.

Stran-Steel, new and improved, is a precision construction material of unlimited adaptability. Joists, studs and plates are of steel—steel for strength, durability, uniformity and fire-safety—steel for speed of erection, rigidity, freedom from warp and sag—steel for permanence. Design in steel; build the world of tomorrow in steel. Explore the possibilities of standardized Stran-Steel.

Rhode Island Honors Two

Rhode Island Chapter of The American Institute of Architects recently did honor to two of its most distinguished members at a testimonial dinner. The recipients were F. Ellis Jackson and Wallis E. Howe. John Hutchins Cady, president of the chapter, saluted Mr. Jackson in the following words:

"A student and patron of historic Rhode Island architecture, Mr. Jackson has the happy faculty of adapting traditional forms to meet modern requirements, as exemplified by his notable group of buildings on College Hill. His passion for harmony and order in neighborhood design led him into the field of city planning, where his inspiration and leadership were of such significance that he received a citation from The Providence Journal in the summer of 1944 for outstanding community service. He is devoted to the interests of The American Institute of Architects and the advancement of its ideals, and is a wise counsellor of the Rhode Island Chapter."

His greeting to Mr. Howe was as follows:

"A designer of distinction, with a technique of delineation envied for its brilliance and charm by his fellow practitioners, Mr. Howe has produced, and is still producing public buildings, schoolhouses, office buildings, churches, and other architectural works of sterling quality. Of outstanding charm are his many residences, not one of which has failed to add beauty and distinction to its environment."

Mitchell, S. D.—The recent 26th annual convention of the South Dakota Society of Architects, at Mitchell, was welcomed by Walter J. Dixon, architect, mayor of the city.

General Motors Competition

The Porcelain Enamel Institute advise they are anxious to furnish the profession entered in the Design Competition for Automobile Dealer Places of Business, as announced by the General Motors Corporation last month, with very useful information on Architectural Porcelain Enamel which should be of value and timely interest in connection with their designs. You can obtain this data promptly by writing to the Porcelain Enamel Institute Inc., 1010 Vermont Ave., N.W., Washington, D. C.

PORTABLE CHEMICAL DEHYDRATORS

Automatically controlled, using flake calcium chloride for controlling humidity and for preventing dampness in:

**THE BOARD OF DIRECTORS** of The Michigan Society of Architects met at the Rackham building in Detroit on the afternoon of February 8. President John C. Thornton presided. Directors present were Messrs. Gamber, Black, Langius, Blakeslee, Caldwell, Stirton, Hughes, Pellerin and Mead. Also in attendance were Watts A. Shelly of the State Registration Board, Aloys Frank Herman of the Legislative Committee, Emil Lorch and George McConkey of APELSCOR, and Clair W. Ditchy, president, Detroit Chapter, A.I.A.

After discussion of registration and legislation, a nominating committee to prepare a slate of officers for the coming year was named by the board as follows: Kenneth C. Black, chairman; Robert B. Frantz and Harry L. Mead.

President Thornton appointed a second nominating committee consisting of Branson V. Gamber, chairman; Wells I. Bennett and Randall Wagner.

The president appointed a committee on roadside signs consisting of Alex Lin-Toutr, chairman, Fred Harley and Buford L. Pickens. He also named William E. Kapp and Frederick Fairbrother as a committee on schedule of charges.

The president announced that he had appointed Andrew R. Morison as the Society's representative to comply with a request from the city of Pleasant Ridge for information on costs of residential construction.

Vicor E. Thebaud, of Grand Rapids, was made a member emeritus of the Society.

It was announced that the Saginaw Chapter of the A.I.A. is now duly established with twenty-four members.

**ANNUAL MEETING**

The date of the Society's annual meeting has been changed from March 23 to March 22, 1945. This was made necessary in order to secure the proper facilities. This being a one-day meeting with less than 50 from out of town, no conflict with ODT rulings will be experienced.

The Producers' Council will provide a program the evening before. The board of directors will meet at breakfast at the Wardell Sheraton on the 22nd which will be followed by the opening business session in the Rackham building at 10:00 A. M. A luncheon will be held at the Wardell Sheraton and another business session in the afternoon.

The annual dinner will be held in the banquet hall at the Rackham building, followed by a lecture in the large auditorium at 8:15 P. M. The speaker will be Frank Lloyd Wright. It is expected that Mr. Wright will arrive on the morning of March 21 and be at the Detroit Athletic Club for a press conference.

**Helen Fassett on City Plan Board**

Miss Helen L. Fassett, director of research for Smith-Hinchman and Grylls, Inc., has been appointed to the nine-member City Plan Commission by Detroit's Mayor Edward J. Jeffries, Jr.

The mayor's letter of appointment asked Miss Fassett to complete the final month of the term of Branson V. Gamber, who resigned from the commission recently, and to accept a full three-year appointment beginning March 1. A graduate of the Armour Institute, of Chicago, Miss Fassett is secretary of the Architects Civic Design Group, an association which has worked in an advisory capacity with the City Plan Commission on long-range development plans for the city.

**Russian Course at Detroit Tech**

To meet a growing demand, the Detroit Institute of Technology will offer courses in the Russian language this spring in its regular curriculum. The instructor in these courses is Mr. E. Litvinoff, a highly-educated native Russian with a rich background of experience in teaching the Russian tongue to Americans. His teaching method provides a short-cut to basic Russian, eliminates all non-essential details, moves always toward the dual goals of useful mastery, and quick mastery.

It is a modern course, designed to teach modern Americans a language needed for today, and even more needed for tomorrow. The advantages of a practical knowledge of Russian for any man entering the armed forces can be seen at once.

APELSCOR Meets to Discuss Court Decision

From the Michigan Engineer, Dec. 1944

A meeting of the Architects, Professional Engineers, and Land Surveyors Committee on Registration was held recently at the Rackham Memorial Building in Detroit to discuss the recent Illinois Supreme Court decision which ruled that state's registration act unconstitutional. George Francis, Chairman of APELSCOR, appointed a Committee to study the Michigan law in view of the Illinois decision to see if legislative action is warranted in Michigan.

Watts Shelly, Executive Secretary of the Michigan State Board of Registration for Architects, Professional Engineers, and Land Surveyors, has presented the following summary of the Illinois decision:

A far-reaching and severe blow has been dealt engineering registration in the case of Krebs vs. Thompson, recently decided by the Supreme Court of Illinois.

In this case, the newly enacted law, regulating the practice of professional engineering has been declared unconstitutional and, therefore, invalid. Basis is primarily on the vague definition of the term “Professional Engineering.” Inasmuch as the Illinois law is patterned, to a great extent, after the model law used by most states, it is quite apparent that steps be taken to amend the model law in all vulnerable provisions. Since engineering is a man-made profession, its functions must be clearly defined. Probably, the common law professions of medicine, law, and divinity would stand up under such a general definition as we have given engineering; but since our own profession is statutory, its scope must be accurately defined and its standards of practice clearly set forth.

The Supreme Court of Illinois held that an act to be valid could not be vague, indefinite, and uncertain but must be complete when it leaves the legislature and sufficiently explicit to advise everyone of his rights under the act and the effect on him by its operation. Quoting a previous decision, Court said: "Statutes which are so incomplete, vague, indefinite, and uncertain that men of ordinary intelligence must necessarily guess at their meaning and differ as to their application, have uniformly been declared unconstitutional as denying due process."

The Court said that the words "engineering principles and data" are not defined in the act and have no fixed and definite meaning. Furthermore, that engineering services and the application of engineering principles and data extend to many different vocations and employment. The chief objection is that the law gives too much discretion to the Department of Registration and Education and its Engineering Committee, in that not only is the definition of engineering lacking but also standards of determining qualifications thereunder are also lacking. Said the Court: "If the statute leaves to a ministerial officer to define the thing to which the statute is to be applied, and if the definition is not commonly known in the modes already pointed out, the act becomes invalid, because it creates an unwarranted and void delegation of legislative power."

As the final blow, the Court said that the provision, stating that an applicant must meet all requirements of the act, is meaningless because there are no requirements set out in the act.

NOW! A New No-Leak Method For Glazing Wood Sash

Excellent for Sash Manufacturers
Ideal for All Outside Glazing

Out of the Plastic Products Laboratory has come a revolutionary advance in glazing wood sash—a better method and a better material. The glass is bedded in Plastoid Elastic Bedding Cement making a rubbery bond that will allow for all contraction and expansion and absolutely prevent leaks. Then the facing is applied in the usual way, with Glaza-Wood. The method and the material produce no-leak glazing, and eliminate the other faults characteristic of the old procedure . . . Write for descriptive literature.

T or two members have not paid their chapter dues for 1944 spoils an otherwise perfect record.

We now have 50 corporate members and one associate member in this chapter, a figure that represents 57% of all the registered architects in our territory. This figure of 57% actually means a higher percentage than the figure indicates, for of the architects registered and accredited to this chapter's territory, nearly 70% are Institute members. I have received and have studied with very great interest a tabulation recently made by C. Julian Oberwarth, membership secretary of the Institute. As you can see, this tabulation is a large blue printed sheet containing complete information from every chapter in the United States to the national membership to the total number of architects. Let me read you a few of the figures: The total number of architects in the United States is 14,477, and of this number 4,491 are members of the Institute. This means that 31% or slightly less than one-third, of the practicing architects of the United States hold membership in the Institute.

The Grand Rapids chapter ranks 6th, out of a total of 72 chapters, in the proportion of Institute members in the total number of architects. You may be interested in the five chapters that have a larger percentage than we have: Delaware has 32 out of 35 architects for a percentage of 91; Detroit has 40 out of 461 for 87%; Kansas 35 for 63%; South Georgia 13 out of 21 for 62% and North Louisiana 15 of 25 for 60%.

Incidentally, the chapter with the lowest percentage is Westchester, where of a total of 310 architects only 14 are Institute members, for a percentage of 5%.

The percentage varies widely in the regional districts. These percentages are as follows:

- New England: 25%
- New York: 25%
- Middle Atlantic: 31%
- South Atlantic: 34%
- Great Lakes (Our District): 33%
- Central States: 33%
- Illinois-Wisconsin: 24%
- Gulf States: 31%
- Western Mountain: 43%
- Sierra Nevada: 21%

Mr. Oberwarth points out:

It is fair to remember that the obstacles to large proportionate membership vary widely in the different districts. The farther away one gets from a state capital, the more difficult the task becomes. A city having 100 architects and a chapter covering only its corporate limits has a simple problem compared to a state with 100 architects and no large cities. These difficulties are multiplied for chapters which cover two or three large states.

Another factor is the date of passage and quality of the registration law in the chapter area. A state which has recently passed a law which allows initial registration to "almost anyone" may be expected to have a proportionately large list of this extremely informative and thought-provoking tabulation.

We hope that before the next annual meeting the war will be over and we will have with us again the members of the chapters who are now in the armed services. The chapter has had, on the whole, and in spite of its president, a successful year in 1944 and I am sure that 1945 will be more successful.

I would like to make a few recommendations. First, as to the type of meetings. One of the most successful meetings we have had was the one conducted by Libby-Owens-Ford, at which the Solar House was discussed and illustrated. I believe firmly that informative meetings of this type are the most worthwhile type, and such a meeting has been scheduled at Lansing for the February meeting of this chapter.

Secondly, I feel that we should publish a monthly mimeographed Bulletin, whether we call it ARCHITECTONICS or something else. The fact that nothing makes a chapter member desire to take part in institute activities as much as providing him with complete information on that chapter's affairs outside the Chapter. While the Bulletin of the Michigan Society functions brilliantly, still there are many things of interest principally to our own members that can be handled better in our own newsletter. I do not think that this Bulletin should take advertising or become a printed leaflet; two mimeographed sheets should give us plenty of scope.

would like to see this matter gone into as soon as possible, for while I would be glad, if the chapter so desires, to edit this bulletin, I have no intention whatever to get mixed up in any details of the duplication or distribution of it.

It seems to me that the Chapter should be giving some consideration to the fact that very soon, we hope, the war will be over and young men will be returning to the practice of architecture. I think the Institute should make every effort to see that these young men are given all the assistance they need in obtaining positions in established offices and that the young men who return to college to continue their architectural studies should be aided in every way possible. I have been serving recently on a committee that has been discussing War Memorials and in looking over the various types of memorials now being planned all over the nation, I note that the emphasis is on some form of living memorial, or at least a memorial that benefits the living while it commemorates the sacrifices of the heroic dead. In Pontiac for instance, the students of one of the large high schools have established a scholarship to the University of Michigan. Each scholarship is to bear the name of some graduate who fell in battle. It seems to me that the two Institute chapters in Michigan could very well consider something of this sort and estab-

ish an architectural scholarship or scholar-
ships in the years to come.

In conclusion, I would like to express my appreciation of the splendid cooperation I have had during these difficult years of this chapter. The other officers and members of the Executive Committee have been extremely cooperative and every member has assisted in the chapter's efforts to keep an active chapter life going during these difficult years.

John H. Freeman Heads Builders & Traders'

At their recent annual election, the Builders & Traders' Exchange, of Detroit, chose John H. Freeman, president; G. K. Chapman, of Walbridge, Aldinger Co., treasurer, and re-elected E. J. Brunner, secretary-manager. Other officers chosen were Lester L. Brooker, Brooker Engineering Co., and Thomas Marshall, Robert Hulton Co., both vice presidents.

M. S. A. Reports

As requested in a previous Bulletin, we repeat—annual reports are due. Please cooperate by complying with this request, without further notice.
AH-H-H! PERFECTION!

And it is much easier to attain "perfection" in cooking—with Gas. Quick starting, absolute control of the required heat intensity and immediate cut-off of fuel, when the job is finished, saves time and assures economy in operation.

Now some wartime restrictions on the purchase of commercial gas cooking equipment are revoked. Deliveries may be slow for some time but we can probably help you get what you need. Ask your dealer or call our Mr. Hampton.

MICHIGAN CONSOLIDATED GAS COMPANY

415 CLIFFORD

CHERRY 3500
SAGINAW'S Board of Commerce, Committee for Economical Development has just issued a 57-page booklet on its Postwar Planning Program. The program appears to be a conservative one, with every division practically certain of achievement.

Member Robert B. Frantz, A.I.A., who is chairman of the sub-committee on Basic Planning, states that a score of other projects, particularly in the building construction field, have not been included in the report, for the reason that they are uncertain of becoming realities.

The report coordinates all public, industrial and other planning committees' findings for the general public's study and approval.

Says a foreword in the report, "A growing city should look ahead one, two, five and even ten years in an attempt to direct its efforts toward the accomplishment of chosen objectives which it feels will contribute most to local commercial and civic development."

Stress is laid on the importance of encouraging private industry, which in peace-time accounts for two-thirds of total construction. The committee's goal has been to encourage the preparation of as many as possible of the postponed and needed private and public projects.

Many of the leaders in Saginaw's business, professional and social life are devoting their time and energies to the end that their city may be a better place in which to live.

Mr. Frantz, who has served as officer and director of The Michigan Society of Architects and Detroit Chapter of The American Institute of Architects, has long been actively interested as a member of this committee. He is currently a member of the State Board of Registration for Architects, Professional Engineers and Land Surveyors.

THE NEXT MEETING will be held in the Lobby Lounge of the Hotel Porter, Lansing, at 7 p.m. (fast time) on Monday evening, Feb. 26th. You will receive a return post card from the Secretary. From then on the procedure is thus: Grasping a pencil firmly in the right (or, in the case of southpaws, the left) hand, make a cross in the appropriate box, tear off the return card, tear off to a mail box and deposit this clears up what has long been a baffling mystery to some of the brothers. It is expected that Julian Oberwarth, former Regional Director and present membership Secretary of the Institute, and Charles Cellarius, our present Regional Director whom you will remember from last spring’s meeting, will be present.

THE NEW OFFICERS of the Chapter: President, Louis C. Kingscott, Kalamazoo; Vice-president, Clarence H. Rosa, Lansing; Secretary-Treasurer, Warren L. Cellarius, Lansing; Members of the Executive committee, the officers and Adrian N. Langius, Lansing, and Roger Allen, Grand Rapids.

LT. CARL J. RUDINE writes: “Here I am, out in the Pacific again among the islands. The romantic part of the islands has gone and this place is like any other war center. Coming across I had several ships with me; in fact I was Task Unit Commander. We had high winds and seas all the way across and I never was so glad to reach this harbor and get a couple of good drinks. We have been very busy here in the Pacific again among the islands. The romantic part of the islands has gone and this place is like any other war center. Coming across I had several ships with me; in fact I was Task Unit Commander. We had high winds and seas all the way across and I never was so glad to reach this harbor and get a couple of good drinks... We have been very busy...”

JOHN P. BAKER, the Johnny that Bonnie Baker sang about and our ex-Chapter President, has returned from the wars to assist Gus Langius in setting up (as if it’s a set-up) post-war construction program. Monday is our chance to get the gory details of his lurid past 3 years as Chief of Design Section, Chemical Warfare Service (phew), Pine Bluffs, Arkansas Arsenal.

THERE WAS SUPPOSED TO BE a new heading prepared for this bulletin and a plate made so we could use the same heading every month but Lou Kingscott’s office and we quote is so busy there wasn’t time to get it out unquote and he is just saying that to make us feel bad. But it will be along in time for next month’s issue which will also have quite a lot more stuff printed above where it says... Roger Allen, Editor.

Steel Joists Available

Gabriel Steel Company, of Detroit, has been authorized to resume manufacturing of all types of steel joists. Production is now under way. For further information call Joe Landry at Gabriel.

Institute Dues

Michigan architects should give heed to the fact that dues in their chapter are now payable for 1945. The Roster Number of The Weekly Bulletin goes to press March 12.

Kampers at Hot Springs

Mr. and Mrs. Louis Kamper, of Detroit, have left the snow behind them in favor of the South’s balmy weather and sunshine. They are now sojourning at Hot Springs National Park, Arkansas.

With our many years of experience and newly-acquired craftsmanship resulting from our war contracts, we will be in an even better position to serve on peacetime construction when hostilities have ceased.
Day Elected on New Construction Industry Council

Clarence E. Day, A.I.A., of Harley, Elington & Day, Detroit architects and engineers, was elected a vice-president of The Construction Industry Council, at its organization meeting in the Hotel Statler, Monday evening, February 19.

Other officers chosen were: President, Joseph G. Standart, representing the Detroit Mortgage Bankers’ Association; vice-president, F. M. Sibley, of the Retailer Lumber Dealers’ Association; secretary, Wallace Reid, of the Detroit Builders’ Association, and treasurer, Clarence Treadwell, of the Detroit Real Estate Board.

The CIC’s executive board will consist of the officers and the following: N. J. Bidwell, of the Warm Air Heating Association; Henry Horn, of the Building Trades Exchange; Charles Haven Burton, of the Builders and Traders Exchange; and N. J. Brunner, of the Building Materials Suppliers’ Association, and Edwin J. Brunner, of the Building and Traders Exchange.

Clarence Day, Jr. is Safe

Clarence E. Day, A.I.A., and Mrs. Day have been informed that their son, Sgt. Clarence E. Day, Jr., is safe and well after being reported missing in the South Pacific area.

Although he bailed out when his plane was only 300 feet above the jagged rocks of the Jap-held Chinese interior, because he had to do a forced landing, and had driven, he did not realize that he was suffering from injuries, until he was flown to a hospital in the United States.

After completing its mission Jan. 18, the plane shot down in the Chinese mountains, and it was not until 11 days later, that he was discovered by a search party. He had been in the mountains for 11 days before he was picked up by Chinese guerrillas.

When he was picked up, he was taken to a native settlement, where he was given water and food. He was then taken to a hospital, where he was treated for his injuries.

He has returned to the United States, and is now recovering at a hospital in the United States.

Fred O’Dell Speaks On Materials

Frederick C. O’Dell, A.I.A., associate professor of architecture at the University of Michigan, discussed “Building Materials” at the fifth weekly meeting of the Home Planners Institute in Jackson, Mich., recently.

The institute is being conducted by the extension department of the University under joint sponsorship of the Greater Jackson Assn. and the Adult Education center.

At Philadelphia’s Art Alliance are being shown designs of war memorials. The majority are by the famous Philadelphia architect, Paul Cret, who exhibits photographs and original drawings of his memorials at Varennes, Chateau Thierry, and Fismes, the last-named a bridge, having recently been destroyed in the war.

Among the other exhibitors are John Russell Pope and York and Sawyer. Mr. Cret is chairman of the committee on war memorials for The American Institute of Architects. This small gallery, by the way, is to be devoted, in the future, exclusively to architectural exhibits.

Spence Promoted

James Alexander Spence, A.I.A., now at Naval Training Station, Dearborn, Mich., has been promoted from lieutenant to lieutenant commander. In civilian life he was a partner in the firm of Frantz and Spence, Saginaw.
