Acoustical Plaster
Why Architects Should Prescribe This Material.

Fireproof:
1. Acoustical Plasters are basically mineral, therefore incombustible.
2. No joints for fire to spread through.
3. Permanent adherence, no glue to dry out, no metal for Fire to warp or moisture to rust out.
4. Completely fire retardant, no combustible binders or erection materials.

Monolithic:
1. Sanitary: Vermin proof, not treated but naturally so.
2. No joints to breathe, no loose parts to fall.
3. Adaptable to any architectural design, all types of curves and contours may be specified.
4. Applied like any plaster, providing a continuous level surface.

Lower Cost:
1. Economical: More sound absorption per dollar than comparative acoustical materials.
2. Permanency and versatility put acoustical plaster in a class by itself; no other material or method can compare in these two points.
3. Acoustical plaster 30 to 60% lower in cost than other acoustical materials.
4. Maintenance: Can be cleaned or redecorated many times without loss of efficiency.

When acoustical results are desired, why use highly inflammable material in preference to a monolithic acoustical plaster which costs less and is equally effective?

The Society Board Met at Alden Dow's

At a meeting of the Board of Directors of the Michigan Society of Architects held at the home of Alden B. Dow, in Midland, on the afternoon and evening of June 6, chief interest was the report of President Bauer and Director Langius on Senate Bill 330. This subject is covered more fully by direct mail to members.

Also discussed was the program for the Society's Annual Midsummer Conference at the Grand Hotel on Mackinac Island, Aug. 2-5, 1951. Carl Rudine, Conference Chairman, presented a tentative program, which is given in this issue. Carl announced that Michigan's new Senator, Blair Moody, had accepted the invitation to be the speaker at the banquet, closing event, to be held on Saturday evening, August 4. Gus Langius will be toastmaster. Gus was one of the few from Michigan who attended Senator Moody's inauguration. It is reported that Senator Moody and Mrs. Williams will also attend. They have done so in recent years, as they are generally in residence on the Island at that time.

Also in this issue is published a rate card from the Grand Hotel and it is recommended that reservations be made early, direct with the Hotel.

A principal speaker at the Conference will be John C. Thornton, past president of the Society, who will speak on a new development in mortar and brickwork, which he has recently discovered. It is designated as the relationship between surface physics of material which was not used. It should be understood that this is bound to happen occasionally. It could not have been often, for during the past nine months (since becoming a monthly), there has been at least something about the Society's Annual Midsummer Convention. Carl announced that Michigan's Society of Architects held at the home of Alden B. Dow, in Midland, on the afternoon and evening of June 6, chief interest was the report of President Bauer and Director Langius on Senate Bill 330. Provide Ventilation
In the Gable Angle

Donley TRI-VENT Ventilators
—draw off stagnant air from the top of the attic, where air is hottest and flow most rapid and complete. It is easy to install, has substantial Donley fabrication and is screened against insects. Appearance is more pleasing.

Ventilators are numbered in accordance with the angle of roof slope. No. 6 - 12 means a 6 inch rise in 12 inches of run. No. 8 - 12 has 8 inches of rise in 12 inches of run. Also made in 5-12 and 10 - 12. In production on these four forms and others will follow as demanded. Wide flange permits use on intermediate sizes.

Saginaw Valley Chapter at Frankenmuth

Saginaw Valley Chapter of The American Institute of Architects held its last meeting of the 1950-51 season at Fischer’s Frankenmuth Hotel in Frankenmuth, Michigan on the evening of Tuesday, June 12, with President James A. Spence presiding.

Eighteen were present, including Samuel C. Allen, H. C. Allison, Glenn M. Beach, A. K. Berry, William E. Bradley, Paul A. Brysselbout, Verne W. Day, Robert B. Frantz, William E. Fraser, George S. Hawes, Talmage C. Hughes, A. Charles Jones, Herman J. Klein, Ralph W. Knuth, John S. Means, Carl G. Schulwitz, James A. Spence, and Fred E. Wigen.

Before dinner the Johns-Manville Company followed their own recommendations by properly conditioning the surface to receive application. The firm’s own new office building is now out for figures. And note to Carl Rudine: young Peter Frantz has a wonderful exhibit of his European photographs at the Saginaw Valley Museum, which might be obtained for the Mackinac Conference, (apply to James A. Spence, President of the Saginaw Valley Museum Society).

Fischer’s at Frankenmuth is famous for good food, and certainly it lived up to its reputation on this occasion. Tables were covered with tracing paper instead of tablecloths, in anticipation of the influx of architects. This resulted in a sketch competition, and while most of them were rather free in character, there were no “free sketches” as such.

In the business part of the meeting there was a discussion of the Monthly Bulletin, as covered elsewhere in this issue, and the Chapter voted to adopt it as its official publication—just like that! Willard Fraser, of the Dow office, is correspondent.

President Spence reported on the recent A.I.A. Convention in Chicago, saying that it was splendid in conception and well organized. He said that it was a great benefit to mingle with architects from throughout the country, and he urged that those who did not attend do so in the future. Glenn Beach put in a good word for the Mackinac Conference and urged attendance.

A resolution, introduced by Robert Frantz and unanimously carried by a rising vote, was as follows:

“On April 26, 1951, the State of Michigan lost one of its finest citizens in the death of Andrew Morison. Having lived in this state since 1916, Mr. Morison left a lasting mark to remind us all of his service to the community and to his fellow architects. He had served as the leader of the Detroit Chapter of the American Institute of Architects and of the Michigan Society of Architects. He had been a member of the Michigan State Board of Registration for Architects, Professional Engineers, and Land Surveyors and had twice served as its chairman. In all these capacities he demonstrated his outstanding ability, his patience, and his kindness. He was a Christian gentleman in every sense.

“Be it therefore resolved that this expression of appreciation be spread upon the minutes of this meeting and that a copy of the resolution be sent to Mr. Morison’s family.”

President Spence said he thought Tommy Manville was expected momentarily with a bevy of girls, then he proceeded to brief members on what to do until Tommy arrived.

“Johns-Manville has the floor,” said the President, as he introduced Verne Day, of Saginaw, Territorial Manager of J-M, who presented a color film on Johns-Manville for themselves and their friends.

In the question-and-answer period it was brought out that the roofing bond is not the answer to an architect’s (or owner’s) prayer. It was mentioned that members of the roofing industry in Detroit had submitted to the Detroit Chapter, A.I.A., a plan for inspections by testing laboratories, to take the place of the bond. Every one agreed that this seemed to be a step in the right direction.

To a live Chapter of Grand Fellows. See you all at the Grand Hotel.

West Michigan Chapter Outing at Macatawa

To Grand Rapids for a nice drive with the C. A. O'Bryons, on June 23, through the beautiful countryside, via Zeeland, the home town of Gus Langius, then Holland, the Tulip City, to Macatawa. This is a delightful resort, just outside of Holland, bordering Lake Michigan on the one side, and Lake Macatawa on the other.

Hotel Macatawa is quite like the Grand Hotel on Mackinac Island, or, as Roger Allen would say, it is colossal in a small way. On the property are many cottages one of which is "High Sea," that of Peter Vander Laan, member of the Western Michigan Chapter, and Secretary of the Michigan Society of Architects.

Chairman of the Committee on Arrangements was Alwin S. Kolm, of Holland. Al did a wonderful job and received the plaudits of all those present.

Attending were President and Mrs. Elmer J. Manson, their daughter Joyce and son Freddy; Vice-President, James K. Haveman and Mrs. Haveman; Mr. and Mrs. Charles A. O'Bryon; Director, Chris Steketee; Mr. and Mrs. Peter Vander Laan and son, David; Mr. and Mrs. Milton C. Major; Mr. and Mrs. Alwin S. Kolm and daughters, Barbara and Judy; Mr. and Mrs. William N. Settersburg; Mr. Talmage C. Hughes; Mr. and Mrs. Harford Field and Carter Strong. Mr. Strong is an employee of Mr. Field. He graduated from the University of Michigan College of Architecture and Design, and was President of the A.I.A. Student Chapter there.

The outing began with a luncheon at the Hotel, which is renowned for its fine food, and we might add, courteous self-service. Then there were water sports, the likes of which we have never seen before. In fact, ski champions were on hand from far and wide to put on their first water show of the season. The speed boat used was the Ski-Daddle, the one used in Warner Brothers technicolor motion picture by the same name, which was made at this same place.

Following the water sports, members and guests went swimming at the beautiful sand beach, then attended a cocktail party and dinner. The evening was devoted to dancing and entertainment at the hotel.

At a short business meeting we learned that the Western Michigan Chapter has several worth-while projects in the works. One is a survey being made of cubic-foot building costs for the various types of structures, as revealed from the data of members. The Chapter is also taking a leading part in a State-wide joint committee on specifications, working with other elements of the building industry. A much-needed bit of information is being gained from a questionnaire relative to the employment status of members, as to whether they are in their own practice or employed by others.

From Grand Rapids comes the news that the School Board will soon select architects, mostly local, for a huge building program, the first in many years.

To travel with the O'Bryons was a distinct pleasure. His model house in Grand Rapids, under the sponsorship of Better Homes and Gardens and others, will be published in an important way, with color, in that magazine's November issue. Charlie has done such an outstanding job for his Chapter that they are considering doubling his "salary."

The ride back to Grand Rapids was particularly pleasant, for it was with our old and very dear friend Chris Steketee. Chris has been in this country 39 years and yet he can still conduct a conference with a building committee entirely in the Dutch language, and he has done just that recently.

Well done, Western Michigan. Now, let's all join together for a State-wide outing at the Grand Hotel on Mackinac Island, August 2 - 5.

Manson

Hotel Macatawa, Macatawa, Michigan

PENNY WISE, PLAN FOOLISH

A Guest Editorial by A. N. LANGUIS

Each year after the legislature adjourns, scribes come forth with resumes of enacted legislation and predictions of its effect on the government and the citizens. While it can be proven that considerable loss will be sustained through lack of sufficient funds for preliminary planning, such proof is usually viewed with apprehension.

Unfortunately, the concept of "planning" has been extended to mean control over almost every detail of every person's life, and the word has fallen into bad repute. Despite that, and for want of a better term, it must be conceded that few successful human activities, whether a Sunday school picnic or the efforts of the United Nations to combat aggression, can be undertaken without some planning.

State government, as it is conceived here, seeks for its citizens the attainment of certain benefits which are neither the concern of the federal government nor within the capacities of municipalities, or private organizations, to provide. The facilities for higher education, the care of the mentally ill and of other unfortunates, the segregation of criminals, the construction of highways, the maintenance of extensive recreational areas, the safeguarding of the potentialities of our vast natural resources, and many similar ones, are all examples of the functions which must be undertaken by the state if they are to be accomplished.

It is not generally realized that the physical plants with which the state conducts most of its enterprises are in themselves small cities whose aggregate worth is approximately one billion dollars and are in a continuing state of change. Not only must inevitable expansion be anticipated but there is an ever-present problem of replacement of facilities resulting from obsolescence and deterioration. Because of the ever-changing conditions it is clear that there is necessary a certain type of planning which must precede by a long time the actual construction of a facility or even the preparation of its plans and specifications.

As part of the preparation for the postwar victory building program, the legislature made available to the building division funds for preliminary planning. With these funds there was prepared for each institution a program of development which charted not only the immediate construction but future expansion as well. To be effective, such development plans must be continually revised to recognize changing conditions and requirements.

It is regrettable that in the face of a building program more extensive than any previously undertaken by the state, no funds were appropriated for the type of planning which is fundamental to the most effective accomplishment of the building program itself.

ARCHITECTURE AT UTAH U.

We were glad to see our former member Roger Bailey at the Chicago convention, also to learn from Richard Neutra the high regard in which the new Department of Architecture at the University of Utah, under the direction of Roger, is held.

The Department was one of the sponsors of the recent Utah Planning Conference held at the University, and Mr. Neutra was a principal speaker.

Blasting the plan of importing Architects from other states or countries to solve Salt Lake City's community planning problem, Neutra stated that the U. of U. School is capable of completely rejuvinating a dying city plan.

"It is the finest and most promising architectural school I have seen in years of travel all over the world," he said, adding that "a handful of teachers here are fascinated by the great opportunities presented."

He said that architects would be needed "worse than bread" in the next hundred years and that the school was the "greatest blessing which has come to the Rocky Mountain area in ages."

HUGHIE MILLAR—Congratulations on your new Headquarters for UAW-CIO at Jefferson Avenue, the River and Van Dyke in Detroit. Also our felicitations to your able assistant, Bill Fromm, and Oscar Honorow as Consultant.

There will be more about this later in the Bulletin (we hope) and in the national architectural magazines.

COMMON COUNCIL, CITY OF DETROIT has passed an Ordinance "To provide for the appointment and direction of Civil Defense Building Inspectors, for war emergency duty, during the present war emergency, to prescribe their duties and to prescribe methods of Department procedure during a war emergency and to provide a penalty for the violation of any of the terms of this Ordinance."

Architects are a part of this program, and we have previously asked for volunteers. The response has not been good. Actually thousands are needed in the whole program, whereas only hundreds have volunteered.

In a recent issue we published a form for application as Civil Defense Building Inspectors. Only one was filled out and returned. Are the architects unmindful of their obligations in this respect.

Please fill out the application and re-turn it forthwith. If you do not have it at present, a call to the office of the Bulletin will suffice to see that you get one.

CLAIR W. DITCHY sends copy of Bulletin from the Bureau of Governmental Research, 810 Farwell Bldg., Detroit, reporting the renewed proposal to combine all of the licensing bureaus of the State, in an effort to save taxpayers' money by some co-ordination or combining of the units to at least a limited extent. This proposal does not go so far as a former one, but there is still a question of this aspect of putting the professions included with other groups who are not professional. This seems like a matter for APELSCOR.

D. M. CHAFFEE announces that CHAFFEE ROOFING COMPANY is the new name of the former Lentz & Chaffee Roofing Company, also a new location at 14300 Meyers Road, Detroit 27, Michigan. The telephone number is TExas 4-0909. Mr. Chaffee is the son of the late architect who practiced in Detroit for many years.

MATTHIAS R. GOEBEL, 828 York Street, Racine, Wis., has been awarded the George G. Booth Traveling Fellowship in Architecture for 1951 by the University of Michigan College of Architecture and Design, it is announced by Wells I. Bennett, F.A.I.A., dean of the College. Goebel, who received his degree from the College on June 16, plans to tour Europe studying religious architecture with emphasis on contemporary Catholic design.

The Fellowship was established in 1923 by a gift from the late George G. Booth, of Detroit, an Honorary Member of the American Institute of Architects. One Fellowship is awarded annually.

GERALD G. DIEHL. Congratulations on becoming the father of twin girls, Patricia and Frances, on June 12, 1951. Shall we send applications for associate membership? They will be most helpful, at least as consultants in your interior design department.

The Monthly Bulletin is still one of the most enjoyable of all periodicals I read. Still write poetry in my off hours. Still getting it published in the SEP, too. Next one will appear about June 23, 1951, entitled "Lift Bridge."

ROGER L. WARING, Lakewood, O.

PORTLAND NEW HEAD OF PC.

William J. Portland of Armstrong Cork is the new president of Producers' Council, Inc., Detroit Chapter. The election took place at the Annual Spring Golf Outing on June 22 at the Warren Valley Golf Club, Detroit. Others slated by R. B. (Spence) Turner, Richard-son's nominating committee and unanimousely elected were W. F. Mulcahy of J. A. Zurn, vice-president (Bill, by the way, wore the tie of the evening, a handsome blue and tan number); Clyde T. Oakley of Truscon Mutual; and G. Frederick Muller of Pittsburgh Plate Glass, re-elected treasurer.

Retiring president Louis T. Ollsiehmer of Flat Metal asked for a pause of silence in respect for the memory of the late Walter J. Torbet of Detroit Steel Products, whose lamenting passage was a great loss to his countless friends. It was said that strong men wept openly at his funeral—such was his place in the hearts of all who knew him.

The Outing Committee was expertly handled by W. A. Snure of Unistrut, Bill wearing the sport coat of the evening, and Tom Moore of Detroit Steel Products, who, incidently, had the lowest score in the golf tournament.

Thirty-five prizes were distributed after the dinner. Marshall Noecker of Kaufmann Corp., carried off a handsome golf bag; Norm Lockhart of Lincoln-Mercury a fishing rod; R. E. Hausmann of Elektroacoustic; Eberle M. Smith of R. Marshall of ALCOA, a checkerboard golf cap—to mention a few—now don't you wish you had been there?

Others at the dinner were Architect Stewart Kissinger of Eberle M. Smith Associates; Joe Busse of Libby-Owens-Ford; affable Doug Ainslie of Arm-strong Cork; Roy Smith of Truscon; O. F. Preuthun of R. L. Deepman, and E. Dennis Arundt of Giffels & Vallet.

We also saw Gordon Baskwell of Ceeo Steel; Bob Ogdon of ALCOA; Mel Elward of Detroit Steel Products; Ross Griffith of Pittsburgh Plate and Harry Fritzam of Otis Elevator. Harry wore the bow tie of the evening—a slick grey creation.

Detroit Edison was represented by Henry A. Cook and L. E. Mueller, Uni-strut—Detroit Service sure did themselves up to a tee, what with Dave Kingman, A. D. Bates, W. A. Compton and W. L. Mullen carrying the banner.

We were all glad to hear from Don Olesheimer of Flat Metal that his lovely mother, Mrs. Louis Olesheimer, has fully recovered from her bathtub fall during the M.S.A. convention last March. Don is a fine fellow and we are all looking toward the day when he will make his mark in the Producers' Council.—TGS.
THE RIGHT COMBINATION . . .

The combination of good design, good workmanship and good materials, result in a brick or masonry wall which will give life-long protection from moisture penetration. Properly designed and placed flashings, full head joints and uniform tooled joints combined with HURON MASONRY CEMENT for mortar will give you a job which you can point to with pride throughout the years.

WALTER TORBET
Walter J. Torbet, 56, long a mainstay in the building industry in Michigan, died at Henry Ford Hospital in Detroit on June 16, following an illness of about four months.

Walter Torbet was born in Detroit on August 9, 1894. He was educated at Detroit's old Central High School and at the University of Michigan, where he graduated. He had been with the Detroit Steel Products Company for thirty-three years and at the time of his death was District Sales Manager.

A veteran of World War I, he had served as commander of Alger Post, American Legion; President of Producers Council, Michigan Chapter; Director of the Builders and Traders Exchange of Detroit, Boys Republic, and Star Commonwealth. He was a member of the Detroit Golf Club, Engineering Society of Detroit, and Detroit Rotary No. 1.

During World War II he was on the Reception Committee for service men and he took great interest in meeting and entertaining them and even seeing that their charming wives are with them. It seems to typify the jovial good nature of Walter.

Funeral services were at William R. Hamilton's in Detroit on Tuesday, June 19. Honorary pall bearers were Fred Auch, Associated General Contractors of America, Detroit Chapter; L. George Bott, Rotary International; William A. Cory, Producers Council; Talmage C. Hughes, Michigan Society of Architects; Stanley James, Alger Post, American Legion; Paul R. Marshall, Builders and Traders Exchange of Detroit; C. William Palmer, Detroit Chapter, The American Institute of Architects; George L. W. Schulz, Detroit Board of Education, Harry F. Wardwell, Detroit Steel Products Company; William Gillett, Producers Council, Inc.; William Slocumb, Boys Republic.

Surviving are two brothers, Chester A. and Roy H., both of Detroit.

WILLIAM C. ROHNS
William C. Rohns, pioneer Detroit architect, who began practice here in 1883, died at his home in Ann Arbor on June 17, at the age of 96. He had lived in Ann Arbor since his retirement in 1934.

As a partner of the late Frederick H. Spier, he designed depots for the Michigan Central and Grand Trunk railroads at Ann Arbor, Lansing, Grand Rapids, Battle Creek and Chicago. The firm also designed the building now occupied as The Detroit Bank Building at State and Griswold streets in Detroit, Tappan Hall and the west medical building at the University of Michigan.

After the partnership was dissolved in 1912, Mr. Rohns supervised construction of the Detroit Public Library, the Scott Memorial Fountain on Belle Isle, and The Detroit Institute of Arts.

Surviving are his wife, Emily; a daughter, Elizabeth, and a son, Paul.

GUS STEFFENS post cards from Europe that the Spring Trek of Architects, under the direction of Mr. and Mrs. Harold Sleeper, is affording the attending architects and their wives a great deal of pleasure and real benefit. He heartily recommends that those who stayed behind take advantage of the opportunity offered later this fall, when Mr. and Mrs. Clair W. Ditchy will conduct a tour of Europe.

Gus has found some unattached ladies on the tour, which seems to be much to his liking. He says there are two past presidents “aboard”—must be Ray Ashton and Jim Edmunds. We understand that their charming wives are with them.

Gus has done right well for himself as hotel owner and operator in Dearborn and other points west (of Detroit), though his interest in architecture has never lagged.

ARCHITECTS OF THE MONTH

FIVE ROMAN CATHOLIC DIOCESES
OF MICHIGAN

THE ST. JOHN'S PROVINCIAL SEMINARY group is the school of theology for the five Roman Catholic Dioceses of Michigan. It is situated on a plot of one hundred and eighty seven acres near Plymouth, Michigan. This beautiful site near Plymouth Lake is one of the highest in Wayne County.

Considerable thought was given to the planning of the group of buildings which, when completed, will consist of eleven units, connected by means of cloistered passages.

GEORGE F. DIEHL
As indicated by the plot plan, the arrangement is such that all rooms will have the benefit of sunlight at some hour of the day.

Construction was started early in 1948; and in the fall of 1949, eight of the units were complete and ready for occupancy.

Because of lack of funds, it was decided not to complete in the first operation the permanent chapel, the recreation building, and a large auditorium. However, a temporary chapel has been provided in one wing of the library unit. The basement of the future chapel serves as an auditorium; and indoor recreational facilities have been provided in the basement of the dormitories. Provision has also been made for outdoor recreation in the form of a nine-hole golf course, football and baseball fields, tennis courts, etc.

GERALD G. DIEHL
The buildings are of fireproof construction with masonry walls, concrete floor construction, partitions of cinder block, gypsum and light-weight metal stud construction.

The architectural style is a modern adaptation of the early-Italian type prevalent in the central, or Umbrian, district of Italy. It is characterized by its simplicity and by what is generally accepted as the ecclesiastical character.

The buildings are faced with pressed brick in varying red and brown tones, and the roofs are covered with clay tile of the tapered Spanish Mission type in colors ranging from salmon to deep reddish-brown. Cream Mankato stone was used for all exterior trim.

Simplicity is also the keynote of the design.
and finish of the interiors. The walls of the main lobby and corridors of the Administration Building are of Travertine marble, with ornamental plaster ceilings of coffered design. The ceilings of the future reading room, which acts as a temporary chapel, and the ceiling of the refectory, are also of ornamental plaster. Main stairways are finished with marble and precast terrazzo. Acoustic ceilings have been provided wherever they are essential. Most other portions of the buildings are finished in plain plastered walls and ceilings, asphalt tile floors, steel sash, metal base and door trim, flush type doors, etc. Each unit is so planned that, in itself, and in its relation to others, it is strictly functional. The center building of the front portion of the group is known as the Administration Building. This
includes offices, lounges for the clergy and students, classrooms and study halls, as well as some third floor suites for visiting prelates.

Flanking the Administration Building on one side is the Library unit, which is designed to eventually accommodate 80,000 volumes; on the other side is the Refectory unit, with a dining hall to accommodate approximately 250 students, and a very complete kitchen service wing with quarters for lay help.

There is also a small Convent to accommodate up to ten nuns, who supervise the cleaning of the building, the purchasing of food, linens, etc.

Immediately back of the Administration Building will be a large chapel, the basement of which has been completed. Attached to this chapel is a fine campanile which serves the useful purpose of housing a 40,000-gallon water tank.
Connected by means of cloisters are the two Y-shaped dormitories; only two-thirds of each of these units were built in the first project, but contracts have now been awarded to complete the dormitory accommodations.

The general contract for the first project, as well as for the additions now under construction, was awarded to the W. E. Wood Company of Detroit. This firm, which has constructed many large institutional buildings, did a very fine job, and at the same time completed the first group of buildings in record time. The total construction time was approximately eighteen months; and, on a job of this kind, with the amount and variety of detail involved, it could be done only by builders who are well organized, and through excellent co-operation among the general builders, sub-contractors, architects, material suppliers, and owners.
His Eminence Edward Cardinal Mooney appointed a liaison officer in the person of Reverend Andrew P. McEntee, who attended weekly meetings of the heads of the various construction firms and the architects.

All sub-contractors who performed the work in the main project are also being employed in the additions. It has never been our pleasure to work with a more co-operative group of sub-contractors, and we commend them all.

We also wish to say a word of commendation for the fine service and co-operation given us by the concerns supplying the various materials and equipment.

George F. Diehl, Gerald G. Diehl,
Architects.
