The Architect-Educator Connection

In 1963 a group of 25 maverick architects, (Ann Arbor Area Architects Association, 5A) broke away from the Detroit Chapter and formed the Huron Valley Chapter of the AIA. Next year we will be celebrating our 25th anniversary and we remain a chapter of diversities, contrasts and opportunities.

The Chapter's membership comes from the four counties of Lenawee, Livingston, Monroe and Washtenaw; with our current architect membership hovering at 100. The majority of our members are located in Ann Arbor, also the home of the University of Michigan College of Architecture and Urban Planning. Since the chapter's founding, there has always been a relationship between the local practitioners and the educational community. That relationship has, however, resembled the recent ups and downs in the Dow Jones Industrial Averages on the New York Stock Exchange; sometimes hot and sometimes cold.

The Chapter is currently enjoying a loving relationship between the local practitioners and the academicians at the U of M. Historically, as today, many practitioners are professors and many professors maintain practices. Some of the "stars" that we can claim are: William LeBaron Jenny who first offered courses in architecture at the College of Engineering in 1876; Wally Sanders and Bill Muschenheim who developed the Bauhaus ideals and gained significant reputations as a result; George Brigham who designed the "first modern house" in Ann Arbor in 1934; Reginald Malcolmson who continues to develop his concept of the linear city; and Bob Metcalf, David Osler and Tiv Balogh who all continue to delight us with their exceptional design abilities. Of the 50 faculty members of the College, 15 maintain practices. Of the nearly 100 AIA members, over 50% have been adjunct professors, visiting lecturers, jurors or participated in the education of students in some way.

Not to be forgotten, of course, are other important architectural events in our area: the North Campus Master Plan and the Music School designed by Saarinen; Albert Kahn's many contributions to the Ann Arbor and University environment, including several campus buildings and numerous residences in the area; Yamasaki's Chelsea High School; the Power Center by Roche Dinkeloo; the Alumni Center by Hugh Newell Jacobsen; Wright's Palmer House; Alden Dow's many buildings; the ITI building by William Kessler and Associates; and Gunnar Birkerts' Law Library, Domino's Headquarters and the University Reformed Church.

The newest development in our Chapter's dynamic history is the participation of the architectural student body in Chapter events and interests. For the last two years we have had over 100 student members of the Huron Valley Chapter. American Institute of Architects Students, the national organization, has a very active chapter at U of M with members attending the national AIAS convention in November, the MSA convention in October and the national AIA convention in June. These students are very well organized. They want to be connected to the profession and they are demanding the profession's involvement in their education.

The Chapter's response to our varied membership changed over the past year from poorly-attended
monthly meetings to quarterly major events. This year we sponsored a reception for Bill Pederson, KPF, the speaker at the 1987 John Dinkeloo lecture; "Chalk the Park" in July at the Summer Art Fair at which members assisted and participated with fairgoers in decorating Liberty Park with chalk renderings and drawings; the annual President's Picnic which drew a large number of members and their guests and included children's entertainment; a reception at the college during homecoming weekend last month; and, the annual holiday dinner. The Chapter has been increasing public awareness of the profession by assisting various community groups such as the SOS Crisis Center in Ypsilanti and the Hands-on-Museum in Ann Arbor.

There are always two sides to every story. The Huron Valley Chapter, with a total membership of over 240, including of practitioners, educators, intern architects, students and affiliates, can call upon this wide range of energy and creativity. However, with all of those divergent perspectives it is hard to organize; and difficult to service all of the elements equally. As we look toward the year ahead and our 25th anniversary, the 25 maverick founders as well as the rest of the Chapter extend an invitation to everyone to join us in March for the 1988 Dinkeloo Lecture. Richard Meier will be the speaker and we will be sponsoring a reception following the program. Leave enough time to visit your alma mater, see our city and say yes to the Huron Valley Chapter!

The elections are over and the Detroit Chapter/AIA is in the process of lining up the committees for 1988. This is your chance to shape the events and policies of the chapter, to state your opinions and to learn what is happening in the AIA.

Please indicate the committees that you are interested in serving on for 1988 and return the form to headquarters.

Firm News

Gunn Levine Associates, Inc. held a champagne celebration in their offices to mark the 10th anniversary of the founding of the firm. Since 1977, the firm has designed over 200 projects in Michigan.

The firm is also pleased to note that Laura Hagan, a project manager, has passed her state exam and is now a Registered Architect in Michigan. She is currently working on the renovation of Botsford General Hospital and North Detroit General Hospital.

Praxis, a Detroit architectural and project management firm, announced that it has been acquired by and merged with Ellerbe Associates, Inc., headquartered in Minneapolis. Locally, Praxis is providing aviation facilities planning to Wayne County at Detroit Metro Air Port.

John Dziurman Associates, Inc. has changed its name to Wade-Trim/Dziurman to better reflect the company's membership in the Wade-Trim Group. The Group owns three additional firms in Michigan and one in Florida.

Hobbs + Black Associates, Inc. has named Reno Maccardini as Director of Development. Most recently Maccardini worked for Michigan Consolidated Gas Company in charge of the company's real estate holdings.

Design Plus, P.C. announces the opening of their new offices in the renovated Founders Building, 48 Fountain NW in downtown Grand Rapids 49503. The 1897 building's historical significance is tied to its role as the home of several local banking institutions. The main floor bank was renovated for a commercial real estate office and the upper floors house the architectural firm.

The firm recently named two new partners, Thomas Roode, AIA and Wayne Norlin, AIA. The five person partnership currently employs 28 people.

Solutions Unlimited, Inc. of Kalamazoo has a snappy new brochure to describe their growing design company.

Blount Engineers, Inc. has a new Director of Business Development. He is Clement Martzloff who has a Bachelor of Science degree from Lawrence Institute of Technology and two U.S. patents for air pollution control equipment.

R.E. Dailey & Company has hired Wayne Vert, AIA to fill the position of senior estimator on large commercial construction projects for the firm.
Allied Arts Initiates Award Program

Architect-artist collaborations have enriched the environment and created some very special places. The Saarinen designed Cranbrook Academy, the site of the 1987 Allied Arts Festival of the Detroit Chapter/AIA, is one such place here in Michigan.

In celebration of the 100th Anniversary of the Chapter and to underscore the importance of the architect/artist relationship, the Allied Arts Committee established a juried awards program. The presentations were made during the Festival on September 18th at Cranbrook. Distinguished architect Cesar Pelli, FAIA, who is a disciple of Eero Saarinen, was the keynote speaker.

The jury was composed of three people from the west side of Michigan; Gretchen Minnhaar, AIA, an architect and artist from Grand Rapids; Robert Pew, Chairman of the Board of Steelcase, who presides over an impressive corporate art collection and Delbert Michel, Chair of the Art Department at Hope College in Holland and member of the Advisory Board of the Michigan Council for the Arts.

The Detroit Chapter/AIA has a long history of concern for art and architecture. The first Allied Arts Committee was organized in the thirties.

Student Highlights

The Architectural Design Competition for High School Students has had its kick off meeting and a process to design and ultimately select the winning entry is underway. The contest is open to all high school students in the state and is intended to generate imagination and creativity. A design problem has been devised that will lead to a greater awareness of the ways in which an architect creates an environment for a specific activity.

Professional advise and criticism can be arranged by the school's faculty adviser and will be made available through the Detroit Chapter/AIA.

Top prize is a $1,000 scholarship and there are prizes for the second and third places. Participants are also vying for a Lighting Design Award, a $600 scholarship for the first place winner. This award was donated by the "Designers Lighting Forum" and "The Lighting Group".

The awards will be presented at a banquet on April 23, 1988. The program is jointly sponsored by the Detroit Chapter/AIA; the Michigan Society of Architects; the School of Architecture — Lawrence Institute of Technology and the Detroit Edison Company.
General Motors, under the auspices of the Association of Collegiate Schools of Architecture, recently sponsored a competition to design A 21st Century Manufacturing Facility. Thirty-seven entries, representing 22 schools, competed for a piece of an awards pie that totaled $30,000. Lawrence Institute of Technology prepared the best solution and was awarded first prize for the best overall design application. The second prize went to Pennsylvania State University and the University of Arizona placed third.

This competition was the brain child of the Argonaut group at GM and is intended to stimulate better understanding among the universities of the need for innovative designs, research and development in manufacturing, industrial and technical facilities.

The Masonry Institute of Michigan selected seven students at LIT for their 11th Annual Scholarship Program. The scholarships, worth $1,000 each, were presented to Mark Buchalter, Brian Gill, Larry Logan, Lawrence Rager, Tod Stevens, Laurel Van Epps and Dale Wolicki.

Grapevine

Louis Redstone, FAIA, a pioneer in the art in architecture movement, made it to the Free Press High Profile Column recently to promote the sculpture exhibit that was held in Southfield by the Business Consortium for the Arts... Barbara McGee, AIA, Project Administrator at HEPY is the Public Relations Chairperson for Commercial Real Estate Women, Inc. We haven't seen all the issues of West Michigan Magazine but what we see looks good. The magazine seems to have bent towards things architectural and a fondness for, would you believe, architects. In September, four architects and a professor had a chance to describe their favorite places. MSA members, Evie Asken, FAIA and Robert Lee Wold, FAIA both had some insightful comments. Good job! Now that Evie is commuting to her new job with Hobbs + Black, she may come up with another 'favorite place' there. She was also named to the Practice Trends Committee of the National Council of Architectural Registration Boards... Joseph Neussendorfer, AGC's director of member services, is the chair of the Oakland County Constitution BiCentennial Commission... Willy Lohman and the gang on the train to River City wouldn't recognize them but many of the folks who market architectural services were quoted in Crain's Detroit Business recently: Kim Yamasaki and Cliff Snyder of Yamasaki Associates; Bob Paulson of Albert Kahn & Associates; Angela Kimble of Harley Ellington Pierce Yee Associates who was one of the only three people to be recognized nationally by the Society for Marketing Professional Services; Dick Bither of Giffels Associates; Larry Burns then with SH&G; and, Tony Camilletti with Jon Greenberg & Associates... William Kessler & Associates was the only Michigan firm to win an award in the 1987 Architectural Awards of Excellence competition sponsored by the American Institute of Steel Construction. The Industrial Technical Institute in Ann Arbor took the prize. The Morrow Hydroelectric Dam in Kalamazoo also was singled out but it was done by the Chicago giant, Skidmore, Owings & Merrill (when they join the MSA we will put their name in caps too)... Gunnar Birkerts, FAIA has taken up the lecture circuit again. He was at UofM and then went on to speak at the AIA Central States Region Convention in Omaha. Anthony Gholz, AIA, vice president at Gunnar Birkerts and Associates is also out lecturing. He spoke to the Designer's Lighting Forum at Domino's recently. When do they find time to design all those award winning buildings. Has Susan Brozes taken up architecture?...
President's Message

As my year as president of the Society draws to a close, I have been looking back over this time with mixed emotions. On the one hand it has been very exciting and rewarding. I think we have accomplished a lot. The completion of the Beaubien house and the 100th Anniversary celebration are certainly milestones and I am proud to have been the "on site architect" during these important events. On the other hand, my time is running out and this will be my last chance to make an appeal to you to become more directly involved with your own professional association.

Many people are involved and work very hard. On behalf of all the architects in this state, I say, "Thank you very much."

I have heard a lot of laments during the past twelve months. You may have expressed one or all of them yourself. What does the MSA do for me? Why doesn't the MSA solve the professional liability insurance problem? Why doesn't the MSA spend more money to influence state legislation instead of developing publications?

I can understand the concern for a solution to a particular problem, and the need for an answer to a pointed question. The MSA is a dynamic evolving organization. Debate is healthy. We must constantly challenge the old order, look for new ways, come up with innovative programs and fine solutions to old problems.

But I do not understand why the MSA is usually addressed as a separate entity or as somebody else. The MSA is not its officers or board of directors. They are architects like you, with work loads similar to yours, who volunteer their talent and time to pursue the purposes of the Society. The MSA is not the executive director or the Beaubien House staff, nor is it some select group of experts in Detroit.

We are all the MSA!

Yes, it is much easier to criticize an action or program because you do not understand or agree with it than to become involved in making decisions that chart the course of the Society. But if you are willing to commit the time, and willing to share your experiences and expertise with others, you may be the person who finds a better solution.

There will be many opportunities during 1988 for you to participate in finding an answer to a problem, or creating and developing or participating in a program that will make our profession better and more meaningful.

The last issue of the Bulletin included comments from MSA Past Presidents. The observation of Gene DiLaura is worth repeating here: "Success is measured in many ways, however, true success is measured by what one has given, what one has done for others. Make time, take time to be involved. For architects this translates, in part to being involved with the local chapter, the state society, and nationally where possible. We cannot continuously take. We must give our fair share. For giving is the true success."

With the involvement of responsible, dedicated, and interested members, there will be an effective MSA. Theodore Roosevelt said, "The life of duty, not the life of mere ease or mere pleasure — that is the kind of life which makes a great man, as it makes a great nation." The same is true in making a strong organization. Your help is required to have a strong architectural profession in Michigan, so please consider really being a part of the MSA. Be MSA ACTIVE IN 1988!

I would like to thank the Board of Directors, and especially Tom Lucas, Dick Fry, Carl Roehling, Jim Shane, and Rae Dumke for their hard work, support and encouragement. You have all helped make my term as president a most rewarding experience. I appreciate having been given the opportunity to serve my profession.

More Past Presidents

For the October Bulletin, President Hamann asked all of the extant former presidents of the MSA to identify, in fifty words or less, what they felt to be the most important issue facing the Society in the future. The two responses that missed the deadline follow:

Elmer Manson, AIA 1954 "For architects to maintain a leadership position in the construction industry, we need a group of satisfied clients. They are better than a bushel full of glossy brochures. Clients want architects to polish their (the client’s) image. Architecture is a service profession. We need to be "user friendly." We have to give service to get business."

Jackson Hallett, AIA 1969 "Only one issue can be called most important: A-R-C-H-I-T-E-C-T-U-R-E. The MSA must emphasize programs that increase our competency as the professional leaders most responsible for the built environment; building technology, productivity improvement and above all, design."
