Tradition-breaking houses

Living with a French twist

Architectural firm directory

When your design calls for quality wood windows, Metromillwork is the supplier of distinction. As a full-line distributor for Kolbe & Kolbe, Metromillwork is able to custom tailor windows to meet your exact requirements. In addition to a broad line of "standard" residential windows, Kolbe & Kolbe has been a pioneer since 1946 in producing special sizes, styles and shapes which are limited only by the imagination. Kolbe & Kolbe also offers the commercial grade Magnum line in virtually any size with glass choices ranging from authentic single-glazed cutlight to high performance insulated glass. Whether it's new construction, replacement windows or historic

LaSalle Plaza looking up

Construction is expected to begin this spring on LaSalle Plaza, a multi-use office and entertainment complex in downtown Minneapolis, designed by Ellerbe Becket.

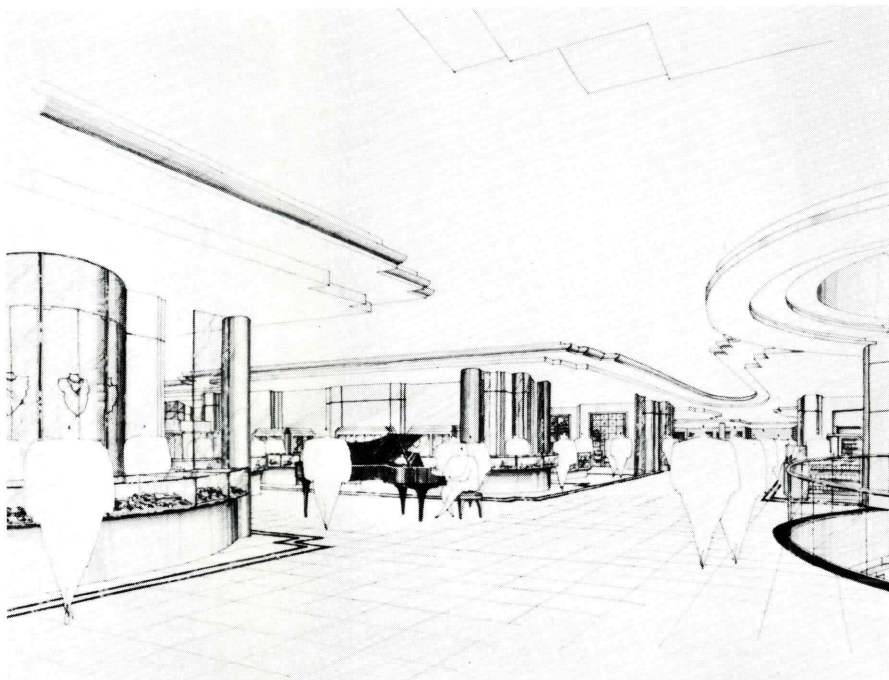

The \$130 million project, to occupy a full block between Hennepin and

LaSalle Plaza, a mixed-use complex by Ellerbe Becket

LaSalle Avenues and Eighth and Ninth Streets, will include a 28-story office tower, a 24,000-square-foot multi-screen movie theater, 70,000 square feet of retail on two levels and a new 100,000-square-foot YMCA building, designed by The Alliance. The project also includes plans to renovate the existing Gothic-style YMCA building into office space, and the Italian Renaissance State Theater.

Ellerbe Becket will move its headquarters into the new office tower when the project is completed in 1991. LaSalle Plaza is being developed by LaSalle Plaza Limited Partners, a joint partnership between the Palmer Group of the Twin Cities and Beta West Properties.

A bigger and better Dayton's store at Southdale

New Dayton's store

Dayton Hudson has unveiled the design for its new Southdale store, under construction adjacent to the old Dayton's store. When completed in August 1990, the four-story, 370,000-square-foot department store will feature an exterior of textured stone trimmed in Minnesota granite. Granite pavilion-shaped entrances will culminate in lighted crystal pyramids.

The interior will blend the classic and the eclectic. Four main aisles will intersect at a central vertical transportation system. A pair of elevator/escalator systems will pierce a 40-foot diameter opening through the four floors and ascend to a dome, which will be clad in stainless steel and brass, topped with a crystal oculus. Two circular glass elevators will be trimmed in carnelian granite and edged in brushed stainless steel.

The Southdale Marketplace on the third level will reflect a Mediterranean villa, with rubbed hickory wood floors interrupted by white ceramic tile and accented with blue neon.

When the new store is completed,

renovation will begin on the former facility to convert it into retail space for 50 specialty shops, which will be part of the overall renovation of Southdale.

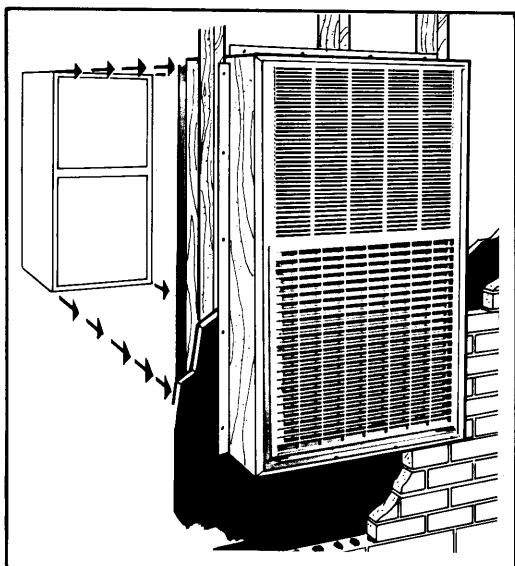

The exterior is designed by Sloman, Smith and Barresi Architects of New York, and Tucci, Segrete and Rosen, Interior Consultants of New York are responsible for the interior design and planning. Bentz/Thompson/Rietow of Minneapolis is responsible for the architectural, electrical and mechanical work. The Alliance is working on the mall renovation.

Dayton Hudson also plans to expand its Rosedale and Burnsville stores.

Playing Polo

Polo/Ralph Lauren Corporation has opened its third largest Polo shop in the country in the historic Young Quinlan building in downtown Minneapolis. The 15,000-square-foot store, designed by Ray Bailey Architects of Houston, carries clothing and home accessories on three levels. The building's original crystal chandelier and light fixtures have

CUT HEATING COSTS WITH Magic-Pak® HIGH TECH GAS SELF-CONTAINED UNITS.

Shrink Installation Costs

Contractors, developers and designers applaud the way the Magic-Pak single package units save time and money starting with the wall opening itself. Each opening is exactly the same size and saves approximately 63 standard bricks (9.7 sq. ft.), plus masonry costs.

The Magic-Pak trim cabinet measures just 28" x 48" x 29". Utility hook-ups are simple, since power, gas and low-voltage connections are mounted on the top of the outside of the cabinet. Magic-Pak completely self-contained units arrive on site completely pre-charged and pre-wired for fast, easy installation, and there's no need for chimneys or flues. Consider this: central systems require early release of heating and cooling equipment to the job site. With Magic-Pak units delivery and installation can take place closer to actual occupancy, even after the carpets have been laid and the walls painted. The result? Real savings on construction financing costs.

Lower Operating Costs

A new cooling chassis with higher energy efficiency ratings combined with electric pilot ignition and power venter give users a high tech, energy saving unit for both heating and cooling modes. Lower fuel costs all year 'round.

- Astonishingly Self-Contained
- Incredibly Simple
- Goes Through Walls Effortlessly
- Over 300,000 apartments, entrance foyers, process rooms, town homes, condominiums and offices use Magic-Pak units to help cut heating and cooling costs.
- Easy to Install
- Easy to Operate
- Easy to Maintain

Designed and manufactured by **Armstrong/Magic Chef Air Conditioning.**

What Makes Carlisle The Leader In Single-Ply Roofing?

INNOVATIVE SYSTEMS AND PRODUCTS

Carlisle's new Design "A" Fully-Adhered Roofing System featuring Carlisle's unique .045 in. polyester-reinforced EPDM membrane is the latest benefit oriented introduction. The reinforced sheet increases the tear strength of the system by over 200%, breaking strength by over 40%, and puncture resistance by over 40% when compared with a conventional .060 in. non-reinforced sheet. All of these add up to a stronger, lightweight, cost competitive fully-adhered system.

With over 2,500 installations in less than two years Carlisle's Mechanically-Fastened Roofing System is the most popular and successful system introduced in Carlisle's 25-plus years. This system also utilizes the fatigue resistant .045 in. reinforced EPDM membrane and when coupled with the new attachment system offers better seam strength and improved fastener load performance.

Both systems are available in Sure-Seal® (black) and Brite-Ply™ (white).

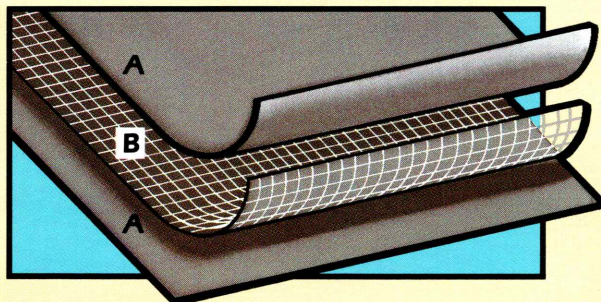

Each system includes Carlisle's SecurSeam® System featuring the revolutionary In-Seam Sealant™ acclaimed as the best innovation to better seaming since butyl-based splicing cement which Carlisle also pioneered.

Carlisle's roofing systems are fully-integrated. All the quality key components: membrane, insulation, adhesives, cements and sealants are designed to work together resulting in Quality Roofs By Design.

Part of leadership is being the innovator. Carlisle is first to the marketplace with user-friendly systems and products benefiting you and your customers. More reasons why Carlisle is truly the leader in single-ply roofing.

For more information write Carlisle SynTec Systems, P.O. Box 7000, Carlisle, PA 17013 or call toll free 1-800-233-0551. In PA 1-800-932-4626. In Canada 1-416-564-5557.

American Landscape
Minnesota Museum of Art, Jemne
Building galleries
May 7–November 12

"The American Landscape" will present the development of American landscape and seascape painting from the Hudson River School to the present day. The exhibition focuses on rural and figural landscapes and includes works by Hudson River School painters Jasper Francis Cropsey and Homer Dodge Martin, and Luminists George Innes and Joseph Rusling Meeker. For more information, call the Minnesota Museum of Art at (612) 292-4355.

Spring Architectural Lecture Series
University of Minnesota
May 12–May 19

The School of Architecture and Landscape Architecture continues its seasonal lecture series with a dynamic group of speakers for spring. On May 12 architect Thom Mayne, a principal in the award-winning Los Angeles firm Morphosis, will speak on his recent work. Jane Wernick, a civil engineer and a visiting scholar at Harvard's Graduate School of Design, speaks Monday, May 15 on "The Structural Backbone: Engineers, Art and Principles of Design." Tony King continues the series on May 19 with a presentation on "Architecture Capital and the Globalization of Culture." King is the author of several books on the built environment and currently a visiting professor of art history and sociology at the State University of New York, Binghamton. The series concludes on May 19 with Kenneth Frampton, the author of *A Critical History of Modern Architecture*, speaking on the work of Jørn Utzon.

All lectures will be held in room 3210 at the Electrical Engineering/Computer Science building on the University of Minnesota campus. Call the School of Architecture for information on specific times at (612) 624-7866.

Architecture Tomorrow
Morphosis
Walker Art Center
May 14–July 23

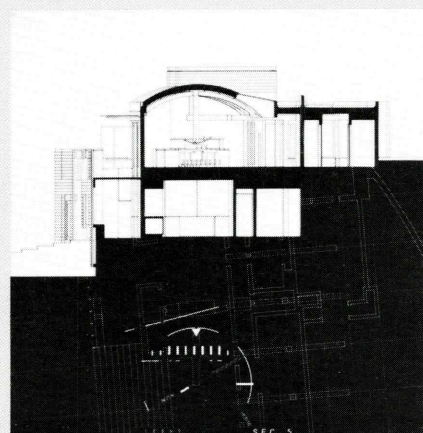

The second of six exhibitions in Walker Art Center's *Architecture Tomorrow* series features the work of architects Thom Mayne and Michael Rotondi, both principals in the Los Angeles firm Morphosis. Their theme, "Three Houses," will take shape in installation form. The

architects have designed three structures site-specific to the gallery space which allude to ideas inherent in house design. Three accompanying "deciphering" books, complete with drawings and text, will serve as a guide through the exhibition.

Thom Mayne, educated at the University of Southern California and Harvard, has been a principal of Morphosis since 1975. Michael Rotondi, also a principal at Morphosis, received his education at the Southern California Institute of Architecture. Morphosis received a *Progressive Architecture* (P/A) Design Citation in 1980 for the Riedel Medical Office Building in Tijuana, Mexico, and a P/A Award in 1987 for Kate Mantilini, a restaurant in Beverly Hills, California. The restaurant, a renovation of an existing Modernist commercial bank, was transformed by an intricate layered facade, an oculus filled with a complex steel sculpture, and a dazzling new interior.

The three-year series continues with four exhibits scheduled for consecutive fall/spring time slots: Tod Williams and Billie Tsien in fall 1989; Stanley Saitowitz in spring 1990; Elizabeth Diller and Ricardo Scofidio in fall 1990; and, finally, Steven Holl in spring 1991.

For more information, contact Walker Art Center at (612) 375-7600.

Morphosis, Crawford House, 1987–1989

Frank Lloyd Wright: Architecture as a Quality of Mind
125 Willey Hall, University of Minnesota
May 25, 7:30pm

Award-winning photographer J. Spencer Lake will present his images, gathered over the past three years, of the architecture of Frank Lloyd Wright. Lake's show presents the seven decades of Wright's work and more than 50 buildings and interiors. A soundtrack

of Wright speaking about his work interlaced with the words of his contemporaries accompanies the slides.

Tickets are available at Odegard Books Minneapolis in Calhoun Square or by calling (612) 379-2260. General admission is \$8.50, students \$4.00. All proceeds support the restoration of Frank Lloyd Wright's Willey house.

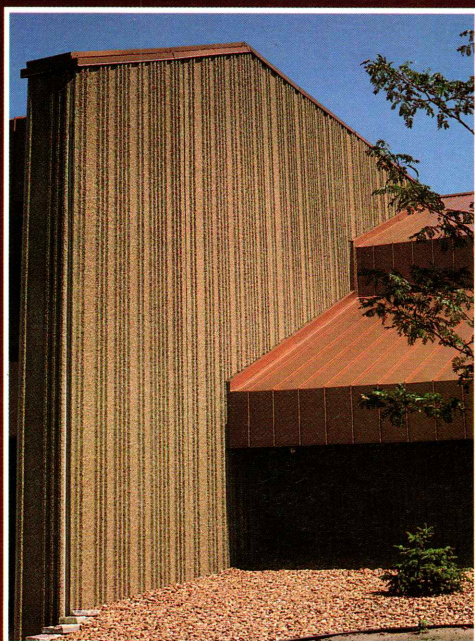

Built in 1934 for Malcolm and Nancy

Introducing AaCron's Anodizing **BREAKTHROUGH**

AaCrotalSM is truly a proven anodizing service of a whole different color.

AaCron's revolutionary new AaCrotal electrolytic anodizing coloring service produces finishes ranging from pale rose to deep burgundy. And this proven* anodizing service used in Europe for years is available in the U.S. for the first time. Now aluminum fabricators and architects have a beautiful new spectrum of colors to choose from.

AaCrotal, together with AaCron's comprehensive anodizing services, creates a new dimension in application possibilities.

As with all anodizing services, AaCrotal can also be etched or polished for different surface textures. And with our 42' tanks, among the largest in the industry, AaCron services can handle virtually any size job including large architectural projects.

Innovation, fast turnaround and complete service...an AaCron trademark.

For over 20 years, we've been serving aluminum fabricators nationwide. And if you'd like more information or samples of the breakthrough AaCrotal finishing service, or other AaCron capabilities, give us a call.

*Test results are available on request.

**IN THEIR QUEST TO
EXPORT GOOD DESIGN
AND ENGINEERING,
THE SCANDINAVIANS
FINALLY GOT AROUND
TO WINDOWS.**

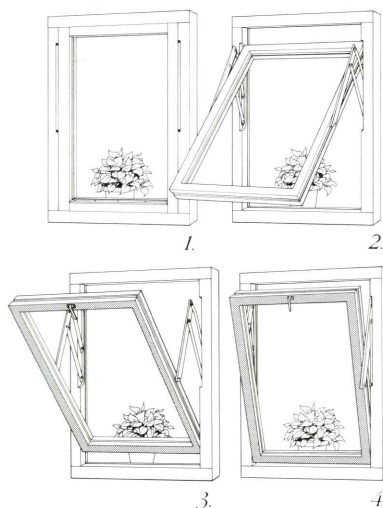

The people of Scandinavia have long strived to combine function with form. Technology with hand craftsmanship. Engineering with design.

It's apparent in the graceful simplicity of their furniture. In the reliability of their cars. And in the sophistication of their stereo equipment.

It's also abundantly apparent in their windows.

Introducing the H window.

Designed and proven by Scandinavians in Norway, these windows are now being manufactured by Scandinavians in Minnesota.

A patented hinge lets you safely clean the outside of the glass from inside the house.

What makes the H window unique is a patented hinge. This hinge not only permits you to have a much larger operating sash than other brands, it makes cleaning easy.

As for the window's insulating properties, consider this: The H window is the largest selling brand in a country where over a third of the land is located above the Arctic Circle.

For more information, mail the coupon or call Rob Roberson at 1-800-242-4946.

I'd like to know more about the H window.

Lake Superior: Beyond the daily realm

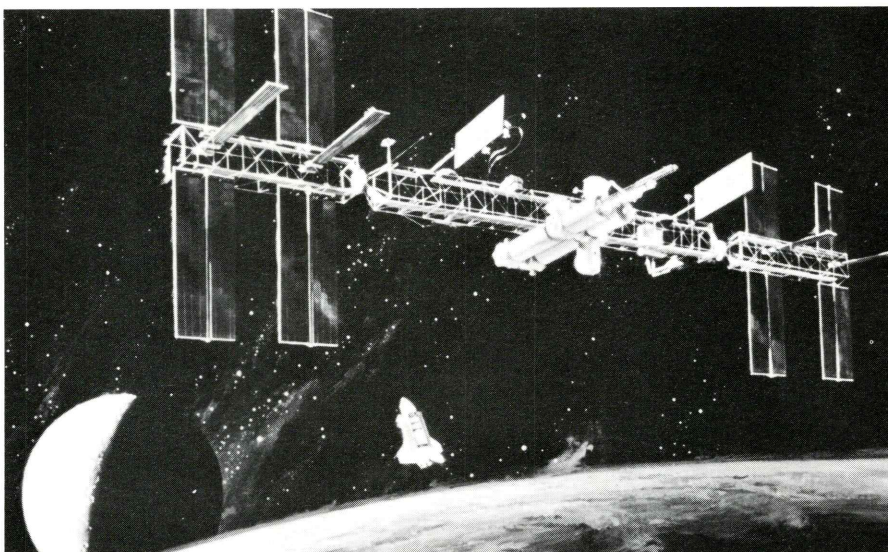

By Eric Kudalis

Duluth seems an unlikely winter tourist spot, but the weekend of February 25–26 more than 40 architects, designers and design enthusiasts gathered at the historic Fitgers Inn for the first annual Lake Superior Design Retreat. Sponsored by the Minnesota Society American Institute of Architects and hosted by the Northeast Chapter, “Explore the Corners” presented a diverse group of speakers who traversed the outer limits, from the polar north to the surface of Mars to the highrise boardroom. Though the speakers were from different backgrounds—an industrial designer to a NASA technical assistant—all shared a passion for exploration and a concern for developing livable habitats from extraordinary conditions.

Dr. John Alred, technical assistant for NASA’s Office of Exploration, examined the space program’s future projects and discussed the possibility of building research facilities on the moon and Mars. Alred thinks of himself as a “conceptualizer” rather than as a designer. He stresses that space may hold answers to questions we have yet to ask, and that’s reason enough to justify space explorations, said Alred.

Michael Kalil of Kalil Studios of New York examined ways of designing compatible living environments in space. Space exploration requires living with others within cramped quarters for extended periods, and there lies the potential problem. If you get sick of your roommates, you can’t exactly step outside for a breath of fresh air. NASA hired Kalil in 1983 to conduct research studies for the interior architecture of the space station’s habitation module.

In preparation, Kalil studied the roots of architecture to understand man in a primitive built environment. He noted natural body movements in relation to

The Lake Superior conference traveled from the board room to the outer limits.

the surroundings, and he applied his findings to interior design of space stations. Kalil designed sleeping chambers with a series of straps that allow the body to recline in its natural position without floating away. He also analyzed the effects of color on the body and mind—blue soothes, red excites—to determine appropriate color for long-term space travel.

Because Kalil is designing interior architecture for inhospitable environments, he is looking for elements that will have a positive emotional and psychological impact on the inhabitants rather than simply an aesthetic impact.

Moving to inhospitable environments closer to earth, Bob Mantell discussed the perils of arctic exploration. A member of the Steger expedition to the North Pole in 1986, Mantell, like the other conference participants, discussed man living in unusual conditions as he explores unknown turf for exploration’s sake. A carpenter by trade from Ely, Minnesota, Mantell bailed out of the expedition because of frostbite, but not before learning what it was like to live in life-threatening situations.

Home for the explorers was nothing more than sleds, pup tents and sleeping bags. Through a series of slides, Mantell introduced the seven other fron-

tiersmen as he journeyed along the arctic ice. Like astronauts, the arctic explorers are essentially strangers to each other who are bonded by their common goal to reach the North Pole.

The journey often tested the limits of human endurance and patience, in which each is dependent on the other for survival; and the luxuries we take for granted, such as privacy and “personal space,” are moot concepts when eight people are cushioned into one tent for the night.

Yet such are the sacrifices in the name of science and discovery.

The second day of the conference presented speakers who also sought to expand the boundaries of design and creativity, but who were more grounded in daily activities.

Thomas Newhouse, owner and principal of an industrial design firm in Grand Rapids, Michigan, used his design-work experience with Herman Miller to highlight the evolution of the office environment. Office workers, like astronauts and arctic explorers, are essentially strangers confined to limited spaces as they pursue shared goals. And this environment, too, affects human interaction, moods and productivity. Gone are the days when an office floor un-

**GIS Systems
is proud to offer
Arris and
Sun Microsystems.**

Systems Managers, Architects, Designers: More than an Opening Move— GIS Systems Offers The Winning Strategy.

Chess Masters know that success depends on having a winning strategy in place right from the opening move. This same game plan holds true when selecting the right vendor for your CAD purchase.

At GIS Systems, we believe winning the CAD game means more than buying a computer and software. It also means having the right vendor that can help you put it all together with:

- A fully trained staff of experienced and knowledgeable hardware and software applications engineers.
- Complete system training in our training center, or on-site.
- After-sale support and service.
- Plotting

output service bureau. ■ Custom software development services. ■ Corporate-wide networking strategies and implementation. ■ A commitment to your satisfaction from start to finish.

Developing your winning strategy for CAD begins by discussing your CAD needs and concerns with a knowledgeable and professional GIS Systems account representative. Our representative will work with you to develop and execute a winning strategy, from opening gambit to final move.

With your winning strategy in

place, we want to be sure that when you hear "Checkmate," it won't be coming from your competition.

When it comes to energy choices, your customers rely on you to make the right choices for heating and cooling their homes and businesses. They can't get better value or indoor air quality than with a ground-source heat pump.

Because ground-source heat pumps operate at a coefficient of performance (COP) of 3 or greater, they can out-perform any conventional heating and cooling system.

Advance design and proven technology now provide an all-electric system which can cut home heating costs up to 60 percent and reduce cooling costs up to 25 percent.

And electric ground-source heat pumps provide your customers the best indoor air quality of any heating and cooling system. Give your customers technology that is clean, safe, reliable, affordable and state-of-the-art.

To find out more about the technology that makes electricity the preferred energy source, contact the energy specialists at the electric cooperative serving your area.

They can help you make the best choice for your customers.

The Centers of Italian Design.*

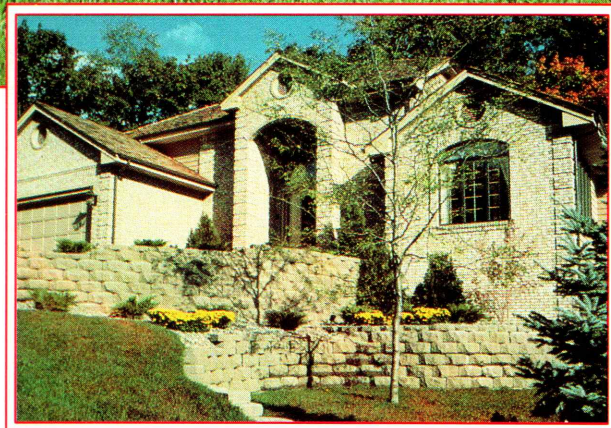

*Except June 13-18th.

For one week, the true center of Italian design will be Aspen. That's where outstanding designers, artists, architects, and writers will unite for "The Italian Manifesto: The Culture of Nine Hundred and Ninety-Nine Cities." Speakers will include architects Aldo Rossi, Renzo Piano, Joseph Rykwert and Tobia Scarpa; designers Mario Bellini, Michele de Lucchi, Achille Castiglioni, and Emilio Ambasz; fashion designers Luciano Benetton and Gianfranco Ferre; and museum director Philippe de Montebello. Italian design will never be more accessible.

KeyStone® retaining walls are designed to function beautifully for a lifetime, providing long term savings compared to timbers which will deteriorate.

There are no metal members in **KeyStone** to rust away, such as found in timbers.

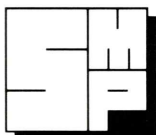

No cumbersome tools, mortars, cutting or preservative treatments are required with **KeyStone**, and the wall goes up in half the time of old methods.

KEYSTONE
RETAINING WALL SYSTEMS

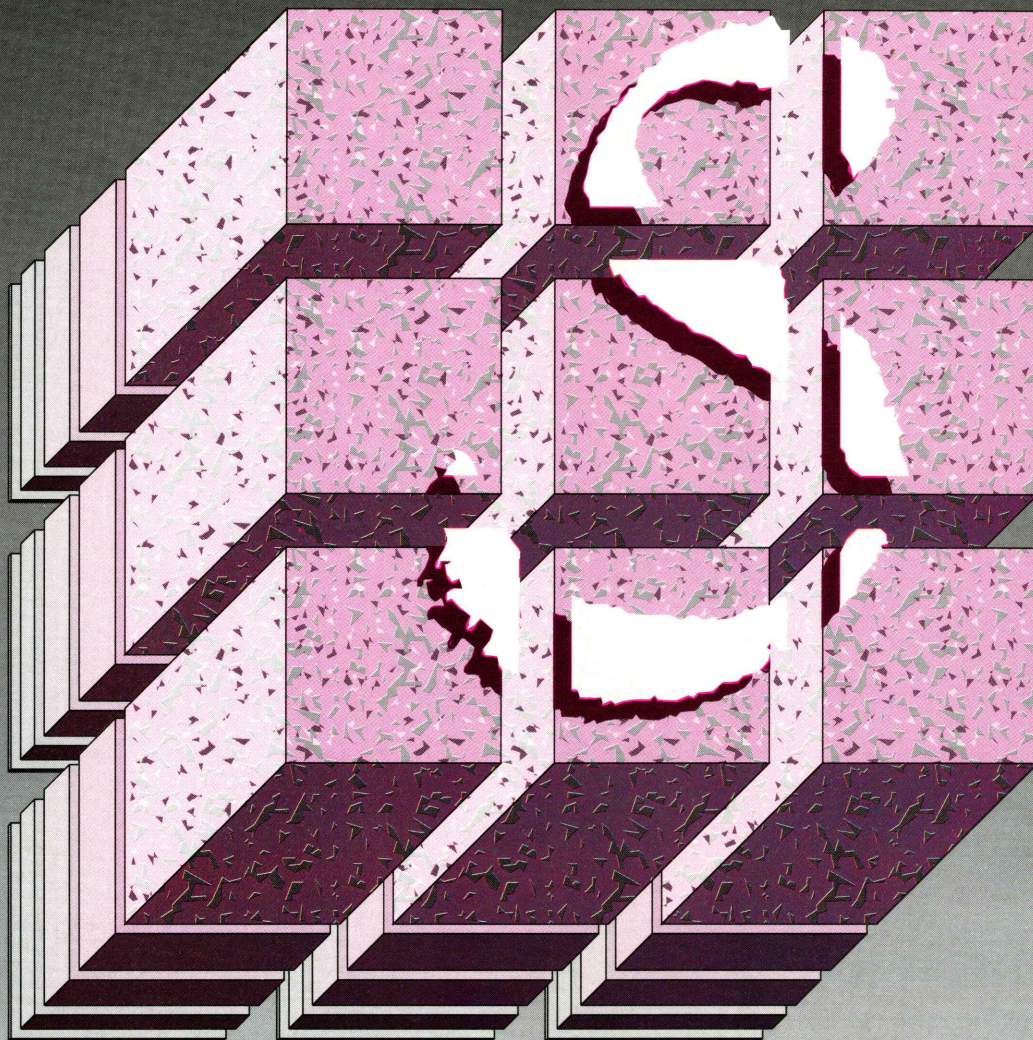

Built to last!

- Individual concrete units locked together with fiberglass dowels.
- Available in 8" or 4" high mini-units.
- Choice of face, color and texture.
- Strong, permanent and maintenance free.
- Quick and easy installation reduces labor.

Dovolis, Johnson & Ruggieri: An architectural firm with designs for the neighborhood

By Kira Obolensky

Crack houses, littered lots and blocks of no-man's land in Minneapolis' Phillips neighborhood have been reborn as single-family housing, cooperative rental units and a small business incubator. What was once considered Minneapolis' worst neighborhood—the area between Hiawatha and Lake bounded by 94 and 35W—is slowly turning around with the help of the architectural and planning firm of Dovolis, Johnson & Ruggieri.

Principal Brian Johnson, who studied under the great urban planner Edmund Bacon at the University of Pennsylvania, remembers Bacon's advice to adopt your city. Attracted initially by low-cost office space offered by a family-owned building on East Franklin, the firm moved to the Phillips neighborhood in 1985 and immediately began to host the weekly meetings of the Franklin Avenue Task Force in its office. Dean Dovolis explains the initial energy, "We had all of this education and Franklin Avenue needed help so we decided to take advantage of that. We literally pounced on the opportunity and quickly discovered that if the plans are already drawn, no one has time to ask if we have the experience."

Dean Dovolis and Brian Johnson both received degrees in architecture from the University of Minnesota before leaving the state to pursue graduate programs. After graduate work in architecture at Harvard for Dovolis and in architecture and city planning at the University of Pennsylvania for Johnson, they came back to Minnesota. What began as a friendship in college evolved into a working relationship. In 1984, the firm of Dovolis and Johnson was

From left to right: Dean Dovolis, John Ruggieri, Brian Johnson

Photo: George Heinrich

born. John Ruggieri, a landscape architect schooled at Penn State, was working on the landscaping for a house that Dean Dovolis had designed. The collaboration worked so well that he joined the firm in the fall of 1984.

"We really started from scratch," Johnson explains. "It's the classic firm-is-born story. First we worked out of my kitchen and now there are more than ten people in our office. We were fresh out of graduate school and frustrated with our experiences in other firms. We wanted to provide a work environment where people could grow with the firm." The office layout—essentially just one big room—reflects this idea. Principals sit next to the staff architects, landscape architects and support staff and, as Dovolis says, "it leads to an incredible give-and-take process. Co-workers will gather without warning for spontaneous critiques. There is input even when you don't want input."

In the five years since its formation, the firm's business has grown in divergent ways: housing, office, high-tech and warehouse space.

But where the firm has made its biggest mark—at least for now—is in the neighborhood.

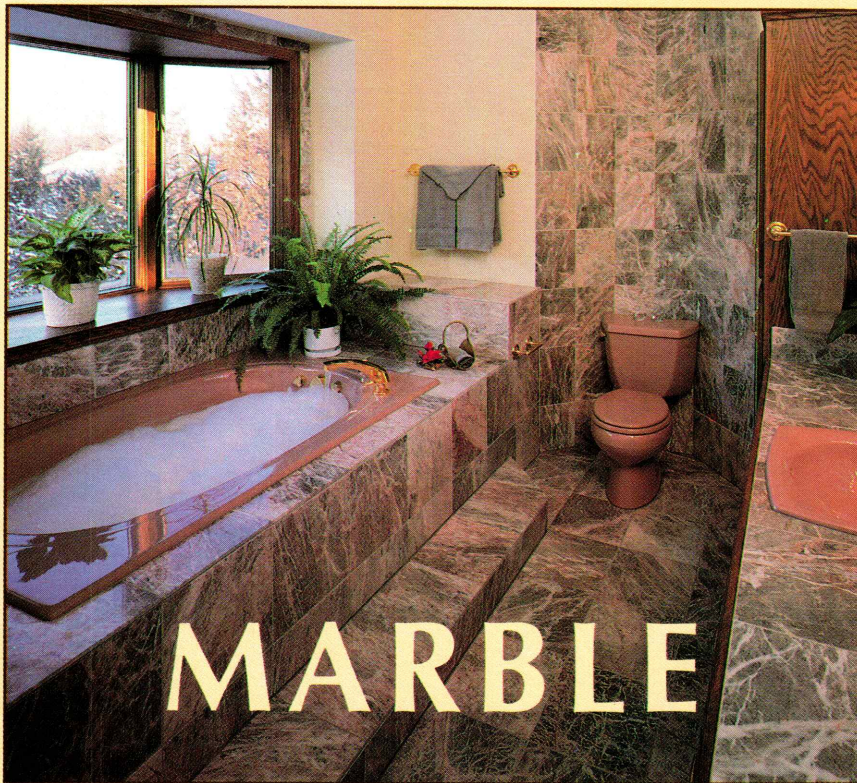

In 1985, eager to apply their school-

learned knowledge, the firm tackled what was surely the worst block in the area, a full city block off Franklin between 13th and 14th Avenues. With the idea in hand for a cooperative housing project, they then began to look for a developer and found one in the Phillips Neighborhood Housing Trust and the Twin Cities Housing Development Corporation. Three years and literally hundreds of meetings with different neighborhood organizations later, the Phillips Place Cooperative was born. A 23-unit single-parent cooperative, the project boasts front and back yards, private entrances and front porches. As infill housing, the cooperative incorporates three existing structures. Its gables, peaked roofs and four-square forms create a convincing streetscape.

Setbacks, window placement and different roof heights help define the individual units so residents can point to their living space rather than just to the aggregate. "People can be negatively labeled by their architecture, such as the derogatory reference implied by the projects," says Dean Dovolis. While other housing projects in the area remain empty, Phillips Place has enough people on the waiting list to prove that

Allan Block™
A Mortarless Concrete Block
Retaining Wall System

The Allan Block Advantage

What is the Allan Block Advantage? For landscape designers and contractors, it's Allan Block's design versatility, easy installation and lightweight handling. For homeowners, it's a durable, maintenance-free retaining wall system that beautifully enhances any size landscaping project.

Allan Block's 3 block shapes can be combined to form retaining walls in a wide variety of designs, from simple 3 foot walls to elaborate tiers and landscape projects for both residential and commercial applications. The Allan Block advantage, durable, versatile, attractive *and* affordable.

A GOLDEN OPPORTUNITY

A golden opportunity is something you can't pass up because the value is simply too great. Such is the new Scherer Bros.

FarNorth Casement 90™ window.

Like Gold, our new window is durable, dependable, and beautiful. In fact, to our knowledge, there is no other window that uses as much Ponderosa pine, is as trouble free and air tight, or is delivered as quickly.

That's because we believe in focusing on the basic strength and thickness of a window, its structural integrity. Perhaps that's why, we're told, nearly 25% of the windows used in the 1988 Parade of Homes were supplied by Scherer Bros.

We also back our products with a limited 10 year glass warranty and our unique repair policy.*

A series of design advances makes the *FarNorth* capable of meeting or exceeding other top-line window standards. The new *FarNorth* Casement 90™ stock features are:

- Double-pane glazing (13/16" glass)
- Low Emmissivity Argon filled
- Dual "bubble" weatherstripping
- Ponderosa Pine sash and frame
- Dual Arm EntryGard® operator
- Heavy duty screen (1/4" wider/thicker)
- Optional aluminum cladding (white, bronze and now sand)

*For more info on our window & warranty call 379-9633

15% thicker frame provides additional unit strength and promotes greater thermal performance.

18% thicker sash rails & stiles makes for a stronger and more thermally efficient window unit.

21% wider rails further increases structural strength and improves thermal efficiency.

Raised waterdam $\frac{3}{16}$ " makes window practically air-tight. Our own tests show a .03 cfm, which is 17 times better than MN Energy Code Standards.

New no-scratch screen corners are made of easy-ware plastic that won't scratch your windows when you clean or replace your screens.

14% larger screen lip on stop makes sure those nasty insects stay on the outside.

Quality That Protects Scherer Bros. Lumber

When Consistency Counts, Count On GE Silicones

Different applications place different demands on a sealant. When your project demands high strength for structural glazing AND high movement for weatherproofing, the choice is easy:

- Go With Consistency.
- Go With The Leader.
- Go With GE Silicones.

The GE Structural Glazing Team

ULTRAGLAZE® 4000 Structural Glazing

- The strongest one-part, neutral-cure sealant on the market—the most cost-effective 5:1 safety factor available.
- High strength/high modulus, 12-month shelf life.

SILPRUF® Weatherproofing Sealant

- The proven standard—offers long tooling time and high movement capability.
- 11 standard colors plus custom color capability.

Contact us today.

You can count on GE Silicones for all your sealant needs. And you can count on us to deliver to meet your scheduling needs. For complete product information, contact us today.

ONLY ONE WINDOW COMPANY DARED TO TAKE ON THIS CITY HALL.

When Baltimore decided to replace the windows in its 120 year-old City Hall, Baltimore talked to all of the major window companies.

Then Baltimore chose Marvin.

Baltimore chose Marvin because no one had more experience at making windows to order. Because no one was better-equipped to actually make all of the different shapes and sizes. Because no one else could incorporate more maintenance and energy-efficiency features into such

historically accurate replicas.

And because we make windows to order, we could apply more know-how and technical support to the job. We could deliver on a schedule and in an order that let the contractor do his job quickly and cost-efficiently.

No other window company could have handled this job as well as we did. The proof is right there at Baltimore City Hall.

And nobody can argue with City Hall.

For more information, call 1-612-854-1464, ext. 10. Or just write Marvin Windows, 8043 24th Avenue South, Minneapolis, MN 55425.

For artists Julie Baugnet and Lee Clapsadle, life in St. Paul's Lowertown Lofts provides balance. Baugnet and husband Clapsadle juggle a graphic design company with the ongoing creation of art, and their loft allows room for art and graphic design, work and personal life.

The loft bears the distinction of being designed by sculptor Kinji Akagawa. With simple materials and plenty of sweat equity, Akagawa and visual artist Nancy Gipple transformed 1,800 square feet of exposed brick and soaring ceilings into unique environments for home and work.

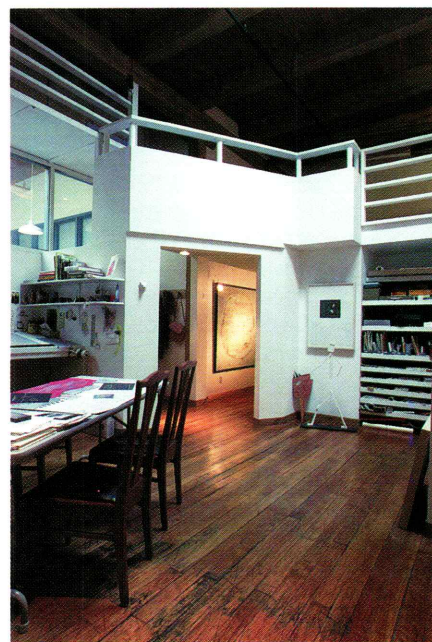

"We needed efficient space for two artists, as well as two children who visit on weekends," explains Akagawa. So he divided the long, rectangular configuration into two studio areas, separated by a two-story living module that contains the kitchen below and bed-

room and living space above.

Akagawa's former studio is now the home for the Clapsadle Baugnet Design Studio (pictured above), a graphic partnership that has created the look and image for many of the Twin Cities' non-profit organizations, including the Minnesota Opera. Built-in cupboards and shelves hold tools for graphic design. A work station is tucked under an extension of the "second-story" living room above. Lit by a skylight and transom windows into the central atrium, the space works as well for the display of Lee's obsessive colored pencil drawings and Julie's delicate botanical drawings as it does for running a business.

"Fine art is integrated with our graphic design and both are now integrated with our home, our work place, our studios, and our lifestyle," says Julie Baugnet.

New walls Domestic architecture offers the opportunity for client and architect to explore new terrain, and the houses presented here probe the boundaries of residential architecture. Whether it's Jim Stageberg's colorful cottage on a hill, Harrison Fraker's kinetic lakefront house, or the MCAD's exhibit of "illegal" houses designed by young architects, these houses step beyond traditional residential design to capture the immediacy of art. No house better exemplifies architecture as art than does Frank Gehry's Lake Minnetonka guest house, a sculptural collage of forms and materials. Yet art doesn't take precedence over comfort. Gehry's house is designed to accommodate the owner's lifestyle, as are all the featured houses.

A house reflects the owner's tastes and ideas, and there is never a strikingly individualistic house without a client willing to step beyond the norm to create unique architecture. We acknowledge these risk-takers for embarking on architectural adventures, for designing houses that break customs.

But domestic architecture, perhaps the most personal and potentially the quirkiest of all architecture, doesn't have to take risks to express a homeowner's tastes. For the traditionalists and Frenchophiles in the audience, this issue also looks back to the 1920s when clients took comfort in the grandeur of the past. Period revival houses were influenced by European culture and a desire to recreate European lifestyles on the American prairie. They were built by industrialists who truly wanted to make their home their castle.

So here's a sampling of houses for the daring. Skewed windows, gyrating rooflines and curvilinear floor plans may not be everyone's cup of tea—especially those warmed by memories of grandma's house in the country. But we take pride in showing houses that grandma never told you about, houses that are new in every sense of the word.

Country romance

Color animates
a weekend retreat

Photos: Lea Babcock

James Stageberg designed a cottage for his wife Susan Allen Toth that reflects his Modernist background and her affection for English country cottages. To attain an appropriate country charm, Stageberg incorporated wood throughout the cabin, from white oak at the bases to knotty pine at the ceiling level. High ceilings and large windows open the interior to the outdoors. Accessories include a built-in wall cabinet in the bedroom, and artwork and birds of fancy on the ceiling add a warm element to the living room.

The romance of country living is alive in this weekend cabin, designed by James Stageberg of Minneapolis. Built on the edge of a cliff nearly 400 feet above Lake Pepin outside Stockholm, Wisconsin, the cottage is a colorful country haven, a place for both work and relaxation.

When writer Susan Allen Toth, Stageberg's wife, asked for a weekend getaway from city life to write, the architect found himself in the unique position of treating his wife as a client. Toth always admired the English country cottage, and she asked for an American version of this English landmark, something colorful, light and open.

Trained in the Modernist tradition, Stageberg confesses to looking for a "little romance, a little whimsy in the cabin," which, he says, is realized in the scale and character. Set at the end of a stone path winding through a glade, the cottage sits low and horizontally on its site. A high-pitched cedar roof is accented by an eyebrow overhang covering an oval window of the guest bedroom. A crow's-nest housing a sauna and deck juts upward from the roof.

Inside, the dining room, living room and master suite are compact, measuring sixteen feet by sixteen feet, but the high ceilings create an open, roomy feel. A curving staircase leads upstairs to a loft, which serves as Stageberg's study, and then to Toth's den, which has access up a wooden ladder to the sauna and deck. On the main level a few steps down from the kitchen is the guest bedroom.

Pine and oak finishes maintain a country feel, and large triangular windows in the living room, dining room and bedroom capture views of the lake and woods to either side. "The crow's-nest, too," says Stageberg, "is a great place for absorbing the view."

The true character of the cabin is realized in lively colors, which were inspired, says the architect, by the Scandinavian palette. Bright yellow announces the front, which is trimmed in green and accented by the mauve crow's-nest. Inside, Stageberg rubbed paint into the grain and then wiped it off, creating a light patina. The living room ceiling is robin's egg blue, Toth's den pink, and the master suite green. "Susan has definitely brought color into my life," says Stageberg.

E.K.

No plain Jane on the hill, the cabin is splashed with colors inspired from the Scandinavian palette used in Carl Larsson's watercolors. The front (above) reverberates with bright yellow, green and mauve. A crow's-nest poking through the roofline houses a sauna and balcony, and a woodshed next to the front door doesn't hide the fact that this is a weekend retreat, not an urban house, says Stageberg. Though windows in the front are at a minimum, the back has an ample supply that opens to the bluff and river below.

English charm on a Wisconsin bluff

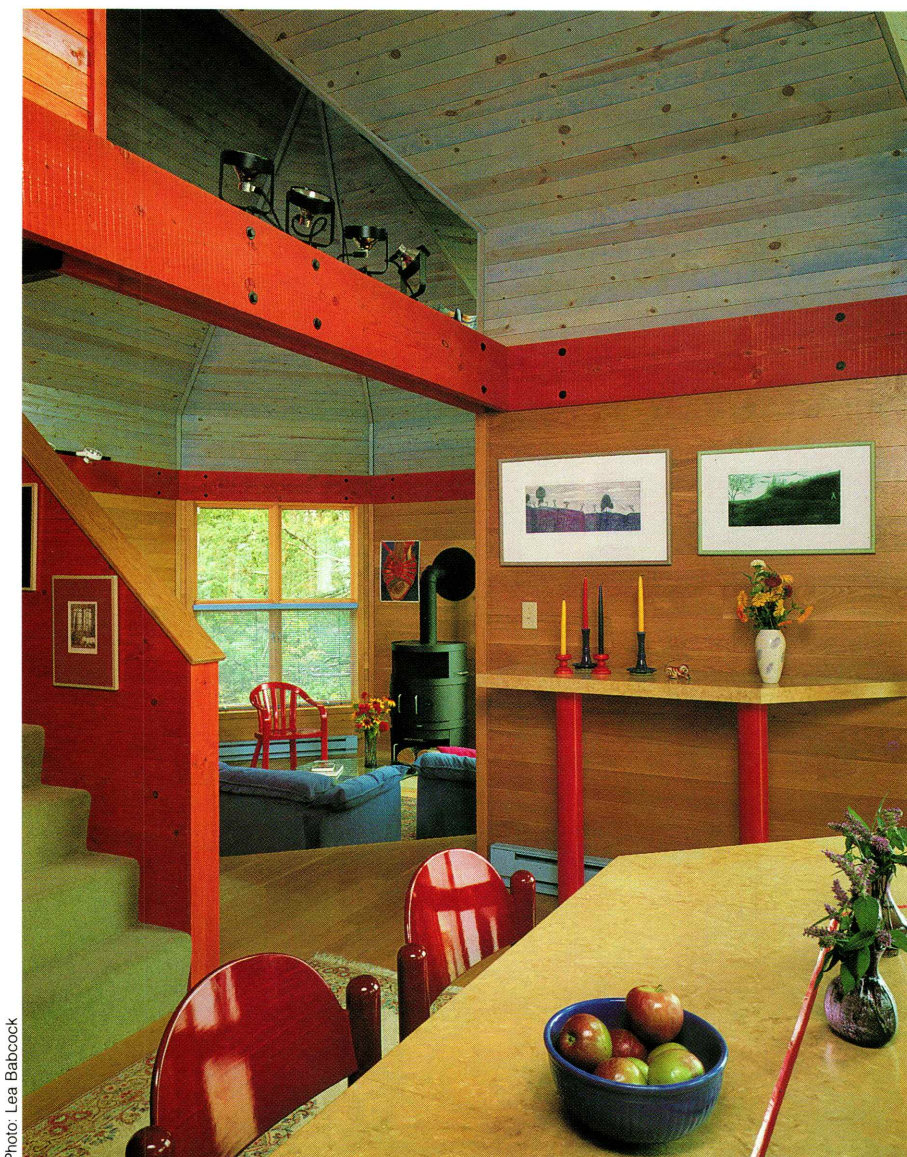

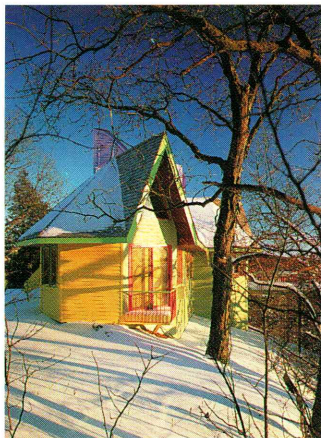

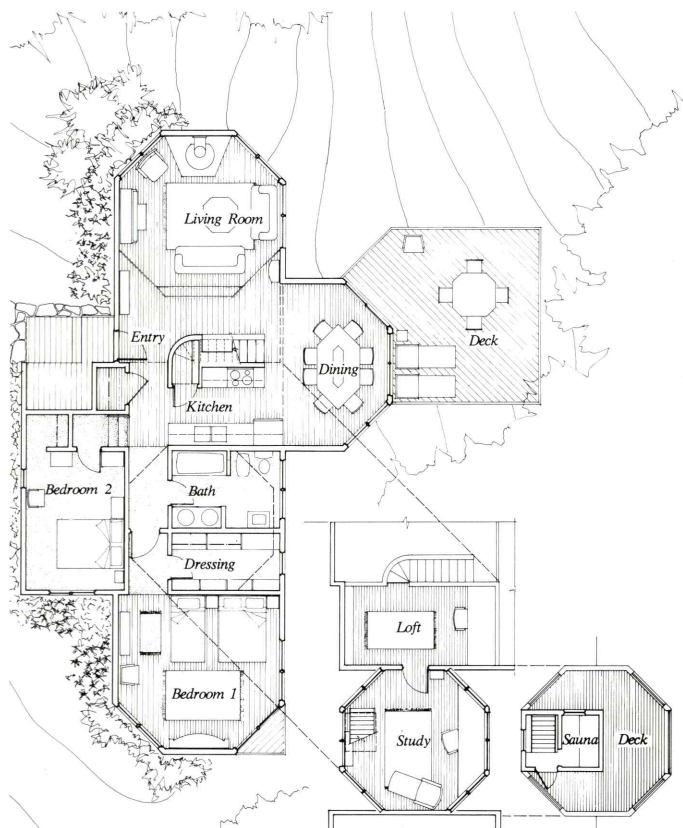

Photo: Lea Babcock

The dining room (above) a few steps up from the living room features a built-in stone sideboard and a custom-designed table, both of Kasota stone. "The stone matches the stone in the cliff," says Stageberg, "which brings a bit of the outdoors inside."

Overlooking Lake Pepin near Stockholm, Wisconsin, the cottage is built on the edge of a 400-foot cliff. The cottage (above) is inaccessible to the pedestrian from the back and can only be entered from the front. Inside, major rooms are based on an octagon (floor plan, below), such as the living room, dining room and study. The cottage, though long and horizontal, is compact with maximum room widths of sixteen feet.

Bypassing tradition

Kinetic forms electrify
a lakefront house

Photos: Thomas Hysell

When the Whitneys requested a one-story house from architect Harrison Fraker, they got a melding of different geometric components into a layered, multi-faceted whole. The back side (above) faces Lake Minnetonka and is built alongside a gulley. A concrete block foundation, stucco walls, lead-coated copper trim and roof and expansive windows contribute to a lively, inviting lakeside facade.

Moving across the property line was akin to moving across town for Helen and Kimbal Whitney. The couple, who owned a traditional house on a double lot facing Lake Minnetonka in Wayzata, wanted new quarters now that the kids were grown. They enlisted Harrison Fraker, head of the school of architecture at the University of Minnesota, to explore the design possibilities of a new house on the other half of their property.

"The Whitneys entered the project with no preconceived notion of what they expected in a new house, aside from the fact that they wanted a one-level home," says Fraker. "Instead, they offered me the freedom to 'explore' with them, to consider different design alternatives that address the site and views, specifically the bluff, the lake and a cedar grove along the shore."

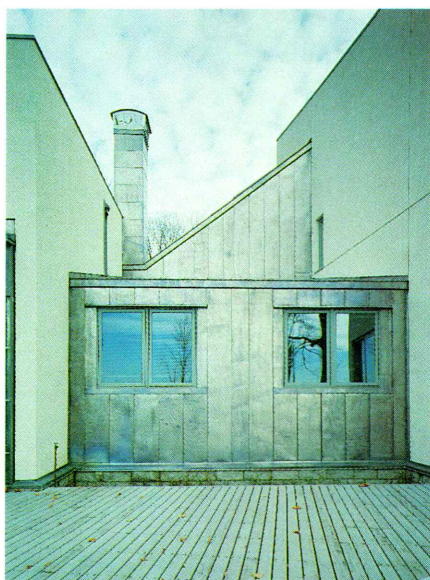

Those design alternatives converted into an eclectic divergence from tradition. The house unfolds like a piece of modern sculpture, which is fine for the Whitneys, who have an extensive art collection. Rather than designing a linear ranch house, Fraker created a kinetic juxtaposition of geometric shapes and forms that are all connected yet defined by different materials and functions.

A dark green granite wall grips the front of the house and outlines the entrance, which is trimmed in contrasting white and set in from the wall. The granite wall lends permanence, creating a fortress-like effect that adds privacy and a sense of security. Yet despite the solidity of the wall's appearance, the front of the house is anything but static. A lead-coated copper garage cuts out toward one side from the center, a small den to the other. A guest loft pokes its flat top above the roofline, and a sloped roof of the master bedroom announces itself from the other side of the house.

Geometric forms also enliven the back of the house, which faces Lake Minnetonka. But here the rigor of granite is replaced with white stucco, offering a friendlier, more traditional lakeside facade. "We wanted a stark contrast between the back of the house facing the lake and the front of the house," says Fraker. "Stucco is softer and more casual than granite, more welcoming." Providing a contrast to the stucco is

The front of the house is a stern and sedate foil to the back facade. A dark green granite wall anchors the house to its site. Windows are skewed to reflect the distorted images of an Ellsworth Kelly canvas. Yet even from the front, the juxtaposition of different geometric shapes is evident. Lead-coated copper sheathes the garage in the foreground and the den in the background. A dark green granite parapet shielding the front entrance court from the street (not seen in photo) imitates the wedge-shaped front entrance. Lead-coated copper connects different components of the house (below).

Bustling with details, inside and out

Photos: Thomas Hysell

The bright interior is meant to capture exterior views from different perspectives. A square window in the living room (above) frames a cedar grove and gazebo. Triangular forms, as seen in the front door (below) and repeated in the back door (left corner of photo), relate to the wedge-shaped central atrium. The triangle is repeated in the Deco fireplace. A coffered ceiling with white molding adds visual interest to the walls, which are ideal for artwork. Lead-coated copper, generally delegated to exteriors, is a design ingredient in the atrium (below). The barrel-vaulted atrium ceiling (not shown) is made of perforated metal.

lead-coated copper, which connects the different components of the house, as well as covers portions of the roof and the screened porch.

Inside, the action really begins. A two-story high central atrium with a barrel-vaulted perforated metal ceiling slices the house in half, severing the dining room from the living room. The kitchen, dining room, family room and stairs to the guest loft unfold on the west side of the house, the living room, master suite and den on the other half. "Although each room functions as a separate piece," says Fraker, "they all relate to each other and are held together by the wedge-shaped atrium." The wedge shape is reinforced throughout the house: in the front and back doors, in the curving front hallway, and in an eyebrow window above the dining room window.

Rooms are orientated toward particular views. For instance, the living room angles outward to capture a view through a cedar grove of a gazebo, a heirloom from the original house across the property line. The dining room across the atrium curves in the opposite direction. A semi-circular bay window provides dining for two away from the main table, as well as an uninterrupted view of the lake.

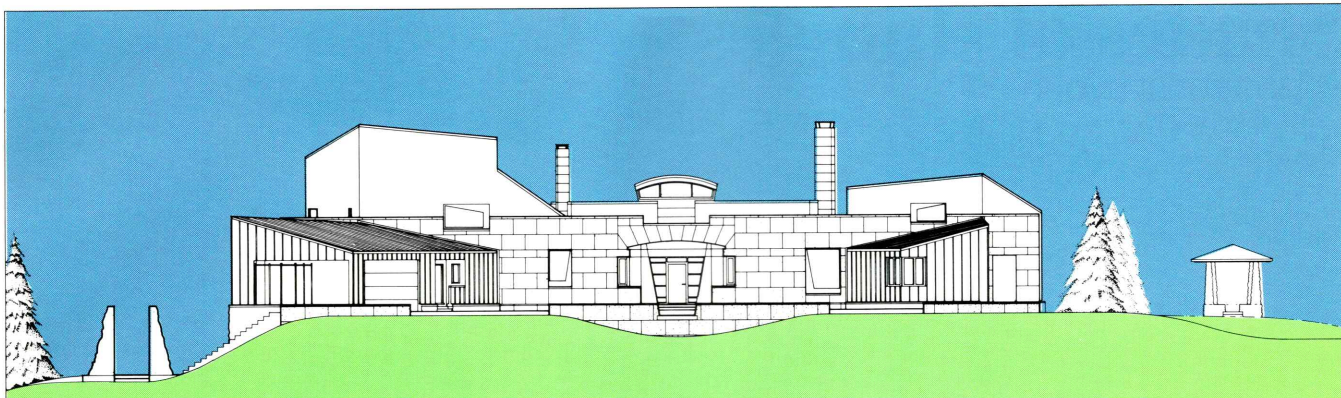

At either end of the house are two other rectangular components. The bedroom, with two bathrooms (his and hers) and two walk-in closets (his and hers), focuses on the cedar grove and gazebo. At the other end, a family room opens to the lake.

As for the Whitney's art collection, there is plenty of wall space in the curving front hallway, where a grouping of Georgia O'Keeffe sketches hang. The dining room, living room and family room also display art.

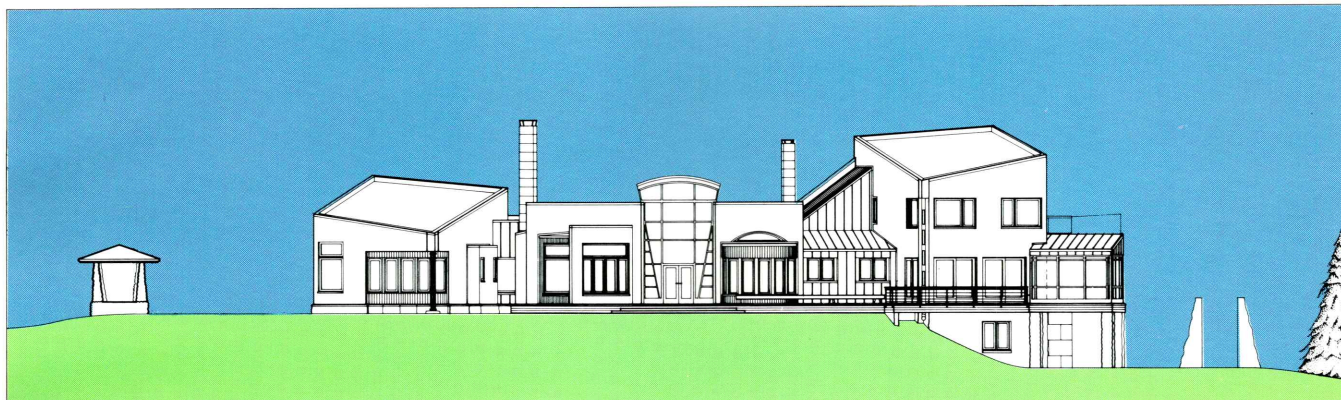

Inside to outside, the house bustles with details. The front windows are framed askew, mimicking the effect of an Ellsworth Kelly canvas of shadows and double images. A V-shaped Deco fireplace highlights the living room; and outside, open-faced drainpipes showcase flowing rain water.

Moving just across the property line, the Whitneys now find themselves in a house that resists labels. Neither traditional nor modern, the house creates its own identity out of the energy of geometric shapes.

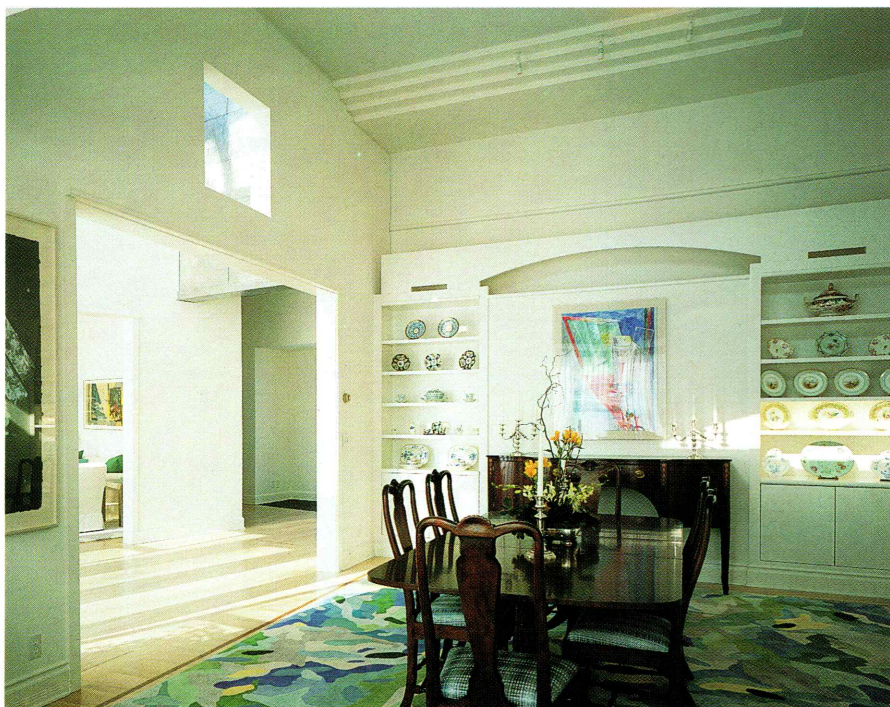

E.K.

North Face

South Face

The top elevation shows the garage to the far left of center and the den to the far right. The triangular front door breaks the rigor of the granite wall. From the back side (bottom elevation), different forms come alive. The guest loft (far right) is above the family room, and the master suite is to the far left. The atrium, which bisects the house, features a full wall of windows facing the lake. The dining room is just to the right of the atrium and the living room to the left. The kitchen is nudged between the dining room and the family room. Inside, the dining room (left) features a built-in cabinet with an eyebrow ornament, which is repeated in the eyebrow above the dining room window. A square opening above the entrance allows light in from the sun-bathed atrium.

Shades of shingles

A Modernist hybrid
with New England flair

Photos: Peter Seyfarth

Architects Peter Seyfarth and Lisa Winkelmann looked to disparate sources of inspiration in the design of this 2,100-square-foot home in Deephaven, Minnesota. The clients wanted a New England feel, open interior spaces reminiscent of warehouse lofts, and something that would be one-of-a-kind. The architects responded with a contemporary exterior unique among its more traditional neighbors and fresh, spare rooms for living. The house divides its functions among three separate forms. The center square-shaped form (above and below), stained a darker gray, holds both front and back doors and links the two wings of the house.

For John and Jeannine Winkelmann, moving back to Minnesota meant putting down roots. Building a house was a way of making those roots unique. Finding an architect was easy: They looked no further than Lisa Winkelmann, John's sister and a former Minnesota architect now with Cesar Pelli & Associates of Connecticut. Lisa asked architect Peter Seyfarth with Seyfarth and Hulton of Minneapolis to collaborate on the project. Together, they brainstormed with the couple for three weeks in a process akin to a design charette.

"We wanted our new house to remind us of the small New England coastal town we moved from and also to be something that was one-of-a-kind," says Jeannine Winkelmann. On a cloudy day, nearby Lake Minnetonka can feel like the sea, but the architects looked to the Shingle-style to ensure the salty flavor.

Shingles, then, unify this two-story house, but the forms they cover are a hybrid of the Modernist cube, the New England Salt Box, and the barns and silos found usually rising from a prairie. Architect Peter Seyfarth explains, "The basic shapes used in the house are abstracted familiar forms, like the Salt Box, but adapted and transplanted to the Midwest."

The house angles into its wooded site. Three basic forms—a long rectangle and two squares—designate different functional areas. Living and bedroom spaces are contained within the rectangular wing; a square-shaped form hides a garage and a family room above. Although the V-shaped exterior configuration was inspired by the unusual triangular-shaped lot, it seems as if the front entrance of the house is indeed welcoming you with outstretched arms.

That welcoming feeling is carried through inside, where a sunlit and slate-floored atrium connects the two wings of the house.

"We wanted a view of the lake, and that essentially turned the house's plan upside down," say the clients. Consequently, bedrooms and bathrooms were relegated to the first floor, and living spaces saved for the treetops. Upstairs, breakfast nook, kitchen, dining and living room march one after the other in a long, narrow formation. The narrow span avoids a cavernous feel with a

Photo: George Heinrich

Interior details, all derived from the square, compete with picture windows for views. In the dining room (above), a low-rising wall does more than screen the kitchen from the living areas—its layers and cut-outs modulate light with shadow and create a dynamic focal point.

Contemporary design matched with open spaces for living

contemporary ambiance.

Although the space is fairly open, different rooms have distinct personalities: The breakfast area and kitchen feel cozy because of the scale and a lower ceiling height. Architectural drama is saved for the dining and living rooms—essentially just one open space with different functions demarcated by a change in floor covering from birch to carpet. Here the ceiling soars to a 22-foot peak, windows in elegant geometric formations open up the east and west sides of the house, and a built-in buffet provides nooks for the display of art and screens the space from the kitchen and breakfast nook.

More than just windows connect the living quarters with the outdoors. Two step-out balconies extend the house into the treetops. An intimate balcony off the breakfast nook offers space for two, while an angular extension off the living room serves as a second-story front porch.

The two wings are connected on the second floor by a bridge of a walkway that provides a lookout over the front atrium entrance and leads to a family room. Enlivened by a dramatic, chimney-shaped skylight, the family room provides a haven from the open living area. “The family room has evolved into an all-purpose room. The children use it as a play area, it doubles as a guest bedroom and, sometimes, when you’re lucky, it is a quiet place for reflection,” says Jeannine.

“Woven into the architecture,” explains Lisa Winkelmann, “are details derived from the square.” The fireplace brackets, cut-out shapes in the stairwell and in the low-rising wall that separates living area from kitchen are geometrically informed. The exterior shingle siding is stained two shades of gray, and squares of subtle reflective paint are stenciled on top to add shimmer.

An architect’s hand is always evident in the Winkelmann’s new house, but “design” never takes precedence over livability. Disparate design inspirations are kept in check with open, vibrant spaces for living: a familiar feel, carved from an amalgam of peaked roofs, formal fenestrations—and shingles.

A lively two-story atrium of an entrance (below) immediately focuses all attention up, past bedrooms and garage on the first floor, to living spaces on the second. Dining and living rooms (above) flow together. The mantel, usually reserved for family portraits, here showcases Jeannine Winkelmann’s collection of found objects—among them, fossils and a circular saw blade with rusty patina.

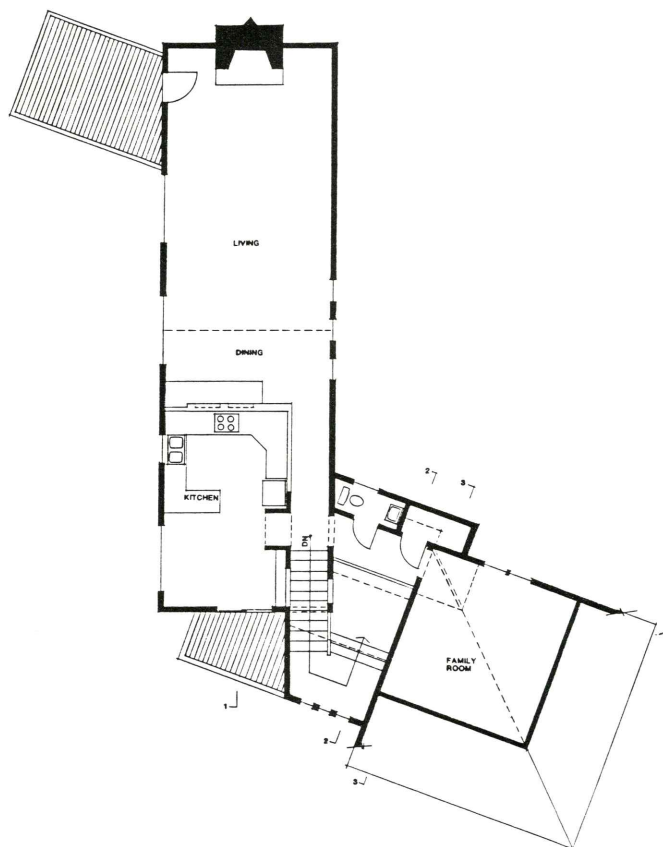

Photo: Peter Seyfarth

Photo: Peter Seyfarth

Photo: George Heinrich

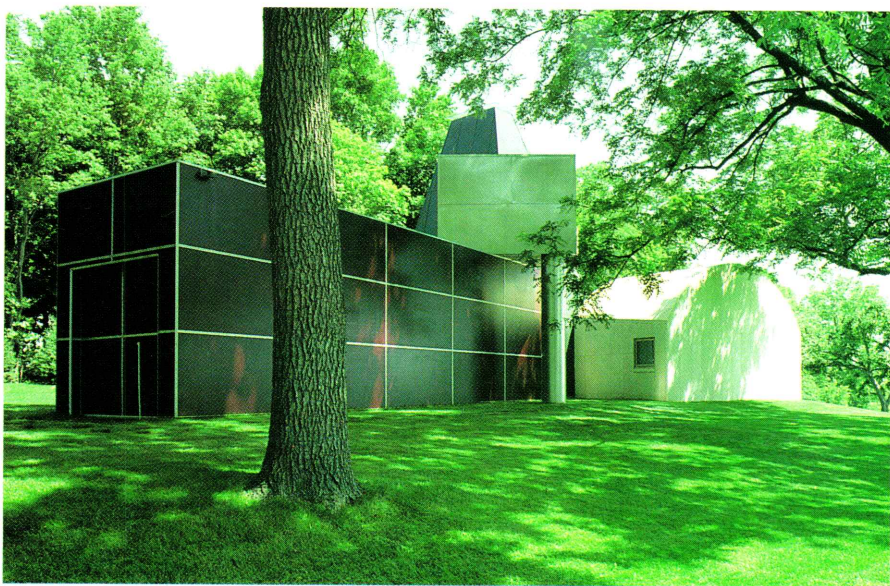

A door to the left of the fireplace leads to a walk-out porch (top), which angles off the living room to capture views of Lake Minnetonka. The clients wanted the kitchen and adjoining breakfast nook (above) to function as an alternative living and entertaining space, so speckled counter tops and custom-designed cupboards lend pizzazz to an efficient circular layout. Architect Gary Hulton, a partner in Seyfarth and Hulton of Minneapolis, chose the subtle palette, which ranges from a warm almost peachy white in the hallway and kitchen area to a very pale blue accenting the hearth. The floor plan (left) is simple, with bedrooms contained on the first floor of the long wing and living spaces above. The other wing holds the family room, a cozy haven from the open living spaces, and below the garage, modestly hidden from view.

Geometric Gehry

An assemblage of forms
for a Wayzata guest house

Photo: Thomas Hyse

In Frank Gehry's guest house for Mike and Penny Winton, there's an unexpected twist to almost everything. Above, it's a twist on the tuck-under garage, as the garage becomes an indecipherable part of the kitchen wing. The wing is sheathed in Finnply, a material Gehry used to beautiful effect on his chapel at Loyola University in Los Angeles. The shiny outpost perched above is the loft, where the Winton grandchildren love to retreat with Monopoly and toy soldiers. The living room (below) is an equally private retreat for adults. The main house is not visible, and the tall, narrow space, the window on the sky, and the marine-fitted doors give it a far-away feel. Gehry did not do the interior furnishings. "He doesn't like the designer look," said Penny. "We tried to avoid the expected." The only exception—Gehry's fish lamp on the right.

Photo: George Heinrich

By Linda Mack

In the not quite two years since Frank Gehry's guest house for Mike and Penny Winton was finished, it has become an icon of American residential architecture.

The assemblage of odd-shaped forms has appeared on the cover of *House and Garden*, *Global Architecture*, and *Progressive Architecture*. It has won an American Institute of Architects' honor award, the first *House and Garden* design award for architecture and worldwide interest. And the ultimate accolade has been paid: photographic artist Jan Dibbets has based six major works on the large window in the main room.

By now the story is almost legend of how the Minneapolis couple chose avant-garde California architect Frank Gehry to design a guest house next to their Philip Johnson-designed house on Lake Minnetonka. Though it is commonly assumed that Gehry was recommended by Mildred Friedman, design curator of the Walker Art Center and of the Frank Gehry exhibit held there, in fact the Wintons were swayed by a 1982 article in the *New York Times Magazine*.

"When Philip Johnson turned us down, we thought about the other likely architects," explained Penny Winton in an interview in the guest house. "They all seemed to do the same thing. When we saw the article about Frank, it seemed he was doing something totally different, but had strength and confidence equal to Johnson's." Added Mike, "We were lucky to find Frank at a moment when he wasn't yet lionized or terribly busy."

Having secured an architect famous for his use of chain-link fence and deconstructed forms, the Wintons took the next brave step: they gave him as free a hand as possible. "We told him we wanted a guest house with nooks and crannies for the grandchildren, and

otherwise we kept our hands off," said Penny. "If he was willing to take risks, we were too."

Even more important, the Wintons imposed no time constraints on Gehry. "We didn't want to build right away and we told him to take his time," said Mike. It was an architect's dream.

Though Gehry started early on with the idea of an assemblage of separate parts, one he had explored in earlier houses in California, he kept taking the pieces apart and reassembling them. "Every three or four months, he'd appear with another model," said Penny. "We'd look at it and talk it over. Finally, in 1985, he said, 'I've resolved all the issues. This project is ready to go.'"

What evolved was a house that defies

Located on high ground overlooking Lake Minnetonka, the Winton guest house expresses its weight like a giant sculpture. For California clients, Gehry had designed houses with living areas and bedrooms in separate buildings. Impractical in the Minnesota climate, the idea nonetheless animated the Winton house. "Making each room a distinct piece but physically connecting them interested him," said Mickey Friedman, design curator of the Walker Art Center. The barrel-shaped bedroom is closest to the main house; the brick cube to the right is the fireplace nook. The other bedroom is hidden behind the tall stack of the living room.

Comforting rooms within a giant sculpture

Photo: George Heinrich

The fireplace nook (above) is down a step from the living room. A small square window (just to the left of the photo) frames a view of the outside from sitting height. Each window in the house is so carefully placed as to make art of the views. Doorways are double thick to reinforce the act of entering a separate room. "He has such a saucy way," said Penny Winton. "The doorways aren't all the same height because he loves to resist the agreed-upon requirements in architecture."

all expectations. Each of the six rooms is a discreet form expressed in a different material. A brick cube with a chimney encloses an inglenook containing only cushioned seats and a fireplace. One bedroom is a barrel-vaulted form sheathed in Minnesota Kasota stone. The other is black-painted sheet metal with a low-pitched roof. The kitchen and the garage occupy a long box sheathed in deep burgundy Finnish plywood, a plywood normally used for construction forms. The four forms meet, uncompromised, at the tall cone-shaped main gathering space. But wait, there's one more, a shiny sheet-metal cube perched above the kitchen. It holds a sleeping/playing loft.

No other house has ever looked like this gigantic sculpture of elemental forms. While architectural oddity often is alienating, Gehry's is endearing.

Inside, those endearing qualities are even more evident. The spatial experience of each room is distinct. All are comforting and comfortable. For the Wintons, Gehry has provided contemporary spaces meant more to enclose and nourish than to impress.

"What is endlessly interesting," said Penny, "is living in the Johnson house, which is very peaceful in its dimensions, but imposes certain rigid conditions, and then being in this house, which reverses all the rules. This is cozy, witty and inviting. That is austere and demanding; it says join me, but on my own terms."

"The intellectual difference between the two is also fascinating," said Mike. "That's a Miesian structure, totally European, and set on a pedestal. This is not derived from European culture, but is American."

The Wintons' early fears about adding a guest house that could stand up to the Johnson house have been allayed. If anything, Gehry's gigantic sculpture has overshadowed Johnson's house, which now looks strangely stark. In 1948 Philip Johnson's Glass House in New Canaan, Connecticut broke the rules of residential architecture and changed forever the notion of house. Frank Gehry has done the same in his guest house for the Wintons. Is it beyond speculation that the Winton guest house may supersede the Glass House as the touchstone of residential architecture?

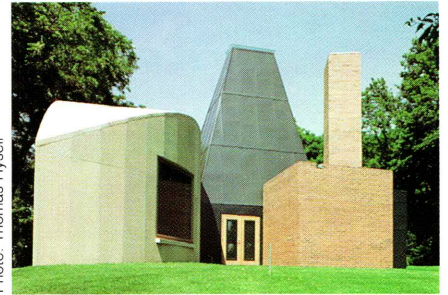

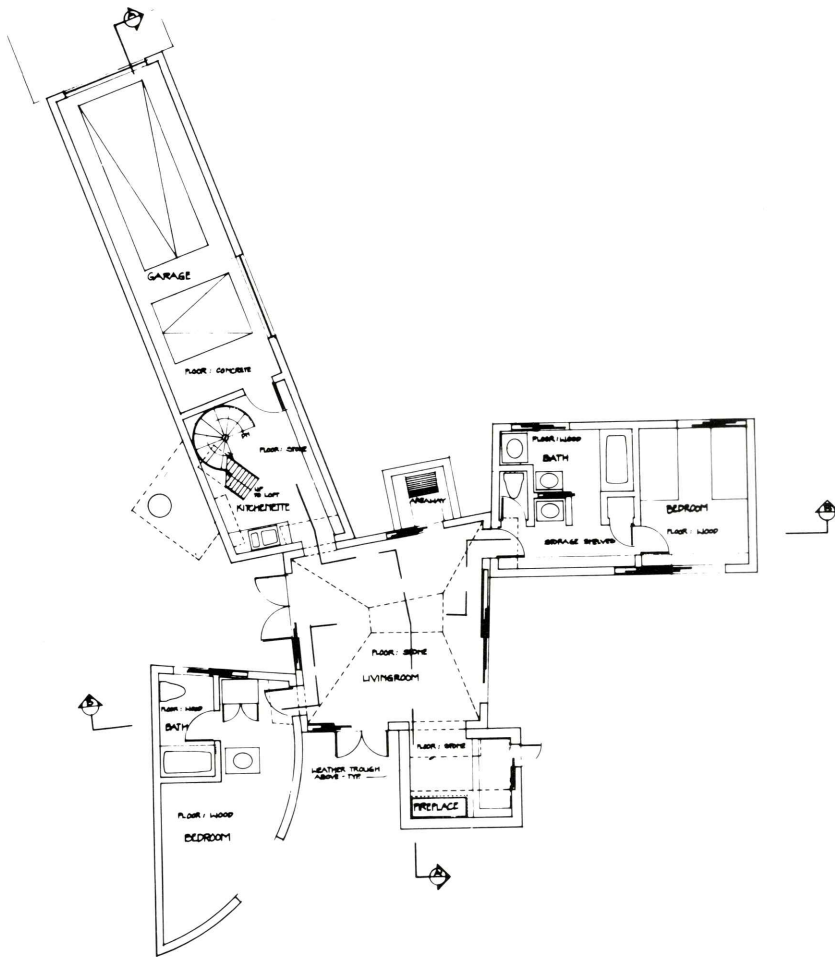

Photo: Thomas Hysell

Photo: George Heinrich

The barrel-shaped bedroom (left) has "absolutely my favorite corner of any building in the world," according to Penny Winton. The curved wall and ceiling create a room of womb-like comfort. In keeping with the idea of the house, the bathrooms become rooms within the room, in this case with Finnply outside and simple cabin-like plywood inside. The plan (above) is surprisingly efficient: No weird contortions have been made to make the exterior composition work. The two bedrooms are at opposite ends for utmost privacy; the kitchen and fireplace nook open off either side of the living room. The loft (not shown in plan) is reached by the stairs in the kitchen. The exterior (above) presents an almost infinite variety of compositions. Here the Kasota-stone-covered bedroom wing and the nook overlook the lake.

Illegal Houses

An exhibit encourages young architects to break the rules

Take away the rules in Monopoly and the result would be mayhem. Take away the rules in architecture, and the result, at least according to *Illegal Houses*, an exhibit organized by the Minneapolis College of Art and Design gallery, is art—or a new form of architecture.

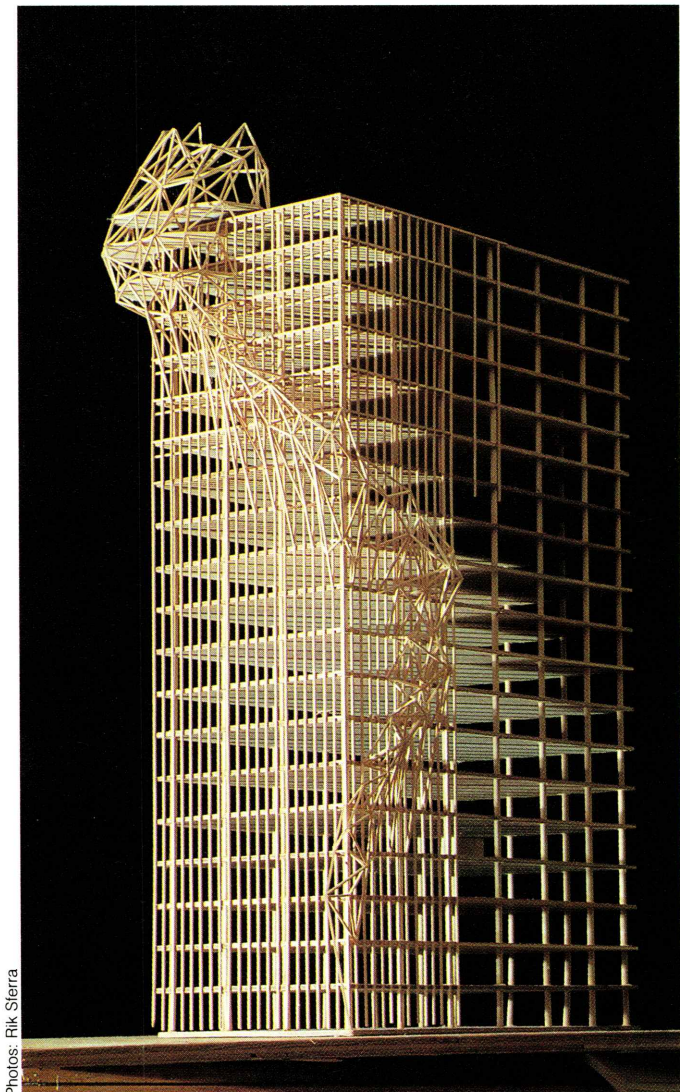

The show's curator Brad Hokanson, an architect and chair of the design department at the college, describes his inspiration for the exhibit as growing from indignation. "An architect friend had plans for a house rejected because the house was too narrow for a city lot," Hokanson explains. With funding from a National Endowment for the Arts Design Grant and the help of Julie Yanson, director of the MCAD gallery, Hokanson challenged young Twin Cities architects to create illegal houses, houses that purposely break the rules.

Eight emerging architects and two design teams participated in the exhibit which was on display in March: Samuel Alexander; Sixto Beltrandy; Anthony Desnick and Constance Lowe; Gary Diebel; Helena Espinosa; Kevin Flynn; Vincent James and Joan Soranno; Troy Kampa; Julie Vandenberg Snow; and Geoffrey Warner. In models, drawings and installations, these architects embraced symbol and narrative rather than the building code; metaphor and craft in place of compromised creativity.

"The original concept of the show was to explore illegality in terms of the building code," says gallery director Julie Yanson, "but there were several interpretations of the word illegal." Troy Kampa defined it as "an illegal lifestyle and an attempt to provide for that with an illegal dwelling." In "The House of Transgression," Gary Diebel looked to human psychology for his definition of illegal. His proposed structure mimics the psychology of restraint and transgression with a long arm-like form reaching from the wall, restrained by metal cables.

While none of the participating architects suggested the elimination of building codes, they all called for more variety in the built environment. Our houses all can't be illegal, but they can express creativity, quirkiness, and alternative solutions. Architecture, they suggest, should not contribute to the homogenization of American housing, but should influence a new environmental richness.

K. O.

Photos: Rik Sierra

Vincent James and Joan Soranno used the Miesian slab form as a visual and metaphorical take-off point. The formal slab structure, painstakingly built with more than 500 pieces of wood, represents an absolute order. "Once order is established," says Vincent James, "there is an immediate need to break it." In the new order, a parasitic climbing form clings to the slab-like form.

Sixto Beltrandy's "House for Chance" is a screened-porch just big enough for a squatter. Built with walls of double-hung screened windows sitting on three-foot-high cast cement legs, the house features four interchangeable roofs: tinted glass, metal screening, clear glass, and a hard cover. "I wanted the people who use the house to experience a unique sense of place, like sitting on a cliff. Inside, you become very aware of what is around you," says Beltrandy. The curved screen that juts off the side of this "tower for looking" bears the converging lines of a linear perspective.

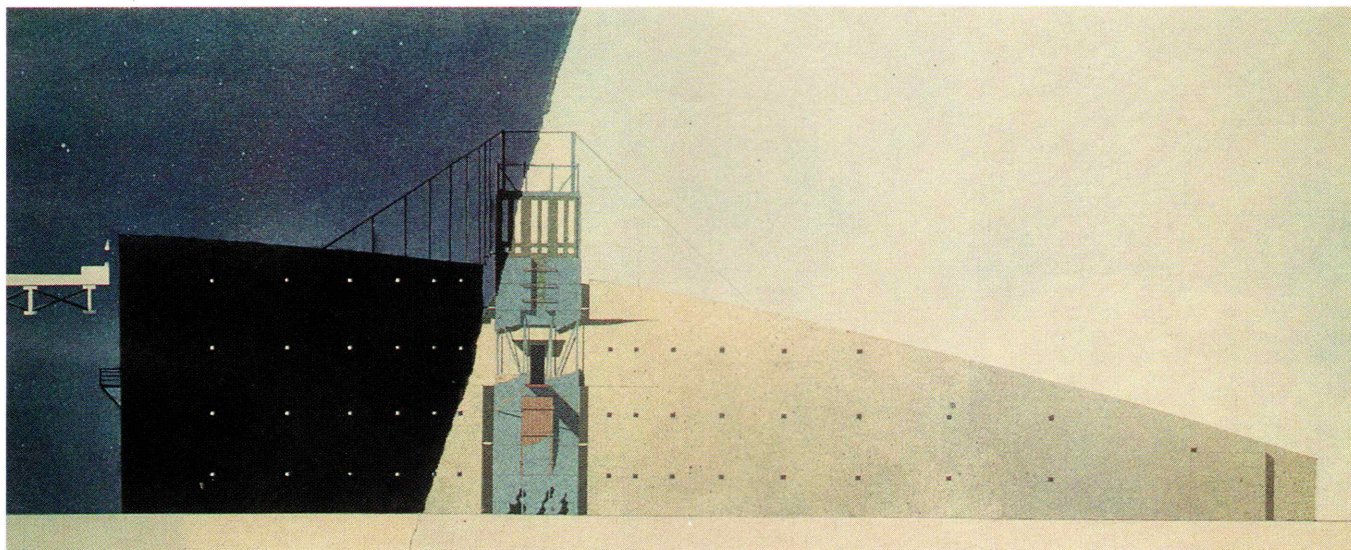

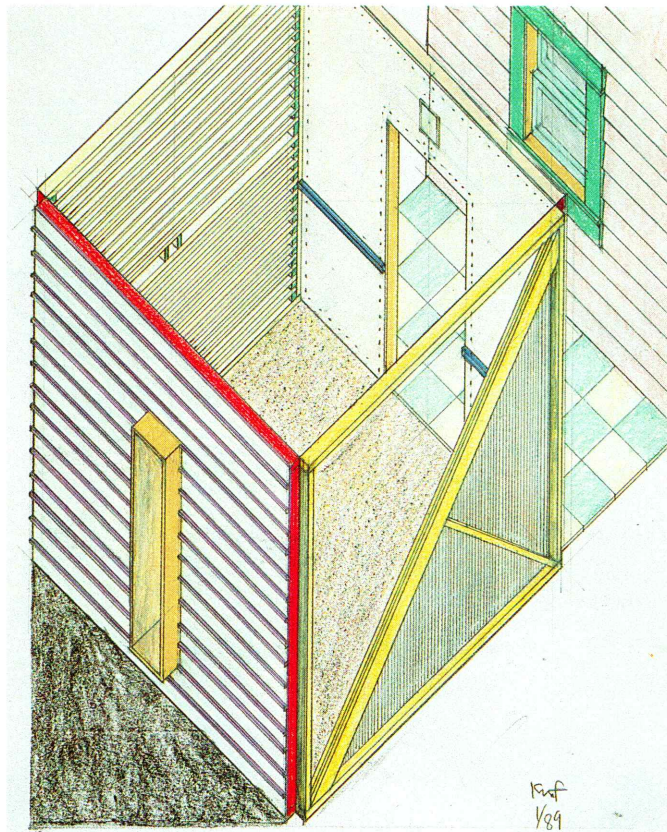

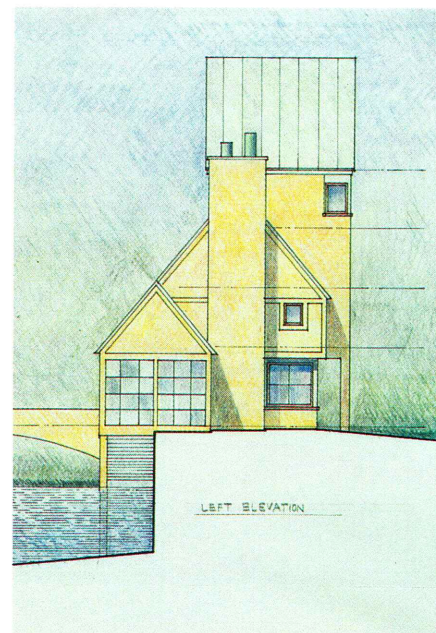

Photo: Photos, Inc.

Helena Espinosa's house for a judge in self-imposed spiritual isolation is sited on an island surrounded by a clover-leaf freeway intersection. The house consists of a wall and a tower and has no entrance or exit. "The wall represents the physical world and the tower the world of the mind," explains Espinosa. To that end, the tower is composed of five stacked rooms, each molded by an idea in the judge's mind. The wall's stair risers are irregular to "force the judge to think about the connection between his body and his mind."

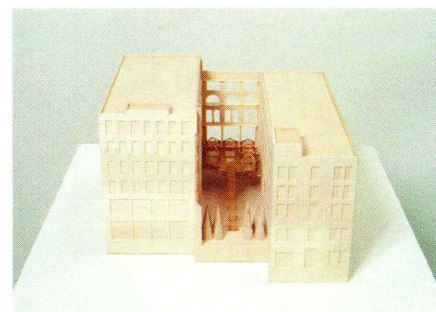

Tall houses, straw houses,
architecture that calls for a
new environmental richness

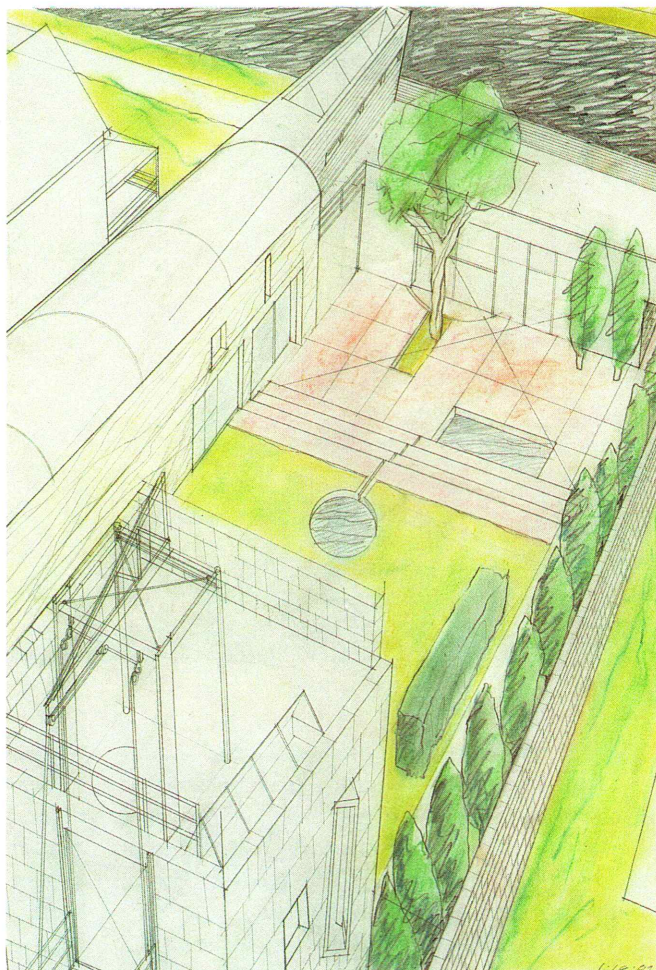

Kevin Flynn, an architect and a poet, drew from both professions in the creation of "A House for a Gnostic Voyeur." Using the window as the initial exploration point, Flynn wondered how window placement could affect the way we live. His installation inverts the essential idea behind the window. The windows, intended to be built into another person's home, are no longer openings to let in light and air. A desire for privacy changes to blatant voyeurism—representative of what Flynn believes is our voyeuristic society.

Samuel Alexander designed three 70-foot-tall "Tower Houses," (above) each to be sited in a different context—urban, rural, suburban. Stylistically different, they all break building code laws which relate to height and zoning regulations. Intended for single-families, the houses feature complicated stair configurations which connect as many as eight stories. Julie VandenBerg Snow took a tongue-in-cheek approach to housing what she calls "a mythical client, the voluntarily homeless." Her proposal for urban yurts (below) would provide impermanent housing unsuitable for homeless families: "indicating the incapacity of the current housing system to provide shelter for the homeless," she explains. The yurt, a circular tent made of felts or skins stretched over poles, is used by Mongolian nomads. Urban yurts rest on a platform in the bowels of a gutted Minneapolis warehouse and await the next "urban camper."

The design team of architect Anthony Desnick and visual artist Constance Lowe investigated the impermanence of American housing. "We wondered why building codes don't address issues of permanence, why homes in European countries are built to last and why longevity doesn't concern American consumers," says Desnick. A house made of straw and cardboard suggests the ultimate in impermanence. Inside the straw house, a television shows segments from *I Love Lucy*, *Father Knows Best*, and *Leave It To Beaver*, which dowse the installation with American pop culture. Matches, the nemesis of straw and cardboard, flirt with the mantelpiece and hint at the installation's ultimate demise.

Geoffrey Warner created two houses, one a thick wall which encloses the yard's perimeter, and the other a slender tower enclosed within the wall. Warner's two forms coexist aesthetically and functionally, but break setback and height laws. Both share the yard within, but each claims its own identity and privacy. The wall-house hugs the land and gets its views from the enclosed yard, while the tower-house looks to the horizon.

The French in our midst

Gallic grandeur comes
to the American heartland

Photos: George Heinrich

By Paul Clifford Larson

In their time, the 1920s period revival houses were regarded as the antithesis of Modernism, and they have fared poorly among architectural critics up to the present day. But like the characters in the novel of manners, the best of these

houses emanate from so careful a craft and exude so strong a character that they rise above their many conventions. They represent the last great period of high craftsmanship at modest cost in American building practice.

Each style had its own niche in the American imagination. The American

Colonial style linked young immigrant settlements across the country to 17th Century New England. The mix of Olde English styles, from "Late Norman" to "Tudor," from "Elizabethan" to "Jacobean," transported the houses of the barons and the Bard into streetcarland. The Moorish and Mediterranean styles

carried mirages of warm-weather living halfway to the North Pole.

But the most complex and fantasy-driven of the historical styles were those borrowed from the French. By 1920, most of the other period styles found their way into pattern books and joined the mainstream of American domestic design. The "French look," on the other hand, remained haughtily apart.

The French country house was usually anchored to its site by a prominent tower and featured eccentric masonry devices, such as interlaced stone and brick. Though many tradesmen of the period had the skill to lay the stone and brick properly, contractors were not likely to know what patterns to introduce or even what materials to intermix. As a result of such peculiarities, getting a properly French look nearly always required hiring an architect, and getting it accepted required an aesthetic education for the client.

The client seldom received that education in school. Rufus Rand got his in the course of long treks across the French countryside as a soldier in World War I. No classroom teaching could have better etched the image of tranquility and endurance presented by grand old country houses appearing intermittently against a backdrop of devastation.

When Rand built his country estate in Minnetonka in 1930, he claimed it was a copy of a French chateau. That was plainly exaggeration. But its overbuilt masonry and sprawling plan were undoubtedly inspired by the massive incremental building programs of French country manors. Many took centuries to build and were completed only in the sense that somewhere along the line construction stopped. The effect of imitating that manner in a modern building was to create a sense of historical accumulation at one stroke, as if several hundred years of building activity could be condensed into a single building season.

The Rand estate was a seat of personal power built to rival the longevity of its prototypes. The walls are seventeen inches thick, the floors are reinforced concrete, and the roof rests on steel trusses. The seat, in fact, outlived the power, for Rand occupied the house for less than a decade before he died. In 1941, the entire estate passed from

his family to the Cargill Company, which immediately converted the house into corporate offices.

In more restricted suburban settings, the bucolic aspect of the French house humbled its imperial manner. In 1929, advertising executive Mac Martin hired local architect and fishing companion

Maurice Maine to design for him a house on Mount Curve in Minneapolis. Martin was quite clear about what he wanted: a city house that had the look and feel of a country house. What he got was a stucco, stone and tile composition along fashionable "French Provincial" lines, and a walkout onto a woodland setting.

Martin and his wife were avid world travelers and collectors. For many Americans, France was still regarded as the seat of human culture, and their Frenchified house shortly became a receptacle for artifacts and memorabilia from abroad.

The most pictorial of all the French houses in the Twin Cities was the Kenneth Worthen house on the Mississippi River Boulevard in St. Paul. Worthen was an architect himself. Prior to 1926, he had produced a number of workmanlike period designs, most of them in a Tudor vein, but nothing approaching the inspired fantasy that he would build for his own family.

To the passerby, the Worthen house seems all roof, an enormous cap of shingles with a tinsel crown. It was a peculiarity even in its day. A city employee penciled onto the field assessment card: "an architectural freak." But

The composition of the Rand house (above and opposite) permitted its designer to vary the detailing considerably. The major segments of the building are perforated with arched windows, faced with elaborate masonry patterning, and crowned with a complex array of crossing gables and a massive central tower. Outlying wings, however, are more generic in style, more symmetrical, and simpler in detail. Remodelings by McEnary and Krafft in 1945-1946 and again in the 1960s carried the simplification further.

Nostalgia and historic resonance
inspire instant châteaux

The tower-like bays of the Martin house, the tall windows and false balconies, and the tile roofs and chimneys were all likely meant to recall European culture in general rather than some specifically French locale. Many of the larger rooms were designed to accommodate architectural artifacts, such as stone fragments from the Acropolis and ironwork from Spain.

Photos: Courtesy Minnesota Historical Society

from a symbolic standpoint, the exaggerated scale of the Worthen house roof had two clear functions: in type, it was an obvious totem of Gallic culture, while in materials, it was an assertion of rural identity on an increasingly busy suburban artery.

Nostalgia, and an insistence that it be built into the house design, motivated the owners of these French-style houses. The engineering and planning could be utterly up to date, but the spirit had to be comfortably old from the day the owner stepped across the threshold.

For some, this objective was fulfilled in rich landscaping and a sentimental English-style name (Wee Haven). But for the majority of architects and their clients, that was not enough. The house had to carry some other part of the world and some other period of history onto the lot.

The cessation of period building in the 1930s must have come as a great

relief to architects. The weight of history no longer needed to be carried by the design. Yet enough pale incarnations of period styles continue to spring up, particularly in these Post-Modernist years, to keep alive the tension between Modernism and historical association.

Unfortunately, the French style has become an object lesson in how not to resolve the tension. In proliferating modern affectations of French farmhouses, cheaper materials and cookie-cutter copies have replaced subtle detail and texture. All the pretension is there, but none of the education. Economy naturally plays a role, but the cha-teaux of the 1970s and 1980s leave the impression that what has really gone away is not the money but the architect.

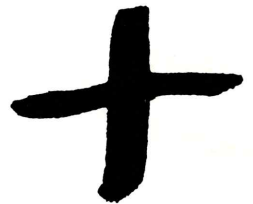

If period styles are ever to play an important role again in American domestic design, they must bring with them the craftsmanship that gave them character, and the learning that gave them style.

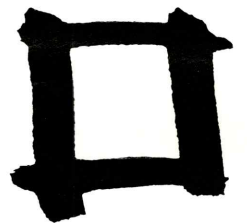

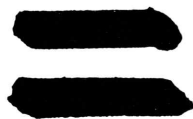

The Worthen house stepped slightly aside from the typical French-style country house with its aggressive, highly textured roof and rhythmic march of window and pier, and with its modular treatment of house and attached garage. Yet the roof's high profile was more than for appearance's sake, for the architect was able to treat it as a separate volumetric entity. The use of stone and brick, rough wood trim and cedar shake related the house to the prairie, despite the increasingly congested urban setting.

“We must cultivate the life-long attitude of

being both students and teachers.”

Making an entrance The front door of the American house is typically unused. The owner invariably enters through the garage, past lawnmower and laundry, leaving the main entrance for guests. Ironically, with the loss of daily function, the front door has gained status and is often the site of a grand gesture. With the Whitney house, architect Harrison Fraker designed a door that “tells a tale by layering gestures and responses.” The entry, an incised proscenium in a polished granite wall, suggests a wedge or keystone. Fraker says the wedge serves a dual purpose of bisecting the house, literally cutting through the center, and simultaneously holding together the disparate pieces of the house that flank the central atrium. The entry to the Winkelmann house, designed by architects Peter Seyfarth and Lisa Winkelmann, takes a different approach. Here the entry is a separate volume that links the two wings of the house. Ceremonial stairs step up through the volume as the roof steps down, creating a dynamic forum for daily activity, as well as arrival.

Bill Beyer

Photo: Peter Seyfarth

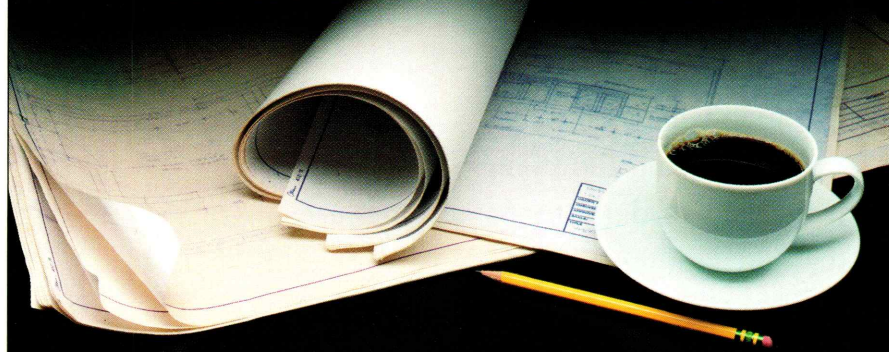

Clad in the same shingles as the main living volumes, but stained darker, the entry is pivotal in the composition of forms.

Photo: Thomas Hysell

The white stucco and wedge shapes revealed behind the green granite and the atrium roof are repeated throughout the house and grounds.

We Dream In Blue And White.

At Silver Bullet, we see only two hues: blue and white. That's because we understand how important it is to work from an accurate blueprint. Before we pick up a hammer, we listen to your dreams and gain a solid understanding of your plans. Then, we follow those plans meticulously. So you can rest assured your dreams will come to life. been incorporated into the new interior of cherry millwork, imported antique furnishings and oriental rugs. The store is sectioned into separate rooms to highlight individual products. For instance, bedroom settings on the third level highlight home furnishings.

The building, built in the late 1920s, underwent extensive interior renovation by Ellerbe Becket, and was the temporary home of Harold, a women's clothing store, before Polo/Ralph Lauren moved in. Crate & Barrel, a Chicago-based retailer, will open a store in the Young Quinlan building in May.

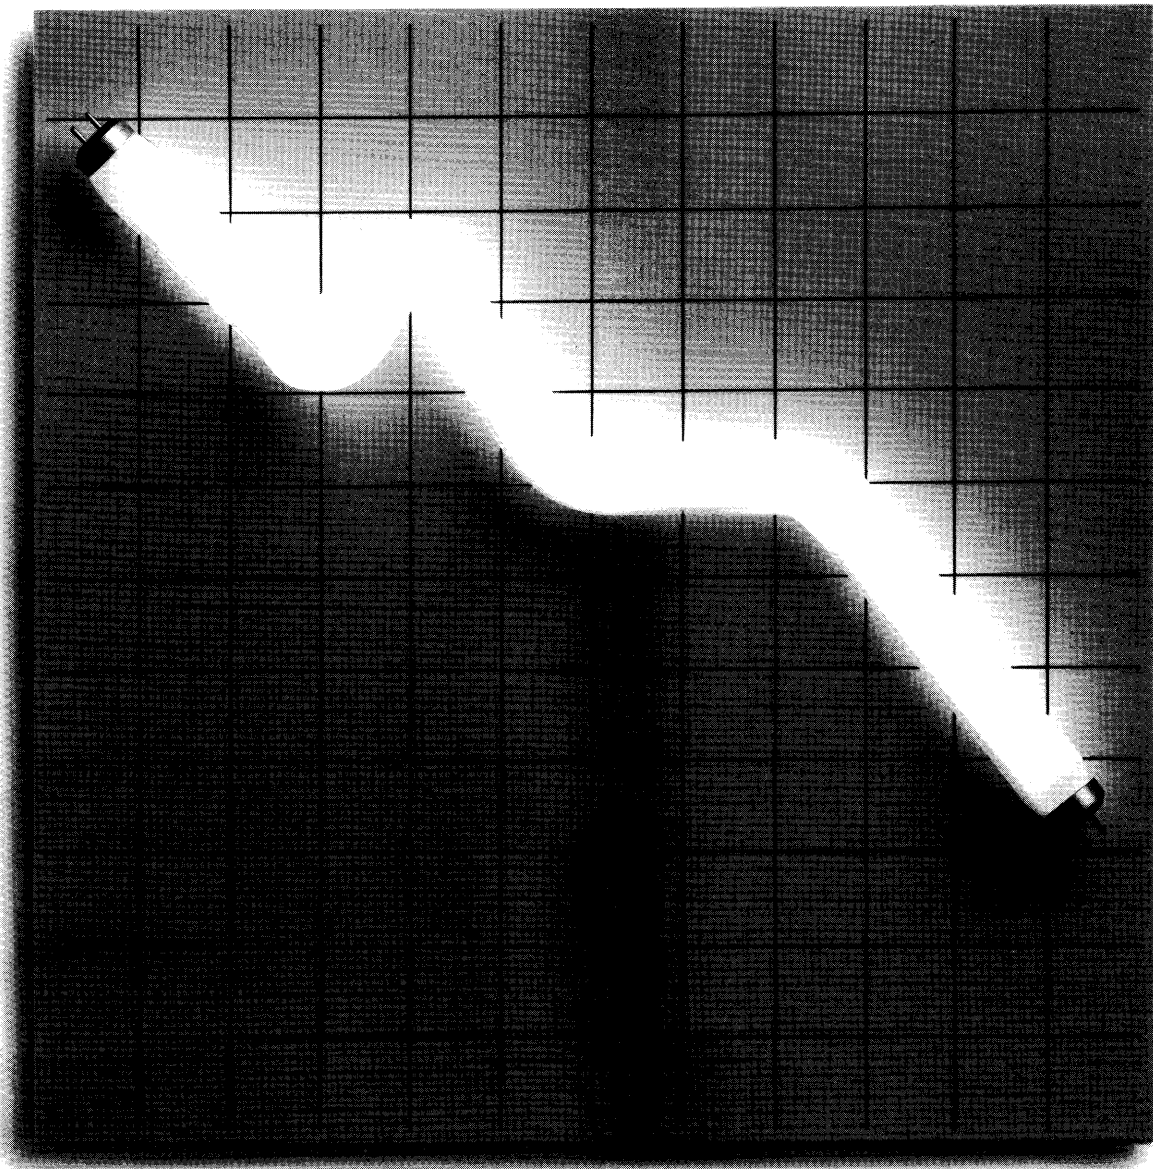

Chicago Architecture Center

The University of Notre Dame School of Architecture has announced plans to establish a Chicago Architecture Center. The new Chicago center will serve as a base for field studies and design work in a contemporary urban environment. Robert L. Amico, chairman of the School of Architecture, will serve as director of the new center. Amico envisions the Chicago center as a laboratory to conduct theoretical work, to present projects to other architects, government officials and developers, and to deal with more complex urban issues. Amico sees the Chicago center as an American counterpart to the university's existing Rome center.

The center is made possible by \$450,000 of combined gifts from Ellerbe Becket of Minneapolis, John Burgee of New York, a Notre Dame trustee, and the Kawneer Corporation.

Marquette Tower downtown

Hammel Green and Abrahamson has released design details of a proposed office tower in downtown Minneapolis. The 25-story 900 Marquette Tower, being developed by Cabot, Cabot & Forbes, will line Marquette Avenue in back of the historic Young Quinlan building. The tower will feature Minnesota Kasota stone at its base and dark green stone running vertically along the spine and front facade. The base is de-

Your Clients' Lighting Costs Can Drop As Much As 75%.

By combining NSP Lighting Rebates with more efficient equipment, your clients can save as much as 75% on business lighting costs.

Considering that lighting costs can account for 20% to well over 50% of your client's total business electric bill, that could add up to quite a savings.

The NSP Lighting Rebate Program offers three different plans covering installation of efficient fluorescent lamps, installation of efficient fluorescent lamp ballasts and conversion to higher efficiency lighting systems. Each provides varying rebate values and payback periods.

To find out how Lighting Rebates can cut

the costs for your clients, return this coupon or call your NSP representative, Ralph Dickinson, at (612) 330-1910.

signed to respect the scale and character of the adjacent Young Quinlan building. A two-story lobby will open onto Marquette Avenue. The tower will include eighteen floors of office space and five levels of above-grade parking. Hammel Green and Abrahamson also designed the Piper Jaffray tower in downtown Minneapolis. Groundbreaking is pending financing.

The new 900 Marquette Tower, by Hammel Green and Abrahamson

Designs for the homeless

Architecture students and professionals gathered for the second annual Search for Shelter Design Charette the week-end of February 3-5 to devise affordable and safe housing for the homeless. Organized by the Search for Shelter committee of the Minnesota Society American Institute of Architects, the charette had students and professionals break into eight separate teams to consider the renovation of six existing Twin Cities dwellings into affordable housing.

Local organizations and groups provided the sites and programs. The East Side Neighborhood asked team members to create housing on four city blocks in St. Paul, which would include rehabilitation, new infill housing and streetscape plantings. The Dayton's Bluff Neighborhood Group asked team members to design one new building and two side-by-side townhouses to fit in with the existing St. Paul neighborhood, and the South Side Neighborhood Services in South Minneapolis suggested team members rehabilitate a gutted duplex and design one new duplex.

Pride for Living focused on the Selby-Dale area of St. Paul and asked team members to renovate one building and design a new house as a multi-family residence, and the Whittier Alliance in Minneapolis requested the rehabilitation of three housing units. And finally, Accessibility Incorporated wanted to rehabilitate a residence in Little Canada, Minnesota to provide better accommodations for people with cerebral palsy.

E Block, round III

Ray Harris has presented a revised version of his proposed entertainment complex for Block E in downtown Minneapolis. To be called E Block, the four-story, \$58 million project, designed by the Jerde Partnership of Los Angeles with Korsunsky Krank Erickson of Minneapolis, will offer approximately 210,000 square feet of space for retail, movie theaters, nightclubs and restaurants.

The proposal also calls for a 200-room hotel and possibly an office tower in a future phase. The complex will be skyway-connected to the NBA Basket-

Ray Harris' revised version of E Block, a proposed entertainment complex on Hennepin Avenue

ball Arena, under construction across First Avenue, and thus to the nearby city parking ramps. An open-air circular court at the center of the complex will encourage ceremonial arrivals by

car. Harris, who downscaled his proposal from two blocks to one block, has until January 1990 to secure financing to retain exclusive development rights of the block.

Judicious about sculptures

Artist Richard Fleischner of Providence, Rhode Island was selected from among 41 candidates to design a landscaped plaza in front of the new Minnesota Judicial Center, under construction adjacent to the Historical Society. The plaza will include multi-colored granite pavers, geometric sculptures, free-standing columns and an amphitheater. Although the \$1.6 million plaza has been approved by the Minnesota State Arts Board, it must receive recommendation by the state Administration Department before construction can begin.

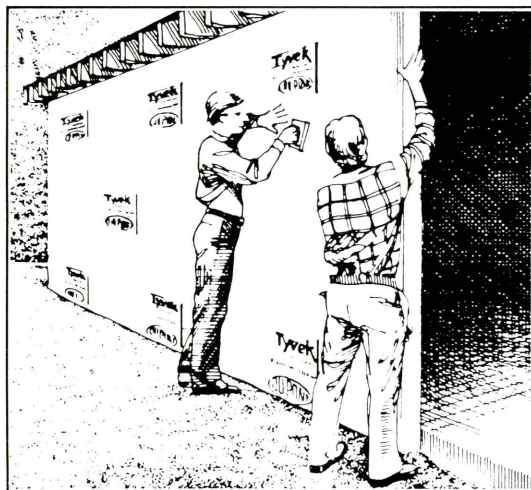

Galtier on the rise

The firm of Heise Reinen MacRae & Associates has been selected to redesign the retail and residential sections of Galtier Plaza, a mixed-use development in St. Paul's Lowertown district. Plans call for turning the retail portion into smaller shops and creating an open air marketplace with adjoining food courts, something on the level of a farmer's market. Construction is expected to begin this summer. **AM**

LET LUMENATA SHOW YOU THE LIGHT

At Lumenata, they can actually show you the light – all the lighting possibilities that are available to you – whether your lighting and fixture needs be residential, commercial, retail or industrial.

The Lumenata staff will work with you to custom design a lighting system that follows your specifications and budget. They can also help remodel your current lighting system. At their 3500 square foot professional lighting showroom, they use dynamic color video simulations and computer lighting analysis to demonstrate over 1,000 lighting sources and applications available to you. The people at Lumenata are always up-to-date on the most innovative lighting technologies – and they are usually the first ones to have the newest lighting products available for you. They can supply you with cost efficient equipment – from decorative chandeliers to concealed architectural lights. Many times, the equipment you need is available immediately.

So if you're a professional looking for lighting advice and equipment, come to Lumenata. No matter what stage you're at in your project, they can help. From concept to finishing touches, Lumenata can show you the light – the light that's right for you.

To find out how Lumenata can assist you with your lighting and fixture needs, call: 612/333-0323.

Wiley, the Minneapolis house is Wright's earliest work in Minnesota, and marks a significant link between his Prairie School designs and his later Usonian houses. Tours of the Wiley house can be arranged by appointment. An \$8.00 fee supports the restoration. To schedule a tour, call project director Leif Anderson at (612) 379-2260.

Tourism and America's Heritage St. Paul Hotel June 1–June 2

Tourists are sophisticated travelers in search of new environments and unique experiences. A conference sponsored by the National Trust for Historic Preservation will provide a thorough introduction to the process of tourist development. Designed for preservationists, planners, economic development officials and civic leaders who are interested in creating a tourist program, this day-and-a-half conference will emphasize building partnerships with residents and industry personnel. For more information, contact the Center for Preservation Conferences, (202) 673-4100.

Architectural walking tours Minneapolis and St. Paul June 7–June 28 Wednesdays, 12:00-1:00pm

The June walking tours sponsored by the Minneapolis and St. Paul Chapters of the Minnesota Society of Architects begin on the 7th with a tour of the new and controversial Department of Revenue building in St. Paul designed by Pope Associates. Meet at the building's parking lot, located on the corner of Eaton and Fillmore in St. Paul. Stroll along the West River Parkway with tour leader Aryf Pakalns from BRW on June 14; meet in the plaza that adjoins the Whitney Hotel in Minneapolis. See a little bit of Japan on June 21 when the series concludes with a guided tour of the Japanese garden and tea house at Como Park. Meet in the conservatory's parking lot. June 28 has been reserved for the rain date. For more information, call Karen L. Bracht at MSAIA, (612) 338-6763.

The Italian Manifesto The International Design Conference Aspen, Colorado June 13—June 18

This summer the culture of Italy—the design, the food, the wine, the song—will come to Aspen.

"The Italian Manifesto: The Culture of Nine Hundred and Ninety Nine Cities" will build on the 1981 conference which also focused on Italian design and is considered to be the most successful conference in the IDCA's 37-year history. Conference participants include architects Aldo Rossi and Renzo Piano; designers Mario Bellini, Michele de Lucchi and Emilio Ambasz; historian Joseph Rykwert; and Philippe de Montebello, director of the Metropolitan Museum of Art.

In addition to an exciting assortment of seminars and presentations, a medieval street set will feature the food and wine from Italy's regions. A masked ball will finish off the festivities in grand style.

The week-long conference fee is \$475, \$125 for students. To register, contact IDCA, P. O. Box 664, Aspen, CO 81612, (303) 925-2257.

Synthesis: Architecture, Craftsmanship, and Design Walker Art Center June 23—June 24

Reacting to a perceived fragmentation of the designer's role and responsibilities, this two-day symposium will address the present state of American design education; examine past experiments in creativity such as the Bauhaus, Black Mountain and Cranbrook; and explore new approaches for the future. Sponsored by the Minnesota Society of Architects and the AIA Committee on Design, the event will focus on issues related to the integration of architecture with the decorative and industrial arts.

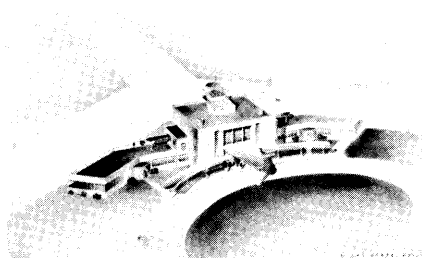

The symposium begins with an afternoon of presentations and discussion moderated by Stewart Johnson, former Curator of Decorative Arts at the Museum of Modern Art. Symposium highlights include an informal discussion of design movements in the United States

moderated by architect Ralph Rapson and textile designer Jack Lenor Larson; and a panel discussion with architectural critic Michael Sorkin and Cooper Union head John Hejduk, among others, on the role of education in past design movements and today.

"A Midsummer Night" celebration in the Minneapolis Sculpture Garden will conclude the symposium on Saturday evening with dinner and live entertainment. For more information, contact the Minnesota Society of Architects at (612) 338-6763.

**In the Architect's Eye: 100 Years of North Dakota Building
Plains Art Museum
Moorhead, MN
April 28-July 2**

An exhibition of more than 70 drawings explores the changing nature of architecture in North Dakota. Divided into six categories—civic, commercial, so-

Fargo Air Terminal, Kurke, 1940s

cial, religious, residential and educational—the drawings record many of the state's landmark buildings, as well as some never built, such as Michael Graves' design for the proposed Fargo Moorhead cultural bridge.

A lecture series is offered in conjunction with the exhibit. Ward Jandl, chief of technical preservation services for the National Park Service, will speak on May 11 on "Houses by Mail: The Architectural Influence of Sears, Roebuck and Co." Alan Lathrop, curator of the Northwest Architectural Archives, presents "Architectural Drawing as a Means to Design" on May 16. The series concludes May 18 with a lecture by Paul E. Groth, professor of architecture at the University of California at Berkeley, on "Exuberance vs. Design: Seeing Healthy Landscapes in the Upper Midwest." All lectures are at 7:00pm in the Museum's main gallery.

Contact the Plains Art Museum for more information at (218) 236-7171.

TEA Tom Ellison Architects Inc.

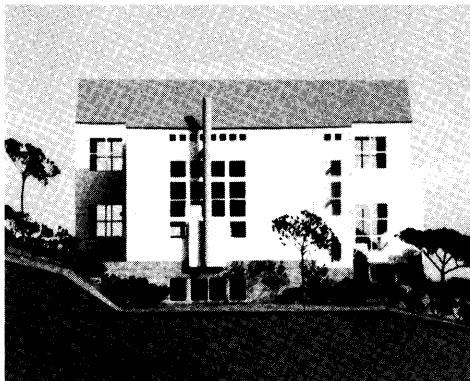

Project: New residence Menomonie, WI

The house profile and hip roofs reflect the sloped shoreline; its plan reacts to the land shape, extending the peninsula's unique form. Strong horizontal lines are repeated in the overhangs, stone-walled terraces and the site. Each living space has a different view of the lake, with the Great Room having views on three sides. 612/824-3474.

Tom Ellison Architects Project: New Residence Minnetonka, MN

Steep gable roofs, a raised entry terrace, and glimpses of a grand piano/library space form the entrance experience for this two-story white stucco house. Carefully scaled divided lite windows provide counterpoint for large window areas on three sides of the 19' high "core" of the house—the family/living room. 612/824-3474.

Opus Corporation Project: ConAgra, Inc. Corporate Campus Omaha, Nebraska

Centerpiece to a 105-acre Omaha downtown redevelopment, the ConAgra corporate campus is master planned as a pastoral oasis set into a gridded urban fabric. The redevelopment includes a 35-acre corporate campus, as well as a 25-acre county park with a 15-acre lake. Opus Corporation is developing, planning, designing and building the campus. The Office of Peter Walker and Martha Schwartz, located in San Francisco and New York, is the landscape architect.

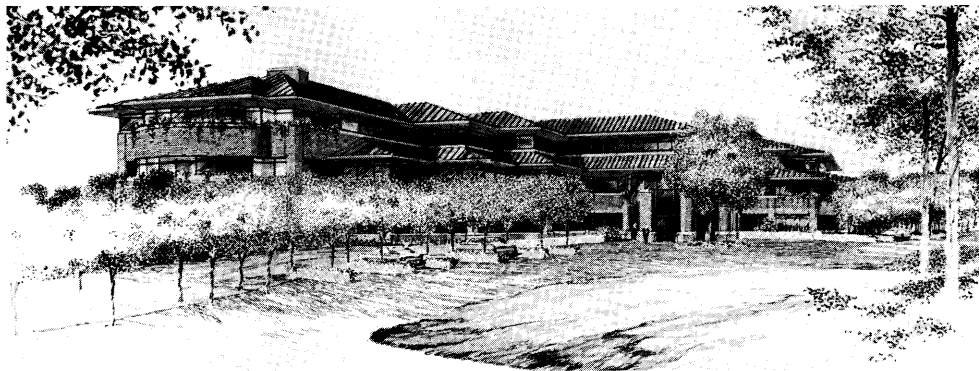

The campus is designed according to the ConAgra corporate philosophy of independent operating companies. It

will house the grain, refrigerated and frozen food groups as well as the food development laboratory and ConAgra corporate offices in a series of five low profile buildings which share a common architectural vocabulary. The buildings will be three to four stories, using

earth tones, terraced brick layers and dominant floating roof forms. The landscape design will be consistent throughout. An underground link built into the hillside and overlooking the lake will house a cafeteria, health club and auditorium to be shared by all groups.

The first phase of develop-

ment equals approximately 500,000 square feet. The surrounding parcels of land are held by the Omaha Development Foundation. Future plans for development include a conference hotel and several office projects. Total development is expected to be 900,000 square feet. (612) 936-4444.

Coming Soon announcements are placed by the firms listed. For rate information call AM at 612/338-6763

coming soon

**Rosemary A. McMonigal
Architects
Project: Woodview
Terrace Montessori
School
Woodbury, MN**

This addition to an existing Montessori School provides specialized spaces for a toddler and infant child care program. The spaces were de-

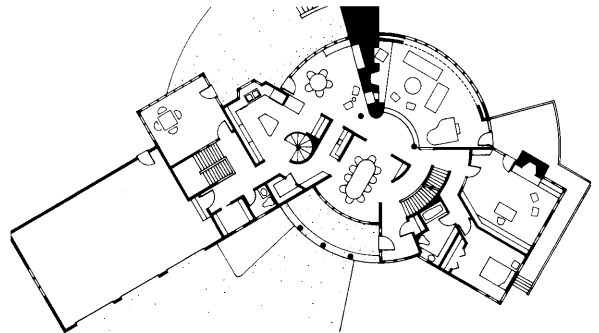

signed to provide a flexible, durable framework for the creation of a rich environment for very small children. The south facing, sheltered, wooded slope at the rear of the site will be developed into a play area using natural materials to encourage active, creative play. (612) 789-9377.

**Rosemary A. McMonigal
Architects
Project: Private Residence
Stillwater, MN**

The round plan forms of this residence resulted from a site responsive plan development process. The 50 acre site has a number of unique views: rolling hills to the north across farmland, steeply sloped and

wooded ravine to the east, a lake to the south and mature pine stands to the west. The plan wraps the horizon of the site, maximizing the best views from virtually all living areas. The mellow colors of the wood shingle and stone exterior evoke the warm tones of the house's setting. (612) 789-9377.

**Rosemary A. McMonigal
Architects
Project: McCullough
Residence
Edina, MN**

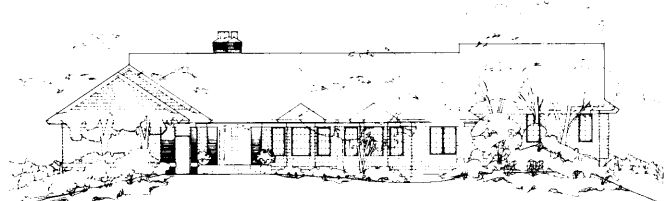

The client liked the location of this colonial house, but not the awkward 1950's addition with a hipped roof and a tandem garage. The renovation enlarged the addition, repeating the gable forms and details of the original house. Added amenities were a new second stair, kitchen, eating area, family room, master bedroom suite and double garage. (612) 789-9377.

**Rosemary A. McMonigal
Architects
Project: Nichols
Residence
West St. Paul, MN**

The wooded site for this home is located on a bluff with a sweeping view. The wood shingle home maintains a low profile to the north, dropping away to two levels above grade at the south side. The panelled of-

fice, stone fireplace and vaulted ceilings, create unique spaces within the house. (612) 789-9377.

Coming Soon announcements are placed by the firms listed. For rate information call AM at 612/338-6763

coming soon

Sawhorse Designers & Builders
Project: Harris Residence
Hastings, MN

This country lodge is an update of an existing split entry on a wooded site. Exposed timber construction, Chicago brick, and stained glass compose the pallet of materials. The main 'lodge' is a large vaulted area with a hot tub nestled behind a massive fireplace in a glass

porch and a library loft above. A gourmet kitchen is organized for both function and entertainment. Three galleries lead to private suites for homeowners and guests. (612) 533-0352.

L. E. Kollmeyer, Architect, Inc.
Project: Michael Halley Homes
'1989 Parade of Homes Entry'
Minnetonka, MN

A lineal floor plan was required to alleviate the problem caused by the site's steep topography. The exterior's strong vertical lines, enhanced by the use of vertical wood siding, are

softened with three radiused roofs, one of which highlights the main entry to the house. The interior detailing includes a waterfall by the master whirlpool tub and a living room accent wall which incorporates two-story angled windows. The main living spaces are orientated for a Southern exposure and views of a heavily wooded valley. (612) 942-0955.

L. E. Kollmeyer, Architect, Inc.
Project: New Residence
Mendota Heights, MN

This new house will be situated on a treeless lot which overlooks a pond to the South. Its orientation allows for a circular turnaround drive and an entry court whose design provides for the display of statuary. The in-

terior detailing creates a 'Prairie School' feeling, which is carried through in the design of the three fireplaces, stair railings, valance lighting and lighted display areas. The exterior of brick and wood lap siding reflects the horizontal topography of the lot and pond. (612) 942-0955.

L. E. Kollmeyer, Architect, Inc.
Scott Larson Construction, Inc.
'1989 Spring Preview' Home
Minnetonka, MN

The exterior design of this four-level, 4500 s.f. Tudor style home with gabled, high-pitched roofs reflects the owner's desire to create the ambience of

a 19th century country manor. The interior spaces include a three-story foyer and a two-story vaulted ceiling with lofts and dormers in all bedrooms. The main living areas of the house are positioned to maximize the beautiful panoramic views of ponds, trees and waterfalls. (612) 942-0955.

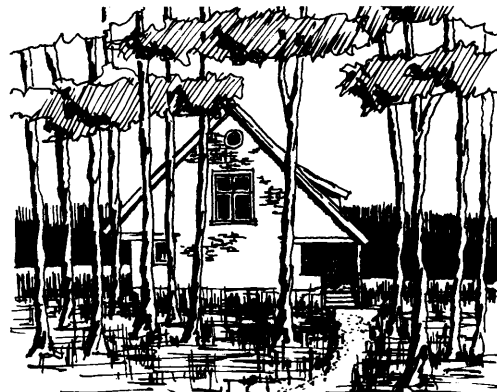

Coming Soon announcements are placed by the firms listed. For rate information call AM at 612/338-6763

coming soon

**Mulfinger and Susanka
Architects, Inc.
Project: Anderson Cabin**

Seen through the woods, this lake cabin's dramatic form is punctuated by a large central window bringing light through the open stairway to the entry below. Living spaces to the south capture the views of lake through the playful patterning of windows. Dale Mulfinger and

Jill Sousa designed the cabin.
(612) 379-3037.

**Mulfinger and Susanka
Architects, Inc.
Project: Haugo Residence
Litchfield, MN**

This countryside residence overlooks the prairie through a screen of mature oaks. A deep wrap-around porch and steeply pitched shingled gables define the courtyard entry. Associate Michaela Mahady designed the residence. (612) 379-3037.

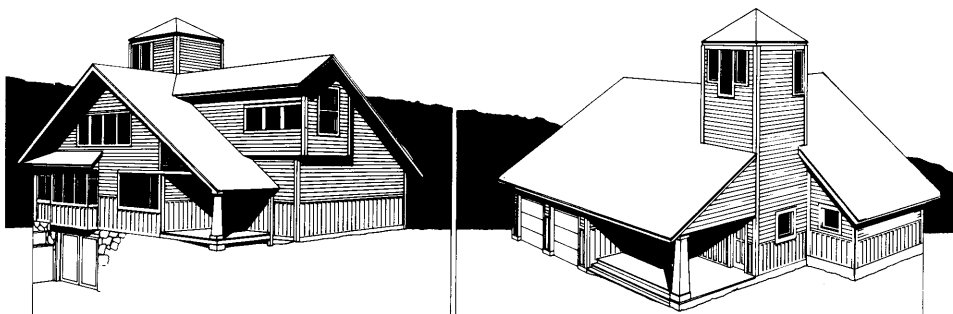

**Mulfinger and Susanka
Architects, Inc.
Project: Residence
Edina, MN**

Changes of form, pattern, and color give this Edina home a new look and spirited presence on its corner site. Associates Cheryl Fosdick and Michaela Mahady designed this project with appreciation to contractor Don Berg for his craft and sense of adventure. (612) 379-3037.

**Mulfinger and Susanka
Architects, Inc.
Project: New Resid. MN**

In this design for a new home, Associate Katherine Cartrette chose to join two simple house forms around a stone tower. The sloping roof in front will deflect cold North winds. A large gable in back will open to the South. The tower will offer an otherwise lost view of the valley beyond. (612) 379-3037.

Coming Soon announcements are placed by the firms listed. For rate information call AM at 612/338-6763

coming soon

**Charles R. Stinson,
Architect
Project: Cannell
Residence
Sewall's Point, Florida
Builder: R. J. Dittmar**

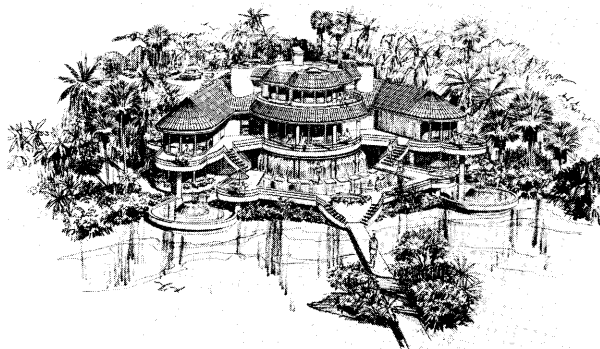

This 6000 sf waterfront home is the realization of the dreams of a romantic couple with an international lifestyle. Sculptural curving walls throughout allow the dramatic interior spaces to flow gracefully onto balconies and terraces.

A one-story waterfall sur-

rounds the entertainment bar. Guests may dive through the falls into the pool, complete with underwater music.

This concrete structure is supported on 333 pilings, driven 20 feet to withstand hurricane forces.

From the master suite and roof top terrace, each day shall begin with the sun rising from the ocean and end with the romance of a spectacular tropical sunset. Eden Prairie, MN, Stuart, FLA (612) 944-5334.

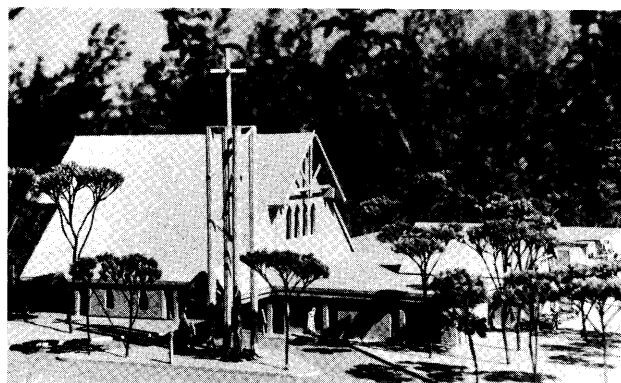

**Cording-Natwick-Hilbert
Architects, Inc.
Project: Messiah Lutheran
Church
Hoffman, MN**

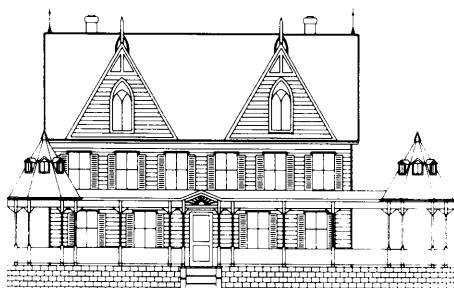

Construction is underway for this new 17,000 s.f. worship center. The sanctuary will seat 340 persons and has a rich combination of wood truss work and solid brick support elements. The exterior is of brick, with decorative concrete block

and wood trusses.

This worship center was formed by merging three churches. The congregation was interested in providing a traditional yet fresh image as well as incorporating elements of the previous churches. A "Heritage" chapel will house artifacts detailing the history of those churches. The opening is anticipated for August 1. 612/431-4433.

Coming Soon announcements are placed by the firms listed. For rate information call AM at 612/338-6763

Minnesota Society
American Institute of Architects

1989 Firm Directory

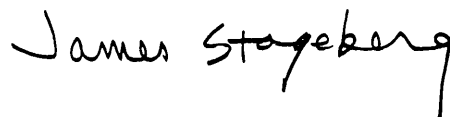

Good architecture is good business, good business sense. It's also good design! And Minnesota has a fine collection of architectural firms that are prepared to deliver good design.

If you're planning an apartment building or a house, a hospital or a clinic, a bank or an office building, a church or a school, a warehouse or a factory, a shop or a restaurant, investing in high calibre design services will pay for itself in efficiency of operation, soundness of construction, and joy of use.

If your project involves a new facility, a remodeling or an addition, or master planning for the future, Minnesota's architectural firms listed on the following pages can respond to your unique project requirements.

I invite you to study this directory. It presents Minnesota firms which are managed by architects who have chosen to be members of their professional fraternity, The American Institute of Architects. The size, experience, and specific design services of these firms may vary, but they are all dedicated to meeting your facility and planning needs.

If you have any questions about architectural services or how to select an architect, Beverly Hauschild and Peter Rand, AIA, our Executive Vice Presidents, will be pleased to help. Feel free to call them or write for additional materials.

James E. Stageberg, FAIA
President

insight

Continued from page 15

folded as an uninterrupted sea of desks and filing cabinets. Now office systems with full-height movable walls create individual environments and the "illusion" of privacy for office workers.

The change did not come overnight, said Newhouse, but evolved from the successes and failures of previous office environments. Newhouse used a series of slides showing contrasting images of office furniture, architecture, library rooms and arcades to ascertain how people emotionally respond to design. Newhouse found that in places like Dallas, respondents almost always chose modern design while Midwesterners chose the tried-and-true, perhaps because Midwesterners are less likely to embrace new designs than are their Western counterparts.

Turning strictly to architecture, Ron Keenberg of The IKOY Group of Winnipeg, Canada presented his design philosophy. Keenberg, one of Canada's most renowned architects, pulls aesthetic signatures from unlikely sources. His buildings are often characterized

by their exposed guts: air ducts, fire extinguishers, suspension cables, plugs and electrical cords become design elements. For his own office in Winnipeg, a wall of glass exposes the inner functions and operations of the building to the street. His architecture explores the workings of a building and demonstrates that the mundane is often a strong design element.

Completing the two-day conference were presentations by Marc Hinshaw of the San Francisco firm Holt Hinshaw Pfau & Jones Architecture to discuss industrialized components of new architecture, and Larry Seiberlich from the American Institute of Architects on the AIA Vision 2000 program.

The creative process begins with curiosity and exploration. The speakers were visionaries who explored the limits of possibility, even when the questions were undefined. As Alred stressed, space research serendipitously may help improve humanity. The Lake Superior Design Retreat presented speakers who simply weren't satisfied with the status quo, who set out to discover what lies beyond the daily realm.

AM

The Versatility & Economy of Drywall

A light and airy ceiling with a background to reflect the light and shadow images was planned for this 3-story atrium. It was accomplished through the liberal use of soffits and coffers, and the creation of several planes of drywall.

Drywall was used because of its inherent economies, both in the cost of material and the speed of construction.

This was important because the project was fast track...from design to completion.

PROJECT: 8400 Tower, Bloomington
ARCHITECT: Wilson/Jenkins & Associates, Inc.
GENERAL CONTRACTOR: M.A. Mortenson Co., Golden Valley

Minnesota
Drywall Council
(612) 546-5416

Bladholm: Your total structural-contractor.

Knollwood Place, St. Louis Park, Minnesota

For this 153-unit senior residential project, Kraus-Anderson needed a quality structural system that could meet their constraints of price, design and anticipated winter construction. That's why Bladholm precast, prestressed concrete was used throughout. Bladholm manufactured and installed the complete structural system, including custom bay window slabs and load-bearing wall panels.

For senior residential projects, precast, prestressed concrete is the ideal building material. It maintains interior temperature stability to reduce heating and cooling

expenses. Noise and air infiltration are minimal. What's more, buildings by Bladholm receive the highest possible fire rating, for lower insurance costs.

Just as important, Bladholm's fast-track construction can cut total construction time to reduce financing costs.

So whether your next project is senior housing, a manufacturing plant, parking ramp or office building...Whether you need hollow-core plank, wall panels, double tees, columns or beams...Talk to Bladholm, your total structural-contractor. We have a total solution for you.

the perception of the architecture here is positive.

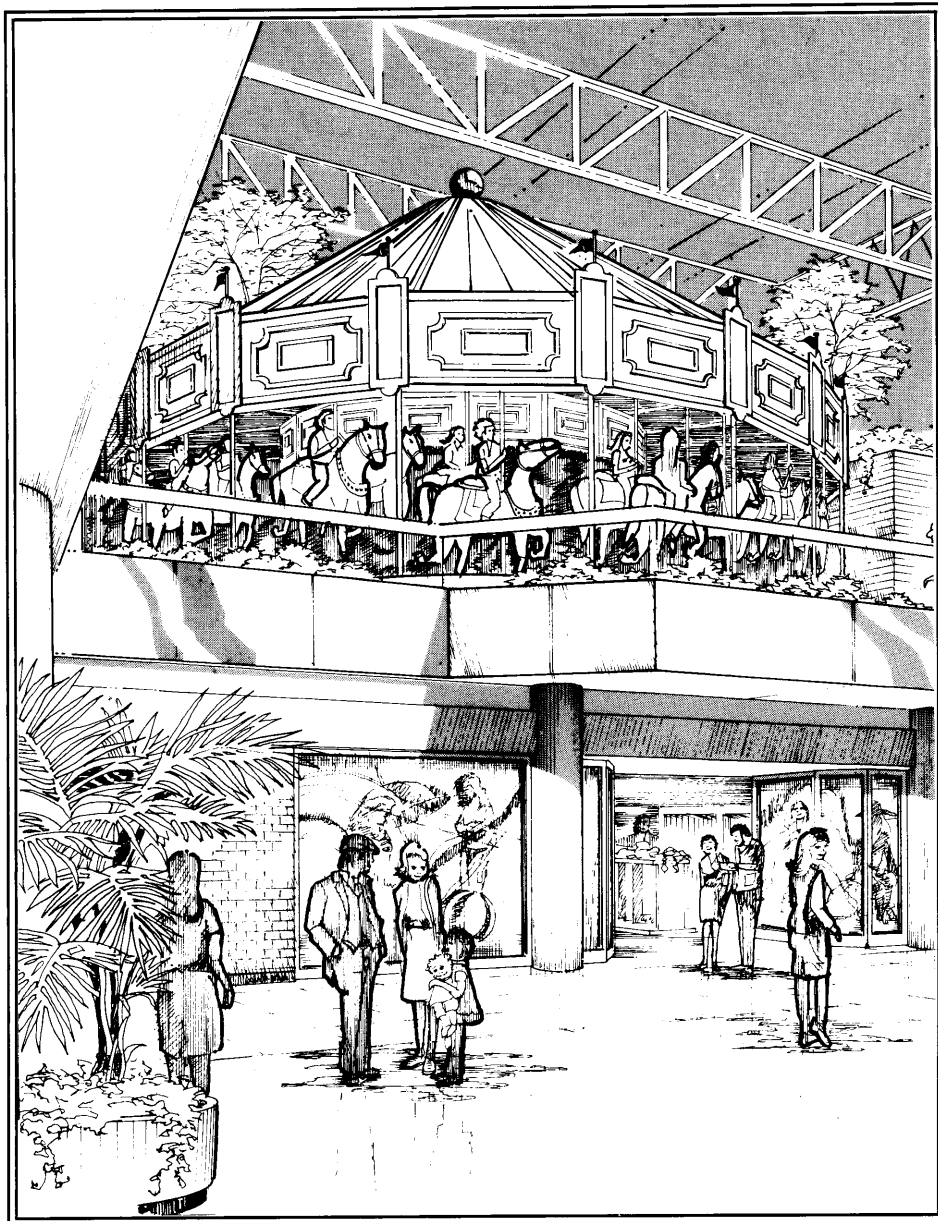

For the Powderhorn Residents Group, former crack houses were turned into rental cooperative housing units called The Maples. Using the typical Minneapolis fourplex plan, the architects carved a total of ten units from three gutted buildings and added different entrances to bring detail and identity to the square stucco buildings.

Scattered site housing for the Minneapolis Community Development Association is also taking root. Two models—a split-level and a traditional—blend with the scale and detail of the older neighborhood. The low price tag will allow residents to own rather than rent. For the Honeywell Foundation, Dovolis, Johnson & Ruggieri renovated eight houses by gutting the interiors and starting anew. Amenities such as walk-in closets and finished basements, painted trim and front porches transform these houses into homes.

The common denominator in all of the firm's projects is thoughtful attention to detail. Whether a renovation or new construction, certain basic tried-and-true amenities are included. Front porches, back stoops, private entrances and yards encourage a sense of ownership. Windows that look out on children's playlots create a sense of community and safety. Architectural detail—bays, gables and dentries—give identity and pride to houses and to residents. Interiors lit with plenty of natural light and plans that accommodate spaces for children make life, perhaps, a little easier.

"We want to provide housing that is substantial and design that is respectful of the quality of life," says Dean Dovolis. "If you design a cheap building it will always look cheap. Designing decent, affordable housing means we take away one basic need. If we can provide a good foundation for people to start from, then that is one less thing that people have to worry about."

The firm's community efforts have been recognized with two awards from the Committee on Urban Environment (CUE)—one for Phillips Place and the other for the Honeywell Foundation houses, and an honor award from the

Minnesota Society of Architects for Phillips Place.

While outside recognition is always important, it is more gratifying to the architects to see their designs embraced by the community. In the Phillips Place Cooperative, tenants have planted gardens. During the past holiday season, several of the Honeywell Foundation

One of the Honeywell houses

houses were decorated with lights and wreaths. And, throughout the area, children are playing outside—a sure sign that there is renewed faith in the neighborhood.

Brenda Draves, the executive director of the American Indian Business Development Corporation, has worked with the firm on the Franklin Avenue Task Force and recently, as the client on the design of the Franklin Avenue Business Center, a small business incubator. "We all need neighborhood architects," she says, "designers willing to help an area grow and commit to good design. Because the firm is familiar with the neighborhood, they understand our needs and are involved not only in the design, but in the vision of the project."

Outside of the neighborhood, the firm runs a healthy mixed business, designing everything from masterplans for golf course communities to industrial work to private residences. For The Brackett's, a 75-acre golf course community in Lakeville, Minnesota, the developer presented the architects with a logistical challenge: design four standard units that could combine in infinite ways. Because each buyer chooses the piece of land and the unit they want built,

WE'LL MAKE YOU AND YOUR COMPUTERS COMPATIBLE.

When you're ready to consider a computer system for your company, we at The Micro Group know that it's not just computers, it's your business. We help you make the right choices.

Don't let a computer dealer sell you a system only to find out that it can do little more than draft letters. Our systems consultants can help determine what will work best for your business and train your people to keep your investment working for you.

A professional consulting firm, in order to grow and prosper in a competitive environment, needs a comprehensive system. One of the products we offer, Wind-2 Software was developed by professional consultants who fully understand the consulting business. This software is specifically designed for your type of business.

If this sounds like what you might need, give us a call. We look forward to helping your business grow.

the configurations and each connection between the units are designed by the architects. The result is a townhome community that fends off the cookie-cutter look with the impression that each unit is different.

Perhaps the different strengths each partner brings to bear on the design process is exemplified in the manner in which they describe their initial design inspiration. John Ruggieri, a landscape architect, says his primary concern was to give everyone a view of either the golf course or a park reserve that adjoins the complex. Ruggieri brings his background as a landscape architect to all of the firm's projects, and rather than

**Diverse backgrounds
 complement
 collaborative efforts**

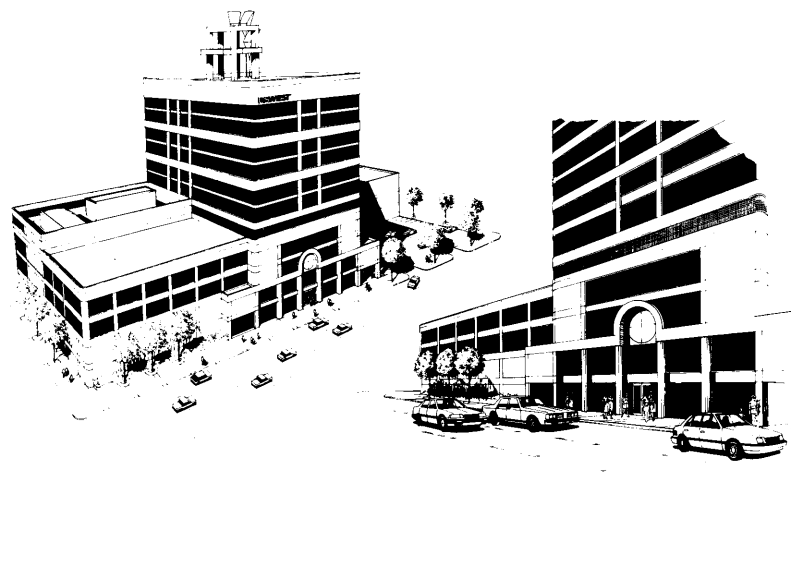

apply his expertise as a finishing touch, he is involved from the conception of a project.

For Brian Johnson, trained as an architect and city planner, the design inspiration evolved from thinking about the Shingle-style. Dean Dovolis, with a similar educational background as Johnson, was inspired by the thought of creating a new community. "I wanted the layout of the roads and walking paths to create a certain feel," he says.

The input of the client or the community is just as important as what comes from within the firm. "All projects are cooperative efforts between members of the firm. We are very fortunate to have such talented and energetic people working with us. Just as important, though, is the collaboration with the client," stresses Dean Dovolis. "An architect develops other people's ideas. You cannot design in isolation."

The firm looks forward to the future. "We have just scratched the surface of developing low-income housing. The more success we have the more we must learn," says Dovolis. Brian Johnson adds, "Good design is public knowledge and we hope that our work will continue to make that point."

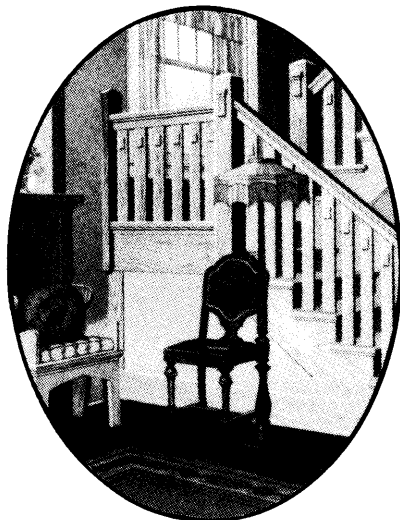

With a vision firmly in place and some notable successes already attained, Dovolis, Johnson & Ruggieri is poised for the next challenge. **AM**

Norman Kittson house, late 19th Century

Norman Kittson built his paeon to the glories of France at the apex of Summit Avenue. In the context of the American frontier, such mansions had an import that rose above their intrinsic aesthetic merit, for the Second Empire style served one of the formative myths of American expansionism in the 19th Century: the planting of instant urban culture in the raw wilderness.

Though a late example of the style, Commodore Kittson's mansion, designed by Abraham Radcliffe, immediately became the most celebrated piece of domestic architecture in the Twin Cities. The progress of its period interior installations was followed closely by the local media. Front and rear parlors were finished white in the manner of Louis XIV, while sitting and dining rooms followed the style of the French

Renaissance. The Kittsons did not let the French reign upstairs, however, for Mrs. Kittson slept surrounded by the German Renaissance and warmed by a Queen Anne fireplace, and the girls bedded with the Romans and Henry VIII.

A lively buff grade of Kasota stone happily substituted for the off-white that typified the style, and the same stone was built up into retaining walls around the property.

After scarcely two decades of life, the Kittson mansion was razed in 1906 to make way for the Cathedral of St. Paul. In the person of Emmanuel Masqueray, the labors of frontier franco-ophile Abraham Radcliffe had been supplanted by those of the genuine French article.

Paul Clifford Larson
