# RE CON STRUC TION HEAD

"Reconstruction Ahead" is the theme of the 1993 IDCA as well as a directive. This is a time of great opportunity for design. The L.A. riots, the collapse of the Soviet Union, economic stagnation, ecological and environmental disasters such as Hurricane Andrew, demand a reinvention of our infrastructures and of our roles as designers.

The 1993 IDCA will address these issues in terms of design:

- How will the design profession play a role in defining change?
- How will change impact our roles?
- Are we as designers prepared to grow and change our approaches?

The conference is being co-produced by architect and designer Andrew Drews, industrial designer and educator Noel Mayo, architect, urban planner and educator Adèle Naudé Santos and architect Harry Teague.

## Registration information:

- \$575 Early registration (postmarked by March 1, 1993)
- \$625 Regular registration fee
- \$350 One additional member of household
- \$150 Full-time student (photocopy of current ID required)

# When the specs are demanding—

## and the task is huge—

The painting contractor needed 15,000 gallons of paint in Minneapolis for the Veteran Administration's largest Hospital. And the Government specifications were stringent.

The job was so huge, the contractor needed a full month to estimate needs — epoxies, alkyd enamels, undercoaters, exterior paints, pastel colors, accents, and on and on.

Mautz delivered its quality paint precisely to specifications and right on time — to supply thirty painters who worked 1½ years to cover 4,985 doors, miles of corridors, hundreds of rooms, three giant atriums, an energy facility and a maintenance building.

Every job you do is a big one — so trust your specs to Mautz.

## Not just another pretty picture

In fact in many ways these durable prairie grasses and wild flowers represent a troubled environment. You see, too many of these gems have been traded for cornfields, bluegrass, asphalt and landfills. We are now left with a weakened, less diverse environment that puts our own global status at risk.

By restoring native plant communities to the built landscape you can help establish a better balance, doctoring the environment and ultimately ourselves. It can also be cost effective and esthetically sublime.

To find out how our ideas and materials can work into your site plans please call.

### Feds on the river

The new Federal Reserve Bank Building is freeway architecture at its purest. It's functional; it's inoffensive; and, like most freeway architecture, it's bland. To be built next to the Hennepin Avenue bridge overlooking the Mississippi River in downtown Minneapolis, the 545,000-square-foot building will muscle out several historic buildings (including Berman Buckskin) and bring a bit of suburban character to an urban corridor. HOK proposes two central sections to include a 2- and 3-story operations center and a 6-story administration building. A barrel-vaulted glass atrium, angled toward Hennepin Avenue, will bisect the taller section. The tiered brick-and-stone forms are meant to "portray a village or a community of buildings rather than a single overall mass," according to HOK. Construction is slated to begin in spring 1994, with completion two years later.

When the Federal Reserve moves, it will leave behind one of Minneapolis's most prominent office towers of the past 20 or 30 years. The current Federal Reserve Bank Building, designed by Gunnar Birkerts and completed in 1972, features a pair of catenary arches that suspends the office floors above a granite plaza. The structural system, lending the building a striking sculptural beauty, is typically used for suspension bridges. Whether the building stays or goes will be the decision of a new owner. In the meantime, a task force of AIA Minneapolis has outlined a number of reuse proposals, suggesting options from integrating part of the building into a new downtown library to converting it into housing.

### City Center slicks up

City Center in downtown Minneapolis has always been an easy target for criticism. Architecturally, it's reminiscent of a prison. But things are beginning to look up.

Brookfield Development has announced plans to give the 10-year-old City Center a \$20 million facelift and add several midpriced retailers to its tenant core. The vacant Carson Pirie Scott space will be subdivided to accommodate Montgomery Ward and several smaller specialty retailers, joining addresses with Filene's Basement already in the lower level.

Among the changes will be illuminated exterior signs above the four major entrances to highlight the center's new graphics, as well as the addition of 2nd-story display windows above each entrance. The Hennepin Avenue side will be ribbed with an illuminated ribbonlike awning extending the entire length of the block. Inter-translucent banners and chandelier-style lighting hung

or features will include throughout the atrium to add color. A permanent stage will be built for special events. The 3rd-floor food court will see new lighting, banners, carpeting and flooring.

The Alliance of Minneapolis is the renovating architect, with Shea Architects, also of Minneapolis, overseeing the renovation of the Carson space. Completion is expected by October 1993.

# THIS BANK SELECTED US BECAUSE WE PAID HIGHER

It looks less like a bank and more like an English country manor. But the charm of the Investors Savings Bank belies the challenges its design and construction presented. Particularly to Marvin Windows and Doors.

For one thing, fast-track construction scheduling was necessary due to constantly evolving design constraints. For another, it wasn't until thermal efficiency, condensation resistance and aesthetics were factored in that wood was chosen over aluminum. Consequently, Marvin wasn't selected for the job until construction was underway, making manufacturing and delivery deadlines extremely tight.

But Marvin's biggest challenge proved to be the building's three massive window and door assemblies, the largest of which measures 28 feet wide by 30 feet high. Using a combination of sturdy Magnum Double-Hungs and French Doors, Marvin not only built them on schedule, but also engineered them prior to delivery to guarantee they would withstand the strong, prevailing winds off the lake. And, like all 177 of the bank's other made-to-fit windows and doors, they were built with features designed specifically for the project. Features such as authentic divided lites, interior windows and doors glazed to match those on the exterior and a durable, factory applied finish in two complementary colors; Midnight Teal for the sash

and Graphite Grey for the frames.

Shortly after its completion, Investors Savings Bank was named the NAIOP Build To Suit Building of the Year. Which just goes to show that paying extra interest can result in some handsome dividends.

## previews

---

**James Rosenquist:  
Time Dust, The Complete  
Graphics 1962-1992  
Walker Art Center  
Through May 9**

More than 100 prints will reveal the depth of Minnesota-raised pop artist James Rosenquist's influence on the art world. Among the selected works will be an early 1962 etching to the largest and most complex print ever made, his 35-foot-long *Time Dust*. The show will include never-before-exhibited studies, sketches and source-material collages. Rosenquist will discuss his work on opening day March 7.

For further information, call WAC at (612) 375-7600.

---

**Six McKnight Artists  
MCAD Gallery  
Through May 13**

This exhibit features the work of six Minnesota artists who were awarded the McKnight Foundation Fellowship. The McKnight is an 11-year-old, Twin Cities-based foundation that seeks to identify and support promising local artists. This year's winners include painters Doug Argue, Frank Bigbear Jr., and David Lefkowitz; sculptor Kate Hunt; and multimedia artists Rik Sferra and Judy Yourman. The exhibit will travel throughout the state after it leaves MCAD.

For more information, call (612) 874-3790.

---

**Dan Mason:  
New Paintings  
Thomas Barry Fine Arts  
Through May 15**

The recent work of Minneapolis artist Dan Mason focuses on transparent, abstract shapes and illusionary spaces with references to

---

**Ralph Rapson:  
Paintings and  
Drawings  
Gallery 416  
Minneapolis  
May 6-May 19**

More than 40 drawings, paintings and professional renderings by Ralph Rapson, one of Minnesota's most renowned architects working within the modernist mode, will be the subject of this exhibit. Rapson's career spans more than four

decades, and his work can be found throughout the country and in Europe. Among the more prominent local examples of his architecture are the original Guthrie Theater, the Rarig Center at the University of Minnesota, and the Cedar Square West apartments on the West Bank in Minneapolis. He has won numerous local and national design awards and is a Gold Medal recipient of AIA Minnesota. Rapson headed the University's architecture program for 30 years. The exhibited works represent the diverse talents of Rapson as an educator, practitioner and traveler.

Portions of the show's proceeds will go to the Ralph Rapson Traveling Fellowship fund. An opening reception will be held May 6 at 4:30 p.m. The exhibit is free and open to the public.

For more information, call Gallery 416 at (612) 338-2913 or (612) 222-5887.

Highlights of the Rapson show include this drawing of a Church in Norway.

the landscape. Mason's art can be found in the permanent collections of Merchant and Gould, General Mills and Dayton Hudson.

For more information, call (612) 338-3656.

# Handles Well

*Taboret™ Faucets.* When it's time for a change, recommend Kohler faucets. It's the one-of-a-kind combination of commercial durability and distinctive residential style. Interchangeable acrylic and metal handle inserts, included with every faucet, are a no-cost option that can be changed to match almost any decor. And Taboret faucets feature solid brass construction and reliable, washerless System C™ ceramic valving. With its interchangeable looks, Taboret is an affordable way to get a handle on your best customer.

THE BOLD LOOK  
OF **KOHLER**®

## *On this project, the precast used for the roof reached a new peak.*

When you're using over 90,000 square feet of product for the floor and roof, you have a certain level of economy established. So it made perfect sense to use Flexicore hollowcore slabs to build gabled canopies over the entrances of these buildings. Staying with the same roof system was simply cheaper than switching just for the entrances.

On this project, flexibility went beyond product capabilities. Starting early in the planning stages and working within the architects' and

*Canopy detail.*

engineers' design parameters, Molin made suggestions for a layout that included 6", 8" and 12" slabs. Specifying only the material necessary to fit the function keeps projects on time and on budget.

Using Molin lets you use your time more efficiently, freeing you and your staff to turn your attention to other important parts of the project.

With consistency in product and service, from design to installation, Molin has served professionals since 1897.

State of Minnesota – Shakopee Correctional Facility for Women, Shakopee MN, 90,791 Square Feet.

## A conversation with Dore Mead

Interview by Jennifer Waters

*The debate over how and when to overhaul Interstate 35W has been a long, arduous one. It first began in 1986 when the Minnesota Department of Transportation [MnDOT] and the Metropolitan Council hired consultants to look at the 18-mile span between Burnsville and downtown Minneapolis.*

*What they found was that that stretch of 35W carried more than 700,000 people daily, or about 10 percent of the Minneapolis-St. Paul metropolitan area's transit trips. They also were reminded that any plans to make extensive changes to the road will have great impact on not only the highway itself, but the neighborhoods adjacent to it, the suburbs it reaches out to, and ultimately the health and vitality of downtown Minneapolis.*

*In January, MnDOT shed more light on what it deemed would be the transportation priorities of the future by proposing to reconstruct portions of 35W and Interstate 494 to the tune of \$1.8 billion. The project—the most ambitious undertaking in Minnesota highway history—will widen the highways to make room for high-occupancy vehicle lanes and general-purpose lanes. Room will also be made for a light-rail transit line on 35W from 95th Street in Bloomington to downtown Minneapolis.*

*In the process, more than 1,000 residential units and 70 commercial properties will be acquired on 35W from the Interstate 35E junction in Burnsville to Washington Avenue in Minneapolis. On 494, 80 to 160 commercial properties and 270 to 290 dwelling units will be eliminated beginning at Interstate 394 in Minnetonka to the Minnesota River.*

*As might be expected, those proposals have been embraced by some and shunned by others. Dore Mead, chairperson of the Neighborhood Transportation Network [NTN], is among those who discount the plans because of their substantial effects on more than 3,000 people who live and work in the Minneapolis neighborhoods that abut 35W.*

*Architecture Minnesota spoke with Mead recently about her repudiation of a plan that she believes is outdated and without vision for a future more dependent on public transit.*

**What are your objections to the Interstate 35W/Interstate 494 reconstruction project?**

It's continuing outmoded planning that, for the most part, has been going on since after World War II. What we should be doing instead is getting ready for life in the 21st century.

Our Department of Transportation has not yet earned its name. It's stuck in a wreck that they've been in for decades, and it's hard for them to understand the effect that their decisions have.... Their actions, instead of stopping traffic, will create demand for more highway space.

What they should be doing instead is creating mass transit, but they're not giving it any serious consideration. They've not given serious study to any alternatives that give priority to public transportation. Sure, some of the alternatives include public transportation, but they do it in the largest highway we've ever seen.

Their studies discovered that the public transportation would have low use. And we agree with that. But if you expand any highway, the public transportation component will go down because more people will be driving their cars.

We did a study last year called "The 35W Change Plan: The Economical Solution" that gave priority to public transportation. The highway department's entire study of that proposal was literally contained on one page.

**What did the plan call for, and what did you find out in terms of costs and duration of the construction project?**

What the study called for is adding LRT in the median of

*Lifestyles*

## Options Are Significant In Product Flexibility

Lincoln Divided Lites are popular in primed wood and receive even more attention in the beautiful maintenance-free exterior clad version. Lincoln offers four standard cladding colors to blend or contrast to many siding colors. The vast array of options provides windows for any lifestyle.

## Remodelling As Well As New Construction Are Considered

Lincoln's huge range of standard sizes and custom capabilities are increased even further with panning trim for retro-fit masonry application. The aluminum clad pan is available in all four colors throughout the entire product line with radius units the only exception.

35W, only making the most minimal of changes to the highway itself—really only those that would be necessary to accommodate LRT—plus making major safety improvements at the Crosstown Commons.

That alternative could be built very, very quickly. It could be done over a four-year period, rather than the 10 to 12 years planned for this project, and with a lot less disruption. It also carries a price tag of about \$400 million, as compared to \$1 billion for 35W. It does add a lane in each direction of the Crosstown Commons. We submitted it to MnDOT in August and got a one-page rejection.

**You sound dismayed by the rejection. Do you know why MnDOT refused to look at it? Why do you suppose?**

Because they're resistant to providing serious public transportation. I think they want to continue doing what they're doing. Building highways keeps them in business. They have to be rebuilt every 30 years and they're very maintenance intensive, where public transportation is not. Once you put that rail in there, it's likely to stay there for some time.

**What kind of relationship do you have with MnDOT now? Is it acrimonious?**

Well, we're certainly at a gridlock. The question is how long this will take.

**What do you mean by that? What are your next steps?**

At NTN we intend to make this issue a major issue in the Minneapolis mayoral race this year. There is some strong leadership in this city, and certainly some of the mayoral candidates have been involved in the development of the change plan.

We also intend to make it an is-

sue in the gubernatorial race next year. This is of regional significance and, in fact, of statewide significance. What happens on 35W is going to affect the pace for the next generation. Are we going to continue as business as usual and put all of our eggs into the highway business, or start absorbing more and more highway dollars in the metro area? Or are we going to start spending our dollars wisely? We need to change our parochial view of transportation.

**From your group's and your own perspective, this sounds like it's only a Minneapolis issue. But a handful of south suburbs are involved. Are you getting any input from the suburbs? What do you think the public, overall, thinks about this project and the public-transportation issues?**

I think the general public sees the handwriting on the wall. I point to the public hearing last May on 35W—the only public hearing held on 35W—and all but one of the suburban residents who testified were united with their neighbors in the city in demanding LRT and no more lanes.

The elected officials convey the opposite message. Elected officials in the suburbs are not listening to constituents. We're hoping suburban residents will jump on this. Susan Rosenberg in Richfield ran [a successful city-council election] on a 35W program and said she was in favor of LRT. She won with a very comfortable margin.

**This is a lot of activity for a project that is in its last stages of going forward. Aren't you afraid of spinning your wheels?**

This [reconstruction proposal] is far from being a done deal. In terms of funding, it's a bad-news, good-news story. The good news is there are no funds for the project, but the bad news is there aren't any for LRT either. In effect, the project is on hold. The department is also acknowledging

that the plans they have made don't work entirely.

**What do you see as the biggest impact of the reconstruction project?**

The loss of neighborhood businesses. Look at the construction of Interstate 394 [from downtown Minneapolis to Wayzata], for example. More than half of the businesses that had been located on Highway 12 bellied up during the construction period.

And besides the loss of business, it may mean the loss of neighborhood institutions, like churches. It will have an effect on the school system by decreasing the population of school-aged children when it takes away the 1,000 city homes.

Also, the city would immediately lose \$2 million in annual property taxes—for which the city gets no compensation. And air pollution is projected to increase by as much as 42 percent in some neighborhoods [from the additional traffic that they will accommodate].

**Without speaking for MnDOT, my guess would be that they will tell you that yes, these are major changes to the areas and to the environment as we know it today, but not all change is bad. It's just different.**

They'll base their argument on public safety. My response to that is that if they were serious about public safety, they would be doing everything in their power to get people out of cars. Traveling by car is the most dangerous mode of transportation there is. They should not be building more highways that encourage people to drive their cars rather than to take public transportation.

If they were serious about public safety, they would also be making safety improvement their top priority at the most dangerous stretches of highway, such as on 35W north of the project area.

# The **CARLISLE** **COMMITMENT**

## **Provide The Most Efficient Roofing Sales Team To Better Serve You.**

Teamwork is fundamental to making this commitment a reality. Whether you are dealing with Carlisle's outstanding manufacturers' rep/distributor network or any of our talented sales and marketing team players, this group is committed to helping you achieve your sales goals. Need bid preparation, project submittals, design assistance? Carlisle's diligent sales team can assist you.

Much expertise, knowledge and creativity are available at our over 60 strategically located regional sales outlets throughout the country. We invite you to dial into this vast Carlisle data bank and let our sales team help you with your next order. Some of Carlisle's on-going sales commitments include:

- Generation of Carlisle specified projects by architects/building owner
- Continuous updating of communications networks
- Quick response to warranty requests
- Product delivery when you need it

Next time you are buying roofing materials, think about The Carlisle Commitment. And, commit to Carlisle. Contact your local sales representative or call 800/233-0551; in PA 800/932-4626; in Canada 416/564-5557.

## Minnesota's mean streets

*The Search for Shelter committee seeks inventive solutions for housing the homeless*

By David Anger

Though ubiquitous in America, the homeless are at best ignored, at worst scorned.

Is it any wonder? Over the past decade or two, the rhetoric toward the homeless has been decidedly ambivalent: Mother Teresa's pleas for compassion juxtaposed with the Thatcher/Reagan doctrine of pull yourself up from your own bootstraps.

The sum total of such indecision has led to a muddled public-policy response and consequently, in the view of many advocates for the homeless, a worsening of an already-critical situation. Since policy leaders seem unwilling to tackle the homeless issue directly, the charge of resolving the problem often has been assumed at the grass-roots level by such organizations as AIA Minnesota's Search for Shelter committee, which has sponsored an annual design charrette since 1987.

When talking to the volunteers who comprise the committee, conversation inevitably veers toward the late Louis Lundgren, who as chairman of the national AIA Housing Committee in 1984 organized a three-day meeting to address the issues of housing the homeless. The meeting was the genesis for the Search for Shelter

committee's design-charrette program, a collaboration between design professionals, students and social-service agencies. At weekend-long sessions, students and professionals break into teams to evaluate and propose solutions for housing the poor.

For design professionals bewildered by the business world's bottom-line sensibilities, the charrettes offer both an escape from the workaday world and an entry into the creative problem-solving world of social activism. For students, the charrettes provide an opportunity to work on projects that may become realities. And for the homeless and poor, Search for Shelter offers an alternative to life on the streets.

At the charrettes, camaraderie abounds and roles are reversed. The professional becomes the undergraduate and the coed assumes the position of senior partner.

Armed with statistics, Search for Shelter volunteers are quick to serve up a rather bleak state-of-the-union address. "The best definition of homelessness was given to me by a homeless person," explains Nancy

Volunteers for the Twin Cities' Search for Shelter committee (above) break into small design teams each year to develop affordable-housing plans. Among the projects considered this year is a series of houses for Dayton's Bluff Neighborhood Housing Services (below).

Nagler of Ramsey Action Programs in St. Paul. "Becoming homeless is like dying, because when you lose your home you're no longer a part of society; and when you're no longer a part of society you're dead."

Consider that the children on the state's largest welfare program, AFDC, live at or below the poverty level. Advocates also report that for the first time since World War II, home ownership in the United States is on the decline, and the number of homeless range from a conservative 250,000 to an alarming 3 million. In the Twin Cities alone, an estimated 30,000 homeless people use the shelters in a single year.

When the number of people seeking access to human services appears

# Your Work Has Never Looked So Good!

A great project starts with good design, but it also takes quality materials, craftsmanship, and experience to make it reality. That's why the right choice for putting your best work forward is Spancrete architectural and structural precast concrete.

At Spancrete, we put our 30 years of experience to work helping designers and contractors right from the project's conception, by providing:

- State-of-the-art precast solutions
- Precast engineering
- Accurate budgets and estimates
- Design and detailing assistance
- Reliable scheduling

Whether planning or building a parking ramp, warehouse, factory, housing, or an office, Spancrete enables you to

blend beauty and function. We provide a complete line of structural concrete products, architectural concrete, and insulated wall panels with your choice of basic or architectural finishes. All products are quality manufactured in the largest enclosed precast production facility in the U.S., then erected with our own experienced erection crews.

Spancrete. Giving you maximum flexibility to create, design, and build. Call today to request our full-color portfolio brochures.

to be increasing, the number of solutions is also increasing, Nagler reports. "Search for Shelter provides brilliant ideas and creative solutions that nonprofit [housing agencies] could never afford to pay for otherwise," Nagler continues. "Also, it's an important primer—for students and architects—about working with the poor and homeless."

However, committee members express frustration that involvement from professionals, not students, remains relatively low. "Many people stay away because the problem is so daunting," says architect Dennis Grebner, who also teaches at the University of Minnesota. "But homelessness has much more to do with the average person than people are ready to admit."

Others believe that the low-income high-rise projects of yesteryear—those that stood in isolation of city and neighborhood—contributed to a sense of malaise. Yet Rosemary Dolata, an architecture student involved with Search for Shelter, counters, "We can't blame today's inaction on past mistakes. The failure of big projects wasn't the architects' or builders' fault but [was due to] existing social problems and the removal of entire communities. When this happened, the good things about communities were destroyed with the bad."

"In the 1960s through the 1970s, the ideas [for affordable housing] were generated from the top down, when the ideas should be created from the bottom up," says John Klockeman, AIA Minneapolis president. "There's a new approach now, which consists of involving diverse elements from community groups to design professionals, and the results are much more promising."

Klockeman and others report that more than one-third of Search for Shelter's projects become realities. So nay-sayers' concerns about the committee's effectiveness should become dormant after reviewing some of its success stories from St. Anne

Convent to the 38th Avenue Bridge Project. "There's never been a greater thrill in my career as an architect than driving up to St. Anne's and seeing the sign on the door, 'Let the children be safe,'" Klockeman says.

Projects like St. Anne Convent share several common traits, including a grass-roots approach in which architects design *with* instead of *for* the poor. "We no longer approach affordable housing with an 'I know what's best' attitude, which I think Search for Shelter has helped foster," says architect Rick Carter, whose firm, LHB Engineers & Architects, recently worked with Justin Properties and Habitat for Humanity to develop a full-block of moderate-priced single-family homes in St. Paul called Lyton Park Place.

"There's a real exchange of ideas and experiences during the charettes that doesn't always, but should, take place."

Consequently, nowadays designing for the poor is more humane and inventive. With limited time and resources, Search for Shelter challenges the growing acceptance of homelessness as a fixture of American life. Ironically, in this postmodern design age, architects continue to employ that modern architectural phrase: "Less is more."

"Architects have a unique role in society," Klockeman says. "We have the ability to act as community lead-

ers and assert solutions to problems. There is a housing crisis and architects can directly transfer our skills to solving this issue. Our potential contribution is limitless."

A community without Search for Shelter would be a poorer one, says Carter, adding, "It would mean less of what already isn't enough."

"We have a drastically increasing number of poor people in this country," Nagler concludes. "At the same time, there has been an expansion in the nonprofit response to homelessness, particularly in the Twin Cities. Unfortunately, however, the battle is not being won, but we're making tremendous strides."

*David Anger, a frequent contributor to Architecture Minnesota, is a writer living in Minneapolis.*

## Twin Cities' success stories

### St. Anne Convent, Minneapolis

#### 1989 design charette

A vacant north-Minneapolis convent was transformed into a shelter for mothers and children.

### Theresa Living Center, St. Paul

#### 1989 design charette

A former convent originally designed by Louis Lundgren is now a transitional shelter for women and children. Charette-team members added landscaping that includes a playground, and increased space within the dormitory-style rooms.

### 2421 Portland Avenue, Minneapolis

#### 1989 design charette

The design team created a community living room on the ground floor and additional bedrooms upstairs for women and children.

### Lyton Park Place, St. Paul

#### 1991 design charette

Initial design work from the charette helped Habitat for Humanity develop this full block of single-family homes just north of the State Capitol.

### 38th Street Bridge Project, Minneapolis

#### 1991 design charette

Three types of single-family homes were devised to reflect the neighborhood's architectural character. Several are built through the assistance of South Side Neighborhood Housing Services.

### Golden Valley Road, Minneapolis

#### 1992 design charette

Charette-team members prepared plans for five new three-bedroom homes on the corner of Golden Valley Road and Xerxes Avenue. Three have been built with Habitat for Humanity.

## *editorial*

Highways have become one of the most salient design features of American cities. Since the highway-building boom began in the 1950s, cities have been transformed—and so has the American way of life. Freeways paved the way to suburban growth. But in the process, they destroyed a good chunk of America's cities as they tore through neighborhoods, displacing people and businesses.

Many cities after World War II were in a sorry state. Their downtown cores were deteriorated, their tax base depleted, their housing stock antiquated. Federal-highway and urban-renewal programs offered cities a second chance, and many cities wasted no time in using these programs' generous funds to clear their slums.

### **Highway blues**

Not much has changed since the 1950s. Freeways continue to expand and people continue to use their cars to escape the city. The construction of Interstate 394 through Minneapolis's western suburbs improved traffic flow, but it also destroyed numerous businesses along the former Highway-12 strip. Now plans are underway to reconstruct portions of 35W and Interstate 494 (see Up close, page 15). More than 1,000 residences and 70 commercial properties—from Burnsville to downtown Minneapolis—will be leveled in the name of transportation progress. Businesses along the 494 strip also will be toppled.

Transportation departments have far-reaching influences on our lives. Over the past 40 years, they have molded us solidly into a car-dominated culture. The pretext for expanding 35W is that it will lessen congestion. But more expressways pave the way for more traffic, not less.

Minneapolis and St. Paul have enough highways. What the Twin Cities lack is decent public transportation. The transportation department proposes adding a light-rail transit line down the center of 35W. That sounds fine, except people will have to drive to 35W to get to the transit stations. Light-rail lines don't belong in the middle of expressways; they belong in neighborhoods where people live. Public transportation needs to be accessible by foot—not by car. Make mass transportation safe, accessible and affordable—and people will use it. The money budgeted for expanding 35W would be better spent developing a network of light-rail transit lines that serve and preserve our neighborhoods.

**Eric Kudalis**  
Editor

# F rom the inside out

A North Shore house bows to Danish tradition—with an eclectic twist

By Sharon Ross

From the first moment Hans and Martha Aas sat down with David Salmela and Cheryl Fosdick of Duluth to plan their house, they made it clear they wanted a house that was designed from the inside out, not from the outside in, as is often the case. Façade was not their chief concern; function and intellectual honesty were.

The Aases wanted to shed the physical and spiritual confines of the typical American suburban house. Theirs was to be a personal house, a functional house geared for comfort

George Heinrich

George Heinrich

*The Aas house on the North Shore of Lake Superior is a striking juxtaposition of different forms and shapes. Architect David Salmela says that the exterior massing is a "honest by-product of the home's interior needs."*

Peter Kerze

and privacy while also contributing to strong personal relationships and environmental integrity. "They wanted all rooms to pay attention to the relationship of people, materials, views and light," Fosdick says.

The result is a series of geometric forms shoved together almost like a child's pile of blocks. However, the house is neither childish nor haphazard. It may be void of symmetry and traditional decorative forms, yet its simplicity gives it a cohesion that emphasizes its functionalism without being sterile or

schizophrenic. Once you step inside, the exterior forms make sense. The house's layout flows logically from room to room, and you realize their activities are clothed in the skin of the house. Exterior and interior are part and parcel of one another.

"This is a house designed from a sensitive, almost poetic perspective," Fosdick says. "Each room was planned for its specific function. Then we put the rooms together, letting their forms join and intersect naturally."

Salmela adds, "Yes, we resisted

the impulse to design from the outside in and to smooth out the exterior forms once we had the rooms together. The façades are the limits of each interior space, and that makes them an honest by-product of the home's interior needs."

Still, it is evident that this house embodies much more than concern for function. Danish immigrants, the Aases have fond memories of their native land and its distinctive rural architecture. They also share a Danish sense of agrarian values. They wanted both elements expressed in

Peter Kerze

*The dining room overlooks a courtyard (above and right). The interior is bathed in light, with large living-room windows framing views of the lake (opposite).*

Peter Kerze

their home's architecture. They also wanted to take full advantage of their site atop a high point in the Duluth area. This site gives them a magnificent view of Lake Superior to the south and an equally breathtaking view of Duluth's western hills and sunsets. Located just below the crest of the hill, the house is oriented to southern light and views, and its pure organic forms spring naturally from the ground.

These forms reflect the family's Danish heritage. On the exterior, the geometric shapes join together around the entry courtyard, mirror-

George Heinrich

ing the cluster of small sheds around a small central farmyard that characterizes the Danish farm. The low walls dominated by steeply pitched roofs, especially on the garage, guest and master-bedroom wings located at opposite ends of the house, recall rural Danish buildings, as do strong, simple forms like the chimney and the entry court.

As the outside relates to the inside, the inside relates to three things: people, light and view.

The Aas's entertainment style focuses on conversation around the dining table. This means that the

dining room had to be prominent yet intimate. They put it just inside the entry, and filled its exterior wall with windows that look out over the courtyard. This makes it the first interior space seen on the way to the front door. Then they extended the entry canopy over the room to create an intimate feeling that is heightened by the presence of the brick wall moving from the courtyard into and around the room.

"Historical Danish colors and the tactile brick wall make this the most intimate and favored room in the house," Salmela says.

Equally compelling, the house is awash with light all day. As the sun moves in its path, it is captured and reflected into the house by the living-room light scoop and an additional skylight between the kitchen and the solarium. Reinforced by the continual flow of brick walls from the dining room through the ceremonial entry to the hearth, this light draws the eye and the feet through the house to the front windows and the Aas's sweeping view of Lake Superior.

# Firehouse make-over

A historic neighborhood fire station re-emerges as new in-town living

By Sharon Ross

Ask anyone in the real-estate business if the Twin Cities is a good market for condominiums and they'll say no.

Ask Michael Lander of the Lander Group and architect Scott Nelson of Dovolis Johnson & Ruggieri the same question and they'll tell you it's a good market if you do the job right.

They base their response on the success of Station 23 Lofts at Hennepin Avenue and 36th Street in Minneapolis's East Calhoun neighborhood. The building's four condos, built from an old fire station, drew so much attention and presold so quickly that the project can only be called a success—and a lesson in how to execute successful adaptive reuse projects.

Lander recognized that the building (built in 1906 and vacated in 1988) was an ideal property for adaptive reuse. Structurally, it was strong and solid and it had great volume. Its ground floor, for example, was completely free span. He knew he'd never get permission to build a new building of that volume on that site, so tearing it down and starting over never was an option. In addition, he felt it would have appeal as a condo development because of its historic value to the neighborhood and its location on the edge of the Uptown district, although the preliminary market study was skeptical about that assumption.

How could that study and the city's general experience with condos be

so wrong? Lander and Nelson credit the project's success to a number of favorable factors. One, certainly, is the location and the station's nostalgic appeal. It did prove to be of interest to the kind of home owners Lander envisioned—city-focused, artistic and motivated people. Another was their effort to include the East Calhoun Community Organization, as well as all appropriate city organizations, in the development plans from the beginning.

A key to reaching the right market was to divide the space vertically rather than horizontally. "I've discovered that Minnesotans take very well to living side-by-side, but not on top of each other," Lander says.

"This traditional town-house arrangement allowed us to make use of the high ceilings and build each unit as a 2-story home with an intermedi-

Erik Rusley

Dovolis Johnson & Ruggieri took an abandoned 1906 firehouse in the Uptown area of Minneapolis (above) and converted it into four, 2-level condominiums. The architects and the developer gutted the space and left it unfinished, allowing the new owners to custom-design their lofts. Each unit, with separate entrances, ranges from 1,250 square feet to more than 3,000. The largest unit (below) faces the front of the building. A white stairwell (opposite) offers a modern contrast to the historic shell.

Erik Rusley

ate half level or loft space,” says Nelson, who worked closely with the buyers on the structural and decorative details of their individual units. “We ended up with three living levels in a modern, open layout that proved very appealing.”

Selling the units as undeveloped shells and then custom finishing them for the buyers proved a wise move. While each unit has maple floors, exposed brick walls and ceiling beams, and huge windows, it also has remarkable individuality. Each unit also has its own entryway and its own garage, another feature that added appeal.

“In terms of design, I take pride in the way we were able to retain the character of the old building and still create a sense of private entry for each house,” Lander says.

Originally, the building was to be sold as five units, but one buyer purchased both front units to make one living space. This 3,500-square-foot condo fronts Hennepin Avenue and reuses the fire station’s original doors as an entry. The three other units, one in the middle and two in the back, range from 2,200 square feet to 1,200 square feet each.

Nelson believes that there is another reason the project worked out so well. “Everyone involved was an integral part of the building team,” he says. “When I say everyone, I’m including the contractor ... who gave us invaluable advice and helped us solve a lot of problems, and the home owners, who had the vision to buy this way. We had a synergistic relationship, and that gave us an optimum end product in terms of cost and quality of design and construction.”

Station 23 Lofts has won several awards for adaptive reuse, including a Grand Award from *Professional Builder and Remodeler* magazine, and another from the Minneapolis Heritage Preservation Commission and the Minneapolis Chapter of the AIA.

*Sharon Ross is a frequent contributor to Architecture Minnesota.*

*Interiors are spacious, adding updated conveniences while taking advantage of such existing architectural elements as hardwood floors, arched windows, exposed-beam ceilings and brick walls. High ceilings, ranging from 14 feet on the lower level to 10 feet on the upper, add to the openness.*

# Form and function

From an old shell rises a new house expressive of its region and client's needs

By Eric Kudalis

Christian Korab

*A curving wood-framed glass wall (opposite and bottom) adds drama to this Sunfish Lake house. The south elevation (above), though more sedate than the north side, is enhanced with large living-room windows on two levels.*

When Ken and Diana Lewis decided to move from their south-Minneapolis French-Tudor house, they found a terrific piece of property in Sunfish Lake, Minn. Complete with pond, meadow and a variety of plants, from pines and buckeyes to crab-apple and ash trees, the 6 1/2-acre lot was too good to turn down. The only drawback was that the property came equipped with an uninspired, split-level house.

No problem, they thought. The 2,800-square-foot, timber-framed house with gabled roof provided a good core structure from which they could add on.

Designed by Cuningham Hamilton Quiter of Minneapolis, the new and improved house includes a 1,900-square-foot addition and complete renovation that dramatically alter the original house, from inside to out.

The architects began by gutting much of the house and letting its raw volume show through. The new family room, the only major structural change, extends from one corner. Lynette Pollari of Cuningham Hamilton Quiter says that they were inspired by the challenge of working with an existing structure, rather than tearing down to the foundation and beginning anew, as is sometimes the case when people buy primarily for the site and not necessarily for the existing house.

"Part of the interest is how the old and new parts of the house relate to each other," Diana Lewis says. "Sometimes the constraints [of working with an existing house] helped with the creativity."

With an essentially empty house shell, the architects devised two separate wall types that define the space and delineate rooms.

The primary architectural element is a warm-yellow stucco wall that forms the spine of the house, dividing the living and formal dining rooms from the kitchen and family room. The wall is pure mass, 30 inches thick and punctuated with clerestory windows that usher light into the family room.

The secondary architectural elements are two wooden walls made of 8-inch-wide vertical slats of cedar. One wall is painted blue, the other green, to contrast with the neutral interior tones. The green wall marks the family room and kitchen, and enclos-

Dana Wheelock

Wooden walls (right) define interior spaces. A warm-yellow stucco wall (below), which runs along the spine of the house, dominates the living room. The art-glass windows are by Pegasus Studio. The new kitchen (opposite) overlooks the family room. The family room is a wedge-shaped addition (site plan). From the family room, the owners have easy access to the patio, pool and nearby meadow.

Dana Wheelock

es such smaller rooms as the mud room, pantry, bathroom and stairs to the lower level. The blue wood wall relates to the bedrooms with the master suite and bath on the upper level, and the Lewis's 10-year-old daughter's bedroom and bath on the lower level. This wall encloses a study on the upper level and playroom on the lower.

The focus of the house is the open kitchen and family room, in which a curving, cherry-stained wooden window wall overlooks the garden, pool and meadow. Both Ken and Diana work, and both enjoy cooking. The kitchen and family room is where they come together to cook, watch

Dana Wheelock

TV, entertain, relax and be together as a family, Diana says. They also like to entertain on the patio and by the pool, so they welcomed a visual connection between inside and outside.

"The window wall became the most important part of the house, so it was important to have an expressive form," Pollari says. The curving wall also helps to soften the house's hard edges.

Despite the house's somewhat eclectic shapes and forms, Pollari says the residence evokes a vernacular architectural quality often associated with Minnesota design. That vernacularism is found in the honest expression of raw materials—exposed duct work, maple-trimmed concrete floors in the family room and beams along the window wall. "It has a rugged strength," she says, in which its "beauty is based on its structure."

Diana says that the house's design developed over several months, and although she and her husband didn't have a specific architectural style in mind, she did want something that felt and looked "warm and comfortable." The Lewises got that and more. Once a plain Jane from suburbia, the house is now an eye-popping showplace that offers architectural drama and the space the Lewis family needed.

Dana Wheelock

# Arvid Elness

The face of housing for America's senior citizens is changing, and Arvid Elness is part of that change.

Gone are the flat-roofed, institutional structures of the '60s and '70s, aesthetically sterile environments that had little to do with creating a homelike atmosphere. Elness's 12-person firm gears nearly 80 percent of its practice to designing housing for seniors that evokes home—not institution. And by recalling traditional housing types, Elness is restoring dignity to senior living by giving residents a sense of control in a familiar setting.

"In the '70s, we were guided by HUD programs and principles," says Elness, who formed his firm in 1975. But with the shift away from the HUD model, the approach to designing retirement housing also shifted. "We looked at what the market wanted and began to develop the residential model in the early '80s," says Elness, who bases his design principles on the simple precept that seniors want to live in a comfortable, residential environment in which they

have control over their lives while still receiving the care and protection they need.

Part of the changing focus of such housing has been to meet the diverse needs of the marketplace. All seniors do not have the same needs. "I think the public has the perception that there is a growing market of older people, but there are a lot of people out there who haven't been

Don F. Wong

taken care of yet," Elness says. "They're stuck where they're at until we [the designers and developers] can get caught up."

Among the wide range of housing types designed by Elness are independent cluster homes for older people; "congregate housing," which promotes self-sufficient apartment living in a community with some shared spaces for social interaction; and "assisted-living" housing designed for those requiring varying levels of medical care.

Perhaps the breakthrough project for Elness was Elder Homestead, completed in 1986 in Minnetonka. This 28-unit facility was designed to provide a homelike setting for the frail as an alternative to the nursing home. From the outside it looks like a retreat, with an expansive lawn, pitched roof, lap siding and front porch. Inside, "cluster parlors" group four individual efficiency apartments around a common parlor, offering residents the privacy of their own space with ready connection to common areas. Elness says communal spaces are important to reduce isolation and promote social activities.

Since Elder Homestead, similar projects have followed, addressing different needs while maintaining residential character and often reflecting the architecture of their area. Oak Woods of Eagan and Haskell Court of West St. Paul, for instance, are designed as congregate-living buildings offering private apartments with common areas. Walker Elder Suites in Edina, Rosewood Estate in Roseville and Gideon Pond Garden in Bloomington, on the other hand, are designed as assisted-living buildings. The medical component of the assisted-living buildings is often invisible, available "a la carte," or on an as-needed basis.

As the population continues to gray, the need for senior housing grows—a need that's growing in many younger suburbs. "Children want their parents in facilities [in areas in which] they live," Elness explains.

Future senior-housing developments will see further differentiation between levels of care. The facilities of the '70s will become obsolete, Elness says, as the residential model expands throughout the country. Though the approach to senior housing has been revamped in the past 10 years, each year will bring new innovations. Says Elness, "We're still on a huge learning curve that changes with each generation and will continue to evolve in the future."

**Eric Kudalis**

Jerry Swanson

Arvid Elness (opposite) devotes a large share of his practice to designing senior housing. Among his projects are Walker Elder Suites (above), a 72-unit, assisted-living facility in Edina that features familiar residential details and furnishings. Elder Homestead (below), completed in the mid-1980s in Minnetonka, was one of Elness's earliest senior-living projects that sought to redefine senior housing.

Franz Hall

## Kim Bretheim and Paul Madson

Don F. Wong

Breaking out on your own as an architect is a challenge in itself. Choosing to design affordable housing is an even greater challenge. The financial pay-offs are not as great as with big-ticket projects, and the resources are scarcer. But Kim Bretheim and Paul Madson, in business since 1991, seem to have hit the ground running.

"There is a real challenge to designing for a low- or moderate-income market," say the two architects, who devote approximately 50 percent of their work to housing. "The question is: What can you do creatively with a limited budget?"

They apparently have figured that out as their list of commissions continues to grow. For more than 10 years each played influential roles at Arvid Elness's office in Minneapolis, working on a variety of projects, including moderate-income housing and elderly-housing facilities. Madson, who sought the independence of a smaller firm,

set up shop in early 1991 before Bretheim joined him a few months later. "We want to keep a low overhead so we can be more involved in the work," Madson says.

Much of their built work was designed or started while at Arvid Elness's office. A lot of their designs, since going independent, are now under construction or on the boards.

The approach to building affordable housing has changed since the post-World War II urban-renewal days, when such large-scale high-rise developments as Cabrini Green in Chicago and Pruitt-Igoe in St. Louis stood in isolation of the city as islands of poverty and crime. "Things today are done at a smaller scale, with low- and moderate-income housing being dispersed into the community so it will serve as a catalyst for additional development," Bretheim says.

People tend to think the need for moderate-income housing is reserved strictly for the inner city, but that has changed over time, too. Madson and Bretheim stress that there is an increasing need for affordable housing in the suburbs because of changing demographics and the aging housing stock. Despite the shifting demographics, the two say there is still a stigma attached to low-income housing: "The public perception hasn't changed. No one wants it in their backyard."

But many of the Twin Cities' backyards are in need of repair, and Madson and Bretheim are helping.

With developer Sherman Associates and the Central Neighborhood Improvement Association, the two architects currently are transforming a city block—a former "crack row" at 31st Street and Fourth Avenue in south Minneapolis—into a neighborhood of new single-family houses and revamped apartment buildings. The total project includes eight three-bedroom houses of approximately 1,400 square feet, plus one revamped house and three renewed apartment buildings. They developed four basic house plans based on typical styles found in the area and included such familiar urban-residential features as front porches and wrought-iron fences. "A lot of attention was spent on street image to make a unified block," says Madson, who emphasizes that one of the surest ways to improve a neighborhood is to encourage inner-city home ownership.

Moderate- and low-income housing designed by the two runs a spectrum of choices, from "for-sale" town houses and detached single-family houses to subsidized rental units. The for-sale housing is market driven, often in the \$75,000 to \$100,000 price range. Rental units include both new construction and rehabs for apartments to SROs (Single Resident Occupancy).

Their projects often slip unobtrusively into the neighborhoods, and they frequently accomplish what many higher-priced developments miss—a respect for the urban context.

The red-brick Trinity town houses (designed at Elness's office) on Minneapolis's West Bank recall Georgian row houses that come up to the sidewalk in a traditional urban sense rather than suburban style. Likewise, Rollins Court in the Dinkytown area near the University of Minnesota builds on the neighborhood's dense urban character with screened porches and small, narrow front yards. On the boards is Lourdes Square near Riverplace in Minneapolis. This 6-acre development will feature low-rise buildings that enhance the area's pedestrian amenities.

For these two architects, the residents are the ultimate client, their needs paramount. Says Bretheim, "The social responsibility [of designing affordable housing] gives us satisfaction. The reward is getting letters from the residents who are happy with the project." **Eric Kudalis**

Jerry Swanson

*Kim Bretheim and Paul Madson (opposite, left to right) are designing solutions for affordable housing. Among their projects are Trinity town homes and apartments (above), designed while at Arvid Elness's office. In the works is a city-block development at 31st Street and Fourth Avenue (below) in Minneapolis, which will combine new single-family homes with rehabs and apartments.*

# Robert Mack and Stuart MacDonald

Bob Mack and Stuart MacDonald are a bit like sleuths, peering around corners, looking under the floor boards, digging up old records in search of clues. Since teaming up in 1977 to form their own architectural-restoration firm, they've made a point of reconstructing the past from seemingly inaccessible evidence.

"There are no pat answers in restoration," says the pair, who met as students at the University of Minnesota in 1965. A commission for them can include anything from designing an addition to a Queen Anne-style house on Lake Minnetonka to restoring James Garfield's house in Mentor, Ohio.

Every project for them is different and every client is different. And even with history as the operative word, 20th-century technology plays a role, whether we're talking about incorporating fire-safety equipment

into an old house or adding handicapped access. "There are very few absolutely pure restorations," they say.

Buildings are subject to the changing market and fluctuating economy, and a historic building's fate falls under a broad spectrum of possibilities, from academic, museumlike restorations to demolition. For MacDonald and Mack, the most involved projects—and those requiring the greatest detective work and research—are the museum-style restorations. In such cases, a building or house is renewed as a historic museum, a freeze-framed set piece from the era in which it was built and occupied. Work will involve extensive documentation, gathering available photos or drawings, researching the life of the original owners, studying the history of the community. Sometimes they will play the role of archaeologists, conducting on-site digs. Inside, they may peel away layers of plaster to see if there are any former

doors or windows. An X-ray machine occasionally comes in handy.

"You go through it to try to determine what happened through history," MacDonald says.

They always will draw the house as it exists, and then, in a sense, start backward. The challenge is that architecture is always in a state of flux.

"A building could have changed a lot in a few years," they say.

If it sounds like they sometimes get their fingernails dirty, it's because they do. With the restoration of the Purcell-Cutts house in Minneapolis, they had their hands in the sawdust from the start. "We were on the planning side all the way through," MacDonald says. "We did a lot of the restoration on site with the contractors using few drawings. It was more of a craftsman approach to building, much like a throwback to the era in which it was built."

Sawdust is familiar to MacDonald, who grew up in St. Paul and whose father worked in construction. Restoration combines his appreciation for history, architecture and the construction process. Mack, who was raised in a suburb of St. Louis, found his interest in old buildings

rekindled while assigned as an architect for the U.S. Air Force in South Carolina in the 1960s. Trips to historic Charleston and the old plantations proved inspiring.

Although the Midwest's stock of older buildings is scant compared to the East Coast, the quality is still high. Historic buildings seem to start around 1870

in the Midwest. "Our time frame in the Midwest isn't as broad [as it is on the East Coast], and the numbers aren't as high, but the structures we have are as good as anywhere," Mack says.

Today their practice continues to proliferate, as they devote 90 percent of their time to restorations and preservation. Approximately 40 percent of their commissions is focused on residences, which includes restorations, remodelings for individual home owners, and even an occasional new construction.

For Mack and MacDonald, preservation is more than a matter of saving a single building. Architecture fits into a historic context, technological context, urban context and social context. Fitting those pieces together is part of the joy of their job. "Our professional careers," they say, "coincide with our personal interests." **Eric Kudalis**

Robert Mack and Stuart MacDonald (opposite, left to right) have made a career of reviving the past. Their commissions include the restoration of the Purcell-Cutts house (above) in Minneapolis and James Garfield's house in Ohio (left).

## Plaster of Paris

The beauty of authentic French plaster architectural ornamentation is now available in the United States. The classic styles and variety of designs set the Sorale line apart from all the competition. Free literature is available showing the complete line of mouldings, columns, pedestals

ceiling rosettes, niches, vases and cornices. If you're interested in learning just how easy installation is and would like a view of how beautiful homes or offices finished with Sorale plaster can be, a video is available for \$19.95 (refundable with order).

## Architectural wooden columns and capitals

Available in redwood, pine and other species.

Diameters 6"-36".

Heights to 40'.

## *endangered species*

The Sumner Field Homes, built between 1935 and 1938, were one of Minneapolis's earliest public-housing developments.

Sumner Field Homes were built in Minneapolis between 1935 and 1938 by the Public Works Administration. It was the first public-housing project in Minnesota and among the first built by the federal government. Slum clearance, better housing for the poor and job creation were all high priorities during the Great Depression—so public housing was instituted for the first time in the United States under the National Industrial Recovery Act.

Built around the Sumner Field playground at Eighth Avenue North and Bryant Avenue North, the project was a modern respite within the worst slums in Minneapolis. The area around Sumner Field Homes since has spawned numerous other—yet less benign—public-housing developments, thus concentrating and isolating its residents.

Sumner Field Homes may be the most pleasant and livable of these projects. The federal directives attending the money to build the project allowed little flexibility or typical WPA-moderne decoration on the buildings themselves. Floor plans and unit configurations were also well es-

tablished when the local architecture firm of Magney and Tusler was commissioned. The resulting placement of the space and simple International-style masses around the 30-acre site give this project its humane and pleasant feel. Site coverage is about 20 percent.

Two fundamental problems are confronting Sumner Field Homes—one structural, one social. The structural problem results from a layer of expandable clay that inflicts differential settling on the red-brick buildings as the subsoil dries out during droughts. Substantial cracking and strain have rendered many of the buildings uninhabitable. Piles to reach below the clay shelf could be added to save the existing buildings, but this would cost about 10 percent more than razing each damaged structure and building in-fill.

Sumner Field Homes must also fit within a complex social and political climate. The damaged buildings and expandable soils of Sumner Field are well suited to conversion to parkland and open space—sorely needed by the assisted housing that surrounds it. Most importantly, the Minneapolis

Public Housing Authority (MPHA) must decide if it can better accomplish its goal by switching to a scattered-site approach. There are mixed feelings about continuing to concentrate—and thus institutionalize—assisted housing. Some thought has been given to preserving the project by redefining its present use—perhaps as a campus or limited-term residency. The MPHA must first decide what its priorities are concerning Sumner Field Homes and then present these priorities to HUD in Washington to make the final decision. Part of this process is determining its historical significance. Toward that end, Jeff Hess has written an evaluation for the MPHA, which has been abridged and printed in the Winter 1993 issue of *Hennepin History*. There is little doubt that Sumner Field Homes could qualify for listing on the National Register, but what option will best serve the needs of its residents? Is our public soul better served by preserving a monument to affordable housing or by letting it disappear?

### Uecker Residence Addition

Minneapolis, MN

An intimate booth is the focus of this addition to a Tudor style home in Kenwood. The addition includes the booth, a sitting room, and a master bathroom in a turret which overhangs the library below. Both the interior and exterior celebrate the highly detailed craftsmanship of Choice Wood Construction. Designed by Michaela Mahady and Paul Buom.

### Private Residence

Victoria, MN

Set on a steeply sloping, north facing lot that looks onto Lake Minnetonka's Smithtown Bay, this home is designed to take full advantage of the stunning northerly views, while also allowing direct sunlight to penetrate the living spaces through a two story skylight shaft and clerestory ribbon windows. The house was designed by Sarah Susanka.

### Pleasants Residence

Afton, MN

Sitting like a windowed beacon on a hill, the third floor studio in this home in Afton is the terminus for a central stair that stitches together the formal and informal areas in this home. Outside the stair, wood trim and beams provide an overhead map connecting one space to the other. The house was designed by Tim Fuller and built by C.A. Johnson.

### Pilhofer Residence

Inver Grove Heights, MN

Originally built as a hunting lodge, this hilltop home has majestic views of its heavily wooded site. A new hipped roof and trellis refers to a Bavarian mountain home. The timber frame interior by Deane Hillbrand restores the character to this turn-of-the-century retreat. Designed by Katherine Cartrette and Michaela Mahady and built by Choice Wood.

**TSP One, Inc.  
Plainview School  
Addition  
Plainview, MN**

This 56,700 sf addition will connect to the existing elementary school on two levels. The main floor includes a central media center and computer center, surrounded by 16 new classrooms. The lower level adds a multi-purpose area, two new Kindergarten classrooms and three Special Education class-

rooms. A unique handicapped-accessible ramp feature will be shared by the elementary and junior high schools. With completion of this addition, the entire elementary and junior high complex will be accessible for the disabled. Completion is slated for Summer, 1994. 507/288-8155.

**TSP One, Inc.  
with MS&R Ltd.  
Community Library  
Champlin, MN**

This 8900 sf Hennepin County Library, located on a prominent corner site, features a central, daylight circulation spine flanked by raised-ceiling reading rooms, each ending in a pleasant bay window. Bays "step out" to follow the curve of the main drive. Contact P. Sieger, AIA, or G. Milne Rojek. 612/830-0070.

**TSP One, Inc.  
Kindergarten Addition  
Jefferson Elementary  
School  
Rochester, MN**

This 6000 sf addition to an existing 1920's elementary school building includes four new kindergarten classrooms radiating from a shared common area, new computer lab, and media center. Contact S. Sorensen, AIA, 507/288-8155 or R. Moe, AIA, 612/830-0070.

**George F. Cundy &  
Assoc. Architects  
Private Residence  
Lakeland, MN**

The traditional coiled all brick exterior belies the modern open plan of the interior. Ten foot ceilings, tall arched windows and sprawling decks provide a light, open feel and dramatic views of the wooded sloping site. 612/646-3268.

### **Xerxes Architects Stumpf Solarium Minneapolis, MN**

This 400 sf addition to a tudoresque home near Lake Harriet employs a tri-partite pavilion to mediate the modern simplicity of the pool area with the eclectic and additive nature of the house's rear elevation. Steel and glass construction lend identity while the texture and forms remain sympathetic to the main house. 612/339-8572.

### **Chris Doehermann Architect Inc. Private Residence Arden Hills, MN**

This passive solar house responds to the site by reaching for the sky. All living spaces and bedrooms are located to the south to maximize solar exposure and the views to a nearby lake. A wooded berm to the north will create a secluded rear yard while providing a buffer to the harsh north winds. 612/639-0469.

### **Peter K. Paulson Architect Seemann Residence Lakeville, MN**

This late 50's era walk-out rambler with a spectacular hilltop view of Orchard Lake will be completely transformed inside and out. The design features a new kitchen, dining room, master bedroom, children's bedroom and a garage. A two-story entryway and front porch welcome visitors. 612/341-2586.

### **Bruce Knutson Architects Residence Minnetonka, MN**

This striking contemporary features two waterfalls with reflecting ponds and numerous museum-quality display walls and a complete Lucas theater to respond to this sophisticated client's needs. 612/332-8000.

## Build Fire/Sound Walls Using The Eliminator Track

By using the ELIMINATOR TRACK fire/sound walls can be built to the structure above while leaving the acoustical ceiling grid intact.

The ELIMINATOR TRACK produces a better looking ceiling/wall intersection because it has a built-in edge molding at the acoustical ceiling line.

Minnesota Projects (Twin Cities Area) utilizing the ELIMINATOR TRACK:

## Canon Color Copies. Yet Another Way To Work On Your Image.

On top of everything else Photos, Inc., does to make you look good, now Canon color copies are available here too.

These copies can be made from prints, original art, slides or even transparencies. And you can get them reduced or enlarged from 50 to 400% — even 1200% for slides — to fit exactly.

Just think of all the ways a color copy will fill the bill, such as to duplicate a nicely rendered layout. Or to make a position-only color stat.

So add Canon color copies to our other fine photographic services, which include black-and-white and color film processing, quantity and custom prints, duplicate transparencies, mounting and laminating.

Just call Photos, Inc., for a sales rep, price list or free pickup today.

### **Architectural Use of Terra Cotta: Historical Examples, Process and New Uses Northern Clay Center Through June 2**

The art and history of architectural terra cotta comes alive in this exhibit featuring drawings, blueprints, photographs and terra-cotta samples from historic buildings around the state, including the Hamm Building in St. Paul and Louis Sullivan's Prairie School bank in Owatonna. The process of manufacturing terra cotta also will be examined through historic photographs of the carving of wet clay, mold making and installation onto buildings. More than just a historic retrospective, the exhibit will help dispel rumors of terra cotta's demise by spotlighting local contemporary teams of artists and architects who are reintroducing the art form in customized commissions. And for those interested in the nuts and bolts of terra cotta, Tom Lane, associate professor of art at the University of Minnesota, will conduct a mold-making slide lecture and demonstration May 22, from 9:30 a.m. to 3 p.m.

For more information about the show or lecture, contact the Northern Clay Center at (612) 642-1735.

### **Building the Fair: Platinum Photographs of the World's Columbian Exposition 1891-1893 by C.D. Arnold The Art Institute of Chicago May 1-July 4**

This exhibit of photographs by Charles Dudley Arnold, the official photographer of the 1893 world's fair, documents the daily construction of the Columbian Exposition fairgrounds in early 1891 through the six-month run of the fair beginning in May 1893. The

60 large-format platinum prints, capturing the extraordinary structures that became Chicago's ephemeral "white city," are drawn from three albums of some 700 photographs compiled by Arnold, and now in the Art Institute's permanent collection. A catalog accompanies the show.

For more information, call (312) 443-3600.

**Chicago Architecture and Design, 1923-1993: Reconfiguration of an American Metropolis**  
The Art Institute of Chicago  
June 12-Aug. 29

This comprehensive exhibit, a follow-up to *Chicago Architecture 1872-1922*, presents more than 600 pieces related to the development of Chicago's architecture and design over the past 70 years. Objects include original drawings, prints, artifacts, furnishings and architectural models, presented in a 10,000-square-foot installation by eight young Chicago architects in conjunction with Stanley Tigerman. The exhibit is divided into eight sections to encompass planning; transportation; institutions and government; commerce and business; industry; shopping; houses and housing; and recreation. A 480-page catalog with 17 essays by noted architects and scholars accompanies the exhibit.

For more information, call the Art Institute at (312) 443-3600.

**Expansion, Renovation, Reinstallation:  
A Blueprint for the Future**  
Minneapolis Institute of Arts  
Through 1993

The Institute's plans to renovate, expand and reinstall its permanent collection are showcased through a series architectural models, photographs and wall diagrams.

For further information, call the Art Institute at (612) 870-3000.

## Minnesota A to Z and Saving Places: Historic Preservation in Minnesota Minnesota History Center Ongoing

The Minnesota Historical Society continues to celebrate the opening of its new facilities in St. Paul with two ongoing exhibits exploring the vast resources of the state's heritage. *Minnesota A to Z* showcases the Society's extensive collections. Arranged according to the 26 letters of the alphabet, the exhibit explores topics from *Animals*, *Baseball* and *Canoe* to *eXtravaganza*, *Yankee Girl* and below *Zero*. Objects on display include the 10-foot boat Garry Spiess sailed across the Atlantic, kitchen appliances from the 1930s to '50s, and a 37-foot, birch-bark replica of a Montreal voyageur canoe.

*Saving Places* looks at historic preservation in Minnesota through 61 black-and-white photographs by Jet Lowe. A resource room allows visitors to learn more about historic preservation through interactive computer programs, films, videos, books, children's activities and a "how-to" exhibit on doing one's own house history.

For more information, call (612) 296-6126.

## Portraits, Plots and Places: The Permanent Collection Revisited Walker Art Center Ongoing

The reinstallation and reorganization of Walker's permanent collection consists of a number of new acquisitions, as well as many favorites. Bypassing the more predictable chronological presentation of 20th-century work, the installation is thematically organized to offer new ways of looking across generations and media. Included among the paintings and sculptures are drawings, photographs, prints, artists' books, models, video works and film installation.

For more information, call WAC at (612) 375-7600. **AM**

## up close

Continued from page 17

But there's no doubt that there are safety issues MnDOT is addressing in the reconstruction proposals.

There's not a compelling safety issue. No part of the 35W stretch that they're planning for [reconstruction] is on their top-10 list of safety-hazard areas.

Basically, you're saying that they're just using safety as an excuse?

That's right. Another example is that one of their biggest hang-ups is the lane drop at 46th street—south of 46th street there are three lanes versus four before 46th—which they claim causes a tremendous amount of accidents. But when you look at the accident data of the nine interchanges in the city, that one is the third safest. It has the third best track record.

OK, assuming you're right, what's the problem here? Why is MnDOT putting together such an elaborate scheme for something that is not forward-thinking transportation?

What this really boils down to is that for years and years transportation decisions have been made on an engineering basis. Instead of that, it really is a public-policy question.

It gets to the very heart of public policy: What do we want this region to look like? Should we have an energy policy that decreases our independence on imported oil? Should we have an economic policy that would allow at least some people to travel in public transportation when the next energy crisis comes? Those are really public-policy questions, not engineering questions.

Another thing I find very interesting is that in terms of the highway design itself, everything that we're fighting for over here without success has just finished construction in St. Paul. For example, at the 50-mph curve at 35W in

*The Law Firm of*

**POPHAM HAIK**

SCHNOBRICH & KAUFMAN, LTD.

(612) 333-4800

222 SOUTH NINTH STREET

MINNEAPOLIS, MINNESOTA 55402

NATIONAL OFFICES

DENVER MIAMI WASHINGTON D.C.

downtown [Minneapolis], we're fighting for that to be softened to a 35-mph speed, which they're refusing to do. But they've just finished building one on 94 in downtown St. Paul. Strategies like that save tremendous, tremendous amounts of land.

From our perspective, what's good enough for St. Paul is certainly good enough for Minneapolis.

You're talking about a lot of things here that conflict with one another. You're saying that if we want to keep the city strong, we should create mass-transit options rather than broadening highways. But others are saying that if we choke traffic on 35W, we will not enhance public transportation, but drive people away from the core city.

Demographically, the first-ring suburbs look exactly how they

did a few years ago. If we continue with business as usual, 20 years from now they can expect to be in the same condition they are today.

The city will be much worse off. If you continue with a highway approach, the deterioration at the core gets worse and worse, like a virus that keeps spreading out, so the region itself will spread out farther and farther with more deterioration and abandonment at the core.

**Sounds like it presents an impossible planning challenge.**

It doesn't have to be. It comes from a lack of planning.

**What do you do next?**

Right now, from our perspective, the project is kind of on hold. But we have two things going on: We're on the campaign trail to

make a major issue of this in upcoming elections; and the other is to gear up for a lawsuit, which appears to be likely.

**On what basis would you have a suit?**

There are at least three major charges that are likely. One is whether or not their plans and planning process comply with environmental requirements. Then, whether they comply with new federal-transportation laws, which we think they don't. The thrust of the Intermodal Service Transportation Efficiency Act that became law in December 1991 was to call an end to the highway era and to turn instead to alternatives like public transportation. And the third is discrimination, based on the people affected directly by the dislocation as well as those most affected

# CALL

by being left behind. They include members of minority populations and seniors, which are far out of proportion to the population as a whole. Under current federal legislation, agencies have responsibilities to make sure the actions they take are not discriminatory. Discrimination does not require intent to discriminate.

**A lawsuit could slow down the process, but it's not likely to hold it up forever.**

A lawsuit is not a solution. It's just a stop gap, but it does buy time. And a lawsuit can go on forever, in fact it's likely to go on forever.

**How soon would you file, and how would you fund it?**

Assuming that the highway department follows the normal planning process, the first oppor-

tunity to go to court is after they issue the final EIS [Environmental Impact Statement] for the project, which may be sometime around the end of the year. If they change plans, it will slow up the EIS.

We're going to be very serious about this and about raising money for it. We're planning this spring to start running a canvass, we're planning a major fund raiser in the fall, and we have requests into a couple of major national [environmental] groups to participate in the lawsuit.

## Copying Documents Isn't Just Illegal, It's Dumb.

You can get into a lot of trouble by copying blank AIA Documents. For starters, it is illegal to reproduce copyrighted material. On top of that, the language in an old Document can be out of date and not reflect current case law and practice within the complex construction industry... and then there's the potential increase in your liability as a result of errors or omissions which can result in your paying big dollars to settle a dispute. It's just not worth it; in fact, it's dumb.

Order your *current* AIA Documents today. Contact us for details.

## **Directory**

American  
Institute  
of  
Architects  
Minnesota

I invite you to study the directory of architecture firms on the following pages and become better acquainted with my esteemed professional colleagues. They are members of AIA Minnesota, the state organization of architects created 101 years ago to provide the profession with continuing education, professional practice assistance and opportunities to communicate to the public concerning the design of the built environment.

These firms provide services to clients in Minnesota and throughout the United States. Their skills relate to all types of building projects both large and small, new and old, and they can assist you in planning and designing those facilities which respond to your specific needs.

If you have any questions about architectural services or how to select an architect, Peter Rand, FAIA, and Beverly Hauschild, Hon. AIA, our Executive Vice Presidents, will be pleased to help. Feel free to call them (612/338-6763) or write for additional information.

C. Jay Sleiter, AIA, President

The purpose of this Index of Firms is to enable you to quickly identify, from among the over 200 architectural firms in the foregoing Directory, those with experience and skill in designing whatever specific building type that may be of interest to you. The building types listed directly match with those in the Directory of Architectural Firms.

To be included, each firm was invited to identify building types for which they have specific design expertise and required to pay a modest fee for each listing. Firms listed are identified in alphabetical order by name with location of their office also indicated.

A full description of each firm in this Index is included in the Firm Directory along with all other firms managed by members of the American Institute of Architects. We urge you to thoroughly study the Directory and direct any questions to AIA Minnesota, 612/338-6763.

AM publishes a variety of directories to aid clients, design firms and the public in identifying any licensed design professional or specialized consultant that may be required for various building projects. For example, elsewhere in this issue is our annual directory of architectural firms.

The Directory of Consultants which follows is our second attempt at identifying those organizations which have very unique and specialized skills that may be necessary for certain project teams. All firms have offices in Minnesota and some have diversified, engineering skills which are broader than the narrow specialties of this directory.

We invite you to use this directory and let us know of any additional firms that should be invited to be part of our next Directory of Consultants.

Peter Rand, FAIA

*The Radisson Hotel (1909-1982), 41-43 S. Seventh St., Minneapolis (at right), in the final stages of construction.*

When Edna Dickerson, the manager of a court-reporting school in Chicago, arrived in Minneapolis in 1907 to collect a multimillion-dollar inheritance, she probably had no idea how much attention she would receive. George Draper Dayton and other members of the business community wasted no time in telling her about the luxury hotel they believed was needed for the site next to Dayton's 5-year-old department store. Dickerson plunked down \$1.5 million to start the Radisson Hotel on its way.

The hotel, designed by the firm Long, Lamoreaux and Long of Minneapolis, began to rise in mid-1908. At the time, its 16-story height made it the second-tallest building in Minneapolis. The impressive street entrance boasted a 50-foot-long canopy of glass and iron, marble columns

and a glass-enclosed taxi-cab stand. William Frederick Behrens of New York designed the interior, adopting a French Renaissance style with copies of French period furniture, parquet floors, Circassian walnut walls, and patterned pink-and-gray marble lobby floors.

When the hotel opened Dec. 15, 1909, it had 425 rooms (prices ranging from \$1.50 to \$5 a day), a cigar shop with the capacity to store 1 million smokes, a library, a miniature Viking ship created by Edward Caldwell, a 975-foot-deep artesian well for drinking water, an electric revolving door, and a 6,500-square-foot kitchen. Each room had a telephone.

For 25 years, Edna Dickerson operated the hotel with her husband, Simon Kruse. The couple occupied the hotel's 13th floor. They opened

the famous Flame Room in 1925, grew fruits and vegetables for the hotel on a farm in Anoka County, and established the Radisson as one of the Midwest's finest hotels. In 1934 they ran into financial problems, and a mortgage company acquired the property. Soda bottler Tom Moore, a later owner, began renovating the hotel in 1947. He raised the room total to 565 and eventually refaced the building with a pink-and-white façade. Two decades after Curt Carlson bought the hotel in 1962, he decided he wanted a new hotel on the site.

The Radisson closed in November 1981, and its \$1-million demolition took place the following year. Its successor, the Radisson Plaza Hotel Minneapolis, opened in 1987.

# Every profession has its tools.

## But it's the professionals behind the tools who make the difference.

When you get right down to it, almost anybody can throw a baseball. Or play an instrument. Or even hold a trowel. But when these tools are in the hands of professionals, the difference in quality becomes apparent. That's why you should award your contract to a tile contractor who employs union tile setters. When you do, you'll be engaging professionals whose job management experience and craft skills will protect you from costly job failures. They'll provide tile surfaces of lasting beauty that will help make your building more durable, fireproof, more attractive to tenants and maintenance free. And over the life of your building they'll save you money. Why not call on the best: Union Tile Contractors and Craftsmen. They're ready for you.

### THE SIGN OF A TILE PRO<sup>®</sup>

**Nobody builds like union contractors and craftsmen.**
