Marketplatz Mall Shopped Around And Chose Wells.

Single Source. Wells gives you a total concrete system by designing, fabricating, and installing your building. **Quick Installation.** Concrete components can be precast during foundation preparation and assembled directly from the delivery truck. Your on-site construction time and your costs can be dramatically reduced. **Multiple Finishes.** Your options of patterns, textures, and colors are nearly limitless. Exterior finishes may be designed to achieve a specific color or effect. **Wells' Advantages.** Over thirty years of experience, along with computer-aided drafting, an in-house engineering staff, and a team of highly trained craftsmen, ensure you a quality structure. Rely on Wells for a building that's durable, energy efficient, fire-resistant, and flexible for expansion.

Not just another pretty picture

In fact in many ways these durable prairie grasses and wild flowers represent a troubled environment. You see, too many of these gems have been traded for cornfields, bluegrass, asphalt and landfills. We are now left with a weakened, less diverse environment that puts our own global status at risk.

By restoring native plant communities to the built landscape you can help establish a better balance, doctoring the environment and ultimately ourselves. It can also be cost effective and esthetically sublime.

To find out how our ideas and materials can work into your site plans please call.

sketches

Construction will begin this spring on a 15-story Minneapolis Federal Building-U.S. Courthouse across Fourth Street from City Hall downtown. Designed by Minnesota native William Pedersen of Kohn Pedersen Fox in New York, the 494,000-square-foot, granite-and-precast building is being developed by an affiliate of BPT Properties in Washington, D.C., with The Alliance of Minneapolis as associate architects. The \$91.5 million structure will house courtroom and office space for the U.S. District Court, the U.S. Bankruptcy Court and related judicial and executive agencies, including the U.S. Attorney. Special features include a 40,000-square-foot public plaza facing City Hall. Completion is slated for summer 1996.

This convex/concave table, designed by Minneapolis architect Vince James, is a gem sitting delicately on its base. A steel base with black-oxide finish clamps to a cherry top. The concave steel connection helps minimize the impact of steel against wood, creating a light appearance that emphasizes the wood. The top tapers to one-eighth-inch edges. James's other furniture includes a coffee table, secretary and another small table.

UNEQUALED SYSTEMS

Unique **Carlisle** Roofing Systems... People... Working For You

By specifying a unique Carlisle commercial/industrial single-ply roofing system, such as our Mechanically-Fastened System, you benefit two ways. First, you are the beneficiary of a first-class system, and secondly, you have Carlisle's unique team of design, research and quality control people working for you.

Carlisle's focused design staff produce user-friendly specifications and details and supply in-depth systems' information for you. One mission of Carlisle's talented research personnel is to make sure all products work in harmony within the system, making your job easier.

Hot off the presses

The Ecology of Commerce

In *The Ecology of Commerce: A Declaration of Sustainability*, Paul Hawken examines the negative impact a profit-driven economy has on the environment. Not necessarily against big business, Hawken believes commerce and ecology can and should work hand in glove. While Hawken tells us that every commercial venture in the industrial world degrades the environment, he calls for a system where the opposite is true, where our search for commercial profit works toward sustaining the planet. The author offers suggestions for reducing environmental degradation and encouraging green progress. Hawken is the author of *The Next Economy* and *Growing a Business*, and co-author of *Seven Tomorrows: Toward a Voluntary History*. He has founded several businesses, including the Smith and Hawken catalog company. *The Ecology of Commerce* is published by HarperBusiness, a division of HarperCollins Publishers.

Now in a revised edition, *Architects on Architecture: New Directions in America* has become a classic on modernism since its publication in 1966. The book is unique in that the story of modernism is told in the voices of architects who made 20th-century modernism a driving force that has affected all aspects of our daily lives. Author Paul Heyer's interviews reveal the philosophies, values and aesthetic sensibilities of more than 40 architects. Among those featured are Ralph Rapson, Walter Gropius, Paolo Soleri, Le Corbusier, Mies van der Rohe, Eero Saarinen, I.M. Pei, Frank Lloyd Wright and Buckminster Fuller. President of the New York School of Interior Design, Heyer is the former dean of the Pratt Institute's School of Architecture and is the author of *American Architecture: Ideas and Ideologies in the Late Twentieth Century*. *Architects on Architecture* is published by Van Nostrand Reinhold.

FRANK LLOYD WRIGHT AND JAPAN

Frank Lloyd Wright and Japan, by Kevin Nute, examines the influence Japanese art and architecture had on the architect's early work by looking at eight specific art forms, from woodblock prints to publications and individual buildings. Through text and graphics, the book compares Wright's perception of traditional Japanese art and architecture to his own organic design principles. We learn how Wright brought together disparate forms and ideas to create a synthesis that became uniquely his own. Wright himself, however, would beg to differ with the author and other theorists, claiming that Japanese art had no direct impact on his creative process. Well, see for yourself. Nute has practiced architecture in London, Hong Kong and Singapore, and was a Fulbright Scholar at the University of California at Berkeley and a Monbusho Research Scholar at the University of Tokyo. *Frank Lloyd Wright and Japan* is published by Van Nostrand Reinhold.

As highways and suburban office parks continue to swallow the landscape, the need for sound urban planning is ever more relevant. In *Urban Design: The American Experience*, Jon Lang calls attention to the efforts of designers who are creating livable, enjoyable and inspiring built environments. Urban design, he says, must be user oriented to achieve a higher quality of life in our cities. The author reports on the 20th-century's major urban-design efforts, from the City Beautiful movement through post-World War II urban design, examining the key factors that led to the development of our cities in the modern car-dominated era. Lang is a professor of architecture at the University of New South Wales in Sydney, Australia and director of urban design of the Environmental Research Group in Philadelphia. *Urban Design* is published by Van Nostrand Reinhold.

Designing America: Creating Urban Identity, by Joel B. Goldstein and Cecil D. Elliott, discusses how urban spaces are designed, financed and developed in America. More than 200 photographs, illustrations and maps accompany numerous case studies of successful projects that have transformed underutilized and sometimes hostile urban areas into vibrant spaces. The authors zero in on the small projects that often get overlooked. Historic perspectives are weighed against current conditions and future needs as the authors suggest ways to improve the urban environment. Goldstein is a professor of city and regional planning at the School of Urban Design and Public Affairs at the University of Texas at Arlington. Elliott is emeritus professor and former chair of the architecture and landscape architecture department at North Dakota State University. *Designing America* is published by Van Nostrand Reinhold.

Frederick Bentz A retiring architect looks back on 46 years in the profession

Things change. Some things, however, stay the same. Frederick Bentz, a founding principal of the Minneapolis architectural firm Frederick Bentz/Milo Thompson/Robert Rietow, Inc., believes young architects still need basic training that can only be gained through a strong mentor.

"The mentoring process is going to remain important to young architects," says Bentz, noting that formal academic work is only the beginning of the architectural training process. "Young architects must spend time with those architects who have contributed to the profession."

Now retiring from a profession that has seen enormous changes since he graduated from the University of Minnesota's architecture program in 1948, Bentz cites Minneapolis architect Robert Cerny as one of the strongest influences in his career.

"Cerny was instrumental because he was one of the first in the community to emphasize the need for strong marketing," Bentz says.

Back in the late '40s architecture was just coming out of the doldrums of the Great Depression and Second World War. Marketing was not a paramount business consideration because there was nothing to market. The construction industry had virtually screeched to a halt with the 1929 stock-market crash. Architects found some work through federally sponsored programs, but for the most part they had lots of time on their hands.

Bentz says that after the war, architectural firms were fairly casual. Business was drummed up through word of mouth. Clients, who hadn't built a school or office building in 20

years, lacked sophisticated knowledge of the building industry. For that matter, many firm principals lacked real experience.

All that was to change. Modernist principles, espoused by the likes of Mies van der Rohe and Walter Gropius, came ashore. A new prosperity was bubbling up and the

building industry took off.

"We didn't have specific training to respond to modernism at the time," Bentz says.

He notes, however, that U of M was one of the first architecture schools in the 1940s to abandon the Beaux-Arts system and embrace modernism. Minnesota fully endorsed modernism with the arrival of Ralph Rapson as head of the architecture program in 1954.

Bentz began his career with one of the Twin Cities' oldest and most established

firms, Long & Thorshov, which at one time had been known as Long & Kees and eventually became Thorshov & Cerny and then The Cerny Associates. During the late 1940s, Bentz says, Cerny was conducting a "one-man crusade to develop an interest in contemporary architecture in the Twin Cities."

Bentz worked in Cerny's office under a number of positions. Finally in 1971, he teamed with Milo Thompson and Robert Rietow to form their own firm.

The design process, Bentz notes, has become more complex over the years. The days of the master architect are long gone. Instead, the design team is comprised of a series of experts, from architects to engineers, energy-efficiency experts, lighting consultants, contractors and others. "Buildings have become much more complex because of advanced technology," Bentz says. As a result, many firms are forming collaborative teams with other architectural firms and engineers to maintain a competitive edge. Firms with different strengths complement each other on projects.

The down side of a more diverse design team is that the architect can get lost in the shuffle.

"Things will continue to get increasingly competitive over the years," Bentz says, "and we need to find ways that will ensure architects of their appropriate role in the design/construction process. We need to continue to expand our skills to lead the management team."

Despite the move toward specialization and collaboration, Bentz says that the architect is still the generalist on the design team, the one who has the overall vision of a particular project.

To remain competitive, the architect must look for ways to get involved in the community, business world and political power structure.

"Community service is important," Bentz says. "It can only help your practice and help increase the architect's public visibility." **Eric Kudalis**

Frederick Bentz, retiring after a 46-year architectural career, says it's important for architects to be involved in the community.

THIS BANK SELECTED US BECAUSE WE PAID HIGHER

It looks less like a bank and more like an English country manor. But the charm of the Investors Savings Bank belies the challenges its design and construction presented. Particularly to Marvin Windows and Doors.

For one thing, fast-track construction scheduling was necessary due to constantly evolving design constraints. For another, it wasn't until thermal efficiency, condensation resistance and aesthetics were factored in that wood was chosen over aluminum. Consequently, Marvin wasn't selected for the job until construction was underway, making manufacturing and delivery deadlines extremely tight.

But Marvin's biggest challenge proved to be the building's three massive window and door assemblies, the largest of which measures 28 feet wide by 30 feet high. Using a combination of sturdy Magnum Double-Hungs and French Doors, Marvin not only built them on schedule, but also engineered them prior to delivery to guarantee they would withstand the strong, prevailing winds off the lake. And, like all 177 of the bank's other made-to-fit windows and doors, they were built with features designed specifically for the project. Features such as authentic divided lites, interior windows and doors glazed to match those on the exterior and a durable, factory applied finish in two complementary colors; Midnight Teal for the sash

Big island living

Craftsmanship and a respect for nature meet in this Hawaii house

By Eric Kudalis

Life's small pleasures; life's little surprises: They make it all worthwhile. For Minneapolis architect Sarah Susanka of Mulfinger, Susanka & Mahady Architects, those small pleasures and little surprises came with a phone call from Hawaii one April day in 1990, as Minnesota's winter was still clawing on.

Eric Johnsen, a craftsman and woodworker living in Hawaii, had seen a Susanka-designed house in a building magazine. He and his business partner, Darrel Kloninger, were smitten and wanted Susanka to design a similar house for them, which they would then market on speculation. The Minnesota house they liked had plenty of windows, and they wanted the

Everyone needs to live somewhere. Unfortunately, many people live nowhere—unless you consider huddled in doorways or stints in overnight shelters as somewhere. In a nation as prosperous as the United States, millions of Americans are going without shelter. Some surveys estimate that more than 4 million people are homeless across the country. Other surveys put the figure at 7 million. In the Twin Cities, approximately 30,000 people use shelters each year. In addition, ripples from the recession leave people dangling on the precipice of being homeless.

We hear a lot about affordable housing, but defining affordable housing is tricky business. Individual circumstances vary. Broadly, affordable housing costs no more than 30 percent of a renter's or home owner's income. Thirty percent can get you a lot if you make \$100,000 a year. For those living at or below the poverty level, 30 percent can get you a hole in the wall. As federal support for subsidized housing

Housing crunch

dwindled through the '80s, the nation's poor coughed up a higher percentage of their income on housing—sometimes 50 percent or more.

Recently the Federal National Mortgage Association (Fannie Mae) announced that it will boost its financing of homes for low-income families, minorities, immigrants and people with needs to \$1 trillion by the year 2000. Nearly 10 million people stand to benefit under the new plan dubbed "Showing America a New Way Home." A government-chartered private company, Fannie Mae has provided financing for millions of homes since its inception in 1938.

The housing crisis, however, goes beyond accessible mortgages with low down payments. Many people are not in the position for any kind of housing loan when they lack a decent job that pays a living wage.

Henry G. Cisneros, Secretary of the U.S. Department of Housing and Urban Development (HUD), is readdressing housing issues overlooked during the Reagan-Bush years. Cisneros recently talked to a group of 250 architects at a national conference called "Secure and Livable Communities: Crime Prevention Through Environmental Design."

"At HUD," Cisneros said, "we recognize that to revitalize public housing it must be redesigned—architecture and environmental design make a profound difference in people's lives....they are absolutely crucial for improving the general quality of life and for lifting the human spirit. Efficiency and beauty, functionality and aesthetics—these have always been the twin purposes of good design."

Cisneros is right about good design. Good design raises the human spirit, just as bleak design pummels the spirit. The failures of such large-scale public-housing projects as Cabrini-Green in Chicago and Pruitt-Igoe in St. Louis are attributed, in part, to bad design, design that relegates the poor into urban ghettos of despair.

Cisneros further says that good design alone cannot solve housing problems. Solutions must be tied with economic and social changes—"community empowerment," as President Bill Clinton says.

Traditionally, Minnesota architects have been involved in designing low- and moderate-income housing. *Architecture Minnesota* recently held a round-table discussion (see page 36) in which architects considered their roles in designing affordable housing. Many are doing what Cisneros wants—designing housing that raises the spirit. But as one round-table participant stresses, there isn't much architects can do to lower construction costs without jeopardizing quality.

Eric Kudalis

Decent, safe, affordable housing requires more than good design and the good will of architects. It requires money—money that is in short supply. Architects don't hold the purse strings. To have impact, architects must work closely with government agencies, nonprofit organizations and neighborhood groups to address housing needs and scout different venues for funding. Architects must be more than designers—they must become advocates for affordable housing and a voice for the poor.

U.S. Department of Agriculture

Northern Crop Research Center, Fargo, ND

"We wanted...(the structure) to tie into other buildings at the University, so we used a color of brick found on the adjacent structure, plus two other colors predominant on campus. The patterning of the brick draws from the Scandinavian tradition of enlivening utilitarian structures with color and pattern, creating visual interest during the long northern winters."

– Loren Ahles, AIA, Project Designer
– Hammel, Green and Abrahamson, Inc., Minneapolis
Photography: Tom Hlavaty

Burnsville Marketplace – Burnsville, MN

"Brick was chosen as the primary facing material...for all the long established, practical advantages; durability, low maintenance and cost effectiveness. Equally important...were the major aesthetic benefits...Brick was consistent with the surrounding context. The inherent design flexibility of unit masonry coupled with the available ranges of color and texture ensured us that Burnsville Marketplace would indeed age with interest."

– John Gould, AIA, Director of Design
– KKE Architects, Inc., Minneapolis
Photography: Lea Babcock

Warroad Public Library – Warroad, Minnesota

"We selected brick for this project both to emphasize the horizontality of the design and to root the building firmly into its site. Brick connotes permanence and stability, while its modular form gives pattern to otherwise unrelieved surfaces."

– Sarah Susanka, AIA– Mulfinger, Susanka & Mahady Architects

By Gayle Worland

Businessman, author, preservationist, publisher—James Perry Cramer is astonishingly versatile. And that's what he wants American architects to be.

In the decade since he left Minneapolis for AIA headquarters in Washington, D.C., Cramer has seen the role of the architect become more diversified, more challenging and potentially more rewarding. "The pace of change is so rapid today," says Cramer, who on Sept. 1 will end his six-year tenure as executive vice president and CEO of the American Institute of Architects. "Flexibility is very important."

J I M C R A M E R

The 46-year-old Cramer moved to the capital in 1982 after four years as executive vice president of AIA Minnesota. After transforming the *AIA Journal* into *Architecture* magazine and launching the highly successful AIA Press, he served as the AIA's senior vice president and deputy CEO from 1985 to 1988, when he moved into the institute's top spot. Now, as winter sunlight floods through the windows of his spacious Washington office, Cramer speaks eloquently about the future—the future of architecture, the AIA and his own career. Much of this vision is expressed in *Leadership in Architecture*, the working title of his first full-length book, to be published in September. The book will feature "successful practitioners" of the profession, he says, including several renowned Minnesota architects.

It will also include material from Cramer's monthly column in the AIA *Memo* newsletter. One excerpt helps summarize his overall philosophy: "Our times call for miracles as we try to be better stewards of our greatest resource—the planet on which more and more of us dwell," he writes. "And who is in a better position to make the unusual, the extraordinary, the miraculous into standard practice if not the architect working with

planners, other design professionals, public officials and, most importantly, the public?"

"Architects are individual thinkers, and they like their independence," Cramer explains. That entrepreneurial spirit is crucial in today's economic climate—but so is a dedication to cooperation. Architects have to build "key community relationships...and be a real business partner with the community and the client," he says, adding that it's the architect that people are looking toward to take more responsibility. With more responsibility come better fees, better compensation, more security and less uncertainty.

"With a broader interpretation of services that architects can provide, architecture becomes placed at the center rather than the margins of the construction industry," he explains. "This becomes critically important to the future of the profession."

Although "enlightened" clients understand the value of good design, architects likewise must respect the client's needs, and create a building that can adapt to its occupants for decades down the line. "We used to recognize individual buildings as if they were sculpture," Cramer explains. "The client wants a space to conduct business. From the client's point of view, architecture is a means to an end." So the architect must provide a solution—as well as a vision.

Of course, money is a factor. "Profit," Cramer insists, "is not a dirty word." Today's successful architectural firm is more capital intensive (and less employee intensive) than in the past. For example, while only 25 percent of firms had computers a decade ago, he says, today 98 percent are dependent on computer technology.

To excel, today's architects must heed four principles: stay optimistic, be innovative, maintain solid business practices and foster good relationships within the community.

**AIA Minnesota's
60th Annual Convention & Products Exposition
Minneapolis Convention Center
Minneapolis, Minnesota**

Architecture Minnesota recently talked with Sandy Ritter, 1994 president of AIA Minnesota and a founding principal of RSP Architects, about architects' fees. As we learn, architects' fees are based upon diverse factors, which vary from project to project depending upon the architects' level of involvement, the project type, collaborating consultants and years of expertise.

How do architects determine fees?

Typically architects look at the level of involvement. For instance, if the architect is just doing programming, the fee is structured differently than if the architecture firm is involved all the way through a project, from programming to schematic, construction and interior finishes. Percentage of total construction cost is considered in determining fees. Architects also determine fees based on how many consultants are involved—engineers, lighting designers, energy-efficiency experts, etc. A firm's expertise in a particular building type also affects fees. The more complex the project, typically the higher the fee. If it's a high-design project that's going to be difficult to resolve, the fee will reflect that.

Are many clients surprised by architects' fees?

Sometimes. It depends on how often clients work with architects. A school district that hasn't built a new facility in 20 years may be unaware of fee structures. A corporate client who frequently uses architects for various facilities is more aware of fees. Most clients, however, don't understand what architects do. Architects have to do a lot of education about the various phases of the project—whether it's programming, design, construction documents or construction administration.

Are there industry fee standards? If not, should there be?

Various industries have fee ranges. The state of Minnesota has a fee guideline for state-funded architecture projects, which typically are a percentage of construction costs. Often these guidelines are outdated and don't fit into the complexity of build-

ings and the complexity of the design process. I don't think industry standards are necessarily a good idea, because a fee standard assumes a standard client, a standard project, a standard way of communicating and a standard result—and most architectural projects do not fall into that kind of an easy category. One project may be relatively simple on a complex site—you may have wetland issues, for instance—so the building may be simple but the resolution of the project difficult. The fee needs to reflect that range of difficulty.

Do fees depend on the kind of client? If a nonprofit organization wants to build a community clinic, will you give it a better deal than a for-profit group?

That partly is philosophical. Being nonprofit isn't as much a factor as financial capability. There are very large nonprofits. We've done pro-bono work for a nonprofit organization to help it get underway. If it's a lucrative nonprofit, we're not as apt to lower fees because it doesn't have the same financial needs.

What is a client getting by hiring an architect to design his or her house? Are they getting a better deal?

If somebody's happy with a builder house, we'll usually tell him to go find a good builder to do that house. If they want something that's more personalized or have strong environmental issues they want to work into the house—natural light—then I think it's valuable to have an architect involved. The fee often runs 10 to 15 percent. With an architect-designed house, you're getting long-term values and something that is more closely aligned with your individual needs and tastes.

Come home to quality.

Andersen

Integrity.

Product: Andersen® DC Tilt-Wash Double Hung window and transom combination, with divided light grilles and High-Performance™ glass.
Builder: Burkhartzmeyer Construction.
Dealer: Lamperts, Faribault yard.

To learn more about how the quality of Andersen teamed with the **pmdifference** can help you with your design challenges, call 612/631-2211, Wats 800/672-0933 or 800/328-0848. Brad Gregerson, CSI Architectural Representative.

Question?

How do you maintain the design integrity of a home built in 1881 and take advantage of today's technology?

That was the problem that faced the administration of Shattuck – St. Mary's School in Faribault, when they decided to rehabilitate the Director of Admissions building also known as "The Old Rectory." The answer: they used Andersen® DC Tilt-Wash Double-Hung windows with patented Wash Assists that allows both sash to tilt-in for easy cleaning and **pmd's** unique RETROFITTER capabilities.

This window also fights the weather with both sash weather-stripped on four sides, creating a tight seal all the way around. The results: was a combination of Andersen® beauty, style, energy-efficiency and convenience.

Pacific Mutual Door Company has created a team – Andersen's beauty and quality, and our professional, well-trained, dedicated sales representatives and architectural specialists. We back that team with highly skilled, veteran personnel in our Andersen setup shop to insure that the products we provide meet the most demanding specifications. That's the **pmdifference**.

**Frank Lloyd Wright:
Architect
The Museum of Modern Art
New York City
Through May 10**

Public interest in America's most famous architect shows no sign of letting up as books and museum shows continue to chronicle Wright's work. With more than 500 works, this exhibition reveals the depth and range of expression in Wright's architecture, offering an opportunity to explore every phase of his 70-year career. The show presents 190 of Wright's buildings, from the famous to the obscure. Included are 350 original drawings, 30 scaled models, six full-scale wall constructions, 126 photographs, and selections of such architectural fragments as windows and decorative concrete blocks.

For more information, call the Museum of Modern Art at (212) 708-9750.

**New Works by James Henkel
Carolyn Ruff Gallery
Minneapolis
Through May 14**

Light and dark suggest an interplay of image and reality in Henkel's photos. The natural, real world of sand, snow, light and water are recorded in an elusive, ephemeral moment evoking subtle meaning. Henkel has taught art at the University of Minnesota since 1976. His work is found in the collections of the Walker Art Center and the George Eastman House Museum in Rochester, N.Y.

For more information, call (612) 338-8052.

**Steven Erickson: New Paintings
Carolyn Ruff Gallery
Minneapolis

**Design and Human Bodies
International Design Conference in Aspen
Aspen, Colo.
June 12-17**

The 44th annual Aspen design conference will explore the relationship between design and the human body. Chaired by fashion designer Alexander Julian, the conference breaks into four themes: Design of Human Bodies; Design for Human Bodies; Design with Human Bodies; and Design Instead of Human Bodies. The diverse roster of speakers includes Dr. Deborah Prothrow-Stith, assistant dean of the Harvard School of Public Health; Witold Rybczynski, architectural critic and author of *Home*; Gwen Verdon, dancer and choreographer; and Peter Schneider, president of Walt Disney Feature Animation. As usual, the morning and evening will contain general presentations, with workshops and small-group discussions held in the afternoon. The popular "Anatomic Cafe" will allow informal conversations between the guest speakers and the conferees. The film series, organized by the Film Society of Lincoln Center, will pursue how the body is used in cinema.

For registration information, call (303) 925-2257.

hibit of his paintings. Erickson recently received a master's degree in fine arts from the University of Iowa.

For more information, call (612) 338-8052.

**Art as Activist: Revolutionary
Posters from Central and
Eastern Europe
Frederick R. Weisman
Art Museum
University of Minnesota
Minneapolis Campus
Through May 22**

On display are 82 posters—many retrieved directly from public sites during eastern and central Europe's recent revolutions and political upheavals. Most of the posters were made in 1989 and 1990, both by prominent and unknown artists. The posters provide insight into the region's complex social and political

changes. A 160-page illustrated catalog accompanies the show.

For more information, call (612) 625-9494.

**1994 Summit Hill
House Tour
St. Paul
May 22
Noon-6 p.m.**

Seventeen houses in one of St. Paul's most historic neighborhoods will be open to the public. Among the previewed houses will be the James J. Hill house. Many of the houses have been restored and updated for modern uses, while others have been renovated as they were originally built. Tickets are \$8 in advance and \$12 on the day of the tour.

For more information, call the Summit Hill Association at (612) 222-1222.

Continued on page 66

same to take advantage of the Hawaii views, in this case five dormant volcanoes and 180-degree ocean views.

Susanka walked the site with her clients, making sketches and discussing how to orient the house and make modifications appropriate to Hawaii. The living room, dining room and porch would retain similar proportions of the Minnesota house, thus making it easy for Susanka to mentally visualize the house. New to the program: a two-stall stable with garage and studio apartment.

For Susanka, the commission offered a prime opportunity to revisit and revise an earlier design, and to improve upon a house she already liked, but about which

Kevin Ireton, Courtesy Fine Homebuilding

This Prairie-style house in Hawaii is a reworking of an original house Sarah Susanka designed in Minnesota. Indigenous lava rock anchors the structure to its 10-acre site. Approximately 108 windows take advantage of the views that include the ocean and five volcanoes.

she had some qualms. For instance, in the Minnesota house Susanka was dissatisfied with the fireplace, which she says looked like a huge exclamation point over the 2-story living-room wall. Such qualms she could now change.

Over the next several months, Susanka went about reworking her designs. She decided to orient the entry/dining room axis toward Maui, which projected the image of a mountain. The cross axis through the porch aligned with Hualalai, one of the dormant volcanoes. She removed the basement, broadened the eaves to further reflect this expansive island landscape, lowered the roof pitch and moved the guest room to the main level. The second level became a single all-purpose "special-interest" room, which overlooks the living room and kitchen. As for that fireplace, she designed the wall above the mantle to accommodate art—in this case, a 17th-century Chinese scroll. Wood trim defines the scroll's exhibit area.

Susanka was aware that a great house needs more than great views. Rhythm, scale and detailing play prominent roles. Window groupings, such as the upper transom windows clustered in threes, further enhance the house's unified logic. When windows wrap around corners, rooms seem bigger because of multiple views. With 108 exterior windows and doors, the 3,600-square-foot house draws the island in from all angles. Views also cut through the house, bringing into focus other rooms and exterior

vistas. In the informal eating area, for instance, you can look through the hallway to the living room and out the corner window to Haleakala.

Varying ceiling heights add intimacy and grandeur when necessary. The highest ceiling is in the living room. In the kitchen, which is a small room with a high ceiling, a lattice hangs above the kitchen island to provide shelter and more intimate scale without obstructing views of the upper level, which overlooks the kitchen.

Susanka chose materials that relate the house to its site, and relate inside to outside. The exterior stone base is indigenous lava rock that anchors the red-wood-sided structure to its locale. Rough-textured, 2-by-2-foot slate tiles covering the entrance patio continue inside the foyer and hallways as 1-by-1-foot slate tiles. Polished granite, which complements the slate tones, highlights the fireplace and special display niches. Extensive white-ash banding unifies the different rooms while creating a horizontal order to the untouched landscape beyond. Other wood detailing includes red oak for floors, doors, cabinets and select light fixtures. Art-glass marking the front door continues the horizontal patterning established by the trim.

For Susanka, the opportunity to rework an original design proved a creative exercise in combining architecture, art and craftsmanship with nature. That's prime real estate.

A 17th-century Chinese scroll hangs above the fireplace (opposite) in the living room. Susanka uses light wood trim to create unity and balance throughout the house. Art glass in the foyer (top) is designed by Michaela Mahady. Exterior slate tile is used inside in smaller dimensions. The eating nook (above) offers informal dining and panoramic views.

T E C T O N I C L I V I N G

David and Patty Schall were always hobby-house browsers. On Sunday afternoons, they would poke around open houses to see just how green the grass was over the fence. Usually what they saw never particularly clicked with them. At least not until they happened upon some vacant land overlooking a pond in Edina. They settled on a corner of an 11½-acre tract, and the design wheels started turning.

David, an executive recruiter, began searching for an architect the way he would place a job candidate. The couple interviewed numerous architects and firms before settling on Meyer, Scherer & Rockcastle of Minneapolis to design a new house for themselves and their two daughters.

"We wanted an architect because we wanted some-

thing unique," the Schalls note. "We knew we didn't want a standard-issue house."

Tom Meyer of MS&R promised them something unique—and then some. But what that nonstandard-issue house would look like was unformulated.

"We left the concept really open in the beginning," the Schalls say. "We gave ideas and concepts but no specific design look. We wanted the architects to feel invested in the project and go with their own flow."

This, of course, did not mean that the architects had free reign. David and Patty were part of the design process all the way. "We weren't passive," David says, "we did some research."

To make the work flow smoothly, they divided the chores: David was in charge of financial and mechanical considerations, and Patty had a stronger say in aesthetic issues. To start, they filled out a lengthy questionnaire that touched on everything from lifestyle to general feel and attitude about a house. When Meyer presented them with design concepts, they responded with four-page, type-written reactions. Meyer, in turn, would go through the responses point by point.

Function, structure

and beauty combine

in this award-winning

Edina house designed

by Meyer, Scherer &

Rockcastle

Red trim contrasts with the dark-stained cedar siding (above and right) of this L-shaped Edina house overlooking a pond. Steel beams support the curving corrugated-metal living-room ceiling (opposite).

Lea Babcock

This, of course, reinforced their already strong trust in Meyer, Scherer & Rockcastle.

"You can't pick at everything," David says. "You have to trust sometimes, and we had an easy time trusting the architects."

Meyer says that several factors played into the final design. He was inspired by the site and the potential to capture the natural amenities of pond and trees on an L-shaped lot; he worked out his interest in the tectonic, how things are put together; and he layered the house with a rich palette of details, materials and views.

Like industrial architecture—bridges, barns, factories—the house expresses its structural forms and materials honestly and cleanly. Beams are beams, moving from inside to outside. Like Japanese architecture, the house has a serene, stylized expression of its structural functionalism.

Meyer chose an array of materials that gives the house its intricate detailing and layered richness. The exterior is sheathed in a dark-stained cedar with red trim, with other structural elements rendered in stone, lead-coated copper, teak and mahogany. Inside, several different woods, including cedar, fir and oak, combine with stone fireplaces, granite tiles, marble, steel, stainless steel, perforated metal and particle board.

The outdoor connection is omnipresent inside. A stone living-room fireplace wall moves from inside to outside. A kitchen counter top continues outward as an exterior ledge, visible through glass-walled cabinets. Interior beams become exterior arbors. A first-level exercise room adjacent to the master suite extends to an arbor, where a path passes alongside the pool to a gazebo.

Meyer says that all this contributes to a strong spatial quality enhanced by visual links of "seeing the same view in a variety of ways. Axes and spaces pierce the house, views pierce the house. The house is about having a sense of space unfold around you and being presented with a view in front of you."

The house is also about a total approach to design. Too often architecture, landscaping and interior furnishings are designed separately. Here MS&R's in-house interiors department was at work during the design process,

while landscape architect Herb Baldwin shaped the property. The result is a house that is complete, inside and out.

As active participants, the Schalls scouted out some of the building products that made the final cut. David, for instance, found the window products and wooden flooring, as well as suggested the perforated-metal living-room ceiling and coral-reef aquarium, which he calls "living art" with its colorful array of tropical fish and coral.

The dust has settled since moving in last May, and the couple has had plenty of opportunities to discover even more about the house. "As you live in the house longer, you go through a process of discovery," Patty says. "We've found lots of little things that give us pleasure. I love being able to experience the architecture."

Eric Kudalis

Lea Babcock

The informal dining area (opposite) is just off from the kitchen and family room. Views connect with the formal dining room beyond. Several different woods, stones, marble and metals offer a rich and diverse interior palette. The dining room (left) is in view of the living room. Tom Meyer says that one of his goals was to create a diversity of vistas, "seeing the same view in a variety of ways." The upstairs hallway (above) connects with the children's bedrooms.

Lea Babcock

The Loken residence in Duluth is a whimsical combination of architectural forms. The study tower (above and opposite right) juts out from the main house. An arched breezeway (above and right) connects the garage to the main house.

Peter Karze

We stood in the driveway, savoring our first view of the little complex of buildings—house, stable, study tower, garage and sauna—that Duluth architect David Salmela of Salmela/Fosdick designed for Cal and Amy Loken on their hillside site overlooking Lake Superior. It was well below zero and the snow crunched underfoot with a polystyrene squeak. The air was white with suspended ice crystals switched electric by the weak winter sun, which hovered low in the pale, robin's-egg blue sky. My lungs burned with every breath. But I couldn't help but smile.

The buildings, smothered beneath three feet of snow, nestled comfortably into this seemingly endless Dr. Zhivago landscape of spruce and popple. While individual elements looked familiar—I recognized the ghostly form of a loft, the traditional Norwegian storage house, mixed in with Robert Venturi-inspired cut-out classicism, blended with the everyday north-woods vernacular—they were held together with a quirky, idiosyncratic and unique hand.

This was architecture with a twist.

It's difficult for a building to have a sense of humor. Even the best Ole and Lena jokes grow stale after the first telling, and since a building is used day in and day out for decades, overtly funny design appears flippant and frivolous to its users, if not downright disrespectful. Architects who successfully infuse humor into their architecture don't go for the belly-laugh of the one-liner, but the gentle passing smile of whimsy, a quality that, like any good humor, wriggles free when pinned down for analysis.

At the Loken residence, various twists and quirks, exaggerations and distortions—a slanted window mullion, asymmetrical trim framing a brightly painted door—made me smile. These same mannerisms might have appeared precious and arbitrary in different hands, yet Salmela's whimsy seemed grounded in something deeper, something not immediately apparent.

Norwegian whimsy

Salmela Fosdick, Ltd., designs a compound of buildings for a North Shore residence

A main house and several secondary buildings form a small compound (plan below). Included on the property are the stables (opposite) and sauna (above). Strong roof forms (top) add to the complex's visual strength.

We stepped into the first building in the complex, the stable. It was warm with the horses' body heat and moist from their breath. The air was rich with the mingled odors of straw, hay, manure and fresh-cut pine. A black cat with green eyes blinked lazily at us from a dusty pool of sunlight, which barely penetrated the heavily frosted French doors salvaged from the original house. It was a timeless scene. We could just as easily have been in 15th-century Norway as 20th-century Minnesota.

This stable epitomizes Salmela's approach to design. First he organizes the simple, ordinary pieces of the program, in this case three horse stalls, a tack room and a hayloft, into a simple, no-frills rectilinear plan. Then he massages ordinary building materials—cedar siding, pine planks, salvaged windows and site-built wooden trusses—into a unique and magical form by tweaking the conventions of construction: plate lines conventionally are horizontal, but by tilting the hayloft's plate line at three different angles Salmela causes the trusses to rise and fall, creating a roof form that is vaguely horselike, a Trojan stable that echoes the form of its function. Salmela then carefully locates windows to echo and reinforce the form, bumping out a window seat to create a human place in this otherwise horse-scaled design. While the form is unusual, even weird, it's also instantly recognizable within the culture as a stable.

The plan is simple, the materials are simple and the construction technology is simple, but the whole is complex. A prefab metal Butler building could have fulfilled the same function for less money, but according to Salmela, when Cal Loken first saw the drawings, he asked "how can we *not* build it?"

Salmela wasn't so convinced. "Initially I thought it was too strong a form," he confesses. "Until it was built I was scared to death. The siding, the color and the windows all bring it down in scale."

"It's welcoming," observes Amy Loken. "It looks like something alive."

Maple-veneered plywood frames the fireplace and stairs (above and right).

Peter Kerze

"It's just like a Saint Bernard dog, it's so lovable," laughs Salmela. "It protects the house."

We continued touring the complex, awed by the view across the iced-over void of Lake Superior from the study tower, basking like cats in the sun in the dining room, lounging on the sauna bench and watching clouds pass through an ancient stand of white pines.

I stopped in their daughter Michelle's room, fascinated by the built-in bed Salmela designed. Tucked in under the roof, it lifts the mattress onto a platform and frames it with a whimsical proscenium cut out of three-quarter-inch, maple-veneer plywood. A curtain would make the bed completely private. Surrounding the bed are built-in drawers and shelves for secret treasures, and overhead a small roof window frames a private view of the stars.

This child-scaled bed "room" is every child's dream, a private little world far from the clumsy intrusions of adults. This shared human longing stretches back through Victorian four-poster beds to the ancient boxbeds of the Lokens' Norwegian ancestors.

For lack of a better word, let's call this shared human longing an archetype. Salmela's design satisfies the archetype of an enclosed bed completely, thus its specific form can be quirky and whimsical, with wild curvilinear forms, and still feel utterly reasonable. The passing fancy of Salmela's whimsy is deeply grounded in ancient archetypes: Michelle's enveloping boxbed; the stable's timeless warmth; the sauna's tentlike roof. These archetypes give the house its depth, and Salmela's whimsical "free elements" simply counterbalance the otherwise bleak, brooding, silent landscape.

"You have to earn the right to be whimsical," argues Salmela. "You have to pay respect first. You have to first understand the land, then the context of the environment, the terrain and the vegetation. You have to respect the old house. Only then can you start to introduce whimsy."

The Loken residence is such a complete composition, a complex, integrated whole woven together out of dozens of smaller, archetypal experiences, that it comes as a surprise to learn that the house isn't all new construction, but the renovation of a 1910 bungalow with its own rich history. A legend that Caruso, the famous Italian tenor, sang in this house has been passed along from owner to owner through time. Whether new or old, each unique piece in the complex, each building, each room, can stand alone as a complete essay, yet the pieces are so interconnected that the whole is far greater than the sum of its parts.

Whimsy holds it all together.

"The strongest part of this whole complex is its entirety," says Salmela. "All five structures whimsically become one statement. Maybe the whole humor of it is that five such different structures actually do go together."

"When we first met, my first priority was that this should be fun," Amy says. "We had fun doing it, and that made all the difference."

Robert Gerloff is an associate with Mulfinger, Susanka & Mahady Architects in Minneapolis.

The daughter's bedroom (above) contains a built-in bed with shelves and drawers, common in Norwegian architecture. A loft (top) is used as a multipurpose room.

The housing crisis

Minnesota architects address the diverse housing needs of the city and suburbs

Architecture Minnesota recently asked a group of architects with experience in residential work to comment upon the profession's involvement in designing affordable and middle-class housing, both in the city and suburbs.

The following is an excerpt from that conversation.

Architecture Minnesota: Who is the driving force in the single-family housing market, builders or architects?

Madson: The single-family housing market is builder-driven more than architect-driven. Part of it is just the way the land is developed. You've got a land developer who starts to form relationships with builders.

McMonigal: That's a mid-western attitude, too, in that builders control land, especially in Minnesota. There are other parts of the country where they don't control land and the traditional route in developing housing is much different. But here, every builder I know strives to get enough money to go out and buy a tract further out and have the control to develop it. It's a shame that architects aren't more involved in assisting with the development of those layouts.

AM: How do architects get involved with builders?

Carter: We're working on a house for the Lung Associa-

tion called Health House '94, which is in a development out in Chanhassen that is builder-controlled. The builder has an open mind about letting us do things that are different, like facing the garage away from the street. But it's a speculative house. It's still going on the market with all the chateau-looking houses in the development—and it's a hard sell. Architects have to add value to a property for a builder to afford our fees. If a builder is using a Xerox copy of the last plan, it's a lot less expensive than hiring an architect to design from scratch.

Berger: It's easier for the builder to produce the house. They've done it before. He'll make some modifications, but from his perspective it's a lot easier to go through that process and do minor modifications rather than make a totally new design.

McMonigal: People are getting smarter in seeing the value in design. A realtor once said to me that he couldn't believe how many people will spend 7 percent to sell their house but won't invest the same amount in good design.

Hargens: Architects need to show the public innovations that reflect different options. Part of the housing problem is that the public has monotonous options, as we see at such housing showcases as Street of Dreams. We ought to highlight the other possibilities. For instance, we recently designed a duplex for co-housing for two brothers in south Minneapolis that offers shared spaces for family get-togethers.

▼ **AM:** After World War II, there was a big building boom in the suburbs that reshaped the landscape. A lot of the housing was builder designed. Did architects miss out on the residential building boom after World War II? Historically, what has the architect's role been in designing middle-class housing?

Madson: By nature of state laws, architects have been involved in multifamily housing because the developer needs a registered professional to design it. That's presented a lot of opportunities, from senior housing to more moderate housing.

Hargens: That's interesting. State laws got us involved in the lower end—the mass housing end. The idea of the artist—and exclusiveness—got us involved at the top end. The middle section is where we seem to have the least impact.

▼
AM: How will architects reach that middle market?

McMonigal: One way is to encourage people to buy an existing house, because their dollar per square foot can get so much more. Then we can do a small addition or something, rather than trying to build a new house. As soon as we get to a new house, the construction cost is so high that it's tough to be competitive. So we turn around and try to encourage people before they buy their lot to go out and find compatible housing in an established neighborhood.

Berger: It's pretty scary for middle-class, middle-income home buyers to build a new house. It requires a sophisticated person to go out and hire an architect and try to visualize a new house.

▼
AM: Buying a new house in a fresh, clean suburb is appealing to people. Builders are savvy about advertising the amenities of new subdivisions. How do architects convince people to stay in the city, reinvest in older houses in established neighborhoods?

Berger: People are becoming more historically aware of the quality that was built into some of the housing in urban areas. There is so much variety and so much character to

a lot of these older houses, and people are beginning to appreciate that.

McMonigal: The clients that we work with who live in the city truly enjoy all the services that are nearby. There are so many features of living in the city that we really try to sell people on. But if people are sold on a new house or want bigger yards and things like that, price-wise they go to the suburbs.

Hargens: A friend recently left South Minneapolis and went to Hopkins because he and his family couldn't find the middle-class house that they wanted in the city.

Berger: It gets back to being secure, too, and knowing what you're buying. People hope they're buying a good school system and a stable neighborhood. Those are the things that are still questions in their minds when they're buying in the inner city. They're concerned about crime. Those are problems that need to be solved.

Carter: School systems and crime enter into that decision for most people before the actual physical house does.

▼
AM: Middle-class home buyers still have options: They can buy in the city or move to the suburbs. Moderate and lower-income people don't have as many options. What are architects doing today in terms of affordable housing? How do we define affordable housing?

Hargens: Affordable housing is all in your definition, according to a realtor I asked. It's everywhere from home-

less shelters through transitional housing to subsidized units to market-place rentals to your first house. Affordable housing depends on your individual circumstances.

Berger: I was working with a nonprofit organization in Mexico City recently that provides basic-shelter programs. I toured a family's house, for which the organization had offered help two years ago. The house was essentially two 10-by-10-foot concrete-block rooms with no doors or windows—but it was 1,000 percent better than what the woman and her five children previously had. It's all relative, especially when you think of a place like Mexico City where the dust and dirt and pollution are so rampant that they make people's lives very difficult.

▼
AM: There's a lot of talk of moving subsidized housing into middle-class suburban neighborhoods. Are people in the suburbs resistant to having subsidized housing in their neighborhoods?

Madson: You get out into some of the suburban areas and there is a lot of resistance. There is some legislation with federal funds tied to suburbs to provide low-income housing. If they don't, they're being cut back on federal funds. It's not the best way to approach it, because they're less than willing participants, but that's the way the government is trying to make this work.

McMonigal: I'd like to see more suburban developments with low-income housing because that makes for strong neighborhoods. When you

have a mixed neighborhood you can suddenly continue to support services, whether it's the dry cleaner, the grocery stores, whatever. As soon as you go strictly to a low-income cluster, then you start losing all your services, your small businesses and other things that make a neighborhood healthy.

▼
AM: Is some of the resistance to subsidized housing in the suburbs a failure to recognize that poor people are in the suburbs? Or are they afraid that this will bring undesirables to the suburbs?

McMonigal: Both. We worked on a shelter for battered women and children that took two years to get approved, and it was a small, low-density project. No one wanted to face the fact that there are needs and problems out there.

▼
AM: Which areas of the housing market do architects most critically need to address today?

Madson: We have to include all markets in what we do. There's a role for doing large homes. There's a role for doing singular, very basic shelters.

McMonigal: The general public doesn't realize that architects do more than just a building. Our work goes beyond that. It's not to say we can solve problems about subsidizing housing and issues like that, but I think we look for a broader solution than just strictly a building.

Should middle-class housing achieve high-style design?

By Frank Edgerton Martin

Photography by Christopher Faust

*Garage Sale,
West Des Moines, Iowa, 1993.*

The historian John Stilgoe wrote that gnomes, dwarfs and other lawn ornaments can be traced to Roman gods and medieval beliefs in animism in the forest. Today, mass-produced figurines, home-planted foundation shrubs and plastic flower pots are important to creating a sense of suburban identity and ownership after the sod has been laid. Outside this garage sale, we see two waif figures and a goose—all molded concrete. A weeping spruce adds flair to an otherwise traditional palette of shrubs. The garage wall reveals vinyl siding, vinyl brick and a light fixture that was probably standard in the builder's package. Across the street we see such historicist, mass-produced elements as the Georgian-style porch on the white house and the Palladian window in the gable on the brick-faced house.

The whole mechanism of the house industry is geared to sell new ready-built homes, with the result that for the seller, who passes on the risk, the long-run endurance of the home is of negligible concern. From a merchandising point of view, a house is a brightly painted commodity with shining gadgets and gleaming equipment to catch the eye of the prospects.

—*The Book of Houses*, by architects John P. Dean and Simon Breines, 1946

The Parade of Homes, sponsored by the Builders Association of the Twin Cities this spring, features 508 model homes in such high-growth suburbs as Woodbury, Lakeville and Prior Lake. For every architect-designed house, approximately 100 such builder's houses exist; these streets and neighborhoods of builder's houses will one day serve as the legacy of American landscape ideals in the 1990s.

This year's Parade of Homes showcases models ranging from \$63,000 to \$925,000. The majority of these houses are marketed to middle-class, first- and second-time home buyers, with prices ranging from approximately

o f r e a l i t y

\$90,000 to \$220,000. Simultaneously, the Fourth Annual Reality Home Show displays 40 model houses priced under \$200,000 that meet the “real” budget of average buyers.

The midrange houses featured here were designed by builders; the architects who signed the drawings played more of a decorative than a conceptual or programmatic role in the evolution of the product. The façades—“contractor historicism”—are historic tidbits draped over middle-class houses with aspirations of greatness.

Although architectural training encourages one to create original buildings or vital public spaces, such lofty ideals are alien to the builder who considers the houses in his spring line-up as “products.” Architects and landscape architects, in fact, have little influence over the development of these new environments.

Many contractors market themselves as custom builders. In truth, there is far more mass production than custom design in midrange housing. Buying one of these houses is similar to purchasing a new Oldsmobile with various combinations of options and trim colors. You pay for an extra window on the side and a deck off the kitchen—but the deck is often necessary because many model homes have sliding glass doors off the breakfast room that open onto a perilous 15-foot drop. Many options, such as Honeywell’s Home Security

*Filling in the Old Farm,
Brooklyn Park, Minn., 1992.*

In the winter of 1991 the only completed house was the one on the left. A year later, a new house had appeared. Probably built by the same contractor, both houses include brick wainscoting on the garages. The house on the left has a more “European” theme with its arched window. The house on the right, with its implied front porch, reflects the “country” packages that many developers offer as a design option. The two houses frame an original farmhouse with its mature trees and outbuildings. Farming ceased several years ago with the advent of growth and increasing land values.

 Reality Home Show,
 Prior Lake, Minn., 1993.

In response to the million-dollar houses of Street of Dreams and other shows, builders have begun to showcase "affordable" housing in the annual Reality Home Show. Located close to Mystic Lake Casino, these under-\$200,000 houses are geared to newcomers who work in the job-rich suburbs of Eden Prairie, Minnetonka and Chaska. As more jobs move to the office and service parks of the freeway beltline, commuting patterns will extend far outward to rural areas.

Systems, Andersen Windows and 3M's wonder products, are made by regional companies. The process of designing, building and buying most new houses is really one of putting such pieces together from catalog.

Environmental designers who wish to change the popular tastes of middle-class suburbia must convince market-savvy developers that the input of architects and landscape architects can add profit and longevity to projects. The partnership role of designers in the product-development system at Chrysler has certainly contributed to the company's increased profitability. Tom Gale, Chrysler's vice president of design, explained in *The New York Times* recently that "design can add value faster than it adds cost."

Such business precedents are the language with which architects should market themselves to builders.

Developers are constantly seeking new ideas—and they often borrow floor plans and details from each other. There is a serious need for new prototypes. Architecture schools and design firms should provide new housing models. If these new models are cost-effective and marketable, the builders will be happy to borrow from architects.

ers value stoical regularity over flights of imagination; because the rains fall equally on all, farmers value egalitarian hard work over the elitist presumptions of birth; because they work up to their elbows in soil and manure and machinery, farmers value pragmatic hands-on skills over abstract idealism; because the midwestern soil is fertile and the rain frequent, farmers value optimism over pessimism.

These are values rooted deeply in the soil, and, Shortridge argues, sharply distinct from the values held on either coast. It is in the Midwest that we hold "the pastoral ideal—a haven midway between the corruptions of urban civilization and the dangerous, untamed wilderness." After six years of breaking the prairie sod, the Gibbs family built a 16-by-24-foot one-room house of tamarack logs from a nearby swamp, which they called home for 14 winters before post-Civil War prosperity allowed them to

build the 2-story, center-hall farmhouse we see today.

This house has five bedrooms, a small formal parlor, a winter kitchen/sitting room, a summer kitchen, and a loft for the hired hands to sleep in, a standard program for a farmhouse of its time.

This program articulates the Gibbs's values. For example, while there is a small formal parlor, indicating connection to a larger community, there is no formal dining room. Everyone gathers in the kitchen around the stove. All who come are treated equally, as part of the family.

The program also domesticates the harsh contrasts of the midwestern climate with special rooms for specific seasons. The winter kitchen conserves the stove's heat within the house, while the summer kitchen disperses the heat. A large porch will gather breezes on those breathlessly hot summer evenings, while a small, intimate parlor will gather peo-

ple around a stove on those below-zero winter nights.

The values the Gibbses placed on community, and their place within that community, are articulated in the small formal parlor for Sunday visitors and the carefully balanced and orderly façade that faces Larpenetour.

Facing the long façade toward the street also articulates the specific qualities of the setting's landscape. The façade sits square to the world, at right angles to the national grid, its long face opening to the south. Solar orientation, of course, was far more important before central heating. The Gibbses consciously created a micro-climate for the house, planting oak trees to shade the house in the summer

The 19th-century Gibbs Farmhouse (above), now used as a living museum, is a prime example of midwestern rural architecture. Interiors (opposite) replicate the era in which the house was built.

Despite the federal government's efforts to house the poor and homeless through the decades, the nation's housing crisis continues to grow

By David Anger

The importance of decent, safe, affordable housing to the stability of individuals and communities is unchallenged. Whether the community is urban or rural, housing means more than physical shelter with heat and plumbing. It is a home, and as such is a fundamental reflection of personal identity and dignity. Housing is also the beginning of self and community. In the hierarchy of human needs, shelter sits at the top.

Despite the primacy of housing in people's lives, many Americans are either on the brink of homelessness or sleeping on the streets. For 100 years policy makers have argued the merits of federal intervention as a way to resolve the housing needs of the disadvantaged. While public housing is a modern phenomenon in this country—not emerging until the mid-1930s—sentiment is widespread against it.

A decade into what must be called a housing crisis, have we given up on public housing as a viable option too early? "Yes," answers Nancy Nagler, Ramsey Action Programs. "The housing crisis is so acute that one solution isn't enough. We need philanthropic support, but the poor and the homeless also need government action."

.....
**The statistics:
many renters on
the brink of
homelessness**

Nearly two-thirds of all poor live in housing that costs more than they can afford, reports a study by the U.S. Conference of Mayors. Nationwide, one in six poor families live in dilapidated units. If the incomes of these families were supplemented to help pay their housing expenses, the total annual cost would be about \$14 billion. Although that figure is daunting, consider that every year the federal government forgives more than \$30 billion in tax revenue through home mortgage breaks allowed to middle- and upper-income home owners.

While middle- and upper-income families typically spend one-quarter of their income on housing, lower-income families spend a burdensome percentage of their income for housing. The Metropoli-

tan Council (of the Twin Cities) found in 1990 that 20 percent of renter households had incomes of \$8,000 or less. Two-thirds of these paid 30 percent of their income for rent; half spent more than 50 percent. Nationwide the situation is worse: half of the poor spent 70 percent of their income on rent.

Not surprisingly, many renters face homelessness. Estimates of the homeless population vary widely, often depending on the definition of homelessness. Last year a Columbia University study found that 13.5 million Americans have been homeless in their lives. A wider definition of homelessness—those who have doubled-up with family and friends—jumps the number to 26 million Americans. The Reagan-Bush claims that only 600,000 people were homeless during the late 1980s was recently refuted by a Clinton administration-sanctioned report, estimating that as many as seven million people were homeless during that period.

.....
**Public housing:
a victim of
perception**

Minnesota's architects have designed many sound, and sometimes even heroic, responses to the housing crisis of the 20th century. Both Sumner Field and

Cedar Square West in Minneapolis are monumental examples of public housing that continue to provide decent and affordable shelter. Today, however, most design solutions are directed toward affordable housing and temporary shelters. Efforts to house the poor have halted, not because of the design community's indifference, but because of the federal government's retreat from subsidizing public-housing programs.

This retrenchment has as much to do with perception as reality. To most affluent citizens, public housing symbolizes the failure of the American Dream. Worse yet, public housing is a constant reminder of the presence of a permanent underclass in what is mythologically regarded as a classless society. Instead of addressing the problems of social and economic inequities, the tendency in this postmodern age has been to blame the victim—the poor—who are viewed as resisting improvements.

If government-assisted shelters (a free ride in many people's view) failed to alleviate the characteristics of poverty, then the poor had only themselves to blame. In this sense, public housing was similar to other social programs, which assumed that poverty could be eliminated by cosmetically altering one aspect of life. Therefore, the widespread disdain for public housing has more to do with society's contempt for the poor than it

does with a burgeoning design consciousness. In fact, in many instances, the only architectural distinction between assisted- and private-housing projects are the occupants' incomes.

"There are public-housing authorities run so well that you can't tell it's public housing," says Richard West of the National Low Income Housing Coalition. "The perception problem we're dealing with is that if you see a well-maintained place, you don't assume it's public housing."

The history of government intervention

The federal government's response to the affordable-housing problem has been reactive rather than proactive. Social activists, not bureaucrats, have led the call for public housing since the end of the 19th century. Considered in the broadest terms, there have been five waves of government intervention in the housing arena over the last 100 years: first wave, the housing-reform movement of 1892; second wave, the New Deal responds to the Great Depression; third wave, the Urban Redevelopment Act of 1949; fourth wave, the Great Society; fifth wave, the government addresses homelessness.

The First Wave: Housing Reform Movement of 1892

The industrial revolution brought a massive influx of immigrants into America's cities at the end of the 19th century. Prompted by such preeminent reformers as Lawrence Veiller and E.R.L. Gould, Congress authorized a commission to investigate the horrible living conditions of the nation's largest cities in 1892. Slum dwellers were condemned to makeshift, life-threatening hovels. The density of New York's Lower Eastside—1,000 people per acre—exceeded that of any European or even Asian city; its closest rival was one district in Bombay.

The housing-reform movement meant the improvement of slum conditions through the establishment of minimum standards of ventilation, sanitation and density. During this era, philanthropic agencies built housing like the YWCA and YMCA in downtown Minneapolis. Also, companies constructed workers housing, such as Morgan Park in Duluth from 1915 to 1917. Apartment hotels, known today as single-room occupancy (SRO) units, sprung up around Loring Park in Minneapolis and Summit Hill in St. Paul.

**SKD Architects, Inc.
Paddock
Laboratories, Inc.
Corporate Headquarters
New Hope, MN**

This 70,000 sf facility contains their corporate offices, manufacturing and warehousing of pharmaceutical products. The stable and progressive building image for this growing company is created through the sophisticated and bold use of limestone and granite architectural precast, concrete, aluminum and glass. Steve Kleinman 612.591.6115

**SKD Architects, Inc.
Private Residence
Minnetonka, MN**

Nestled into a wooded site overlooking a pond, this home realizes the owners' dream of bringing in the outdoors by use of prairie style detailing integrating glass, stone, and wood, throughout the home, and by the creation of stepped stone terraces that emerge from the ground to become the structure. Extended roof lines create a strong sculptural play with form. Steve Kleinman, 612.591.6115

**SKD Architects, Inc.
Kaplan Residence
Minnetonka, MN**

This home sits in a wooded site with panoramic views of an adjacent golf course. Battered stone walls and base visually support the natural wood exterior and accentuate the horizontal feel of the home. The L-shaped plan naturally defines formal/informal living. Utilizing stone, several wood species, and color, the detailing further emphasizes the organic nature of the home. Steve Kleinman, 612.591.6115

**SKD Architects, Inc.
Proman Residence
Minnetonka, MN**

Responding to a "empty nest" life style all primary living functions are on the main level. The open, airy plan has the active spaces oriented to the pond at the rear of the home. Unique interior spaces are created by changing ceiling heights, cantilevering soffits, and floating wall planes. A flat barrel vault with indirect lighting runs the length of the home, emphasizing the linear arrangement of the space. Steve Kleinman 612.591.6115

Ellison
Architects

2724 West 43rd Street Mpls MN 929-2800

Poulsen Residence

Bayfield, WI

This retirement home in historic Bayfield combines the straightforward materials and simple forms of the local vernacular with the crisp detailing and pristine geometry of the classical tradition. An interior "widow's walk" overlooks Lake Superior and nearby Madeline island. Designed by Robert Gerloff.

Private Residence

On the Mississippi in Wisconsin

With stunning views down to the river from its bluff site, this river retreat is designed for informal living and comfort, with special places for writing, reading, and playing music. A third floor "sentry" functions as both a lookout and a place for introspection. Designed by Sarah Susanka and Tim Fuller and built by C.A. Johnson.

Soucheray Cabin

Crested Butte, CO

The Soucheray Cabin is located on the outskirts of an historic district of an old Colorado mining town and embraces dramatic views to both north and south. Simple, box-like forms, a steeply pitched gable roof and local materials integrate this house into the existing townscape. Designed by Kelly Davis, built by Norm Bardeen.

Wilson Cabin

Leech Lake, MN

The Wilson Cabin, sited in a swale, is lifted on stilts, giving a bridge-like quality to this retreat. Lots of wood, light, space and a porch sleeping loft characterize this design. The bridge theme returns indoors as passage between upper bedrooms. Designed by Dale Mulfinger. (Photos by S. Gilmore courtesy of Better Homes & Gardens.)

MULFINGER, SUSANKA & MAHADY ARCHITECTS, INC.

Coming Soon and in place announcements are placed by the firms listed. For rate information call AM at 612/338-6763

Private Residence

Lake Minnetonka, MN

Located on a quiet bay, this new home takes full advantage of its many views to the lake. The post and beam interior and stress skin roof allow for an open interior with exposed roof structure, nooks and alcoves for privacy, and a large screen porch for summer living. Designed by Sarah Susanka and built by Abrahamson Construction.

Sullivan Addition

Mahtomedi, MN

This lakeside summer house, which has been in the Sullivan family since 1902, had been added to in 1929 and 1963. The historically referenced 1993 remodeling updates the home for the third and fourth generations of the Sullivan family with a new infusion of light. Designed by Dale Mulfinger.

Laing Residence

Shakopee, MN

Clean lines, simple forms and a welcoming front porch distinguish this "little house in the woods." Straightforward construction, stock materials and a rectangular footprint keep the house affordable, while careful window placement and spatial variety create richness within simplicity. Designed by Robert Gerloff.

Minnetonka Transformation

Orono, MN

The owner sought a 'timeless' house that would be consistent inside and out. A central hall opens to all first level living spaces and a four-season garden room is a focus of attention. The close collaboration between owner, architect and builder is reflected in the attention to detail and quality of craftsmanship. Designed by Paul Baum.

A two-story house located on a lake in western Wisconsin. 612.439.3710

LHB Engineers & Architects American Lung Assn. Health House '94 Chanhassen, MN

This single family home utilizes design for a healthy indoor environment while minimizing construction waste and maintaining the integrity of the surrounding area. Construction features include use of low VOC-content materials; a ventilation system that provides frequent fresh air

exchanges, design for maximum use of natural light and efficient use of resources. 612.831.8971

George F. Cundy & Associates Private Residence Minneapolis, MN

Designed for a 40' wide lot in the lakes region of Minneapolis, this split entry home captures the limited views and access to natural light while maintaining the privacy desired for this inner city home. The open flowing upper level with its maple floors and woodwork serves as a live in art gallery. 612.646.3268

George F. Cundy & Associates Private Residence Stillwater, MN

Set on an open sloping lot, the rooms of this highly energy-efficient home are carefully situated to maximize views, light and natural air circulation. With the flow of spaces from formal to informal areas, a computer center and workshop under the garage, the needs of a modern family are met in this traditional country farm home. 612.646.3268

coming soon

Stamson Residence

Grand Rapids, MN

This cottage for two will take its place amongst an intimate community of lakeside homes. The community shares outdoor spaces and paths and private, contemplative views to the pristine lake beyond. Its materials resonate with the surrounding woods to create a distinctly northern home. Designed by Katherine Cartrette.

North Shore Retreat

North Shore, MN

A 1940's Edwin Lundie cabin is stripped clean of earlier additions and repositioned as the center living room of this three bedroom retreat. A Lundie sketch from the archives serves as genesis for this expanded complex of shapes, including two existing Finnish structures. Designed by Dale Mulfinger and Leffert Tigelaar.

Larson Residence

Hiawasse, North Carolina

A Minneapolis couple, looking ahead toward retirement, will be able to look back across a pastoral valley to distant mountains. The house will be clad in wood shingles and set on a stone base, and expansive decks and terraces step down the hill, making for a flexible blend of inside and outside living. Designed by Tim Fuller.

Strom Cabin

Copas, MN

Designed to fit the footprint of an existing cottage, this rebuilt residence takes full advantage of its St. Croix River setting. The house, with its intimate scale, low roof forms, stone walls and cedar shingle roof, is in harmony with the spirit of National Park Service and Wild and Scenic River guidelines. Designed by Kelly Davis.

Behr Residence

Northfield, MN

The predominantly stone and stucco exterior of this home is inspired by the English Arts & Crafts movement. The interior features such elements as reading nooks and library passages, while coffered and other ceiling variations define traditional spaces within an otherwise open plan. Designed by Joseph G. Metzler.

Benson Residence

Minneapolis, MN

This new home looks south to views of the lagoon connecting Lake of the Isles with Cedar Lake. The interior is designed as a backdrop for the display of large contemporary paintings and sculptures, while the exterior is scaled and detailed to blend with its neighbors. Designed by Sarah Susanka and built by Nstrom Construction.

Ahrens Residence

Hudson, WI

This home, with hand-scribed log walls, log rafters and a partial timber frame, embodies one man's particular vision rooted in American railroad lore. Its form and materials, reminiscent of a small town on the frontier, ruminate on the past from a distinctly forward-looking point of view. Designed by Katherine Cartrette.

Maple Forest House

Minnetrista, MN

The Maple Forest House, with its steeply pitched gables and wrap around porches, was designed by Michaela Mahady and is being built and offered for sale by Kyle Hunt and Partners. Visit it during the 1994 Fall Parade of Homes, see it on an upcoming series of the PBS show "Hometime", or read about it in Better Homes and Gardens.

Carlsen & Frank Architects Addition & Remodeling 4340 Fremont Avenue S. Minneapolis, MN

This 1,500 sf addition to an older residence near Lake Harriet is the third phase of a continuing renovation project. Reflecting the desires of the owners, the design eliminates the obvious "old house meets new house"

look by the use of similar proportions, details, and materials which complement the architecture of the original house. The first phases included the porch expansion, adaptation of foyer and kitchen spaces; the new work includes an expanded kitchen and new breakfast area, library, screened porch, additional bedroom plus a master bedroom suite with a cozy upper porch and vaulted ceilings. 612.227.4576

Carlsen & Frank Architects Infill Houses Single Family Residence Minneapolis, MN

Designed for 40 ft. wide lots, this split level, 3-bedroom, 1500 sf house is a prototype for a number of houses the Powderhorn Residence Group hopes to build in Minneapolis. 612/227-4576.

Kodet Architectural Group, Ltd. Tweed Residence Minneapolis, MN

The design of the home revolves around three academic and artistic careers, thus the individual study and studio areas. The entire lower level is for exhibit and exhibit production. The floor plan is designed primarily for convenience with all major space uses on the main level. The massing is organized around a central sloped ceiling space. Due to the very restrictive urban lot, the perimeter spaces are transparent to permit large amounts of natural light into the central space. Exterior materials will reflect an informal expression of urban character. 612.377.2737

Morrison/Walijarvi Architects Morrison Residence White Bear lake, MN

This contemporary home features all living essentials on one accessible level with a study/loft above and recreation space in the walk-out level below. Rear elevation features a cantilevered deck overlooking a wooded pond area. Clerestory windows with overhangs plus skylights on a northeast roof slope assures quality daylighting of the interior. Designer, Eldon Morrison. 612.426.3287

Morrison/Walijarvi Architects North Oaks Residence St. Paul Area, MN

This spacious North Oaks home departs from the typical two-story with high pitched roof, by blending into the prominent site and utilizing the natural grades, with a design solution of low pitched roof, one-story front, and rear walkout with patio, deck, and porch overlooking a pristine lake. Designer, Maureen Lodge. 612.426-3287

**Rice • Stromgren
Architects
Private Residence
Bloomington, MN**

Sitting on a steep slope, the living areas of this house reach out into the surrounding trees. Designed with specific owner needs in mind, the house is functional and simple. Large windows and high ceilings capture light and create dramatic views inside and out. 612.827.7802, 507.625.3632

**Peter K. Paulson
Architect
Seemann Residence
Lakeville, MN**

This late 50's era walk-out rambler with a spectacular hilltop view of Orchard Lake will be completely transformed inside and out. The design features a new kitchen, dining room, master bedroom, children's bedroom and a garage. A two-story entryway and front porch welcome visitors. 612/341-2586.

**Carl Frederickson AIA,
Architect
Private Residence
Cook County, MN**

This simple, compact, yet comfortable 1200 sf (main floor) plan is composed of three basic 13' x 30' eat, sleep, and living bays with a master suite loft above. Built to serve leisure requirements with an eye toward early retirement. 612.823.8108

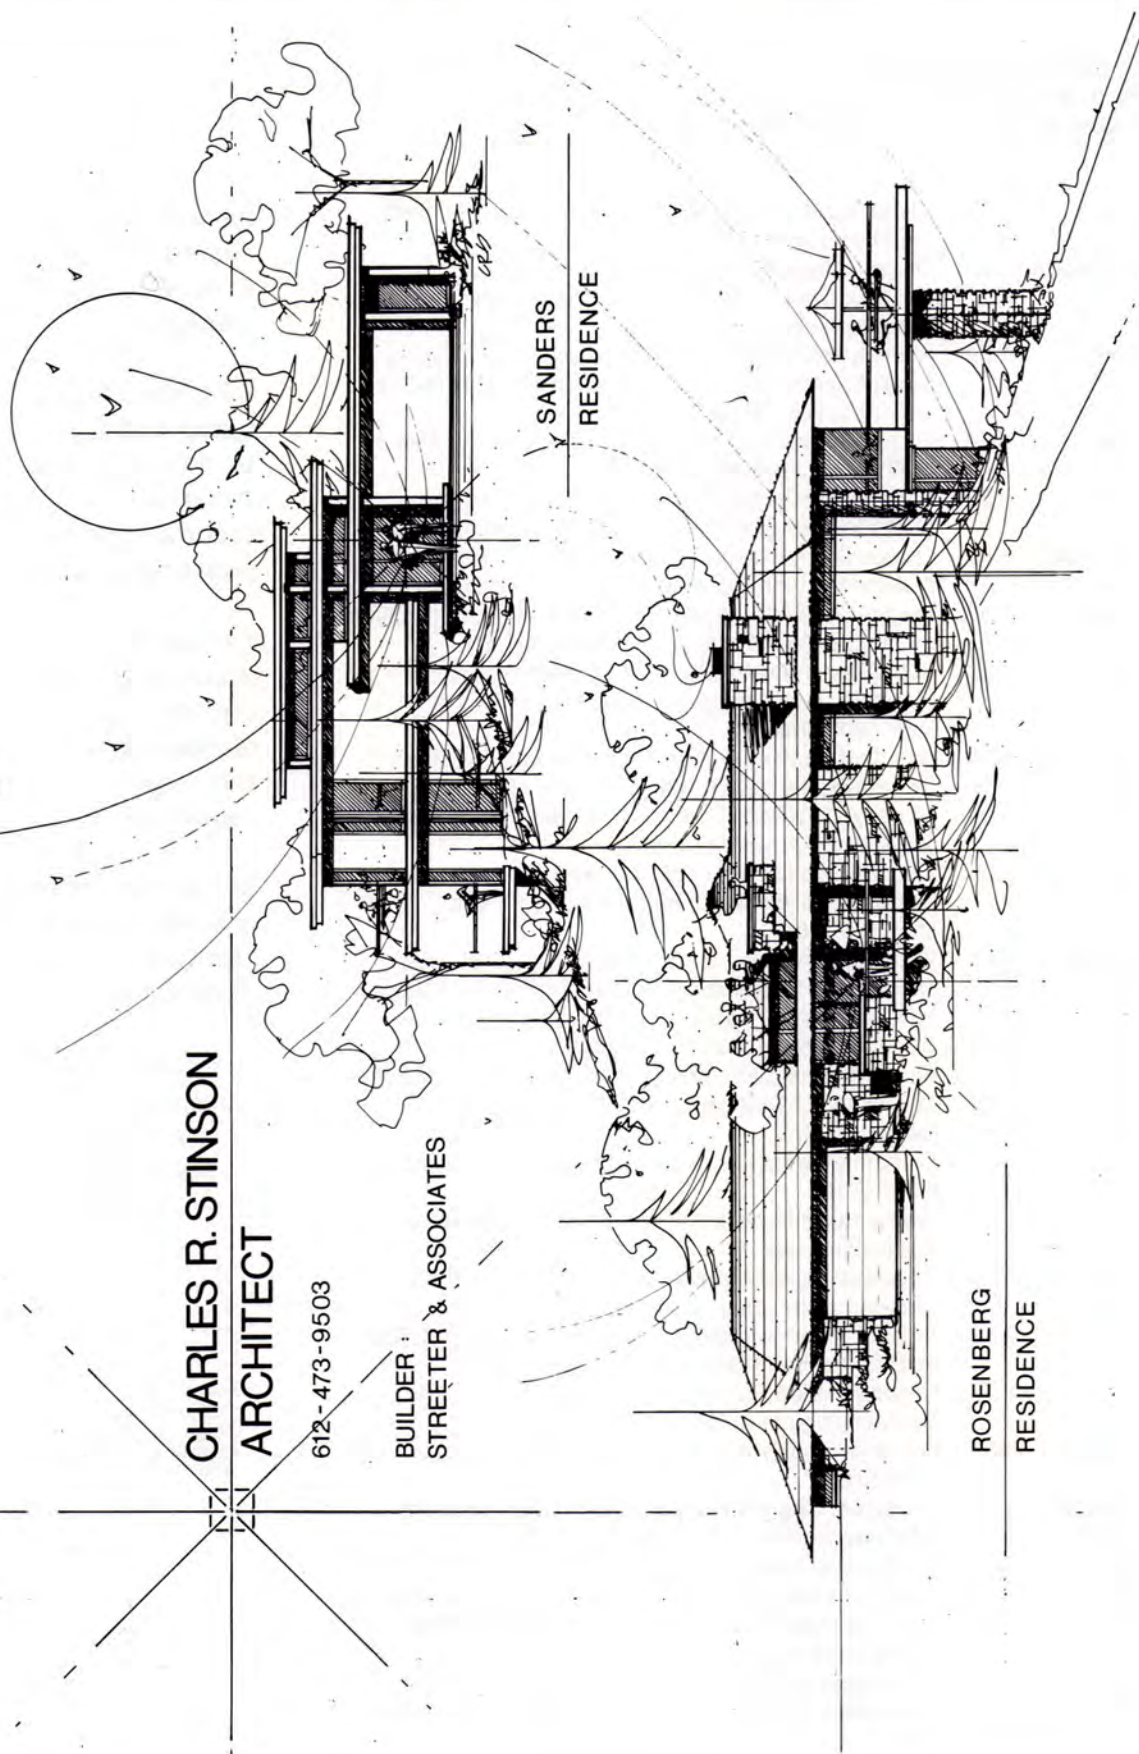

**Carlsen & Frank
Architects
Caretakers House
Sawtooth Mountains
Illgen City, MN**

The 1200 sf caretakers house is to set the style and tone of a new wilderness retreat being developed in the Sawtooth mountains overlooking Lake Superior. The split level design recalls its northern European antecedents in what the developers refer to as the "North Shore Vernacular". 612/227-4576.

**After a Fashion:
 20th Century Milestones
 Goldstein Gallery
 University of Minnesota
 St. Paul Campus
 Through June 5**

A 10-foot-tall zipper provides an entrance to this exhibit that chronicles the major fashion trends of the century. From raccoon coats and nylon seersucker dresses to hot pants, polyester leisure suits and the current "grunge" look, the highs and lows of fashion are here.

For more information, call (612) 624-7434.

**Light from the Yellow Star:
 A Lesson of Love from the
 Holocaust
 Frederick R. Weisman
 Art Museum
 University of Minnesota
 Minneapolis Campus
 Through June 17**

Featured are a series of 17 gouaches and accompanying prose created by University of Minnesota professor of pediatrics Dr. Robert O. Fisch, a native of Hungary and a Holocaust survivor. Several images from the exhibit were used in the book *The Holocaust: The World and the Jews, 1933-1945*, by Semour Rossel. Concurrent with the exhibit is an international conference, "Xenophobia in Germany: National and Cultural Identities After Unification," May 11-14.

For more information about the exhibit or conference, call (612) 625-9494.

**The American Moderne:
 1920-1940
 Norwest Center
 Minneapolis
 Through Summer 1994**

Pulled from the bank's extensive collection, the objects in this installation focus on the '20s and '30s. Highlights include Walter Dorwin Teague's "Nocturne" radio from 1937, to Norman Bel Geddes's stainless-steel "skyscraper" shaker and

"Manhattan" serving tray of 1934, and John Vassos's aluminum "RCA Victor Special" portable phonograph of 1935.

For more information, call the Northwest arts program at (612) 667-2112.

Barn Again!
National Building Museum
Washington, D.C.
Through Sept. 11

This exhibit explores the history and symbolism of an American icon, the barn. A 30-by-44-foot barn serves as an entrance into the exhibit. Visitors will be able to explore barn mythology and nostalgia, and discover how social, political and economic developments affected barns. The show also examines the various uses of barns and speculates about the future of barns in our urban culture.

For more information, call (202) 272-2448.

A Common Ground:
Minnesota Communities
Minnesota History Center
St. Paul
Ongoing

The Minnesota Historical Society's latest exhibit is a grass-roots program by and for the diverse people of Minnesota. Visitors explore six distinct Minnesota communities. Displays are everything from a parish dress made in Sweden to combat gear of the Vietnam War and artwork of Winnebago women. In developing the exhibit, the Historical Society's staff worked with an advisory panel comprised of community representatives, as well as historians and sociologists. Communities depicted will change occasionally.

For more information, call the Minnesota Historical Society at (612) 296-6126. **AM**

COLD SPRING GRANITE DELIVERS QUALITY, FROM QUARRY TO RIBBON CUTTING AND BEYOND...

■ Architects worldwide recognize Cold Spring Granite Company as the source for structural granite of superior quality. They also recognize the reason for that quality — single-source service from start to finish. ■ From our 30 company-owned quarries, to complete in-house design/engineering assistance, to fabrication facilities capable of accommodating any size project, Cold Spring Granite insists on quality throughout. This nearly century-old commitment assures you of consistently superior results, long-term color matching and replacement availability — and completed projects you and your clients will take pride in for generations to come. ■ So when you're building with granite, build with quality throughout. Build with Cold Spring Granite.

Continued from page 19

"The world doesn't owe the architect success, but there's nothing that is insurmountable to keep the architect from achieving success," he says. "Most architects are doing very well—but are almost afraid to admit it."

He is concerned that many firms pay younger employers too little, at a time when the profession needs to attract the best and the brightest. Salaries for recent graduates are often 15 to 20 percent lower than they should be, he says, "and these young people are starting off discouraged." Cramer hopes the AIA will continue to create more intern programs for the institute's 11,000 student members.

In spite of a nationwide recession, AIA membership has grown to 57,000 during Cramer's six-year stint as CEO. "What's most encouraging is that our products, programs and services grew by significant percentages every year," he says, adding more than \$1 million each year to the institute's reserves.

Having the institute on sound financial footing will greatly aid Cramer's successor, says 1993 AIA board president Susan Maxman, who worked with Cramer during her six years on the board. She praises Cramer for his work on the institute's image, including the remodeling and expansion of the Washington building, and a restructuring of the AIA's graphic and corporate identity. "He has always represented the AIA very well and been a good spokesperson for the profession," she says. "He's a very easy-going, affable person, and has been a real boon to the AIA in terms of raising spirits. Everyone just loves him. He has a great presence."

"To me it was always obvious that he would play a significant leadership role," adds Terry McDermott, Cramer's successor as CEO. McDermott first met Cramer at AIA Minnesota's annual convention and products expo in 1977, when McDermott was publishing *Building Design and Construction* magazine. Cramer, he says, "is terribly creative. He has a great idea at least once an hour. But he's also extremely competent and has the managerial skills so that he can take his idea and go out and do it."

"Our whole goal has been to help the architect with the support and information that's so vital as we reinvent the profession," Cramer explains. His 240-person staff—whom he calls "the best in Washington"—has studied and lobbied on small-business issues, Inter-modal Surface Transportation Efficiency Act (ISTEA) legislation, copyright law, federal procurement policies and eight provisions of the Americans with Disabilities Act.

Just as he left Minnesota for a new challenge and the chance for personal growth in Washington, Cramer says he looks forward to a "personal renewal" as he moves to his next goal. He "greatly loves and respects" the AIA, he says, and will continue as a member of the Board of Regents and an occasional consultant. But "it's important to keep things fresh," he says, adding that "I couldn't be more enthusiastic about Terry" taking the reins.

If his résumé is any indication, Cramer will have no trouble finding plenty to do. Since his move to Washington, he has overseen preservation of the historic Octagon Museum, founded the American Design Council, served on the Board of Directors of the National Building Museum, chaired a division of the United Way, contributed to National Public Radio's "All Things Considered," and granted countless interviews to major print and network media. This spring he will make a presentation on profitability at the AIA annual convention in Los Angeles and lecture on "Contemporary Practice from an International Perspective" at MIT. In June, he delivers commencement speeches at the University of Nebraska and the University of Minnesota, where he was adjunct professor from 1976 to 1982.

Cramer's next career step, which he plans to announce soon, will further his mission of linking good design and the business community. For "who better than the architect to bring problem-solving to architecture?" he asks. "We talk about historical times that were 'the good old days' in architecture. It has never been better for architects than it is in the 1990s."

Gayle Worland is a writer living in Washington, D.C.

yet not block solar warmth in winter, and planting a windbreak to the west to shelter the house from winter winds.

And in true midwestern fashion, the house is not a single pristine object set in the landscape, but a small compound of buildings—house, barn, chicken houses, and various sheds and outbuildings—built over time, creating a farmyard, a domesticated outdoor room in the vastness of the plains. The Gibbsses clearly followed the old farm adage “the house doesn’t build the barn,” for they first invested in buildings that could produce income. The white barn, for example, was electrified a full decade before the house. They clearly valued future security more than immediate gratification.

Their values also shaped the Gibbss’ material choice. Not only was the 1854 house incorporated into the 1867 house (it’s the winter kitchen), but many of the original windows were salvaged from a building on the nearby University of Minnesota campus that was being remodeled. All this reflects the natural frugality of the farmer.

Also, materials were largely shaped by machines, reflecting a pragmatic attitude towards craftsmanship. There is not the same romantic worship of handcraft in the Midwest as there is in New England or the West, where a hand-split cedar shake roof or a hand-hewn log cabin are cultural icons. The Midwest could not have been settled without the John Deere plow to break its prairie sod, without the McCormick reaper to harvest its bumper crops, without the steam-driven sawmill to rip its white pine into dimensional lumber, or without the railroad engine to carry its products to market. Machines always have been part of the midwestern cultural landscape.

So far I have avoided discussing aesthetics, both the aesthetics of this particular house and the larger midwestern sense of beauty. “Midwestern aesthetic” may sound like an oxymoron, for all the values I have listed—pragmatism, economy, frugality—seem to force architecture toward the banal anonymity of a prefabricated Butler building, a utilitarian architecture without charm, grace or beauty.

Yet to drive the back roads of Minnesota, Wisconsin or Iowa is to see thousands of beautiful buildings: houses, barns and corncribs on farms; small commercial blocks, schools and libraries in towns. Beauty has transcended utility.

The uniquely midwestern aesthetic that shaped these beautiful buildings is not rooted in romantic excess. It is a quiet, gentle, self-effacing beauty, a beauty of the domestic and pastoral, a beauty of the ordinary and everyday. This aesthetic shapes a vernacular that is neat and tidy, an architecture of order with symmetrical forms, balanced massing and repetitive proportions. Perhaps this aesthetic can be described as a nascent or innate classicism, not an academically correct classicism of textbook details, but a classicism that grows from the principles of symmetry, balance and order, which are reinforced by vernacular construction technology: roofs are the least expensive to frame when they’re symmetrical; foundations are cheapest when they’re poured in simple rectilinear forms; framing is most efficient with consistent plate heights and a uniform roof pitch.

Ultimately this midwestern aesthetic traces to the core pastoral value of stewardship over the land. A farm that is well-maintained, a farm with straightly plowed furrows, freshly-painted buildings and well-manicured grounds is a good farm; a good farm is a beautiful farm, preserving the land for all time.

How do we as architects bring beauty back into our everyday life?

The Gibbsses would be horrified by the fourplexes sprouting like weeds in full view of their porch. These buildings lack any orientation to the sun or relationship to the land; they are built of flimsy materials that won’t age well through time and are divorced from their neighbors by blank and anonymous garage doors.

The “bottom-line” mentality that shaped these fourplexes values privacy over community, expediency over rigor and cheap theatrics over subtle proportions. Worst of all, it values the land only as a commodity, refusing to accept stewardship over its long-term welfare. These bottom-line values are national in scope, sprawling across regional lines,

overriding local values tuned to land and climate.

Tragically, the pastoral values that have defined the Midwest through time are today written off as anachronistic museum relics, for popular culture has boxed the Midwest into a schmaltzy "heartland" stereotype. Shortridge writes that by the 1960s, "The Middle West had become a museum of sorts. No up-and-coming citizen wanted to live there, but it had importance as a repository for traditional values. The Middle West was a nice place to visit occasionally and to reflect upon one's heritage. It was America's collective 'hometown,' a place with good air, picturesque farm buildings and unpretentious 'simple' people."

While there's no question that farming as a way of life is passing, few Midwesterners are more than a generation off the farm. The pastoral values of the farming ethic, the value we dismiss as "nostalgic" and "traditional," the values that shaped the Gibbs Farmhouse, remain deeply rooted in midwestern culture.

Architects, in mimicking the forms and styles of the picturesque cornerbarns and romantic farmhouses, have played into this nostalgia. Perhaps by drawing a different lesson from the vernacular, by drawing on the everyday values that shaped the midwestern aesthetic, architects can bring beauty back to our everyday environment, shaping a unique architecture that is both green and sustainable, an architecture that—like the Gibbs Farmhouse—grows easily and naturally from the rich, black midwestern soil.

The Gibbs Farmhouse Museum is operated by the Ramsey County Historical Society. It is open from May through October, Tuesday through Friday from 10 a.m. to 4 p.m., and on weekends from noon to 4 p.m. The historical information in this article is drawn from a 1993 Historic Structure Report prepared by Carol Zellie of Landscape Research and Robert Lunning of Hokanson/Lunning Associates, Inc.

Robert Gerloff is an associate with Mulfinger, Susanka & Mahady Architects in Minneapolis.

AM

While the 1892 Congressional foray had no legislative sequel, the reform movement shaped an important debate that endures today: public vs. private solutions to low-cost housing. Reformers like Veiller and Gould opposed housing subsidies, but Edith Elmer Wood championed public housing. Her book, *The Housing of the Unskilled Wage Earner* (1919), gathered national acclaim, arguing that government action to replace slums would improve citizenship, lower welfare costs, and reduce crime and delinquency. Despite Wood's efforts, the federal government did not reenter the housing arena for some 40 years.

The Second Wave: the New Deal responds to the Great Depression

A little known fact is that Herbert Hoover, not Franklin Roosevelt, instigated the first act of federal intervention during the Great Depression. He established the Home Owners Loan Corporation to rescue distressed homeowners and mortgage lenders. But Hoover did not address the needs of the poor. It was FDR's ambitious New Deal that enacted progressive programs to address the situation that "one-third of the nation [was] ill-housed."

Under the auspices of the Public Works Administration (PWA) the government sought to eradicate and rehabilitate slum areas in order "to check the exodus to the outer limits of cities." The PWA employed two strategies: it lent money to private corporations interested in slum clearance, and the agency was empowered to buy, condemn and sell property for the purpose of developing new projects.

Sumner Field on the cusp of Minneapolis's north side is a product of the New Deal. In fact, it is the Twin Cities' only PWA housing project. Inspired by the social idealism of Governor Floyd B. Olson (the state's first Democratic chief executive) Sumner Field replaced one of

the region's worst slums. Designed by the firm of Magney, Tusler and Setter, Sumner Field consists of several 2-story brick boxes completed in 1938.

Between 1924 and 1937 the government began constructing 21,000 units in 49 cities, costing \$129 million. However, the New Deal's initiative was slowed by a 1935 judicial action, ruling against the acquisition of land for public housing through eminent domain. This decision limited the government's authority, forcing it to purchase sites at market prices that increased costs. By the time the PWA erected apartments or houses, the minimum rents had risen to levels that excluded the urban poor.

The Third Wave: the Urban Redevelopment Act of 1949

With the victorious close of World War II new home-buying programs were established for veterans and those with wartime savings. The result both in the Twin Cities and across the country was an extraordinary residential-housing boom. New housing starts reached an all-time high of nearly 2 million units a year.

As the families spread outward into prosperous suburbs, cities began a downward spiral that continues today. The population of Minneapolis peaked in 1950 (521,718) and St. Paul in 1960 (313,411), slowly losing residents ever since. Housing conditions within the inner city also declined. Despite the tremendous postwar-building boom, only 2 percent of all housing starts were publicly financed.

Congress passed the Urban Redevelopment Act (URA) in 1949, which sought to clear inner-city slums. As a part of URA, the government declared its commitment to build "a decent home in a suitable environment for every American family." That bold statement was the closest the federal government has come to pronouncing housing as an entitlement.

The clearance of the Gateway district in Minneapolis is URA's most famous action in Minnesota. A dramatic instance of slum clearance, 17 downtown blocks were cleared beginning in 1960, one of the largest urban-renewal pro-

jects in the country. Only one government-assisted apartment block was built in the area at First Street and Third Avenue in 1974, equipped with a mere 269 low-cost units. Perhaps the Gateway project's greatest legacy was the awakening of the local preservation movement as many Minneapolitans witnessed the demolition of the treasured Metropolitan Building.

The effects of URA's action in other cities influenced the local scene, particularly the rise and fall of Pruitt-Igoe in St. Louis. Completed in 1954, Pruitt-Igoe was built on top of the city's most troubled ghetto. Situated on a 57-acre site, 2,700 rental units were constructed to house 15,000 people at densities higher than the original slum.

The initial design called for a mixture of low-rise, high-rise and walk-up structures. Yet costs exceeded the federal government's maximum allowance cost per unit, resulting in the scheme of 33 identical 11-story elevator buildings. Despite some unique design features, budget constraints sabotaged the final design. In addition to the elimination of such amenities as landscaping and playgrounds, the quality of the hardware was so poor that the door knobs and locks were broken on initial use.

The Fourth Wave: the Great Society

More comprehensive than its federal predecessors, the legislation of Lyndon Johnson's Great Society set in motion a record volume of subsidized housing units. In 1965 housing concerns were elevated to a cabinet-level position through the creation of the department of Housing and Urban Development (HUD). Although the Great Society failed to assert the notion that housing is an entitlement, President Johnson voiced a commitment to build 26 million dwellings for the benefit of every economic class, with 6 million units assigned to low-income families.

Forty of Minneapolis's 44 subsidized high-rise apartments were built between 1960 and 1974. Cedar Square West—conceived as a "new-town in town"—was the most far-reaching product of the Great Society, started in 1968 and finished in 1973. Designed by Minneapolis

architect Ralph Rapson, five high-rise buildings are softened by bright primary colors and narrow balconies. Rapson's Mondrianlike treatment humanizes the concrete mass, allowing residents to identify their unit from the ground. The project also is supported by public spaces that accommodate neighborhood groups, a grocery store, day-care facilities and meeting rooms. While Cedar Square West has been at times riddled with low-occupancy rates and crime, the project has been rejuvenated as Riverside Plaza, preserving low-income housing that remains a superior alternative to housing owned by slumlords.

Like other federally funded housing projects built during the 1960s and 1970s, Cedar Square West was met with severe, and sometimes deserved, criticism. But it was a proposal to build a large housing project on the north side of Minneapolis that prompted the creation of the Community Design Center (CDC) of Minnesota in 1968. After inspecting existing structures in the area, CDC volunteers proposed that most of the old buildings could be renovated and the character of the neighborhood preserved. By 1971 the CDC had an office at 118 East 26th St., and a paid executive director to organize the volunteer design professionals, who provided a range of services to the disadvantaged.

If the CDC was an effective critic of public housing, the debate between housing advocates and private developers actually hindered public initiatives. Housing advocates complained that developers were allowed excessive profits and developers griped of HUD delays and red tape. Inflation was rampant in the early 1970s, causing utility and maintenance costs to soar. Defaults accelerated in subsidized projects, drawing further criticism.

The deflation of the Great Society's housing programs had begun. Besotted with low occupancy rates, poverty, crime and seemingly irreversible construction flaws, three of Pruitt-Igoe's 33 buildings were detonated in 1972. Public housing appeared to be morally and politically bankrupt, resulting in President Nixon to declare a moratorium on all federal-housing programs. In 1976 the remaining 30 Pruitt-Igoe buildings were demolished.

Support for public housing had erod-

ed. In 1979 President Carter (who, ironically, would become a vocal critic of the Reagan-Bush housing cuts and a Habitat for Humanity supporter) proposed substantial reductions in HUD's budget. With the triumph of President Reagan's fiscally conservative legislative agenda, support for subsidized housing declined from \$30 billion in 1981 to less than \$8 billion in 1989. Coinciding with federal cutbacks was the demolition or conversion of low-cost rental units. The first eight years of the 1980s were to pass before another federal housing law was enacted.

..... **The fifth wave: the government addresses homelessness**

After a 12-year stand off between housing advocates and government officials, the Clinton administration has identified homelessness as a large-scale problem demanding a large federal response. "Homelessness has become a structural problem in America: chronic, continuous, large-scale, complex," says Henry Cisneros, secretary of HUD.

Yet in the early 1980s Minnesotans recognized a critical housing problem. Faced with the withdrawal of federal support for low-income housing in the 1980s, local governments and philanthropic groups forged new approaches through the creation of housing trust funds, community loan funds and alternative housing models. In 1983 the McKnight Foundation committed a \$10 million Program-Related Investment, as well as grant funds, to set up a capital pool to finance mortgages for low-income families.

Furthermore, architects have not been indifferent. In 1984 the American Institute of Architects' (AIA) Housing Committee hosted a three-day meeting in St. Paul to address the issues of housing the homeless. The meeting was the genesis of the AIA Search for Shelter design-charette program, a collaboration between architects, design-related professionals, students and nonprofit agencies. Since 1987, formed under the leadership of the late Louis Lundgren, AIA Minnesota has sponsored an annual Twin Cities design-charette program,

which proposes solutions for affordable housing.

The charettes are part of a growing trend to utilize aging and existing housing. In fact, such Minnesota architects as Kim Brethheim and Paul Madson, among others, have worked with neighborhood groups to revitalize housing stock at the Twin Cities' core. Success stories abound in city neighborhoods, like Minneapolis's Whittier and Phillips and St. Paul's Westside, where older homes have been rehabilitated for moderate-income home owners.

However, little has been done to address the bewildering problem of housing America's growing poor population. Most of the attention on affordable housing remains focused in the city, not suburbs. Troubled that the Metropolitan Council has failed to promote low-income housing in the suburbs, the Legal Aid Society of Minneapolis asked federal court in February to add the agency to a 1992 class-action suit on behalf of housing renters and the Minneapolis office of the NAACP.

..... **The affects of public-housing initiatives**

Since the 1930s, government assistance has created a distinction between city and suburb. On one hand, the government encouraged home ownership through long-term, low-interest mortgages—the beneficiaries were white, middle class and suburban. The government further engendered suburban growth through massive federally funded highway-expansion projects at the expense of public-transit systems.

Political and social ambivalence toward public housing produced token housing programs plagued by fiscal and site restrictions. Almost always public-housing projects were confined to the poorest parts of central cities and impeded by low construction costs. Cheaply constructed and problematic from the outset, St. Louis's Pruitt-Igoe only survived a stormy 20 years.

In the end, the projects that were built invariably reinforced racial segregation. A suburb that did not want to tarnish its image could simply refuse to create a housing agency. No authority or

national official could force it to do otherwise. Despite good intentions, the government created a housing policy of containment—the poor were concentrated in central cities and suburbia thrived as an affluent refuge from the social ills of the economically disadvantaged.

From the late 1950s to the early 1970s, the Twin Cities experienced more miles of freeway construction than any other comparable metropolitan area, resulting in the separation of the affluent from the poor and whites from minorities. For example, the suburban area west of I-494 is the sixth "whitest" locale in the country, reports *American Demographic* magazine. Ninety-seven percent of this area's population is white, encompassing such privileged communities as Minnetonka and Wayzata.

..... National proposals for change

If a substantial impact is to be made on the low-income housing situation, strong federal action is necessary. The Clinton administration's 76-page draft report on homelessness is a step forward, calling for the end of homelessness. While the paper does not specify the amount needed to solve the problem, it indicates that HUD would need to spend an additional \$40 billion annually compared with its current \$25 billion annual budget.

But past acts of federal intervention into the housing arena carry several important lessons: first, money alone does not solve poverty; second, public housing requires quality construction; third,

suburbs must share the responsibility of providing affordable housing; and finally, architects and policy makers cannot approach design questions in isolation; instead, they must seek input from the client—the poor.

Strange to conclude that Canada has more than 600,000 units of subsidized housing compared with 3.3 million in the United States, which has 10 times the population. But transforming a verbal commitment to affordable housing into concrete policies is an expensive proposition. Yet, it is hard to resist the notion that America can make decent and affordable housing a reality for low-income people.

SUPERIOR WOOD SYSTEMS Products

Pre-Engineered to Produce the Ultimate in Structural Capacity & Versatility
Environmentally Efficient • Time Saving • Cost Effective

SWI-Joists

Available in standard lengths up to 48'

- **Lightweight** - Can be handled by a single worker, easily cut with standard job-site tools
- **Dimensionally Stable**
- **No twisting, warping or splitting**
- **Built with No Crown**
- **Less Waste** - Much less than solid wood
- **Easy Boring** of holes in 7/16" thick web

Insulated Headers

2 x 4 and 2 x 6 Wall Construction

- **Pre-Insulated**
- **Cost Savings** - Eliminate the need for on-site insulating
- **Dimensionally Stable** - No shimming required for tight fits.
- **Lightweight** - Can be handled by a single worker, easily cut with standard job-site tools
- **Less Waste** - Much less than solid wood.
- **Energy Efficient** - Provide an R-value of 20 (after sheathing & sheet-rocking)

SW-II Headers are made with Machine Stress Rated lumber and Oriented Strand Board. They are manufactured to strict quality control standards, with PFS Corp. acting as third party inspectors. SW-II Headers have code acceptance by ICBO, BOCA, State of Wisconsin & HUD.

IF YOU'RE PLANNING EVEN A SMALL RENOVATION...

...PLAN ON SAVING MONEY WITH AN ARCHITECT.

Whether you're adding a bedroom or building a new home, it pays to call an architect. It all starts with your first meeting. By listening carefully to your specific wants and needs, an architect can help you make the most of your space, speed up your renovation, and smooth out the hassles from start to finish.

Architects know how to keep a watchful eye on your budget throughout a project and can help you avoid costly, last-minute changes.

So if you're considering either renovating or building a new home, give us a call.

We can put you in touch with an AIA architect who'll interpret your needs.

And keep a ceiling on your budget.

IT PAYS TO CALL AN ARCHITECT.

THE AMERICAN
INSTITUTE
OF ARCHITECTS

Firm

American Institute of Architects Minnesota

Directory

I invite you to study the directory of firms on the following pages and become better acquainted with my esteemed professional colleagues. They are members of AIA Minnesota, the State organization of architects created 102 years ago to provide architects with continuing education, professional practice assistance and opportunities to communicate to the public concerning the design of the built environment.

These firms provide services to clients in Minnesota and throughout the United States. Their skills relate to all types of building projects both large and small, new and old, and they can assist you in planning and designing those facilities which respond to your specific needs.

If you have any questions about architectural services or how to select an architect, Peter Rand, FAIA, and Beverly Hauschild, Hon. AIA, our Executive Vice Presidents, will be pleased to help. Feel free to call them (612/338-6763) or write for additional information.

Alexander F. Ritter, AIA

1994 INDEX OF FIRMS BY BUILDING TYPE

The purpose of this Index of Firms is to enable you to quickly identify, from among the over 200 architectural firms in the foregoing Directory, those with experience and skill in designing whatever specific building type that may be of interest to you. The building types listed directly match with those in the Directory of Architectural Firms.

To be included, each firm was invited to identify building types for which they have specific design expertise and required to pay a modest fee for each listing. Firms listed are identified in alphabetical order by name with location of their office also indicated.

A full description of each firm in this Index is included in the Firm Directory along with all other firms managed by members of the American Institute of Architects. We urge you to thoroughly study the Directory and direct any questions to AIA Minnesota, 612/338-6763.

AM publishes a variety of directories to aid clients, design firms and the public in identifying any licensed design professional or specialized consultant that may be required for various building projects. For example, elsewhere in this issue is our annual directory of architectural firms.

The Directory of Consultants which follows is our third listing of those organizations which have very unique and specialized skills that may be necessary for certain project teams. All firms have offices in Minnesota and some have diversified, engineering skills which are broader than the narrow specialties of this directory.

We invite you to use this directory and let us know of any additional firms that should be invited to be part of our next Directory of Consultants.

Bohemian Flats

Courtesy Minneapolis Public Library

First were hickory trees and scenic bluffs. Then around 1870 came a Danish family. Finally there was a flood of Czechs, Slovaks, Germans, Poles and Irish that wanted to settle in Bohemian Flats, a crowded neighborhood of small houses, shacks and shanties huddled in the shadow of the Washington Avenue Bridge in Minneapolis.

Every spring, the Mississippi River greeted this flood of humanity with an overflow of its own. Residents of the lowest (and cheapest) tier of the Flats faced an annual ritual of evacuating children, furniture and livestock to higher ground. When residents returned, sometimes the whole house had floated away. As if in compensation, however, the river left behind a layer of rich soil that made the cultivation of vegetable gardens a communi-

ty obsession. Growing food—along with raising chickens, ducks and rabbits—was a necessity, as well, because many people in Bohemian Flats were impoverished. They chose to live far outside the city's main area of settlement because the rents were low—or nonexistent.

The Bohemian Flats did have a system of social stratification, however, based on distance from the river. Mill Street, the neighborhood thoroughfare furthest from the river, boasted the highest rents, while Cooper Street, somewhat closer to the water, was more modestly priced. Wood Street, closest to the river's edge, commanded the lowest rents.

Eventually, during a peak reached around the turn of the century, about 500 people lived in Bohemian Flats—a heady mix of nationalities, faiths, languages and

occupations. Many worked at nearby pickle factories or in the lumber and flour mills, and some made money (and acquired construction material) from lumber scavenged from the river.

Eventually, city officials formulating plans to clear out the Flats joined forces with absentee landlords seeking to evict squatters. A riot broke out in 1923 when police entered the neighborhood to boot out nonpaying residents. Residents wielding yard implements, sticks and brooms fought back.

Over the next 10 years, however, residents lost their battle to remain. In 1932 the city began construction of a barge landing on the site and only a few people remained. By the 1940s all the houses were gone.

Jack El-Hai
