Marketplatz Mall Shopped Around And Chose Wells.

Single Source. Wells gives you a total concrete system by designing, fabricating, and installing your building. **Quick Installation.** Concrete components can be precast during foundation preparation and assembled directly from the delivery truck. Your on-site construction time and your costs can be dramatically reduced. **Multiple Finishes.** Your options of patterns, textures, and colors are nearly limitless. Exterior finishes may be designed to achieve a specific color or effect. **Wells' Advantages.** Over thirty years of experience, along with computer-aided drafting, an in-house engineering staff, and a team of highly trained craftsmen, ensure you a quality structure. Rely on Wells for a building that's durable, energy efficient, fire-resistant, and flexible for expansion.

Northern Minnesota Retreat

Architect: Salmela Fosdick Ltd.

Photographer: Peter Kerze

FEATURES

New houses From an award-winning northern Minnesota retreat by Salmela Fosdick to an environmentally friendly suburban home by LHB and a traditional south-Minneapolis house by Xerxes Architects, new residential design is as much about aesthetics and vernacularism as it is about advanced energy-efficient technology, by Robert Gerloff and Eric Kudalis. **Page 24**

Prairie legacy Trained in the Prairie School tradition of Taliesin, John Howe has left his residential-design stamp throughout Minnesota, by Kelly Davis. **Page 34**

Neighborhood focus Morgan Park in Duluth thrives in the shadows of the abandoned steel factories, by Adelheid Fischer. **Page 42**

Also

Prairie reworking

A John Howe-designed house is renovated to its never-realized potential, by Eric Kudalis. **Page 38**

Minnesota landmark

This classic house designed by acclaimed architect Philip Johnson in the 1950s remains one of the state's modernist gems, by David Anger. **Page 46**

Blazing Stars

The name alone suggests beauty and indeed, they are beautiful. What's more, there are others like butterfly weed, wild lupine and azure aster. These and hundreds of others can be combined to create unique, natural landscapes that can bring interest, diversity, economy and health to your landscape.

The intrigue of restored prairies and wetlands can take you far beyond traditional turf grass plantings to a place where you will find rewards in the less contrived, predictable or controlled landscape. The random beauty of nature will stimulate your senses and renew your spirit. It will bring that "big picture" into better focus and your landscape into better balance.

To find out how our ideas can become your rewards, please call:

Native American imagery

The new 4-story Division of Indian Work building on East Lake Street in Minneapolis combines traditional American Indian symbolism with contemporary building technology and programming.

Designed by AmerIndian Architecture of St. Paul, the 26,000-square-foot building features a light-green exterior with color-glazed block to create turtle and dragonfly motifs, tan rock-face block to create fish imagery, and a curving 3-story glass entryway with a sloped roof in the shape of a crescent moon at the northwest corner and a sloped roof at the southeast corner symbolizing a full moon. The facility includes counseling rooms for couples and small groups, a nursery, library, study and tutoring room, classrooms, lodge with circular fire pit and boardroom.

The Division of Indian Work, founded in 1952 to serve the American Indian community, is affiliated with the Greater Minneapolis Council of Churches. Services range from the Emergency Assistance Program to provide food, clothing and transportation, to Family Violence Program, Teen Indian Parents Program and Youth Leadership Development Program.

TERRY WILKINSON

The final phase of the mixed-use LaSalle Plaza development in downtown Minneapolis is completed with the \$7.2 million renovation of the YMCA building. Designed by Long, Lamoreaux and Long in 1919, the 12-story Tudor Gothic tower has been converted into 121 apartments by Architectural Forum, Inc. Highlights are two restored fireplaces and a refurbished marble entrance foyer. The entire full-block project along Hennepin Avenue includes a new YMCA building, an office high-rise, retail space and restaurants, and a renovated State Theater.

Toxin-free living

LHB Engineers & Architects is leading the way in designing environmentally sensitive and energy-efficient houses in the Twin Cities. This house west of Minneapolis was designed for a woman with Multiple Chemical Sensitivity who believed a low-toxin house would improve her health. The house, which architecturally fits with the surrounding rural structures, has no basement to prevent mold and mildew buildup, employs an advanced ventilation system and uses low-toxin materials that were tested with the owner and her doctor.

COURTESY LHB

THE FIRST THING WE DID TO HELP REMODEL THIS OLD HUNTING LODGE WAS

This large, beautiful room is the centerpiece of what was once an exclusive hunting lodge. Built in 1930, the property was converted to a single family residence in the early Fifties. But 40 years of paint, plasterboard and paneling had all but hidden its original elegance.

So, when new owners began renovating it in 1991, they asked architect Katherine Cartrett of Mulfinger, Susanka and Mahady to recapture the original rustic charm of the place.

They asked her to use only the finest high performance building products available. Given those terms, it's not surprising that, when the subject of windows and doors came up, the owners asked to talk with Marvin.

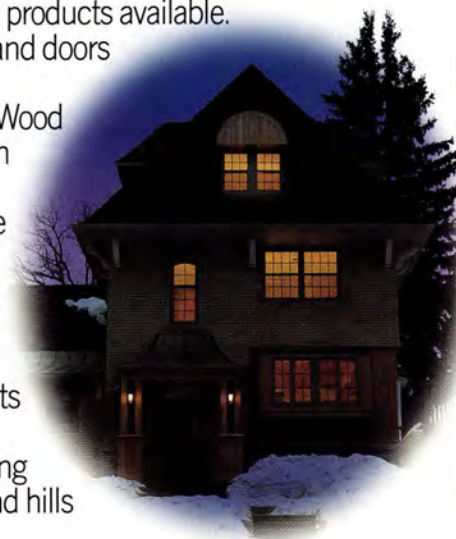

The first step was an on-site meeting. Nick Smaby from Choice Wood Custom Residential Remodelers was there. So were representatives from the Marvin dealer and distributor.

One by one, they inspected every opening in the home. Then the entire group sat down and planned the job out.

Sizes were discussed. So were shapes, styles, energy efficiency, maintenance and budgets.

By the end of the day, the plan called for a combination of new windows and replacement sash – 46 windows in all. There were eight sets of doors too.

The results of that meeting are pictured above. The Marvin Sliding French Doors add light and open the room to the panorama of woods and hills

START FIRING QUESTIONS.

beyond. And in keeping with the architectural style of the home, each door features custom divided lites and an exterior finish in a color mixed specifically for the project.

Today, this rustic home looks much like the hunting lodge it once was. And if you ask the owners, they'll tell you the key was tracking down the right window and door supplier in the first place.

MAKE US YOUR FIRST CALL, NOT YOUR LAST RESORT.

If you've got a look you're trying to achieve or a problem you just can't solve, call the one company you know will have the right solution. Call Marvin Windows and Doors at **1-800-346-5128** (1-800-263-6161 in Canada). Or mail the coupon for a free catalog featuring the entire line of made-to-order Marvin windows and doors.

PRECAST
CONCRETE
IDEAS

WE'VE GOT A MILLION OF THEM

In fact, there's virtually no end to the combinations of patterns and textures, to the ranges of colors and finishes, and to the advantages of designing and building with precast concrete products from Spancrete Midwest Co.

Our professional staff is always available to help with the details, design, budgets, samples and engineering. In-plant casting, pre-stressing, insulation

and finishing, deliver greater consistency in a complete load-bearing wall system that is ready to erect year round—and for less cost than many other building materials. Add our comprehensive line of hollow-core planks, double tees, beams and columns to create a complete structure—saving time and money.

Take advantage of precast concrete ideas—call Spancrete Midwest Co.

1995 Home Tour Showcases: A Slice of City Life Various locations Minneapolis/St. Paul May 6-7

Highlights of this year's Minneapolis/St. Paul house tour include a houseboat docked at Harriet Island in St. Paul, a restored Victorian in Minneapolis and a Lake Nokomis home decked with an impressive modern-art collection, including a wall collage of Tinker Toys, piano keys and other 3-dimensional objects painted and assembled by the home owners. The featured houses are a diverse group, ranging from more than 100 years old to completed just yesterday. The home owners, too, are a varied group, including artists and architects, singles and families, life-long residents and newcomers.

Now in its eighth year, the tour is free and self-guided. A 24-page guidebook, which contains maps and descriptions of all the houses, is available at Target stores.

For more information, call (612) 673-2491.

Sigmar Polke: Illumination Walker Art Center Minneapolis May 6-Sept. 17

Since the early 1960s, Sigmar Polke has been known for his innovative work as he experiments with an endless array of materials and pictorial sources. The exhibit examines three bodies of work by the artist. "Editioned Work" looks at 70 prints, multiples, artist's books, catalogues, and other projects created from 1966-1995. "Magic

*Laterna Magica (Magic Lantern)*

Lantern Paintings" includes 52 paintings from his Magic Lantern series, which Polke has worked on since 1987. Finally, "Large-Format Paintings" will showcase six of Polke's recent, large-format translucent paintings.

For more information, call WAC at (612) 375-7650.

*Untitled 60"x72" 1994 Oil on canvas, by Carolyn Grace*

New Works by Therese Buchmiller Knierim and Carolyn Grace Carolyn Ruff Gallery Minneapolis May 19-July 1

Carolyn Grace presents oil paintings that convey an ethereal visual record of how a time and place feel. Therese Knierim, in her sculptural box constructions, imposes a new order on nature and her experiences of it.

EvansPlus Architect Knotty Western Red Cedar Decking

Decking That Makes The Grade

Now you can take the guesswork out of specifying Western Red Cedar for outdoor projects. Evans offers its Western Red Cedar deck grade to customers that desire a product that's attractive in appearance, ready to use and is graded specifically to meet their deck and patio requirements. Decking that is free of holes and any unsound knots on the face side, naturally stable, proven durability, restricted wane on the back face and smooth dressing on the face side are some of the advantages of using EvansPlus Western Red Cedar Decking. Canton Lumber Company is your supplier for EvansPlus Architect Knotty 2x6 Western Red Cedar.

Collecting: The Instinct for Order

Collecting: The Instinct for Order
Goldstein Gallery
U of Minnesota
St. Paul
Through May 21

From soap boxes to cigar bands, postcards, caddy spoons and more, this exhibit examines the age-old impulse to collect things. The show examines the difference between accumulating and collecting and the reasons why certain people collect and how they seek unity and order in their collections. The exhibit draws from 35 collectors.

International Design Conference in Aspen
New Business:
Redefining the Idea of Design
Aspen, Colo.
June 8-11

Established in 1951, IDCA has always taken a broad-based look at emerging design trends and issues, bringing together a diverse—sometimes eclectic—array of speakers and guests. The mountainous scenery and ideal early June weather are the fringe benefits of enjoying lively discussions with other designers and design enthusiasts.

This year's speakers include Jane Alexander, chairman of the National Endowment for the Arts, Tom Peters, co-author of *In Search of Excellence* and *Thriving on Chaos*, Dorothy Leonard-Barton, anthropologist and professor of business administration at Harvard Business School, and Milton Glaser, graphic designer and artist.

For more information, call (303) 925-2257.

Dictated by Life:
Marsden Hartley's German Paintings and
Robert Indiana's Hartley Elegies
Frederick R. Weisman Art Museum
U of Minnesota
Minneapolis
Through June 18

Hartley is a key member of America's avant-garde. His German paintings, from his residence in Berlin from 1913 to 1915, are considered among the finest of his career and landmarks in American art history. Indiana, one of the major pop artists from the 1960s, just completed a series of 18 paintings that pay homage to Hartley. The exhibit unites the two sets of related paintings for the first time. Indiana says that he created the series because his home on Maine is near a house Hartley once lived in.

For more information call, (612) 625-9494.

"Portrait", c. 1914, Oil on canvas,
 by Marsden Hartley

START
RIGHT.

DECORATIVE ROCK FACE & GROUND STONE CONCRETE MASONRY UNITS

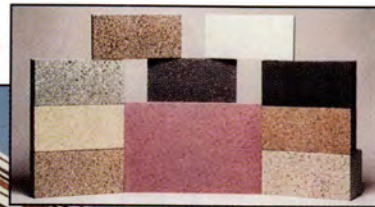

Fast becoming the leading choice of both builders and architects in the '90s, combining the strength and economy of concrete block with the beauty of clay brick.

- For load bearing or veneer applications
- Autoclave cured to assure consistent color and efflorescence free walls
- Available in many standard sizes and harmonic colors
- Key panels and samples available free of charge

SHIELY
MASONRY PRODUCTS

2915 Waters Road, Suite 103 • Eagan, Minnesota 55121 • (612) 686-7100

The new Target Store in Stillwater, Minnesota, illustrates the smart look of 4" high decorative rock face CMU's complimented by 4" and 8" high Ground Stone Masonry Units to provide the ideal combination of strength, aesthetics and economy.

THE PERFECT MIX

■ CONSISTENT AND RELIABLE QUALITY,
USING THE BEST INGREDIENTS AND THE
MOST RIGOROUS QUALITY CONTROL

■ A FULL RANGE OF
PRODUCTS TO HANDLE
YOUR MOST DEMAND-

World-Class Performer

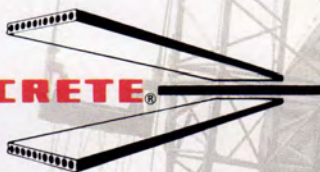

Home to the U.S. Olympic Speedskating Team, the 200,000-square-foot Pettit National Ice Center is enclosed by 217 precast Spancrete Insulated Wall Panels.

Cast off site and installed at a rate of 20 per day, Spancrete panels helped the Center streak from start to finish in record time. The panels are 38 feet high and 8 feet wide and feature a sandblasted sandstone exterior with horizontal reveals—a beautiful blend of texture and color.

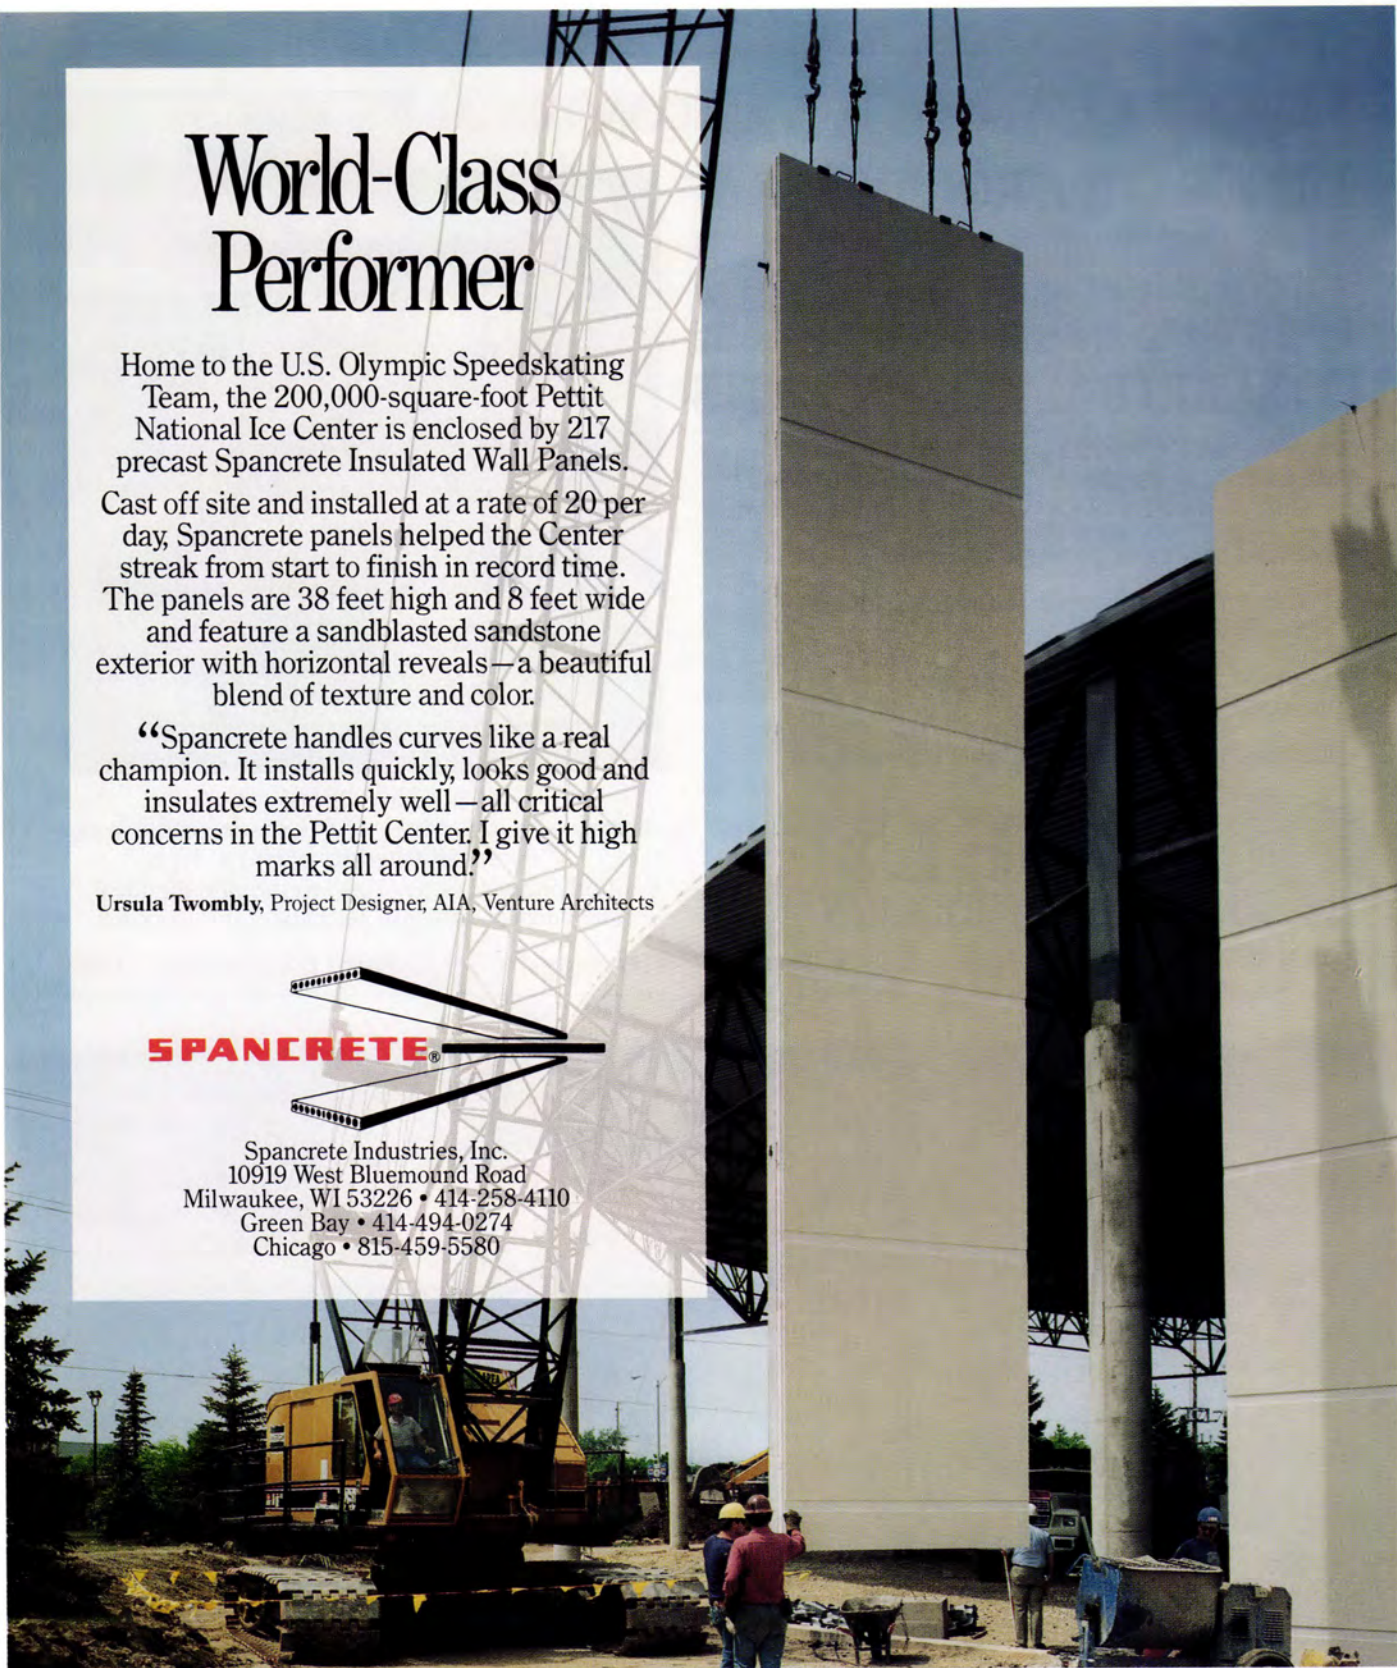

“Spancrete handles curves like a real champion. It installs quickly, looks good and insulates extremely well—all critical concerns in the Pettit Center. I give it high marks all around.”

SARAH NETTLETON

For Sarah Nettleton, architecture and gardening grow from the same design principles

By Eric Kudalis

Sarah Nettleton is in a unique position. As a registered architect specializing in garden design, she combines two interests to explore the relationship between architecture and the landscape.

"The best gardens have an architectural basis," Nettleton says. "People tend to just think of the flowers, but gardens are really more than that. It's the context that makes a garden wonderful."

Nettleton says that she first became interested in gardens when she was a student at Tulane University in New Orleans, where she completed her undergraduate degree in architecture in 1973. She recalls everything in New Orleans always being green, a lush, tropical "swamp-garden" aesthetic of hanging moss and massive oaks.

Sarah Nettleton

DON F. WONG

hacked out. The landscaper was rarely part of the original decision making."

Nettleton eased into garden design as a career. Through travel, she has explored different gardens and remains particularly impressed with the English country gardens and their spatial quality. Her first gardens were for herself and the different houses she's lived in over the years. "It's been a hands-on tutelage," Nettleton says. "You learn from your mistakes."

Nettleton turned to professional gardening when she was visiting a friend in England. The friend insisted that she design her garden. Nettleton was, of course, resistant, being a practicing architect and merely a hobby gardener. But she created a tiny garden in the back of a London townhouse.

Residential design allows her to combine architecture and landscaping in ways that commercial architecture rarely did. Since 1987 she has operated as Sarah Nettleton Architects, focusing on both house and garden with an emphasis on sustainable design. Academically, she is organizing courses on the built environment for the Center for Global Environmental Education for the Graduate School at Hamline University. Before Hamline, she taught at the Minneapolis Technical College beginning in 1983.

Surely her new Hamline career will fuel her residential garden-design career.

Continued on page 68

DON F. WONG

SARAH NETTLETON

Nettleton's work includes this house and prairie restoration (above) in Wyoming and her own garden (top) in Minneapolis.

Her early career focused on commercial architecture for such Minnesota architecture firms as Miller Hanson Westerbeek Bell and Nemeth Associates. In commercial architecture, she says, landscaping and architecture are quite separate. "Landscaping was something you got if you had enough left in the budget," Nettleton says. "A lot of times it got

MASONRY. A ROCK SOLID INVESTMENT.

Whether it's brick, block, or stone, building with masonry always makes financial sense. And its high quality and durability are second only to its beauty. For more information on making a sure investment in masonry, call the Minnesota Masonry Institute at (612) 332-2214.

1994 AIA Minnesota **honor award**

ACADEMIC ARCHITECTURE, VERNACULAR ATTITUDE

Though externally avant-garde, this North Woods cabin captures the essence of “up north”

By Robert Gerloff

The Hanson Retreat, which sits on a granite outcropping overlooking a small lake at the end of the Gunflint Trail in northern Minnesota, looks like a piece of avant-garde architecture. And it is. Not only was it published in the trendy Italian showcase *Case Da Abitare* (Irverno 1995), but its architect, David Salmela of Duluth, Minn., also won a 1994 AIA Minnesota Honor Award.

Mike Lande, who built the cottage for Madge and Jay Hanson, summed up its avant-garde quality with midwestern understatement: “It certainly isn’t a conventional box.”

Yet, at the same time, this cottage fits neatly into northern Minnesota’s backwoods vernacular, creating a dual identity that begs an interesting question: How can a building be simultaneously avant-garde and vernacular?

Vernacular architecture is, in theory at least, architecture by nonarchitects. We’re all used to theories about how academic design “trickles down” into vernacular architecture, but rarely do we hear about the rich and complex influence of the vernacular on practicing architects. The Hanson cottage blends avant-garde style with a vernacular attitude, creating a serious lesson for both architects and the public alike.

PETER KERZE

The Hanson retreat (above) in northern Minnesota presents a vibrant and lively east façade to visitors on approach. Stairs leading to a deck (left) are built around a massive rock.

First, let's explore the Hanson cottage's academic credentials. Four famous modern architects in particular influenced Salmela's design.

From the Finnish architect Alvar Aalto, Salmela learned about both siting and materials. Aalto often organized his buildings around outdoor courtyards, echoing the traditional Finnish farmstead, which over time collected small sheds and outbuildings around an informal farmyard. The Hanson retreat is built around a central court and its pollywog tail of noninsulated and unheated sheds and lean-tos—useful for storing firewood, tools, camping equipment, etc. And Salmela's collage of different wood-siding patterns, materials and finishes learns from the famous collage of brick, block and tile at Aalto's own cottage in Muuratsalo, Finland.

From the French/Swiss architect Le Corbusier, Salmela learned about syncopated fenestration. In such iconic designs as the Pilgrimage Chapel at Ronchamp in France, Corbusier scattered windows about with no visible pattern or logic, as does Salmela in the Hanson cottage. Even though the building meets Minnesota's strict energy codes, when you're inside light seems to be coming at you from all directions.

From the Danish architect Arne Jacobsen, Salmela learned the elegance of long, thin buildings. Jacobsen, who was classically trained, is the most delicate of

all the modern masters, particularly in his use of proportions. The cottage's strong use of horizontal proportions comes directly from Jacobsen.

From the American architect Robert Venturi, Salmela learned to exaggerate the scale of individual building elements and to give his architecture the cardboard frontality of a billboard or a western storefront. Venturi, of course, was the intellectual power behind postmodernism. His book *Learning from Las Vegas* argued that architects should learn from the everyday environment around them, including suburbia, Main Street and the ubiquitous "strip." Salmela was most impressed by Venturi's embrace of the "messy vitality" of American culture.

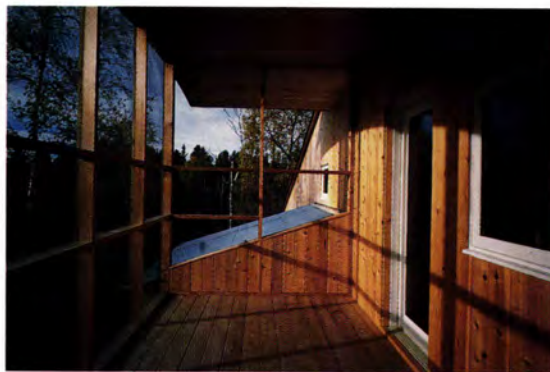

There are other influences, of course. From the Minnesota architect Edwin Lundie, Salmela learned picturesqueness; from the Finnish architect Lars Sonck, Salmela learned exaggeration; and from the German master Mies van der Rohe, Salmela learned structural discipline. You get the drift. This cottage may be simple, but it is deeply rooted in architectural history.

Understanding what makes the Hanson's cottage vernacular is far more difficult, for vernacular has become impossible to define, though its connotation is generally romantic and nostalgic, if not outright

sticky-sweet and sentimental. When one speaks of "vernacular architecture," most people imagine the everyday architecture of the past, the familiar red midwestern barns and white farmhouses, slatted corncribs and chicken coops.

Close your eyes and imagine the classic midwestern dairy barn for a minute. A dairy barn has two simple functions, to shelter cattle and store hay. Its form evolved over a century of

A 16-foot bench (opposite top) fits under a protective overhang on the entry court. Screened porches (above and left) on the west side overlook a lake.

rigorous testing by thousands of farmers asking practical questions: Does it keep the cows warm? Does it keep the hay dry? What materials work best? Can it be built for less?

Barns and other farm buildings are never frivolous; their forms are never arbitrary. Farm buildings are essentially tools, and a dairy barn has the same feel of a form reduced to its ultimate simplicity as any good hammer, broad-ax or cross-saw. Farm buildings and tools are shaped by pragmatism, practicality and economy—the utilitarian values of the farming culture.

Let's take a quick tour of what makes the cottage vernacular.

For starters, the heat is electric baseboard. Radiant electric heating is the least expensive of all heating sys-

tems to install. It requires no furnace, no ductwork, no boiler, no pipes. Just screw it into the wall, wire it to the electric panel and crank up the thermostat.

The lighting fixtures are simple exterior floods available for three bucks at your local lumberyard.

The interior material is a V-joint pine that local sawmills consider waste (because of dark streaks called “staining”). Locally, this particular grade of pine is cheaper than gypsum drywall.

The floors are locally milled painted pine boards, as are the kitchen cabinets. Countertops are also simple maple flooring boards and the cabinet pulls are 75 cent birch knobs painted white.

The weight of the house is carried on exposed concrete piers that are far cheaper than blasting foundations into

the solid granite slickrock that lurks just below the thin soil in this part of the country.

Other than the curved roof, all the construction is extremely simple, and all work was done by Mike Lande and his carpenters using hand-held power tools. Few other trades worked on-site.

For all its artistic qualities, the Hanson cottage—like older vernacular farm buildings—grows out of the utilitarian values of economy, practicality and pragmatism.

These utilitarian values do not always create buildings as beautiful as the classic midwestern dairy barn. The crackerbox tract homes gobbling up Minnesota's corn fields are economical, practical and prag-

matic—and extremely ugly. They, and much of today's vernacular architecture, are extinguished by expediency: Whatever works in the short run is okay; we'll only live here a few years before moving on.

Let's take another tour of what distinguishes the Hanson cottage from today's expedient vernacular. The all-V-joint-pine interiors tap into the very essence of "up north" cabin romance, satisfying every Minnesotan's archetypal image of what a cabin should be. Two classic American icons are combined in the front-door bench constructed like a picket fence. Unlike most architecture today, aesthetics do not override convenience, and one can easily imagine the realtor's ad for this cottage ("infrml lvng w/lk vw, 5 bdrms slps 18, 2 bths, dshwshr, wic"). There is a sense of pride in the craftsmanship, with even details as small as how the stair sits on the tile floor. Finally, the two porches demonstrate Salmela's understanding of the informal, outdoor-oriented way of living in a cabin, the romance of the great North Woods.

In the Hanson cottage, Salmela has combined his knowledge about architectural history with the values of the vernacular; the house is not only rooted in architectural history, but—even more important—the ethnic references, the romantic archetypes, the use of cultural icons all are ways of rooting the design in the "messy vitality" of contemporary American culture. This "rootedness" gives the Hanson residence a depth that tempers the vernacular's expediency.

Why is all this important? More strip malls, fast-food joints and tract homes are built every day here in Minnesota. These buildings constitute today's vernacular. Few Americans consider these buildings beautiful, certainly not as beautiful as our classic midwestern dairy barn.

At the same time, much contemporary academic architecture is an exercise in weirdness for weirdness' sake. To cartoon the situation, vernacular architecture is ruled by expediency—whatever is cheap is good—while academic architecture is ruled by novelty—whatever is weird is good.

Between these two extremes both architects and the public suffer: Architects suffer because the public dismisses their work as irrelevant; the public suffers because their everyday environment could be so much richer.

In the Hanson cottage, Salmela brings the academic and vernacular worlds together: To the vernacular he brings a knowledge of history, of mythology, of archetypes; to academic architecture he brings a vernacular atti-

not one of image, form or type, but of values. The Hanson cottage is academic architecture with a vernacular attitude.

Robert Gerloff is an architect with Mulfinger, Susanka & Mahady Architects in Minneapolis

Project: Hanson Retreat
Architect: Salmela Fosdick Ltd.
Client: Jay and Marge Hanson
Location: Northern Minnesota

The main floor (opposite) is a single open space. The stairway in the background leads to the bedroom loft. To keep furniture at a minimum, the architect designed many built-in pieces, including this sofa-bed combination in the kitchen area (top) and bunks in the loft (above).

PETER KERZE

A new south-Minneapolis house looks as though it's been around for decades—but take a closer look

At first glance, you won't recognize the Anderson family house as new construction. It looks traditional and unassuming, a perfect match for the other pre-World War II homes in this south-Minneapolis neighborhood. If anything, you might assume this square, 2-level house simply

sports a fresh coat of paint. That suits Leslie and Miles Anderson just fine. When they decided to build new, they wanted to fit in, not stand out as often happens when a new house pops up in an established neighborhood.

Several years ago the Andersons lived just a few blocks away when they started thinking about whether to add on to their house or buy a larger existing house. Building new in this neighborhood at first seemed an unlikely choice. After all, vacant lots in south Minneapolis don't exactly come by the baker's dozen. But as luck would have it, they discovered a prime site with a Depression-era cottage set back from the street. The cottage, one of many built as temporary housing, was easily razed.

Building fresh represented the best of both worlds for the Andersons. "We wanted to build an old house with new-house features," Leslie says. With Xerxes Architects of Minneapolis at the drawing board, the Andersons got exactly that.

From the outside, everything is what you might expect. Timber framing and stucco are classic south Minneapolis. Inside, however, the 2,200-square-foot house maintains a traditional feel with an updated floor plan. Older houses tend to be claustrophobic and dark. Not here. The first-level floor plan is free-flowing, with the only real interior wall being the stairwell at the center. The kitchen, breakfast nook, living room, dining room and family room progress smoothly from one to the other. Without boxy walls, daylight brightens the interior from all four sides. Even on a gloomy day, the house is well lit. The upstairs, less open to accommodate privacy, has a traditional plan that places the four bedrooms in the corners off from the center stairs.

Strong on comfort and efficiency, the Anderson house is remarkable for eschewing the "big design" statement in favor of blending old and new with a neighborhood feel.

E.K.

Though new, the Anderson house (top) fits unobtrusively with its south-Minneapolis neighbors. Traditional design features include a porch (opposite), yet an updated floor plan offers a more open, light-filled interior (right) than is found in many older houses.

New Neighbor

HealthyLiving

Health House '94 combines technology
and design to showcase options
for healthy residential environments

By Eric Kudalis

MARK ENGLUND

Health House '94 (top) reflects the rural architecture of its west-suburban location. The metal roof is low maintenance, the lap siding is composite wood, and the deck is made from recycled plastics and waste wood. High-insulated windows (above) maintain temperature consistency and offer enough natural light to offset the need for electric lights during the day.

Energy conservation has been a design issue since the 1970s, when we suddenly realized that perhaps all those natural resources of ours were, after all, finite. After being a bit neglected during the rampant consumerism of the 1980s, concern about the environment and energy conservation are back with a new name—sustainable design.

The term sustainable design, however, is easier to squeeze into the public lexicon than it is to implement. Look around you. Freeways are chewing up the countryside as we build farther and farther from the urban core, cars chug out toxic fumes as always, buildings are torn down almost as soon as they are put up and garbage continues to pile up despite all our recycling bins.

In an effort to educate the public about sustainable design and healthy living, the American Lung Association developed Health House '94, a prototypical suburban home. Designed by the Minneapolis office of LHB Engineers & Architects, this 2,200-square-foot speculative house in suburban Chanhassen is one of several such houses built or planned by the ALA. Health House '94, according to Rick Carter of LHB, is designed to showcase energy-efficient technology, resource efficiency and better indoor air quality.

Almost diminutive in comparison to its big-roof neighbors in this upper-middle-class housing development, Health House '94 is revolutionary in how it combines existing technology.

"A lot of the technology is out there; it's just a matter of using it in the right way," says Carter, who worked with a team of experts to explore the different available technologies.

In addition to incorporating up-to-date technology, much of Health House is based on such common-sense design thinking as siting. Most of the houses in the development are merely plopped on their lots without much consideration given to orientation. Health House '94 is designed and sited in such a way to take full advantage of daylight and offset winter winds. "You can perform any task in any room during the day without electric lights," says Carter, who admits that most houses simply don't have the luxury of selective siting.

In creating a healthy and energy-efficient house, the design team considered such features as air ventilation, less toxic materials, super insulation, recycled building products and long-lasting materials.

Health House '94 sells for nearly \$270,000, a bit out of reach for the average home buyer, but still considerably less expensive than the neighboring houses.

The obvious question remains: Is all this energy-efficient, resource-efficient technology practical and accessible for mainstream American home owners? Perhaps the average home owner doesn't think on such whole-scale environmental and energy-efficient terms. The lesson here is for the building industry, the developers who are responsible for the majority of suburban developments.

Consumers need to educate themselves about available sustainable technology, but builders need to step in line, too. Health House '94 is a good example of architects having an impact on builders' terrain. With luck—and the effort of architects—builders will make stronger efforts to integrate the latest technology into suburban-housing developments to create healthier homes that save on resources.

Project: Health House '94
Architect: LHB Engineers & Architects
Client: American Lung Association
Location: Chanhassen, Minn.

Highlights

Resource-efficient materials

Alternatives to dimensional lumber include wood-composite exterior lap siding, decking from wood waste and recycled plastics, and metal studs from recycled steel.

Framing

Structural building panels with a nontoxic polystyrene core sandwiched between two stressed skin panels were used in the second level. The panels are recyclable. Strand board made from wood chips were used for the first floor.

Energy-recovery ventilation

Ventilation system recirculates house with outdoor air every three hours. The high-efficiency heating system is a combination forced air and in-floor.

Wood floors and tile

Wood and tile floors are easy to clean and keep indoor air quality cleaner from airborne contaminants. Wood floors are maple from a certified sustainable forest. Glazed ceramic tile used because it does not need to be sealed. Carpet on the second floor made from recycled PET bottles.

Vapor barrier

Entire indoor shell of the house is wrapped to minimize moisture problems.

Insulation

In addition to standard insulation, blow-in insulation fills the voids around wires, electrical receptacles and pipes to minimize heat loss.

Windows

Both gas-filled and special heat-reflective materials boost the insulation. A special technology reduces condensation and provides better energy efficiency.

Kitchen

Kitchen and bath cabinets are solid wood finished with a sealer that is low in volatile organic compounds (VOC). Typical cabinets are made of particleboard that can release urea-formaldehyde gases that can cause a variety of respiratory irritations and health problems. Low-VOC paint is used throughout the house.

Landscaping

Native plants well suited to the local environment cut down on the need for herbicides and water.

Metal roof

The roof is long lasting, reflects heat, requires no maintenance, can be cleaned easily and has no off-gassing.

Rooted in the tradition of Frank Lloyd Wright's Taliesin, John Howe has imprinted his residential-design signature on houses throughout Minnesota

ROBERT GOEPFEL

John Howe

I'll never forget the first time I saw a house designed by John Howe. I was an eighth-grade student and had been invited, with a group of friends, to spend an evening at the recently completed David LaBerge house, just outside my hometown of Stillwater, Minn. It was a gathering for fellowship and music; David LaBerge was director of the Bach Society of Minnesota and Jane LaBerge was an accomplished violinist. More than the memories of good company and good song that have lingered for close to 30 years, I recall the powerful poetry of the house itself. Indeed, this was a house un-

the house. His name was John Howe; he had worked with Frank Lloyd Wright.

More than just working for this legendary figure, Howe was almost an extension of Wright's hand. In fact, many of the elaborate pencil perspectives credited to Wright were—other than a few final flourishes—the work of John Howe. Years later, I had the good fortune to meet Howe and our paths crossed on several subsequent occasions. Each meeting yielded glimpses and insights into this soft-spoken, gentle yet decisive man and his long career in architecture.

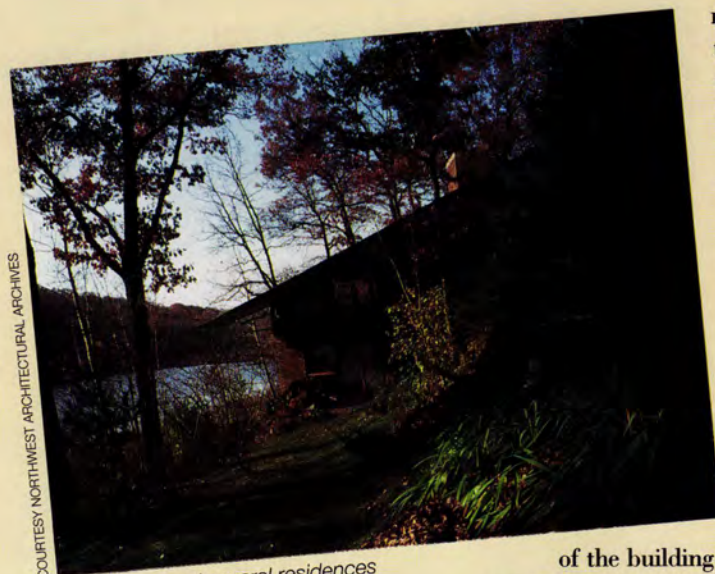

The first part of Howe's career centered around Taliesin East in Spring Green, Wis., from 1932 to 1964. Born in Evanston, Ill., in May 1913, Howe exhibited an interest in architecture early on. He often crossed Chicago by bicycle to Oak Park and River Forest to study the houses of the full-fledged Prairie School. Just a week after high-school graduation he headed to Spring Green to enlist as one of 20 charter members of the Taliesin

P R A I R I E

like any I had ever experienced. It was a building so in harmony with nature that it seemed to be a natural extension of its surroundings, embracing a rich autumnal palette of materials and colors and textures. It wasn't ostentatious in the least. On the contrary, the house exuded a humble sense of elegance. And it was the first house I'd ever been in that wasn't conceived as a mere series of rooms. Despite its modest size, spaces flowed openly from one part

of the building to another, all pivoting around a vast skylit stone fireplace. I asked Jane LaBerge who had designed Fellowship, Wright's grand experiment to keep his practice and precarious financial situation afloat during the height of the Great Depression. Howe, along with the other young apprentices, was required to bring a saw, hammer, pocket rule, T-square and triangle, spirit and "whatever money they could." He remained there for 32 years, maturing eventually into Wright's chief delineator and draftsman. One of his first duties as a new arrival was to keep the countless fireplaces blazing in the great house during winter, a herculean and frustrating task that he often recalled with a dry sense of humor. At the same time, he and the others gained invaluable hands-on experience in carpentry and stone masonry, for it was the members of the Fellowship who were primarily responsible for the constantly evolving construction work at Taliesin.

There were quiet pursuits as well. Every morning after breakfast Howe sang in the Taliesin chorus. He also helped develop the grounds at Taliesin into lawns and gardens: "When I became tired of drawing, I pulled weeds."

COURTESY NORTHWEST ARCHITECTURAL ARCHIVES

Howe designed several residences for himself, including Sankaku in 1971, in which the house seems to spring naturally from the wooded slope in Burnsville, Minn.

By Kelly Davis

Taliesin was a demanding lifestyle, but with great rewards. When asked the most important thing he learned from his years with Wright, Howe responded "I learned how to live, and the joy of work." With regard to architecture, Howe said, "You do it because you can't help yourself. It's just something you have to do."

Howe's drawing table in the Taliesin drafting room in the early years was just around the corner from Wright's. One of his earliest tasks was to detail the shelves that marched down the hallway of the Malcolm Willey house in Minneapolis. With time, his speed of drawing became legendary. Only half jokingly, he admits that he learned to work fast just to keep ahead of Wright and get the drawings out the door before Wright changed them. Wright often summoned Howe to the studio in the early morning hours because he awoke with an idea for a building and didn't want to lose it. Howe complied and developed the original concept sketches through the wee hours for review the fol-

sin retreat in a 1959 collector's edition of *House Beautiful* entitled "Your Heritage from FLW," but they had in no way prepared me for the powerful impact of this 850-square-foot masterpiece. Organic architecture needs to be experienced in person; the camera, even

through the eye of a gifted photographer, is limited in capturing the magic of spatial fluidity and the essence of human scale in a building such as this. Only by being there can one appreciate the way the house is inseparably fused with the hillside, the sense of sheltered enclosure at the entry door, the comfortable inti-

COURTESY NORTHWEST ARCHITECTURAL ARCHIVES

L E G A C Y

lowing day. Dependent on Howe, Wright eventually put him in charge of the Taliesin studio and its production of drawings for hundreds of buildings across the country. Wright was a mentor to Howe. In turn, Howe became a mentor to a host of new Taliesin apprentices.

It's often insightful to see a house an architect designs for himself, because houses are frequently the most visible manifestations of who we are and what we value. Fellowship members often designed and built their own shelters or living quarters. Howe and his wife Lu, an assistant to Taliesin's secretary, Eugene Maselink, remodeled a desert cabana on the grounds of Taliesin West near Scottsdale, Ariz., in 1951. In addition, they designed and built a cottage on a beautiful hillside site across the valley from Taliesin East in the mid-'50s. I first saw photographs of the Howes' Wiscon-

COURTESY NORTHWEST ARCHITECTURAL ARCHIVES

maciness of the low-light decks that line the perimeter of the living room, the visual interpenetration of spaces and the long focal views toward the stone patio and valley beyond, the psychological anchor of the great fireplace. The house is sub-

Howe had several repeat clients. He designed two houses for George and Norma Johnson, first in 1963 (top) in west-suburban Minneapolis and then again in 1973 (above) in the western suburbs.

servient to nature, a house of great humility and respect, a house that shows the mastery of Wrightian principles that Howe would continue to interpret. A third home, "Sankaku," nestled into a wooded slope above a small lake in Burnsville, Minn., followed in 1971.

In 1964, five years after Wright's death, and feeling a need for independence, Howe and his wife Lu left Taliesin and moved to San Francisco. While

them long after they were built. On more than one occasion, I've heard of clients being taken to task for making changes or additions to their homes without soliciting his input. The generally mild-mannered architect, like his predecessor, could suddenly display an intimidating presence. But no one could accuse him of not caring.

Taking inspiration from the site—for he often said, "The land is the beginning

COURTESY NORTHWEST ARCHITECTURAL ARCHIVES

For the first Johnson house, expansive windows open to Lake Minnetonka.

working with Aaron Green, another Taliesin Fellow, Howe began getting requests to design houses in Minnesota. He moved to Minneapolis in 1967 and opened his own office on Wayzata Boulevard. Thus Howe began his second career in architecture, a career that included some 200 projects, primarily residential, of which an impressive 125 were built.

For as long as I've known him, Howe has exhibited a delightful enthusiasm and optimism about his work; he seems to take sincere pleasure in what he has accomplished. Working alone, or often with a young apprentice, Howe designed houses that were his most personal creations and he remained protective of

of architecture"—the best of his houses are richly detailed and filled with integral arts and crafts, from furniture and lamps to stained glass and more. Quality of space is coveted far more than quantity of space, and many of the residences express a delicacy of proportion not always found in Wright's work.

As most architects are acutely aware, a sympathetic client is a key factor in producing a good building. A high level of rapport, respect and trust is necessary between architect and owner, especially in the intensely personal process of designing a house. For Howe, this was no exception; the results can be studied in his buildings.

Of the houses I've seen, which are by no means all-inclusive, several stand out as obvious examples where owner and architect were in undivided agreement. The results can be breathtaking. The LaBerge house (1961) is one. The beautifully sited Goodale house (1969) in Excelsior, with its entry balcony that ingeniously penetrates from exterior to interior, is another. The two houses Howe designed for George and Norma Johnson (1963, 1973) are additional examples. The fact that Norma Johnson commissioned Howe to help her with four more projects after her husband's death is further testament to the strengths of a successful working relationship.

Howe's work has been published and exhibited equally as much in Japan as in Minnesota. Perhaps this is due to the enduring fondness the Japanese have for Frank Lloyd Wright and those who have followed in his footsteps. No doubt it's also a result of the aesthetic kinship between organic architecture and the traditional architecture of Japan, both taking their cues from nature. No matter. John Howe is retired now. In the autumn of 1993 he closed his office and donated his drawings to the Northwest Architectural Archives at the University of Minnesota, where they will continue to inspire those who seek them out. John and Lu recently moved back to the San Francisco bay area. Sixty years. Two remarkable and enviable careers. A rich legacy for Minnesota.

Kelly Davis is an architect with Mulfinger, Susanka & Mahady Architects in Minneapolis.

Prairie reworking

Well-designed but poorly constructed, this John Howe house is revived with a careful remodeling

By Eric Kudalis

KAREN MELVIN

Architect John Howe, an apprentice to Frank Lloyd Wright and now living in retirement in California, was a master of the Prairie School style in his own right. More than imitating Wright, Howe created a distinct architectural vocabulary that expressed his views of organic architecture. While Howe was prolific in creating Minnesota work, the execution of his designs was sometimes inconsistent—even shoddy. This 1970 house in west-suburban Minneapolis was a perfect example of how Howe's strong designs were at times poorly assembled.

Before its recent renovation, the house's primary problems included a heating and mechanical system that allowed 15 degree temperature swings, inadequate insulation and marginal interior finishes in detailing. Wood finishes, for instance, were rough-textured, something more appropriate for a barn interior than a refined house. When Kelly Davis of Mulfinger, Susanka & Mahady Architects entered the scene, the house was in general disrepair. In fact, the 20-year owner actually closed off the main-floor bedroom wing because of the cold.

Kelly Davis renovated this John Howe house (above) west of Minneapolis. Exterior work was generally cosmetic, but did include redesigning the front doors (opposite bottom).

Davis, hoping to renovate the house to its never-realized integrity, began by reconsidering room functions and reworking the family entry, kitchen and informal dining area, main-floor bedroom wing with master suite and underutilized atrium at the center of the house. A newer three-season porch was a particular blemish on the house as it blocked interior light and was inconsistent with the rest of the house's design.

Aside from pulling down that porch, perhaps the most visible change Davis executed is seen in the new dining room. Originally Howe planned the dining room off from the kitchen. The space, though it had good exterior views, was too small for large gatherings. Davis turned this space into a family eating area while remodeling the kitchen and turned the atrium, with its skylight, into a new dining room. In the bedroom wing, Davis designed a new master suite with an adjoining study and dressing room. Other interior rethinking included removing much of the rough-textured wood trim and replacing it with smoother detailing and establishing long focal views through the house.

From a mechanical standpoint, Davis called for a new high-efficiency heating/cooling system, innovative wall and roof insulation, energy-efficient lighting system and replaced the quarter-inch glass windows with state-of-the-art insulated glass. Also, windows that had been covered with plywood to keep out the cold were restored to usher in more light.

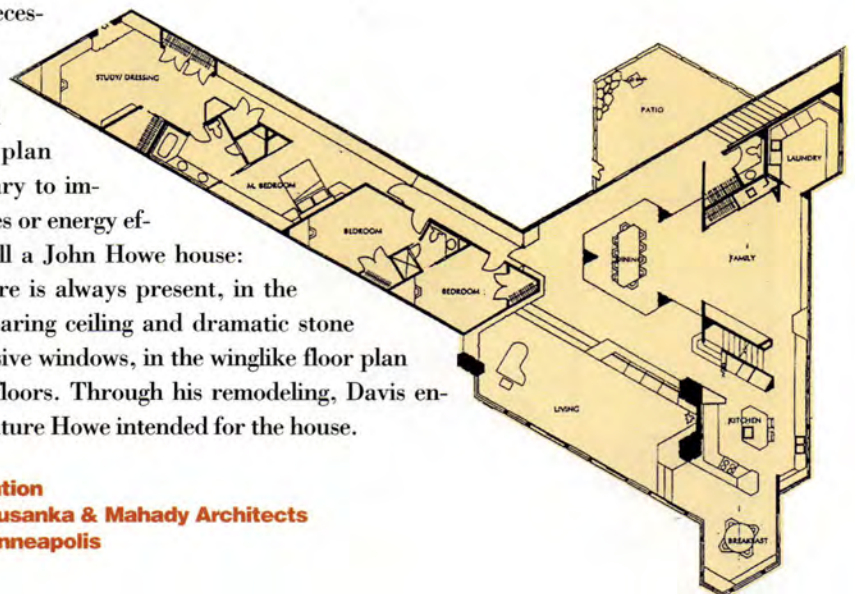

Davis says his design intent was not necessarily restoration but renovation, which meant that he did make structural and plan changes where necessary to improve function, site lines or energy efficiency. But this is still a John Howe house: Howe's design signature is always present, in the living room with its soaring ceiling and dramatic stone fireplace, in the expansive windows, in the winglike floor plan and in the rich stone floors. Through his remodeling, Davis enhanced the design signature Howe intended for the house.

Project: House Renovation
Architect: Mulfinger, Susanka & Mahady Architects
Location: Suburban Minneapolis

KAREN MELVIN

Davis designed a fireplace for the new master suite (above) and repositioned a dining room in a former atrium space (left). The floor plan (bottom) features two bedrooms and a master suite, dining room, living room, kitchen, laundry and den on the first level. The upstairs includes a home office that overlooks the living room, and another bedroom. A soaring fireplace (opposite) is the focus of the living room. Davis replaced much of the woodwork and installed better-insulated windows throughout.

Morgan Park →

You don't have to dig deep in Duluth, Minn., to discover that big industry is the bedrock of the city's economy. Mount the first overlook of the city on I-35 at the west end of town and you'll get a 180-degree view of the St. Louis River estuary bristling with massive grain elevators, paper mills, ore docks and lake freighters. Drive down leaf-dappled London Road as you exit the city to the east and you pass the turn-of-the-century mansions of industry captains who built their fortunes using the alchemy of their time—turning the trees, minerals and waters of the northland into bankers' gold.

Morgan Park is a monument to their aspirations—and their folly. Located 10 miles southwest of downtown Duluth along the St. Louis River are the remains of a company town built by United States Steel Corporation. In 1913, U.S. Steel chose 1,600 acres along a bow in the St. Louis River known as Spirit Lake and began construction on a steel plant that would manufacture, among other things, a revolutionary new

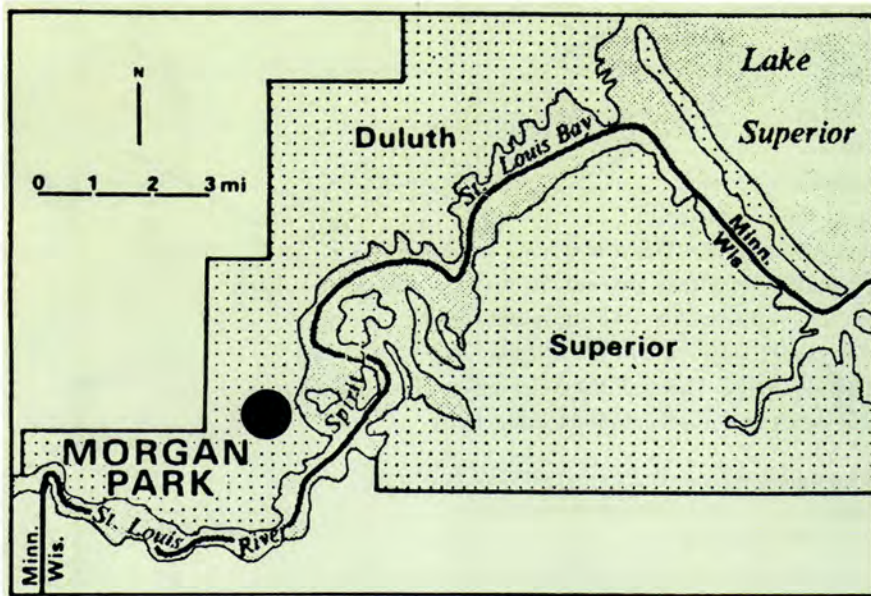

**Built to house steel
workers and their
families, this
Duluth neighborhood
thrives in the
shadows of its
long-abandoned
factories**

By Adelheid Fischer

product—barbed wire for agricultural fencing. To supply ready housing and services for its workers in this isolated location, the company built a 200-acre community from scratch, complete with housing, two churches, playgrounds, stores, a community recreation center, school, bank and hospital. They called it Morgan Park after the town's benefactor and U.S. Steel's financier, J.P. Morgan.

"Company town! The very phrase summons images of grimy tenements clustered about a pithead or forbidding factory, where over-worked laborers remained in perpetual debt to the company store," writes urban-planning historian John W. Reps in his classic book *The Making of Urban America*. More often than not, Reps says, this reputation was well deserved. But Morgan Park was different. True, U.S. Steel owned all the land and property in Morgan Park, but residents didn't live in indentured squalor. In fact, the town was built on some of the most progressive urban thinking of its day. Unlike many other company towns that hired plant engineers to design homes and community layouts, U.S. Steel executives consulted the Chicago architectural firm Dean and Dean and the Minneapolis firm Morell and Nichols for town and landscape plans.

The designers avoided the block-long bunkers that constituted workers' housing in many other industrial centers. Using cement bricks produced by a nearby U.S. Steel-owned plant, the company built a mix of attractive and sturdy single-family detached homes, duplexes and row houses known as "sheep sheds," all available at subsidized rents. Porches, gables and variable roof lines added flare and a pleasing diversity to the concrete's hard edges. The maintenance regime was rigorous. Every few years company workers

A plant open house for U.S. Steel welcomed workers, families and friends in October 1956.

BASGEN PHOTOGRAPHY

added a coat of dark-green paint to the exterior trim before moving indoors to freshen household walls. In addition, the company provided such services as garbage collection, coal delivery and snow shoveling.

Anedith Nash and Rob Silberman, authors of the 1992 exhibition catalogue *Morgan Park: Continuity and Change in a Company Town*, point out that by comparison to other company housing in the region, Morgan Park bordered on luxurious. Of the 2,000 homes owned by Oliver Mining in 1921, for example, 63 percent lacked indoor plumbing; another 31 percent had no running water. Not only was comfort attended to in Morgan Park, but the plans didn't scrimp on aesthetics. The sewer, water and electrical lines that serviced homes, for example, were run underground, and the muddy streets paved with con-

crete. Only the necessary trolley car and streetlight lines were exposed, preserving the parklike atmosphere of the meandering, tree-lined streets whose course followed the rolling topography of the land.

But according to a 1918 article in *The American Architect*, town planning in Morgan Park was more than the sum of its physical parts. It encompassed "the whole social structure rather than the narrower field of building construction and town site surveying only." Nash and Silberman point out that Morgan Park's more than 2,000 residents benefited by the age of enlightened corporate self-interest in which the town took shape. "Morgan Park was founded in an era of industrial reform," they say, "when 'scientific management' meant acknowledging that such matters as housing conditions,

personal health and hygiene, education and plant safety were part of business efficiency....A healthy, safe, orderly environment would create a stable, reliable work force."

This benevolent paternalism has historic roots in the first company towns of the Northeast. Following the War of 1812 and subsequent westward migrations, Reys points out, textile mills faced a shortage of male laborers. To attract young women from outlying farms, mill owners had to convince wary parents that town life and factory work offered respectable situations for their unmarried daughters. Young female workers lived in closely supervised boarding houses in which much of their free time was taken up with mandatory scripture readings and church services. To provide for the needs of all its employees, the company

Morgan Park housing looks traditionally midwestern, with detached houses, duplexes and row houses, but they are made of cement block from a nearby manufacturing plant owned by U.S. Steel. Many of the home owners today have dressed up the exteriors with fresh paint or new siding to disguise the cement block. One of two neighborhood churches is St. Margaret Mary Catholic Church (right).

built a full range of facilities that could be found in other communities.

Following the Civil War, industry in the North flourished, and company scions took an avid interest in the idea of company towns. They were inspired by models of workers' housing in Germany, an obligatory stop on many an industrialist's grand tour of Europe, and

later by ideas circulated at the Chicago World's Columbian Exposition in 1893. While some were clearly motivated by fear of labor unrest, Reps says, others were moved by genuine philanthropy. "If workers in a single plant could be isolated from their fellows, if no alternative sources of employment were readily available, and if employees were dependent on industry for housing, shopping facilities and credit, then trouble might be avoided," Reps observes. "At the same time some industrialists felt a genuine concern for workers' welfare and desired to establish better conditions for their labor."

Morgan Park was, by many accounts, a model company town. Nash and Silberman point to the company's

ROBERT SILBERMAN

emphasis on education, not just thorough vocational training for high schoolers, but the value of creative play for the youngest children. "Playgrounds around the community," they observe, "were prominently featured on early plans." The list of amenities goes on. U.S. Steel built a Gothic-revival church for Protestants, which anchored the wealthier section of Morgan Park; the working-class neighborhood hosted a Spanish Mission-style church for Roman Catholics. At the heart of the community was a school and recreation center, replete with such amenities as a bowling alley, swimming pool, gym and

running track. An infirmary catered to every medical need, from aspirin to crutches. And the company generated interest in such social activities as theatricals and gardening contests through regular community bulletins.

By the time competition and outdated technology forced U.S. Steel to close the plant in 1973, Morgan Park had long lost its identity as a company town. In 1942, U.S. Steel turned its housing over to realtors for sale to private individuals. Over the years, the town had looked beyond its boundaries, developing both political and automotive links to the greater Duluth area.

But the complicated legacy of Morgan Park remains. As Nash and Silberman point out, the systematic exclusion of some religious, ethnic and racial groups resulted in a homogenized society of Anglo-Saxon and Scandinavian origin. Social stratification and gender roles were rigidly prescribed. And the company, in many cases, overstepped its bounds in citizen's lives. On the other hand, Morgan Park afforded employees dignity and prosperity at a time when many other workers around the country were engaged in life-and-death struggles for far less. As one anonymous observer remarked in 1921, "Morgan Park has neither saloons nor slums; everybody who lives in it is prosperous."

This modernist treasure designed by Philip Johnson in the 1950s features an interior plant-filled atrium (above). The modular, clean-lined exterior (right) is offset by the owners' eclectic guest house. Furniture groupings help to define rooms (opposite) within the fairly open floor plan.

GEORGE HEINRICH

Modernism revisited

An icon of modernism, Philip Johnson's classic Lake Minnetonka house still stands as one of the prime examples of midcentury residential architecture in Minnesota

By David Anger

DON F. WONG

Architect Philip Johnson a superstar, renowned for the skyscrapers that punctuate the horizons of many American cities. Minneapolis, of course, claims one of the architect's best-loved trophies—the IDS Center. While our towering edifice is widely assumed to be Johnson's sole contribution to Minnesota's architectural landscape, his diverse catalog also includes a secluded and modern private residence in pastoral suburban Minneapolis.

Constructed between 1950 and 1952, Johnson created the home for Richard S. Davis, the former senior curator at the Minneapolis Institute of Arts. After its completion, the Davis house received critical accolades in both local and national magazines. In addition, it was featured in the 1958 MIA exhibition "A Century of Minnesota Architecture," which was incidentally organized by Davis.

In the scope of Johnson's opus, the Davis house is ren-

dered in the International Style. The architect fashioned several other residences in a similar style, including the Hodgeson house (1951) in Connecticut and the Oneto house (1951) in New York. Because these and other designs pay homage to Mies van der Rohe, critics dubbed Johnson, "Philip van der Rohe."

Davis championed the International Style, having been exposed to the progressive idea as a student at Harvard University and as a curator at Cranbrook Academy of Art in Bloomfield Hills, Mich. An inveterate art collector, Davis's works were frequently lent to museums across the country. Then, too, his purchases were closely watched and often imitated by the cognoscenti. Because of the voluminous size of Davis's collection, displaying his handsome purse was the primary function of the house.

Like Richard Davis, the current occupants of his former residence are serious patrons

of contemporary art and design. Their walls attest to this fact. Works by Robert Ryman and Cy Twombly, among others, are proudly displayed. This Minneapolis couple is civic minded, devoted to an assortment of charitable endeavors.

They are also private people, who for purposes of attribution asked to be identified as "owners." Guardians more aptly describes the couple that has meticulously maintained and nurtured the Davis house since purchasing it in 1965.

The house is perched on a high bluff overlooking Lake Minnetonka. In keeping with the guardians' understated manner, the house is barely discernible from the road, reached by ascending a twisting road that suddenly gives way to a gravel driveway.

Here stands two anonymous rectangles, enveloped in Pennsylvania iron-spotted

Right: Renovation of a House Originally Designed by John Howe, Architect Medina, MN

It is a rare occasion when an architect is asked to renovate the masterpiece of another, well-known and highly-respected architect. This beautiful home, which was originally built in the 60's, had been modified over the years and was in a relatively poor state of repair. With great respect for the original design and detailing, we brought the home back to its original majesty, updating a few rooms in the process, to better serve the lifestyles of its present occupants. The renovation was designed by Associate Kelly Davis. The contractor was Choice Wood Company.

Below: Smith Residence Menomonie, WI

A rural vernacular form meets a contemporary glass wall; nature enters flowing space and internal vistas connect living realms with distant views. Designed by Dale Mulfinger and constructed by Paul Paulson.

Right: McDonald Residence Minneapolis, MN

This unique 1915 Prairie style home recently underwent an exterior restoration and an interior rehabilitation. A new period kitchen incorporates salvaged cabinets and reproduction materials in exacting detail. A new master bedroom suite was created by reconfiguring existing spaces. Designed by Joseph G. Metzler and constructed by Rivertown Builders.

Above: Maple Forest House Minnetrista, MN

The steeply pitched roofs and sheltering eaves of this house promise both welcome and retreat. Interiors and exteriors are characterized by a spirited sense of joinery, texture and detail. The home was designed by Michaela Mahady and built by Kyle Hunt & Partners. It was featured on the PBS "Hometime" series, the 1994 Fall Parade and 1995 Spring Preview.

Since 1978, **SKD Architects, Inc.** has guided over three hundred clients through the design and construction process. Whether we're designing a single family home or a corporate headquarters, **SKD** will produce a creative, well thought-out project. We'll show you dozens of sketches and material samples, to develop the project's visual poetry. Using our sophisticated computer animation, you'll take a virtual tour around and inside the structure before it leaves the drawing board. The computer also enables us to prepare the most precise construction drawings. We coordinate the bidding process and make site visits during construction to maintain quality control. If you wish, we'll select the paint colors, wall covering, furniture, fabric, hardware, even the cabinet knobs. We leave little to sweet chance. **(612) 591-6115**

CONGRATULATIONS GOLDEN VALLEY LUTHERAN CHURCH

Creative options from an experienced team facilitated this church in selecting their single preferred concept. Now that this new facility is in place you have spaces to include many others into your wonderful community.

INSIGHT

Continued from page 17

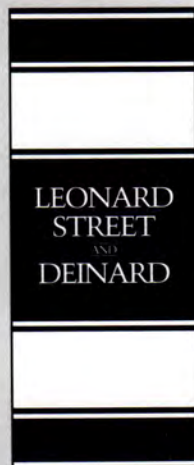

nately feel away from it all. Most of the area between downtown Chanhassen and the development is still predominantly farms, wetlands and woods. It's a quiet area, for now. Increasingly, however, residential developers are leapfrogging further afield, out to where land is relatively cheap and big, open sites are plentiful.

These developments are sustained—made possible, even—by the automobile. Walking to work, or to the store or to the local community center, is impractical, even impossible. The housing development sits in isolation of retail development and other commercial development, all built as separate developments miles from each other. Mass transit is severely limited. The environmental advantages demonstrated in Health House are somewhat compromised by its location: One could argue that the gallons of gasoline burned during long car drives can quickly and easily negate the embodied-energy savings gained from responsibly chosen building materials and good solar orientation. The paradox of Health House and its context simply underlines the broader issues of environmental design.

What can we do?

With only a small percentage of new homes built with the involvement of architects, what can design professionals do to have a broader impact on the environmental housing market? Perhaps one way is to get involved with such efforts as the Health House projects. The AIA Minnesota Committee on the Environment worked with the American Lung Association (ALA) of Hennepin County on the project (along with many others, including LHB Engineers & Architects, who were retained for the design development of the house). Health House is a valuable bridge between custom architectural works and the mass-housing market. Thanks to the ALA's marketing savvy, the project illuminates many environmental issues that aren't being addressed in the mainstream housing market today. Health House '94 may fall short as a true exemplar,

SUPERIOR WOOD SYSTEMS Products

Pre-Engineered to Produce the Ultimate in Structural Capacity & Versatility
Environmentally Efficient • Time Saving • Cost Effective

SWI-Joists

Available in standard lengths up to 48'

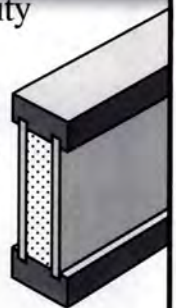

- **Lightweight** - Can be handled by a single worker, easily cut with standard job-site tools
- **Dimensionally Stable**
- **No twisting, warping or splitting**
- **Built with No Crown**
- **Less Waste** - Much less than solid wood
- **Easy Boring** of holes in 7/16" thick web

Insulated Headers

2 x 4 and 2 x 6 Wall Construction

- **Pre-Insulated**
- **Cost Savings** - Eliminate the need for on-site insulating
- **Dimensionally Stable**
No shimming required for tight fits.
- **Lightweight** - Can be handled by a single worker, easily cut with standard job-site tools
- **Less Waste** - Much less than solid wood.
- **Energy Efficient** - Provide an R-value of 20 (after sheathing & sheet-rocking)

SW-II Headers are made with Machine Stress Rated lumber and Oriented Strand Board. They are manufactured to strict quality control standards, with PFS Corp. acting as third party inspectors. SW-II Headers have code acceptance by ICBO, BOCA, State of Wisconsin & HUD.

but it remains a good lesson in how architects, a committed client and—in this case—excellent marketing leverage can make a difference.

Scott Newland is an architect with Architectural Alliance in Minneapolis. He is a member of the AIA Minnesota Committee on the Environment. Richard Venberg, Rachelle Schoessler Lynn and Greg Maxam, also members of the Committee on the Environment, contributed to this article. The American Lung Association of Hennepin County recently committed to Health House '95, not as another new suburban project but as a remodeling of an existing house. **AM**

UP CLOSE

Continued from page 21

For a rustic house that she designed recently for a working cattle ranch in Wyoming, Nettleton explored the relationship between architecture, the landscape and gardening. Rather than rearranging the site, as is typical in residential development, Nettleton looked at the wide-open land and the mountainous background—in this case, the Bighorn Mountains—to determine how the house would blend as a natural extension of the landscape. The owners, planning to donate the land to The Nature Conservancy, wanted to restore the ecological balance of the land, so the house needed to respect the land and become part of it.

Nettleton's master plan included out buildings, the new ranch house, custom interior features, landscaping around the house and ponds. The main house, which has been completed, is surrounded by prairie grasses. You might think these grasses had been there all along, but in fact Nettleton restored the prairie. The native grasses and flowers were destroyed long ago by cattle grazing and the introduction of exotic grasses.

Just as a restoration architect will study a house's history to determine the precise period in which to restore the structure, Nettleton studied the history of the prairie. That in itself is

tricky business, she says "because nature and the prairie are ever changing—the prairie was different in 1835 than it was in 1890 or 1920. We went back as far as we could to find information about what was there. We consulted The Nature Conservancy and the SCSC and used those records as the basis for the plants we reintroduced."

By incorporating a historic prairie survey into the total design process, architecture and landscape meshed. "It affects the house's program when you go with the landscape instead of deciding 'let's do the house first and then do the landscape,'" Nettleton says.

Nettleton is quite comfortable thinking of gardens, landscape and architecture in the same mode. Garden design, she says, is like architectural design, in which a clear definition of space, use of design elements and texture combine for success.

"On the largest scale, a garden starts with rooms, vistas and purposes, as a building starts with functions and site," Nettleton wrote in a May/June 1986 article in *Architecture Minnesota* about English country gardens. "On the next level, the scale of the garden space is created by decisions on the height of walls, shrubs and trees. On the most immediate hands-on level, color harmonies, leaf textures, sculpture and building materials create the mood of the garden. As in architecture, well-planned gardens reinforce their themes by repetition at all three levels. A garden, then, can have an architectural presence of its own in addition to its presence as an adjunct to architecture."

While her Wyoming project may represent an ideal commission in combining nature and architecture, Nettleton works primarily in the city, often on cramped lots. Although there is the obvious difference in scale that will determine the plants used or spatial planning, the results of an urban garden can be just as rewarding as a rural garden. In an urban setting, privacy is a primary goal, so the objective is often to create a little oasis, a refuge tucked away. While the mountains and expansive land are the context of her Wyoming project, the

surrounding houses, busy streets and pedestrians are the context of the urban garden.

"I love the concept of outdoor rooms," she says.

Some of her best urban gardens become rooms in themselves, sometimes a progression of rooms that flows from the public realm of the street to the privacy of the house. She likes gardens that are integrated with the house—not set off to one corner of the yard—so that you can see the garden from inside and easily move through it when you walk from the house to the garage or down the walkway.

Gardens are ever changing, always in the process of becoming. She finds that many home owners expect immediate results from their gardens. Part of raising a successful garden, however, is learning patience, Nettleton says. Gardens, while adding beauty to a home, are more than ornament to Nettleton. A signature Nettleton garden doesn't come from a local garden shop. Call her gardens controlled wilderness. They are not particularly manicured; they are, in many ways, low maintenance. She likes combining textures and colors of perennials, leaves and flowering plants, a layered look, so even in winter there is texture.

Designing in a place like Minnesota where summer and spring are brief respites from the main show—winter—is no hindrance to her work. "I don't think there is any perfect place where you can grow everything," she says. "My sister, who lives in New Orleans, complains about all the things she can't grow because it's too hot down there. England is probably the closest thing to an ideal climate for gardeners because it is neither too cold nor too hot."

Sure, she would love it if the growing season started earlier here, but she says, "Everybody has limits, and that's part of the fact that gardens are alive. There are so many wonderful plants that will grow in Minnesota." **AM**

modernism

Continued from page 47

brick. Neither unit of the house opens so much as a window toward the driveway, but the larger possesses an enormous glass entrance door. Two glass panels complement each side of the door, a motif that appears on all sides of the home.

The smaller unit contains the garage, servant's quarters and a kitchen/dining area for informal meals. A narrow passageway of sheer, uninterrupted glass poetically links the two units. The juxtaposition of the units creates separate courtyard-like spaces.

The larger unit rapidly unfolds into a vestibule, dining room, main living area, sitting area, three bedrooms and baths, library, study and coat closet. The south and east windows of the larger unit open to a pebble-covered terrace. The southern exposure frames the family's enigmatic and engaging guest house.

Strange to tell, the Davis house sat empty for the first half of the 1960s, revealing the limited appeal of modern architecture in our region.

For the most part, practical and philosophical realities impeded modern residential architecture. Due to the high cost of materials and design fees, builders opted for traditional plans. In addition, structures such as the Davis house—looking more like a corporate headquarters than European castle—challenged entrenched notions of upper-class living.

The Davis house is reserved and scholarly. But it is certainly not introverted. The expansive space in which interior and exterior merge invites social activities, especially the cocktail party. As youngsters, the guardians' children sailed skateboards and darted hockey pucks across the floor. When the fun and games became unruly, one son scolded his friend, "Look out, that's art!"

"It isn't a great house to raise kids in," the owners concede. In fact, when the guardians approached Philip Johnson about designing an addition to accommodate their five children, the architect proposed a detached suite, similar to his guest-house bunker in New Canaan, Conn. When they objected to being separated from their family, Johnson protested, "Nonsense, they have wonderful intercom systems these days."

Johnson has always been contemptu-

ous of domesticity, once remarking, "Why can't people learn to live in the windowless spheres of Ledoux or the pure glass prisms of Mies van der Rohe?"

Indeed, the Davis house references Johnson's own Glass House "turned inside out," observes Franz Schulze, author of *Philip Johnson: Life and Works*. Visually, the cavernous 50-foot by 60-foot interior of the house is one large space where "rooms" are declared by groupings of furniture suited to conversation, dining, reading and so on. Glass walls lining the interior atrium do not interrupt the openness. Requisite privacy partitions for the bedrooms and vestibule overlap each other in receding planes.

The atrium is the interior's exclamation point. Through a deep, troffered trellis filtered light streams into the interior, which would otherwise be bleak in a wholly roofed box of such proportions, especially in inclement Minnesota. In the winter, covered by a translucent plastic shield that minimizes heat loss, the atrium becomes a windless outdoor haven. During the summer, covered instead by a screen, it is an escape hatch for hot air and pushes cool air from inside the house, stirring an artificial breeze.

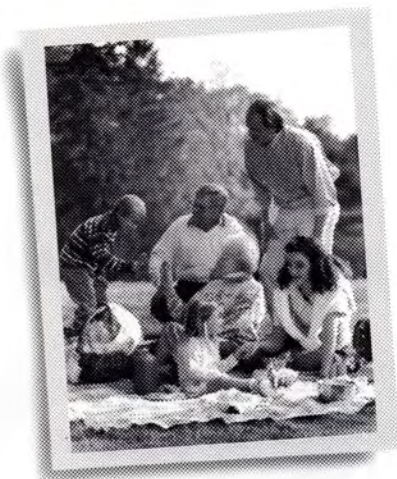

Since it is the art collection that counts, a thread of neutral colors weaves inside and out. An enormous amount of natural teak paneling softens the room with a luxurious touch. The iron-spotted brick is brownish; moldings, atrium frame and troffers are painted opaque; outdoor paving and pools are light brown granite; the sumptuous floor is constructed of pale brown travertine squares.

When day fades into night and the shades are drawn, the character of the Davis house changes. The departure of natural light and arrival of artificial light creates a dramatic effect. Through a series of downlights, the artworks are highlighted. Concealed 10-watt bulbs deep in the atrium's troffers suggest a mysterious splash of illumination.

Four decades later, the Davis house still represents a remarkable architectural exercise in restraint. Later, Philip Johnson adopted a more exuberant and historical style. For the guardians' part, they agree with an English design critic who once quipped about their home, "Oh, thank God, a Philip the First."

David Anger is a frequent contributor to Architecture Minnesota.

IF YOU'RE PLANNING EVEN A SMALL RENOVATION...

...PLAN ON SAVING MONEY WITH AN ARCHITECT.

Whether you're adding a bedroom or building a new home, it pays to call an architect. It all starts with your first meeting. By listening carefully to your specific wants and needs, an architect can help you make the most of your space, speed up your renovation, and smooth out the hassles from start to finish.

Architects know how to keep a watchful eye on your budget throughout a project and can help you avoid costly, last-minute changes.

So if you're considering either renovating or building a new home, give us a call.

We can put you in touch with an AIA architect who'll interpret your needs.

And keep a ceiling on your budget.

IT PAYS TO CALL AN ARCHITECT.

**AIA Minnesota

THE AMERICAN
INSTITUTE
OF ARCHITECTS

I invite you to study the directory of Minnesota architectural firms on the following pages and to become better

AIA MINNESOTA, A SOCIETY OF THE AMERICAN INSTITUTE OF ARCHITECTS

acquainted with my professional colleagues. They are members of AIA Minnesota, the State organization of architects created 103 years ago to provide architects with continuing education, professional practice assistance and opportunities to communicate to the public concerning the design of the built environment.

firm directory

These firms provide services to clients in Minnesota, and throughout the world. Their skills relate to all types of building projects both large and small, new and old, and they can assist you in planning and designing those specific facilities which respond to your specific needs.

CALL 612.338.6763 OR WRITE FOR ADDITIONAL INFORMATION.

If you have any questions about architectural services or how to select an architect, Peter Rand, FAIA, and Beverly Hauschild, Hon. AIA, our Executive Vice Presidents, will be pleased to help. Feel free to call them (612/338-6763) or write for further information.

Tom Van Housen, FAIA

President

If you need the professional services of a qualified architect, the 1995 Firm Directory is for you. Firms listed will welcome any inquiry and the opportunity to discuss your specific project with you. **T**he Directory is a roster of firms owned and/or operated by AIA Minnesota member architects. To be listed, at least one of a firm's principals must be a registered architect and an AIA Minnesota member. Information to create this directory was provided by the firms in response to an annual questionnaire. **E**ach firm listing contains the following information: firm name, full addresses and phone and fax numbers of offices in Minnesota; names of principals; number of staff members by discipline; types of markets served by percentage; and a listing of up to six projects. The work percentage for any given firm may total more than 100 % due to overlap in the categories of interiors and preservation, for example, restoration or interior design of schools. And, of course, except for the very newest of firms, each has done many more than six projects. Projects each firm reports are meant to illustrate the general spread and flavor of the firm's work. **A**s you commence your search for just the right firm for your project, we urge you

about this directory

to read the full directory of firms to ensure that you spot all of the firms that you wish to consider for your project. For your convenience, we have prepared an index of the firms by building type which immediately follows the directory. While this index includes only firms that have paid to be included, it is an easy reference point for spotting which of the 220+ firms in the directory have significant experience in the design of projects such as yours. **T**he Firm Directory can be an invaluable tool in the general sorting of firms. You will use your own project criteria when reading the directory but, frequently, related project experience is of major importance. So, too, may be the location of the firm related to you or your project site. Or, whether the firm offers the diversity of services you may require. Or, whether the firm has the size that fits your project needs. **T**hink through carefully what your project requirements are. If you don't know or want to discuss the entire design process, contact AIA Minnesota at 612/338-6763. We have extensive resources to aid in your architect selection process. And we can explain in detail what architects do, how they are paid, and why they are needed. **A**rchitects are licensed by state governments to protect the health, safety and welfare of the public. They're trained to solve problems and to give shape and form to the space you need. The architect's services are an investment, not an added cost, because their designs can capture energy savings, can improve the efficiency and productivity of your operations, and can add market value to your property because good design sells. **C**reation of your new building, or renovation of an older one, is an inherently exciting process. The secret to its success lies in the relationship you and your architect establish with one another. The architects and firms presented in the '95 Firm Directory are waiting to work with you.

1995 INDEX OF FIRMS BY BUILDING TYPE

The purpose of this Index of Firms is to enable you to quickly identify, from among the over 200 architectural firms in the foregoing Directory, those with experience and skill in designing whatever specific building type that may be of interest to you. The building types listed directly match with those in the Directory of Architectural Firms.

To be included, each firm was invited to identify building types for which they have specific design expertise and required to pay a modest fee for each listing. Firms listed are identified in alphabetical order by name with the location of their main office indicated (some firms may have more than one office in the state).

A full description of each firm in this Index is included in the Firm Directory along with all other firms managed by members of the American Institute of Architects. We urge you to thoroughly study the Directory and direct any questions to AIA Minnesota, 612.338.6763.

AM publishes a variety of directories to aid clients, design firms and the public in identifying any licensed design professional or specialized consultant that may be required for various building projects. For example, elsewhere in this issue is our annual directory of architectural firms.

The Directory of Consultants which follows is our fourth listing of those organizations which have very unique and specialized skills that may be necessary for certain project teams. All firms have offices in Minnesota and some have diversified, engineering skills which are broader than the narrow specialties of this directory. We invite you to use this directory.

Accessible Building Consultants

4770 White Bear Pkwy., Ste. 104
White Bear Lake, MN 55110
Tel: 612/653-7469
Fax: 612/653-5741
Established 1993

Harold Dean Kiewel AIA, CSI

ABC will provide design, design review, peer consultations, facility evaluations, feasibility studies, budget estimates or product research.

ADA Toilet Renovations, Historic Fort Snelling, St. Paul, MN; ADA Facility Evaluation, Midway YMCA, St. Paul, MN; Elevator Modernizations, NE Metro Technical College, White Bear Lake, MN; "Cost of Accessibility in Single-family Housing" for MN Housing Finance Agency.

Acoustical Design

Jamieson and Associates, Inc.

4133 West 45th Street
Minneapolis, MN 55424-1040
Tel: 612/920-3770
Fax: 612/920-6454
Established 1972

Richard N. Jamieson
Rich Jamieson

40 plus years specialized, professional acoustical design and specification experience with studio, worship and presentation space and sound reinforcement environments. Computer acoustical modeling for new and existing facilities.

KMSP Channel 9 TV, Eden Prairie, MN; Beth El Synagogue, St. Louis Park, MN; Public Radio International (PRI), Minneapolis, MN; WCCO-AM, Minneapolis, MN; Cookhouse Studios, Minneapolis, MN

Wm. H. O. Kroll & Associates Inc.

5217 West Mill Road
Minnetonka, MN 55345
Tel: 612/934-9494
Fax: 612/934-1300
Established 1966

Wm. H. O. Kroll
Karl Kroll ME, MBA, EIT
Mark Kroll PhD Eng., MBA
Kai Kroll EE, EIT

Engineers Specializing in Acoustics: Churches, performing centers, schools, hospitals, studios, theaters, recital halls, auditoria, shooting ranges, mechanical and electrical systems, industrial noise and vibration, aircraft noise, power plants, structural and ground vibration analyses, a mobile lab for all manner of plain to fancy sound and vibration testing, electroacoustics. Well over 1000 projects in 30 states and foreign countries. The practice is restricted to acoustics - sound, noise and vibration.

The Mall of America, Bloomington, MN; Phipps Center for the Performing Arts, Hudson, WI; Mayo Clinic, Rochester, MN; University of Minnesota Wilson Library, Minneapolis, MN; San Diego Diocesan Center, CA; Las Vegas Cultural Center Library, NV

Orfield Associates, Inc.,

2709 East 25th Street
Minneapolis, MN 55406
Tel: 612/721-2455
Fax: 612/721-2457
Established 1971

Steven J. Orfield ASA, AES
Richard G. Pierson ASA, AES
David M. Berg ASA, AES

Nationally known laboratory and consulting staff with comprehensive testing and design capabilities in all areas of acoustics and vibration related to architecture. A/V systems consulting and design provided on AutoCAD.

 Lighting consultant: Lappin Lighting, Cheryl Apjoke
 Photographer: Karen Melvin

Correction The Minneapolis Center for Neighborhoods is not associated with the Design Center for the American Urban Landscape at the University of Minnesota, as reported in the March/April 1995 issue. The Center for Neighborhoods is a nonprofit organization interested in neighborhood issues.

The first Idea House, 1941-1962.

COURTESY WALKER ART CENTER

During the 1930s, American modern-art museums grew increasingly interested in exhibiting and promoting notable examples of design and architecture. In 1941, Walker Art Center in Minneapolis made a big splash by becoming the first museum to build and display its own working house, anticipating by several years the famous Case Study Houses that the journal *Arts and Architecture* commissioned later that decade.

Malcolm Lein of the St. Paul firm Lein, Tudor & Bend designed the dwelling, which cost less than \$7,000 to build and received the name Idea House. Occupying wooded land behind the Walker, the house was intended to pro-

vide inspiration for virtually any kind of new home that visitors might consider.

And visitors came in large numbers—about 56,000 over time—along with newspaper and magazine reporters from around the country. Among the house's first guests after its June 1941 opening was a group of Aquatennial Queen aspirants.

According to Bruce N. Wright, whose article in the Summer 1993 issue of *Henepin History* documented the home and a second experimental house that the Walker later built nearby, Idea House contained many innovative features: an open design in which the living and dining spaces flowed into one another, a high-efficiency fan that could replace all

the air in just 10 minutes, and a striking kitchen with electric appliances and stainless-steel walls and ceiling.

Eventually Idea House became a residence for Walker staff members. Martin Friedman, then curator and later director of the Walker, lived in it with his wife Mildred and family for a time in the late 1950s. "But at least by the time we lived there, the practice of people walking through on tours had ceased," Friedman later remembered, although people attending Walker jazz concerts sometimes came in to use the bathroom.

Idea House survived only a few more years, to 1962, when it was razed to make room for the Guthrie Theater.
