ON THE COVER

Anthropologie headquarters Philadelphia, Pennsylvania

"Working with MSR over the past nine years to capture the transformation of nine-plus dilapidated Philadelphia Navy Yard buildings into an iconic fashion hub has been a thrill," says photographer Lara Swimmer. "The Anthropologie building is a showstopper—the interiors and the inhabitants both have such great style."

36 Urban Fabric

By John Reinan

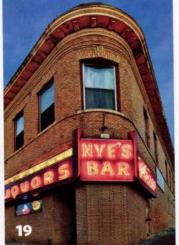

Minneapolis architecture firm MSR continues its work at the Philadelphia Navy Yard for Urban Outfitters with its most complex renovation yet: the transformation of a mishmash of derelict buildings into an unforgettable home for the retailer's Anthropologie brand.

42 Design Partners

By Joel Hoekstra

"He's known among his peers as 'an architect's architect,' while she's often described as an artist," writes Joel Hoekstra of HGA's husband-and-wife team of John Cook, FAIA, and Joan Soranno, FAIA. "But both have high standards and like to push the limits of what is possible, both creatively and technically."

Modern fun

Sorry, all you interesting architects out there, but the most engaging interview I've done as editor of Architecture MN was with St. Paul Saints president Mike Veeck. Our long conversation on the Saints' campaign to build a new ballpark in Lowertown took place four years ago, and if it weren't for a good voice recorder the interview never would have made it to print. I was laughing much too hard to take notes.

At the time, ESPN magazine had recently ranked Target Field the best place to view a sporting event in North America. "Midway Stadium didn't make the list," Veeck deadpanned. The outcome of the Lowertown campaign was still far from certain, but Veeck knew that downtown's arts corner was the perfect setting for the stratospherically creative Saints. "We have musicians, actors, and painters [on our extended team], so I think Lowertown folks can see that each Saints game is like-dare I say it-a venture in improv," he explained. "I think they understand that we're kindred souls."

Fast-forward to 2015, and Veeck's comments to reporters on the new CHS Field have the same unmistakable flavor as those he shared with me over a model of the proposed ballpark (pictured above) in winter 2011. "All we said to [architect] Julie Snow was make the town-make the Farmers' Market-the star," Veeck told the

MORGAN SHEFF PHOTOGRAPHY

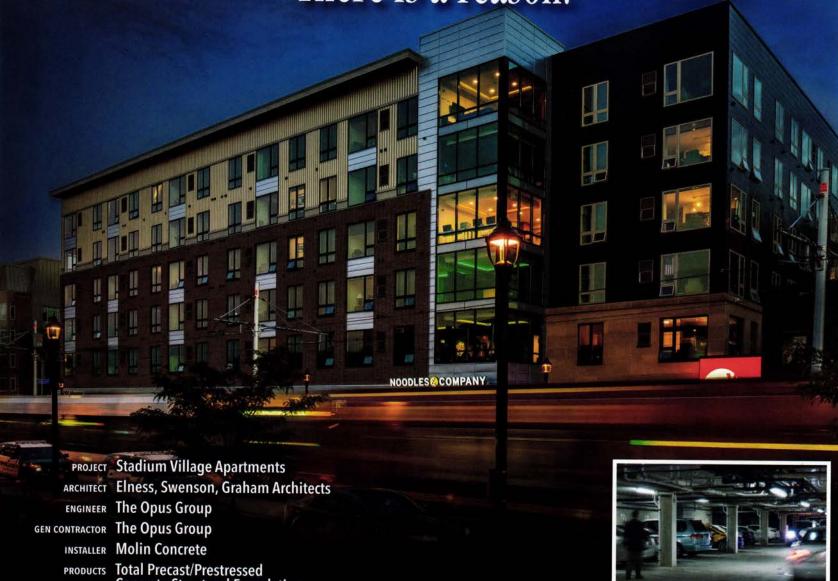

St. Paul Pioneer Press in March. "She said, 'Oh, you mean make it porous.' I said, 'I don't know what porous means." But he does now. "You can see the city from every angle [inside the park]," he continued. "You can't tell . . . where the Farmers' Market stops and the ballpark begins."

I'm an editor, not a critic, but as a St. Paulite I can't help but offer a verdict on the Saints' new home: It's a major-league achievement. A strikingly modern minor-league ballpark that's seamlessly integrated with its urban, arts-rich neighborhood and surrounding bike trails? If there's another project that fits this description anywhere else in the country, I'm unaware of it. We're planning a CHS Field feature full of Mike Veeck quips for our September/October issue. In the meantime, you can take the Architecture MN tour of the ballpark in May (page 13), and of course you can catch some games. On your first visit, I think you'll find yourself smiling and shaking your head. The funniest guy in the zaniest organization in town just completed what might be the best new modern building in Minnesota.

Visit our website in late April for details on how to register.

architecturemn.com

FIELD TRIP

"The big realization with this ballpark, which I kept stressing when we were in design and talking to the community, was that it would be integrated with the neighborhood—porous to the neighborhood—in a way that none of our sports facilities in Minneapolis are," says architect Julie Snow, FAIA, of the St. Paul Saints' new home on the eastern edge of downtown St. Paul.

Indeed, it's hard to imagine a 7,000-seat ballpark more open to its surroundings. With the seating bowl and playing field below street level and the concourse unenclosed beneath a steel-frame pavilion housing the suites, club room, and press box, the game action and atmosphere will spill out onto North Broadway. It's also hard to imagine a minor-league field more modern in character. Ryan Companies' assembled project team—Ryan A&E, AECOM, and Snow Kreilich Architects—eschewed warmed-over nostalgia for forward-looking design that's sure to get baseball fans talking.

But there will be a few carryovers from the ramshackle Midway Stadium, including the Andy Nelson murals and game-night entertainers such as Mudonna, Gert the Flirt, and Caveman Dan. Which is to say that any diehard Saints fans nervous that the venue upgrade will in some way diminish the Saints' creative spirit need not fret. In fact, Snow is sure the time-honored Saints experience and the new architecture will combine to create "a very vivid part of the city."

We at Architecture MN like the sound of that, so we're organizing a spring tour of CHS Field led by Julie Snow and Ryan Companies' Mike Ryan. Snow says participants will get to see how a ballpark really works. "Down below is a whole city of kitchens and commissaries, locker rooms and batting cages," she explains. "All of the functional spaces were beautifully incorporated into the project—including the place where we keep the pig [mascot Stephen Colboar]. We've got a little pig hut." —Christopher Hudson

My Vision is to create a breathtaking view in every room.

Whether my client is entertaining guests in the living room or taking a relaxing soak in the tub, they'll be able to embrace their sturning views. I found the perfect windows and doors from Kolbe — the large expanses of glass and slim profiles of the VistaLuxe® Collection.

TRACK DAYS

Transit historian Aaron Isaacs highlights a memorable chapter in Duluth-Superior history

TWIN PORTS BY TROLLEY:
THE STREETCAR ERA IN DULUTH-SUPERIOR

By Aaron Isaacs University of Minnesota Press, 2014

Clockwise from top left: Duluth's downtown railroad depots clustered together near Superior Street and Sixth Avenue West (1911); the huge outcropping called Point of Rocks forced Superior Street to detour around it on the way to the West End and the ore docks (1910); the Highland car, with the pavilion in the background partially hidden by snow banks (late 1890s).

Stretching 25 miles along the western tip of Lake Superior, Duluth is only 3 miles wide in most places. Along its full length, the Northwoods dramatically creeps over the hilltops into the city, weaving through early-20th-century neighborhoods down to the lake. With its topography and scattered neighborhoods, Duluth is like no other port in the country—and a remarkably challenging place to build a streetcar system.

Aaron Isaacs' new book on the trolley network that was developed in Duluth and its twin port, Superior, more than a century ago is rich in information on ridership, track lengths, and the roster of rolling stock—the kind of details that make a streetcar buff salivate. In the opening chapters alone, Isaacs charts the transition from horse-drawn cars to electric trolleys, labor unrest and union busting, and the women who served as "conductresses" during World War I.

In many areas, streetcars were the only way to navigate Duluth's steep hills before the advent of powerful trucks and cars. Yet they were more than mere transportation—they were an expression of the Zenith City itself.

In 1929, roughly a third of Duluth's junior and senior high school students rode trolleys to school. In the fall, schools used streetcars to get their football teams to games across town, and men and their dogs boarded them to hunt at the city's wooded edge. In winter, the trolleys plowed through heavy snow. In summer, they could be chartered for a party and a tour of, for example, the East End neighborhood's elegant parks.

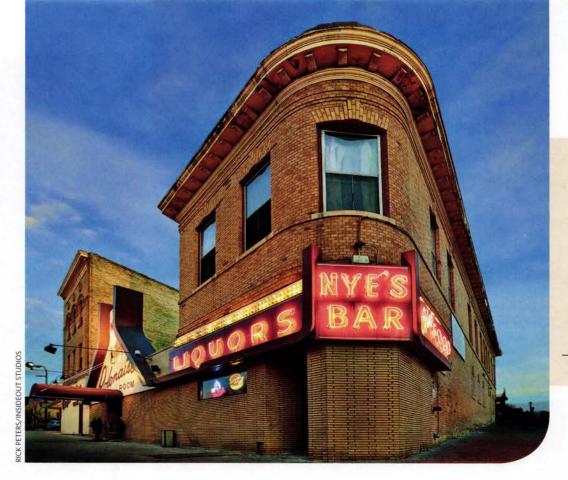

Sometimes the streetcar company's investors made a profit, but more often they lacked the ridership per mile to do so. During the Depression, streetcar ridership fell dramatically.

Twin Ports by Trolley is most compelling when Isaacs turns to original sources such as car-starter E.H. Hassel, who recounts a typical day in 1934 directing streetcar traffic and answering customers' questions. The stories of teamwork and occasional danger show how complex and yet fundamentally social and urbane streetcar transit really was.

-Frank Edgerton Martin

www.chadholder.com

NYE'S POLONAISE ROOM The three pieces of the complex that front Hennepin Avenue are, from left to right, a 1905 harness shop, a midcentury addition, and an historic storefront building.

KEEPING BAR

The proposed redevelopment of the Nye's Polonaise Room site in Minneapolis spurs complex preservation questions. Among them: How can preservation guidelines address properties whose value and significance is more social than architectural? BY FRANK EDGERTON MARTIN

Last December, Minneapolitans were shocked by news that Nye's Polonaise Room—Northeast's venerable piano lounge, Polish supper club, and polka bar—would be closing in 2015. Many of us have indelible memories of singing Christmas carols with Lou at the piano, ordering our first jumbo martini straight up with a twist, and dancing to the polka band with the blind drummer. As of now, the Nye's site is slated for a 189-unit apartment tower with average monthly rents over \$2,000. This is not the immigrant Nordeast of old.

Why does historic preservation often save districts like Minneapolis' North Loop but seem powerless to protect the individual places we most remember? Early preservation efforts focused on grand landmarks, often homes and workplaces of the rich, designed by well-known architects. There was little concern for vernacular architecture, factories, or farms. Nomination to the National

Register of Historic Places and local designation were, and still are, largely tied to association with a period of architecture or a significant person.

Ironically, because preservation law is so geared to architecture, the best legal tool we have to save the Nye's block is to protect two of its least important buildings in terms of social memory: the 1905 harness shop and the storefront building that bookend the property. (Nye's is composed of four connected buildings.) These structures are listed as contributing to the St. Anthony Falls Historic District (SAFHD)—the city's first such designation, listed in 1971. The wonderful Nye's interior isn't listed as contributing, because it wasn't yet historic in the 1970s.

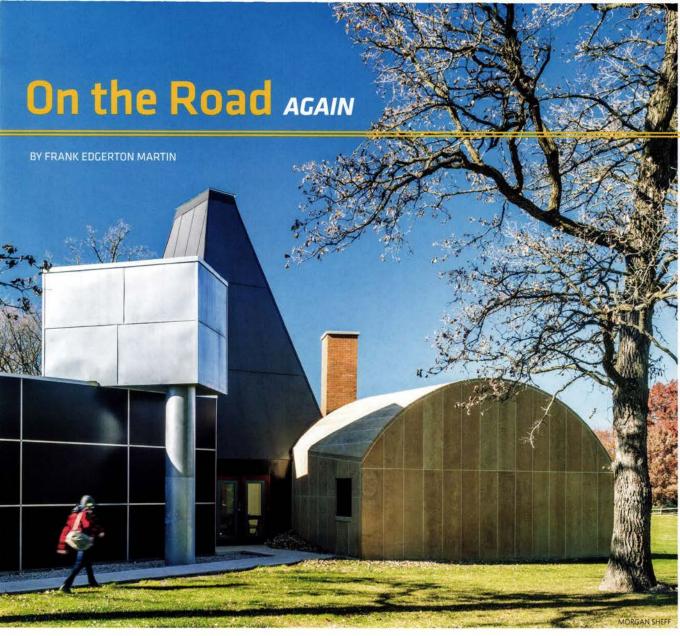

And then there is the question of scale. In a strongly worded statement in February, the advocacy group Preserve Minneapolis noted that the city had updated SAFHD building guidelines in 2012 to address development pressures in the area. Section 10.58 states that building height in the district should not exceed four stories, with some exemptions possible for projects up to 10 stories. If the Minneapolis Heritage Preservation Commission and the Minneapolis City Council approve this 29-story tower with a parking-garage base, they will render the local preservation guidelines meaningless. And there will be an immediate jump in value (and development pressures) for neighboring low-rise buildings such as those that house Punch and Bibelot.

If studied today for inclusion in an historic district, Nye's Polonaise Room, with its unique interior and rich social history, would surely be considered "contributing."

With the puzzle of Nye's before us, the following are preservation strategies to consider for future planning.

 Preserve History the Way It Was: Developers sometimes attempt to bend preservation guidelines by proposing to save only the facades of historic structures, as a kind of compromise

>> continued on page 57

The Frank Gehry-designed **Winton Guest House** needs a new home—again. What's the right setting for this important architectural folly?

How did the Winton Guest House, perhaps Minnesota's most famous small dwelling, become a mobile home? The story has a few twists and turns.

Completed in 1987, the guesthouse—winner of a 1988 AIA National Honor Award—was one of Frank Gehry's early explorations of complex shapes and varied materials. Inspired by Giorgio Morandi's paintings of groups of vases and bottles, the 2,300-square-foot structure anticipates the architect's celebrated work at much larger scales around the world.

When it was new and internationally published, this festive assembly of curved, pyramidal, and rectangular forms seemed so permanent—an important new work of architecture in Minnesota. But today the landmark finds itself up for auction, in need of a second relocation in less than five years. Can it survive?

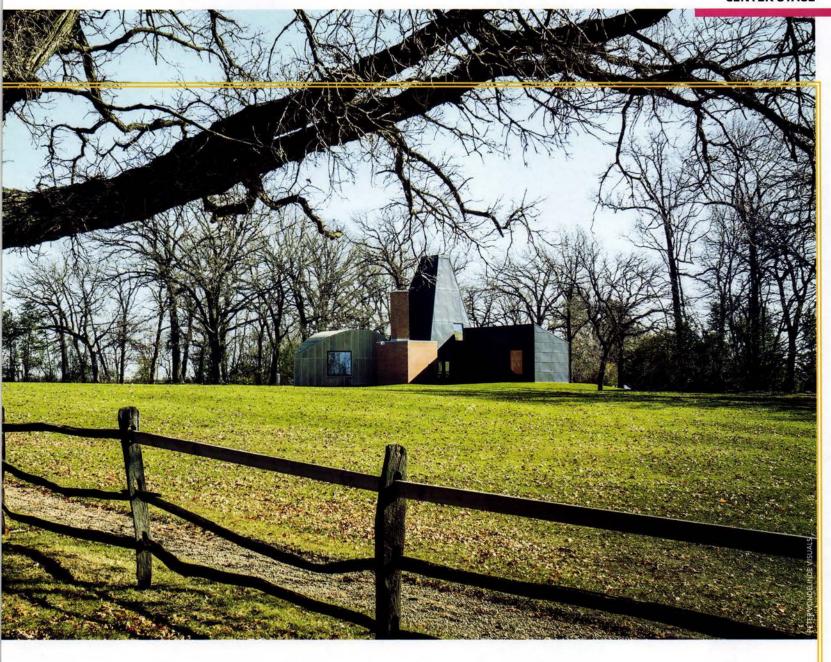

Orono

In 1982, Mike and Penny Winton read an article about little-known Los Angeles architect Frank Gehry in the *New York Times*. Gehry's work with clustered forms and industrial materials piqued their interest, and they invited him to

design one of his first commissions outside California—what turned out to be an exuberantly sculptural guesthouse for their midcentury, Philip Johnson-designed home in Orono. "They were thinking they wanted a potting shed," Gehry later famously recalled. "What they really wanted was a sculpture."

"This little guesthouse plays a pivotal role in Frank's career, allowing him to connect the functional and sculptural in design," says University of St. Thomas art history professor Victoria Young, who would come to play an important role in the building's stewardship. "It set the tone for great works yet

AMERICAN-MADE

CLASSIC CONTEMPORARY HOME FURNISHINGS

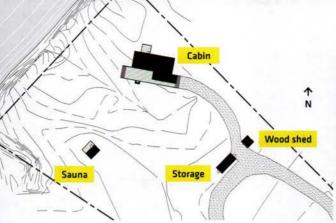

Room&Board

Crescent table, \$899; Carmel chairs, \$499 each; Pacifica umbrella, \$2599.

BY THOMAS FISHER, ASSOC. AIA

A new David Salmela-designed family retreat on Lake Superior's south shore represents what the writer Nassim Nicholas Taleb calls a "black swan event." The cabin looks a bit like a black swan, with the exterior clad in black Richlite, the uplifted wings of its butterfly roof, and the projecting necks of its scuppers. But the relevance of Taleb's idea goes beyond the cabin's appearance.

Black swan events go against our expectations, change our thinking, and prompt an explanation—and this building does all three. Instead of the typical gable-roofed cabin with screened porch, this one upends that model. In a climate where gutters present a maintenance problem, "a gable roof sheds water where you don't want it, onto the deck," says Salmela. So the architect inverted scissor trusses to direct water back to a center roof cricket, which moves the runoff to long spouts at either end.

And in a location where the sun's warmth matters, "screened porches reduce the daylight into the

The black Richlite-clad cabin surprises first-time visitors with its cantilevered screen porch and butterfly roof.

house," adds Salmela. That led him to cantilever the porch off the second floor, adjacent to the stair, which needs less light, and above the route to the front door, which now enjoys shelter from rain and snow. No longer worried about blocking light, Salmela designed the screened porch to maximize the comfort of those using it, with slats along the south side to provide shade and open ends to funnel the breeze off the lake.

In contrast to the dark exterior, the interior glows with basswood walls and ceilings and heated slate floors. Large windows offer views of the lakefront landscape.

Splashes of primary colors provide a contrast to the muted colors of the interior finishes and the black kitchen cabinets.

To reduce maintenance,
Salmela used slate floors with
in-floor heat on the main level,
locally sourced basswood
paneling instead of painted
drywall, and inexpensive
melamine kitchen cabinets.

FAMILY RETREAT

Location:

Architect:

Salmela Architect salmelaarchitect.com

Principal: David Salmela, FAIA

Project manager: David Getty

General contractor: Lake Effect Builders

Structural engineer: Meyer Borgman

Size:

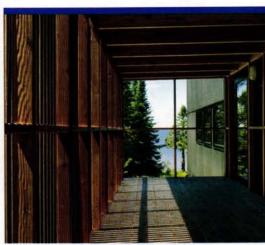

1,280 square feet

Completion: June 2014

Photographer: Paul Crosby

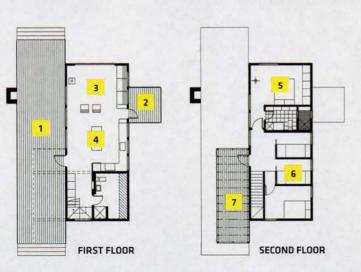

The primary colors continue on the doors and floors upstairs, giving the interior a playful character, a quality echoed in the projecting porch and butterflyroofed sauna.

That same contrary thinking continues inside. To reduce maintenance, he used slate floors with in-floor heat on the main level, locally sourced basswood paneling instead of painted drywall, and inexpensive melamine kitchen cabinets whose black color hides dirt well and "makes the views out the windows more dramatic," says Salmela. Primary colors add to the drama. Upstairs, "the red doors and blue floor, which matches the color of the lake, compensate for the lack of painted walls," he explains, "and the yellow stair risers and treads makes it easier for the children and guests to see at night if they need to use the main downstairs bathroom."

The cabin also enhances seeing during the day. The open living/dining/kitchen space on the first floor has large windows framing the view of the gorgeous landscape outside, and the alignment of windows and doors on the second floor provides perspectives through the house despite the number of spaces—a master bedroom and bathroom, a guest room, and two bunkrooms. The V-shaped second-floor ceiling, echoing the butterfly roof above, also defies expectations, making small rooms feel larger. Even something as simple as a mirror-finished chimney, which rises through the master bedroom from the stove in the living room below, creates a constantly changing reflection as you move around it.

BY LINDA MACK

The sidewalk critics strolling Lake of the Isles Parkway were agog when a house with two separate gabled wings linked by a glass bridge started construction on a prominent corner. Was it going to be a duplex, they wondered?

"No, it's just a different idea of a house," says SALA Architects' David Wagner, AIA.

The owners, Mary and Russ Horsch, had lived on a nearby block for 30 years when a 1960s split-level came up for sale, providing a chance to "move to the lake" while staying in the neighborhood. They found Wagner after touring SALA houses on the AIA Minnesota Homes by Architects Tour and checking out his work. He developed a plan for remodeling the existing

house, only to find that a soil test revealed soggy soils and a failing foundation.

So the Horsches told Wagner to start fresh. "That opened up possibilities," he says. Sitting bya tree in front of the wedge-shaped site, he quickly sketched two shoebox bars set at a slight angle, with a glass link. "If we made the living spaces one room wide, they could take advantage of the views—and of ventilation," he says. And the bridge could allow water to run right under it.

With a clear sense of the Horsches' program already in mind from the remodeling effort, Wagner arranged the main living spaces (a living room and an "away room" and screened porch) at the front of the house, the private spaces

(bedroom and kitchen) at the back. And then he connected them all with a glass-walled dining room, the domestic centerpiece. "Russ and Mary didn't want a great room, and they wanted the kitchen out of the way," says Wagner, as Mary nods vigorously.

Two bedrooms above the kitchen-and-porch wing enjoy spectacular views of the lake and the rooftops of Kenwood houses. "To fit the lot, we built a second level. But we can—and I do—live on one floor," says Mary.

Mary had a firm idea of the functional requirements—a large kitchen island for serving buffets, the laundry in her closet, enough space in the bridge for her heirloom dining table and

Slanted supports on the dining bridge and the angled stair to the entry evoke a Japanese aesthetic. Elevating the bridge allows runoff to follow its course to the lake.

The exterior combines bluegray Hardie siding and stained cedar with black metal accents. Frosted windows on the sides provide privacy from neighbors. The master bedroom (right) is a meticulously detailed retreat.

In the living room, a "floating" ceiling and a window seat (visible far right) show the influence of the architect's time working in Seattle. The blue-gray paint used throughout the home creates a serene feeling.

a special closet to hold its extra chairs. The aesthetics were Wagner's, honed working for James Cutler in Seattle. "When I was at Cutler Anderson Architects, we used to separate houses into boxes—a day box and a night box," he says. "We used the links as a flexible knuckle."

There's also a woodsy character to the house, but it's more Northwest than "Minnesota Lake." All the wood inside except the rift-sawn oak floors is Douglas fir, and the window frames merge with built-ins for a Japanese feel. In the dining room, whitewashed fir walls, beams, and ceiling screens lighten the space. The large casement windows on either side open to create a porch-like atmosphere.

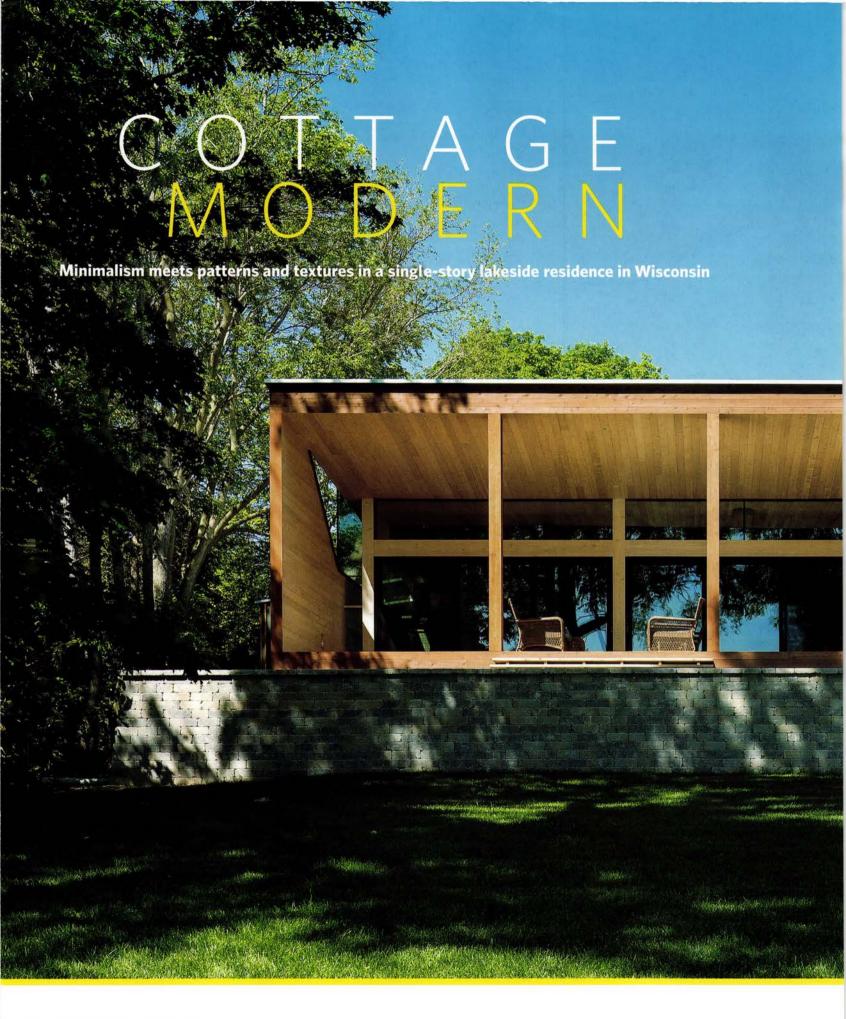

All the wood inside except the rift-sawn oak floors is Douglas fir, and the window frames merge with built-ins for a Japanese feel.

"Sitting in that dining room is like a dream," says Mary. The space makes an artwork of the beloved oak table given to her grandmother when she married in 1906. The angled struts on the exterior create visual interest and reinforce the Japanese character. "I love to delaminate [i.e., separate] the building envelope from the structure," says Wagner.

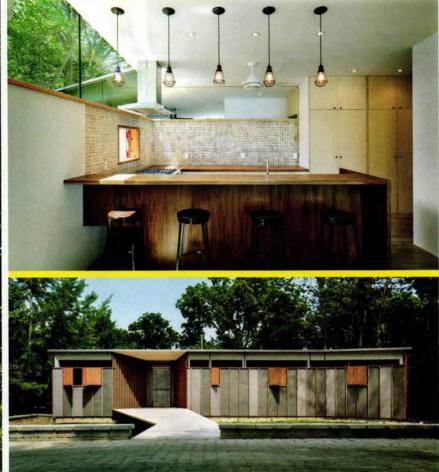

The exterior of blue-gray Hardie Artisan Siding with stained cedar above is unusual for the

neighborhood. Black window frames and metal flashing complete the visual ensemble.

Though the house is far from all glass, its placement on the site maximizes the views. The one the Horsches enjoy most is of all the walkers on Lake of the Isles. Mary says she goes to the living room to read but rarely succeeds: "Looking out is so entertaining!" AMN

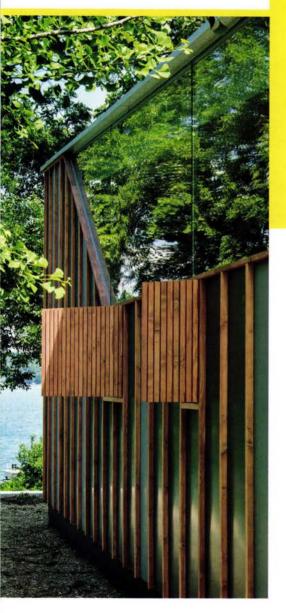

BY JOEL HOEKSTRA

In many Wisconsin cities and towns, lakeshore access is nearly a right of citizenship. City parks and beaches provide public access, of course, and a great number of homeowners can enjoy the shoreline without even leaving their property. For residents who live directly on the water within city limits, the location is a dream come true: They get the relaxing lakeside cabin experience without leaving town, and not just in summertime.

A Wisconsin artist sought this urban-cottage lifestyle when she acquired a lakefront lot a few years ago. She liked the idea of falling asleep to the sound of lapping waves at night, and feeling the coolness of a lake breeze on a hot August day. But she didn't want a cozy log cabin or fisherman's cottage—she wanted something contemporary, something compatible with her daily life as a painter, and a home that would continue to accommodate her as she aged. She hired Minneapolis-based Charlie Lazor, Assoc. AIA, widely known among prefab enthusiasts as the creator of the FlatPak house, to design a residence that met all of those requirements.

Lazor has built his reputation largely on modern minimalist dwellings. But the idea of collaborating

As the flat roof rises gently toward the lake, so too does the clerestory window. The glazing scheme achieves both privacy and ample daylighting for the owner.

with an artist who respected his style but might push him in new directions appealed to him. Aesthetically, the client liked sleek lines and modern color groupings, but she also encouraged Lazor to experiment with new textures and geometries. "The timing was good-I was questioning and growing restless with minimalism," says Lazor. "This project allowed me to try some new approaches."

The house is flanked by large trees and a neighboring home. Lazor liked the notion of having unfettered views of the lake and the leaves, but he also wanted to provide his client with some privacy. His solution? Opening the one-story home to the lake on one side and largely enclosing it on the other three—except for a generous, continuous clerestory window that offers views of the treetops and admit daylight into every room. The flat roof, tilted ever so slightly up toward the lake, teeters on the corners of the structure like "a butler holding a serving tray," says Lazor. The entire house, just 42 feet square, sits atop a stone plinth.

Visitors arriving at the two-tone zinc-paneled home, articulated with Douglas fir battens, cross a kinked wooden bridge and pass through a funnel entry to reach the interior. The living room is simple and open, with stained white-oak flooring, a raw Douglas-fir built-in that gently subdivides the space, and a rough-hewn basalt fireplace that reaches to the roof. The kitchen features a soapstone counter, a walnut surround, and birch cabinetry. An artfully patterned kitchen tile selected by the client stretched Lazor's minimalist mindset, but its overall effect ultimately pleased him.

Likewise, the design for the bath took Lazor beyond the boundaries that once defined his approach: Instead of a single white tile, he and the owner settled on three tiles with different textures and arranged them in different patterns. The subtly surprising composition personalizes an otherwise simple space.

But it's the wide view of the lake that ultimately lends the house its true character. On warm days, the owner can slide back an entire wall of glass doors and live outside and inside at the same time. "There's no distinction between the spaces." says Lazor. "It's a summer cabin that functions year round." AMN

Over the years, as the Navy Yard needed additional capacity, a series of additions grew like vines over and around the stout walls of Building 18. Ranging from a 1940s stucco annex with ribbon windows to a giant corrugated-metal shed, the additions presented a hodgepodge of structural and architectural puzzles the MSR team would have to solve.

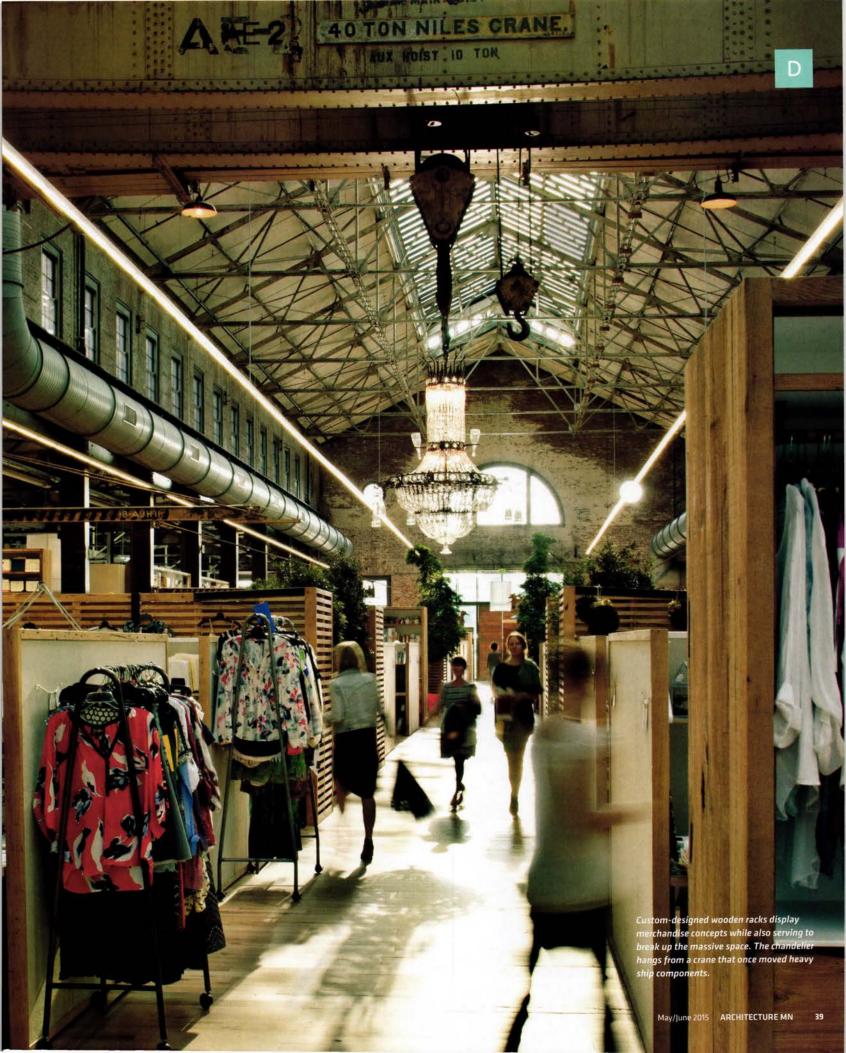

"This was the most complicated building we've done," says MSR principal Josh Stowers, AIA. "It was intertwined with later, neighboring buildings, both structurally and aesthetically. We had to uncouple them."

MSR's approach to the project was guided by a fundamental principle that it's followed throughout its work at the Navy Yard: rehabilitation, not preservation. So what does that look like in practice? An example: The large vehicular openings at the end of the building were infilled with modern steel and glass assemblies. The dramatic apertures remain, but they function as a modern feature.

"We don't replicate old just for the sake of replicating old," says Stowers. Yet the old is embraced with enthusiasm. A majestic terracotta eagle perched atop the building's entrance, for example, had somehow lost a wing over the years. The eagle remains-still sans one wing.

The interior of the building is massive-nearly 100,000 square feet on one level, with a main run

the length of two football fields. "It's just an immense distance," says Stowers. "If you're in the south end and you have a meeting in the north end, you better plan for some walking time in your calendar.

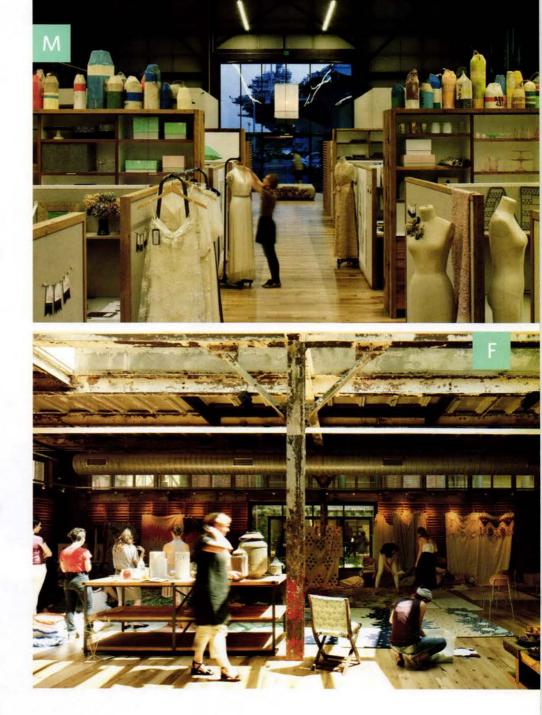

"It's really impressive when you first see it, but to live in it day after day . . . there needs to be some manageable human spaces," he continues. "So we had to break up the scale."

One ingenious scale-breaker made use of the giant rail cranes that once moved pieces of ships weighing hundreds of tons. The MSR team suspended the building's mechanical rooms from one of the cranes. Suspended from another crane is a chandelier.

The main spaces are also filled with meeting rooms and design areas, each delineated with wooden dividers that also serve as a custom hanging system for clothing and houseware samples. Over it all is a network of skylights running nearly the entire length of the two bars of the original building. Natural light was a key consideration in all design decisions, says MSR senior associate Dan Vercruysse, AIA.

"The designers create furniture, clothing, housewares. They love daylight as much as anyone can love daylight," he says. "So to sit

"[Our approach] creates a very unique working atmosphere that's still true to the building's roots. My favorite term for it is 'deconstructive reconstruction.' If the building lends itself to adaptive reuse, we're absolutely going to do it every time."

-URBAN OUTFITTERS' DAVE ZIEL

In Joan Soranno's workspace at HGA Architects and Engineers in Minneapolis is a large table filled with blueprints, drawings, models, and a turntable.

The latter item is set atop a box, and when she is working on a project, she places the model on the turntable at eye level, so she can look at the building from "street level." Occasionally, as she spins the model, Soranno peers down a corridor or through a set of windows and sees a face peering back: It's John Cook, her office mate, fellow architect, and husband.

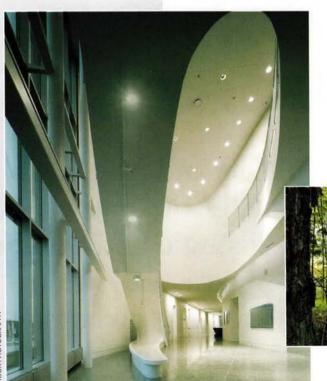

Soranno and Cook have been married for six years and have collaborated as architects for more than two decades. Accomplished designers as individuals, they now market themselves as a team, providing services to primarily cultural clients. Their award-winning projects include a garden mausoleum for Lakewood Cemetery in Minneapolis and the chapel at United Theological Seminary in New Brighton, Minnesota, and they were recently commissioned to design an expansion for the Walker Art Center. Publications ranging from Architect

magazine to the New York Times have lauded their designs, and clients speak fondly of their experiences with the pair. "We had a marvelous working relationship," Wilson Yates, former president of United Theological Seminary, says of his meetings with the couple regarding Bigelow Chapel. "There is such substance to these two people, and it emanates in what they do."

JOHN, MEET JOAN

Cook and Soranno met in 1991 at MSR (then Meyer, Scherer & Rockcastle), when the Minneapolis firm was hired to execute Frank Gehry's designs for the Weisman Art Museum at the University of Minnesota. Cook, an MSR veteran charged with figuring some of the most technical aspects of the complicated project, returned from a few days' vacation to discover that his bosses had hired Soranno-then just 29, with almost no technical experience-to assist him. "All I could think was, 'Oh no . . . what am I going to do with this person?" he recalls.

But Soranno proved hardworking and a quick study, and Cook was pleased to learn that his new colleague's skills complemented his own. He's known among his peers as "an architect's architect," while she's often described as an artist, but both have high standards and like to push

The University of Alaska Museum of the North (left) features elegantly curving interiors, while the Marlboro Music Cottages (below) in rural Vermont are all crisp lines. Each Soranno and Cook project is a unique response to the client's needs and the setting.

the limits of what is possible, both creatively and technically. When Soranno left MSR for HGA in the mid-1990s, it was with the understanding that they would collaborate again soon.

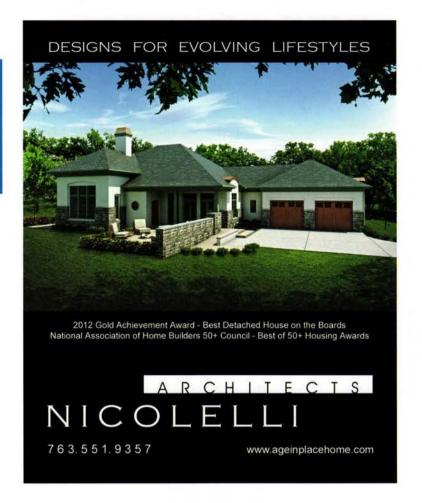

Shortly thereafter, Cook followed her to HGA. Their work styles are now so synced that they can practically finish each other's sentences and schematics. "When Joan sketches or describes something, I know in just a few strokes or words what she has in mind," says Cook.

There's no signature style to the couple's work-a handful of angular wood cottages for the Marlboro Music Festival, for example, were based on the Cape Cod form, while the white-stucco Barbara Barker Center for Dance at the University of Minnesota is all about curves. Rather than stamping each building with a particular style, the couple homes in on the goals for each project with unique passion for the process. "Joan immerses herself in the client's world and develops a very intuitive sense of the client's reality," says Thomas Fisher, Assoc. AIA, dean of the University of Minnesota's College of Design. "Her imaginative response to the experience of her clients is remarkable. Meanwhile, John, ever sensible and creative in his own right, plays an invaluable role in realizing the ideas. They make a brilliant team."

Bigelow Chapel at United Theological Seminary (left) and Lakewood Cemetery Garden Mausoleum (above) both received an AIA National Honor Award. The latter project also earned Soranno Artist of the Year honors from the Minneapolis

Keeping Bar

<< continued from page 19

solution. To make room for the tower on the Nye's site, the developer, Schafer Richardson, working with Nye's owners Rob and Tony Jacob, proposes demolishing the two newer buildings and moving the harness shop westward to sit next to the other older structure—currently home to the polka bar. This idea is even worse than saving the old facades in place because it creates a false history—an odd rearrangement of the past guided primarily by the need to win project approval.

2. Consider Interiors and Design from the Recent

Past: A byproduct of historic preservation being too narrowly focused on exteriors is that distinctive interiors are often overlooked. So are valued places under 50 years old—buildings ranging in scale and character from Porky's drive-in restaurant in St. Paul (demolished in 2011) to the Lutheran Brotherhood Building in downtown Minneapolis (razed in 1997), the latter a pioneering curtainwall design by Perkins + Will. If studied today for inclusion in an historic district, Nye's Polonaise Room, with its unique interior and rich social history, would surely be considered "contributing." In decades past, the case was harder to make.

3. Create Affordable Homes for Valued

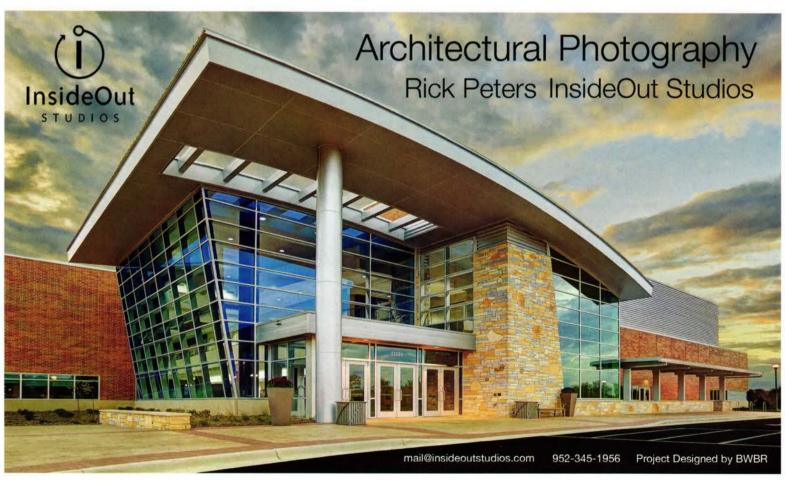

Businesses: Even neighborhoods as lushly historic as Georgetown in Washington, DC, are dulled by uniformly high-end retail—an almost certain outcome for the redeveloped Nye's block despite renderings that show the old "Chopin Dining" and "Nye's Bar" signs remaining. Character-filled legacy businesses like Nye's and Kramarczuk's add to the economic value of nearby properties, but rising property values make them an endangered species. There are tax credits for rehabilitating National Register buildings and others certified as contributing to an historic district. Should we also create tax incentives to retain these businesses and encourage new ones?

4. Enforce the Guidelines: National Register listing is important for preservation tax credits, but the legal power to preserve the character and affordability of local historic districts resides with local governments. Developers and owners have the right to close valued businesses like Nye's. The real issue here is whether Minneapolis will enforce its own laws. If it doesn't, developers will set the terms of the debate. "You need [to build] a tall building to have the scope to move and preserve the small buildings," a leader of the Nicollet Island-East Bank Neighborhood Association recently told the downtown Journal. To the contrary,

>> continued on page 59

Keeping Bar

<< continued from page 57

history shows that any sound historic building in a booming area in Minneapolis will eventually find new life.

The Nye's puzzle calls for a new chapter in historic preservation, one that aims to better preserve affordability and social memory. Sometimes that means saying no to the next big tower—and working to ensure that the city does not become completely gentrified, as is happening in Manhattan and San Francisco.

Attracted by the area's affordability and creative identity, the next generation of Nordeasters is making new economies where older ones have faded. Such resilience happens in cities that offer affordable places in which to live and run small businesses. We need to create long-term economic and architectural preservation plans for our historic districts and enforce the laws intended to protect them. Only then can we give one-of-a-kind polka bars the chance to survive and future generations the opportunity to create valued places of their own. AMN

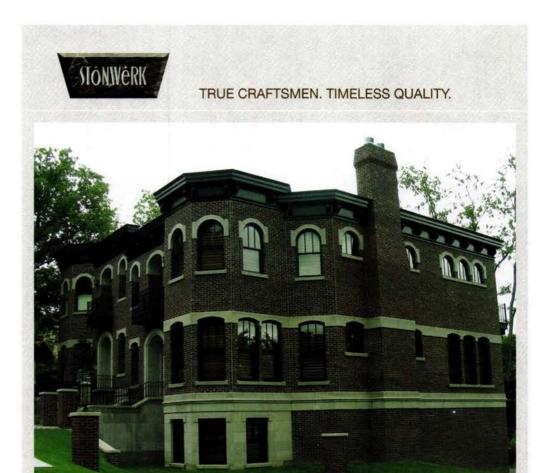

<< continued from page 20

to come, including the Guggenheim in Bilbao and Disney Concert Hall in Los Angeles."

Gehry could be so experimental because the project was not driven by program. The Wintons wanted guest lodgings and also a playhouse for their grandchildren. They gave their architect considerable latitude, and he made them a house that was also a garden folly—a laughing burst of shapes that perfectly complemented the striking rationality of the Philip Johnson design. When the Wintons removed the 15-foot-high hedge between the main house and guesthouse—against Gehry's advice—the two buildings were revealed anew. Penny Winton was so excited she called Gehry and proclaimed, "the houses are making music together!"

Owatonna

In 2007, the Wintons sold their Lake Minnetonka property to a developer, who in turn donated the guesthouse to the University of St. Thomas. The school moved the building 110 miles south to its Gainey Conference Center in Owatonna, a rolling estate already home to a large residence designed by Edwin Lundie. The relocation required

<< continued from page 59

that the building be carefully disassembled into pieces—a costly, complex task—and transported on flatbed trucks in the dark of night. At the Gainey Center, Young worked with graduate students to document and interpret the building. They created and installed exhibits on Gehry's career, how the Wintons had worked with him, and the move to Owatonna.

Relocating the guesthouse from its perch overlooking Lake Minnetonka to the fairly similar Gainey landscape seemed an ideal solution. Lundie's traditional architecture could be interpreted in tandem with Gehry's playful forms. But in 2014 St. Thomas sold the Gainey estate with the proviso that the Winton Guest House needed to find a new home within two years—by summer 2016. Now, instead of using the guesthouse as a teaching resource, Young is charged with the daunting task of saving it.

The Right Place

Destined for historical significance, the Winton Guest House is something between an iconic sculpture and a full-fledged building. While most historic buildings are deeply rooted in their settings, public sculptures—and small, sculptural buildings designed to stand alone in space—rely less on specific context for their meaning. They can be moved and still exert their unique power.

What are the optimal qualities of a setting for the Winton? The future site should offer a quiet backdrop free of ornamental competition and filled with changing weather and light. The neutrality of Johnson's restrained modernism and of the pastoral settings in Orono and Owatonna served the guesthouse well. In addition, the structure needs significant room to breathe. Gehry intended for the building to be seen from many angles and distances.

On May 9, the Winton Guest House will be sold by Wright, a Chicago-based auction house specializing in modern and contemporary design, for an estimated price of \$1 milion to \$1.5 million. The buyer could be a museum, a sculpture garden, or, quite possibly, a wealthy individual seeking a high-profile artwork for his or her estate. "The best outcome," says Young, "would be to have the guesthouse open to the public in its next location, in order to present and preserve Frank's legacy."

The good news is that, whether the guesthouse ends up in Houston or the Hamptons, Young and her collaborators have helped develop strategies and resources for its future stewardship. The Winton Guest House can be moved far away—and live to make music again. AMN

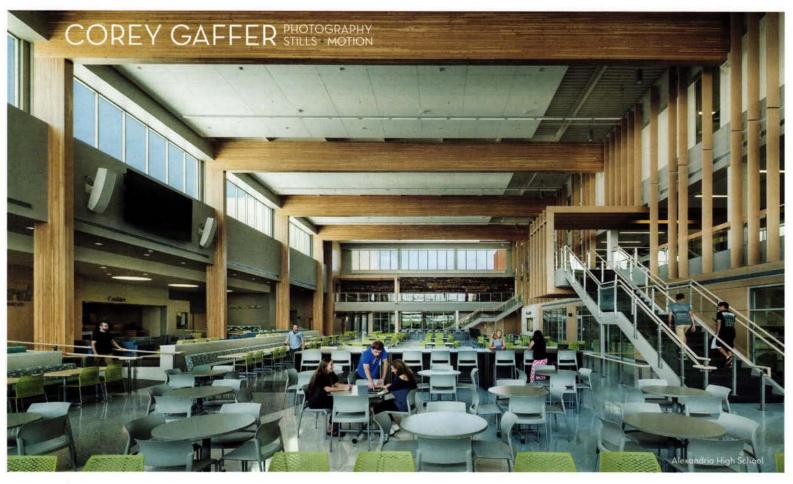

Black Swan

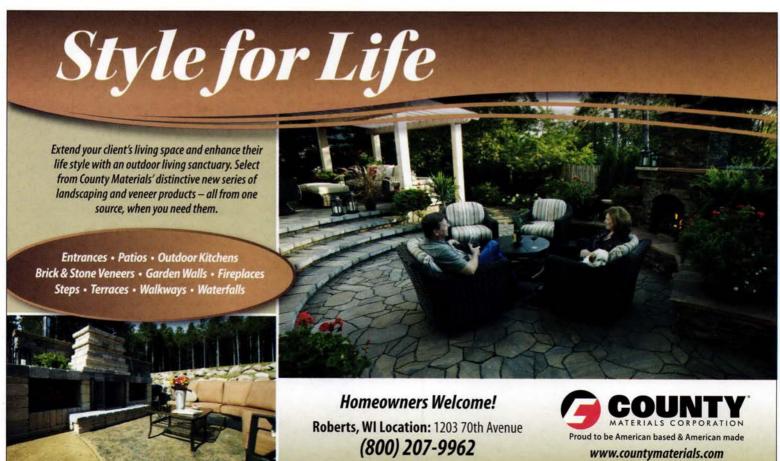

<< continued from page 27

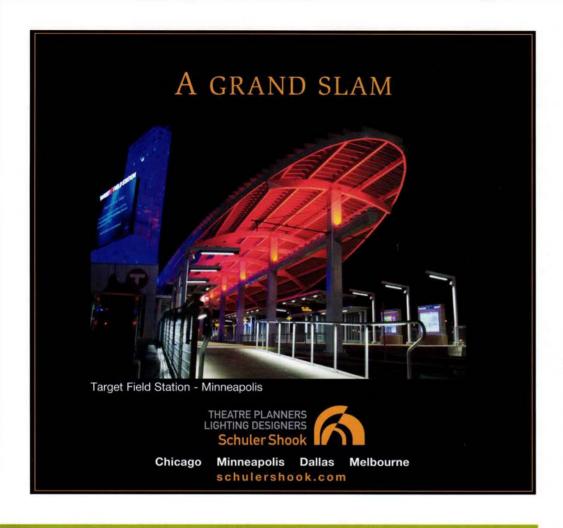

A different kind of reflection occurs outside, where the butterfly-roof sauna echoes the main house in miniature, the slat-sided woodshed recalls the much larger screened porch, and the black Richlite storage building resembles a blown-up version of the kitchen cabinets. The deck, longer than the house itself, feels as if another structure once stood there and left behind its concrete-block chimney and second-floor screened porch.

Such effects reveal something that too few people recognize: Talented designers like David Salmela constantly produce black swans that go against our expectations, change our view of things, and challenge us to explain them. Black swans emerge in response to specific circumstances, as in the case of this cabin. But once we experience them, they make us wonder why we didn't see them before—and why anyone would want to go back to a world of only white ones. **AMN**

Urban Fabric

<< continued from page 41

and work under the skylight is just incredible. We wanted to give everybody access to daylight. If it's not from above, then it's from the sides."

Adaptive reuse is built into the DNA of Urban Outfitters, says Dave Ziel, the company's chief development officer. Most of its retail stores, like its Navy Yard corporate spaces, are repurposed rather than built new. "It's important to our company," he says. "Adaptive reuse fuels our design and approach. You get a unique creativity. And the creative class, which is our employee and customer, really responds positively to the spaces we're designing."

The experience of Building 18 is a series of "unique moments," he says. "The ornateness of the masonry is so amazing. I don't think you could even find masons today who could construct those buildings. The structural steel components—specifically the trusses—are beautiful. You just don't see the mass, the span, the webbing, and the riveting anymore."

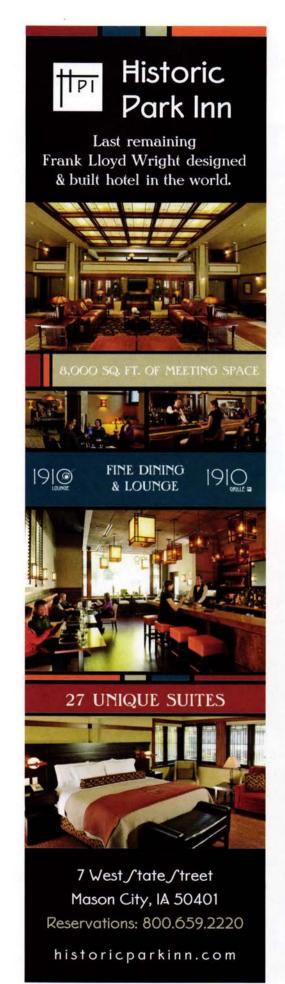

The Anthropologie headquarters benefited from the decade-long collaboration between client and architect, says Vercruysse. "In large part, it's been the same team from the beginning. And building off those relationships [the process and the results have] gotten better and better," he says.

What has changed over the past 10 years— and changed dramatically—is the technology environment for architect and client. "We started the first building in CAD," says Stowers. "Now we're using Revit and 3D. In the old days—2005—we would bring printouts to meetings with the client. Now we bring a laptop, and the client sits with us and reviews the options in real time."

Will Urban Outfitters ever lose its appetite for converting old buildings to new uses, keeping the best of what's there? Not likely, says Ziel. "[Our approach] creates a very unique working atmosphere that's still true to the building's roots," he says. "My favorite term for it is 'deconstructive reconstruction.' If the building lends itself to adaptive reuse, we're absolutely going to do it every time." AMN

HIGHLY COMPLEMENTARY

Cook and Soranno are both in their 50s, tend to dress alike in grays and blacks, and clearly share the same taste in art, books, and travel destinations. But clients and colleagues note clear differences in their personalities and roles: Joan is passionate and creative; John is quiet and pragmatic.

Winona County Historical Society executive director Mark Peterson commissioned the duo to design an addition for the Winona County History Center in the late 2000s. He recalls working with them to resolve a problem with a donor who wanted his name on a room. "He had his own ideas and even had designers who worked for him, but they weren't architects. Joan had her ideas and fought very hard for them," says Peterson. "I admired her fortitude—I learned a lot from both her and John. We trusted them to deliver, and they more than gave us what we were asking for."

In 2002, after nearly a decade of working together, Soranno and Cook began to see each other outside the office. "I think if you can work well with someone eight or more hours a day, there's probably a pretty good chance you'd be compatible with them outside work as well," says Soranno. They married in 2009.

Work consumes much of their lives, the couple admits. But at home they rarely talk about projects or clients. Soranno runs each day, and Cook works out at the gym. They both read avidly, and roughly once a year they travel to Florida for a few days at the beach. In recent years, much of their off-hours time has been spent gutting and remodeling the interior of their Mediterranean house in Minneapolis' Cedar-Isles-Dean neighborhood.

"John can build anything," Soranno says of the remodel, during which they lived amid the dust and debris. "I, on the other hand, had never used a paintbrush before this project." Now complete, the refreshed interior with its clean lines and detailing echoes the aesthetic these architects bring to their work for clients: design that marries beauty, simplicity, and functionality.

"We spend almost 24 hours a day together at work, at meetings, at home," says Soranno. "Not every couple would want that. But the good thing about our partnership is that, in almost every way, it's complementary." **AMN**

A STEP BEYOND ORDINARY PAVEMENT

With Willow Creek pavers you can design streetscapes that set themselves apart. Willow Creek pavers combine the look of natural stone with the durability of concrete. And they come in textures, shapes and colors that suit any design palette, from classic to contemporary. When you face your next creative challenge, look beyond the ordinary to the extraordinary in paving solutions. Look to Willow Creek.

WILLOWCREEKPAVINGSTONES.COM

2015 DIRECTORY OF AIA MINNESOTA MEMBER FIRMS

Dear Readers.

I invite you to study this directory of Minnesota architectural firms and become better acquainted with my professional colleagues. We are members of AIA Minnesota, the state organization for architects created 122 years ago to provide architects with continuing education, professional practice assistance, and opportunities to communicate to the public concerning the design of the built environment.

Our member firms provide design services and special expertise to clients throughout Minnesota, the nation, and much of the world.

Our skills relate to all types of building projects, whether large or small, new or old. We can assist you in planning and designing specific facilities that respond directly to your unique needs.

If you have any questions about architectural services or how to select an architect, call the AIA Minnesota office at (612) 338-6763. Our staff will be pleased to help, and give you further information.

Tim Dufault, AIA President

WHO'S IN THIS DIRECTORY?

This is a directory of firms that are owned and operated by AIA Minnesota members.

Our Architect Member-led firms are qualified by law to practice all types of architectural work in Minnesota.

Our Associate Member-led firms that employ architects are qualified by law to practice all types of architectural work in Minnesota.

Our Associate Member-led firms that do not employ licensed architects are restricted by law to limited areas of practice - primarily single-family residential work. For your reference, we have identified these firms with an asterisk.

HOW DO I FIND JUST THE RIGHT FIRM?

As you commence your search for just the right firm for your project, we urge you to read the full directory of firms to ensure that you spot all of the firms that you wish to consider. For your convenience, we have prepared an Index of Firms by Building Type, which immediately follows the directory. While this Index includes only firms that have paid to be included, it is an easy-to-use reference tool for spotting which of the 268 firms in the Directory have significant experience in the design of projects such as yours. As you read through the listings, take special note of the following pieces of information: the firm's related project experience (of major importance); the location of the firm relative to you or your project site; whether the firm offers the diversity of services you may require; whether the firm has the size that fits your project's needs.

WHAT MAKES SOMEONE AN ARCHITECT?

Architects are licensed by state governments to protect the health, safety and welfare of the public. They are trained to solve problems and to give shape and form to your specific needs. The architect's services are an investment that adds market value to your property. Their designs can capture energy savings, improve the efficiency and productivity of your operations, and often reduce your building's impact on the environment.

HOW DO I GET ADDITIONAL HELP?

Carefully think through your project requirements. If you wish to know more about the design process, contact AIA Minnesota at (612) 338-6763 or go to www.aia-mn.org for reference materials or informational brochures. We have resources to aid you in the architect-selection process. Creating a new building or renovating an older one is an exciting process. The secret to building project's success lies in the relationship you and your architect establish with one another. The architects and firms presented in the 2015 Firm Directory are waiting to work with you.

WHAT INFORMATION WILL I GET?

Each firm listing contains the following information (if applicable): firm name, full address and phone, fax, email and web addresses of the firm's main office in Minnesota; names of principals; number of staff members by discipline; types of markets served by percentage; and a listing of up to six projects. The work percentage for any given firm may total more than 100 percent due to overlap in the categories of interiors, preservation, and sustainable design. And, of course, except for the very newest firms, each has done many more than six projects. Projects listed are meant to illustrate the general spread and flavor of the firm's work.

2015 INDEX OF FIRMS BY BUILDING TYPE

The purpose of the Index of Firms by Building Type is to enable you to quickly identify, from among the 268 architectural firms in the foregoing Directory, those with experience and skill in designing whatever specific building types that may be of interest to you. The building types listed directly match with those in the preceding Directory of architectural firms.

To be included, each firm was invited to identify building types for which they have specific design expertise and for which they paid a modest fee per listing. Firms listed are identified in alphabetical order by name with the location of their main office indicated (some firms may have more than one office in Minnesota). Unless otherwise indicated, all firms listed are located in Minnesota

A full description of each firm in this Index is included in the preceding Directory, along with other firms managed by members of the American Institute of Architects Minnesota. We urge you to thoroughly study this Directory and direct any questions you may have to AIA Minnesota at (612) 338-6763. You may also search this Index and the Directory of AIA Minnesota Architecture Firms on our web site - www.aia-mn.org.

2015 CONSULTANTS DIRECTORY

Welcome to the 23rd annual Consultants' Directory. This directory includes those organizations that have very unique and specialized skills that may be necessary for certain project teams. All firms have offices in Minnesota, and some have diversified skills that are broader than the narrow specialties of this directory.

This Consultants' Directory is just one of many directories that Architecture MN publishes to help clients, design firms and the public in identifying any licensed design professional or specialized consultant that may be required for various building projects. For example, elsewhere in this issue is our annual directory of AIA Minnesota Firms and an Index of Firms by Building Type which you may also find on our website www.aia-mn.org.

WHEN ANNA HILLEGASS, OWNER OF THE FOUNDRY HOME GOODS IN MINNEAPOLIS' HISTORIC WAREHOUSE DISTRICT, TALKS ABOUT "THE DEEP EXPERIENCE OF THE STORE," SHE'S DESCRIBING WHAT HAPPENS WHEN RICHLY TEXTURED ARCHITECTURE AND CAREFULLY CURATED RETAIL OFFERINGS BECOME NEARLY INSEPARABLE FROM ONE ANOTHER. IT WAS A DISCOVERY SHE MADE WHILE LIVING IN NEW YORK CITY SEVERAL YEARS AGO.

"That was the beginning of the Foundry for me, visiting little shops in SoHo like BDDW and the Ochre store," she recalls. "I loved De Vera—a beautiful, raw space in this old building with architectural details like a glass floor and a really modern staircase down to the basement."

"The experience starts on the sidewalk when you look in through the storefront window or the door, and then it's the door itself, the handles on the door," Hillegass continues. "You feel connected to the building—the creaky floors, the smells. It's nice getting lost in these places."
