The President's Message

Having returned so recently from the Los Angeles Convention of the American Institute of Architects my mind remains refreshed with the many interesting meetings and people associated with this annual event.

Elsewhere in the magazine Eugene Magenau has an excellent and detailed account of convention activities which, since they generally parallel mine, need not be recounted again on this page. However, I do wish to emphasize the splendid hospitality of the host chapter which seemed to have overlooked nothing to add to the comfort and entertainment of the delegates and their guests.

Until one has attended a national convention of the Institute it is not possible to visualize the effectiveness of the organization to which we belong, or the value it has to us in the practice of our profession. At two of the sessions which I attended the subject matter was largely directed toward chapter problems. As a result there will shortly be offered to the New Hampshire Chapter for its consideration several changes in policy and organization which have proved successful elsewhere.

Although I appreciated the attractiveness of California, and friendliness of its people, and the atmosphere of the convention, I was glad to return to New Hampshire and what it, too, has to offer.
Having put aside all thoughts of attending the 1956 Annual Convention in far-off Los Angeles, I was astonished to find myself taking off from Logan Airport in Boston at 10:45 A. M. on Monday, May 14, for that very purpose. It seems that my presence was desired as a member of the national Committee on Chapter Affairs, and never have I changed my mind with greater pleasure or anticipation.

The day-time flight across the entire country was full of fascination. We were above clouds in the East and to some extent over the Rockies but the rest of the time I gazed with avid interest on the broad landscape, getting a stiff neck in the process. Half of the country appeared to be pasture land or under cultivation with almost no trees. Approaching and over the Rockies there is much wasteland where the processes of erosion are clearly visible. Our route took us across Lake Michigan, Omaha, the North end of Grand Canyon, Las Vegas, and on to Los Angeles, arriving at 8:15 P. M., Pacific Time.

On Tuesday morning we plunged into committee work, which also occupied all of Wednesday and Thursday mornings as well as other odd moments. Thus I was able to attend only one of the business sessions, on Friday morning. However, New Hampshire was well represented there by Delegate and Chapter President Norm Randlett.

Eleven of the twelve members of the Chapter Affairs Committee were present and some of the problems we wrestled with were the following:

Reclassification of Associate Members including Juniors and Students as national A. I. A. instead of Chapter members.

Chapter dues based on number of technical employees instead of individual basis (now done by some chapters).

Chapter report forms, usefulness already approved.

Student chapters increasing, status of existing student chapter charters needs clarification.

Chapter awards to be standardized and made available through the Octagon.

Should regional associations be incorporated, to eliminate personal liability in connection with handling of funds or judiciary cases?

Need for wider distribution of "Documents of the Month."

Complimentary ads on new buildings on chapter basis instead of individual architect.

One of the Convention highlights was certainly the Chapter Affairs Breakfast on Wednesday morning, attended by Officers and Directors of the Institute, our Committee, Chapter Presidents and Chapter Representatives. Presiding officer was Beryl Price, our dynamic Chapter Affairs Chairman. All of the tables were round tables, with two or three top-level men sitting at each one, with no head table. It was delightfully informal. This meeting set a precedent in bringing together for the first time the "summit" and the "grass roots" and the values of the down-to-earth discussions were so fully demonstrated that this affair will undoubtedly become a permanent feature of all A. I. A. conventions.

The Biltmore Hotel, headquarters for the Convention, is one of the city's older hotels, but was very spacious and comfortable. At the Luncheon on Tuesday, President Cummings gave an address on "State of the Institute," announcing that total membership had gone over the 11,000 mark, with 125 chapters. The Awards Luncheon was on Wednesday and this was notable for the number of repeats among Honor Award recipients. Thursday's Luncheon was, for me, an M. I. T. Alumni affair at the nearby Jacobin Club. At the annual dinner Thursday evening, 35 members were advanced to Fellowship in a colorful ceremony; a report was made of (Continued on Page 8)
WASHINGTON, D. C. — Dimensional standardization—an elusive but very practical method of lowering home building costs—came one step closer to being a reality here recently during a joint meeting of members of the National Association of Home Builders and the Producers’ Council, Inc. The Council is the organization of building products manufacturers and associations.

The purpose of the meeting, which was held on May 17 at the National Housing Center, was to determine practical standards for dimensioning windows and window openings. The builders and manufacturers chose this area for their initial discussion, because of the multiplicity of sizes in which windows are manufactured.

Participating in addition to PC and NAHB members were representatives of the Aluminum Window Manufacturers Association, the National Woodwork Manufacturers Association, and the Steel Window Institute. The conferees agreed that dimensional standardization was desirable and could eventually lead to lower window costs.

Their plan of action is for the NAHB’s Research Institute to determine which window sizes are generally preferred by builders. This information will then be made available to window manufacturers for study, prior to the group’s next meeting. At that time, they plan to set forth acceptable standards for dimensioning windows and openings.

This work of creating dimensional standards for structural components of houses was begun last year by the NAHB’s Research Institute and is being pursued by the PC-NAHB Joint Committee. Although their efforts at present are limited to windows and openings, the Institute and the committee will soon undertake additional activities in which dimensional standardization is a problem. The joint committee is under the co-chairmanship of Chicago builder Bruce Blietz and Robert W. Lear, New York, the national representative of American Radiator & Standard Sanitary Corporation to the Council.

The cost-cutting advantages of standardization of sizes will result from the elimination of much extra cutting, fitting and fabricating at the site of construction. At the same time, it will enable many manufacturers to mass produce a limited number of window sizes. Some firms now produce windows in as many as 350 different sizes.

The conferees agreed that their efforts to simplify the window-selecting process would not in any way standardize home design. Nor will they be eliminating the market for special window sizes.

All proposed standards will utilize the 4″ module as a basic unit of dimensioning, in accordance with the concept of Modular Measure as practiced in the building industry. Modular Measure is a system of coordinating sizes so that different materials such as windows and brick will fit together properly with a minimum of cutting or fitting.

CALIFORNIA PAINTS
provide:
1. LOWER COST PAINTING through ease of application. They are formulated for professionals.
2. MAXIMUM COVERAGE with the desired paint film. Leading painting contractors have job-proved California Paints.
3. UNSURPASSED DURABILITY assured by use of finest raw materials and thoroughly tested formulations.

PLEXICOLOR acrylic exterior flat
Gives wonderful coverage on all exterior surfaces and lasts longer than ordinary paints. Seals and protects all masonry, stucco, painted wood, and unplastered tile. Excellent over asphalt and asbestos shingles. Does not water-spot and rain washes clean to give a new-paint look. Withstands high temperatures.

ALLWALL vinyl interior flat
Made for all interior walls, ceiling, and trim — even steam radiators — where brilliant deep or pastel colors are desired. Flows evenly over smooth plaster to give a hard, tough finish. Withstands high temperatures. Most scrubbable interior paint.

PRIMER-SEALER vinyl
Provides a perfect base for all kinds of paints. Seals the surface so the finish coat goes on evenly and easier.

RAYLITE rubber latex interior flat
Economical in cost. Brushes on so quickly. Dries in about 30 minutes. Second coat or touching-up immediately afterwards. Very abrasion resistant and can be scrubbed in 3 days.

RAYOTINT alkyl latex flat
Lowest in cost of new modern paints. Gives superior one-coat coverage. Recommended especially for use on rough or irregular surfaces such as masonry block. Used in light pastel colors only. Withstands washing after 30 days.

RAYOGLOS latex
Semigloss quick drying, self priming, water thinned paint for all interior surfaces. Will not raise wood grain, non-tacky, easy flowing.

Produced by New England's original latex paint manufacturer

next year's Centennial Observance; the Institute's highest award, the Gold Medal, was presented to Clarence Stein, FAIA, of New York; and the new Institute Officers were announced. President George Bain Cummings' successor is Leon Chatelaine, Jr., of Washington, D.C., former Institute Treasurer.

There were so many interesting seminars and building tours offered that it was difficult to choose among them, as it was necessary to do because several came at the same time. My choices were:

Seminar on School Building Trends—in which Dr. Charles Bursch, former head of the planning division of California State Department of Education, told of the fine results possible by means of enlightened "Regulation without Standards."

Seminar on Architectural Specifications—this meeting was conducted by the up-and-coming Construction Specifications Institute, whose efforts to improve this important branch of architectural practice are filling a great need, and with which I was already familiar, having joined several years ago. At this meeting I ran into Phil Gatz, Maine's only delegate at the Convention.

Tour of Church Buildings—riding on the bus between visits to an exhibition of church architecture and four outstanding new churches, gave us an opportunity to see a good deal of the City. Los Angeles spreads out over an immense area, which is quite monotonous except for isolated structures or other points of interest.

The Exhibition of Building Products sponsored by the Producers Council was open throughout the Convention and deserves special commendation. These exhibitions seem to get better every year, with more skillful displays and less high-pressure selling on the part of exhibitors. I could not find nearly enough time to visit the booths here, but every visit was rewarding as to information and the chance to feel and see the new products.

Social events of the Convention were tops, starting with the President's Reception held Tuesday evening at the Gardens of the Ambassador Hotel. President Cummings and his staff met and mingled with all of us around a beautiful outdoor pool—a fine environment for making and renewing acquaintances with architects from other states. This was followed by a pleasant surprise for me when Norm Randlett came forth with an extra ticket to the Host Chapter's (Southern California) Show Night at the famous Moulin Rouge. If this is a "clip joint" it is a very high class one, with good food, good music, a wonderful show with colorful costumes, intricate dances, and comedy singing.

These fun times were a welcome relief from the concentrated work and business of the Convention. Wednesday night we enjoyed Premiere Night at Grauman's Chinese Theatre, with a first showing of "The Man Who Knew Too Much" and personal appearances of Director Alfred Hitchcock and stars Doris Day and Jimmy Stewart, emceed by Art Linkletter. These people are great entertainers and made us enjoy every minute. Jimmy Stewart admitted having graduated from the Prince-
ton School of Architecture but explained his subsequent career as the result of an “incurable disease” contracted at a summer theatre in Falmouth, Massachusetts, while still a student!

Among the many friends encountered during the Convention was our former Regional Director, Phil Creer of Providence, whom we are about to lose to Texas, where he will head up the Design Department at one of the big universities.

I topped off my Convention trip with visits to friends in Los Angeles for a day and a half, then flew to San Francisco for two wonderful days there. We visited many schools, churches, homes, shopping centers, scenic wonders, world-famous restaurants and bars, the Redwood Forest, and rides on the cable cars, to mention the high spots. The flight back home was uneventful, most of it during the night or high above the clouds. It was great to get home, and just a bit hard to settle down to work, after such a fine trip and so many interesting sights and experiences.

Architects

have long recognized the benefits derived from the timely, systematic interchange of information in the construction field. They find that this benefits their clients and all concerned ... brings a wider range of bids ... brings more complete news of new products, new trends, new techniques. And it saves much time that might otherwise be wasted on salesmen uninformed as to the architects' current interests.

This information, incorporated in Dodge Reports, is helpful to all firms in new construction. And it guides the right supplier's salesman to the right architect at the right time.

That's why for more than 65 years architects have found it good practice to provide their Dodge reporters with complete information about their work.

ARNOLD PERRETON AUTHOR OF NEW PEACE FORMULA

BOOKLET "OUR TASK" NOW ON SALE

A plan to promote world peace through the formations of Peace Assemblies on a local, state, national and international basis has been outlined in a pamphlet by Arnold Perreton, Concord architect.

The booklet, "Our Task," which is now on sale, is a summary of a nearly-completed book-length manuscript which will have the same title. The author is a member of New Hampshire Chapter, A. I. A., and the American Society of Planning Officials.

Major theme of the 40-page booklet is the "properly organized action of all free peoples—the terrific force of the citizens of free nations" in eliminating the "Communist menace." Perreton recommends a local Citizens' Peace Assembly which can be comprised of representatives from various civic organizations, through which proposals made for freedom and peace by these citizens could be channeled to a common center where they could be properly considered and adopted if found worthy.

Implements U. N.

Such an assembly on an international level, Perreton states, can implement the work of the United Nations. "All action for peace from all levels," he writes, "could now be culminated on the world level, whereby the Citizens' Peace Assembly of the world could exercise its right of power to nullify the Communists' or any other objectionable veto by its vote, in order to break a stalemate in the United Nations, and thus a free-peace could be won throughout the world."

The booklet concludes with the statement that information on these proposals and the proposed program of action on such assemblies, may be obtained from the author whose address is 12 Center Street, Concord, N. H.

Never before a paint for school interiors like amazing, rugged Color-flecked PLEXTONE. It's revolutionary . . . two or three different colors (sprayed at ONE time from ONE gun WITHOUT SPRAY DUST) which form a multicolored, textured pattern. SCHOOL AUTHORITIES find this new multicolored decorator finish easy on the budget. SCHOOL ARCHITECTS find that PLEXTONE's uniform coverage on different types of low-cost surface materials gives them new styling resources . . . and new design possibilities because of its high light reflectivity and durability. PAINTING CONTRACTORS say PLEXTONE goes on easier, WITHOUT SPRAY DUST, makes possible neater, cleaner jobs. And MAINTENANCE MEN find it unmatched for ease and low cost of upkeep.

RANDLETT REELECTED PRESIDENT

Norman P. Randlett of Laconia was re-elected president of New Hampshire Chapter, A.I.A., at the annual meeting and dinner of the chapter at the New Hampshire Highway Hotel at Concord on May 17.

Also re-elected were John D. Betley, Manchester, vice-president; Walter Thomas Williams, Rochester, secretary; and Robert Snodgrass, Nashua, treasurer.

John R. Holbrook of Keene was elected to the board of directors and he will serve with Alexander J. Majeski of Bedford and Mitchell P. Dirsa of Manchester who were also re-elected.

A screen presentation, "Architecture U. S. A." followed the business meeting and dinner.

John D. Betley, vice-president, presided in the absence of President Randlett who was in attendance at the National A.I.A. Convention at Los Angeles.

MARTIN-SENOUR
Dual Service to ARCHITECTS

The Color Coordinator System

The Color Coordinator System is a positive system of color selection, specification and duplication in Paints. It consists of 497 colors, selected to provide maximum coverage of all color possibilities. This vast array of colors is arranged in handy chart form for quick matching, selection and creation of color harmonies. It is also available in actually painted 3" x 5" removable samples. Martin-Senour maintains a library of these color samples. Orders for individual color samples are promptly handled.

MARTIN-SENOUR Nu-Hue Colors

To tint the colors in the Coordinator System requires a minimum of elements—only 16 basic tinting colors are needed. Never more than three colors are used, and they are always combined in equal parts! The name of each color is its mixing formula too—easy to specify—easy for the contractor to achieve. Famous Nu-Hue Liquid Tinting Colors combined with Nu-Hue whites deliver the desired color in finest quality paint!

ARCHITECTS

E. L. PATERSON and SON
Portsmouth, New Hampshire
GENERAL CONTRACTORS
Brown and Currier Office Building  
Portsmouth, New Hampshire

Construction of this building was started immediately after preliminary sketches were approved. Thus it was necessary to make quick decisions on many structural and mechanical equipment items before details of the superstructure could be worked out. The original ground elevation being some seven feet above sidewalk grade and the presence of ledge made a basement impractical, so to conserve higher value street floor space the boiler room was raised to the second floor. The boiler room also houses the air conditioning and pneumatic control system.

The building is of "semi-fireproof" construction with steel frame, reinforced concrete foundations, concrete masonry walls with brick exterior and plastered interior, steel joist floor and roof systems, gypsum plank roof deck, hung acoustical plaster ceilings, steel windows, aluminum store fronts, hollow metal door frames, flush wood doors, vinyl-plastic flooring tile. Heating and air conditioning is provided year-round by a gas-fired boiler and package type chiller plant with electric pumps and pneumatic control system arranged to circulate either hot or cold water through the same pipes to remote air conditioning units, both floor type and suspended. Mechanical ventilation is provided in service rooms. Principal lighting is fluorescent.

The conservative design is appropriate for the location and type of occupancy, which includes a bank, pharmacy, telephone business office, insurance office and several attorneys. All office partitions are flush movable type, providing complete flexibility. Interiors are made attractive by the coloring and excellent lighting, both natural and artificial. On the exterior the blue porcelain-enamel canopies over windows unify the design and contrast pleasantly with the variegated tapestry brick, cast stone and aluminum trim.
