... without mortar! If your thing is making more profits, then our versatile green bag is your bag, too. All of the projects shown were built with SUREWALL® Surface Bonding Cement — a new mortarless method of bonding concrete and cinder blocks that's stronger than mortar. SUREWALL's strength lies in a process which embeds glass fibers in a cement matrix. When mixed with clean water, it is troweled onto the surface of concrete blocks that have been dry-stacked in a running bond pattern. In one easy application, using less skilled labor, a wall is bonded with a moisture-resistant, stucco-like finish on each side — no joints or block shadows show.

SUREWALL is the attractive and sensible way to lower soaring building expenses. For more information on cost-cutting, time-saving, money-making SUREWALL Surface Bonding Cement, write or call:

NMA November - December 1973
Outside heat raises inside cooling costs. Zonolite can help reduce the problem at its foundation.

Look into Grace-Zonolite® Masonry Fill Insulation. It's incredible stuff. To put it another way, it's a lightweight, free-flowing, water-repellent, vermin-proof, rot-proof, fire-proof, sound-deadening, inorganic, granular vermiculite! Year after year, it can deliver savings in cooling and heating dollars that far exceed the initial cost of the fill.

Other virtues? Yep. Zonolite® Masonry Fill Insulation reduces sound transmission 20% to 31%. It increases a 2-hour fire rating to 4. It pours in at the rate of 28 square feet per minute. It's acceptable in FHA-financed housing.

Want all the details, test data, specifications, and such? Say the word!

There is no substitute for a good color coat stucco finish! However, a good color coat stucco finish depends on:

- The best materials
- Good building detailing
- Good specifications
- Proper application

We have the best stucco materials, which are specifically formulated for the Southwest and Rocky Mountain regions, and we can furnish you with the proper specifications. But only you can provide the proper detailing and close inspection to assure proper application.

Take advantage of the many unique textures and versatile applications of real color coat stucco—contact us for specifications and exciting new ideas.

NMA November - December 1973
This cost-cutting tool can save you 20% on your next building's walls.

It's the mason's trowel. And in the hand of a skilled craftsman, masonry can end up costing less than metal, glass or precast concrete. Less initially. And less in the long run, too, since masonry needs less maintenance.

What's more, because masonry buildings aren't as expensive, you can save on finance charges. And on real estate taxes.

But wait. Let us prove it. With a free comparative cost study, "Walls to Save Dollars." Mail us the coupon. We'll send the study.

It's chock full of information that can save you a bundle next time you build.

Which makes the study a cost-cutting tool, too.

Nature of business
The author of "Early Modern Architecture in New Mexico," printed in the last issue of NMA, was unable to determine the architects of some of the houses discussed. Since the magazine has been published additional information has come to light—thanks to some searching and telephoning by Mildred Brittelle.

The house at Coal and Hermosa S.E. was designed by William Burke, AIA, in 1937 for Walter C. Raabe.

Tom Benton did indeed design and build five houses on Ridgecrest Drive S.E., including the three pictured on pages 14 and 15, Sept./Oct. NMA. (Note: figures 2 and 4 on pages 14 and 15 of that Sept./Oct. issue are all on Ridgecrest Drive South East.) Mr. Benton was also an architect; he was registered in 1933 and held registration number 34.

1974 OFFICERS FOR NEW MEXICO AIA

During the past few weeks the various New Mexico components of the American Institute of Architects have held elections for their 1974 officers.

NEW MEXICO SOCIETY OF ARCHITECTS

ALBUQUERQUE, NEW MEXICO
How do you judge a zoo? By the total number of animals in the collection or the total number of species represented? Or is a zoo judged by its environmental and architectural quality? The answer is, of course, dependent upon your point of view. In any scale or evaluation the Rio Grande Zoological Park receives moderate to good marks for its existing complex and high to superior in its potential. From the standpoint of completeness of the animal collection, the zoo gets a good rating, due to the outstanding species of hoofstock. The sable and roan antelopes are outstanding collections in terms of American zoos, and the Elburz Red Sheep is unique in the zoos of the world. Further, the zoo rates very high in the estimation of the citizens of Albuquerque and throughout New Mexico.

Dr. Bruce Stringer, Director of the Rio Grande Zoo feels that the zoo is in a continual state of transition and places a great emphasis on a creative breeding program to enlarge and enhance the number of species shown at the zoo. "Within two years the zoo will be a major source for such exotic species as the kudu and the gemsbok. Sales and trades of animals will become a major factor in our development."
The tragic fire which resulted in the loss of a part of the children's zoo area, including its red barn, on July 31 has resulted in a strong positive reaction throughout New Mexico's construction industry. With a massive donation of services, labor and materials a ground breaking ceremony for a new barn occurred on October 28.

The real excitement of this project, however, has been in the sense of community involvement. The Albuquerque Journal has led a campaign for reconstruction of the barn and related facilities. The Albuquerque Chapter of the American Institute of Architects along with a host of other professional organizations, volunteered services for its design and construction.

The original barn had been constructed in 1961 from city funds and a $3000 contribution by the Junior League of Albuquerque. It housed small and sick animals and provided shelter for the zoo's turtles and tortoises. The fire killed about 27 small animals, including birds, squirrels and monkeys.

The new barn will house seven open stall exhibits for touch contact with the animals and five glass enclosed exhibit cages for more exotic species. A keepers area will allow for food preparation and storage. A circular stair brings the public to an upper floor containing a meeting room and office space. The overall size of the building is 40' x 60' and the construction is primarily of heavy timber and exposed wood.

Preliminary design was through Pacheco and Graham, Architects, and Jerry Torr Associates prepared the working drawings.

Monies and donations have arrived from civic groups, school children, piggy banks. This effort has brought a realization of the true value of our Rio Grande Zoo.

Professional organizations offering volunteer services include:

- American Institute of Architects
- Associated General Contractors
- New Mexico Consulting Engineers Council
- Mechanical Contractors Association
- National Electrical Contractors Association
- Albuquerque Chapter of the Painting and Decorating Contractors of America
- New Mexico Building and Construction Trades Council AFL-CIO
- Masonry Contractors Association of New Mexico

The response from individual contractors and material suppliers has been excellent, with donations too numerous to mention here. However, additional donations or cash contributions are needed.
Judging the zoo in terms of recreation, it is a fun place to visit. The environment is detached and different. The zoo, sitting inside the Rio Grande Bosque, provides a welcome contrast to the high desert ecology for the cross country visitor—and the animals communicate! The recreation needs here are for more projects dealing with human well-being, such as more landscaped areas (and personnel to maintain them) less chain link fences and better graphics (these are on the way, thanks to the Tri-Delta Sorority at UNM).

The visitor to the zoo must find a natural and communicative environment when he views the exhibits. Architectural surprise is important here as well, and the zoo provides this element in some features, such as the inside of the great ape house and the tiger moat.

Another function of the zoo is education. The Rio Grande Zoo has been fulfilling an educational mission, but the true judgment of this effort must be made in terms of its future potential. A zoo is a place of knowledge, both in terms of the preservation of exotic creatures from far away lands and the opportunity to learn from simple animal behaviour and life styles. The zoo architect cannot help but be impressed by working with animal "clients" whose disciplines of sleeping, security, food and breeding are so different than his own *homo sapien* ways.

The zoo can also function as a research facility. The construction of a proposed hospital and veterinary clinic at the zoo will greatly enhance this potential. Also possible here is future cooperation between such laboratories as Los Alamos and Lovelace Clinic.

One of the principal judgments of a zoo is its contribution toward conservation. Through an agreement with the New Mexico State Game and Fish Department, the Rio Grande Zoo has pioneered in the reestablishment of endangered species into habitats matching their native environments. The zoo
is also a repository and breeding area for many such exotic creatures as the orangutan and the polar bear. Sometime in the near future animals may only be found in zoos and animal parks. The act of conservation is directly linked to architecture and the need for animal oriented facilities. For example, in the old bear cages at the Rio Grande Zoo the mother grizzly would kill her newborn each year, due to the lack of privacy in the inadequate pens.

A functioning and exciting zoo is the common goal. A zoo that provides for beauty, environment, entertainment, research, education and conservation is possible in Albuquerque. Immediate projects include an aviary, a gibbon flight cage (substituted for a monkey island) and a white rhinoceros enclosure. The future is full of projects and dreams including an outside moat for the gorillas and the orangutans, the completion of the feline exhibits, some water oriented exhibits, the elimination of the chain link through moat enclosures, and the expansion and enrichment of the hoofed animals areas. The zoo will grow with involvement in its programs and its community service to be a good place to be—both from the human and animal points of view. C. G.

A Hex Sign For The New Barn

Hex signs are an American folk art with its origins in the Pennsylvania Dutch country in southeastern Pennsylvania. The early immigrants to this area came mostly from Germany rather than the Netherlands; it is thought that "Dutch" is a corruption of "Deutsch". Fleeing from religious persecution as had the earlier Pilgrims, they sought a land where they could worship as they pleased. Today this area of Pennsylvania is a prosperous, rolling farming area, culturally enriched by the descendants of the members of all the sects who settled there.

"Hex" does not refer to an evil spell. Instead, these brightly painted signs are used to keep away bad luck, and to encourage good luck and a number of specific positive elements. The stylized flowers, birds, stars, rosettes are not intended to be faithful portrayals of their earthly counterparts. Rather, they are stylized visualizations of symbols; many are Biblical derivations produced by a deeply religious people— including the flowers that grow in Paradise.

At the center of this sign is the Barn Sign, used to protect the barn from lightning and fire, and the livestock from harm or disease. The surrounding star motif is the Lucky Star sign, designed to bring good fortune to the building and its inhabitants. The outer band is the Rain, Sun, and Fertility sign. The rain and sun bring crop abundance, and fertility for life. The outer border of scallops encourages smooth sailing throughout life. The entire hex sign is an original, now being executed for the zoo barn at Silver Hill Arabians, Tijeras, New Mexico.

These colorful signs are most obvious in their use as barn decorations, and many may be seen on the unique forebay barns found in southeastern Pennsylvania. Traditionally they also decorate family bibles, birth and marriage certificates, illuminated manuscripts, linens, iron stove plates, trivets, tinware, pottery, tombstones, and wooden chests. And of course in this day of commercialization, they are seen on every imaginable sort of tourist item. The power of the hex sign has not diminished, however. Professional hex sign painters in the area are flourishing, and their customers report that the signs are still being used with great success. C. B.

The need for further donations or cash contributions still exists. The construction program is now underway and any contribution above $5.00 will entitle the donor to a membership in the Zoological Society.

Lembke Construction Co. Contractor
Site:

In Albuquerque, New Mexico, a flat suburban site on formative commercial "strip" next to a shopping center. Views toward northeast mountain range.

Program:

Emphasize the consultative side of banking through the building. Relate to pedestrian customers from the shopping center next door. Respond to regional climatic impacts and views. Make an oasis in the "strip" environment.

Design Solution:

A walled entry court wraps around the mountain view-oriented glass facade. A diagonal pedestrian shortcut to the shopping center passes through the court. The other sides of the bank are closed and the pyramidal roof acts as a prow into
duststorms from the southwest, protecting the entry court. The south and west elevations are blank in response to solar impacts. The high side of the building shades the courtyard and a fountain adds coolness and masks street noises.

Inside, the consultative functions (financial planning, loans) are raised for separation and views to the mountains. The tellers below are oriented toward the view with the vault as a central symbol. From within, the bermed courtyard wall height cuts off views of the suburban foreground and acts as a visual base for the mountain view. Outside, the same wall separates the pedestrian court from the vehicular pattern. A multi-use meeting hall adjoins the banking area. Tapestries are used as color events on the essentially blank interior walls.

Construction:

Sandblasted cast in place concrete walls. Post-tensioned concrete waffle slab roof structure.

An Award of Merit was presented the architect of the Sandia Plaza Branch of the First National Bank at the Western Mountain Region, AIA, Conference held recently in Estes Park, Colorado. The jury commented as follows:

The unusual form of this branch bank building makes a strong statement in the shopping center where it is located. The building is of concrete, of excellent quality to judge by the photographs, and this material is handled with great appropriateness and with a commendable restraint which the strong and dramatic form of the building required for maximum effect. Surfaces are simple and plain, an important consideration in dealing with geometric forms of exceptional configuration. The opening up of the entrance elevation to the enclosed court and, from the upper level, to the view of the mountains, makes the interiors unusually pleasant, and the coffered ceiling which incorporated the illumination of the entire banking room is handsome. The landscape design uses berms to screen the road from the court and to form an environment in which both materials and climate respond to each other, and in which the banking institution and the community can relate pleasantly to each other. For these reasons, the Jury found this building excellent and presents to it the Award of Merit.

You Can’t Burn Natural Gas!

In fact, a burning match would “drown” in a 100% natural gas atmosphere. Natural gas contains no oxygen, so an atmosphere with less than 4% or more than 14% of gas is incapable of burning. To support combustion, you have to mix about 10 parts of air to one of gas. Then — and only then — can you harvest the blue flame which does so many modern jobs so dependably and so efficiently for such a low cost.

Natural gas under control is completely harmless. And since it’s lighter than air, it usually can’t collect in one spot in a moving atmosphere. Moreover, the air in an average house changes one and one-half times each hour. A professional study in Washington, D.C. — where the ratio of electric meters to gas meters was 1.1 to 1 — showed the ratio of electrical fires was 26 to 1. The ratios in your own community are probably quite similar. Natural gas has an enviable safety record, so remember:

If you want the job done right... do it with gas.

SOUTHERN UNION GAS COMPANY
ChemComp doesn’t shrink from any job.

When you want minimized shrinkage cracking for absolute structural integrity, durability, and beauty, the concrete answer is ChemComp, Southwestern Portland’s expansive cement. ChemComp is finished cement, not an additive or partial replacement. It greatly reduces maintenance and repair costs due to cracks. It generally eliminates the need for waterproof membranes or surface sealants. Check ChemComp’s many advantages.
