STRENGTH ABOVE ALL! WITH 62% SAVING IN STEEL

LITH-I-BAR OFFERS
LIGHT WEIGHT — BALANCED REINFORCING UNIT — MACHINE MADE — CONSTANTLY UNIFORM

LENGTHS UP TO 36 FT.
HEIGHTS 6"—8"—10"—12"—14"
FLEXIBILITY IN DESIGN

EASY SETTING — SIMPLE FORMING MINIMUM SLAB WORK

RESULTS IN A FIREPROOF SYSTEM AT LOWEST COST

TIME-PROVEN in floors and roofs on hundreds of outstanding jobs; homes, stores, factories, schools, hospitals, churches, theaters — large and small.

When you want fire and rust proof construction that is simple, that requires the minimum in field supervision, that is fast, that will give you the greatest per dollar value, you will find the answer in the LITH-I-BAR Joist.

We have just furnished with complete satisfaction over 9 miles of 14" reinforced lightweight concrete Joists (to be exact 2,188 Joists, 47,597 ft.) for Flight Hangar Roof at the Buffalo Municipal Airport. The construction of this Hangar was under the supervision of the following:

CONTRACTORS—POIRIER & McLANE, NEW YORK CITY
WAR DEPARTMENT—U. S. ENGINEERS OFFICE
ARCHITECTS & ENGINEERS—DUANE LYMAN & ASSOCIATES, BUFFALO

MANUFACTURERS FOR NEW YORK STATE

GRAVEL PRODUCTS CORPORATION
HUYLER BUILDING, 374 DELAWARE AVE.

BUFFALO 2, NEW YORK
A joint study of proposed American standards, sponsored by the A.S.A. and the Producers’ Council, Inc., has just been published by the American Standards Association. Max H. Foley is general chairman of the committee which includes in its membership all elements of the Construction industry. A completely revised standard basis for the coordination of dimensions of Building Materials and Equipment is contemplated.

Every architect should have a copy of this bulletin, A 62-1, September 1, 1943, which may be obtained from Mr. M. W. Adams, Secretary A.S.A. Committee A 62, c/o Modular Service Association, 110 Arlington Street, Boston 16, Mass.

Every constituent organization should have an active committee studying their proposals and making suggestions to the A.S.A. Committee through its secretary.
Among the Constituents

Sidney L. Strauss

New York Society

The boys are together again after their vacation and the first Fall meeting was most interesting.

Local Law 29 was the subject of considerable discussion at this meeting and all enjoyed Lu Bernfeld's very complete interpretation.

A nominating committee to bring in a slate of officers for the next year was elected and the meeting was conducted in its usual splendid fashion by our President, Bob Teichman.

New York Chapter

Now that vacations are over the Chapter will continue to prosecute the lawsuit which was instituted by the Civil Service Group.

No stone is being left unturned by the Committee, headed by Charles Platt, to the end that the private practitioner maintain his rightful place as being qualified far better than any bureau in the designing of public buildings.

Bronx Society

This Society mourns the loss of its president, Tom Dunn, who passed away so suddenly. His memory will always be cherished by those who knew him and the Society has suffered a very distinct loss.

Bill Kane, our first vice-president, is now acting president and with the first Fall meeting in the offing, it is hoped that the attendance will continue as it has in the past.

Brooklyn Chapter

Adolph Goldberg, President of the Chapter, will rap the gavel before long and start things humming for the Fall season!

Queens Society

Ray Irrera started the Fall season with a bang! There was a fine attendance at the first Fall meetings. The members were given some interpretations of the new Local Law 29 by Tom Kelleher in a most enlightening fashion.

A nominating committee was elected to bring in nominations at the next meeting.

Keep an eye on this Society and watch it go places!

Westchester County Society

With the coming of Fall and Winter the Society will make a special effort to keep itself an active force in the community.

It is hoped that we will be able to formulate an active program for the coming season so that all meetings will be of interest to the membership, which should insure good attendance.

The Blue Print, our official publication, is keeping all members informed under the newsy heading, "Pencil Dirt."

Otto Gette, our president, has great hopes for perfect attendance at the meetings. The boys will not let him down!

Mid-Hudson Valley Society

Your postcard received, and I am shocked to notice its date. Perhaps that is in a nutshell the answer to it—for I have so little time for so many things that the dates pass like telegraph poles on a railway. Because I am one of those weary "war workers" whose existence seems bounded by work and bed, with brief visits to the table, and lunch box.

The fact that I am not winning this war single handed is the explanation of the silence in our direction. That and the fact that our few members remaining at liberty are so widely separated geographically that in these days of the New Deal gestapo, it has been impossible to hold a meeting.

Of our little Society three are in local war plants, two building ships for Kaiser in California, one designing them for Gibbs & Cox in New York, one is an air force major in England and one a captain of engineers Somewhere. One is in war work in Kingston, one in a shipyard on Staten Island and one in a radio plant in New Jersey, and two are building Grumman planes down on Long Island. Still another on war work in Georgia.

Hoping that architectural organization can not only be kept alive but activated to meet the wide opportunity of the post-war world as an aggressive, progressive unit, I am yours sincerely.

Louis Booth.

Syracuse Society

In keeping with the war effort and matters important to the architect, this organization dispensed with the usual recess for formal weekly luncheon-meetings for the months of July and August and thus continued its program throughout the summer.

As the fall season approached some bright and aspiring member deciding that an election of new officers for this society was inevitable and that this was the opportune moment to clean house as there was almost too much accomplished during the past year. Thus the perennial nominating committee was appointed—Mr. Melvin L. King being chairman. There were many meetings behind closed doors et cetera and apparently after assumed refusals by prospects, the same slate of officers were named and re-elected consisting of the following: Prof. L. C. Dillenback, president; Mr. Merton E. Granger, vice-president, and Mr. Rollin H. Burden, secretary and treasurer. Note the latter held the funds. We feel, however, that this in a small way, is the policy in Washington, D. C.

We actually are making splendid progress to date and President Dillenback is cracking the old whip in his usual manner and this is just what we want.

Prof. Walter Taylor heading our radio committee is now endeavoring to seek a few pleasant speaking voices for broadcasting purposes among our members in order to present a worthwhile weekly program for public consumption. The thought in mind is to properly inform the public as to just what the architect really does and the niche which he fills in our business structure.

The Annual Outing of the Syracuse Society of Architects, sponsored by a committee composed of Messrs. Merton E. Granger, Carl F. Woese (Spark Plug) and Paul B. Sweeney, presented a fine clambake and program one day in the early fall at North Syracuse, N. Y. The athletic accidents were of a minor nature fortunately.

(Continued on page 22)
EFFECT OF TAXES—FEDERAL, STATE AND MUNICIPAL ON HOUSING

by ARTHUR C. HOLDEN, F.A.I.A.

Though the primary purpose of taxation is the raising of revenue, it is obvious that the way in which taxation is applied is toward the exercise of a social control. Therefore, the method of application of a tax is of first importance, not only to those who are taxed but to those who may feel the indirect effect of the taxes upon society.

Even those, who have little knowledge of the shifting and incidence of taxation, know that an import duty on a specific product tends to stop importation and to produce less revenue if the rate is set higher than the market price. Thus, a corporation assessing a tax for the purpose of producing revenue, care must be exercised lest undesirable social consequences may be produced. Our local municipalities depend for their revenue almost exclusively upon the real property tax. The earnings on real estate when not overt and destroy the ability of real estate to pay its own way.

It is not only at the time the tax is set that forethought must be exercised with regard to social consequence. Events may develop and other factors may come into play which change the social effect of a tax long after its application. It is necessary periodically to examine the tax structure in order, so far as possible, to prevent undesirable social effects which may be the unintended effect of the shifting of taxation.

The present time real estate is directly and indirectly subjected to the state and federal income and corporate taxes. In addition to bearing the brunt of local taxation which is assessed against real estate. An analysis and clarification of the situation is imperative.

Understanding of the use to which tax money is put as well as knowledge of the methods of taxation that are employed are equally essential if we are to eliminate the difficulties which have grown up as a result of ill-considered tax levies. I am well aware that some students of taxation believe that no taxes may ever be devised which will be adequate to meet the total expenses of government, including debt service obligations, that it is unnecessary to attempt to allocate particular revenues to particular purposes, or to confine the expenditures for specific purposes to funds derived from particular revenues. It must be so charged, the stronger the reason for segregating all such services as are capable of carrying a special revenue charge.

For example, the tax on the real property of New York City is $300,000,000 of which about one half is assigned to state aid to education. Out of the remaining $185,000,000 about one third goes to pay for care of the disabled in state hospitals, most of whom are mental cases. The principal tax on real property of New York depends are: the Income Tax, the Gasoline Tax, and the state’s share of taxes on real estate which are collected locally. Outside of cities, the school tax is collected separately.

As a result the rural taxpayer probably faces the tax that is simply a proportion of his tax which goes to pay for education.

There is, however, no real attempt on the part of the state to explain the allocation of taxes. Practically all revenue passes through the general fund. Even the gasoline tax is not assigned to a single purpose although it was originally authorized as a measure to reduce the drain upon the general fund caused by the state program for improved highways. To those who have criticized the raising of a revenue through the gasoline tax greater than the current appraisations for state highways, the argument has been advanced that such a tax is justified because prior highway appropriations were inadequate to meet the total expenses of government, including debt service obligations, but the greater the amounts that must be so charged, the stronger the reason for segregating all such services as are capable of carrying a special revenue charge.

Where real estate is held by a partnership or an individual, all net gains are subject to tax even if these are kept in the enterprise and applied to long range improvement that may be of distinct social importance.

The progressive taxation of corporate incomes has tended to discourage large scale real estate enterprise. The makers of the federal revenue laws have apparently given scant thought to the social effects of the corporate income tax upon the management of real estate. It is primarily concerned with the management of corporate taxes as though it were primarily concerned with buying and selling.

Although a cash surplus is essential to the growth of conservatively operated real estate enterprise, real estate was treated just like any other business. The earliest tax on the capital gains as though it were primarily concerned with buying and selling.

Where real estate is held by a partnership or an individual, all net gains are subject to tax even if these are kept in the enterprise and applied to long range improvement that may be of distinct social importance. Where real estate is held by a corporation for undertaking housing enterprises, the federal taxation law has been responsible for the growth of conditions which have so seriously affected real estate as to constitute a threat to the solvency of our municipalities.

The progressiveness of the federal income tax has been responsible for the growth of conditions which have so seriously affected real estate as to constitute a threat to the solvency of our municipalities.

Although the general real property tax is by far the heaviest, and perhaps the most unfair as applied to that it is, it is by no means the only tax which adds to the cost of maintaining shelter. Events may develop and other factors may come into play which change the social effect of a tax long after its application.

Although a cash surplus is essential to the growth of conservatively operated real estate enterprise, real estate was treated just like any other business. The earliest tax on the capital gains as though it were primarily concerned with buying and selling.

Where real estate is held by a partnership or an individual, all net gains are subject to tax even if these are kept in the enterprise and applied to long range improvement that may be of distinct social importance. Where real estate is held by a corporation for undertaking housing enterprises, the federal taxation law has been responsible for the growth of conditions which have so seriously affected real estate as to constitute a threat to the solvency of our municipalities.

Although the general real property tax is by far the heaviest, and perhaps the most unfair as applied to that it is, it is by no means the only tax which adds to the cost of maintaining shelter. Events may develop and other factors may come into play which change the social effect of a tax long after its application.
As a result of legislative permission granted to New York City to raise a revenue through a sales tax of not to exceed 294", real estate value of improvements made after the imposition of the tax. The rents of these properties will feel the impact of the tax, but not in the virtual cessation of building within the city due to the war, the tendency of this type of tax to increase "other" rents might have made itself felt. This is another instance of the blindness of legislators to the social implications of taxation. The imposition of an employment tax, for instance, would be a special case of charge to the workers, after long periods of tax exemption without a compensating increment tax levied against the safe price, is sufficient to demonstrate the need of a more enlightened tax policy with respect to the maintenance of social values due to openness as well as to special services.

The general property tax needs extensive revision all along the line. There is particular need for study of the social consequences of the tax and the kinds of social damage which is the unwitting result of neglect, and so far as possible encourage policies which will produce social advantages. The approach should be analytical. New York City has long paid for its "free service" of a public park with an indemnity, which is the result of the wasteful and inefficient administration of the "service rendered" principle. It is sufficient here to point out that the "fare for service rendered" is in principle reasonable, and that had public opinion been capable of letting it be known by the result of the examination, New York could and should have today a self-supporting rapid transit system just as it has a self-supporting water supply.

It is our argument that the burdens of the real property tax can be spread over a wide area and not have uniformity. The "charge for service rendered" principle is a better source of educational funds than the personal income tax is a better source of educational funds than the personal income tax. By recognizing that a portion of the cost of the real property tax can be spread over a wide area and not have uniformity. The "charge for service rendered" principle is a better source of educational funds than the personal income tax is a better source of educational funds than the personal income tax.

With respect to the cost of police protection and the treatment of crime, our objections to the "payment in full" principle is that this principle is a better source of educational funds than the personal income tax is a better source of educational funds than the personal income tax. By recognizing that a portion of the cost of the real property tax can be spread over a wide area and not have uniformity. The "charge for service rendered" principle is a better source of educational funds than the personal income tax is a better source of educational funds than the personal income tax. By recognizing that a portion of the cost of the real property tax can be spread over a wide area and not have uniformity. The "charge for service rendered" principle is a better source of educational funds than the personal income tax is a better source of educational funds than the personal income tax.

The tax burdens which are borne by housing can be greatly reduced by intelligent understanding, analysis, and a balancing of the advantages and burdens of the services rendered. Fundamentally, it must be remembered that the basis of equitable taxation is equitable and honest governmental bookkeeping.

POST-WAR PLANNING

We have learned that the Fetch Company, 236 Scapaquada Street, Buffalo, New York, have recently decided to open a Central New York Office located at 874 Livingston Avenue, Syracuse, and the Manager of this area will be Mr. Howard Gray, who has long been associated with the Construction Industry and acoustical field.

Mr. Gray, after graduating from the University of Michigan, was associated in the practice of architecture, with Bagg and Newkirk for approximately five years, Kinne and Frank, of Utica, for approximately three years. For the past fifteen years he has been associated with the Celotex Corporation, calling on Architects in this area and is well-known to Builders, Dealers and those generally interested in the Construction Industry.

While the Fetch Company is primarily interested in the acoustical field, Mr. Gray's long experience in various phases of construction as well as the adaptation of acoustical materials in the industrial field should prove to be of general service to the architect on specifications covering this type of work.

The Fetch Company will be pleased to have any inquiry sent to the Buffalo office or the Syracuse office, covering any job regarding their specialized service.

Since 1896 it has been the sole business of Gaylord Bros. to help plan and equip libraries of all types. We have always welcomed the opportunity to work with architects, and to place at their disposal the specialized knowledge acquired in our field.

Now that plans for post-war construction make up so important a part of the architect's endeavors, Gaylord Bros. renews its invitation to make use of our experience in the development of plans for public and school libraries. No obligation whatsoever is involved.

LAPIDOLITH LIQUID

A patented colorless liquid which hardens, dustproofs and protects concrete floors for many years, by chemical action. The application of LAPIDOLITH LIQUID will not interfere with working schedules since floors can be kept in use during and directly after application, if necessary. LAPIDOLITH LIQUID also hardens and wearproofs terrazzo floors.

LIGNOPHOL

Lignophol is no ordinary surface finish, but a beautifying and preservative treatment that penetrates into the wood, depositing toughening resins and life-imparting oils which resist moisture, molds, fungi and wood-destroying organisms. Recommended for the preservation of floors in schools, institutions, offices and factories, and for beautifying trim, paneling and floors in residences. Lignophol assures substantial economies in time and labor, because only a single application is required in order to obtain its full benefits.

SANTORIZED TRIMIX INTEGRAL LIQUID

Nine major advantages at a surprisingly low cost are secured through the use of Santorized Trimix Integral Liquid, among which are the shortening of average initial setting time; reduction of water ratio; greater workability and ease of manipulation; high early strength; greater water impermeability and resistance to erosion; faster placing and more rapid removal of forms.

CAULKING COMPOUNDS

Sonneborn has been identified with the manufacture of airproof, waterproof, and elastic caulking compounds for many years. Sonneborn’s Caulking Compounds are used extensively on Federal projects and meet U. S. Bureau of Standards tests. They function efficiently under a wide range of climatic conditions. Shipped in gun or knife grade, or in cartridges.

HYDROCIDE COLORLESS

Protects brick, concrete, masonry and stucco walls against the cumulative effects of rain, snow and sleet, without changing the texture and beauty of the surface to which it is applied. HYDROCIDE COLORLESS is free from wax and oil, therefore it is unaffected by extreme heat or cold. Hundreds of applications to masonry of all types demonstrate its efficiency in all kinds of weather.

Write for specific Sonneborn data on your particular problems of waterproofing and dampproofing, and for copies of the eight page reprints of Sweets Catalog.

Specification Installations

Modern Design - Compact (2 or 3 devices under a 1-gang plate) - Precision-Built for dependable service. Note details of switch construction below.

2. Yoke oscillates on fiber bearings.
3. Contact blades designed to reduce arc to minimum. Blades are assembled with two laminated Bakelite discs which act as further arc snuffer and terminal guide.
4. Lever—Full size, one-piece, with trunnion, spring seat, positive kick-off and T-rotating plainly visible.
5. Terminals — Sturdily, one-piece. Easy to wire, large head screws for wire up to #10.
6. Cover securely anchored in four places.

EMPIRE STATE ARCHITECT
AMONG OUR CONSTITUENTS
(CONTINUED)

Our newly elected Board of Directors is composed of the following members: Messrs. Harry A. King, Paul B. Sweeney, Webster C. Moulton, D. Kenneth Sargent and Thorvald Pederson. This group has dusted off our old constitution and is stream-lining it. They are making a study in which our membership may be substantially increased by other interested candidates.

President Dillenback and N. Y. State President Ellis are carefully studying and promoting action within this society as to both federal and state pending legislation pertinent to the architectural profession. President Dillenback faithfully reads all current A. I. A. bulletins for the benefit of those members who have not been properly informed.

Prof. D. Kenneth Sargent is doing a splendid job also with his work in the state committee, Safety in Housing.

Mayor Thomas Kennedy of this city recently met with this society and promised his full cooperation pertaining to the private architect and Post War Work (Projects) under his jurisdiction. Various committees have been appointed within this society and who are now meeting with civic groups, general contractors and luncheon clubs all on this most important matter of Post War Planning.

Recently ten of our members journeyed to Rochester, N. Y., by train of course, and joined fellow members there at the Central New York Chapter of the American Institute of Architects. This meeting was well worth attending, in fact was inspiration to an architect in these most uncertain times.

We have had a serious loss in this society. This member was a genuine architect in the full sense of the word—genuine. Paul Hueber was a real leader, a civic inspiration and an ethical architect. We miss Paul. Thorvald Pederson, Paul’s successor, is maintaining an office at the former’s address.

Respectfully submitted,
ROLLIN H. BURDEN

CENTRAL NEW YORK CHAPTER A.I.A.

The Central New York Chapter of the American Institute of Architects met on October ninth at the Hotel Saganmore in Rochester. President Bickford introduced Edgar I. Williams of New York City, Regional Director, who spoke on the future development of an Institute publication to serve a wider field than the present Octagon, and to furnish a means for a better understanding of the architect by the layman and to foster a better and more normal architectural taste.

At the conclusion of Mr. Williams’ talk, the meeting was turned over to Vice-President Leo Waasdorp, Chairman of the Chapter Committee and Member of the A.I.A. Committee on Membership. After speaking briefly of the work being accomplished, he introduced Julian Oberworth of Frankfort, Kentucky, A.I.A. Membership Secretary, who held the meeting closely while outlining in a most interesting way the possibilities of increased service to society and to the profession to be derived from a greater membership and the correspondingly larger Institute income.

ROBT. T. BICKFORD.
President

William G. Kaelber, senior member of the Architectural office of William G. Kaelber and L. A. Waasdorp, Rochester, New York, is the recent recipient of the degree of Master of Humane Letters from the University of Rochester.

“Bill” has served the profession most faithfully for many years past, in the Education Department of the State, the Chapter, and the State Association.

A most deserving recognition of our fellow Architect. Congratulations!

Mr. Thorvald Pederson, formerly with the office of A. L. Brockway for thirteen years and with the office of Paul Hueber for the past six or seven years, is now practicing architecture at 200 Syracuse-Kemper Building, 224 Harrison Street, Syracuse, N. Y., as “Thorvald Pederson, Architect, Successor to Paul Hueber.”

Our good friend William J. Picard, for twenty-five years a public servant in various capacities in the New York State Department of Labor, and through this Department well known to the architectural profession, has recently opened an office as Consulting Industrial Engineer at 75 State Street, Albany, New York.

A TRIBUTE TO PAUL HUEBER

Born in Syracuse, raised in Syracuse, educated in the schools and college of Syracuse. A real product of this city. One who established a name for himself, and by himself, leaves a memory that commanded the respect of all who knew him when here and which follows after he has gone to his reward in the Great Beyond.

These traits of character leave “footprints on the sands of time” that form a path true and straight for the young to follow and for the old to ponder over the trail that they have left behind.

Paul has passed on but his memory still lives. I will remember his birth. I now grieve for his death.

MELVIN L. KING
WHERE DO THEY GO FROM HERE?

They go forward—not back but forward—unless they’re mistaken about the America that they have defended. Ten million of them, more or less. They’ll want jobs. It’s said that more of them will find these jobs in the building and allied industries than in any other. There’s responsibility for you!

Married or getting ready to marry, they’ll want homes. What kind of homes? Homes that are easy and pleasant to look at, and easy and pleasant to live in. They’ll be sort of counting on more value for their money. There’s opportunity for you!

Certainly the recent past will make bathrooms and kitchens more important than ever to them. That’s where our opportunity and our responsibility will lie, and we expect to do justice to both—when the time comes. Meanwhile, you’ll understand that the craftsmen who made Case products for you, are now busy making them for these boys, for the war. W. A. Case & Son Mfg. Co., Buffalo 3. Founded 1853.

**Prefabricated-Demountable Structures**
by the thousand, constructed and delivered by the Johnson mill organization

40 War-Emergency Contracts have included War and Navy Department Cantonments, Hospitals, Naval Training Stations, Farm Security Dormitories and War Workers' Housing under the Federal Housing Administration, State and Municipal Authorities.

Today we build for WAR . . . under direction of the U. S. Government . . .

Tomorrow we build for Peace . . . under direction of the Country's greatest Industrial Leaders.

Over 5,000 "Prefabs." included
In addition to thousands of War-workers' homes, the Johnson mills have produced Demountable Administration Buildings, Field Offices, Barracks, Huts, Farm-Workers' Houses, and Cafeterias to serve over 17,800 Workers on a single job.

Today the Johnson mills are engaged in all-out production for Victory . . .

Tomorrow Johnson research will produce America's finest low-cost homes.

**Extract from Recent Navy Dept. Letter**

"This work was started under difficulties that involved delays in acquisition of land, but was so well organized and expedited by the contractors that the 450 housing units were completed in 120 working days and the facilities, including pavements, sewage disposal, incinerators, fire protection and drainage system, were completed shortly thereafter.

"The job was organized on an assembly line basis that proved so efficient that the final costs, including the fixed fee for the contractors, was 11% under the original allotment."
