First Joint Regional Conference
October 19th-22nd 1970
Lightweight Prescription for Learning and Living
School of Nursing, Hartford Hospital, Hartford, Connecticut

Rx for this architectural gem: mix the advantages of Solite lightweight aggregate into a reinforced concrete structural frame. Finish exteriors with glass and dark masonry, accented in white.

Utilize weight reduction, consistency, control and excellent durability in designing a complex of two 9-story dormitories and a three-level academic/social center. Employ throughout for exterior and interior walls, floors, columns and roof deck.

Take long spans of post-tensioned Solite concrete (including one of 104'). Use liberally for enclosed pedestrian bridges and walkways connecting School of Nursing with hospital facilities.

Diagnosis: functional and economical concept handsomely embodying modern building materials.

First chance you get, step inside your drafting room for a moment. Does it look as though you've stepped into the future? Into an atmosphere that accurately reflects the progressive stance your company has taken? Remember, a drafting room that's out-of-date can virtually take money out of your pocket. In loss of productivity, efficiency, and employee morale. That's where Hamilton comes in. Our new, pacesetting drafting room furniture brings you all the color, modern design, and cost-saving conveniences of the future — today! It can help you design for the future. And lessen the blows of increasing competition, higher costs, and lower profits.

with new Hamilton drafting room furniture.

BRICK AND TILE PLANTS / EAST, MIDWEST, SOUTH
PPG Performance Glass has made these 37 recent contributions to America the beautiful.
(And America the comfortable.)

Architects all over the country are putting up more buildings that use beautiful PPG Performance Glass. The architects of the 37 projects shown below used a PPG Reflective Insulating Glass, for one or more of several reasons: openness, reflectivity, color, drama, visual comfort, or to keep out the heat and the cold. The list is made up of Solarban installations only, and while it is by no means complete, it does offer a guide to a number of interesting projects in widely scattered locations. For further details, write or call Mr. D. C. Hegnes, Manager, Architectural Construction Service, PPG INDUSTRIES, One Gateway Center, Pittsburgh, Pa. 15222.

PPG is Chemicals, Minerals, Fiber Glass, Paints and Glass. So far.
To My Colleagues:

As your President, I am pleased to present this annual message on the occasion of the 1970 Convention.

This has been a busy and eventful year. We have made much progress. I am proud to say that your team consisting of your Officers, your Board, your Committees and your Executive Director have done a magnificent job. Leading this group of dedicated professionals has been a great and rewarding experience for me.

The accomplishments of the Executive Committee and the Board of Directors has been most effective. The participation by all Chapters has been a source of gratification. Our relationship with the State Legislature, the Board of Examiners, The State Education Department and the various State Agencies, is much closer. The NYSAA as the spokesman for the architectural profession in this State has received the recognition of these bodies. Our liaison with the American Institute of Architects through our Regional Director has created an excellent line of communication.

Our relationship with the Engineering Profession has developed to a high degree of cooperation between us.

This summer has brought much activity. The Boston A.I.A. Convention, meetings with the General Building Contractors of New York State, The Board of Examiners for Architects, The State Education Department, The Office of General Services as well as a number of ceremonial matters.

Committees have been active and much time and effort has been put into this Convention by an outstanding Convention Committee. This 1970 Convention is a departure and hopefully a milestone, it is the First Joint Regional Convention between the New York and New England Regions. As indicated by the Convention Logo the architect has much to do and much to offer. Our profession in recent years has taken on new vistas and responsibilities. We are involved with the total environment. You will find our Convention Program meaningful and one from which much will be gained.

I cordially welcome you to attend the 1970 Convention at the Laurels, Monticello, New York, October 19th to 22nd, I look for your participation and your involvement. As architects who are proud of their profession we know there is much to do and in the words of the poet Robert Frost, “Promises to keep and miles to go” . . .

Sincerely,

ALBERT MELNIKER, A.I.A.
BY-LAW AMENDMENTS
To be considered at the Convention

Subject: Amendments to By-Laws

General: The By-Laws Committee recommends amendments to the By-Laws which will simplify, improve workability and provide flexibility of its Committees. This affects Article VIII Sections 2, 3, 4, 5 which are changed to read as follows: (No Change is proposed for Section 1 — Executive Committee — Section 3, 4, 5 are deleted).

"ARTICLE VIII
Section 2 Other Committees & Commissions
(a) All committees, except as otherwise provided in these By-Laws, shall be organized under the commission system similar to The Institute, and presently consist of the following:
1. The Commission on Structure and Organization
2. The Commission on Professional Practice
3. The Commission on Professional Affairs
(b) Each of the commissions shall be administered by a Vice-President of the Association, as designated by the President.
(c) Committees shall be designated and assigned to the appropriate commission as determined by the Rules of the Board.
(d) Rules of the Board shall be maintained by the Board and may be amended by simple majority vote of the Board."

Background: In the continuing development of the Association, there will be occasional need for changes in the committee structure: (1) Some may no longer serve a useful purpose; new ones will be required; perhaps it will be found that two existing committees should be combined for more effective operation. (2) Similarly, it may be determined that a committee whose composition is now fixed in number of members should have either more or fewer members. (3) A committee presently assigned to one commission might be better related to another.

It is proposed that there will be greater flexibility under the proposed revision than at present, where any change, such as those we have mentioned, require the mechanics of a separate By-Law amendment, and the time-lag until it can be enacted at an annual meeting.
Monday, October 19

9:30 A.M.  Meeting-State Board of Examiners and Architects

12:00 Noon  Joint Luncheon-Board of Examiners and Executive Committee, NYS/AIA

2:00 P.M.  Meeting-Board of Examiners - Executive Committee, NYS/AIA

LADIES PROGRAM

Special attention has been paid to offering an interesting program for the ladies. We especially urge you to attend
the Seminars on Wednesday; they relate to subjects close to your interest in your husband's career.

SPECIAL LADIES PROGRAMS

TUESDAY - OCTOBER 20, 1970
     12:00 Noon - Wine Tasting - Mrs. Diamond, Hostess
     1:00 P. M. Ladies Luncheon - Mrs. Melniker, Hostess
     2:30 P.M. Cosmetics Presentation - "Danae" Mrs. Mutrux, presiding

WEDNESDAY - OCTOBER 21, 1970
     10:00 A. M. - Ladies Golf Tournament
     3:15 P. M. - Ladies Tennis

THURSDAY - OCTOBER 22, 1970
     9:30 A. M. "Antiquing by Bus"
Outside heat raises inside cooling costs. Zonolite can help reduce the problem at its foundation.

Look into Grace-Zonolite® Masonry Fill Insulation. It's incredible stuff. To put it another way, it's a lightweight, free-flowing, water-repellent, vermin-proof, rot-proof, fire-proof, sound-deadening, inorganic, granular vermiculite!

Year after year, it can deliver savings in cooling and heating dollars that far exceed the initial cost of the fill.

Other virtues? Yep. Zonolite® Masonry Fill Insulation reduces sound transmission 20% to 31%. It increases a 2-hour fire rating to 4. It pours in at the rate of 28 square feet per minute. It's acceptable in FHA-financed housing.

Want all the details, test data, specifications, and such? Say the word!

'Buffalo' fans and coils will provide conditioned air for world's tallest buildings

'Buffalo' axial and centrifugal fans, 316 of them with a combined capacity of over 13,500,000 cfm, will move conditioned air through the twin towers that will comprise the nucleus of the World Trade Center. Aerofin coils, 2529 of them with a total capacity of 22,774,130 cfm, will provide efficient transformation of heated or chilled water into an environment suited to the interior of this monumental structure. For your important air conditioning jobs, whether they require a built-up system such as at the World Trade Center, or a complete fan, coil, filter cabinet package ready to install, call in your nearby Buffalo Sales Engineer. He's an expert in both ways of arriving at an outstanding air conditioning installation.

NEW “ROLL-ON”
EPOXY SEAMLESS FLOORING

Now — a new product that really saves you time and money!
It’s ROLLAFLOR®, a durable, attractive, all-epoxy floor covering that simply pours on — and spreads with an ordinary paint roller! Requires no special skills to apply. A self-leveling, fast-drying 100% epoxy compound combined with a carefully graded, colorful quartz crystal aggregate gives you a lasting “roll-on carpet” for home, office or industry.

ROLLAFLOR® EPOXY SEAMLESS AGGREGATE FLOORING is resilient and flexible! Provides extraordinary resistance to wear and abrasion, and to most chemicals. Will not chip or crack under normal use. It is acid-proof. The easy-to-clean surface is a natural for problem areas and where sanitary conditions must be maintained. Sparkling new ROLLAFLOR® is ideal for renovating old floors! And it can be ready for use in a day. Choice of decorator color combinations.

MEET THE RECORD-BREAKER
ON RESLITE

...the ever ready, all-weather track for an athlete’s greatest effort!

Reslite is the original resilient all-weather track • the proven track far ahead of any contender • with resilience-in-depth to maximize traction and eliminate shin-splints • the cushioned rubber-and-asphalt running surface pioneered by the California Products people, who specialize in track and field surfaces, not tires or asphalt emulsions • Reslite, which may be colored to your specifications, is built to take continuous shock and impact...to recover and heal itself for years of “live” action use • Reslite means safety to minimize athlete injuries • Reslite means low initial cost • no maintenance • and no weather-protective coatings are required. Before you specify or buy, look at a Reslite track!

More details? Call or write for this Reslite brochure, now!
For quick information, call John Wood “COLLECT” at (617) 547-5300.

Give this Hillyard manual an inch on your reference shelf...you'll get untold mileage from it

With all material written in accordance with the suggestions and specifications of the A. I. A. and The Construction Specifications Institute, this manual contains:

1. A Sweets Architectural Catalog. 2. Spec-Data Sheets on seven widely specified products. 3. Floor treatment folder (long form) for every type of floor (includes short specification and long step by step form for contractors). Each copy of the ring binder is numbered and will be kept up to date. Write for your copy today—no obligation—on your letterhead.

OR SMALL BUILDINGS
New Stark Textured Structural Tile

Finally . . . The wall product that has it all . . . Structural strength, color, permanence, economy and 'personality'. New, deep relief random textures and a wide range of variable color systems provide walls with a 'custom' appearance. Best of all, true economy is the result. You can count on less than $1.50 sq. ft. at the site (east of Miss. River) . . . Textured Stark Tile lays up as easily as any masonry wall yet . . . presto! It's all finished . . . and beautifully, excitingly, dramatically, forever . . . with minimum maintenance. In addition it's flame spread rating is zero, highest resistance possible to stains, scratches and effects of weather. There's more, much more — call your Stark Ceramics' rep. or distributor for the whole beautiful story.

STARK CERAMICS, INC., CANTON, OHIO 44701
TAPESTRY
... A gentle random modeling suggesting the hand-hewn qualities found in natural-earth materials. Use is not limited by architectural style or decorative motif.

GLYPHIC
... A deep random pattern with visual overtones suggesting ancient stone carvings or the effects of centuries of wear and weather or perhaps the inexorable changes found in centuries of earthly evolution. Glyphic is particularly suited to "overall" installations.

AZTEC
... A powerful deep, random pattern promising walls of unmatched visual strength and distinctiveness, strong plays of lights and shadows. Ideal for overall wall use in all architectural styles.

COLORS: All textures are available in either of two super-tough color systems.
Terratones ... the beauty of natural earth-tone high lights enhanced with "metallic" recesses.
Cameo color ... a variety of undercoat colors with white overspray to provide subtle enrichment of the textures.

SIZES
Available in 5½" x 12" nominal face size with 2" and 4" bed depths and square corners. All units ground to length.

Available in 8" x 16" nominal face size with 2" and 4" bed depth and square corners. All units ground to height and length.

Houses of worship are frequently a picture of gracious definition and moving simplicity. Lines and angles are eloquently executed to lift receptiveness to its highest peak. Split block has created an altogether elegant material for dignified church walls. Concrete block is not only beautiful, versatile and economical—but is replete with quality.

The basic difference in control centers:

System Format. The exclusive difference in information and alarm display concepts that separates our control centers from the ordinary.

Other control centers force you to check all data inputs and alarms point by point. And to remember a jumble of codes and values.

With Johnson, all monitored information is displayed system by system. A system diagram and all its monitored points appear simultaneously on a common data display screen. No coded information. No point-by-point interrogation. No possibility of confusion.

And all alarm pilot lights are consolidated on a system basis for immediate operator response. No shared alarm lights to delay the alarm signal. Result: the System Format alarm bank shows the operator if a system needs attention. Now. And keeps reminding him (visually and audibly) until it is acknowledged or corrected.

Johnson installs a control center matched to your exact needs. A basic unit that includes only the features you really need. Nothing more. Nothing less. And the system is easily expandable whenever necessary.

Write today for complete information on the basic difference in control centers. System Format. Operator-oriented building automation by Johnson.
There are three vital reasons why imaginative architectural design takes shape when BELDEN Brick is used: BELDEN provides MORE distinctive colors. MORE exclusive textures. MORE adaptable sizes. Over 200 variations of brick to free the imagination of the creative architect, from sand mold colonial brick through earthy browns to mechanically perfect pearl grays.

Your nearest BELDEN Dealer will gladly show you the facts in the form of samples and our new 4 color brochure, or write us at P. O. Box 910, Canton, Ohio 44701.
