# TROPICE \$1.00 RCHITECT

# For the Finest ... Most Advanced Automatic WASHERS • DRYERS • IRONERS

# Specity KKIIIX

 Modern Architects specify Bendix for homes and apartments because only Bendix offers the latest, most advanced design and features in automatic home laundry equipment. Backed by fifteen years of experience, exclusively devoted to the automatic home laundry field Bendix has the highest consumer acceptance. Newly designed Bendix washers and dryers offer the architect such outstanding features as flush-wall installation and perfectly matched units.

Full details on the complete line on Bendix washers, dryers and ironers can be obtained by contacting one of these reliable Bendix Distributors.

HE last of the three main structures that made up the U. N. permanent Headquarters - the General Assembly building - is now completed and was ready for the opening of the seventh session of the Assembly when it convened, on October 14. As this picture shows, the General Assembly building occupies the most prominent part of the site area and is the focal point of the Headquarters' composition. Its low, sweeping lines stand in sharp contrast to the 39-story skyscraper Secretariat building (to which it is connected by the Conference area). The northern facade of the building (foreground) is made of translucent glass set between marble columns. The concave side walls are faced with English limestone, with panels and trimmings in marble matching the narrow ends of the Secretariat building.

Number Two

# PYRAMID BUILDERS OF TODAY

MODERN WONDERS by WALLACE K. HARRISON, Architect

The world has forgotten the name of Cheops' archiect, but his pyramid still stands. Few outside his own profession have ever heard of Wallace K. Harrison, one of the pyramid builders of today. But in the past 30 years, Architect Harrison has directed the construction

of \$700 million worth of modern wonders. Four months ago Wallace Harrison was putting the finishing touches to his latest group of landmarks: the new U. N. buildings, on which, as boss architect, Harrison has spent five years and \$67.5 million.

In place of the Eastside tenements and slaughter houses stands the shimmering glass and marble slab of the Secretariat, towering 39 stories above the East River. Along its base crouches a long (400 feet) flat (five stories) Conference Building for the U. N.'s numberless councils and committees. Besides the thousands of offices, Harrison's designers and engineers have provided restaurants, meeting rooms, lounges and underground parking space for 1,500 cars.

Architecturally, that remains to be done is to complete the interior of the General Assembly Building, keystone of the entire group. Like the Conference Building, it is long and low. But where the Conference Building is

rectangular, the Assembly is sweepingly curved and capped with a wide dome. One end is a clear plate glass, the other a cliff of marble and translucent glass strips. A long ramp leads up to the 2,170-seat Assembly Hall. Along the walls are banks of translators' booths set in strips of gilded South American mahogany. Two vivid, swirling murals by France's Fernand Leger flank the hall, and over the podium will shine rows of plaques bearing the seals of the 60 United Nations.

A Sandwich on End? The U. N. buildings have roused the liveliest architectural debate in years. Some architectural critics have called the Secretariat everything from a "magnified radio console" to "a sandwich on end." Old Revolutionary Frank Lloyd Wright snorted

> that the design is mere "skyscraperism — a sinister emblem for world Said Critic power." Lewis (The Culture of Cities) Mumford: "A Christmas package wrapped in cellophane . . . a triumph of irrelevant

romanticism."

Architect Harrison is used to having these stones shied at his glass houses. And he is a pragmatist. "If in five years," says he, "some-body finds a way to build that is so much more wonderful that he wants to tear the U. N. down and rebuild it, why, let him."

Five years is a long time in the frenetic world of New York real estate, but Harrison's offer is not likely to be taken up, at any rate within that time limit, for two good reasons: (1) U. N. cost too much to tear down, and (2) even the skeptics are getting used to its sharp, clean slab along the edge of the Manhattan skyline.

Harrison's basic idea for the U. N. was a sim-"When we ple one.

started U. N.," he says, "we were not trying to make a monument. We were building a workshop – a workshop for world peace, and

we tried to make it the best we could."

In the eyes of Trygve Lie, U. N. Secretary-General, Harrison had special qualifications for top U. N. architect: he had helped build Rockefeller Center. Moreover, Harrison had been a member of the committee to bring the U. N. to Manhattan, and had assisted Rocke-

(Continued on page 8)

### The Permanent Home of the United Nations

The new permanent home of the United Nations occupies eighteen acres of ground in the heart of New York City. The four buildings that compose this area are bordered on the east by the busy East River, and on the other three sides by the apartment buildings, noise and bustle that help make up this large city. John D. Rockefeller contributed a gift of \$8,500,000 to buy the East River site. New York acquired and gave to the U. N. the remaining land needed to complete the

site. The city also deeded over the streets and waterfront rights along the East River for the entire length of the site. There are eight open acres north of the General Assembly building, which give a spacious, park-like aspect to the site. There are plans for constructing treelined paths, formal gardens and a playground in this

The unusual Secretriat building is 73 feet wide and 287 feet long, and 505 feet above street level, with three levels below. There are 5,400 windows in this building,

with green glass spandrels between them.

The General Assembly building contains an acoustically perfect meeting hall 165 feet by 115 feet, and is 75 feet high. In this room are 636 seats for delegates, 270 seats for observers, 234 for the press, and room for some 800 visitors. Underneath, in two levels, are a large conference room, seven radio studios, several committee and recording rooms, and a master control room for the communications system. Here also is the U. N. Bookshop and a gift shop run by the U. N. Cooperative which sells art and handicraft products of the member states.

The Conference building is 400 feet long and 180 feet wide, and only 55 feet high, but it has three basements. The main area of this long, low building is occupied by the Economic and Security Council, The Trusteeship Council, and the Security Council. These rooms, and several smaller ones lead out onto two terraces which extend the entire length of the building, and overlook the East River. Under this building is a large parking lot with room for 1,500 cars.

The United Nations Headquarters Library occupies a seven story building on the southwest corner of the area. All four buildings are connected either above or below the ground.

### **OUR GEOGRAPHICAL ROSTER ISSUE**

For several years we have published in our August issue, a roster of Architects licensed by the Ohio Board of Examiners of Architects to practice in Ohio. This Roster has been arranged alphabetically. We have been asked many, many times if we could furnish such a roster by cities and towns as there is a real need for such an arrangement. Beginning this year our February issue will be such a roster issue. We hope you like it and find it of service.

CONCERT HALL IN HALSINGBORG, SWEDEN. Designed by Architect Sven Markelius, who was a represent ative on the consulting Board of Design for the United Nations Buildings.

### PYRAMID BUILDERS OF TODAY

(Continued from page 7)

feller in his purchase and gift of the building site. Lie's first step was to name Harrison director of planning then a consulting board of design was brought together from member nations. France sent brilliant, temperamental Le Corbusier (real name: Charles Edouard Jeanneret), famous for developing the city-in-a-park idea in the '20s. The others: Australia's G. A. Soilleux, Belgium's Gaston Brunfaut, Brazil's Oscar Niemeyer, Britain's Howard Robertson, Canada's Ernest Cormier, China's Ssu-ch'eng Liang, Russia's N. D. Bassov, Sweden's

Sven Markelius and Uruguay's Julio Vilamajo.

Given the restrictions of the relatively small Manhattan site, there was never any real debate about whether to build a skyscraper or not. The only question was what kind of skyscraper. Few of the non-U. S. architects had had much chance to work on buildings of really soaring height. They welcomed U. S. engineering experience on such problems as wind bracing, elevators, plumbing and fire prevention. Ideas and sketches (all unsigned, since it was to be a group project) piled in and got knocked down right and left. Harrison wanted a bow front for the Assembly; Corbusier saw the Secretariat set on delicate stilts. Both ideas were discarded. Someone wanted all the elevators put at one end of the building instead of in the center. Russia's Bassov stayed up late one night

the center. In four months Harrison had a basic design to show the U. N. "In Europe," said Belgium's Brunfaut,

figuring how many extra steps that would mean for the

U. N.'s 3,200 office workers, and the elevators stayed in

"We could not imagine such rapidity."

Though most of the kudos for the overall slab design must go to Corbusier, the panel credits Harrison with translating the basic ideas into blueprints. The final decisions were also his, as chief planner. Most of the time he would sit back, listen to the arguments, then advance his own practical solutions. When the group was satisfied that it had sketched out a workable U. N. workshop, it was time to think about making a monument. Part of the solution was to sheath the two ends of the Secretariat in unbroken, windowless walls of marble. But even here, Harrison & Company were thinking of the things that make a workshop workable. The solid

(Continued on page 18)

# Cleveland Chapter A.I.A. Presents "House of Today"

at the CLEVELAND HOME AND FLOWER SHOW, February 28 to March 8

The "House of Today," designed to meet the current opular demand for a small three-bedroom home, will e featured in the 10th annual Cleveland Home and lower Show at Public Auditorium, February 28 through farch 8.

This American Institute of Architects house was degned by Cleveland architect, Howard B. Cain, who

ras selected by the Cleveand Chapter of the AIA or this honor.

The "House of Today" rovides a pleasant enironment for the averge-income family that refers contemporary deign. The plan emphaizes the distinctive functions of its various parts—ompletely separating the edroom, living area and arage workshop from ach other with the large ntrance vestibule servings the connection for hese three major areas.

The living room with ts generous brick fireplace enjoys a long view to the rear of the site, and pens out upon a large errace. The terrace is also accessible from the master bed room.

The indoor dining area, actually a part of the living room, is separated rom the kitchen by a erving counter. A flexble rolling screen above his counter provides a visual barrier when the need arises.

A separate terrace, directly accessible from the kitchen, permits outdoor dining. A high semi-circular fence provides privacy for this area and adds interest to the view of the house as seen from the street.

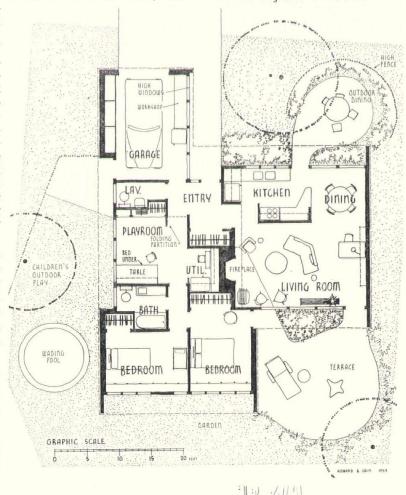

Within the bedroom area is located the utility room, with complete laundry services and linen storage. This room adjoins a corridor which in turn adjoins a dual

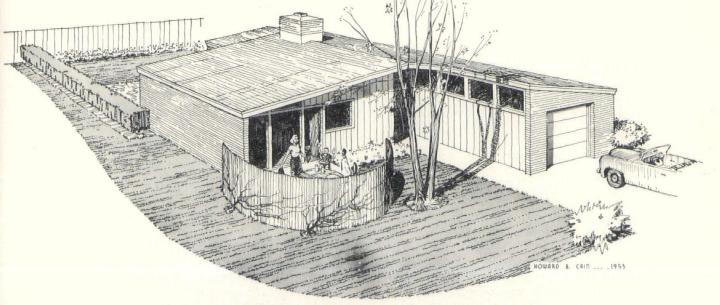

purpose bedroom. When the folding partition that serves the bedroom is completely opened, the vestibule loses its identity and the combined space provides a large play room.

The garage, with its workshop and storage cabinets, serves as a children's entrance to the house from the outdoor play area. Here they can deposit their muddy boots and coats. The adjacent lavatory is located for their further convenience.

Heating the house is accomplished by means of electric radiant heating elements, although space is available above the utility room to house a gas-type heater. Hot water is obtained from a counter-height electric heating unit located in the kitchen.

Almost 200,000 persons visited last year's show and a large percentage of them stood in long queues to go thru the architects' house on display there.

# Three-in-One Dormitories at University of Toledo

PETERSON, HOFFMAN AND GROW, ARCHITECTS, TOLEDO, OHIO

Three dormitories completed at the University of Toledo, Toledo, Ohio, are one structure with respect to the basement, companions on the first floor, and separate structures on the second and third floor levels.

Jim Clarkson, 24, of Lambertville, Mich., a junior and an Air Force veteran studies for his next class in one of three dormitories recently completed at the University of Toledo.

The unique yet original and functional design makes maximum use of the basement but provides an attractive plan of three buildings to the observer. It also reduces the problem of expansion and contraction of the structures.

The buildings provide living quarters for 426 students—142 in each unit. The basement includes a main dining room,

each of the three units.

In the plan of the rooms, provision was made for maximum use of space to accommodate a bed, designar, wardrobe and book shelves for each student.

The exterior is of red brick trimmed in Lannon stone, the latter a Wisconsin stone which compliments the appearance of existing buildings. The Lannon stone has been placed around entrances and at the base of the buildings.

The buildings have been constructed in the form of a U and the court yard includes a circular driveway.

Approximate-

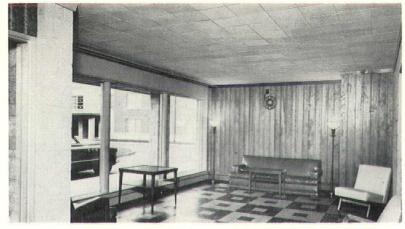

More than 60,000 square feet of noncombustib Fiberglas acoustical tile was installed in ceilin areas of three dormitories recently completed of the University of Toledo.

cafeteria, kitchen, space for members of the athletic training table, small dining rooms, a recreation lounge and an infirmary for students of the university.

On the first floor, two recreation lounges join the three buildings into one unit but on the second and third floors, space separates the buildings.

There are 47 rooms accommodating two students and 12 rooms housing four students in

Picture windows add serenity and the noncombustible Fiberglas acoustical tile contributes to the quiet of this lounge of one of three dormitories.

ly 60,000 square feet o noncombustible Fiber glas acoustical tile hav been installed in ceiling areas to reduce nois and to afford a pleasing appearance in concer with the light color employed in interiors More than 18,000 squar feet of Fiberglas blow ing wool have been in stalled in the attic to conserve fuel during the heating season and to afford greater comfor in warm weather.

(Continued on page 58)

Unique construction of three dormitories at the University of Toledo provides for one structure in the basement and on the first floor and three separate buildings on the second and third floor levels. Space between the units reduces the problem of expansion and contraction,

# Make every blueprint a design for modern living

# ... specify FAST, CLEAN, EFFICIENT

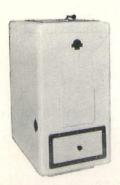

# GAS APPLIANCES

In any dwelling you design . . . whether a custom-planned house or a multiple-unit development . . . it's up to you to draw the pattern for easy, more efficient living. Home-owners want every modern comfort and convenience available today.

Gas appliances are high on the preferred list when it comes to performing household tasks faster, cleaner . . . with less work and greater economy. No other fuel operates so dependably for cooking, water heating, clothes drying, kitchen waste disposal, and heating.

And Gas costs less than any other fuel!

### In these new apartments GAS does 5 Big Jobs Better:

CALCINATOR GAS DIS-POSAL UNITS - odorless, silent, thrifty. A compact, indoor unit.

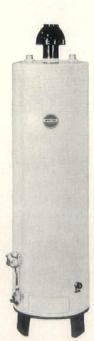

BENDIX GAS CLOTHES DRYERS, GAS dries clothes for less than one cent a

MAGIC CHEF GAS RANGES — fast, automatic cooking with more free time for the cook!

and Gas costs less than any other fuel

BRYANT GAS-FIRED WINTER AIR CONDI-**TIONERS** mean worryfree temperature control and comfort . . . winter or

### **OHIO STATE BOARD EXAMINATIONS**

These two views show the two new drafting rooms which the School of Architecture at Ohio State University makes available to the Ohio State Board of Examiners of Architects for the March and September examinations. They represent an improvement over the rooms in Brown Hall used for the past twenty years, and aid materially to the comfort of the candidates during the 4½ days examination.

### FROM CINCINNATI

The following good news has been received from Cincinnati. It is good because it was sent in voluntarily and secondly because of the evidence of excellent judgment on the part of the Architects along the banks of the Ohio.

At the January 20 meeting where Robert W. Mitchell of St. Joseph, Michigan presented some colored transparencies of architectural models made in his studio, the architects took off enough time to elect the following officers:

Frederick H. Kock, President; Edgar D. Tyler, Vice-President; Walter F. Sheblessy, Secretary; Richard R. Iuen, Treasurer.

New board member: Eugene Schrand.

Chapter representatives to A.S.O.: Harold W. Goetz;

Walter Sheblessy, alternate.

The membership committee reported the admission of the following members: George F. Schatz, Howard Elliston, Nelson Felsberg, C. H. Gillespie, W. W. Cordes, F. W. Pressler.

The program committee for 1953 and 1954 will be led by E. C. Landberg as chairman assisted by Fred Grau and Bernard Schorr. A committee was established to work with the Cincinnati Home Builders Association to develop ways and means by which the A.I.A. can participate in future home shows.

Walter Cordes was elected to head this committee assisted by Eugene Schrand and George F. Roth, Jr. Other

chapters of the state are w. rking on this problem and it is suggested that perhaps an interchange of progress and experiences in this particular annual endeavor might be very helpful and profitable for both the home shows and the architect.

### IMPORTANT NOTICE

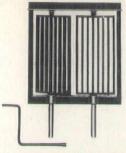

The Ohio State Legislature is in session in Columbus and a preview of the subjects to be considered shows at least three items of special interest to the Architects. As the work of the legislature progresses we will know more definitely what confronts us and as we will undoubtedly need the support of the other professions, it is urgently recommended that each architect immediately find out who their legislators are, where they live and if not already acquainted with them arrange to meet them so that when the call goes out from Columbus for these law makers to be contacted you will not be talking to strangers.

It can be very properly predicted that there has never been as much legislation up for consideration in the Ohio Legislature at one time that is of so much interest to or will have so much direct bearing on the practice of architecture in this state. The A.S.O. State Legislature Chairman, Mr. Harold Goetz of Middletown, will be calling on the various chapters for assistance soon, so the Chapter Legislature Committees should get well organized at once so as to be able to function efficiently

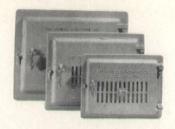

on short notice.

Receiving Hopper

**Easy Dumping Grates** 

Fire & Ash Doors

# DONLEY INCINERATORS Solve a Pressing Problem

 Donley design data, covering eight sizes of Incinerators, plus sturdy, adaptable Donley metal equipment are helping architects and engineers to grapple with the disposal problems of over burdened municipalities. . . . Built-in incineration for newly constructed buildings, free standing or other door fed incinerators for older properties are demanded by the current trend away from public collection and disposal. Any competent mason, with Donley plans can build an excellent incinerator.

Rapid increase in the use of gas for heating has deprived homes of the former means of disposing of all burnable wastes. . . . The answer is private incineration, best for the owner and promising to be mandatory in many localities.

Donley facilities include two types of receiving hoppers. quick dumping and easily replaceable grates, a variety of fire doors and cleanout doors, pilot burners and flame spreaders for efficient gas firing, safety controls for automatically intermittent burning.

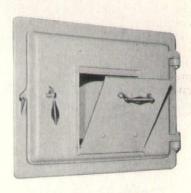

The efficient Donley Pilot Burner, operating with a distinctive flame spreader and intermittent burning by automatic control means rapid burning and increase in net capacity as compared with systems that call for drying periods before burning.

### Wide Variety of Installations

Houses, apartments, hotels, schools and institutions are being rendered independent of public collection by Donley aids. Industrial concerns are increasingly installing large incinerating units. Incinerators are mandatory in trailer camps. There is a Donley design to fit each case.

### THE DONLEY BROTHERS CO.

13972 Miles Ave., Cleveland 5, Ohio

### **Receiving Hopper** in Fire Door Saves Effort

In door-fed installations, it is not necessary that a heavy fire door be opened and closed if you specify the Donley Hopper Door, with its well balanced hopper that opens easily at a housewife's touch and closes automatically.

> Catalog Mailed on Application

# HENRY P. HOWE ENTERTAINS COLUMBUS CHAPTER A.I.A.

For several years it has been the accepted practice for the material interests to have as their dinner guests the members of the various Architect's Chapters who in turn spend the evening listening to lectures on materials and construction methods. This practice has not only been profitable for all parties concerned but has made fine contributions toward a better understanding all around.

One such meeting was held at the Seneca Hotel in Columbus on Tuesday evening, Jan. 27 when the Henry P. Howe Company of Columbus, as the representative of the Bagley Window Products of Springfield, Ohio was the host. Jimmie Micas and his "Senicans" started the evening just right with an excellent dinner (see the contented and satisfied look on John Schooley in top picture below).

The main "speaker" or "lecturer" for the evening was one of the Jones boys (Austin E.) who as sales manager, made an excellent presentation to a very interested audience (see bottom picture below). (Charles Conklin of Manfield had to stay after school as he was not pay-

ing attention.)

In his introduction of Manager Jones, Mr. Howe intimated that the manager had some ability as a musician and as an artist. There was no proof offered as to the first but in the picture shown at right, Wm. Linch, Past President of Columbus Chapter presents a sketch of the host to Mr. Howe while the artist, Austin E. Jones looks on. It is a good sketch and Manager Jones did a fine job in explaining metal windows in general and Bagley Windows in particular.

In as much as Columbus is so close to the Bagley plant at Springfield, Mr. Howe included many of the plant staff as his guests and from the many years of experience shown for each, it can be readily understood as to why they have the "know how" when it comes to manufacturing metal windows. They were as follows:

Austin E. Jones, Central Dist. Sales Mgr. 26 years. M. J. (Jack) Mattimore, Erection Manager, 40 years E. C. Rinehart, Price Comptroller, 40 years. Chas. H. Thompson, General Sales Mgr. 40 years. Arthur P. Jones (Austin's brother) Hardware designer Window designer, 20 years.

Arthur Lawrence, Traffic Mgr., 30 years. Walter Funderburg, Purchasing Agt., 30 years. Robert H. Supp, Sales Dept., 30 years.

John Gotwalt (Son of former Architect) Engineering Dept. 20 years.

Chas. Zea, Chief Draftsman. 25 years.
H. Arthur Nauman, Order Dept. 30 years.
Don Castillo, Walter Shuirr, Don Husted, Sales.
Raymond K. Bradley, now with Henry P. Howe Co.,
formerly with Bayley in Sales Dept.
Carl Rambo, Tool Design.

# George Danforth New Professor of Architecture at W.R.U.

George Edson Danforth, presently on the architecture staff at Illinois Institute of Technology in Chicago, has been appointed professor of architecture at Western Reserve University.

The appointment is a major step in the reorganization

George Edson Danforth

of the architectural and visual arts fields at the university, according to President John S. Millis, who announced the appointment following recommendation made by a special committee and approval by the university board of trustees.

A graduate of Illinois Tech, Danforth has had 16 years of experience as a professional architect, including seven years in college teaching and administration. He began teaching at the Chicago school in 1946 and since 1948 has been serving as administrative assistant to the department director there, the fa-

mous architect, Miles van der Rohe.

The department of architecture will be placed along with the department of art under the newly proposed division of visual arts at Reserve. The division, which will be organized within the arts and sciences structure

at the university, will be officially established with the opening of the 1953-54 academic year on July 1, 1953.

The new division broadening the university programs

The new division broadening the university programs in architecture and art will place architectural education in the faculty of arts and sciences in close cooperation with all of the visual arts.

President Millis said that Danforth would come to the Reserve campus about March 15 to assist in implementing plans for the new program in architecture which will go into effect in September.

### Architect Joins Faculty at W.R.U.

Cleveland architect Howard B. Cain has joined the faculty of the School of Architecture at W. R. U. He began his part-time teaching duties as a visiting critic in architectural design when the Spring term opened Wednesday, Feb. 4.

Cain attended Princeton University and received his Bachelor of Science in Architecture degree from Western Reserve in 1942. While a student at WRU he won the annual Schweinfurth Travel Award, which enabled him to spend one summer in Mexico.

After three years of World War II service as a designer in the special devices division of the Office of Naval Research, Cain joined the firm of Outcault and Guenther in Cleveland. He later was associated with Richard Cutting, working on air bases constructed near Paris, France, under the auspices of the North Atlantic Treaty Organization (NATO).

Cain now has his own architectural firm in downtown Cleveland, and makes his home in Gates Mills, Ohio. He is a member of the American Institute of Architects.

### Will Be Published Next Month

Due to lack of space, the continuing article by David Skylar, continued from our January issue, will be carried in March and subsequent issues.

# Modernfold Announces a New Economy Folding Door for Residences

Now for the first time, a low cost folding door which meets architects' specifications for strength and rigidity is on the market. The door is called SPACEMASTER and is manufactured by New Castle Products of New Castle, Indiana, makers of MODERNFOLD Folding Doors and Folding Walls. In the past, folding doors have been successfully used in thousands of commercial applications but use in the home has been limited by

The New Spacemaster

availability and price. Company spokesmen believe that SPACE MASTER is the answer to this problem. It is priced right for mass consumer distribution without sacrificing sound construction principles. The SPACEMAS-TER has a steel frame with steel pantograph hinges at top and bottom and is covered with a fire-resistant, washable, vinyl fabric. It has all the same basic construction features of the company's MODERNFOLD Doors. SPACE-MASTER is available in one

neutral color and in three popular sizes for the majority of standard size door and closet openings.

It is claimed that SPACEMASTER costs less per opening in new construction than swinging doors. The SPACEMASTER can be installed in 10 to 15 minutes and comes as a complete packaged unit. With the SPACEMASTER it is said that the contractor saves by not having to buy casings, stops, hardware or hinges. He also eliminates the high labor costs of fitting, hanging, sanding, painting and installing necessary in conventional type wooden swinging doors, SPACEMASTER can save from 10% to 15% of room floor space which is ordinarily made unusable by one or two swinging doors.

The SPACEMASTER is distributed in northern and central Ohio by Neo Sales, Inc., 3804 Payne Ave., Cleveland, and in the southwestern part by Durbrow-Otte Associates, 1426 Clay St., Cincinnati.

### RICHARDS TO SPEAK AT COLUMBUS

John N. Richards of the architectural firm of Bellman, Gillett and Richards, Toledo, and Regional Director of the Great Lakes District A.I.A. is the scheduled speaker for the March meeting of the Columbus Chapter. He spoke to the Dayton Chapter at their November meeting and as usual proved a most interesting speaker.

"LET'S SKEDADDLE TO SEATTLE"

When you design your new school or remodel your present building to increase capacity... Make space serve double duty

# SCHIEBER NOW OFFERS FOLDING TABLES and BENCHES IN 2 STYLES

Choose the one that best suits your budget and special requirements

ALL-STEEL CONSTRUCTION

In-wal

RIGIDLY ATTACHED TO WALL POCKETS

Here is genuine quality that has stood the test of time. Since 1937, more than 500 architects have specified thousands of these units in schools from coast to coast. With full knowledge of the rugged use they receive Schieber puts into their construction the best in workmanship and materials. Sound policy? Schieber IN-WALL users have no service problem.

Unless you foresee the need of detaching tables and benches from the wall, specify IN-WALL and get the extra rigidity and quality it offers as compared with detachable units.

DETACHABLE FROM WALL POCKETS

This is a low cost, plywood top, version of IN-WALL, yet many of the important quality features of IN-WALL are incorporated in its design. With 15 years experience building folding tables and benches, Schieber knows exactly where strength is needed. No castings are used in Port-A-Fold and reinforcements are provided where necessary to absorb the abuse of daily operation.

If conditions require various seating arrangements or your budget is restricted, specify this unit.

If you are planning a new school or modernization of an existing building, consult SWEET'S file or write for these two catalogs and get complete details on both Schieber units. Then choose the type that best suits your needs.

DETROIT 23, MICHIGAN

a name that has always stood for highest quality in folding table and bench equipment.

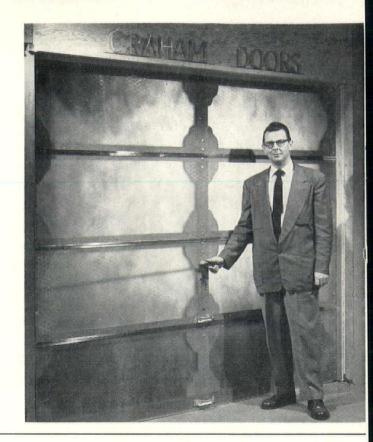

### PORTRAIT OF A "PROUD PAPA"

Mr. J. R. Graham, of Graham Door Company, is shown at right, proudly displaying his newborn "brainchild" . . . a fiberglass plastic garage door.

This innovational door will have its premiere, national showing in the Graham exhibit, adjacent to the Architects' House, in the Homeland section of the coming Home and Flower Show.

The functional features of this product will be of interest to readers of this magazine. The sections of the door are covered on both interior and exterior sides with fibreglass plastic. This popular, structural material is light in weight, extremely strong and impervious to weather. It is produced in a variety of colors and is translucent. This combination of features is considered ideal by Graham for garage doors. The translucence allows soft, diffused light to flood the interior of the garage, while affording privacy. Since it is pre-colored in manufacture, painting is unnecessary. Its light weight assures ease of operation, and its amazing strength gives it durability. Commercial and residential installations are foreseen. The plastic material is a product of "Resolite," of Zelienople, Pa. The door was produced in the manufacturing plant of Graham Industries, Inc., 6911 Carnegie Avenue, Cleveland.

Architects are invited to view and critically appraise the experimental model of this revolutionary door at the Home and Flower Show.

### PYRAMID BUILDERS (Continued from page 8)

end walls also meant no struggles among U. N. staffers for corner offices.

With the basic designs agreed on, the designers went home. It then took Harrison and four of Manhattan's top construction outfits (Fuller, Turner, Walsh, Slattery) four and a half years to finish the job. At the peak, in 1949-50, an army of 2,500 workmen and experts swarmed over the U. N. Harrison's planning office alone kept

more than 250 people busy day and night.

Big and little engineering decisions had to be made constantly. Since the buildings were to be air-conditioned throughout, a vast amount of water had to be piped in for the cooling equipment. Instead of using city water, Harrison's engineers cleaned out two huge sewers left over from slaughterhouse days, and installed pumps capable of sucking in 14,000 gallons of water a minute from the East River. Since everybody at the U. N. seemed to favor a different temperature, Harrison had put in individual controls at every second window. Staffers are not entirely satisfied with the temperature ranges, even now.

Money was the most critical shortage. With zooming costs and an iron-clad budget, Harrison's designers had to redraw the plans for the Assembly Building nine times to make successive economies in size and building materials. The resulting design was too squat, Harrison thought. He introduced a steel dome to give an impression of greater interior height. There were other troubles—problems of riveters who were almost unable to hammer in the oversized rivets needed to brace the Secretariat against the wind, of a tiny decoration budget that had to be eked out with paint, plaster and imagination. Harrison was asked how he ever managed to get the U. N. built. "The same way you build a railroad," said Harrison, "foot by foot."

Wallace Kirkman Harrison is strictly a working architect. He has written no books on what he has done or what architecture might or should do. When he is not

tramping around an excavation or arguing with contractors, he can usually be found hard at work in his office—a big (6 feet, 2 inches, 210 pounds), rumpled figure in shirtsleeves. He talks everyday American with a New England twang, and runs his firm like a football team. He quit school early and came up the hard way. He has very little time for play. In his hurry, singlemindedness and success, he is a character out of J. P. Marquand.

Moreover, if architects are a combination of Mary and Martha, Harrison is mostly Martha. He has no place among such frontiersmen of architecture such as Frank Lloyd Wright, Louis Sullivan (whose steel-ribbed Wainwright Building in St. Louis was one of the earliest (1891) ancestors of the modern skyscraper), and Walter Gropius. He is not even sure that he is a modern. A Harrison-styled building is applied modern — the kind that the purists boggle at, but John Doe likes.

Wallace Harrison was born on September 28, 1895 in a small frame house in the center of Worcester, Mass., where his father was superintendent of a local ironworks. Young Wally Harrison saw the automobiles fill up Main Street, saw the old victorian houses taken over

by morticians and auto showrooms.

When he was just 14, Harrison's mother died, and his father grieved himself to pieces. Harrison quit school and pestered a local contractor for a job. "Son," the contractor told him, "you're a fool to go into building. Go into farming, that's where the money is." Nevertheless, he took Harrison on as an office boy, and later even let him diagram some stone designs. Harrison soon noticed something about the contracting business: the contractor took his orders from the architect. That decided him, he would be an architect.

Harrison took a course in construction engineering at Worcester Tech. But, there must be better places than Worcester, he decided, to find out about architecture. When he was 20, he went to New York and applied for a job with the most famous firm of archi-

# A \$3,000,000 Investment in Your Future

THESE BUILDINGS are the largest and most completely equipped laboratories in the world devoted exclusively to research on portland cement and concrete. They are dedicated to producing scientific data, new engineering procedures and practical information for cement and concrete users throughout the United States and Canada.

Inside these laboratories scientists are able to carry out experiments under conditions colder than the Arctic, hotter than the Equator, dryer than the Sahara, wetter than the Amazon Valley. They have at their disposal the most modern scientific apparatus obtainable.

These enlarged new laboratory facilities re-emphasize the primary purpose of the Portland Cement Association—which is to improve and extend the uses of portland cement and concrete through scientific research and engineering field work, and to make freely available to the public the most up-to-date knowledge regarding cement and concrete and their engineering applications.

These new laboratories are a symbol of the faith which the 67 member companies of the Association have in the future of our country. They are dedicated to helping build a better America and thus are indeed an investment in your future.

A list of Association members—cement manufacturers whose financial support makes these laboratories and broad Association engineering service program possible—will be supplied on request.

### PYRAMID BUILDERS (Continued from page 18)

tects in the U. S., McKim, Mead & White. They had put up half the nouveau riche palaces in Newport, R. I., and had just built the Morgan Library in Manhattan, while some Bellevue Hospital buildings, the Racquet and Tennis Club and several Columbia University buildings were among the projects on their drawing boards. Harrison wanted the job so much that he said he would work for nothing. He was taken at his word and set to drawing plans for a book on hospitals one of the partners was writing. Within a fortnight, he was a junior draftsman at \$20 a week.

In his spare time, Harrison tried to fill out his education. At the parish house of Calvary Episcopal Church, where he roomed for a while, the curates kept a dictionary beside them at mealtime. Whenever a word was in question, they would look it up. "I got an education by absorption there," he says. On his days off, he walked around New York studying such wonders as Fifth Avenue, Wall Street and the Woolworth Building. While still working for McKib, Mead & White, he got himself enrolled in the atelier of a top architect, Harvey Wiley Corbett, where in the evenings he drew, drew and redrew, while Corbett passed from desk to desk, criticizing and encouraging.

In World War I, Harrison enlisted in the Navy, and wound up as an ensign, navigating a sub chaser in the Adriatic. He saw little action, but he did get to Paris, and soon after his discharge he went back to see some more of it. By 1920, he was living in a Left Bank lodging house, eating bean soup in a restaurant "so cheap not even Frenchmen would go there," and hearing excited talk about Corbusier and the new German moderns.

The boy from Worcester still had to catch up on freehand drawing, math and physics — things his contemporaries had learned in college but that he had to learn in Paris cram schools. He stayed up nights arguing with young moderns. He did not take easily or kindly to modern notions in architecture. "I remember arguing my head off against those fellows. I said you couldn't possibly put a glass window at the bottom of a building. It just wouldn't look as if it were going to stand up."

Home again after a year of Paris, Harrison found the tides beginning to turn. The Renaissance revival was losing momentum; the skyscraper boom of the 20's was under way. Harrison left McKim, Mead & White and went to work for Bertram Goodhue, who had just won a competition for the Nebraska state capitol. Harrison worked on some of the dome designs for the capitol,

and became one of Goodhue's top designers.

In 1926, Harrison was the picture of a struggling young architect. He had saved up enough money to support a wife, a tall, 22-year-old blonde named Ellen Hunt Milton, whose brother had married John D. Rockefeller Jr.'s daughter Abby. They were living in a small, two-room apartment in Manhattan's East 70s when Harrison's old teacher, Harvey Corbett, offered him a partnership. Harrison jumped at the chance, and for the next four years designed a series of auditoriums and office buildings with Corbett. Architecture was almost his entire life. There was always a drawing board in his room and a pad and pencil by his bed. In the morning, his wife usually found the floor littered with scrawls and sketches.

When John D. Rockefeller Jr. was ready to build Rockefeller Center, Harrison had definitely enlisted in the camp of modern architecture and was ready to fight for it. He was sure he was on the winning side. Gothic and neo-classic skyscrapers were dying out in Manhattan; Hood had just designed the starkly simple *Daily News* Building and the equally simple – if startlingly peagreen – McGraw-Hill Building. Harrison and his part-

ner Corbett were among the architects chosen by the Rockefellers to work on the designs for the most ambi-

tious project of the century.

The designs for Rockefeller Center were too modern for most people. The conservatives set up a howl. "I don't know what people expected," says Harrison. "They must have thought it was going to be one great square, a sort of Spanish Plaza or a Place de la Concorde." But John D. Rockefeller Jr. never said a word. "I never read the papers when they print disturbing things about

me or my people," he told his architects.

The design had taken 18 months to finish. Architect Ray Hood had wanted the R. C. A. Building to look like a slab, but with staggered setbacks. Harrison battled for a single, uninterrupted cliff of stone. Harrison found himself alone and had to give in. That was not the only fight. The managerial firm of Todd, Robertson & Todd that Rockefeller had put over the architects wanted the whole group of buildings wrapped in Byzantine or Romanesque trim. The argument got hot; so did Harrison. Finally, he exploded out of his chair and sent it spinning. He shouted, "you people just can't do this!" It was worse than criminal, he cried to spend \$125 million tricking out something as clean and new as the U. S.

skyscraper in any of the period styles of the past.

Rockefeller was convinced. When the Center went up, it was the simplest skyscraper group the world had ever seen. John Doe, peering up at it from the street, decided he liked it, thought maybe it was even hand-

some.

In the mid-'30s, Harrison had his own office and two new partners: Andre Fouilhoux and Max Abramovitz. The firm helped add two more buildings to Rockefeller Center, put up the 12-story Rockefeller Apartments in Manhattan and the \$1,200,000 Hotel Avila in Caracas, Venezuela's first luxury hotel and still its best. Harrison's firm was given the job of finding a suitably futuristic theme for New York's World's Fair. He and his designers spent months on the problem. On the 1,036th drawing, they got what they wanted — the Trylon & Perisphere. When the fair officials ran short of money and cut the Perisphere down by 20 feet, Harrison felt it was "a disaster."

In World War II Harrison went to Washington, where he served for four years as deputy to Nelson Rockefeller in the Office of the Coordinator of Inter-American Affairs. Harrison, the Government official proved an able administrator with a knack for homely diplomacy. Then

came the U. N. job.

The U. N. buildings have consumed most of Harrison's time since the war, but he has also been branching out in other directions. In Dallas, he is putting up a 500-foot Secretariat-like office for the Republic National Bank, the tallest skyscraper ever built in the Southwest.

He has finished plans for a \$6,000,000 aquarium for Brooklyn's Coney Island, is working on a \$1,000,000 auditorium for Ohio's Oberlin College, a \$3,500,000 office for the Carnegie Endowment for International Peace in Manhattan, and a \$22 million public housing project (1,800 apartments) in Brooklyn. Near Pittsburgh's "golden triangle" stand two brand-new Harrison skyscrapers. One is a 41-story, \$23 million slab sheathed in limestone and glittering stainless steel for U. S. Steel and the Mellon National Bank; the other is a 30-story office building for the Aluminum Company of America.

Except for the steel skeleton, almost the entire building is aluminum. Stamped aluminum panels cover the girders; there are aluminum partitions, woven-aluminum lighting fixtures, aluminum wires to carry the electricity, bright-colored aluminum strips for the roof terraces. Maybe someday we'll have cities colored like rain-

## JOSAM CATALOG "K" NOW AVAILABLE

Just off the press is the Josam Manufacturing Company's new plumbing drainage products catalog. Josam, leading manufacturer of plumbing drainage products, proclaims this new catalog "K" as the latest and most complete volume ever published on plumbing drainage products. A new and exclusive arrangement throughout the 208-page catalog provides quick and easy comparison, selection and specification of plumbing drainage products-helps the specification writer save time and avoid error-assists the user in quickly locating exactly the product he desires.

Especially interesting to architects, professional engineers, plumbing contractors and suppliers is the "visual flow" idea incorporated in this catalog. Base products are shown side by side with all variations illustrated in one view, so that comparison and

choice are simple.

Many new Josam plumbing drainage products, recently designed and never before shown have been included. Feature pages, prefacing each section, illustrate the important features of each series of products. Location charts, in quick reference form, suggest the correct products for specific locations in all buildings where plumbing drainage products are necessary.

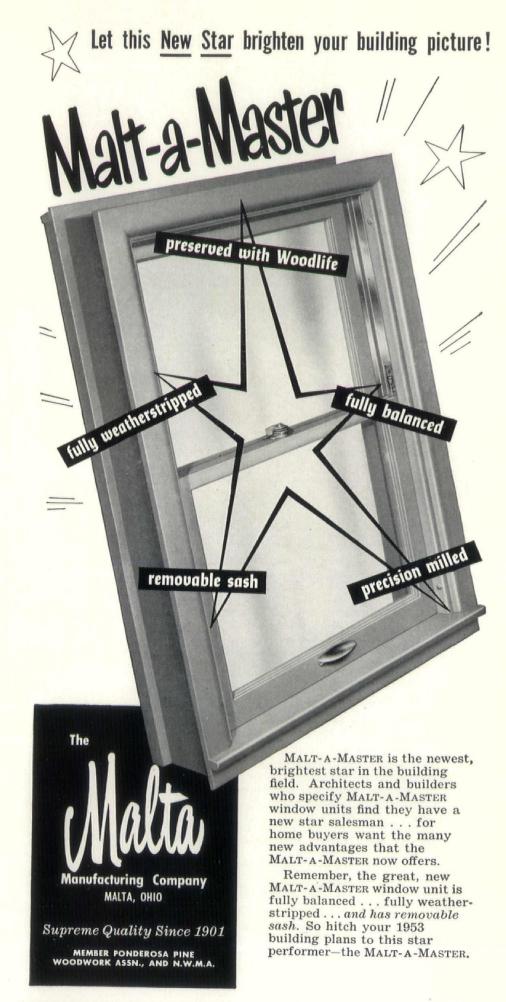

The illustrated, alphabetical and numerical indexes have been carefully developed to provide for maximum speed and convenience in using this catalog. Interesting and very helpful information is provided in the form of charts, installation diagrams and illustrations which give the user a great amount of data pertinent to selecting and installing products suited to his particular needs or location.

Products covered in this catalog include: floor drains, roof drains, interceptors, backwater sewer valves, swimming pool fittings, shock absorbers, U. S. Government products and drainage specialties. Free copies of this complete and authoritative catalog are available by writing the Josam Manufacturing Company, Dept. X63, Michigan City, Indiana.

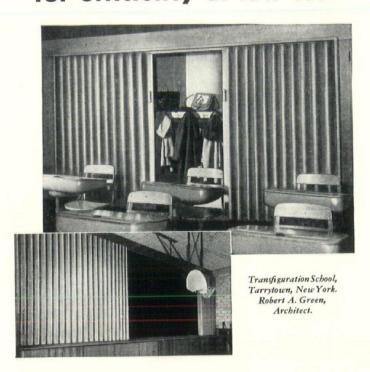

### LIFT SLABS IN CLEVELAND

On the January cover of the "Ohio Architect" was a picture of a concrete slab practically "floating in air." This showed the raising of a concrete roof slab for the new Temple Isaiah in Los Angeles.

We need not have gone west for such a story. This same kind of work is done in Cleveland by the Ohio Lift-Slab Company of 2520 Payne Ave. Roy Brown of this concern tells us

# Model School Chooses "Modernfold"doors for efficiency at low cost

Transfiguration School, a model for other new schools in the diocese, was built at a cost of only 84¢ per cubic foot. Thus, it is evident that the school authorities used only products which were efficient and inexpensive.

"Modernfold" accordion-type doors fitted into this category perfectly. No other type of closure met the needs for an intelligent, complete use of all space so well. The school uses eight pairs of "Modernfold" doors as wardrobes, one large door on the auditorium stage, and another to partition the teachers'

In all types of school applications, "Modernfold" doors are beautiful. The sturdy metal frame is a firm foundation for the beautiful vinyl coverings. Available in a wide variety of colors, they match any general color scheme; are flame-resistant and easily washed with soap and water. Look under "doors" in your classified telephone book for the name of our installing distributor.

MODERNFOLD DOOR CO. OF CLEVELAND 3804 Payne Ave., EX. 1-0311, CLEVELAND 14 MODERNFOLD DOOR CO. 655 N. Cassidy Ave., FE. 5505, COLUMBUS 3 MODERNFOLD DOOR CO. OF TOLEDO

MODERNFOLD DOOR SALES CO. 134 Salem Ave., FU. 5711, DAYTON 6

DUBROW-OTTE ASSOCIATES
1426 Clay St., PA. 0068, CINCINNATI

they have done this type of job for the Central National Bank at Brookpark and Pearl Road and P. L. M. Products Co. on West 150th Street and are now doing a job for Barth Stamping and Machine Co. on Brookpark Rd., all in Cleveland.

This method of handling large slabs—pouring them on the ground and lifting them to place by hydraulic jacks is less expensive and much faster than the same results by older meth-

ods.

# NEO SALES OPENS IN YOUNGSTOWN

Mr. W. K. Barkett of Neo Sales, Inc., 3804 Payne Ave., Cleveland announces the opening of a new warehouse and store at 607 Elm Street, in Youngstown. Mr. William Becherer will be in charge of this operation. He has been with Mr. Barkett for some four years on the Modernfold Door which Mr. Barkett distributes in northeastern Ohio.

At the Youngstown store, among other items, will be carried a full stock of Goodyear Vinyl and Rubber flooring; Johns-Manville tile and Terraflex tile; United States Rubber Company's new "Satusply" which is a counter top covering similar to Formica, and a plastic wall tile made by the Ridge Plastic Company of Elyria.

### JOHN KISH OPENS OFFICE

Architect John G. Kish, of 18500 Parkway Ave., Rocky River, Cleveland 16, Ohio, phone EDison 1-2373, announces that he is giving his entire time to individual practice of architecture. For the past seven years he has been affiliated with the Cleveland District of F. W. Woolworth Co., as their architect in this area. He has had a wide experience in the architecture of Shopping Centers.

Besides retaining a connection with the Woolworth Company he is actively working right now on three Shopping Centers. One in Massilon, one in Medina and one in Olmsted Town-

ship.

He has just finished one of 32 units and Department Store for Stark at

Canton, O.

Architect Kish is a graduate of University of Michigan Architectural College. Prior to his affiliation with the Woolworth Company he was chief architectural Inspector of the NACA at the Cleveland Hopkins Airport, Cleveland. Previous he handled all architectural supervision on the Great Lakes Exposition held in Cleveland in 1937.

Lots of luck John, which we know

you well deserve.

### SEES BUILDING VOLUME STAY AT '52 LEVEL

Dollar volume in the construction field in 1953, nationally, will be about the same as last year, though the number of units to be built will slump says Roy Wenzlick, St. Louis real estate analyst.

Speaking in Cleveland before 1100 guests of the Society for Savings, Wenzlick said that home prices were highest last May and "won't go that high again for years to come.'

However, he didn't expect big declines this year. There may be "some firming' in the spring, he added.

Wenzlick was optimistic about the country's economy in 1953. He predicted no collapse in the last half of the year as some other experts have feared.

He said he expected rising interest rates, falling profits and weaknesses in commodity prices. He noted that defense spending will stop increasing.

However, he predicted an expenditure of between 55 and 60 billions of dollars in Defense this year. In 1951 there was 38 billion spent; in 1952–50 billions. He said his prediction is for the same spending for defense in 1954 as in '53.

His further predictions of interest to the architect were:

Social and Recreational buildings up 25% over 1952; Private Hospitals up 10%; Public built hospitals down badly; Churches up 10%; Schools up 6%; Public Construction up 10%.

### WOMAN STUDENT WINS FIRST PLACE IN DESIGN PROJECT

Appropriately enough the fair sex carried off first prize honors in The Rust Engineering Company's sixth annual Awards Project for fourth-year students of architecture at Carnegie Institute of Technology. The project: Design of a canned soup factory.

Mary Chianelli Kozak, the first woman ever to win one of the Awards, was presented with the \$100 first prize; while Alfred E. DeVido, and Harry R. DePolo won the \$50 second, and \$25 third prize awards respectively. Mr. R. D. Spellman, chief engineer, of Rust made the presentations. The prize winners were afterward honored at a luncheon given by the Company.

Mrs. Kozak, a graduate of Pittsburgh's Peabody High School, is the wife of a fellow student, John Kozak, Jr., a Senior in Carnegie Tech's De-partment of Architecture. They live at 705 Ivy Street, Pittsburgh.

DeVido is a native of Clifton, New Jersey. He lives at the Phi Kappa Fraternity chapter house, 5029 More-

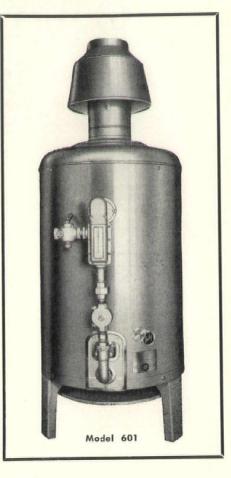

# The Water Heater to Specify

For any commercial installation

# BURKAY **Gas water heaters**

Perform efficiently and economically as:

- Instantaneous Heaters operate as self-contained units — for use in service stations, barber shops, beauty shops and other service businesses.
- Booster Heaters raise preheated water to higher, sanitizing temperatures — fine for laundries, sterilizing, and process use in industrial plants.
- Straight Recovery Heaters provide hot water in large volume when installed with a storage tank and circulating pump ideal for apartment houses, hotels, motels, clubs and hospitals.
- Booster-Recovery Heaters supply 140° hot water for general use and 180° hotter water for sanitizing purposes at the same time - perfect for restaurants, grills and fountains.

and for the home

# A.O.Smith Permaglas

### LAST LONGER!

Permaglas water heaters are completely protected from rust. Glass-surfaced steel tank can't rust because glass can't rust!

COST NO MORE!

YOU CAN SPECIFY BOTH WITH COMPLETE CONFIDENCE!

- DISTRIBUTED IN OHIO BY -

# ULTRA NEW ROLLWAY BLEACHERS

Save Save Save Space! Time! Money!

Rollway Bleachers really preserve space. Folded against the wall, Rollway Bleachers occupy only 2 feet 6 inches of actual storage space.

Rollway Folding Bleachers can be raised and lowered by one person—they're easily maintained, they're comfortable and super-safe.

# Check these important ROLLWAY features!

Extra Comfort—the only folding bleacher with the 24-inch back-to-back feature. 22" size optional at same price.

Extra Safety—2-inch structural select Douglas Fir makes for greater safety.

Extra Protection—can be locked in open or closed position, prevents tampering.

Extra Ease of Operation—can be operated by one person. 6-inch by 2-inch Plaskite roller bearing follower trucks, I-beam and rigid steel cross bracing mean that rack is precluded and smooth operation is assured.

Extra Simplicity—Rollway Bleachers have a perfect counter balance, operate with a minimum of moving parts (only three stout journals every 3 feet).

Extra Ease of Cleaning—simplicity of design erases worrisome cleaning problems.

Extra Floor Space—folded Rollway Bleachers occupy only 2'6" of storage space.

Extra Service—Rollway Bleachers are manufactured in London, Ohio, assuring quick service.

For additional information see your nearest Safway Scaffold dealer or write:

# SAFWAY STEEL SCAFFOLDS, INC.

57 E. CANFIELD

DETROIT 1, MICH.

wood Place, while attending Carnegie Institute.

DePolo, a native of New York City, is a transfer student from Cooper Union. He resides at 5139 Forbes Street. He is the son of Mr. and Mrs. John DePolo, of 3030 30th Street, New York City.

### WERE YOU LISTENING?

ARCHITECTS, WERE YOU LISTENING SUNDAY, 12-21-52, NBC-TV 7:30 EST

MARSHALL: Hello. This is Rex Marshall, speaking for Reynolds. They tell me that according to the law of averages there are a couple of thousand architects watching this program. I hope so, because I've got some nice things to say about architects...as well as aluminum. Architects, you know, are always looking for something better. And they're finding it in aluminum - the modern building material that refuses to grow old. Here's just one example of the many ways architects are using aluminum for better building . . . an aluminum window . . . good looking . . . won't warp . . . won't rust or decay. And it's economical. In other words ...it's a better window. Reynolds makes aluminum windows, and also supplies the aluminum to many other leading window manufacturers. You might be interested to know that compared with ten years ago, four times as many new homes are being built with aluminum windows. Architects realize their advantages. You see . . . better building is the architect's business. That's why-if you're planning a house, or a building of any kind-it makes sense to see an architect first.

The above commercial on "Mister Peepers" was presented by the Reynolds Metal Company of 2500 S. Third St., Louisville 1, Ky. Did you hear this? If so, write and tell them so.

# HIGH COURT RAISES STATE BAR REQUIREMENTS

Stiffer educational requirements for qualifying to take the state bar examination were announced recently by the Ohio Supreme Court.

Effective Jan. 1, 1954, applicants registering as law students must have had three years of pre-law education in an approved college, under the new rule. The present rule requires only

The court also announced adoption of the rules of professional conduct of the American Bar Association, to apply to all attorneys admitted to practice in Ohio. Breach of the ABA canons will be punishable by reprimand, suspension or disbarment, as may be decided by any court of competent jurisdiction. Most other states have adopted the ABA rules.

### TALCO'S NEW DISPLAY ROOMS

We got a thrill—and Cleveland and northeastern Ohio architects will also when they visit the new display rooms of Talco, Inc., at 2323 Chester Ave., Cleveland. Floyd Talman, President, has certainly made this one of the most inviting kitchen cabinet display rooms we have yet seen. Talco, Inc., is the distributor for St. Charles Metal Kitchens; Coppes-Napanee Wood Kitchens and the Talco Wood Kitchens which they manufacture themselves. They are also dealers for Geneva Metal Kitchens in greater Cleveland. They have an electrical contractor's license as well as a master plumber's license. They are specially set up for service to the architect and their sales effort will be directed toward the architect.

The only way to appreciate what they have is to see it for yourself, as quite a number of our leading architects have already done.

### RAY WURZ COMPLIMENTED

Ray L. Wurz, president of the R. L. Wurz Co., of Cleveland who represents Davidson Enamel Products of Lima, O., in the sale and installation of their architectural porcelain enamel was highly complimented recently. The manufacturer, in a recent booklet sent to architects over the country, featured four jobs that he was responsible for in northeastern Ohio. This booklet describes the products - typical construction details of interest to architects with before and after views of the job. The new shopping centers done in their poreclain enamel were most interesting. This booklet can be obtained by writing Architectural Division, Department 0-53, Lima, O., or R. L. Wurz, 1836 Euclid Ave., Cleveland.

"There is no substitute for marble." Why consider "marbleized" materials when genuine marble is available in standard tile sizes. In 1/2 inch thickness Markwa is supplied in sizes from 8" x 8" up to 12" x 16".

In no other material can you obtain the beauty of nature's colors and markings found in marble.

Markwa should be included under tile specifications. It is sold through and installed by Tile contractors.

For complete information and suggested specifications, see our Markwa folder in Sweets or write to our Main office.

### .. A NEW CONCEPT IN GREASEPROOF FLOORING Better Grease Resistance, Smarter Colors, Same Low Cost

New Vinylized Azphlex gives you floors with superior greaseproof qualities — at no more cost than ordinary grease resistant asphalt tile — greater resistance to all kinds of greases and oils. New Vinylized Azphlex has distinctive new colors, heretofore unavailable, to meet today's decorative and light-reflectance requirements .. stepped up flexibility for more strength .. greater resilience for additional walking comfort . . new, smoother surface that keeps floors looking cleaner, makes them easier to clean.

Before you specify floors for restaurants, cafeterias or any food serving area, find out more about Vinylized Azphlex!

### CONGRATULATIONS IN ORDER

Frank J. Uhlik of Cleveland, long active in the hospital and institutional equipment field advises that he has formed the INSTITUTIONAL EQUIPMENT CO. with headquarters at 17016 Madison Ave., Cleveland 7, O., phone BO. 2-1272.

This concern will represent old and reliable manufacturers of Institutional Equipment for hosiptals, schools and commercial buildings. He has five that appear to be of the best. They are EXCEL METAL CABI-Casework); RUSLANDER & SONS, NET CO. (Hospital and Laboratory Inc. (Kitchen and Cafeteria Equipment); THE JEWETT REFRIGER-ATOR CO., Inc. (Commercial refrigeration); OTIS STEEL PRODUCTS CO. (all purpose adjustable shelving); INCÍNERATOR PRODUCTS CO. (Engineered destruction equipment).

Associated with Mr. Uhlik are engineers of qualified ability, recognized by architects and engineers with whom they have worked in the past.

Such an organization representing proven lines should be welcomed. Located in Cleveland and distributing these items in Ohio, they will be in a position to work directly with the architect and give him the service so necessary on items of this nature.

### UNIVERSAL CONCRETE **OPENS MIAMI PLANT**

More than 500 civic officials, engineers, architects and contractors attended the opening of Universal Concrete Pipe Company's Miami, Florida

area plant Saturday, Jan. 10. "The Vagabonds" headlined an entertainment program following a tour of the newest Florida facility for manufacturing concrete products. Visitors inspected a large steel frame building where plain pipe is made in diameters from 4 to 24 inches and re1608 Broggini, Edwin F. (Latimer and Broggini) 4517 Brookpark

inforced pipe from 24 to 156 inches in eight-foot and longer lengths. In addition, the plant will manufacture Flexicore roof and floor slabs and other precast concrete products to serve southern Florida below Lake Okeechobee.

The new Universal plant, 1525 Stirling Rd., Dania, is the 26th in a network that extends through eastern and southern U.S.A. It is equipped with modern machinery made at Columbus, Ohio, home of the company, world's largest manufacturer of concrete sewer and culvert pipe. Its sales and production are linked with Universal's other Florida plants at Ocala and Tampa and sales offices at Tallahassee and St. Petersburg.

H. X. Eschenbrenner, president of the company, and H. E. Eschenbrenner, executive vice president, welcomed the guests. Also present were universal officials from other states. W. M. Lafferty is manager of the new plant, with Francis Aumand, office manager. John A. Harris, Universal's district sales manager who maintains offices at Tallahassee, will direct sales.

### Henry Fox and Morton Brady Die

Henry W. Fox, A.I.A., died Friday, Jan. 23rd in Cleveland, at the age of 64. He practiced in a partnership with his brother, George and was the designer of many school and civic buildings. Among them were the Kirk Junior High School in East Cleveland, and schools in Berlin Heights and Milan, O. His brother died a few weeks previous.

Morton J. Brady, well known to architects for his work as a steel construction designer died Feb. 28th at the age of 70. Among his more prominent jobs were the steel designing for the Cleveland Public Auditorium, Hotel Hollenden annex, Auditorium Hotel and Severance Hall, all in Cleveland. Both will be missed by their many friends and associates in the architectural field.

# 9th Van-equipped cafeteria at Hamilton in 25 years

- Every school official or architect concerned with a kitchen equipment problem will have his confidence in Van confirmed by this continuous service to Hamilton, Ohio Public Schools for more than a quarter of a century!
- Every school day this shining, compact, all-stainless kitchen and cafeteria counter serves 325 to 350 lunches to teachers and students. Hamilton officials pay tribute to the quality of Van equipment.
- Whether your situation involves a new kitchen or modernization, call Van.

BEFORE - The F. W. Woolworth Co. Building before remodeling

### It was done in PORCELAIN ENAMEL

Architect John G. Kish of Cleveland was assigned the problem of remodeling the old F. W. Woolworth Building in Youngstown.

He solved the problem by creating a modern, colorful front and avoided as much expensive, heavy construction work as was possible by using . . .

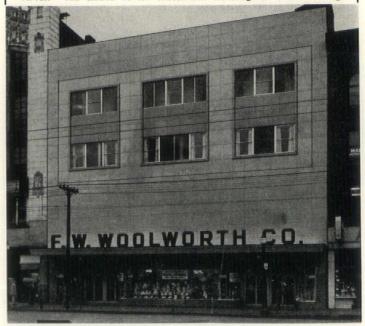

### PORCELAIN ENAMEL

Selected for permanent color and beauty, low maintenance cost and lasting dur-

## To Protect Young Eyes Specify Nature's Light

Here is intelligent, effective design at work safeguarding children's sight. This classroom is flooded with abundant, natural, evenly distributed light. No eyes strain to see chalkboards or books in this room. These children study better, learn more quickly and like school because their environment is more suited to learning. Their classroom is not blocked off from outdoors by an opaque wall. They don't feel "cooped-up," they're less restless because that wall of clear glass unites their classroom with the outdoors. And because there is plenty of natural light, they tire less easily and their eyes are better protected from fatigue.

You'll want to know more about natural daylighting for school buildings. Write to the Libbey-Owens-Ford Glass Company, Toledo 3, Ohio, for the new booklet, "How to Get Nature-Quality Light for School Children."

## SPECIFY Penco

PUTTY, CAULKING and GLAZING COMPOUNDS for WOOD, STEEL and ALUMINUM SASH

LASTING WEATHER RESISTANCE

**FASTER** and MORE **ECONOMICAL** 

SELECTED MATERIALS and CLOSELY CONTROLLED BATCHING

Each Penco Putty undergoes exhaustive laboratory and field tests to provide proper drying, skinning, and weathering qualities. Proper consistencies are maintained for maximum adhesion without stickiness for ease of application and important savings of materials and time. Many glaziers say that bedding and facing time is greatly reduced with easy-handling Penco Putties.

#### "CRAFTSMEN IN PUTTY"

- Use SUR-STIK Tile and Wallboard Cement for perfect adhesion.
- Write today for PENCO Putty Folder.

## There IS a better way to insulate . . . use INFRA Insulation

 Insulate Better, Permanently, on Sound Scientific Principles. Infra gives 7-way protection-not only against Radiation, Conduction and Convection, but

against Water Vapor, Vermin, Mold and Fire. There's nothing about Infra which can deteriorate, nothing which can absorb moisture.

We'll gladly tell you about the permanent comfort and economy from Infra installations.

use INFRA... MULTIPLE SHEET ALUMINUM INSULATION It's "accordion-pleated" With 4 heat-ray-deflecting surfaces and 4 reflective air spaces, Infra is 97% effective against Radiant Heat; BLOCKS wasteful Convection; and is UNSURPASSED in checking Conduction heat flow.

## ROBERT A. LITTLE ADDS ASSOCIATES

Chalmer Grimm, Jr., and John H. Zoller, Jr., have joined Edward M. Hodgman as Associates in the Office of Robert A. Little and Associates, Architects, of Cleveland, Ohio.

Mr. Zoller graduated in 1950 from Western Reserve University in Architecture, and received the Alpha Rho Chi Medal, after which he worked for Smith and Scherr, of Akron. He is the son of John Zoller, Builder, and has supplemented his theoretical training with practical experience, having qualified as a Journeyman Carpenter after graduation from the Cleveland Building Trades Apprentice School in 1951.

Mr. Grimm is a 1951 graduate of Western Reserve Architectural School, where he won various honors including the Illuminating Engineering Society Prize, the Architects' Society of Ohio Award, and the 1950 Schweinfurth Traveling Scholarship for study and travel in Europe. Before joining Robert A. Little in 1951, Mr. Grimm had previous experience with Bascom Little, Architect, and Paul Mehnert, Electrical Engineer.

#### AID TO INDUSTRY

An Ohio research project on engineering design problems in concrete masonry construction is being sponsored by the Columbus Concrete Block Manufacturers Association at Ohio State University under the "Aid to Industry" program which will be conducted by Professor J. R. Shank and associates at the Engineering Research Laboratories, according to O. H. Seeger, president of the Association.

The project gets under way in November, and will be on a continuing basis. Purpose is to provide architects, engineers and contractors with sound structural design and construction precedures for concrete masonry. Anyone desiring to personally witness portions of this research program, should contact Prof. Shank or Chairman Carl Dale explaining what it is they particularly wish to see.

Research committee in charge is Carl K. Dale, chairman, A. G. Cochran, and Robert G. Kern, in addition to Seeger. Cochran is also chairman of the Technical Problems Committee that will handle details of the project for the Association.

LET'S SKEDADDLE TO SEATTLE

## READING ROCK

## design

The hundred shapes and sizes of Reading Rock give the architect latitude for desirable design . . . matching units . . . without extra cost.

## materials

Similarly, Reading Rock is made of sand, gravel or light weight material to fit the building's needs.

Ask for our Book of Modular Standard Building Units.

# Fits into the PICTURE

## where corrosion proof piping is needed

Knight-Ware acid proof pipe and fittings may be used wherever corrosive liquids and gases must be handled. This quality chemical stoneware is not just surface resistant but is physically tough and corrosion proof throughout its entire body. It is resistant to all acids and alkalies, hot or cold, in any concentration.\*

In difficult installations special pieces may be required. These can be made of Knight-Ware at relatively low cost because no expensive molds are required in their manufacture. Knight-Ware is available in a variety of standard fittings and can be installed by any competent plumber.

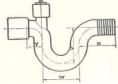

\*Excepting hydrofluoric acid and hot caustics.

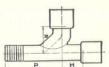

Write for Bulletin No. 12-V for weights and dimensions of bell and spigot pipe and fittings.

## Precast Slabs Save 25% On Floor and Roof Cost

This Columbus motel reported Flexicore floor and roof construction cost 25% less than poured construction. Precast unit also eliminated ceiling plaster, because painting finished their smooth underside as attractive, guestroom ceilings. Cores of standard, hollowcast slabs served as hot air ducts and utility raceways to further reduce job costs.

#### Long Spans Increase Floor Space

Fire-resistant Flexicore slabs give you long, clear spans and uninterrupted floor space. Units are precast to load specifications in inch variations of length up to 22'6" or 26'8" depending on cross-section. For full information, write any of the three Ohio manufacturers listed below.

PRECAST CONCRETE
FLOOR & ROOF SYSTEMS

#### HARLAND WOOD NEW P.C.A. DIST. ENGR.

Activities of the Portland Cement association in Ohic and West Virginia are under the direction of a new District Engineer, Harland G. Wood, of Worthington who has succeeded N. O. Wagner, resigned.

A graduate of Case Institute of Technology, Mr. Wood

received a B.S. degree in civil Following his engineering. graduation, he was employed for six years by the United Fruit Co. and the Government of Costa Rica on railroad and highway design and construction in that country. From 1929 to 1934 he worked on design and construction of state and county highways in various parts of Ohio and then spent three years as a WPA district engineer before joining the Association.

Mr. Wood is an associate member of the American Society of Civil Engineers and is

HARLAND G. WOOD

a registered professional engineer in Ohio. As District Engineer of the Columbus Office, he will direct Association activities in Ohio and West Virginia.

#### **PYRAMID BUILDERS**

(Continued from page 22)

bows. The huge, 300-ton aluminum and glass lobby is suspended like a giant weight by cantilever girders from the rest of the building. There is a radical new air-conditioning system that cools like a radiant-heating plant; cold water is pumped through small pipes, thus eliminating cumbersome air ducts. The windows are a window washer's delight. Each one is surrounded by an air-filled rubber tire. When the air is let out, the window spins on its axis for easy cleaning. After washing, the tires are blown up again from a small compressed-air tank trundled around on a cart.

Harrison thinks aluminum may become one of the future's prime building materials. Metal is cheaper than stone, also lighter and dryer. Dampness is an old buga boo of the builder: the use of stone means water for cement, and water is heavy, messy, freezes in winter Rain soaks through even the best-built stone wall and causes a whole flock of new problems. Harrison has always tried to move forward to something better — ever at the risk of being wrong, and in that way, you are certainly ahead of the man who is right and doesn't do anything. Maybe Cheops' architect talked the same way

#### THREE-IN-ONE DORMITORIES

(Continued from page 10)

The dormitories have been named for three former presidents of the University, Dr. Wilbur W. White, Dr

Philip C. Nash and Dr. John W. Dowd.

The dormitory buildings are part of an expansion and construction program of the University of Toledo a municipal institution where 5,179 students are currently enrolled. In process of construction are a building to house the library and the College of Law, the United States Army Reserve Armory which will be available to the institution's Reserve Officers Training Corps program, a heating plant and a vehicle shed. The armore is being constructed as a joint project of the University and the U.S. government. The University, as its contribution, is building the drill hall and the ROTC wing

The architect for the dormitory construction wa

Peterson, Hoffman & Grow, of Toledo.
