HERE'S WHAT YOU ASSURE YOUR CLIENTS WITH...

ServeL

ALL-YEAR

GAS

AIR CONDITIONING

COMPLETE Year 'Round HOME COMFORT, 365 DAYS A YEAR

A single, compact Servel unit heats in winter and cools in summer. It uses only one fuel — Gas. And a Servel All-Year Gas Air Conditioner serves an entire home, not just one or two rooms.

THE Economy OF NATURAL GAS

True, the initial outlay for a Servel unit is a little higher, but its more economical operation soon makes up that slight difference. For Air Conditioning, as for its many other home uses, Gas is the most economical fuel your client can use.

TROUBLE-FREE, Worry-Free SERVICE

Unique with a Servel Air Conditioner is its no-moving-parts operation in the cooling system. This is a factor in eliminating not only troublesome, but often, costly, repairs. Your client gets a 5 year warranty on his Servel unit and he has the added assurance of prompt and careful Gas Company service.

Trained Gas Company experts are at your service, too, when you plan a Gas Air conditioning job, either residential or commercial. Contact the Gas Advisor at your local Gas Company Office for assistance, or write The Ohio Fuel Gas Company, 99 N. Front Street, Columbus 15, Ohio. Attention: M. E. Pierce.
GROUPS—Combinations of Andersen Flexivents give big windows. Shown are awning, fixed and hopper sash. Large groups of Flexivents are ideal for schools, institutions.

STACKS of Flexivents have many advantages, including ventilation during rain.

CASEMENT—Flexivent becomes low-cost casement when installed on end.

PICTURE WINDOW COMBINATIONS with Flexiview fixed sash units or with Casements and Gliding Windows.

Versatile Andersen Flexivent® Windows combine quality, low cost, wood beauty!

Designed for Flexibility in arrangement, beautiful Andersen Flexivent Wood Window Units are styled for homes, for schools and commercial buildings. In fact there are hundreds of ways to use Andersen Flexivents—singly, combined in stacks, ribbons or groups—to solve your fenestration problems!

Yet along with Andersen quality, Flexivent Units give you the additional advantage of low cost. Economies in design, operation and hardware have reduced the over-all cost-per-square-foot of glass area. Bear in mind that Andersen Flexivents—or any of the Andersen WINDOWALLS—have the warmth and beauty of wood that can’t be matched by any other material. And because all wood parts are toxic treated against decay, moisture and termites, Andersen WINDOWALLS will last as long as the house itself.

in plumbing drainage . . . it costs no more
for the . . .

Very Best

The only interceptor that provides for
automatic evacuation of intercepted
grease at "the turn of a valve"—with­
out removing cover, without touching the
grease. A far-reaching advancement in
grease removal—pioneered by JOSAM.

Series JH

Grease Interceptors
With Automatic Grease Draw-Off

• JOSAM "JH" Interceptor revolutionizes grease interception.
It not only intercepts over 95% of the grease in waste water, but now,
for the first time, it encourages grease removal because it is
accomplished so easily and quickly, thereby keeping the interceptor
always operating at top efficiency. It is smart to use the best—it
costs less in the "long run". In plumbing drainage, you use the best
when you use JOSAM.

Ohio Architect
With design trends demanding colorful and modern precision materials, architects are utilizing BRICK to achieve the "new and different look" in clean-cut, sharp functional styling. A case in point . . .

Rough-textured multi-colored buff brick—Romans laid in stack bond—accentuate the entrance to this midwest newspaper office. Brick of the same colortones—standard size and mat texture, laid in running bond—emphasize the "long, low look" and harmonize well with the other components.

Colors, textures and the overall versatility of BRICK are yours to command in combining personal design ingenuity with the tastes and requirements of your individual clients.
ASO FEE SCHEDULE UNDER STUDY

The public and the architects of Ohio will be interested in the current study of the Minimum Fee Schedule for architects being made by the ASO. This study was proposed by Robert Little, Cleveland Chapter, AIA (letter to ASO President John Macelwane printed below) and approved by the Executive Board of the ASO in a meeting on March 2 in Columbus.

The details of the plan of study are indicated in the printed letter of ASO Executive Secretary Cliff Sapp to Mr. Little.

Dear Mr. Macelwane:

A recent occurrence prompts me to write to you for clarification. At a meeting near Cleveland a few weeks ago, architects were being interviewed for a Town Hall job. I attended the meeting and when asked for a fee proposal, referred to my ASO Recommendations and found the recommended fee for this size of a public building to be 7%. I later found that about 1/2 of the architects interviewed quoted a fee of 6%. On calling a recent past-president of the ASO, I was informed that the 6% was the "going rate" for all public work.

May I suggest two alternates:
1. Revise the printed fee schedule to agree with accepted practice (as interpreted by an ASO officer), or
2. Tear up the printed fee schedule.

In its present form, in this instance, the printed fee schedule acted as a disservice to everyone involved, since it mislead the architect who depended on it (me), confused the client (the City Council), and reflected discredit on the professional body which issued it (the ASO).

Robert A. Little

Dear Mr. Little:

The Executive Board of the Architects Society of Ohio has asked that I write you outlining the action taken by them relative to your letter to President John Macelwane on the subject of the Recommended Minimum Fee Schedule.

Because of your letter, there was a lengthy discussion on the Recommended Fee Schedule and it was the feeling of the Board that your suggestion to revise the schedule to agree with accepted practice should be adopted. Therefore, we are now in the process of gathering data from the six AIA Chapters in Ohio which will be correlated and studied along with information from fee schedules used in states adjacent to Ohio. After this information is assimilated, the fee schedule will be revised and published for use by architects.

We appreciate very much your calling this subject to our attention.

Clifford E. Sapp
Executive Secretary

ARCHITECT APPEARS IN WRU LECTURE SERIES

At the request of the graduates of Western Reserve University's Department of Architecture, Max Abramovitz paid a two-day visit to the University campus, March 17-18. He is the first of four outstanding American architects invited to lecture there in 1957. Others scheduled to participate in the series are Philip Johnson, in May; Paul Schweiker, in October; and Paul Rudolph, in December.

Abramovitz addressed 125 persons in Thwing Hall on the WRU campus, March 17, in a lecture open to the public. This was followed by a dinner at the Acacia Country Club for a selected group of alumni from the Department of Architecture, with Abramovitz as honored guest. He spent the following day at the University participating in an informal debate program prepared and conducted by the students.

The series, under the chairmanship of Ray Febo, AIA, was designed with a three-fold purpose: to give architects and prospective architects the opportunity to meet and converse with a recognized expert in the field, to strengthen the ties between Student Associates and other members of the Chapter, and to make the public more aware of the role the architect plays in the shaping of human environment. Television interviews have been scheduled for two of the remaining speakers as a means of arousing wider community interest.

The Architects Society of Ohio

Service To--
- The People of Ohio
- The Building Industry
- The Profession of Architecture

For many years the Architects Society of Ohio existed by virtue of selfless sacrifice from a never-ending skein of architects who realized the necessity of a state-wide organization. These architects devoted countless hours in service to the interests of the public, the industry and the profession.

However, with each objective that was reached it became more and more apparent that more and more could be accomplished with the employment of a full-time executive and staff to carry out the directives of the Executive Board on a continuing basis. This idea lived and was explored from every side for many years before it reached fruition in June of 1955.

Without question this brief history of the ASO up until June, 1955 is an oversimplification of the vital and necessary progress prerequisite to the development of the organization. It fails to enumerate the many architects who contributed to the ultimate solution; it fails to re-count the many seemingly insoluble problems; it does not account for the reasons behind the ideas or for the success or failure of such ideas; however, it does point out that architects in Ohio were ready for a major change in development that would benefit the public, the industry and their profession.

In June of 1955 the Executive Board employed an experienced Executive Secretary to establish a central office and staff and to publish the Society's official magazine, Ohio Architect. Since this time, the Architects of Ohio have expanded their activities on a full time basis to almost every field of interest and the benefits have been commensurate with the expansion.

ASO Executive Board

The Executive Board is composed of a President, three Vice-Presidents, a Secretary and a Treasurer, all of whom are elected by the membership at large. The Immediate Past-President serves on the Board. Also serving on the Board are the President, or an elected Representative of each of the six AIA Chapters in Ohio. This gives the Board equitable, geographical representation from the State.

The Board formulates the policies and objectives of the Society and is responsible to the membership.

The 1956-57 Board

PRESIDENT JOHN P. MACEL-WANE is perhaps the only architect in Ohio who could conceivably be overruled by his wife, Geraldine, who serves Toledo as Judge of the Common Pleas Court. He devotes his few leisure hours to his wife and two daughters, Mary Frances and Kathleen, and to thrills in their outboard motor boat.

John's service to his country and state began many years ago when he spent two years with the U. S. Marines in France during W.W.I. At Soissons, during the Second Battle of the Marne, he was wounded in action by machine gun fire. He worked with the U. S. Government in the late thirties developing the first Public Housing Projects in Toledo; he served seven years on the Toledo-Lucas County Planning Commission; he was active in Toledo post-war planning and served as Co-Chairman of the Toledo Metropolitan Planning Committee from 1944 to 1947.

He is now serving Ohio, by gubernatorial appointment, as a member of the Ohio Board of Building Standards which is currently writing the new Ohio Building Code.

John is now a principal in the architectural firm of Britsch, Macelwane & Associates and has practiced in Toledo in varying capacities for 35 years.

From 1939 to 1955 he was associated with the firm of Britsch & Munger, becoming an Associate Member of the firm in 1945. Here he directed the design and construction of many parochial schools and other projects and wrote the specifications for practically all projects processed through that office over a period of 15 years.

The present firm of Britsch, Macelwane & Associates handles a considerable volume of hospital, college, public and parochial school, church and commercial projects.

Page 8
John spent three years at Holy Cross College, Worcester, Mass., and upon his return from the service, entered OSU to study Architecture and Engineering—graduating in 1922.

He has served the profession as President of the Toledo Chapter, AIA, and has worked his way through the chairs of the ASO to his present position as President.

CHARLES J. MARR is one of the most active architects ever to serve as First Vice-President of the ASO. The few hours of rest Charley finds between his practice, service to the Eastern Ohio Chapter, the ASO and the AIA, finds him “Commodoring” his sailing craft on one of Eastern Ohio’s lakes with his wife and daughters.

As senior partner in the firm of Marr, Knapp and Crawford, with offices in New Philadelphia, Ohio and Pittsburgh, Pa., he has enough work to keep him going 18 hours a day—but he still finds time to negotiate the hills between New Philly and Columbus in his black Lincoln to serve on many ASO committees.

He is originally from Pittsburgh, was educated at Columbia University and has served the U.S. in two world wars.

HERMON S. BRODRICK is a devotee of color photography, the theatre, good music, and Chrysler automobiles that occasionally exceed speed limits when they know their driver is late for a meeting to serve as ASO Second Vice-President.

Hermon’s service to the community of Dayton includes the “battle of Wright Field” from 1942 to 1946, the Junior Chamber of Commerce, singing in the church choir, and a teaching and Superintendent position in the Fair Lea Church.

He is now a partner in the architectural firm of Walker, Norwick & Associates, one of Dayton’s leading school architectural firms. He received his Bachelor of Architecture degree in 1948 from Miami University.

He has served the ASO in many important committee and Board positions from 1949 until the present.

HAROLD W. GOETZ, like several other architects, claims an avid interest in boating—but unlike other architects, Hal is the only architect who can claim he steps off of boats with more ease than he steps onto them. Tri-focal lenses, apparently, lead to this questionable practice.

Hal has been the workhorse of the ASO for many years. He has served as Chairman of the Legislative Committee during some trying periods and his keen, analytical mind has been an asset during moments of financial stress for the ASO.

His practice of architecture is done under his individual name in Middle­town. He is now serving as ASO Third Vice-President.

HOWARD B. CAIN has an obvious interest in his profession and in young people. His activities in AIA Chapter and ASO affairs attest to his professional interests. His classroom instruction in architecture at Western Reserve University, Cleveland, and his own seven children prove his interest in young people.

Howard is a graduate of W.R.U. and did graduate work at Princeton. He is a winner of two Schwienfurth Scholarships and a Palmer Fellowship. He was commissioned a Lieutenant (s.g.) in the U.S. Navy where he served from 1943-46. He served in varying capacities in major Cleveland architectural firms until he opened his own office in 1952. His firm is responsible for the design of many major commercial, industrial and school projects in the Cleveland area.

He has served the Cleveland Chapter in various positions and is now Secretary of the ASO.

DAVID A. PIERCE has a long record of service to architecture—having devoted much of his personal time to the technical aspects of Ohio Architect magazine, serving in 1955 as President of the Columbus Chapter, AIA, and now serving as ASO Treasurer. Dave also serves the Ohio State Board of Education as Research Architect.

He is a graduate of Ohio State University—after a period of five years in the Army with service in Europe. He has practiced architecture out of his own office since 1951.

Dave is married and has one more daughter to go to achieve an all-girl basketball team.

LEON M. WORLEY will blossom, perhaps, this summer as a golfer to be reckoned with—since his activities as President of the ASO have been assumed by another he may have time to visit the links more often with Arlene and son to practice his favorite diversion. Leon is also noted for an uncanny ability to produce murky weather—just by the action of reserving a seat on a commercial airliner.

His devotion to the professional interests of the architects of Ohio is his major concern. His work for the ASO and the Cleveland Chapter, AIA, is a record of achievement. This record continues in his positions as ASO Immediate Past-President and Vice-President of the Cleveland Chapter.

He is a principal in the Cleveland firm of Damon, Worley, Samuels & Associates and has had wide architectural experience in Cleveland offices since 1928. He is a graduate of Hiram College and Carnegie Institute of Technology and did post-graduate work at the University of Minnesota.

His present firm is engaged in the design of shopping centers, offices, garages, churches and many other types of projects.

President's Message

by John P. Macelwane, President
Architects Society of Ohio

Fellow Architects, let us pause for a brief moment in the fast moving tempo of our daily routine and give some thought to whence we came, where we are and whither we are going as a profession. There is perhaps no profession which, in its pure essence, has a more ancient lineage. Down through the ages, the art of the builder, in all of its varying degrees of refinement, is still abundantly evident in the ruins of the earliest civilizations. We have a proud heritage of accomplishment. We have evidence that the modern architect, by and large, is capable of carrying on.

How well we carry on that heritage depends on many things. There will always be, as there has always been, a few giants amongst us who will rise to the heights of greatness by their very innate artistic genius. For the rank and file, however, there must be comprehensive basic training in our colleges, further guided apprenticeship in our drafting rooms, and finally the opportunity to apply that training in the better solution of the many challenging problems which our current stupendous building programs present.

Given the ability and the proper training, where are we if we are not also given the opportunity of application? And that, fellow architects, brings us to the gist of this short message.

(Continued next page)

OHIO ARCHITECT
President's Message (continued)

We have a job to do in keeping the people of America, of our State and of our Community fully aware of the potentialities of and the necessity for good architectural service. The individual architect can help immensely in this program by adhering to a strict code of professional ethics in his dealings with his clients and by giving to each of them a full measure of professional service. Perhaps this individual service might be considered as the most important factor in building a sound professional foundation.

However, the scope of the individual practitioner is necessarily limited. The broader fields that can be covered by the Chapter, State and National Organizations are all-important in creating and maintaining an informed public, which will recognize the Architect as one of the basic and essential factors in the development of a better Community for more gracious living.

Each individual architect, be he principal or draftsman, is benefited or hurt, as the case may be, by the flow or ebb of favorable public relations. Every architect benefits by the concerted effort of his Chapter and State Society, as well as by his National Organization.

As President of your State Society, I, therefore, urge each and every one of you to give the full measure of your support to the programs which have been inaugurated in your interest by the men who are giving unselfishly of their time and energy on your State Executive Committee and on the various sub-committees which are endeavoring to carry on the good work. The Ohio Architect is one of those functional instruments which needs your support. Help the editorial staff by inquiring as to just what you can contribute to the editorial subject matter and then cooperate with them in getting that subject matter into their hands. A word now and then to some of your friends in the building supply industry about the desirability of advertising in such a broadly circulated magazine would also not be amiss.

Let's all pull together for the good of the profession—that means you and you and you.

APRIL, 1957

ASO OFFICES AND STAFF

The offices of the Architects Society of Ohio, located at Five East Long Street, Columbus 15, have become the focal point for all manner of questions and problems relating to architecture in Ohio. This interest is displayed, not only by members of the profession, but by the press, the public, departments of state government, the state legislature, and the construction industry and related professions.

The office remodeling design was accomplished by Architect Kent H. Brandt of Dan A. Carmichael's firm and Architect Karl Treffinger, both of Columbus.

Office furniture was supplied by the General Office Equipment Company of Columbus. The drapes for the offices were also furnished by this firm.

The offices serve all Society activities, Ohio Architect editorial and advertising functions and also present a pleasant atmosphere for visitors and staff.

Clifford E. Sapp is ASO executive secretary and managing editor of Ohio Architect.

Mineral Core is the secret of warp-free doors

WELDROK—An amazing mineral material that is strong, light in weight, will not burn or shrink. Weldrok® is the reason why Weldrok Fire Doors and Stay-Strate Doors can be unconditionally guaranteed against warping, or twisting!

Weldwood Stay-Strate Door—Guaranteed not to warp or stick

The beautiful Stay-Strate is the only standard flush door with a Weldrok core! Guaranteed against warping, twisting and manufacturing defects for the life of the installation. And the guarantee covers all the labor costs of hanging and refinishing involved. The Stay-Strate can be used in interiors or exteriors, and even in the worst weather it needs no "protection" from a storm door.

Every Stay-Strate door has an individual guarantee registration number, and has the printed guarantee on the door for your clients to see. Available in dozens of naturally beautiful hardwood faces, in a complete range of standard door sizes. Thickness: 1 3/4".

Weldwood Fire Door—Stops flame and suffocating heat

This door combines the beauty of natural hardwood faces with the Weldrok core for positive protection against flame and destructive, suffocating heat. Heat transmission tests prove that after 30 minutes' exposure to 1500°F, heat, the unexposed surface of a Weldwood Fire Door was less than 250°F.

Weldwood Fire Doors come with faces of birch, oak, walnut, mahogany and other fine woods. All Fire Doors bear the Underwriters' Laboratories label for class "B" and "C" openings. Thickness: 1 3/4"; sizes up to 4' x 7'. Vision panel frames for 10" x 10" and 8" x 12" openings available.

NOVOPLY Folding Door

The newest idea in closet doors in 50 years—the door that folds open—the Weldwood Folding Door. It's easy to install, never goes "out of whack" and—best of all—is a real space-saver. Even more important, the Weldwood Folding Door is made of Novopoly®—the flattest wood panel ever made: guaranteed against warping. Folding Doors available also, with Birch or Lauan faces. Door heights: 6'8" or 8'; widths: 3', 4', 5', 6'. Complete folding door kit includes all hardware, tracks, silent nylon bearings.

Weldwood Custom Royal Door

Where there's plenty of interior traffic, there should be a Weldwood Custom Royal. For this door is faced with Westinghouse Micarta® — the plastic that defies scratches, scuffs and marking. It's so sturdy, so unmarkable, it can be used without kick- or push-plates. Easy to install...easy to maintain. Comes in oak, maple, walnut and mahogany patterns. Available in 3 constructions: Stay-Strate (with Weldrok core), lumber core, hollow core. All standard door sizes; 1 3/4" thickness. Light and louver openings as required.

How to simplify and cut costs of Your wall construction with

**BAYLEY CURTAIN WALL SYSTEMS**

After Curtain-Wall is installed. Before Curtain-Wall is installed.

—incorporating BAYLEY Projected Windows and Decorative Panels

Bayley Curtain Wall Systems—in either aluminum or steel—offer you the maximum economies to be realized from modern curtain-wall construction. Incorporating standard time-proved Bayley Projected Window Units, and a Bayley system of sub-frame assembly, a designer's preference can be met without the costliness of special window designing. Also, as illustrated, installation is reduced to the simplest procedure. Other advantages accruing are:

- Permits a choice of decorative panels and individualized arrangements
- Provides an insulated wall treatment to suit the building's appropriation
- Designed to accommodate a building's movement — expansion and contraction
- Provision against condensation annoyance or damage
- A wall with any desired degree of air, light or vision
- Centralized responsibility for the complete wall system — including sub-frames, windows and panels

For further information write; or call your local Bayley Representative; or see Sweets.

APRIL, 1957
Fireproofing with LITE-ROCK* plaster cuts construction time and cost

Metal decking applied over steel framework sped floor-ceiling construction of the new St. Alexis Hospital. To meet the National Bureau of Fire Underwriters' three hour fire rating requirements, Lite-Rock Plaster Grade Aggregate was specified for all ceilings and columns. Lite-Rock plaster was applied to metal lath in three separate coats ending with a fine sand finish.

This new construction method saved eight months in construction time and greatly reduced building material costs and carrying charges.

In conventional construction an estimated 15% of the steel is devoted to supporting the weight of its own masonry fireproofing. By replacing this ponderous fireproofing with a thin membrane of Lite-Rock plaster giving equal fire protection, tons of structural steel and thousands of dollars were saved. No expensive forms were constructed, erected or removed. Fireproofing was accomplished with a pair of nippers and a trowel.

Armco Retaining Wall helps motel make full use of sloping property

The Lorraine Construction Co., Dayton, Ohio, builders of the new Terrace Motel south of that city, had a winter-time job getting the motel ready for the first summer visitors. An Armco Bin-Type Retaining Wall helped solve some of the problems.

The low, sloping lot had to be filled in and leveled off. To gain full use of the land without encroaching on adjacent low-lying property, a retaining wall was required. Since installation would have to be made in winter weather, the wall used could not be affected by freezing temperatures. Meeting this and all other requirements, an Armco Bin-Type Retaining Wall was selected.

Armco wall 250 feet long and 5½ feet high was installed.

Armco Bin-Type Retaining Walls are widely used to stabilize slopes, hold back fills, gain usable land, and curtail stream erosion. Write us for data.
ASO EXECUTIVE BOARD MEETING

ASO Executive Board listens to Ralph Kempton (fourth from left), Executive Secretary, Ohio State Board of Examiners of Architects.

ASO members will note with interest the important discussions and decisions made in the bi-monthly meeting of the ASO Executive Board on March 2 at the Deshler-Hilton Hotel in Columbus.

Representatives of the Frank Insurance Company of Columbus presented an insurance plan for architects which would provide an employer with temporary income to cover office operating expenses in the event of his own disability. Architect Hal Goetz, Middletown, was appointed to work with the ASO Chapters and the insurance company in establishing the details of this program.

Neil Layne, President of the Ohio Association of Producers' Council Chapters, appeared before the Board to determine the preference of the group with respect to an annual fund from the Producers' Council to the ASO. The Board gave unanimous approval to a $600 annual scholarship for a student of architecture to be administered by the ASO, working in cooperation with the PC.

Ralph Kempton, Executive Secretary of the Ohio State Board of Examiners of Architects, recommended that the Board consider a program which calls for a panel of architects from each ASO Chapter to interview applicants for the State Board Exams within a given region. This program would replace the current practice of written letters of recommendation. The Board agreed to study the matter.

ASO Secretary Howard Cain, Cleveland, initiated discussion relative to revising the vertical committee structure of the AIA. The Board approved a motion that Ohio delegates to the Great Lakes District Meeting of the AIA be instructed to support a proposed change in the By-Laws of the Institute which would integrate the ASO into the AIA vertical committee structure at a point between the regional and chapter organizations.

Important discussion was held on the recommended minimum fee schedule for architects. (See "ASO Fee Schedule Under Study," in this issue.)

The next meeting of the Board was scheduled for May 4, again in Columbus.
EASTERN OHIO CHAPTER NEWS

Mr. Gilbert Green, Akron Seventh Ward Councilman, Mr. Richard Mossell, Akron City Planner, and Architect Stewart Roberts discuss AIA Honor Awards Exhibit.

The Akron Area Architects of the Eastern Ohio Chapter celebrated the Centennial of the American Institute of Architects by holding a reception for local leaders of city and county government, industry and civic organizations at the Akron Art Institute, Tuesday evening, February 19th.

High lighting the occasion was a special exhibition of "A Century of Architecture in the Akron Area"—buildings voted by the local architects as most outstanding or representative of the past 100 years.

The Akron Beacon Journal will further feature these buildings with a special roto section in a Sunday edition during April.

Also on display at the Akron Art Institute was the 1956 AIA Honor Awards Exhibit, being shown from February 5 through March 17th.

Arrangements for the reception and exhibits were made under the directions of Elmer J. Guran, Public Relations Chairman of the Eastern Ohio Chapter; Burt V. Stevens, President of the Chapter; Donald C. F. Miller, Chairman of the Akron Area Architects; Gordon Canute, Roger Buzzard, Trefon Sagadeneky and William Kinkoph.

D'ORAZIO WINS CHURCH AWARD

P. Arthur D'Orazio, AIA, Youngstown, was recently honored with a Distinctive Design Award for his work on the St. Michael School in Greenville, Penn. The award was made by Church Property Administration, a national publication for administrators of Catholic church, school and institutional property, in connection with its sponsorship of the Third Annual Architectural Competition in Catholic Institutional Design.

First Awards and Distinctive Design Awards were given for five major classifications of institutional buildings. Architect D'Orazio's design won in a category calling for a complete parish plant, including a minimum of church, rectory, elementary school, convent and parish activities space.

Manufacturers of a complete line of water heaters and Draft-O-Stats
The Dayton Chapter of the American Institute of Architects held a dinner meeting at the Van Cleve Hotel on February 25 in celebration of the centennial observance of the founding of the national organization in New York City in February of 1857.

Prominent citizens who attended the meeting were Mayor Henry Stout, General Rawlings of the Wright Patterson Air Force Base, City Manager Herbert Stairick, City Planning Director Robert Flinn, members of the Montgomery County Planning Board, Dayton City Commissioners, and the Directors of the Dayton Board of Education.

Remarks by both Mayor Stout and the principle speaker, Philip R. Adams, were of real interest to the group.

In describing the profession of architecture, Mayor Stout termed it "Frozen Music." This phrase is used without complete justice to architecture which, as an art, can be liquid in form and part of a harmonious whole.

Philip Adams, in speaking on the broad topic of art and architecture, illustrated the diverse attitudes of the American public toward architecture. For example, John Adams objected strongly to a nation based upon art and allied subjects, thinking that the nation which was so founded could not be strong and was destined to die. His objection was based upon a view that all ties with the old country must be cut and that the men of the new nation did not have the energy nor the time to devote to something as useless as art. Not too long after John Adams uttered his opinion, however, General Sherman, who was a man respected for his manliness and brilliant mind, came forward with a belief that even in a world of necessity art did have a place in society and must serve a basic function in the manufacture of all items for man's use.

Mr. Adams emphasized that man, by his own hands, is a creator and as such shares a place with The Creator. The physical assets of the world have been moulded and re-dedicated and re-created by man into different shapes and forms which have beauty even in their roughest and most primitive state.

In the contemporary world man has become an unskilled digit of the production line and has lost the great satisfaction which the frontiersmen had in carving from the wilderness all the necessities of life—a task which he did with unusual skill and in an art form. Of course, some of this lost emotional gratification has been regained and satisfied by mental creativity. None-the-less, one might explain the current trend of do-it-yourself and the unprecedented popularity of hobbies in terms of man's desire to create something with his own hands, something which can be left for others to enjoy and which can being prestige and a sense of fulfillment to himself.
Send Today for your Free Copy of this Award-winning book

The American Brass Company's new publication, "Modern Sheet Copper Practices," received the highest award in its class — the Certificate of Exceptional Merit in the 1956 Building Products Literature Competition sponsored by The American Institute of Architects and The Producers' Council, Inc.

This new book shows suggested construction details and specifications which reflect the use of copper in current architectural design.

Easy to use. It opens easily, lies flat. The recommended practices and suggested specifications are on the page facing the drawing. Subjects are easy to find, as drawings are in a logical sequence according to type of detail.

Designed for the Architect, Specification Writer, Sheet Metal Contractor. The book is recommended as a practical guide with clear, brief suggestions for meeting everyday problems. Send for your free copy today.

DODGE REPORTS

According to the F. W. Dodge Corporation, construction news and marketing specialists, contracts for future construction in Ohio totaled $90,568,000 in January, a decrease of 27 percent over January, 1956 figures.

January contracts by major construction categories, when compared with the like 1956 period, show non-residential at $48,386,000, up 26 percent; residential at $32,985,000, down 21 percent; and heavy engineering at $9,197,000, down markedly.

OHIO ARCHITECT
Ralph Hetterich Dead: Prominent Architect

Ralph H. Hetterich, Hamilton, prominent Ohio architect and engineer, died Saturday March 23 in Hamilton Mercy Hospital where he had been a patient for two days.

Mr. Hetterich's death was most unexpected and is a severe loss to his family and friends, the profession of architecture, and the firm of Hair, Hetterich and Siegel. Surviving him are his wife, Bertha, four daughters, three sons and sixteen grandchildren.

Hamiltonians will remember him as a life long resident of their city. He was a member of the first graduating class from Hamilton Catholic High School, previous to his college training at the University of Cincinnati. He was President of the Hamilton UC Alumni Association at the time of his death. For fifteen years he had served his alma mater as an instructor in structural engineering.

Architect Hetterich was a member of the Cincinnati Chapter, AIA, and an active participant in the statewide activities of the ASO. He also belonged to the Knights of Columbus (Third and Fourth Degrees), Hamilton Lodge No. 93, BPO Elks, Rotary Club, Cincinnati Club, the Medicalists of Cincinnati and St. Peter Catholic Church in Hamilton.

APRIL, 1957

C. Earl Richards Dies

The passing of Architect C. Earl Richards on Monday, March 4, in Mt. Carmel Hospital, Columbus, severs about the last tie with the history of the very fine architectural firm of Richards, McCarty and Bulford. This organization carried on a wide general practice in central Ohio from 1899 to 1943.

Of the principals, Mr. George H. Bulford died in 1911 while Mr. Joel Edward McCarty lived until 1952, having reached the ripe age of 91.

Earl Richards was the son of Clarence E. Richards of this firm. The father died in 1921 and the son remained on as a partner until 1928.

Mr. Richards then was associated with the Wesleyan University Press until his retirement four years ago.

A graduate of Denison University and the Massachusetts Institute of Technology, he was a charter member of the Mountview Baptist Church and a former member of the First Baptist Church. He was affiliated with the Kiwanis Club, University Club and the Gyro Club.

THIS MONTH’S COVER

Architect Kent Brandt puts the finishing touches on ASO office remodeling plans.

The cover is a sketch of the remodeled ASO offices, Five East Long Street, Columbus 15, Ohio. The perspective, as drawn by Columbus Architect Sam Ingwersen, shows the view from the Executive Secretary's private office toward the door leading to the corridor and elevators.

Photographs of the ASO officers, staff, and offices can be found on pages 8-11 of this month's issue of Ohio Architect.

that's the magic of the
ALL-ELECTRIC.

Your clients will approve the modern magic of electricity for comfortable air conditioning in summer—dependable heat in winter—automatic climate control the year 'round. You provide all this when you include an all-electric HEAT PUMP in your plans and specifications.

Complete in one easily-installed "single package", the electric HEAT PUMP provides, at surprisingly low cost, clean - safe - automatic - quiet - flameless - healthful all-weather comfort that pleases customers and increases employee morale. Design-wise, no chimneys are required—you increase usable space in the building, save your client's money and speed construction.

As shown below, the HEAT PUMP is adaptable to practically every type business. You're invited to see your HEAT PUMP dealer or call us for detailed information on the newest advance in store, office, home heating.

Architects Carl C. Britsch, Toledo, Thaddeus B. Hurd, Clyde, and ASO Prexy John Macelwane discuss Ohio Architect magazine in the offices of Britsch, Macelwane & Associates, Toledo.

Architects Britsch and Hurd had just returned from showing ASO Executive Secretary Cliff Sapp the Toledo Chapter Exhibit commemorating the AIA Centennial. The Exhibit of Ohio architecture was on display at the Toledo Art Museum for three weeks. More than 1700 persons viewed the excellently organized show during one weekend.

Mr. Britsch chairmanned the Committee and Mr. Hurd was responsible for the organization of the display.

ASO PUBLIC RELATIONS COMMITTEE MEETS

The membership of this Committee includes Charles Marr, Chairman; Wilbur Riddle, Cleveland; Herman Feldstein, Toledo; Robert Makarius, Jr., Dayton; Elmer Guran, Akron; Gilbert Coddington, Columbus; and John Becker, Cincinnati.

Discussion was initiated by Lewis Harris, OSBA Executive Secretary, who proposed that the ASO sponsor an exhibit at the OSBA Convention so that school board members could be informed as to the latest in school design as well as to more general questions concerning the role of the architect in school planning and construction.

It was agreed that a recommendation should be placed before the ASO Executive Board requesting that the Society support this project and that the details of assembling the exhibit and selecting entries be handled by a Special Committee to be appointed by the Board.

Further discussion centered on a proposed university scholarship fund as outlined by Architect Charles Marr. This plan, calling for a maximum of five $600 scholarships per year, will be placed before the Executive Board for further discussion and a final decision.

SKIING ARCHITECTS

Architect Loren J. Staker, Columbus
Architect Don W. Sims, Columbus

Architects Loren J. Staker and Dan Sims, Columbus Chapter, AIA, recently journeyed to the Caferfae winter sports center west of Cadillac, Michigan for a skiing holiday.

This fabulous resort handles about 4,000 visitors each weekend during the winter months and has twenty-seven different ski runs and seventeen ski tows. It offers skiing facilities for beginners on up to faster and more hazardous skiing for the experts.

Choice of the latter might explain the misfortune of one member of the party, Don Roberts, who suffered a broken leg while skiing by floodlight.

Architect Robert Yoakum of Columbus also accompanied the group. He is a member of the Caferfae Ski Club.
