NATIONAL COMMITTEE APPOINTMENTS

The following members of Potomac Valley Chapter have been appointed to National A.I.A. Committees:

- **Jack C. Cohen**—Chairman, Housing Committee and corresponding member, Legislation Committee
- **Donald S. Johnson, Jr.**—member, Legislation Committee
- **Stanley H. Arthur**—corresponding member, School and College Architecture Committee
- **Eugene A. Delmar**—corresponding member, Research for Architecture
- **Anthony N. Johns, Jr.**—corresponding member, Education Committee

NEW MEMBERS

The chapter is pleased to welcome these new Corporate Members:

- **David Watson Draper, A.I.A.**—with the office of Collins and Kronstadt, Leahy, Hogan and Collins in Silver Spring.
- **Lennart Hugo Folke**—with the office of Walton and Madden in Riverdale.
- **Peter Warren Hahn**—partner in the firm of Hahn and Hendon in Washington, D.C.

NEW ADDRESSES

- **Willis A. Gortner, II, A.I.A.**, announces the opening of his office for the practice of architecture at 10400 Connecticut Avenue, Kensington, Maryland. Phone: 942-1977.

EDITOR’S NOTE

In an article appearing in the 29 January Washington Post, reference was made to Skyline Elementary School and Robert Frost Elementary School designed for the Prince George's County Board of Education without mention of the architects responsible. We would like to take this opportunity to credit Kea, Shaw, Grimm and Crichton for Skyline Elementary and Ronald S. Senseman, FAIA, for Robert Frost.
There's a special phone in our office that's reserved for architects and builders who want to find out what's new in modern communications. They need to know in order to make provision for today's (and tomorrow's) equipment.

Our special phone for architects has been ringing a lot lately, and we've been telling all we know about what's new and what's coming along in communications.

We have the newest information on Data-Phone* and Teletypewriter services, for example, which have special cable and conduit needs. And the specs on Tele-Lecture, and closed-circuit TV, all in addition to regular telephone service that is planned with expansion in mind.

Before you design your next building, get in touch with us. (And keep in touch—our business changes as fast as yours does.) Your special number is District of Columbia 202-392-3349 Maryland Suburban 202-392-3844 Virginia Suburban 202-392-6476

And if you'd like fast, new Touch-Tone® push-button phones for your offices and studios, just call the Business Office. We'll update your system in a jiffy.

At C&P, service to you comes first with us.

*Service mark of the Bell System

The C & P Telephone Company
Part of the Nationwide Bell System
There's no doubt about the view of the Christian Brothers Retreat House. It's beautiful... inside and outside. And there's a reason—the handsome Pella Casement and Multi-Purpose windows. These attractive windows combine the beauty of wood and the strength of steel to give a lifetime of dependable, trouble-free service.

For more than 35 years, we've been serving Washington area architects and builders with a wide selection of quality building products. Cassidy Representatives are always available to assist you in determining the windows, doors and other products best suited for your needs. When planning your next project—be it residential, commercial, or industrial—call us. We think you'll soon see the value of a Cassidy point of view.

Washington's changing skyline shows you why the future belongs to gas!

The Watergate: one of many new buildings air conditioned with gas

ARCHITECTS: PROF. LUIGI MORETTI, ROME; CORNING, MOORE, ELMORE & FISHER, AIA, WASHINGTON, D.C.
PHILIP W. MASON, A.I.A.

Born in the State of Washington in 1922, at an early age moved to Silver Spring and attended Montgomery County Public Schools, graduating from Montgomery Blair High School in 1939. Attended the University of Illinois and after a four year stint as a Naval Aviator in World War II returned to the University of Illinois to graduate from the School of Architecture in February 1947. Upon graduation, returned to Washington, D.C. and Silver Spring working in the offices of Leon Chatelain and Ted Englehardt. In August 1952 opened office for the general practice of architecture. Practice is of a general nature but heavy in the industrial area.

Lives with wife, the former Anne Derrick of Takoma Park, and three children in the Colesville area of Montgomery County. Active in community affairs and a member of Silver Spring Rotary Club. Seriously believes Montgomery County is the best place in the world to live.
Few residents of Prince George's County are aware of the richness of the architectural heritage in their presence. There are about a hundred buildings in the County which were erected prior to 1800, most of which have value unknown to the public.

The better known buildings are well preserved, including the five eighteenth century churches, Christ Church in Accokeek, St. John's in Broad Creek, St. Barnabas in Leeland, St. Paul's in Baden and St. Thomas in Croom. Several elegant homes are also in excellent condition. Most of these are privately owned and include Beall's Pleasure, Bellefields, Compton Bassett and His Lordship's Kindness. Smaller but important houses in this group are Dunblane, Mullikin's Delight, Sasscer's Green and Wyoming. There is a growing number of historic buildings receiving the attention of public agencies. Adelphi Mill, Belair, Harmony Hall, Montpelier, Riversdale, Rossborough Inn, Snow Hill and Walnut Grange are owned by public or semi-public groups, and the Mill and Montpelier may be inspected by the public. The future of the George Washington House, Marietta, Mount Calvert and the Surratts House are being studied by historic groups.

However, there are other buildings of great value which lack such good fortune. The worst example is Want Water, a priceless two-room house of 1710, owned by the Federal government but abandoned and a hollow ruin. The futures of Content, Magruder House and Wilson House are still unclear.

Historic preservation in Prince George's County is somewhat impaired by the lack of a public County Historical Trust. A law was enacted by the state legislature to establish such a Trust, but the implementation of the law has proceeded slowly. The Prince George's County Historical Society and the volunteer County History Program carry the load.

There are extremely few seventeenth century buildings in the County. Of the eighteenth century buildings, at least three are known to have been designed by architects: Calvert Mansion, His Lordship's Kindness and Montpelier. And even in the case of His Lordship's Kindness the architect is not known.
Montpelier was one of several Snowden family houses in Prince George's and Anne Arundel County. This one was supposed to have been designed by William Buckland but there are no Buckland or Snowden papers existing to substantiate this information. On the grant to Richard Snowden, the "Ironmaster", the house was erected by his son Thomas Snowden, and Thomas, Jr. added the wings. The front and rear of the house are identical except for the wings, which are semi-octagonal. The octagonal side of the wings show dormers which would indicate a second level, but there is no way to get to such a level.

The bond of the exterior brickwork is Flemish; the facade of the main section has five bays with double hung windows. The entrance doors look far older than the house in that they are the battened type of the Medieval period. The rest of the house's woodwork is superbly executed in the Georgian manner.
This elegant home is that of Mr. and Mrs. John Walton. He is the senior partner of Walton and Madden. Mr. Walton has personally attempted to research the identity of the building's architect. One historian has stated that His Lordship's Kindness was the first house in America designed AND SUPERVISED by an architect, but no author mentions the man's name.

The legend attached to the house's history is also subject to confirmation; supposedly the Earl of Shrewsbury gave the house as a wedding present to his niece, Anne Talbot, upon her marriage to Henry Darnall. Some say the gift was to be a surprise, since the Earl had not previously voiced approval of the marriage. But other sources say that the Earl and Darnall had reached an agreement about the house before the marriage.

The grant had been given to another Henry Darnall in 1672, and included 27,000 acres. The house was built about 1724-27, but this fact is contradicted by some papers.

The rooms of the main section are quite large, and there are two wings attached by means of "curtains". The brickwork is in common bond, which was rather unusual for that time. The brick shows evidence of restoration work, and the color is not perfectly uniform.

The main portion of the house is two stories high under a hip roof. Centered in the hip at the front facade is a pediment with a semi-circular window. The fireplaces are the interior type, so that two back-to-back rooms share a common flue housing. The plan of the central house is the four-room type with a central hall; the hall is very large.
CALVERT MANSION
(RIVERSDALE; RIVERDALE)

Until recently Riversdale was the regional office of the Maryland-National Park and Planning Commission, and is now the office of the delegates to the state legislature. Construction dates vary from 1794 to 1802, according to various sources. It was built by Henry Joseph Stier for his daughter Rosalie, who married George Calvert of Mount Airy. Stier, a descendant of Reubens, brought from his native Antwerp many original paintings. Stier’s estate was once 2,000 acres with the entrance two miles east of Bladensburg. At the time of its construction it was one of the most lavishly appointed homes in the County.

The house was reputedly designed by William Thornton. The exterior is of brick with a yellow stucco finish. The brick was reportedly brought from England, and one of the building’s chroniclers states that the columns used in the construction were originally intended for use in the U.S. Capitol. Since the columns arrived at the Capitol site with an incorrect dimension, they were rejected and used instead at Riversdale.

A central building has wings at either end. Originally the house had forty rooms but the number has since been reduced by remodelings. It has a broad imposing stairway; the rails and newels are of rosewood. One of the original mantels was once sold for $5,000, and today few of the mantels, or the interior trim in its entirety, are original.
Let the lighting do the heating. Link does.

Hold your hand up to an electric light. Feel the heat? Now there's a way to capture this clean, gentle warmth, and heat an entire building with it. It's called heat-by-light.

The Link Group, world leaders in flight simulation and computer programming development, specified heat-by-light for their new plant in Montgomery Industrial Park. Careful studies told them that heat-by-light, teamed with electric air conditioning, would cost them less to install and operate than other heating-cooling combinations. Link expects less maintenance, too, because their system is so simple.

Tell us your heating problem. Our engineers will survey your heating needs and help you decide which of several electric heating systems is right for you. Call National 8-8800, ext. 442 for residential buildings, ext. 591 for commercial and industrial buildings.
