If You Forget To Specify Cast Iron,

During the first dinner party in your new home, would you want conversation interrupted by the noise of waste water in your plumbing system cascading across the ceiling and dripping down the wall? Of course not.

Few construction upgrades will give as much satisfaction as Charlotte's quiet cast iron waste piping. Why? Cast iron systems provide a lifetime of quiet performance.

But what about cost and availability? In a typical residential application, installing cast iron costs only fractionally more than using alternative piping materials — a small price for lasting peace. And you can join Charlotte's cast iron No-Hub pipe and fittings with our plastic pipe and fittings for use in the vent lines to reduce cost. Charlotte’s cast iron and plastic pipe and fitting systems are readily available from local plumbing suppliers.

Is installation of cast iron piping a problem? No. Cast iron No-Hub piping actually requires slightly less space in a stud wall than plastic piping. Experienced plumbers recognize that cutting and joining cast iron No-Hub pipe is a snap.

Here's the bottom line, literally a cast iron guarantee: use Charlotte cast iron pipe and fittings and we guarantee you won't have noise problems in your waste plumbing system.

You'll Hear About It!

At this award-winning nursing care facility, architects Richard Heym and Ruth Neeman used pitched roofs, clapboard siding, a front porch and 450 Andersen® windows to flood interiors with daylighting and build in what they refer to as “the sensation of home.”

“The Andersen frames also gave us more mass and a more solid, homelike feel than metal or aluminum windows,” they said.

Create a window design for the ages in your next commercial project. Contact your Andersen distributor below.

Circle 85 on reader service card
For architects who have become accustomed over the years to the predictable rhythm of the annual Virginia Architects Handbook, the appearance of this special issue of Inform magazine may be something of a shock. And to those who have missed the periodic notices in other Society publications about the impending changes in our firm directory, this may seem a sudden shift in direction. But this publication is, in fact, the result of many and long discussions – some of which focused on changes in how we disseminate information and, more importantly, who we disseminate it to.

Five years ago we took the first tangible steps toward creating Inform, a magazine that is seen and read by many in the profession, but which is written to appeal primarily to a general audience. Inform is, in short, the foremost public outreach effort made by the architects of Virginia. Why, we reasoned, shouldn't the annual listing of Virginia architecture firms and their specialties be published in the sole vehicle which is targeted for public consumption? We decided it should, and in the process revamped the list of AIA-member firms so that when our office fields telephone calls, as we frequently do, from people who want to know how to contact architects, we have a fitting way to respond. Time was, we made photocopies of the chapter firm listings and sent them off in the mail. Now inquiring minds who write or call the AIA will receive this four-color magazine that lists member firms and highlights examples of the best architecture in the state. You'll also find that we provide a source list for contacting the AIA in Virginia and a brief introduction to hiring and working with an architect. The most strictly trade-related information you'll find in this special issue is the directory of consultants to the design professions that begins on page 92.

For those who miss seeing the types of organizational information that used to appear in the former handbook, rest assured. We now publish a separate directory of each Virginia Society AIA member – a listing that is rightly seen as internal, not relevant for public consumption – in VSAIA News, our association newsletter. And while we can no longer justify, for instance, the annual expense (or the wisdom) of printing and mailing to each of our members 11 pages of organizational by-laws or 19 pages of industry-related legal statutes, all of that information is still available from the Society on the request of any member who has a need for it.

Old habits die hard, of course. And in the course of reinventing the wheel, we may discover in time that we need an extra ball bearing or a few new spokes. That will be next year's topic of discussion. If you have thoughts to contribute on that score, drop us a line and we'll see that your views on the "new, improved directory" are taken into account.

Vernon Mays, Editor
We take pride in the unmatched quality, performance and innovation found in every Peachtree door and window. So we back them with the industry's only Non-Stop Warranty. All Peachtree products are guaranteed for as long as you own them. For a presentation and our new architectural binder, please call (410) 997-3411.

Contacting the AIA in Virginia: A Source List
Need to find an architect? Have a reason to talk to our professional association? Here's a list of how to reach the state and chapter offices located throughout Virginia.

How to Hire an Architect
Few people realize how complicated it is to build - that is, until they find themselves lost in the maze of design options, building codes, zoning laws, and contractors. Here's an introductory guide to locating and working with an architect.

Awards for Excellence in Architecture
Thirteen buildings by Virginia architects, ranging from a whimsical treehouse made of logs to an airport terminal rendered in high-tech materials, were honored with Awards for Excellence in Architecture. Take a look at the best in Virginia architecture.

Virginia Society Honors
The distinguished winners of awards presented by the Virginia Society AIA to recognize the exemplary efforts of architects and members of the public who have offered service to the AIA or to other worthwhile projects within the realm of design.

Directory of Virginia Architecture Firms
An alphabetical listing of AIA-member firms in Virginia. To locate firms in a particular city or town, look first in the index organized by location that begins on page 89.

Consultants to the Design Professions
This informational resource for design firms lists vital data and recent project information on a range a consultants from acousticians to theater consultants, and everything in between.

On the cover:
Drawing of Scott Insurance Building,
by Wiley & Wilson.
Kitchens sell houses and you give yourself a great advantage with the GE Profile line of appliances.

Profile gives you custom appeal without custom expense. It achieves this with a superbly coordinated line of sleek black-on-black and invigorating white-on-white appliances that are loaded for bear when it comes to features. The line shows an attention to quality detail and appearance that may even suggest something about the way you build houses.

Profile appliances can be installed in a variety of configurations to boost the appearance and function of the standard kitchen so it's not standard anymore. There's even a wall oven and cooktops for builders who opt for a built-in appearance.

Profile offers advanced appliance technology and the latest features for convenience and cleanability. It comes with the most extensive network of factory service professionals. And the extraordinary GE Answer Center service which stays open 24 hours a day every day of the year at 800.626.2000 to answer any questions you or your buyers may have.

Profile™, from GE.
A line of stylish appliances created to rejuvenate the standard kitchen.

Guess which one comes with a 10-year warranty?

Dampproofing can't assure a dry basement. Over time, foundations will crack and allow water to seep into the basement. That's why we offer TUFF-N-DRI Exterior Foundation Waterproofing System in our homes. TUFF-N-DRI guarantees your basement will be dry with a 10-year limited warranty. Plus, the superior protection makes it possible to use your basement for additional living space — perfect for a home office, family room, entertainment center or kids' playroom. Call 800-DRY-BSMT for more information. Or ask the TUFF-N-DRI builders below about the difference between TUFF-N-DRI and dampproofing.

Koch Materials Company
Why Hire an Architect?

A Consumer's Guide to Architectural Services

Few people realize how complicated it is to build — that is, until they find themselves lost in the maze of design options, building codes, zoning laws, contractors, and so on. No two building projects are exactly alike, so there is no single, clear-cut path to follow.

The architect is the one professional who has the education, training, experience, and vision to guide you through the entire design and construction process. Architects do everything from helping you define what you want to build to helping you get the most for your construction dollar. Architects see the big picture. They don’t just design four walls and a roof — they create total environments, interiors and exteriors, that satisfy functional needs and are dynamic places to be. Whatever the size of your project, an architect can help you achieve a well-designed building that meets your needs and works within your budget and time frame. This happens in a number of ways.

A Wise Investment

Architects are trained to solve problems in creative ways, translating your needs into square feet and three-dimensional space. With their broad knowledge of design and construction, architects can show you alternatives and options you might never think of on your own.

The architect’s services are a wise investment, not an added cost to your project. Why? Consider this:

- A well-conceived project can be built more efficiently and economically. Architects plan your project with you. As your ideas evolve, changes can be made on paper much less
expensively than later on when construction is underway. Thorough drawings also make it easier for the contractor to accurately price and build your project.

- Energy-efficient buildings can save you money on fuel bills down the road. An architect can design a building to maximize heating from the sun and let in natural light, thus reducing your heating, cooling, and electric bills over time.

- The architect can work with your budget and help you select the appropriate materials and workmanship at a fair price. Architects develop the drawings and specifications to help you get bids for construction that are based on your requirements.

- An architect can help you choose materials and finishes that are durable as well as attractive, saving on frequent maintenance and replacement costs. Architects work to stay abreast of advances in roofing, brickwork, floor tile, paint finishes, and so forth. Their familiarity with the full range of materials enables them to suggest the appropriate ones for your project.

- Good design sells. A well-designed house has a higher resale value. A well-designed store draws customers. And a well-designed workplace attracts good employees and increases their productivity.

- The architect can make your life easier. Face it: building is a long process that is often messy and disruptive, particularly if you are living or working in the space under construction. The architect you hire looks out for your interests and tries to find ways to make that process go smoothly.

- If your project requires engineering or other design services, the architect can coordinate this team of experts so you don't have to. The architect sorts out complex building codes and zoning laws. The architect can help you find qualified contractors based on your project's needs. The architect visits the construction site to help verify that the project is being built according to the plans and specifications.

How Do I Find the Right Architect?

Architecture firms come in a variety of sizes and types. Each firm brings a different combination of skills, expertise, interests, and values to its projects. Statistically, the average firm is made up of nine or ten people. Many firms have one or two architects. Others have staffs of 50 or more. Some firms specialize in one or more project or facility types. Some firms include in-house engineering services (for example, civil, structural, mechanical, or electrical) or other design disciplines, such as planning, urban design, landscape architecture, or interior design. Other architects incorporate these disciplines into their projects by involving appropriate consultants with special expertise.

It is well worth investing the time required to select your architect carefully. As you move forward in the process, be reminded that you are engaging the services of a professional. You will work closely with the architect through the life of the project, and your relationship may extend to future projects. Invest at least the care it takes to select a financial or legal advisor.

Yours will be a business relationship. Find out how prospective architects do business, how they work with their clients, how responsive they are to your management and decision styles, and how well their work stacks up against their clients' expectations. The best way to find out is to talk with other owners for whom the firm has provided professional services.

Ask questions. Respect the architect as a professional who will bring experience and specialized knowledge to your project. At the same time, don't be afraid to ask the same questions you've asked yourself: What does the architect expect from the project? How much information does the architect need? How does the architect set priorities and make decisions? Who in the firm will work directly with the client? How will engineering or other design services be provided? How does the firm provide quality control? What is the firm's construction cost experience?

Be frank. Tell the architect what you know and what you expect. Ask for an explanation of anything you don't understand. The more you place on the table at the beginning, the better the chances for a successful project.

And get it in writing. Once you have found the architect, you are ready to put in writing the terms of your agreement on the scope of work, services, schedule, construction budget, and architect's compensation. This written agreement can take many forms. The American Institute of Architects has developed a variety of standard contract forms which are used industry-wide. The Virginia Society of Architects has developed a variety of AIA standard contract documents. For a list of them, call us at 804-644-3041.

Getting Results

The best building projects are created when the client and architect work together as a team. Both you and your architect can take specific steps to help meet your quality, time, and budget goals.

Design and building are group activities. Many people and firms come together to (continued on page 12)
When, in the life cycle of a project, should I bring the architect into the picture?
As early as possible. Architects can help you define the project in terms that provide meaningful guidance for design. They can also do site studies, help secure planning and zoning approvals, and perform a variety of other predesign tasks.

Should I look at more than one firm?
Usually, yes. The exception arises when you already have a good relationship and a good track record with an architect. In such a case, it makes little sense to change.

How do I find potentially suitable firms to contact?
Start building a list of potential architects. Contact other owners who have developed similar facilities and ask whom they interviewed and ultimately selected. Ask who designed buildings and projects that you've admired or that seem especially appropriate. Get recommendations from friends and relatives who have worked with architects. Consult the directory of firms that is included in this publication— it lists all the member-owned firms in the state, including an index that will help you locate architects in your local area.

What information should I request from the architect?
Contact each firm on your list. Describe the basics of your project and ask if the firm is available to take it on. If so, request literature outlining the firm's qualifications and experience. If the office is unable to handle your project, ask for a recommendation of another firm. The materials you receive from interested firms might include a letter of interest, brochures, fact sheets, photos of past work and biographical material about key personnel. Look beyond the style of the brochure to determine which firms have the right experience and capabilities for your project. At this point, you should be able to narrow your list to the architects you want to interview.

Why bother with formal interviews?
An interview addresses one issue that can't be covered in brochures and printed materials, and that is the "chemistry" between the owner and the project team. Interviews also allow the owner to investigate how each architect will approach the project. Remember, you will be working with the architect for a long time and you want a partner in this endeavor who makes you feel comfortable.

How many firms should I interview and how do I choose which ones to talk to in the first place?
Most people advise that you interview between three and five firms, enough to see the range of possibilities but not so many that an already tough decision will be further complicated. Interview the architecture firms you feel can do your project because of their expertise or their ability to bring a fresh outlook to your situation. Treat each firm fairly, offering equal time and equal access to your site and existing facilities. Ask to meet the key people who will work on your project.

What can I realistically expect to learn from an interview? How can I structure the interview to make it as informative as possible?
Ask a lot of questions. You can learn how the architect's team will approach your project. Ask how the architect will gather information, establish priorities and make decisions. Ask what the architect sees as the important issues or considerations in the project. Evaluate the firm's interest in your project. Evaluate the firm's style, personality, and approach. Are they compatible with your style? Architects sometimes speak in their own jargon, so ask for clarification if you don't understand all the terms you hear.

How should I follow up?
Tell each firm what you intend to do next and when you plan to make your decision. If you haven't talked with past clients, do so now. Assess both the performance of the firm and the performance of the resulting building. You may want to visit existing buildings to see them in use. Notify the selected firm as soon as possible. Remember, conditions change: the firm may not be able to offer the same project team if you must take several weeks or months to decide.

What basis should I use for my final choice?
Personal confidence in the architect is preeminent. Then seek an appropriate balance among these factors: technical competence, professional service, cost, and design ability. Once you've selected the best firm, enter into negotiations of services and compensation. If you cannot agree, begin negotiating with your second choice.

Some say that I should select a builder or contractor before selecting an architect. When is that good advice?
It works best to select an architect first. Then you will have help in understanding how to make the builder or contractor an effective member of the building team. Be aware that selection is a mutual process. The most thoughtful architects are as careful in selecting their clients as owners should be in selecting architects. Don't forget that the architect is just as interested in a successful project as you are, and the firm you choose knows that good architecture results from a fruitful collaboration between architect and client.
Do Your Clients Dream in 2-D or 3-D?

Your clients will want to see their projects rendered before production begins. They will appreciate you being able to do that. At H&H, we give you the tools to satisfy your customers... or we can even do it for you. From detailed renderings of interiors and exteriors to animated walkthroughs of buildings.

As the Virginia Solution Center for Intergraph, as well as being a dealer for AEC and MCE products, we have the answers you need for today’s clients. Affordable solutions for advanced design.

Design and construction projects typically involve several steps or phases. These may include programming, schematic design, construction documents, bidding, or negotiation with contractors. However, on some projects, several of these steps may be combined. On others, there may be additional phases involved. The architect’s involvement normally does not stop with the preparation of construction documents. Architects also provide construction administration services. These services may include assisting you in hiring the contractor, making site visits, reviewing and approving the contractor’s applications for payment, and keeping you informed of the project’s progress. The secret to successful projects is effective project management by both owner and architect. The importance of the owner’s involvement cannot be overemphasized.

All told, the path to successful results is paved with many challenges and uncertainty. There are literally hundreds of decisions to be made, decisions which have a strong impact on how the project looks and functions over time. Experience tells us that successful projects — those that respond to owner needs and aspirations, that are accomplished within schedule and budget, and that contribute to the quality of our communities and our lives — result from good clients and good architects who form good professional, business, and often personal relationships. These relationships are formed early and are nourished by clear communication, mutually understood expectations, and a willingness of both you and your architect to accept your responsibilities for realizing a successful project.

This brief overview of selecting and working with an architect was adapted from two lengthy publications published by the American Institute of Architects, “A Beginner’s Guide to Architectural Services” and “You and Your Architect.” Copies of these publications may be ordered by calling the Virginia Society AIA at 804-644-3041 or by writing to VSALA Documents, 1902 South Fifth Street, Richmond, VA 23219.
YOU WANT A FIREPLACE
WHERE?

OK. No problem. Whatever you say. New gas fireplaces from Thulman Eastern. Now any place is a great place for a fireplace.

Nothing lends warmth to a beautifully designed room like a fireplace. And now, thanks to Thulman Eastern's innovative technology, you can design with a fireplace in mind for any room, or even several rooms, in a home. From conventional gas to new vent-free gas fireplaces, we offer you a full range of styles to make them beautifully appropriate in every setting. And with many, no flue is required! That gives you greater freedom to create, and greater demand for your work. Best of all, you get all the quality of a Thulman Eastern product, and the assurance that you'll be treated exactly as we would treat ourselves — with respect and integrity.

Call our office nearest you today for more information or to see a demonstration.

WITHOUT THE RIGHT SUPPORT, ANY ROOF CAN FALL TO RUINS.

Brace yourself. Ruffin & Payne has been making the best trusses in Virginia since 1952. In fact, we have the most modern truss facility anywhere in central Virginia. Computer-designed for strength and inspected by engineers for structural integrity, our trusses can be made to any size or specification. Whether they're roof or floor trusses for residential or commercial use. To see for yourself, just visit Ruffin & Payne on the corner of Laburnum and Vawter Avenues (just east of the State Fairgrounds in Richmond), or call us at 804-329-2691. Because when it comes to trusses, no one else supports you better than Ruffin & Payne.

Awards for 

Excellence 

in 

Architecture

Thirteen buildings by Virginia architects were honored in 1993 with Awards for Excellence in Architecture in the annual design awards program sponsored by the Virginia Society AIA. Winning projects represented a wide range of building types, from a whimsical treehouse made of logs to an airport terminal rendered in high-tech materials. Changes in the format of the program allowed for the submission of commissioned—but-unbuilt work to be considered by the jury. Virginia architects who are not members of the AIA also were encouraged to participate. Awards were presented at a formal ceremony in the House of Delegates Chamber of the State Capitol in Richmond. The event was part of Building Virginia 93, the annual convention and trade show sponsored by the Virginia Society AIA.

Three Chicago architects comprised the awards jury:

Thomas H. Beeby, FAIA
Hammond, Beeby and Babka.

Laurence Booth, FAIA
Booth/Hansen & Associates.

Carol Ross Barney, FAIA
Ross Barney and Jankowski.
This work was commissioned by the Historic Richmond Foundation to offer visions of a new canal system incorporating, where possible, the remaining portions of Richmond's historic canals, which predate the railroads. The proposals for a restored canal explore its possible contributions to urban revitalization, tourism, recreation, and rediscovery of the city's waterfront, setting the tone for a new urban design theme. "This is a do-able thing," said juror Larry Booth. "We should encourage this, because it is achievable." Added Beeby: "It's taking an urban problem and making something good of it."
This airline terminal, composed of 120,000 square feet of space on two levels, is designed for easy expansion that will, in time, complete the design for a facility with two passenger concourses. Terrazzo floors and metal-and-glass forms in the concourse contribute to its contemporary image, which is emphasized by a glass pyramid covering the main lobby. Raising the public level 12 feet above ground provided space below for service functions while increasing the airport's visual prominence. "There is a very rational plan and the geometry is very good," said Beeby. "It's a very modest but elegant solution."
A House in Algonquin Park
Via Design Architects
Norfolk

This project involved the renovation of an existing residence, the completion of a new outbuilding designed for boat construction, and the design of a third (still unbuilt) structure for boat storage—all of which combine to frame a forecourt for the complex. Expansion of the house's kitchen and creation of a new entry foyer set the tone for "Craftsman-style" forms and details that were repeated in the design of the boat shop. Juror Tom Beeby praised the project's "extraordinarily high level of invention. It's very knowing, and it reveals an incredible concern for detail."
This fanciful treehouse exhibits an unusually high level of design, detailing and craftsmanship. While the function of the building required that it appear to be supported by trees, it is in fact standing on seven piers set back beneath a cantilevered deck. All framing members and finish materials are clear redwood, with the exception of cedar roof shingles and tree limb deck rails. “There are a lot of cute things about it—but you can get away with that here,” said Carol Ross Barney. “It’s a sculptural tour de force— but it’s well-detailed,” said Booth. “And it will look even better when it turns gray with age.”
An abandoned church was converted into a new public library and municipal offices for the town of Keysville, which lacked another prominent public building. The full exterior was recovered with new stained cedar shingles, the front entrance was rebuilt to provide new steps and a vestibule, and the interior was thoroughly reworked to accommodate its new function. Jurors noted that the renovated building is as effective as a library as it was as a church. "This is a lot more sophisticated in its restraint than you first might think," said Booth. "It shows you that architecture can be accomplished with very little effort."
This new athletic facility uses straightforward means of construction to achieve elegant results. A series of concrete columns circumscribe the field in an ellipse, serving primarily as markers in the landscape but providing structural support for the grandstand that rises also along one sideline of the playing field. Jurors praised the scheme's sophisticated use of geometry in the design of the stadium plan. "This is a building type that is often neglected," said juror Carol Ross Barney. "The building is really only the bleachers. The rest of the stadium is simply implied." Added Tom Beeby: "It uses the required tectonic pieces in a wonderful way and it has an appropriate character."

Dunham-Jones and LeBlanc Architects
Cambridge, Mass.

Acting as consultants to the state Department of Transportation, the architects designed a bridge that functions as a gateway to the City of Charlottesville, increases access to the river, and provides ecologically sound guidelines for future waterfront development. The bridge structure incorporates ramps that sweep down to the riverfront and frame an outdoor room, a fishing platform that steps down from the sidewalk, and poles for banners that create the sense of a gateway. "This project, and the other two planning proposals we are awarding, are as advanced as you will see anywhere in the country," said Booth. "It uses less money power and more brain power," Beeby added. "And with achievable means," said Ross Barney.
Prototype Offices for American Express Travel
Polo + Terzian Architects
Alexandria

In response to the client's request for design alternatives for a retail travel office, the architects proposed a number of possible solutions using a typical 2,000-square-foot rectangular space as a starting point. Modes of travel such as a jet airplane and cruise ship were used as the basis for generating dynamic forms for the travel offices - some of which are designed with a fixed floor plan, some with a flexible plan, still others that combine aspects of both. Among the project's goals were the creation of a dynamic image and the reduction of unit costs. "It's mind-bending," said Booth. "It's an artful investigation of a travel office and very special."
Lubber Run Amphitheater
James William Ritter, Architect
Alexandria

The deteriorated wooden shells of an existing amphitheater were replaced with sturdy masonry, but blended into the rustic setting with the aid of a new wooden skin. In a theatrical spirit, the wooden skin is handled like a mask which partly obscures the masonry mass while making places for required lights, speakers and access doors. "With very modest means, it made something that was not very theatrical into something that is very theatrical," observed juror Tom Beeby. "When you see it with people, it scales itself very well. The architect accomplished a lot with a very few gestures."
Brooke Station Town Design
Community Design Associates
Charlottesville/Richmond

This transit-oriented community is designed for the area surrounding a station of the new Virginia Railway Express commuter rail system located 50 miles outside of Washington, D.C. The plan proposes new patterns of development that recognize existing limits on population density in the county—but redistribute that density to create a community of 4,000 people surrounding the station. "The project deals with creating new urban environments by taking advantage of the presence of mass transit," said juror Laurence Booth. Ross Barney noted that the proposal is more realistic than the celebrated new town of Seaside, Florida. "And it's very clear-headed," said Beeby.
This house in Lexington was designed in reaction to the architects' concern that "affordable" construction is too often synonymous with "cheap." The intent of this project was to build a small house (850 square feet) that was intelligently planned and rich with character. Its front dormer and bay window make for a building that fits comfortably in an existing neighborhood, and interior features such as an alternating-tread stair conserve space. "It is contextual, inventive and has character," said juror Tom Beeby. "It has the signature of an American building," added Booth.
A 6,000-square-foot education wing was added to this historic church in Catharpin, with the architects taking special care to repeat details such as the window proportions, siding and roofing material. In the process, the integrity of the original building was maintained while making it functional for contemporary use.

A large window, designed with the proportions of its stained-glass counterpart in the main sanctuary, takes advantage of the friendship hall's eastern exposure. "Here they have replicated one piece and successfully extended the language," said Beeby. "The repetition of the windows is very smart."
This new printing plant is clustered along a central light monitor that spills natural light into the large production rooms and lends organization to the composition of the building. Color and massing are used to give a human scale to the building, which is designed for flexibility to accommodate a rapidly changing industry. Jurors praised the way the building is integrated into the landscape. "The massing is broken down to become a very pleasant form in the landscape," said Booth. "It makes a wonderful place for people to work — it reminds me of the Johnson Wax Building by Frank Lloyd Wright," said Beeby.
E. Dillon & Company is a leading manufacturer of high quality architectural concrete masonry units. Nowhere else can a designer find a more complete line of Architectural Concrete Masonry products from one manufacturing source.

E. Dillon's line of architectural units, known as the Premier Line™, includes:
- GROUND FACE UNITS
- SPLIT FACE UNITS
- SEGMENTAL RETAINING WALLS

E. Dillon & Company's facilities are centrally located in the Eastern half of the United States on a 600 acre plant site (see inset on back page).

GROUNDFACE UNITS

Premier Line™ ground face units are lightweight or normal weight concrete masonry units with faces ground and polished to expose the carefully selected aggregates in a unique and exciting way. Texture and aggregate exposure varies from one color selection to another, providing the designer with unmatched selection. Ground face units are reminiscent of polished marble, terrazzo or granite.

All ground face units receive a factory applied coating of acrylic which contributes to the wall's performance against weather and stains.

A large inventory of molds, specialized equipment and experienced people provide the designer with a wide selection of specialized shapes. A fully staffed and experienced laboratory staff also provides the designer with the option of custom colors.

It is our business, and our pleasure, to work with designers to provide the shapes and the colors that their creative design concept requires.

SPLIT FACE UNITS

Premier Line™ split units offer the designer selection of colors, shapes, sizes, and face profiles that rival any producer in the country. Premier Line™ units are available in a wide selection of scored, fluted, ribbed and full split face profiles. All split colors are available made with the very same mix as our ground face line for safe and effective combination of two or more Premier Line™ products.

Split units were the beginning of our architectural block program and today Premier Line™ split units are among the most respected split concrete masonry units available anywhere.

Our split product holds the plane like no other!

ALLAN BLOCK RETAINING WALL SYSTEM

The Allan Block™ system was developed to answer the need for a durable, attractive and affordable retaining wall product. Over five million square feet of Allan Block™ wall has been installed on commercial and residential projects. Allan Block™ combines basic engineering principals with the time-tested durability of masonry construction.

By using various combinations of the three Allan Blocks™ - standard, angle, and corner, an endless array of design possibilities can be achieved.

Allan Block™ are manufactured by E. Dillon & Company with a split face finish and available in two standard colors. By special order, Allan Block™ is also available in any Premier Line™ color.

UA / USES, APPLICATIONS

Every Premier Line™ unit is suitable for use in interior and exterior applications and for use in load-bearing and non load-bearing construction. When used as a veneer in multi-wythe construction or in single-wythe construction, Premier Line™ architectural block offer warmth and

- Brookstone
- Natural Gray
- Mojave
- Natural Gray
- Mojave

Fourteen standard Premier Line™ colors are represented on this page. Any Premier Line™ face profile, size, or texture is available in every color. Additionally, many other colors have been custom developed over the years and are made available with the Premier Line™. Check with your representative for colors not shown on this page.
Manufacturer shall provide necessary special shapes such as half units, bond beams, corner units, chamfered edges etc., as required by drawings.

SPLIT FACE UNITS

Scope: Split face concrete masonry units shall be used to construct interior and/or exterior walls as indicated on the plans or on the schedule of finishes.

Product: Split units shall be of color(s) and face profile(s) as indicated on plans. All split architectural cmu's shall be Premier Line™ units as manufactured by E. Dillon & Company, Swords Creek, Virginia. All architectural units shall comply with the requirements as set forth in ASTM C90 and ASTM C145, for Grade N, Type 1 moisture controlled for load bearing concrete masonry units.

Cement, admixtures, and aggregate used in the manufacture of units shall conform to applicable ASTM specifications and shall be suitable for use in cured concrete masonry.

ALLAN BLOCK RETAINING WALL SYSTEM

Complete specifications for scope, materials, and installation of Allan Block™ retaining walls are outlined comprehensively in The Allan Block™ Design Manual available from E. Dillon & Company upon request.

MANUFACTURER'S RECOMMENDATIONS

FIELD PANEL - It is recommended that a field panel (mock-up) be erected on the job site for architectural approval of color, joint treatment, and workmanship. This panel should be maintained throughout construction of the project for use as a standard for the above. The panel should be cleaned in the same manner as planned for final clean down.

CLEANING - Use Sure Klean 600 or equivalent detergent cleaner. Small trial cleanings are recommended to determine appropriate concentration and method. Emphasis is placed on consistency of method for all wall sections.

FIELD COATING (FOR GROUND FACE UNITS ONLY) - Though not required, it is recommended that a final job site application of acrylic be applied to the finished wall (after thorough clean down) to provide coating over mortar joints and to recoat scratches and/or chips that may have occurred during installation. This application will further enhance the lustre of the finished wall and provide a most satisfactory appearance.

EXECUTION - When laying E. Dillon's Premier Line™ architectural units, the most careful masonry practices must be adhered to. All Premier Line™ units are integrally colored for maintenance free wall systems. Walls should be kept covered and clean in progress. Wall sections and units stored on pallets should be protected from workers in other trades, splashing mud and other job site contaminants. Care should be taken in the handling of the units to minimize chipping.

CONTACT E. DILLON & COMPANY FOR MORE INFORMATION ON ANY PRODUCT IN THE PREMIER LINE™. FULL SIZE SAMPLES AND COLOR SELECTION KITS ARE AVAILABLE UPON REQUEST.

Leonard Currie actively sought new solutions for housing of the masses long before it became a fashionable pursuit for architects. Likewise, his keen interest in the social dimensions of architectural practice far predated the current preoccupation with the topic. For these reasons — and many more — Currie was named the 1993 recipient of the William C. Noland Medal, the highest honor bestowed upon an architect by the Virginia Society AIA.

Scholar, inventor, teacher, and administrator, Len Currie has tread the far reaches of the architect’s landscape. He was bedside during the birth of the Modern movement in America, cut his architectural teeth in the shadow of Walter Gropius and Marcel Breuer, matured in his profession during an era of mid-century prosperity, and in recent years has eagerly shared his experiences with the new generation of practitioners. One student who recently toured Currie’s “Pagoda House,” built for his family in Blacksburg in 1961, likened the architect to Ralph Waldo Emerson’s “sharpest sighted hunter” — one who hits the mark of sublime beauty because of his unwavering aim.

“It’s a sensible house with a sensible plan,” Currie says of the residence, officially listed in 1994 on the National Register of Historic Places and now owned by Virginia Tech professor Peter Trower. The house’s prominent roof form, glass walls, and open floor plan created a sensation when it was first completed. But Currie also likes to talk about the house’s pragmatic aspects, such as the heating system that radiates warmth from the ground-level floor and second-level ceiling. “It’s unperceived — a gentle kind of heat,” Currie says.

He also notes that the spatial interest provided by the pitched ceiling has acoustical benefits as well as aesthetic ones. In her description of the Currie-Trower House for the National Register application, historian Sarah Shields Driggs observed that its impression of massiveness is subtly contradicted by visual cues such as glass-enclosed corners that give indication of a roof supported by a skeleton of wood rather than heavy load-bearing walls. “This increases the impression of a volume of space perched at the edge of a hill, merely wrapped in an enclosure of glass and wood with a large roof hovering over it,” Driggs wrote. Currie designed the house while he was head of the Architecture Department at Virginia...
In 1951, he left for Bogota, Columbia, to accept the challenge of organizing the InterAmerican Housing and Planning Center of the Organization of American States. As head of the center, Currie directed studies of the severe urban problems existing in South and Central American cities. "My chief work there was really to do with the poor people, with housing and community development, rather than much emphasis on urban sprawl." Currie says he tried in vain to raise public and government awareness of the severe problems caused by overpopulation. "Now, finally, the press and TV are beginning to recognize that one of the chief underlying factors of all our urban problems, if not the most important, is the population explosion."

By 1956, Currie returned to the U.S. with his family and took the administrative post at VPI. Through his leadership as the head of the Department of Architecture there, he was instrumental in laying the groundwork for a program that would soon be elevated to the status of an independent college within the university and become a recognized leader in the region. In 1962, he was lured away as founding dean of the new College of Architecture and Art established at the University of Illinois – Chicago Circle campus. He saw the college through its tumultuous early years and the construction of a new urban campus just outside The Loop. Currie's experience in Latin America and as an administrator led to his later involvement in planning for a new university campus in Nicaragua (never built because of a massive earthquake and the political upheaval of the 1970s) and another in Patras, Greece.

He retired to Blacksburg, and in 1981 built his present house, which explores energy efficiency strategies and incorporates recycled components and fragments of demolished buildings. "In order to conserve energy and raw materials, the human race must come to realize that we simply cannot afford to keep throwing away our buildings," Currie says. Since returning to Blacksburg, he has remained active in university affairs and operates a practice that concentrates on residential and small commercial projects. During the mid-1980s, he received national acclaim for operating a free clinic that provided architectural services to low-income residents in the region.

Throughout his long and productive career, Len Currie has consistently demonstrated that architects can be leaders in historic preservation and the orderly development of the built environment. His willingness to pursue such ends in an unfailing manner conveys a rare depth of commitment to both his profession and society.

The Architecture Medal for Virginia Service - the Society’s most prestigious public award - was created to honor an individual or organization that has made an unusually significant contribution to Virginia’s built environment or to the public’s understanding and awareness of the built environment. Daniel P. Jordan, Executive Director of the Thomas Jefferson Memorial Foundation, has distinguished himself as a scholar and administrator in advancing the public’s understanding of Thomas Jefferson’s physical environment and his efforts to shape an American culture.

In his leadership capacity with the foundation, Jordan has shown, and continues to show, an exemplary devotion to the interpretation of history, the promotion of education, the advancement of historic preservation, and an expanded public awareness of the world of the nation’s third President. Jordan’s accomplishments are many. He has become a public spokesperson for Jefferson and Monticello, overseeing the recent roof restoration of Jefferson’s home and participating actively in the move to preserve the “viewshed” of Monticello. Most recently, he has worked closely with local and state groups in the design and formation of the proposed Thomas Jefferson Parkway, which will protect the portion of Route 53 from the base of Monticello Mountain to the estate’s entrance.

During his time at Monticello, Jordan has established an education department, restoration department, office of the curator, a development program, and the Thomas Jefferson Historic Plant Center, which obtains and cultivates old varieties of Jeffersonian plants. He also has worked to establish an endowment fund to finance future restorations and acquisitions at Monticello. In addition, Jordan has served as chairman of the State Review Boards for the Virginia Department of Historic Resources and has been a member of the Jeffersonian Restoration Advisory Board overseeing the historic precinct at the University of Virginia. He has participated on the Commission for the Preservation of the Virginia State Capitol and has served on the boards of cooperating associations that concern themselves with our national parks. In 1993, Jordan played a central role in the commemoration of the 250th anniversary of the birth of Thomas Jefferson. In addition to directing the activities at Monticello, he served on the federal Thomas Jefferson Commemoration Commission, appointed by President Clinton. Author of more than 60 articles, essays, and reviews in various journals and reference works, his work includes books on the City of Richmond and the political leadership in Jeffersonian Virginia. He is presently writing the history of Universal Leaf, the world’s largest tobacco company.
Design For Energy Efficiency.

Design with conservation in mind. When you design a structure with consideration for energy efficiency, you build in long-term savings. For more information call Virginia Power at 1-800-275-9387 and one of our Energy Efficiency representatives will be glad to help you.

AIA Documents... the foundation for building agreements.

© 1992 AIA
This award is given to a Virginia-based architecture firm that has produced consistently distinguished architecture. The winner in 1993—a Charlottesville firm founded in 1947 by Floyd E. Johnson, the late Thomas W.S. Craven, and David J. Gibson—has delivered the highest quality architectural services. In the belief that a more complete service could be performed by people with experience in all aspects of architectural practice, Johnson, Craven & Gibson at no time specialized in a single building type. Nonetheless, the firm is well known for its excellence in traditional design and detailing. The breadth of its residential work is significant, resulting in some of the region's most admired homes and estates. Institutional work by the firm is to be widely seen at the University of Virginia, Piedmont Virginia Community College, Clinch Valley College, the Blue Ridge School, and Woodberry Forest School. In 1991, the Virginia Society AIA's Test of Time Award was presented to the firm for its design of The Boar's Head Inn and Conference Center in Charlottesville. Its principals long contributed their expertise as instructors at the University of Virginia School of Architecture. And they frequently donated their time to serve on public bodies ranging from the Albemarle County Planning Commission to the Virginia State Arts Commission. Firm principal Floyd Johnson, in particular, has worked closely with the Thomas Jefferson Memorial Foundation on the 1980s reconstruction of Monticello's Garden Pavilion and the design and fabrication of the oculus in the house's reconstructed dome.
No Rot. No Termites. No Arsenic!

There's no arsenic or chromium in ACQ® Preserve pressure-treated wood. It's new!
ACQ Preserve is durable, strong and fights rot, decay and termite attack... Guaranteed!
As for value, ACQ Preserve is priced below redwood and cedar, and it's much less than
plastic substitutes. It's attractive too! You can paint it, stain it or let it
weather naturally to a warm brown color. So, whenever there's a
concern for the environment, use ACQ Preserve.
It's simply... "the wood for the great outdoors!"

Distinguished Achievement Award

This honor is presented as a means of signaling distinguished achievement by an architect in any one of the following categories: design, practice, education, service to the public, and service to the profession. In 1993, three members of the Virginia Society AIA received the award.

Morton B. Gulak, AIA
Through his role as associate professor in the Department of Urban Studies and Planning at Virginia Commonwealth University and his leadership in urban revitalization, Mort Gulak has created a national model of university-community relations. In 1980, he established the Richmond Revitalization Program to bring attention to the urban man-made environment and its revitalization potential. By doing so, he expanded the emerging role of the architect in city building. His public service work includes past membership on the Virginia Art and Architectural Review Board, which he chaired, membership on the Richmond Urban Design Committee, board service for the James River Chapter AIA and active civic involvement. In 1993, Gulak advised the Indonesian government and its universities on urban design issues.

John B. Farmer, Jr., AIA
As principal of Farmer Puckett Warner Architects of Charlottesville, John Farmer's professional approach to architectural and community service upholds the highest standards of the AIA. Following his training in New York with Philip Johnson and Victor Lundy, Farmer opened his Charlottesville office in 1974. Since then his projects have included social and environmental improvements, housing for the elderly, an addition to a mission, modernizations of public housing, and several church additions. For six years he served on the Charlottesville Board of Architectural Review. He also has served as James River Chapter president, Virginia Society Director and Mid-Atlantic Region council member – in addition to being one of three founding organizers of the Charlottesville/Albermarle Section of the AIA.

Thomas L. Kerns, FAIA
Kerns is senior principal of Kerns Group Architects in Arlington and, under his direction, the firm has become widely recognized for an unwavering commitment to client service and design excellence, evidenced by a string of design awards that extends back for 13 consecutive years. Kerns served as president of the Northern Virginia Chapter AIA in 1984 and has remained active in AIA affairs. His professional activities include service as a visiting critic and juror at Virginia Tech, the University of Maryland, and Catholic University. In 1988 he received the Northern Virginia Chapter's Award of Honor. Kerns's practice and professionalism have merged at a level attained by few.
Go To Extra Panes To Make It Special.

Kolbe & Kolbe’s slender cut-lite bars are made of solid, one piece construction, they add strength and durability while providing more glass area for a better view.

Kolbe & Kolbe – we’ll go to extra panes for you.
Historian by training, raconteur by birth, William Seale has transformed a fascination with old buildings into a career as a prolific author and frequent consultant on restoration projects. Those projects include the George Eastman House in Rochester, New York; the Old State Capitol in Tallahassee, Florida; the Executive Mansion in Richmond; the Michigan State Capitol; and the Ohio Senate Building — in addition to an interpretive plan for Stratford Hall. While his first interest is in research and design, Seale's second love is books — particularly books that blend social history and architecture. His 1992 volume titled *The White House: The History of an American Idea* is a richly illustrated history that follows up on his original two-volume history of the President's house. Virginia's executive mansion and its colorful cast of occupants also received Seale's scrutiny in a 1988 book published by the Virginia State Library and Archives. William Seale began his career in 1965 as a history professor, first at Lamar University and then the University of South Carolina. He joined the Smithsonian Institution as a curator in 1973, and worked for four years as White House historian for the National Park Service. After that, he taught historic interiors and buildings in the architecture program at Columbia, with a focus on how buildings are used and how they are finished. Since 1978, Seale has been a self-employed restoration consultant. He lives with his wife in a turn-of-the-century Alexandria townhouse.

The Virginia Society AIA occasionally honors a person who is not eligible for membership, but who has rendered distinguished service to the profession or to allied arts and sciences. In 1993, the distinction was given to Virginia Currie of Blacksburg. Recipient of a B.Arch. degree in 1936 from the University of Minnesota, she has been a bellwether of design awareness from Chicago to Bogota, Colombia, ever since. With her husband, Leonard, she fought to save the landmark Stock Exchange Building by Louis Sullivan, an effort which failed in its immediate goal but led to the creation of Chicago's Landmark Preservation Council. Her successes on the Chicago Beautification Committee led to her spearheading a similar Beautification Awards effort in Blacksburg.

How to design an irrigation system without getting soaked.

If commercial and institutional sprinkler system designs take too much of your time and are watering down your profits — contact Virginia Turf & Irrigation, distributor Toro irrigation products. We will be happy to assist you with our design and engineering services.
Society Honors

The recognition of Society Honors may be bestowed on individuals or organizations outside the AIA that have inspired, influenced, or complemented the architecture profession in the Commonwealth through work related to architecture and design. Three such awards were given in 1993.

John Gray
A resident of Grafton, Gray has emerged as one of the leading sources for masonry expertise in the state. As a tried-and-true consultant to the Association for the Preservation of Virginia Antiquities for the past 20 years, he has worked on some of the APVA’s important historic properties. The impressive list includes Bacon’s Castle, Jamestown, Cape Henry Lighthouse, The John Marshall House, Lynnhaven House, and the Isle of Wight Courthouse. He has also generously shared his knowledge in workshops on masonry conservation techniques so that his important body of knowledge may be passed on through later generations.

J. Timothy Keller, Genevieve P. Keller
Over the past 20 years, these partners in Land and Community Associates of Charlottesville have contributed significantly to the theory and practice of historic preservation in the United States. Combining their respective strengths in landscape architecture and architectural history, the Kellers have developed an interdisciplinary approach to planning, preservation, and design. Their innovative work in landscape investigation and evaluation lays the groundwork for more informed rural planning. From their planning and design work in the historic downtown of Bedford, Virginia, to their award-winning analysis of Martic Township in Lancaster County, Pennsylvania, the Kellers successfully have applied an advocacy approach to physical planning. In 1991, the pair jointly received a Loeb Fellowship at Harvard and, in 1992, a Public Service Award from the U.S. Department of the Interior.

William A. Lynch, Jr.
As president of the W.A. Lynch Roofing Company in Charlottesville, Lynch has long strived to elevate the perception of the roofing industry and its standards of construction. Through controlled growth into surrounding states and the District of Columbia, his company established itself as a leader in the region for discriminating residential clients and for commercial and institutional building projects that demand a high technical competence. Among the firm’s noteworthy projects are the roof restoration of Ash Lawn-Highland, former home to President James Monroe, and the reconstruction of the slate roof at The Miller School of Albemarle. The nomination for this award stressed Lynch’s general practice of issuing cost estimates that include the methods and materials needed to do a job properly, thus exhibiting his willingness to lose a job if there is a lack of commitment to doing it well.

The Kellers’ portfolio includes a cultural landscape report for the San Antonio Missions.

**PRODUCTS YOU CAN STAND BEHIND**

*flamesafe® Firestop Systems*

*When your signature goes on the bottom line, make certain the product specified is one you can safely stand behind if fire strikes.*

IPC Flame-safe® Firestop Systems and Products are among the first products engineered specifically for the prevention of smoke and flame migration with twenty plus years of successful installation history. These proven performers have been used around the world in all types of commercial, industrial, utility and petrochemical applications. IPC Flamesafe® offers diversity with a complete line of products designed for use in electrical, plumbing, mechanical, telecommunications and computer installations. The product line consists of caulks, compounds, non-hardening putties, PVC pipe devices, mortars and sealbags for thru-penetration smoke/fire stops. Also available are electrical cable protection tapes, blankets and sprays.

IPC Flame-safe® quality products are tested and classified by Underwriters Laboratories, Inc., listed by Underwriters Laboratories of Canada, and factory Mutual System approved.

For a catalog, technical information or assistance, call (800) 334-8796, in NJ: (908) 531-3667 or Fax (908) 531-5192.

How to Use This

Directory

FIRST
If you are trying to locate architects in a particular area, but don't know the firm by name, look in the index on page 89. That's organized by city and town.

SECOND
If you know the name of the firm you are trying to locate, simply thumb through the following pages and find the name in the alphabetical listing.

THIRD
Here's what you will find under the firm listing.

1 Name, address, and phone number.
2 Principals and Firm Personnel
   If you want to talk about a possible commission, ask for the person listed as "client contact." If you want to talk to the firm about using a new product or service, ask for the person listed as "vendor contact." In smaller firms, these contacts will be the same person.
3 Principal areas of practice
   While architects pride themselves on being generalists, many firms develop particular strengths over the years. This listing includes the four most important areas of a firm's practice, though other project types aren't necessarily excluded from the range of work a firm is qualified to do.
4 Firm specialties
   Here is where many firms take the opportunity to elaborate on the types of work they do or to make qualitative statements about how they go about practicing their profession. This statement may help you understand the intangible qualities of the firm a little better.
5 Recent projects
   We have limited each firm to naming no more than five of their recent completed buildings. Take note. Many of the buildings may have been recognized for design excellence or other attributes. If you are considering hiring this firm, go take a look at some of the buildings first and ask the building owners about their level of satisfaction with the results.

A few words about this directory. Contained here are the architecture firms which have a member of the Virginia Society AIA as a principal. Only the names of the Virginia AIA members are included, so there may be other principals and employees at the firm whose names are not listed. The information published here is provided by the firms and we assume it to be accurate, though we do not assume liability for its accuracy.

Firm Specialties
The Alexandria Architects Partnership was
founded in 1982 by seven architects in the
Washington Metropolitan area for the express
purpose of providing architectural and
engineering services to the public sector.

Clients include the federal government,
counties, and municipalities. The practice is
tailored to respond to the requirements of public
procurement policies and administrative
procedures not common to private work.

Firm Specialties
Our firm provides complete architectural
services for clients who demand on-time quality.
We believe that a thorough understanding of our
clients' needs coupled with diligent
programming provides a framework for the
successful completion of any project. Our
specialties include commercial interiors on fast-
track or design-build basis, land use design,
zoning studies, expert testimony and project
representation.

Firm Specialties
ArchGroup, Inc. is a unique architectural, development, and construction management firm specializing in developing properties from zoning approvals through construction. Our services typically include filing zoning permits, economic feasibility studies, architectural & engineering design, construction bidding and construction management of the project. This full service, design/build approach is successful for workshop facilities, private commercial property owners, and residential projects. We particularly specialize in the design and construction of churches, office buildings, and custom residences.

Firm Specialties
Our practice is small and personal. We seek to create architecture that in some way makes a positive contribution to the built environment and is also responsive to the aspirations of the owner. This is a challenging enterprise whatever the building type. But whether the project is a single house or a large scale office, we believe that it's worth doing at all, it's worth doing well. Our clients and our planet deserve nothing less.

Recent Projects

Firm Specialties

CCAP specializes in long term relationships with institutional clients. We begin with a masterplanning process which defines the vision and the resources and commitments necessary to reach that vision. This process has led to a number of educational commissions in athletic facilities, dormitory renovation and academic space planning. Civic projects resulting from masterplan projects include jails, courthouses, and human service facilities. In addition, we are designers of fine new homes and residential additions and alterations.

Recent Projects

Motley + Associates' professional practice has a strong focus on facilities for education. Our architects have developed successful, award-winning prototype designs for elementary and middle schools, including the first new building in Virginia designed to be a middle school. We design libraries (academic and public); we design classroom, housing, cultural and support facilities for colleges and universities (public and private); we provide planning services and interior design.

HISTORIC PRESERVATION

The practice was established by a sole proprietor experienced in historic preservation to provide restoration and preservation services in the Mid-Atlantic region. As a resource for specialized consultation services to other architectural firms as well as private clients, principal has acted as consultant to major historic sites from Connecticut to Florida. Owners of suburban and country houses in Virginia and Maryland have been provided architectural services for alterations and additions in context.

Recreational facilities, Single-family residential, various institutional, planning
Firm Specialties
This firm specializes in the highest quality residential, institutional, golf, and country projects. It has completed these all over the state of Virginia, all contiguous states, Tennessee and Florida. Our goal is to produce timeless design, often quite traditional, yet always to address the lifestyle issues of the day as well as the future. Integration of the structure into the site and the handling of its landscape is of absolute importance to this firm.

Firm Specialties
Rust, Orling & Neale, Architects has been providing architecture, planning, and interior design services to the public and private sectors since 1979. Our primary focus has been in land planning and the design of housing, commercial office buildings, and corporate facilities. Project experience also includes the design of museums and exhibit spaces, conference and meeting spaces, shopping centers, retail shops, restaurants, and light industrial buildings. A major portion of our projects are new buildings for infill sites or restoration, renovation, and adaptive reuse of existing buildings. This experience has translated to suburban sites where other contextual influences form a framework for design.

Firm Specialties
TDBF focuses on commitment to quality service and development of long term client relationships. Over 70% of our clients are repeat business, including highly diverse projects for governmental, industrial, and institutional clients. The firm’s resume includes facilities for manufacturing, laboratory, data processing, education, parking, and offices. Renovations comprise about 80 percent of our recent projects, with the majority falling in the category of “high technology” facilities such as labs, data centers, and manufacturing.

Recent Projects
DNA Forensic Lab, Richmond; Whitbread-Hollins Plant C upgrade, Richmond; Glaxo, Inc. Tablet Site II & Q2 Microbiology Lab, Zebulon, N.C.; Southern States Cooperative, Inc., retail facility & warehouse, Morgantown, W.Va. and Manassas; Carpenter Company, various manufacturing plants throughout the U.S.

QUALITY, FROM QUARRY TO RIBBON
COLD SPRING GRANITE DELIVERS
• Architects worldwide recognize Cold Spring Granite Company as the source for structural granite of superior quality. They also recognize the reason for that quality—single-source service from start to finish. From our 30 company-owned quarries, to complete in-house design-engineering assistance, to fabrication facilities capable of accommodating any size project, Cold Spring Granite insists on quality throughout. This nearly century-old commitment assures you of consistently superior results, long-term color matching and replacement availability—and completed projects you and your clients will take pride in for generations to come. So when you’re building with granite, build with quality throughout. Build with Cold Spring Granite.

When you call a Marvin distributor or dealer, expect professional service from the beginning. They provide the support you demand, like factory trained personnel, customer service, and complete technical assistance from Marvin's architectural division.

They're backed by the best built line of wood and clad wood windows in America. Marvin makes windows to order, combining technology with craftsmanship to solve your unique design or performance problems.

So consult with your Marvin distributor. They'll work with you on your schedule, not theirs. No matter what stage your project is in.

Professionalism ... from start to finish. Call us.
CONCRETE
DRIVEWAYS & PARKING AREAS

Now one source gives concrete answers to your cost related and technical paving questions:

△ How to save money on paving costs?
△ How to solve excavation and drainage problems?
△ What are the long range considerations in paving maintenance and repair?
△ How to meet traffic wear and weight requirements?

The Solution:

Our concrete paving consultant, Michael Zaldo, will answer your specific questions. Call him at the Advisory Council. He speaks your language and will visit your office or job site.

Call the Virginia Ready-Mixed Concrete Advisory Council today (804) 977-3716

Save on Prescription Drugs with the AIA Trust Health Insurance Plans.

While congress and everybody else is talking about fixing the costs of health care, the AIA Trust is doing something about it. With the Caremark prescription drug program, participants in the Trust's plans pay no more than $12 for medicine, even for a three months supply! Designed for small firms and sole practitioners, plans include a preferred provider hospital network and optional dental coverage.

Call 1-800-343-2972, ext. CACE for a quote.

Very affordable premium rates!
