Architecture

IF YOU FORGET TO SPECIFY CAST IRON,

Architecture by Meyer-Greenson.
Photo ©1992 Joann Sieburg-Baker.

YOU'LL HEAR ABOUT IT!

During the first dinner party in your new home, would you want conversation interrupted by the noise of waste water in your plumbing system cascading across the ceiling and dripping down the wall? Of course not.

Few construction upgrades will give as much satisfaction as **Charlotte's quiet cast iron waste piping**. Why? Cast iron systems provide a lifetime of quiet performance.

But what about **cost** and **availability**? In a typical residential application, installing cast iron costs only fractionally more than using alternative piping materials — a small price for lasting peace. And you can join Charlotte's cast iron No-Hub pipe and fit-

tings with our plastic pipe and fittings for use in the vent lines to reduce cost. Charlotte's cast iron and plastic pipe and fitting systems are readily available from local plumbing suppliers.

Is **installation** of cast iron piping a problem? No. Cast iron No-Hub piping actually requires slightly less space in a stud wall than plastic piping. Experienced plumbers recognize that cutting and joining cast iron No-Hub pipe is a snap.

Here's the bottom line, literally a cast iron guarantee: use **Charlotte cast iron pipe and fittings** and we guarantee you won't have noise problems in your waste plumbing system.

You are assured that your new home will be a high-quality, **Quiet House.™**

JEFFERSON NATIONAL BANK IS RENEWING ITS COMMITMENT TO KEEP YOU TOTALLY SATISFIED.

Banks everywhere are pretty much alike. They all offer practically the same products and services. Checking accounts, saving accounts, loans, even their monthly statements. It's just money in and money out.

So, what really sets one bank apart from another? The people who work there and the way they take care of you, their customer.

At Jefferson National Bank your needs come first. Someone who knows you by name. A friendly ear. A sincere smile. And most of all, a banker who will consider your needs fairly and will work hard to see that they are met.

The banking professionals at Jefferson National Bank want to know that when they go home from a hard day's work you are totally satisfied with their performance and with the bank's.

It's not always easy, but it's always just that simple. That's why we're renewing our commitment to our customers in all of the communities we serve.

We Promise!

To be totally satisfied — it's the promise you need from your bank and it's the promise you deserve. Jefferson National Bank has held this belief for over 80 years.

It's a belief you can bank on!

Jefferson National Bank
Satisfying Banking™ Member FDIC

The refrigerator that thinks it's an armoire.

Monogram™ built-in refrigerators always were ambitious. This one thinks it's French Provincial. But with the help of custom unfitted cabinetry, it can just as easily assume the identity of a Shaker cupboard. Or an art deco pantry. Your imagination can take over from there.

Of course, Monogram refrigerators were created to integrate with your kitchen cabinets. It is their reason for being. In 36," 42," and 48" widths, they have a shallow design that permits installation that is totally flush with the cabinets (we call it "cabinet friendly").

They are designed to accept decorative panels that completely match your kitchen cabinets with no trim or overlapping edges. You can mount custom door handles on these panels to match the handles on the cabinets.

The interior is also an exhibition of fine design, with flexible space adjustment, efficient storage, good lighting, spill-proof shelves, ice and crushed ice and cold water through the door.

Monogram refrigerators are part of a complete line of flush, built-in appliances designed to integrate with

your cabinetry. They come with the assurance of the industry's most extensive network of factory service professionals and the extraordinary GE Answer Center® service on call 24 hours a day every day of the year at 800.626.2000.

Please call for a brochure.

Monogram, from GE.

A synonym for the best in built-in appliances.

Monogram.™

The Art of Color Matching

Because The World Isn't Black and White.

Your design a total vision, a beautiful environment, a new way to view space. The tools you use—including masonry and mortar—must all blend form and function, concepts and colors to reflect your artistic impression.

The world isn't limited to black and white. Neither is your vision or your client's need. At Lehigh, if you can imagine it, we can match it.

We appreciate the attention to detail you use in selecting materials, down to the color of the mortar. That's why we work with architects to ensure cement color standards and provide a palette of colors that will enhance your design.

Our Custom Color Development Service is unsurpassed in its ability to create that particular shade for absolute artistic control. From

drawing board to construction site, from factory to delivery of the pre-blended product, you can be sure that Lehigh's exacting production standards will assure your total satisfaction.

The world isn't black and white. With Lehigh you know that from specification to project completion, the final product will match the vision of your imagination.

Contacting the AIA in Virginia: A Source List

Need to find an architect? Want to know more about our professional association and what it can do for you? Here's a list of how to reach the state and chapter offices in Virginia.

9

Why Hire an Architect?

Few people realize how complicated it is to build – until they try. But an architect can help clients negotiate the maze of design options, building codes, zoning laws, and contractors. Here's a simple guide to locating the architect who is right for you.

15

Awards for Excellence in Architecture

Six projects by Virginia architects, ranging from private residences to education facilities, were honored in the most recent Awards for Excellence in Architecture program. Take a look at this sample of the best in Virginia architecture today.

24

Society Honors

Presenting the distinguished winners of awards to recognize the exemplary efforts of architects and good citizens who have offered service to the AIA or improved the manmade environment.

38

Directory of Virginia Architecture Firms

An alphabetical listing of AIA-member firms in Virginia. To locate firms in a particular city or town, look first in the index on page 95 that's organized by location.

101

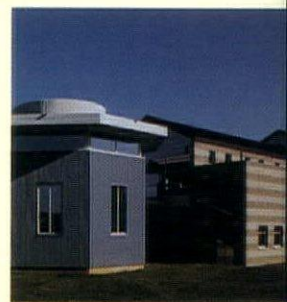

Directory of Virginia Society AIA Members

An alphabetical listing of individual members of the statewide professional organization for architects.

130

Consultants to the Design Professions

This resource for design firms lists vital data and recent project information on a range of design industry consultants.

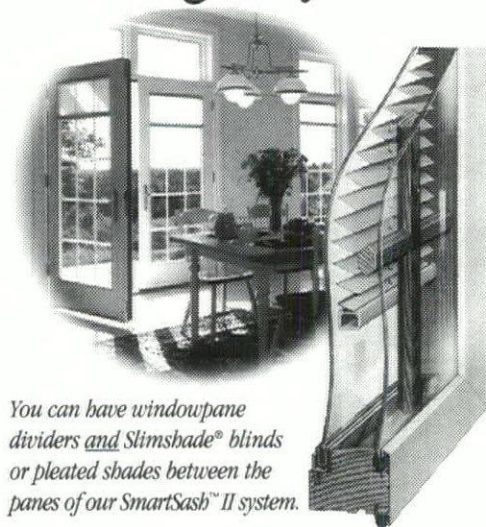

p. 15

On the cover:

Studies from first-year architecture
studio taught by Virginia Tech
assistant professor Shelley Martin.

We'll give you enough space to explore your options.

You can have windowpane dividers and Slimshade® blinds or pleated shades between the panes of our SmartSash™ II system.

Up to 1⁵/₁₆" to be exact. That's the size of the space between the panes on Pella® Designer Series™ windows and doors with our unique SmartSash™ II glass system. There's room for wood windowpane dividers plus our stylish Slimshade® blinds or pleated shades for privacy. And since they're protected between the panes, dusting is strictly optional.

Whatever your next project – libraries, schools, courthouses, hospitals, high-rise buildings, office parks, multi-block developments, historical renovations, hotels or other commercial projects – we would like to talk to you about making Pella windows and doors a part of it.

The Pella Window Stores

Richmond West, VA	(804) 741-4556
Virginia Beach, VA	(804) 499-7165
Newport News, VA	(804) 249-8454
Fredericksburg, VA	(703) 898-3376
Charlottesville, VA	(804) 978-4471

Quality like this only comes from Pella.

SNAP-CLAD™ Metal Roofing Panels

Petersen Aluminum Corporation's SNAP-CLAD Panels feature architectural panel aesthetics as well as structural panel performance. SNAP-CLAD Panels are corrective leveled to provide superior flatness and feature an optional factory-applied sealant bead for improved weather resistance. In addition, SNAP-CLAD Panels carry a UL 90 rating for wind uplift.

SNAP-CLAD Panels feature a 1-3/4" leg height and a continuous interlock for improved structural performance and wind resistance. A concealed fastener clip system has been designed to allow for thermal expansion/contraction while providing excellent hold-down strength.

SNAP-CLAD Panels feature our full-strength PAC-CLAD® finish and are available in a variety of on-center dimensions, fabricated from either .032 aluminum, 24 ga. steel or 22 ga. steel. For more information on SNAP-CLAD Panels, please contact Petersen Aluminum Corporation, 1-800-PAC-CLAD or visit our web site @ <http://www.pac-clad.com>

Features

- Herr-Voss corrective leveled
- UL 90 rated
- Factory-applied sealant
- Continuous interlock
- Labor-saving one-piece design
- 20-year non-prorated finish warranty
- 25 standard colors (24 ga. steel)
- 10 standard colors (22 ga. steel)
- 16 standard colors (.032 aluminum)

Why Hire *an* Architect?

Few people realize how complicated it is to build – that is, until they find themselves lost in the maze of design options, building codes, zoning laws, contractors, and so on. Because no two projects are exactly alike, there is no single, clear-cut path to follow.

The architect is the one professional who has the education, training, experience, and vision to guide you through the entire design and construction process. Architects do everything from helping you define what you want to build to helping you get the most for your dollar. They don't just design four walls and a roof – they create total environments, inside and out, that satisfy functional needs and are dynamic places to be. Whatever the size of your project, an architect can produce a well-designed building that meets your needs and works within your budget and time frame. This happens in many ways.

A Wise Investment

Architects are trained to solve problems in creative ways, translating your needs into an efficient floor plan and three-dimensional space. With their broad knowledge of design and construction, architects can show you options you might never think of on your own. And architects' services are a wise investment, not an added cost. Consider this:

▼ A well-conceived project can be built more economically. Architects plan your project with you. As ideas evolve, changes can be made on paper much less expensively than after construction has begun. Thorough drawings also make it easier for the contractor to price and build your project.

▼ Energy efficient buildings can save you money on fuel bills down the road. An architect can design a building to maximize heating from the sun and let in natural light, which reduces your heating, cooling, and electric bills over time.

▼ The architect can work with your budget and help you select the appropriate materials and workmanship at a fair price. Architects develop the drawings and specifications to help you get

bids for construction that are based on your requirements.

▼ An architect can help you choose materials and finishes that are durable as well as attractive, saving on frequent maintenance and replacement costs. Architects work to stay abreast of advances in roofing, brick, tile, paint finishes, and so forth. Their familiarity with the full range of materials enables them to suggest the appropriate ones for you.

▼ Good design sells. A well-designed house has a higher resale value. A well-designed store draws customers. A well-designed workplace attracts good employees and increases productivity.

▼ The architect can make life easier. Face it: building is a long process that is often messy and disruptive, particularly if you are living or working in the space under construction. The architect you hire looks out for your interests and tries to find ways to make that process go smoothly.

▼ If your project requires engineering or other design services, the architect can coordinate the team. The architect sorts out complex building codes and zoning laws. The architect can help you find qualified contractors based on your project's needs. The architect visits the site to verify that the project is being built according to specification.

Finding an Architect

Architecture firms come in a variety of sizes and types. Each firm brings a different combination of skills, expertise, interests, and values to its projects. Statistically, the average firm is made up of nine or ten people, but can range from one to 100 or more. Some firms specialize in one or more project types. Some include engineering services, such as civil, structural, or mechanical. They may also incorporate other design disciplines, such as planning, urban design, landscape architecture, or interiors. Other architects introduce these disciplines into their projects by involving consultants with special expertise. It is well worth investing the time required to select your architect carefully. As you move forward in the process, be reminded that you will work closely with the architect throughout the project. Invest the same care it takes to find a financial or legal advisor.

Yours will be a business relationship. Find out how prospective architects do business, how they work with clients, how responsive they are to your decision styles, and how well their work stacks up against clients' expectations. Talk with their former clients.

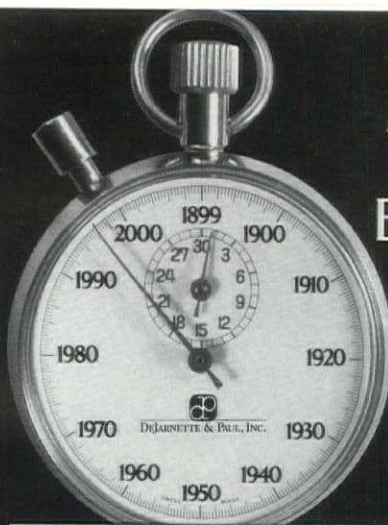

Ask questions. Respect the architect as a professional who brings experience and specialized knowledge to your project. At the same time, don't be afraid to ask: What does the architect expect from the project? How much information does the architect need? How does the architect set priorities and make decisions? Who in the firm will work directly with the client?

Be frank. Tell the architect what you know about the process and what kind of performance you expect. Ask for an explanation of anything you don't understand. The more you place on the table at the beginning, the better the chances for success.

And get it in writing. Once you've found the architect, you are ready to put in writing the terms of your agreement on the scope of work, services, schedule, construction budget, and architects' compensation. This agreement can take many forms. The AIA has developed a variety of standard contract forms which are used industry-wide. The Virginia Society AIA maintains a complete inventory of the standard contract documents. For a list of them, call us at 804-644-3041.

All told, the path to successful results is paved with many challenges. There are literally hundreds of decisions to be made, decisions which have a strong impact on how the project looks and functions. Experience tells us that successful projects result from good clients and good architects who form good professional, business, and often personal relationships. These relationships are formed early and are nourished by clear communication, mutually understood expectations, and a willingness of both you and your architect to accept your responsibilities.

This brief overview was adapted from "A Beginner's Guide to Architectural Services" and "You and Your Architect," both published by The American Institute of Architects. To order copies, write the Virginia Society AIA or call 804-644-3041.

The inside story on the York Triathlon™ Natural Gas Heating and Cooling System.

Exclusive YORK microprocessor control modulates operation for continuous comfort. Delivered air temperature averages 110° F, eliminating chilly drafts.

Precise, variable-speed engine control optimizes efficiency.

Quiet natural gas engine runs the system at variable speeds for constant, even heating and cooling, and reduced humidity.

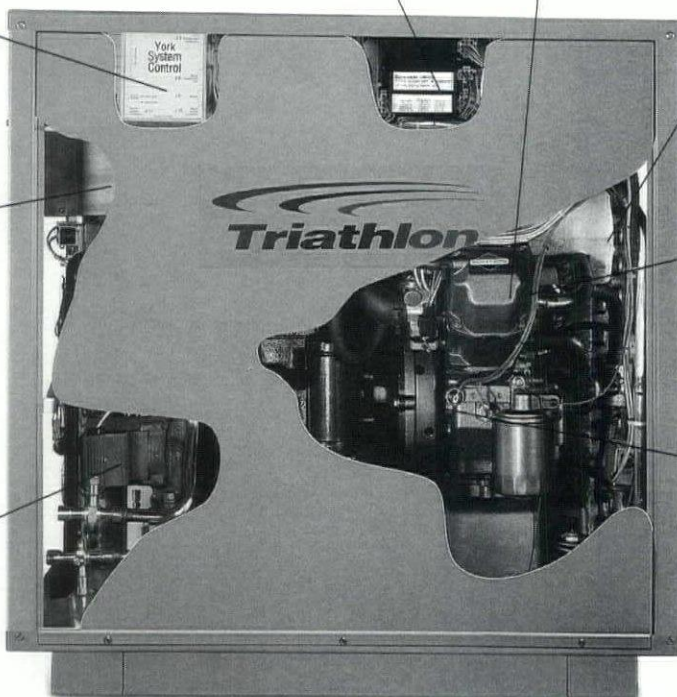

Recuperator recovers engine heat for more efficiency and an equivalent 126% AFUE.

Auxiliary gas heater provides supplemental heat for continued comfort during extremely cold weather.

Engine was designed and thoroughly tested for years of dependable operation, even under extreme weather conditions.

Heavy-duty pump sends supplemental heat indoors.

Heavy-duty compressor transfers heat to keep the home warm in winter and cool in summer. Cooling efficiency levels reach as high as an equivalent 25.8 SEER.

© 1995 American Gas Association

The YORK Triathlon Natural Gas Heating and Cooling System revolutionizes HVAC technology. The first system of its kind for residential and light commercial use, the Triathlon delivers phenomenal efficiency, unsurpassed comfort and proven durability. And because it runs on economical natural gas, its operating costs typically are lower than those of any other space conditioning equipment on the market. Join the revolution. Blue Ridge Mountain House

“The way the interior spaces are rigorously assembled and related to the site is quite compelling.”

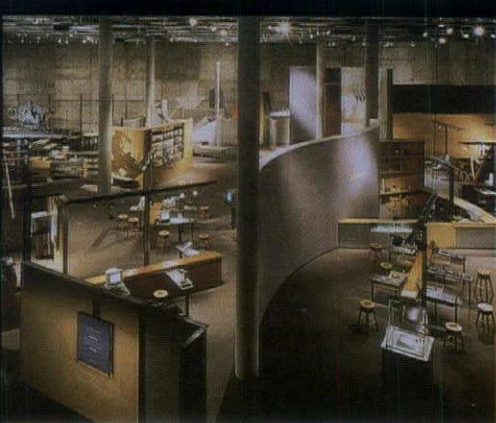

Design by:
Mashburn + Mashburn, Blacksburg

Situated on a rocky, 6-acre site looking east across a valley, this long narrow house is a series of terraces that step laterally up a mountain slope. Interior spaces are shaped by the relationship of the stepped floor to the continuously sloped roof plane. Stunning eastward views of the mountains and the desire to turn the body of the house southward for sunlight and solar warmth combined to orient the main living spaces diagonally toward the views. Radiant heating is provided directly by the concrete floor slab through which hot water circulates. While the finished house is a work of art, the choice of materials – such as corrugated galvanized steel and fiberglass roofing and siding; light wood platform framing; and double-glazed aluminum doors and windows – was governed by

practical considerations such as speed of construction, economy, low maintenance, and durability.

“The house is beautiful and quite severe,” observed juror Laurie Hawkinson. “And the simplicity of the lines is a strong gesture to the site. The roof/wall details, the windows, the interiors are all simply detailed to support and strengthen the overall concept.” Added juror Tod Williams: “This is a superb project. The way the interior spaces are rigorously assembled and related to the site, and the diversity of views, is quite compelling. And the photographs communicate the abstract nature of the overall concept and the way seemingly simple gestures can reveal a rich array of experience.”

Honor Award

Exhibition Design for The Museum of Invention

“Elements of
the exhibit are
works of
architecture
that speak to
the idea of
invention.”

Design by:
AP2 Architects, Newport News
with Hands On, Inc.

The goal in this exhibit design for Inventure Place in Akron, Ohio, was to create an environment that would give visitors first-hand experience at inventing. Following this theme, the designers strove to make a place that could reinvent itself, with staff and visitors participating in the transformation. The overall design exploits the tension between areas that are very refined and those that are more works-in-process. One of the latter aspects is an invention known as the “spline,” a modular cabinet

made of lacquered fiberboard and steel. The spline is analogous to a Mr. Potato Head toy in that exhibits can be attached, modified, and reattached to it. The architects regarded the generous use of commonplace materials such as masonite and steel as consistent with the theme of invention, reflecting an attitude of doing much with little. In the museum’s Hall of Fame, a wall for hanging photographic plaques was designed to allow flexibility as new inductees are added in future years.

The design jury lauded the way in which the exhibit design engages the space. “Many elements of the exhibit are works of architecture that speak clearly to the idea of invention, resolving problems in a unique way,” said juror Tod Williams. Juror Laurie Hawkinson noted: “While the exhibit will change, the pieces share the architectural vocabulary of the spaces within which they reside. They all share a tectonic sensibility that is praiseworthy.”

“The sequence
of movement
through the
trees is quite
beautiful.”

18

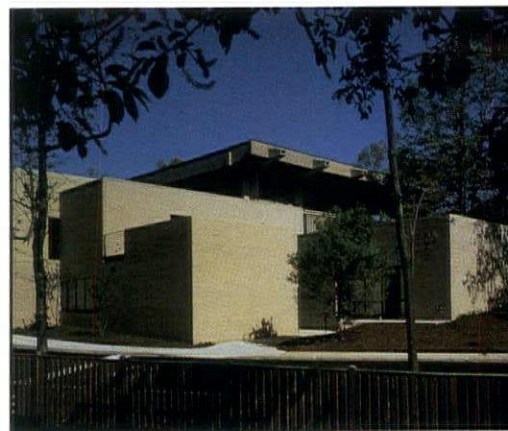

Addition to a Unitarian Universalist Church

Design by:
Kerns Group Architects, Arlington

The design of this 26,000-square-foot addition is a complement to the original church built in 1960 by architect Charles Goodman. In deference to the dominant stature of the existing sanctuary, the addition was conceived to be partially hidden in the ground, taking advantage of the sloping site. The new building provides classrooms, offices, preschool facilities, conference rooms, workrooms, and a library, social hall, activity space, and chapel. Materials were chosen to com-

plement the original building and, like the original, a system of proportions based on the golden mean was used in the design of column bays, facade organization, floor patterns, and handrails.

“The entry sequence of movement through the trees is quite beautiful,” said juror Tod Williams. “In this addition, it is not necessary to separate the existing from the new. Instead, they flow seamlessly, giving the building a strong consistency.”

Forest Middle School

Merit Award

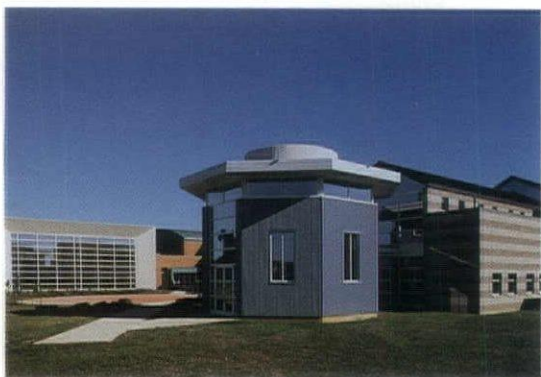

Design by:

Sherertz Franklin Crawford Shaffner, Roanoke

This 900-student middle school is designed to accommodate team-teaching through its layout of clustered classrooms. One building wing is dedicated solely to each grade level to promote the perception of a "school within a school." To emphasize the importance of learning, the architects placed the library/media center in a central location and physically separated it from the classroom block with its own distinct identity. Rooms such as the gymnasium and cafetorium were strategically located for easy access during after-school hours.

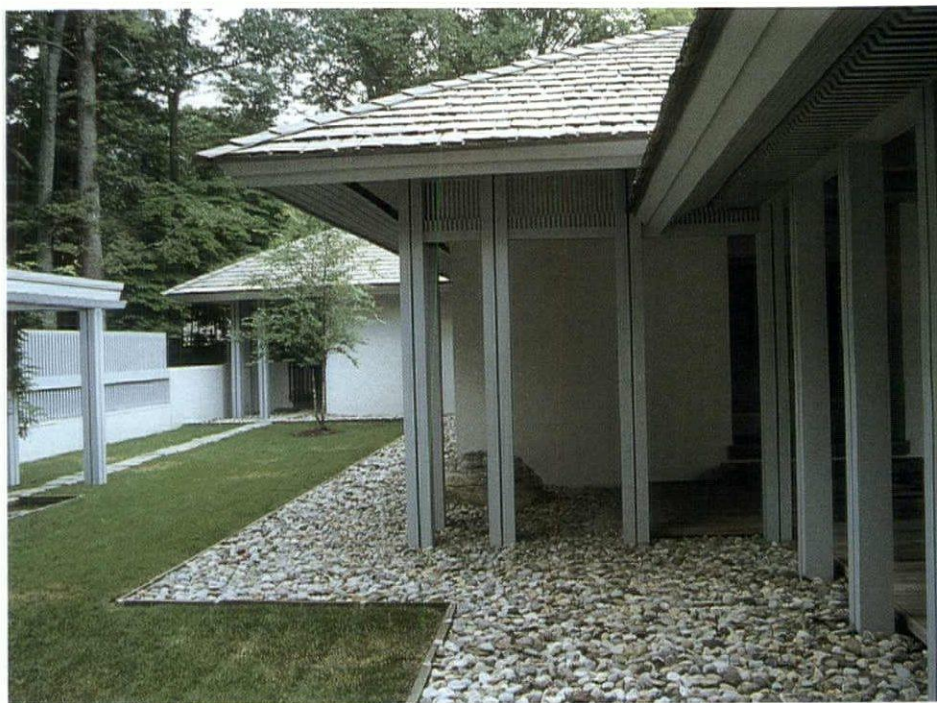

The jury agreed that this was the best of several schools submitted for their consideration. "The interiors demonstrate a good sense of material and use," said Tod Williams. "And the exterior pavilions indicate a desire to make particular the experience of the building from the outside."

"The interiors demonstrate a good sense of material and use."

Merit Award

A House on the Lower Chesapeake

Design by:
Carlton Abbott & Partners, Williamsburg

Because of the limited availability of waterfront property in Tidewater Virginia, the owners acquired an existing brick rancher on a 3-acre lot and redeveloped it to suit their needs. A new larger house and garage were added to the site. Both are connected by breezeways to the rancher, which was adapted as a studio and guest house. The new complex takes its design cues from the existing building, following the same roof

shape and adopting a similar scale. Spaces for indoor and outdoor entertaining also were an important aspect of the design. Details reminiscent of Asian architecture respond to artifacts collected by the owners in their travels to the Far East.

Juror Laurie Hawkinson praised the skillfulness of the new floor plan, especially in the way it creates new exterior spaces.

“The original house is most ordinary and so it is gratifying to see the strong transformation that has taken place.”

“And the courtyards enhance the house’s livability,” said Gio Pasanella. Added Tod Williams: “The original house is most ordinary and so it is gratifying to see the strong transformation that has taken place, creating a feeling that is vaguely Asian and establishing gentle and varied relationships among the elements of the house and landscape.”

Merit Award

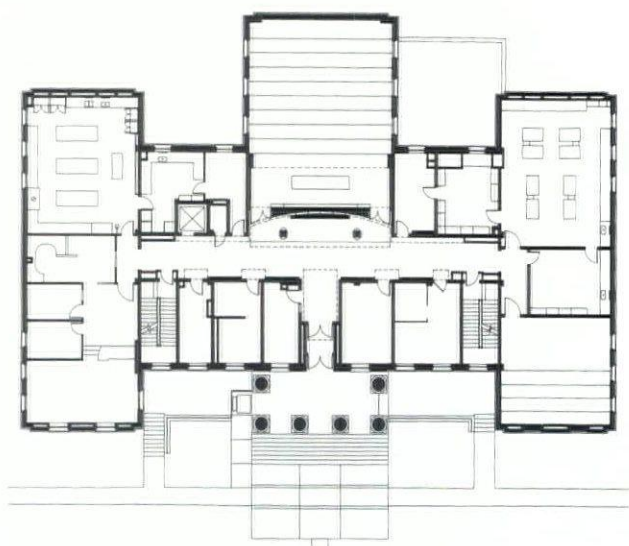

Design by:
VMDO Architects, Charlottesville

The primary focus of this project at Randolph Macon Women's College in Lynchburg was the evaluation and renovation of laboratory and classroom spaces inside the five-story building. The building was upgraded with rich materials such as cherry paneling, slate, and anodized aluminum. Using the faculty's input, the architects custom designed 26 laboratories to meet specific instructional and research needs. Major modifications of the existing building systems were required to allow for intensive laboratory use. Glass cases placed along the hallways provide a place to exhibit scientific instruments held in the college's collection. In addition, four lecture halls were designed to provide for image display from a projector driven by a variety of visual media.

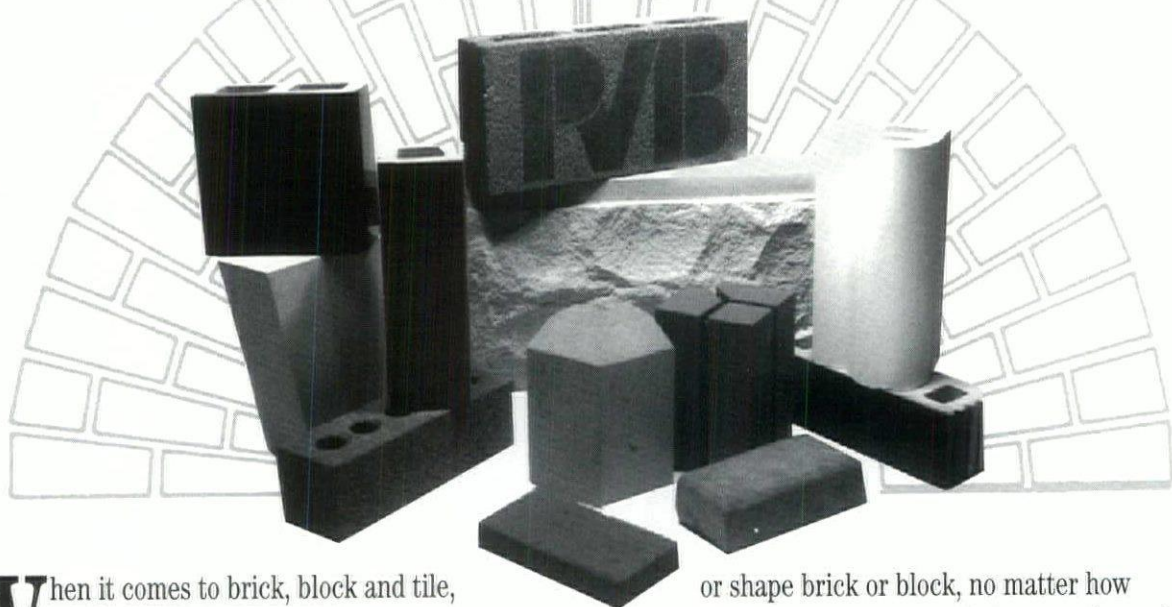

"This is a modest project, in terms of intervention, with all the moves good ones," said Gio Pasanella. Juror Laurie Hawkinson praised the clarity of the improvements in the lobby and corridors and noted how she admired the details. Added Tod Williams: "This work is thoughtfully resolved. The original entry portico is not only redefined as an entry, but that order appropriately extends into the lobby."

"This is a
modest
project, with
all the moves
good ones."

Martin Science Center

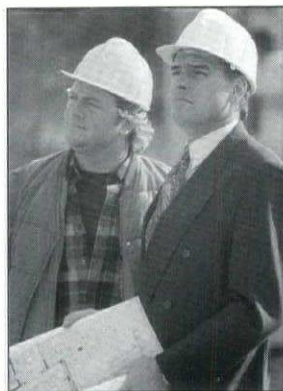

One Size Does Not Fit All.

When it comes to brick, block and tile, no name is more solid than Potomac Valley Brick. Our selection is second to none, with the top names in brick, pavers and masonry. Our people are some of the best trained in the business—so skilled that many of our customers look to us for help with their design and specs. And our level of service—from knowledgeable advice to on-time deliveries to problem solving—is the highest in the industry. We can supply any size

or shape brick or block, no matter how unique to meet your particular creative and structural objectives.

Get your next project off to the right start by calling Potomac Valley. And see why area architects, contractors, builders and homeowners begin every successful design and construction project with us.

Contact us today and experience the PVB difference.

William C. Noland Medal

Marvin J. Cantor, FAIA

24

Marvin Cantor has spent a large portion of his career working to gain architects the recognition they deserve for their technical as well as aesthetic expertise. It is their knowledge and ability that ultimately leads to the built environment – small buildings as well as skyscrapers, parks as well as monuments, and houses as well as housing projects. These are the legacies professional architects leave for the generations who follow them.

Yet all too often, architects have been left out of the decision-making loop regarding the establishment of technical standards for building safety, design, and comfort. Frustrated with the situation, Cantor focused much of his energies to promoting the role of architects and getting them included in the code-making process. This groundbreaking work, along with his building designs and service to the American Institute of Architects, earned him the 1995 William C. Noland Medal, the premier honor given to an architect by the Virginia Society AIA.

Trained in architectural engineering at the University of Illinois, Cantor attended Columbia University to continue his education. He received a M.S. in Architecture in 1953, and was immediately drafted and assigned to teach building in the Engineer Corps. Within months, a call came from the Eisenhower White House for a military architect and Cantor was transferred. He worked as an architectural draftsman for two years with the Army Signal Agency to integrate security and protective devices into special government facilities.

After the Army, Cantor found employment in a series of Washington-area architecture firms. Then in 1959 he opened an office in his home. A year later, Cantor decided to join forces with architect Elliott Gitlin. They took on a third partner and Gitlin,

Cantor basks in the spotlight at the Noland Awards ceremony with his wife, Ellen, a longtime champion of the AIA (above). His design credits include Temple Beth Emeth in Herndon (facing page), designed in joint venture with architect William Klene.

Cantor & Rosenberg worked together on local, national, and international projects until 1974. But the lure of private practice under his own name captured Cantor once again, and he set up his present home office. Sometimes he works alone, other times he has three or four architects and draftsmen working with him. Whatever the work load or the arduous hours, Cantor likes the intimacy of working from home.

By the time he established his sole practice, Cantor had a longstanding relationship with Time Out Family Amusement Centers. He had been designing the company's retail facilities and interiors in locations nationwide and, because of that far-ranging work, was registered in 17 states. But instead of easing his job, multiple state registration became a burden to Cantor. "The codes were different everywhere I worked," he complains. That was when the frustration set in. Based on having passed the licensing exam in Washington, D.C., Cantor says he could apply for a license, pay a fee, and theoretically set to work in any state. The problem was that first he had to find out which code he was designing to, then get a copy of it and understand its requirements. Although most local building codes are based on the three model building codes – the Uniform Building Code, National Code, and Standard Building Code – their language, format, and requirements differed significantly. "This really peeved me," says Cantor. "Aren't the people in Portland, Maine, entitled to the same protection as the people in Portland, Oregon?" It also means that architects working outside their local region are forced to align themselves with a local architect to make sure the appropriate code is followed.

A wee bit of investigation brought another disturbing fact to light. Architects were not involved in making decisions about building practices and codes, Cantor discovered. The rules of the game were strictly the domain of code officials, product manufacturers, and consultants. Ironically, the professional responsible for adhering to the codes had little, if any, say in their content or development.

Cantor recognized that building codes could never really serve the needs of architects unless the architects were involved in their creation. So he decided to get involved. Once he made that decision, Cantor made a beeline to the code groups to suggest that they join forces and create a single code with a common format throughout the country.

But when he first suggested the idea in 1974, the industry wasn't ready for what many considered such a radical idea. "Sixteen years later, I brought the idea up again, and they paid attention," Cantor says. "But the climate was right. The attitude of working in a global community had taken hold."

Cantor says all he had to do was point to the Americans with Disabilities Act regulations on the building industry. "Everyone hates them. My argument was that if the three codes didn't join forces to come out with a common building code, somebody in Washington, D.C., would do it for them." Within three years, the trio of regulating bodies came together to issue codes in a common format – with common sections and ordering. Already they have agreed on a single mechanical and plumbing code, and are on target to create a unified building code by the year 2000.

Cantor also became active in training young architects about the codes and how to use them efficiently. He developed a seminar for intern architects titled "A Walk Through the Building Code," which he presented at chapter- and state-sponsored sites. He also took part in publishing *An Architect's Guide to Building Codes and Standards*, a book produced to increase architects' understanding of codes. When national AIA staff learned of Cantor's training program, they asked him to speak at the national convention, which he has done for the past few years to positive reviews. Cantor plans to make a continuing education video with the AIA so that more architects can benefit from this knowledge.

When he is not attending code group meetings, Cantor continues with his architectural practice. Much of his work is for foreign governments, including the project that he describes as one of his biggest achievements: the design of a chancery for the German Democratic Republic. The commission also proved to

be a major disappointment when it didn't get built because the two German states reunited.

Over the years, Cantor has been active in professional affairs, serving as a director and officer of the Virginia Society AIA. In 1989, he was President of the Virginia Society. As the motivating force in organizing the Virginia Society AIA/BOCA Professional Chapter, he was vital to creating the first such chapter offering design professionals a voice in the code-writing process. And, through his community involvement at the state and local levels – serving as chairman of the Fairfax County Building Code Board of Appeals, the Commonwealth of Virginia Building Code Advisory Committee, and the state's Technical Review Board – he has carried the architect's vision and concern for public safety into the heart of his community. During a moving acceptance speech at the presentation of the Noland Medal, Cantor revealed his pride in being an architect. "Architects were responsible for designing the beautiful, soaring cathedrals that we all admire today. That's a profession I am proud to be a part of. And I evidence the same pride when I stand beneath the St. Louis Arch, recognizing it as a symbol of a city, of a state, even of a nation opening up to the west. Or seeing Fallingwater for the umpteenth time and knowing that the architect Frank Lloyd Wright is as well known in this country as any world leader."

Cantor advises architects to forget the economic disparity between themselves and other professionals, forget the inordinate liability placed on their shoulders for the safety, health, and welfare of the public, and remind themselves instead that they are part of one of the most skilled and admired professions. That attitude has informed his distinguished career.

Architecture Medal for Virginia Service

Jean Packard

In 1984, Virginia architects established the Architecture Medal for Virginia Service – the Society's most prestigious public award – to honor an individual or organization that has made an unusually significant contribution to Virginia's manmade environment or to public awareness of that environment. Jean Packard, a longtime activist in planning and environmental efforts, received this distinction in 1995.

Packard has shown an admirable perseverance in her work to protect and conserve our resources and the beauty of our environment. As early as 1968, before such causes were fashionable, she served as president of the Northern Virginia Conservation Council. She has been a constant force in Fairfax County planning issues, serving terms

as chair of the Fairfax County Board of Supervisors, vice chair of the Northern Virginia Regional Park Authority, and president of the Metropolitan Washington Council of Governments. She has been a director of the National Sierra Club, and a trustee of National Parks and Conservation. In the mid-1980s, she was editor of *Parks Magazine*, published by the International Union for the Conservation of Nature and Natural Resources and, in the late 1970s, managed an Environmental Protection Agency outreach program to advise elected officials on the Clean Water Act. Currently she serves on the Natural Resources Task Force of the President's Council on Sustainable Development, and is a board member of the state Sierra Club chapter and the Fairfax Land Preservation Trust.

Tom Kolesich

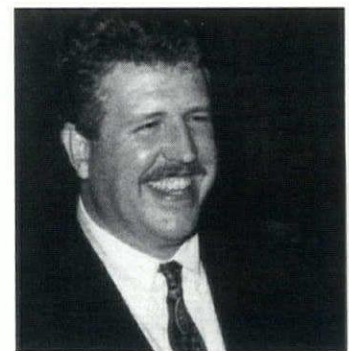

Society Honors

THE RECOGNITION OF SOCIETY HONORS MAY BE GIVEN TO INDIVIDUALS OUTSIDE THE AIA WHOSE EFFORTS COMPLEMENT THE WORK OF THE ARCHITECTURE PROFESSION. TWO SUCH AWARDS WERE GIVEN IN 1995.

Henry Cersley

Brickmason Henry Cersley is a widely acknowledged masonry conservator who has practiced historic masonry repair and rebuilding for 23 years. He has worked on landmarks such as Monticello, Poplar Forest, Homewood at Johns Hopkins University, Glen Echo in Albemarle County, and The Wigwam in Amelia County. His meticulous work at Monticello included repairs to the house's chimneys and the privy skylight, in addition to hand-forging interior and exterior metal fixtures. His current work involves the rebuilding of the south portico of Jefferson's Poplar Forest home.

Bruce Cody

In 1985, Bruce Cody began a custom commercial woodworking business, Architectural Wood, seeking to fill a void in the market for architectural detailing. Cody is a former sculptor, jeweler, and commercial woodworker. His work can be admired at a variety of high-visibility locations, including the Hotel Roanoke, Duke University, First Union Bank Executive Offices, and The Homestead. For his accomplishments, he already has been recognized by the Architectural Woodwork Institute and in 1994 received the AIA Blue Ridge Craftsmanship Award.

T. *David Fitz-Gibbon Architecture Firm Award*

Carlton Abbott and Partners, P.C.

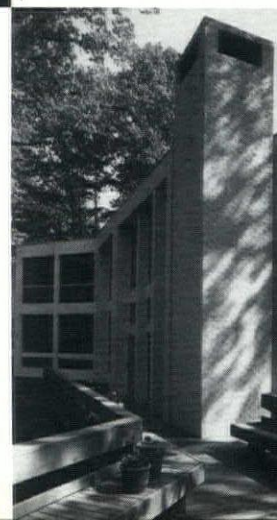

In the history of the Virginia Society AIA, only four firms have been selected to receive the T. David Fitz-Gibbon Architecture Firm Award, given to a Virginia-based architecture firm that has consistently produced distinguished architecture. The winner in 1995 was Carlton Abbott and Partners, P.C., a 21-year-old Williamsburg firm that has carried on the tradition begun by the late Stanley Abbott and his son Carlton in 1968. Over the years this firm has produced architecture of the highest quality, designing in sympathy with the landscape.

Abbott first emerged as a design talent in 1968 by winning a statewide award for his parents' house. Soon he won another for a bridge in a Richmond park. It was the first in a long line of park structures, visitors centers, and museums that have become the hallmark of the firm, which has earned nearly sixty state and chapter design awards with a practice that extends along the entire Eastern Seaboard. Increasingly, the firm's interdisciplinary nature has led to work in the areas of planning and landscape architecture – even the creation of visual guidelines for scenic roadways such as the Blue Ridge Parkway. Many of the firm's projects succeed because of its rare combination of disciplines.

Award for Preservation

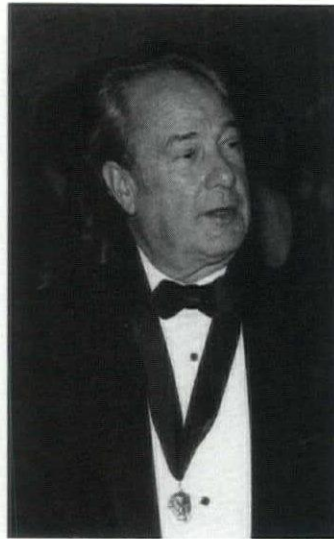

THIS AWARD TO RECOGNIZE HIGH ACHIEVEMENT IN THE REALM OF HISTORIC PRESERVATION CAN BE GIVEN EITHER TO AN INDIVIDUAL OR ORGANIZATION. IN 1995, TWO AWARDS WERE GIVEN.

31

Hugh C. Miller, FAIA

Hugh Miller's expert knowledge has earned him an outstanding reputation in the field of preservation both in the U.S. and abroad. Frequently called upon by historic houses and museums for consultation, Miller distinguished himself as Chief Historical Architect of the National Park Service. During his 28-year career in the Park Service, he was responsible for preservation planning for the Chicago School Skyscrapers, Pennsylvania Avenue in Washington, and architectural projects such as Independence Hall. He served as executive assistant for the Statue of Liberty/Ellis Island restoration project. A dedicated public servant, Miller came to Richmond as the first director of the Virginia Department of Historic Resources, which was elevated to department status in 1989. In support of this nomination, former Governor Gerald Baliles praised Miller's "national stature, cultural sensitivity, and outstanding record of creative service." In addition to his work on behalf of preservation organizations around the world, Miller was 1995 chair of the national AIA Committee on Historic Resources.

Miller (above) served as the first director of the Virginia Department of Historic Resources. After years of neglect, Jefferson's Poplar Forest (top) is being restored with the benefit of careful study.

The Corporation for Jefferson's Poplar Forest

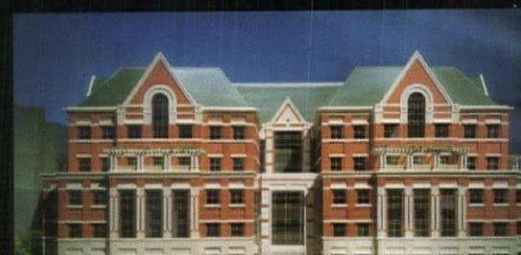

This organization was formed in 1983 to rescue Thomas Jefferson's Poplar Forest retreat. At the time, only 50 acres of Jefferson's 4,000-acre plantation remained, with surrounding farmland being sold to residential developers. The remaining house and outbuildings were purchased for \$1.7 million and, over several years, adjacent land was bought in order to preserve 473 acres for a total purchase price of \$3.4 million. After ten years of commitment, the corporation has succeeded in paying off the acquisition loans and initiating a model restoration project. They have followed the highest standards for the program of stabilization, research, conservation, and continuing restoration. And the on-site research already has contributed to the body of knowledge about Jefferson's ideas on architecture, landscape architecture, and the life of a private citizen. Of equal note is the corporation's strong commitment to realizing Poplar Forest's potential for cultural and educational benefit by keeping this work-in-progress open to public view.

Distinguished Achievement Award

THIS HONOR IS PRESENTED AS A MEANS OF SIGNALING DISTINGUISHED ACHIEVEMENT BY AN ARCHITECT IN ANY ONE OF THE FOLLOWING CATEGORIES: DESIGN, PRACTICE, EDUCATION, SERVICE TO THE PUBLIC, AND SERVICE TO THE PROFESSION. IN 1995, THREE MEMBERS OF THE VIRGINIA SOCIETY AIA RECEIVED THE AWARD.

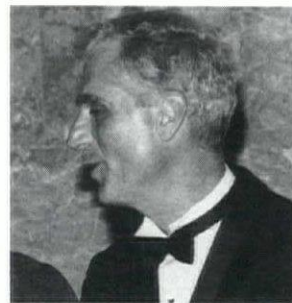

Timm L. Jamieson, FAIA

Timm Jamieson is a principal of Hayes Seay Mattern & Mattern in Roanoke. Notable among Jamieson's achievements is his long-term effort to direct and promote urban planning and revitalization of the core of his adopted hometown of Roanoke. Through his efforts, public art has been placed throughout western Virginia, and Roanoke has adopted an official policy that 1% of all civic building funds will be dedicated to the purchase of public art. In addition to his leadership of the Roanoke Arts Commission, Jamieson initiated and implemented a ten-county regional high school art exhibition which has grown to serve as a springboard for collegiate scholarships for many participants. He has served on the boards of directors of many Roanoke cultural organizations during critical phases of growth, including Mill Mountain Zoo, Mill Mountain Theatre, and the wilderness history park Explore.

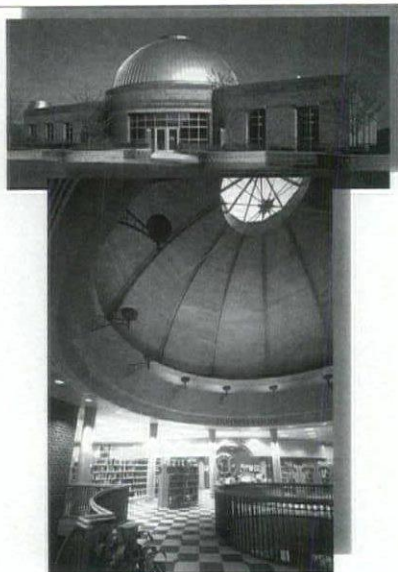

J. Everette Fauber III, AIA

J. Everette Fauber was cited for nearly 40 years of service to architects in serving on statewide AIA committees. Known to many by his nickname "Ebo," Fauber is a principal of Fauber Architects of Lynchburg. He served a four-year term as a member of the Architecture Section of the Board for Architects, Professional Engineers, Land Surveyors and Landscape Architects and was chairman for two of those years. He recently completed a five-year term on the Architect Registration Exam Committee of the National Council of Architectural Registration Boards. He is a past chair of numerous Virginia Society and Institute committees, and has been a leader of many Lynchburg-area planning and economic development organizations, including his role as president of the Governing Council of the Blue Ridge Region of Virginia.

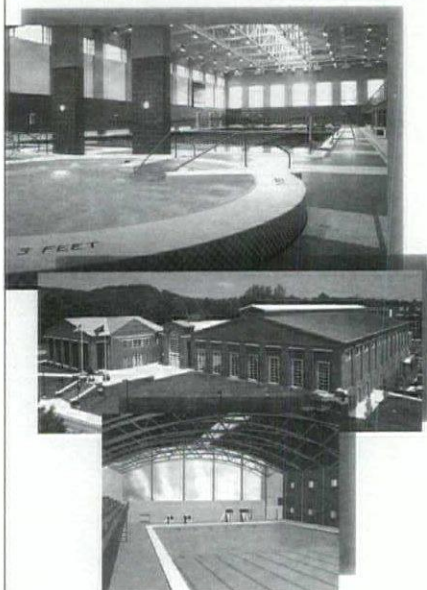

James J. DePasquale, AIA

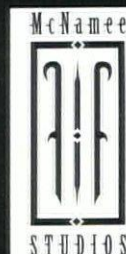

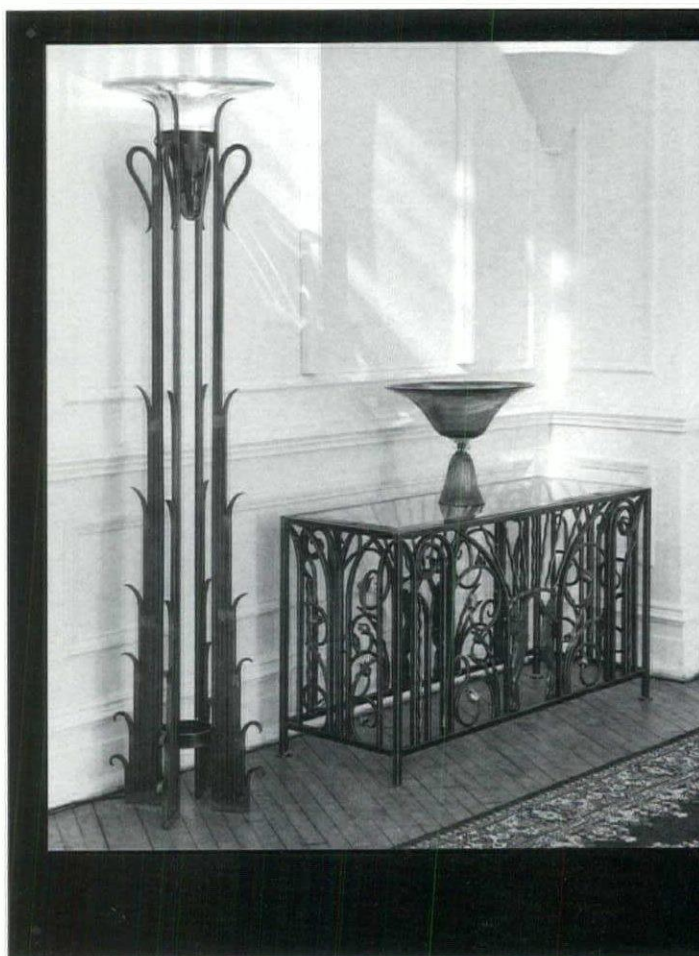

James DePasquale is a principal of the DePasquale Gentilhomme Group in Richmond. His commitment to monitoring and acting on legislative issues vital to the profession in Virginia is one among many assets he brings to the AIA. He has served as chair of the Compensation Review Task Force, which in 1994 presented a white paper stipulating a complete overhaul of the process used to establish fees for state projects. These recommendations are slated for inclusion in the Capital Outlay Manual. In addition, DePasquale has served as the Society's representative to a legislative advisory committee on Business, Professional, and Occupational Licensing Taxes. He was a key participant in V-Quest, an initiative to develop educational and facility goals for Virginia public schools in the 21st century. In addition, DePasquale has contributed to joint efforts by the design professions in drafting recommendations for state design-build and construction management procurement practices.

Wessynton

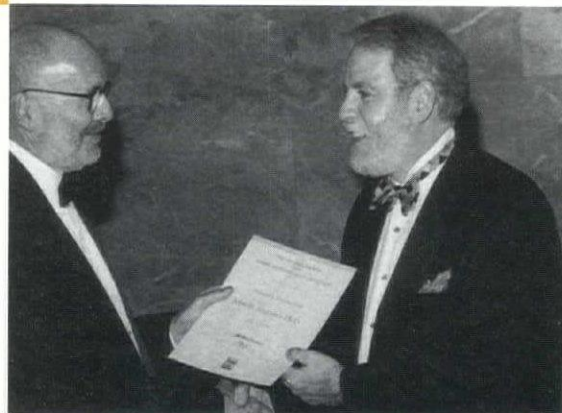

This award, first created in 1981, is designed to recognize the lasting value of good architectural design. To qualify, the project must be no less than 25 years old and must function in essentially the same manner in which it was designed. In 1995, the award was bestowed on Wessynton, a residential development near Alexandria. A secluded subdivision of 155 homes built from 1966 to 1969, Wessynton is located adjacent to the Mt. Vernon historic site on land that was part of George Washington's principal farm, the "Mansion House Farm." Designed by the Washington, D.C., firm of Deigert and Yerkes under the direction of project architect Nicholas A. Pappas, Wessynton demonstrates the value of comprehensive, well-considered design in housing developments by uniting site, nature, and building form, materials, and color. In the context of a speculative housing industry that is focused on traditional design, Wessynton stands as a tribute to those who conceived an aesthetic that is brave but simple enough to weather the passage of time. Wessynton also was cited for its residents' success in perpetuating the original guidelines for siting and building forms to maintain its distinctive character.

Test of Time Award

Honorary AIA

Robert Guffey (above, at left) receives a warm embrace from AIA Regional Director Helene Dreiling. VSAIA Executive Vice President John Braymer (at right in photo, right) is congratulated by Society President Donald Sunshine.

Roberta J. Guffey

As Executive Director of the West Virginia Society AIA, Roberta Guffey was honored for her 13-year leadership of the West Virginia component and success in recruiting 94% of eligible architects into the AIA. She was instrumental in having West Virginia adopt a statewide building code, organizing over \$11 million in flood relief after extensive flooding in 1985, and operating a high-profile Search for Shelter program. She is also responsible for organizing and facilitating the Greenbrier Leadership Conference for component leaders in the region, which is being used as a model for leadership training nationwide.

John W. Braymer, Ph.D.

Since assuming his post as Executive Vice President of the Virginia Society AIA in 1986, John Braymer has distinguished himself through his leadership in bringing the Society to financial stability, for the development of Building Virginia, for overseeing the restoration of The Barret House, and for coordinating the launch of Inform magazine. In 1995, he was president of the Council of Architectural Component Executives and, as such, served on the AIA national board of directors. He has participated on the national Government Affairs and Professional Development advisory committees and in 1994 chaired the Component Structures Task Force.

FIRST

If you are trying to locate architects in a particular area, but don't know the firm by name, look in the index that begins on page 95. That's organized by city and town.

SECOND

If you know the name of the firm you are trying to locate, simply thumb through the following pages and find the name in the alphabetical listing.

THIRD

Here's what you will find under the firm listing.

1 Name, address, and phone number.

2 Principals and Firm Personnel

If you want to talk about a possible commission, ask for the person listed as "client contact." If you want to talk to the firm about using a new product or service, ask for the person listed as "vendor contact." In smaller firms, these contacts will be the same person.

3 Principal areas of practice

While architects pride themselves on being generalists, many firms develop particular strengths over the years. This listing includes the four most important areas of a firm's practice, though other project types aren't necessarily excluded from the range of work a firm is qualified to do.

4 Firm specialties

Here is where many firms take the opportunity to elaborate on the types of work they do or to make qualitative statements about how they go about practicing their profession. This statement may help you understand the intangible qualities of the firm a little better.

5 Recent projects

We have limited each firm to naming no more than five of their recent completed buildings. Take note: Many of the buildings may have been recognized for design excellence or other attributes. If you are considering hiring this firm, go take a look at some of the buildings first and ask the building owners about their level of satisfaction with the results.

LAST

A few words about this directory. Contained here are the architecture firms which have a member of the Virginia Society AIA as a principal. There may be other principals and employees at the firm whose names are not listed. The information published here is provided by the firms and we assume it to be accurate, though we do not assume liability for its accuracy.

Firm Specialties

Our practice is small and personal. We seek to create architecture that in some way makes a positive contribution to the built environment and is also responsive to the aspirations of the owner. This is a challenging enterprise whatever the building type. But whether the project is a single house or a large scale office, we believe that if it's worth doing at all, it's worth doing well. Our clients and our planet deserve nothing less.

Recent Projects

Relocation and addition to a plantation dependency, Gloucester (AIA James River Design Award); Williamson residence, Urbanna (AIA James River Design Award); Wake residence, Deltaville; Commons Townhouses at Kanawha Trace, Richmond (Virginia Society AIA Design Award, 1988); Parkview Townhouses at Kanawha Trace, Richmond (AIA Hampton Roads design award)

Our history demonstrates our attitude and our success in producing facilities or solutions needed by the community. The architect applies his skills and knowledge from past projects to the client's program requirements in producing a program, design, and construction cost estimate. Attitude drives us to perform beyond the basics in addressing an issue immediately, and maintaining communication with the client's needs. ASA consistently demonstrates its ability to perform at this higher level.

CCAP specializes in long term relationships with institutional clients. We begin with a master planning process which defines the vision and the resources and commitments necessary to reach that vision. This process has led to a number of educational commissions in athletic facilities, dormitory renovation and academic space planning. Civic projects resulting from our master plans include jails, courthouses, and human service facilities. In addition, we design fine new homes and church master plans and facilities.

Recent Projects

Athletic center, fieldhouse and outdoor tennis complex, Virginia Episcopal School, Lynchburg; Central post sentence facility, Blue Ridge Regional Jail, with renovation of four local jails for pre-sentencing, Lynchburg; dining hall, Fork Union Military Academy, Fork Union; master plan, Averett College, Danville; alterations and additions, Dearington Elementary School, Lynchburg

Fairlamb Sadler + Whitehead Architects, P.C., was incorporated in January 1996 with a vision of providing architectural services to commercial, government, and residential clients seeking to adapt and reuse existing buildings. The three principals met as intern architects in the early 1980s, gaining extensive experience in rehabilitating several landmark structures in Richmond. The firm offers full historic preservation services, including evaluation, planning, and investment tax credit applications.

A 2000-year-old building technique that can help you make a lasting impression.

It combines the warm beauty of massive wood timbers and the intricate joinery of fine furniture.

It imparts an instant sense of strength and permanence.

It is incredibly energy efficient.

It can be used to create wide-open, soaring spaces filled with glass and light. And to define an intimate room or corner.

It is not a log cabin. It is not a prefab. It is not microlam.

It is timber framing. And it could be exactly what you need to make your next project uniquely impressive.

**Dreaming Creek
Timber Frame Homes**

The architect's vision comes to life as a Dreaming Creek crew erects timber framing we designed and built for a spectacular 19,000-square-foot residence in Sundance, Utah. Architect: Babcock Design Group, Salt Lake City, Utah.

From the primeval forests to the banks of Dreaming Creek.

Whoever it was that first used a timber to frame a shelter is a fact lost in the dense forest of prehistory. What is generally accepted is that the invention of basic joining techniques like the mortise-and-tenon joint between 500 and 200 B.C. enabled builders to practice a simple form of true timber-frame construction (not to be confused with the log cabin, which is an entirely different way of building).

Refined over the centuries in medieval Japan and Europe, timber framing nevertheless became almost a lost art—until recently. Our company, headquartered on the banks of Dreaming Creek just outside Richmond, Virginia, has been proud to play an ongoing role in timber framing's revival.

Today Dreaming Creek Timber Frame Homes has two full-time beameries cutting timbers for buildings we are framing in various parts of the country—buildings ranging in size from a few hundred to over 19,000 square

feet. We also have an in-house design staff experienced in working with architects, designers, and builders who want to incorporate the beauty and strength of custom-designed timber framing into a wide variety of modern structures.

Everyone at Dreaming Creek has strong feelings about craftsmanship and about working with natural materials. In the techniques they use—mortise-and-tenon joints, lap joints, dovetails, and the like—our timber framers actually have more in common with a cabinetmaker than they do with the average carpenter.

We also care very much about doing something good for the planet. We've taken

pains over the years to make sure the things we build and the manufacturing techniques we use are compatible with good environmental practices.

Along those lines, here are a few facts you may want to think about when considering working with Dreaming Creek:

- The energy efficiency of a Dreaming Creek structure is as important to us as its appearance—and our designers are experienced in finding ways to ensure that the two go hand in hand.
- For every timber-frame structure we build, we plant 500 new tree seedlings.
- Whenever possible we try to recycle timbers from old buildings and other structures (these timbers can be especially beautiful). From time to time, we have also been able to salvage trees blown down in violent storms (one of the mixed blessings of a hurricane or tornado).

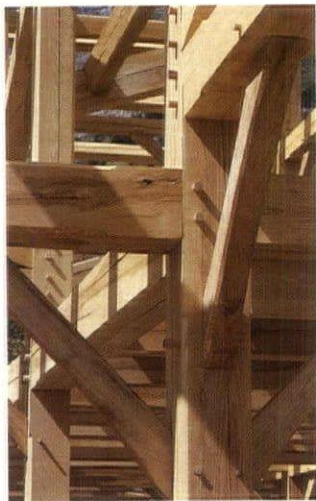

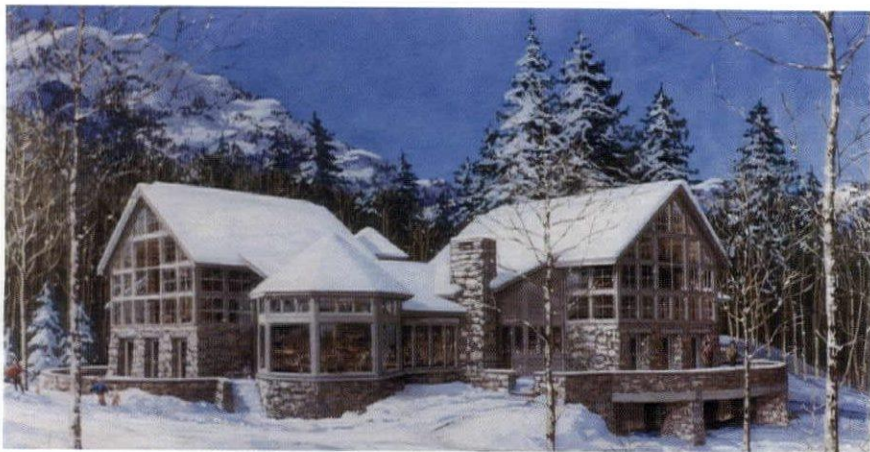

Is it traditional? Is it contemporary?

One of the beauties of timber-frame construction is that it complements a variety of architectural styles—traditional, contemporary, and many things in between. Some architects and builders use timber-frame construction to recreate classic home styles like the New England saltbox or a Cape Cod. Others chose to emphasize the wide-open interior spaces and expansive use of glass that are possible with timber framing in order to create a very contemporary feel in the homes and commercial structures they build. In many cases, people find that timber framing is the ideal way to integrate the lines and details of a traditional structure with floor plans and amenities that better suit the way we live and work today.

Timber framing allows the use of a full range of exterior and interior treatments and a wide variety of door and window styles. Wood timbers also harmonize beautifully with materials like brick, stone, and tile.

Another important point: Because timber frame structures tend to *feel* spacious, many people think the technique is only for large structures. The fact is that timber framing is highly adaptable to smaller structures such as room additions, garages, gazebos, pool houses, and the like.

06170 / DRE
BuyLine 7507

Sundance, Utah: timber framing designed to highlight mountain scenery and engineered to comply with the strict building code of an area prone to high winds, earthquakes, and heavy snow loads.

How we work with architects, designers, and contractors.

Designing. Achieving a balance between function, form, cost, and energy efficiency is essential in any building endeavor. Timber-frame construction, because of its many special characteristics, calls for some special experience at the planning stage.

Dreaming Creek has on staff several designers who are experienced in working with architects, designers, and contractors to incorporate timber framing into many different

sizes and types of structures. Our designers collaborate not only in working out design and engineering aspects of the frame itself, but also floor plans, interior and exterior sheathing, electrical and mechanical systems, and the like. They are also well versed in the application of alternative energy systems such as solar heating in timber frame structures.

Building. Dreaming Creek's primary role in the building process is to cut and prepare the individual frame members in our beamery, transport the timbers to the site, assemble the pieces on location, and erect the frame. We can also handle every aspect of ordering and installing stress-skin panels (see back).

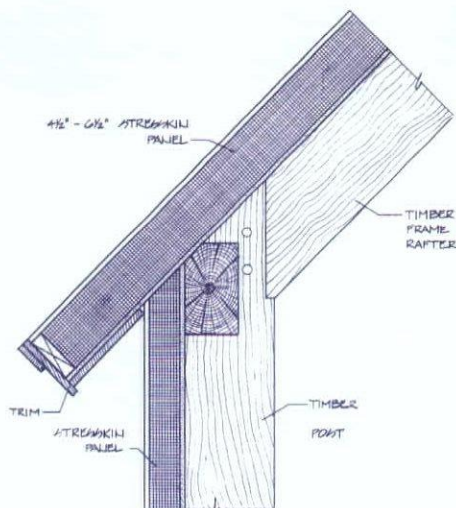

We are available to work with subcontractors such as plumbers, electricians, and heating and air conditioning people who may be less familiar with how to install systems in timber-frame structures and stress-skin panels. Often we can help a contractor find local tradesmen who are familiar with timber frames (although it is quite easy for any qualified tradesman to adapt his methods to timber framing).

In most cases, our customers employ a general contractor, and we serve in both a subcontractor and consultant role.

How much does timber framing cost?

Timber framing can cost about the same as conventional framing for structures of comparable size and quality. Also, the stress-skin panels we recommend for exterior walls cost about the same as a stud-framed wall when the greater labor costs of stud-wall framing and insulating are taken into account. And then some other economies of timber framing and stress-skins come into play.

Timber construction creates a frame so strong and stable, its structural integrity can endure for centuries—or even longer. In combination with stress-skin exterior panels, timber framing also provides an extraordinarily high level of energy efficiency that can result in significant savings in heating and cooling costs.

Stress-skins: an energy-efficient solution for exterior walls.

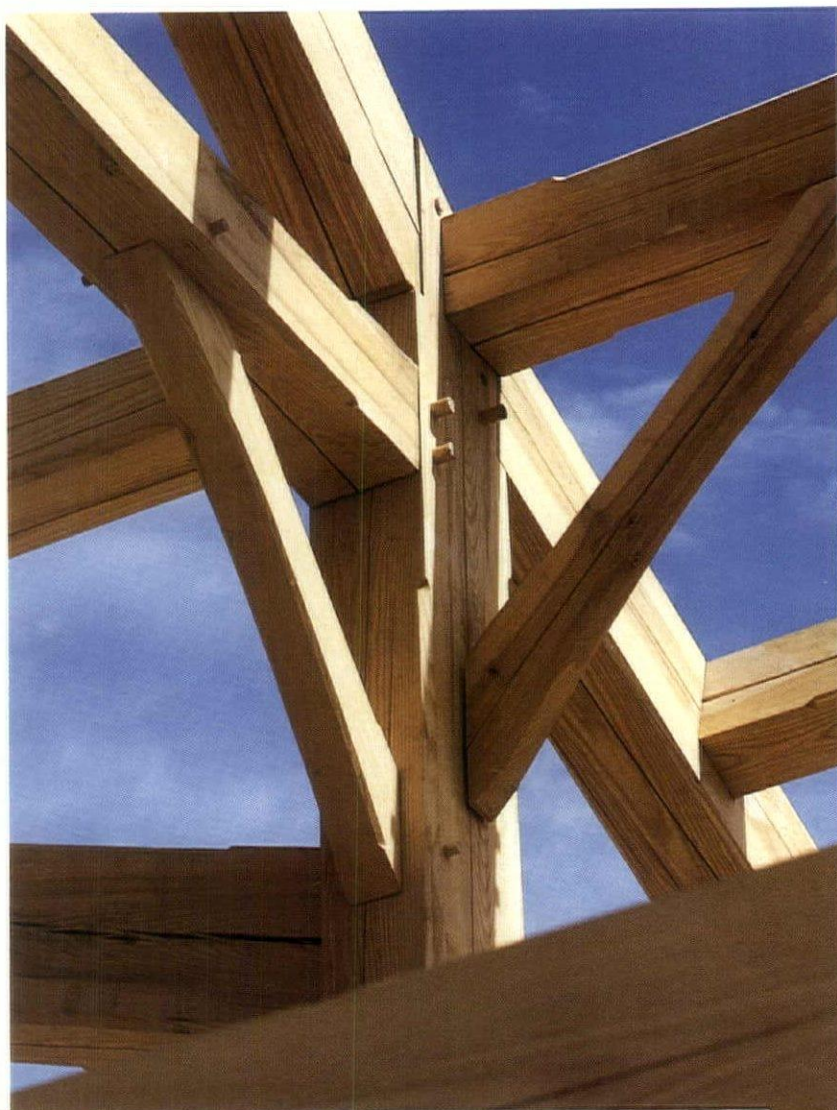

To leave as much as possible of the beautiful timber framing exposed on the interior of a building while providing high energy efficiency, we recommend blanketing the entire building exterior with laminated foam-core stress-skin panels to create the exterior walls and roof decking. The panels we recommend consist of a high-density, high-R-value expanded polystyrene foam (no CFCs are used to produce EPS foam) that is sandwiched between two layers of substrate, such as wafer-board, drywall, paneling, etc. Stress-skin panels that use other insulating materials are also an option.

The use of stress-skin panels creates an unbroken layer of insulation throughout the wall and roof systems of the structure. Wall building, insulating, and exterior sheathing installation are combined in one relatively easy step, reducing labor costs in comparison with building a wall with 2x4s. The panels can then be finished with a variety of covering materials, such as siding or shingles on the exterior and drywall, wallpaper, or wood paneling on the interior. The choices are many.

The properties of wood, the beauty of wood.

Many strong and beautiful woods are suitable for timber framing. Oak, ash, Douglas fir, pine, cherry, walnut and cedar are among the species we have used at Dreaming Creek.

Most timbers are crafted and the frame is assembled while the wood is still green. Due to their thickness, new timbers cannot be easily kiln- or air-dried. Instead, timber framers learned long ago how to create joints that would actually improve in strength as the wood dries naturally over time. The drying process also produces splitting (called checking) that is structurally harmless and that enhances the natural appearance of the frame.

**Dreaming Creek
Timber Frame Homes, Inc.**

Member, Timber Framers' Guild of America

If the idea of building a conventional building goes against your grain, contact Bob Shortridge, President, or Steve Arthur, Chief Designer, at Dreaming Creek Timber Frame Homes in Powhatan, Virginia, to discuss the many possibilities of timber-frame construction.

Firm Specialties

Frazier Associates is an architecture,
interior design and planning firm that
specializes in historic preservation. The
principals of the office have over thirty
years' experience in the public and private
sectors in historic architecture,
preservation planning, and community
revitalization. The firm is experienced in
restoration, rehabilitation, and adaptive
use of historic buildings and new
construction in historic districts. They
have prepared numerous design
guidelines publications and implemented
facade improvement programs
throughout Virginia.

Principal Areas of Practice

Single-family Residential, Commercial,
Multi-family Residential, Office Buildings

Firm Specialties

Gwyn Gilliam has practiced architecture
for fifteen years, and has designed a wide
variety of building types both in this
country and abroad. The guiding force in
her work is understanding a particular
client's rituals and requirements in order
to design a building to reflect and support
them. Her buildings relate clearly to the
traditions of architecture yet acknow-
ledge the spirit of the present through
attention to detail and the unique use of
materials.

Principal Areas of Practice

Hotel/Restaurant, Religious/Cultural,
Interiors, Historic Preservation

Firm Specialties

Context, fit and appropriateness of each
project characterizes the firm's practice,
which is founded on the strong conviction
that the creation of successful buildings
and spaces is best served through a
collaborative process with the client. Our
approach makes little distinction between
architecture and interior design and has
produced a good portfolio of projects,
which have received local, regional, and
national recognition. The firm's present
clients are primarily institutions in the
public realm.

Recent Projects

Renovations, The Homestead Hotel, Hot
Springs; library, Union Theological

Religious/Cultural, Interiors, Education, Health Care

Firm Specialties

Established in 1984, Intec Group, Inc., is a dynamic architectural and interiors design firm offering a broad range of professional services. In addition to the typical architecture and interior related

design services, Intec Group offers asset management, master planning and programming, building and code analysis, tenant space planning, construction administration, furniture and furnishings procurement, relocation management, computer aided architectural design, design consultation and compliance with ADA requirements. Intec is primarily a commercial design firm specializing in religious facilities.

Recent Projects

St. Elizabeth Ann Seton Church, Lakeridge (Virginia Masonry Council - Excellence in Masonry Award); school and gymnasium addition, St. Joseph Parish, Herndon; addition and renovations, Embassy of Indonesia, Washington, D.C. (Associated Builders and Contractors, Washington and Virginia chapters, Certificate of Merit for Excellence in Construction); offices for Drs. Zussman, Smith, Dolan & Lane, Oakton; Century National Bank, Washington, D.C.

Principal Areas of Practice

Commercial, Multi-family Residential, Single-family Residential, Accessibility Issues

Firm Specialties

At present the firm concentrates on commercial projects, leaning toward shopping center design and tenant plans. We handle all phases and types of residential from additions to multi-family housing. Additionally, we have a portfolio of medical and municipal projects completed in the past. No project is too small or too great to be attended to by the firm through a network of professionals in all aspects of building design and construction.

Recent Projects

Potomac Mills Outlet Mall (various tenants), Woodbridge; Sully Plaza (various tenants), Chantilly; ADA surveys of multi-family housing, W.H.H. Trice Co., Washington, D.C.; Magrogan residence, Fauquier Co.; addition, Budge residence, Fairfax Station

Firm Specialties

The firm principal has 24 years of
 experience and has worked on many
 building types and projects of both very
 small and very large scope. The
 residential design of the firm involves
 both new construction and additions
 and renovations. We work closely with
 homeowners in order to develop their
 ideas into functioning pleasant spaces.
 The commercial work also includes new
 construction and renovation or
 adaptive reuse of existing space. Great
 attention is paid to clients' program,
 budget, and time constraints.

Recreational Facilities, Single-family
Residential, Institutional, Planning

Firm Specialties

This firm specializes in the highest quality
residential, institutional, golf, and country
club projects. It has completed these all
over the state of Virginia, all contiguous
states, and Florida. Our goal is to produce
timeless design, often quite traditional, yet
always to address the lifestyle issues of
the day as well as the future. Integration
of the structure into the site and the
handling of its landscape is of absolute
importance to this firm.

Firm Specialties

Rust Orling + Neale Architects has been providing architecture, planning, and interior design services to the public and private sectors since 1979. Our primary focus has been in land planning and the design of housing, commercial office buildings, and corporate facilities. Project experience also includes the design of museum and exhibit spaces, conference and meeting spaces, shopping centers, retail shops, restaurants, and light industrial buildings. This experience has translated to suburban sites where other contextual influences form a framework for design.

Recent Projects

Multi-family Residential

Firm Specialties

SMBW has produced award-winning office buildings, operations centers, and interiors for the corporate and development community. The firm's commissions are distinguished by a quality of design and execution achieved within the often tight business constraints of each client's *pro forma*. Particular emphasis is placed on shaping the building envelope and its interior environment to meet the precise programmatic needs of each user. The firm has recently extended its practice to include projects for research and development. Other project types include the adaptive reuse of historic urban structures for mixed-use multi-family housing and business tenants.

Multi-family Residential, Office Buildings, Government Facilities (federal, state), Planning

Firm Specialties

Services are based on over 30 years of experience with firms such as Mies van der Rohe, McGaughan and Johnson, and Holle Lin and Shogren, P.C. Client needs are professionally addressed from feasibility and site selection studies to design, construction, occupancy, and beyond. Close attention to scheduling and fiscal constraints has resulted in many repeat commissions. Projects have ranged from customized accessibility modifications and new use renovations to town planning and multi-use, high-rise building complexes for government and private clients.

Recent Projects

Completed while affiliated with firms noted above: Fairways North and South apartments, Leisure World, Silver Spring, Md.; Vista International Hotel, Washington, D.C.; 8180 Greensboro Drive Office Building and underground garage, Tysons Corner; Post Office, Fort Washington, Md.; Second, Fourth, and Fifth Police

District headquarters, Washington, D.C. (American Institute of Steel Construction Design Award, Fourth District building)

MASTERSPEC®

For more than twenty-five years MASTERSPEC® has set the standard for excellence in specification systems. Used for all types of building construction, MASTERSPEC® libraries provide maximum flexibility and coverage when the ability to match specifications to the scope of your project is paramount.

- Designed by the most experienced specification writers in the country.
- Updated quarterly and peer reviewed by independent user committees.
- Provides information on manufacturers, reference standards and available products.
- Contains over 460 sections that comply with CSI MasterFormat®.
- Available on CD-ROM or diskettes, with complete reference binders and user manuals.

The support team at **800.424.5080** (**801.521.9162 in Utah**) will gladly answer any questions about MASTERSPEC® and assist you in choosing the right MASTERSPEC® libraries to fulfill your needs.

CONCRETE DRIVEWAYS & PARKING AREAS

Now one source gives concrete
answers to your cost related and
technical paving questions:

- ▲How to save money on paving costs?
- ▲How to solve excavation and drainage problems?
- ▲What are the long range considerations in paving maintenance and repair?
- ▲How to meet traffic wear and weight requirements?

The Solution:

Our concrete paving consultant,
Michael Zaldo, will answer your
specific questions. Call him at the
Advisory Council. He speaks your
language and will visit your office
or job site.

Recent projects: Landscape plan and site amenities, Glen Allen Park Office; park landscape improvements and site design, Brandywine Park, Wilmington, Del.; Master plan and site development, U.S. Naval Academy, Annapolis, Md.; Mill Pond residential development entry signage & landscaping, Selbyville, Del.; landscape & site design guidelines, National Naval Medical Center, Bethesda, Md.

LIGHTING DESIGN

KUYK & ASSOCIATES

2827 Wilton Road, SW
Roanoke, VA 24014-4227
Tel/Fax: 540-342-1652
Contact: Dirk Kuyk

Lighting, as a design element, completes your design concept. By understanding and applying lighting's three initial design elements (providing visibility, defining form, and controlling focus) we create the fourth element—mood. Whether it is a romantic dinner or a bustling office, the mood is what you are after and it is what we deliver for interior and exterior spaces. Projects include commercial, institutional, residential, and theatrical facilities.

Recent projects: St. John's Episcopal Church, Roanoke; Volume II University Bookstore, Virginia Tech, Blacksburg; VCU Student Center Banquet Hall, Richmond; Old Dominion University Webb Student Center, Norfolk; Pray Residence, Charleston, W.Va.

NOISE

MILLER HENNING ASSOCIATES, INC.

6731 Whittier Ave., Suite A110
McLean, VA 22101
Tel: 800-783-6424 / 703-506-0005
Fax: 703-506-0009

Measurement, analysis and control of transportation, industrial, utility, excavation, mechanical equipment, and occupational (OSHA) noise.

Recent projects: Mechanical equipment noise control, UPS Facility, Atlanta, Ga.; Equipment sound power certification, Buffalo Forge, Amherst; Acoustical design and control of aircraft noise, British Aerospace Headquarters, Herndon; Roadway noise control, Villages of Kiln Creek, Newport News; Environmental noise assessment, USDA Child Care Center, Washington, D.C.

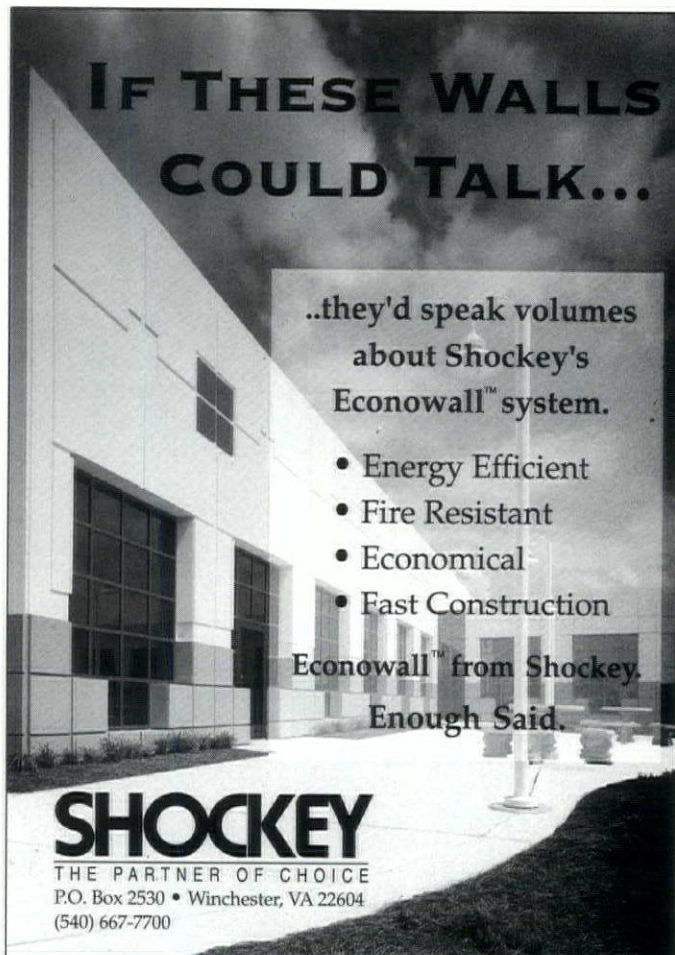

THEATER CONSULTANTS

MARVIN WINDOWS ARE KNOWN FOR BEING VERSATILE AND ENDURING. REMINDE YOU OF ANYONE?

In his 36-year career, Mario Andretti has driven nearly every race car there is to drive and won nearly every title there is to win. So when he and his wife began planning the new home they wanted to build, Mario had some very definite ideas about how it should look.

The architect selected for the job answered with a classic design. And for the windows and doors, both he and the builder recommended the only company they were certain could translate Mario's vision without compromising it. Marvin Windows & Doors.

Once the options of glazing styles, lite patterns, hardware and interior finishes had been decided upon for all 250 of the home's windows and doors, Marvin's tough, low maintenance aluminum cladding was chosen for the exterior surfaces.

Mario's builder was quite familiar with Marvin

and its capabilities. Nevertheless, he was concerned that the size and complexity of the order might delay progress on the project. As it turned out, his fears were unfounded. Not only did the entire order arrive on schedule, but Marvin's representatives stayed closely involved right through installation.

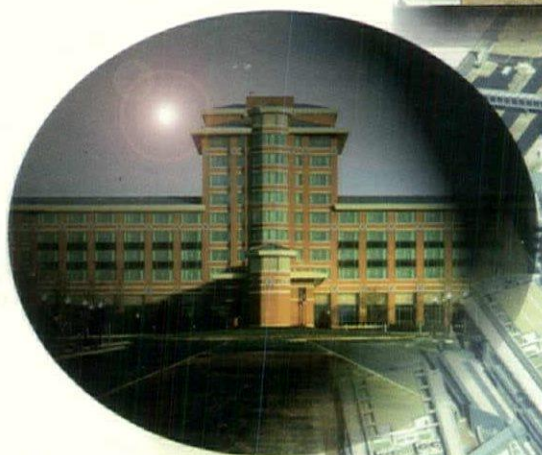

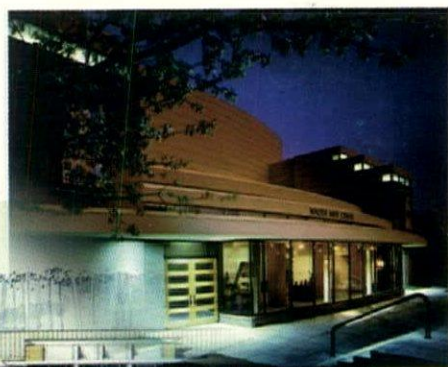

MAKE US YOUR FIRST CALL,
NOT YOUR LAST RESORT.

If you've been spinning your wheels looking for a window company that's as responsive as it is versatile, give us a call.
