Meet one of your most valuable contacts.

Allow us to introduce ourselves. We're Deltek. For nearly two decades, we've been busy developing innovative software and solutions automating architectural, engineering, construction and other professional services organizations. So busy that we haven't spent much time making our name known. Except, of course, for the thousands of companies we serve worldwide.

We could do great things for your business. Our back office and front office solutions help you win more business, strengthen customer relationships, improve your cash flow and boost project profitability. Call us at 800-456-2009 or visit our Web site at www.deltek.com. We'll make you glad you ran into us.

PEOPLE ARE
JUST MORE
COMFORTABLE
WITH
NATURAL GAS.

Comfort is what turns a house into a home.
That's why so many homeowners insist on
natural gas for their heat and appliances. It's clean.
It's reliable. And, most importantly, it keeps the
hot water and cool air coming. Natural gas.
It's a decision you can live with - very comfortably.

WITH AUTODESK SOFTWARE THIS CAPABLE, YOUR IMPLEMENTATION AND SUPPORT HAD BETTER BE TOO.

AutoCAD Architectural Desktop™ & 3D Studio VIZ™ offer incredible capabilities.

But mastering these powerful tools requires more than just installing the software. It takes a dedicated collaborator who can help you get the most out of them – fast.

Avatech Solutions is one of the nation's largest specialists in implementation, training and technical support for architectural design automation. We're also the nation's largest reseller of Autodesk products. Which is why it's a good bet that we have the answers to your application issues, no matter what they are.

Call 1-877-AVATECH for your free comprehensive demo package. Or call just to see how we can help.

We'll show you how having the right kind of support can put new capabilities right where they belong. At your command.

Contacting the AIA in Virginia: A Source List

Need to find an architect? Want to know more about our professional association and what it can do for you? Here's a list of how to reach the state and chapter offices in Virginia.

11

How to Hire an Architect

Few people realize how complicated it is to build – until they try. But an architect can help you negotiate the maze of design options, building codes, zoning laws, and contractors. Here's a simple guide to locating the architect who is right for you.

17

Awards for Excellence in Architecture

Eleven projects by Virginia architects were honored in 1999 with Awards for Excellence in Architecture. The winning projects varied widely in function and scale, from a series of small additions providing services to a house museum to the conversion of an underused seminary chapel into an elegant modern library.

30

Society Honors

Presenting the distinguished winners of awards to recognize the exemplary efforts of architects and good citizens who have offered service to the AIA or improved the manmade environment.

Building or renovating a house?
Here's how to find the right

Architect

ARCHITECT:

Reader & Swartz Architects

PROJECT:

House Renovation and
Addition

LOCATION:

Boyce, Virginia

11

Each architect has an individual style, approach to design, and a method of work. So it's important to find an architect who is compatible with your personal style and needs. To help in your search, follow these few steps to success.

Build a list of possibilities. Ask around. Find out who designed projects in your community that you like. Get recommendations from friends, relatives, and acquaintances who have worked with architects. Check to see if the architect is a member of the American Institute of Architects (AIA). Membership in the AIA means that the architect subscribes to a high professional purpose to advance standards of practice and service to society. This includes having a code of ethics and access to a variety of professional and technical resources.

Contact your local AIA chapter. Many have lists of member-owned firms that are interested in doing various types of projects. The most complete statewide list is published by the Virginia Society AIA in this directory.

Call each firm on your list. Describe your project and ask the architects if they are available to accomplish it. If so, request literature that outlines the firm's qualifications and experience. If the office is unable to handle your project, ask if they can recommend another firm.

Interview each firm. Interviewing a firm gives you a chance to meet the people who will design your project and to learn if the chemistry between you is right. You may be working with your

architect for a long time, so look for someone with whom you feel comfortable. Allow at least an hour for the interview, preferably at the architect's office where you can see where the work will be done. Some architects charge for the interview, so ask if there is a fee.

Ask questions. How busy is the firm? Does it have the capacity to take on your work? Who will handle the job? Insist on meeting the person who will actually design your project. What is the firm's design philosophy? Talk about a project budget and the range of fees that the architect would anticipate for your project. Before you select an architect, ask to be taken to at least one completed project. Also ask for references from past clients. These are invaluable. In addition, you might want to obtain an Architect's Qualifications Statement (form B431) from the Virginia Society AIA offices. This standardized document may be used to verify an architect's credentials and other information prior to selecting an architect for a project.

Making the final cut. Unlike buying a new car or new appliance, you can't see the product and test it out. The architect provides a professional service, not a product. The right architect will be the one who can provide the judgment, technical expertise, and creative skills – at a reasonable cost – to help you realize a project that fits your practical needs as well as your dreams.

This brief introduction was excerpted from "Home Delivery," a guide to how an AIA architect can help you realize your dream home. Copies of the publication are available by calling the Virginia Society AIA at 804-644-3041.

THE FRAMEWORK

FOR SUCCESS

CADRE Systems, Inc. provides design automation solutions that will help you establish the framework you need to succeed in today's progressive architectural design climate. We can supply you with the tools and services needed for efficient facilitation and profitable implementation of CAD design strategies.

Avoid Being Checkmated by "Churn"

Presenting the YORK® FlexSys™ Underfloor Air System

Your winning strategy The integrated Building Technology Platform® from YORK, Tate and Honeywell that puts power, data, video, telecom, and air-conditioning under the floor.

Your smartest move for flexibility Outmaneuver a typical building's 40% "churn" (annual movement of occupants) with FlexSys' patented MIT underfloor air terminals that are as easy to rearrange as the furniture.

Comfort fit for king and queen Improve personal comfort control with variable-air-volume, FlexSys terminals that allow unlimited floor positioning and occupant adjustment of air-distribution patterns.

Building Technology Platform is a registered trademark of Tate Access Floors, Inc.

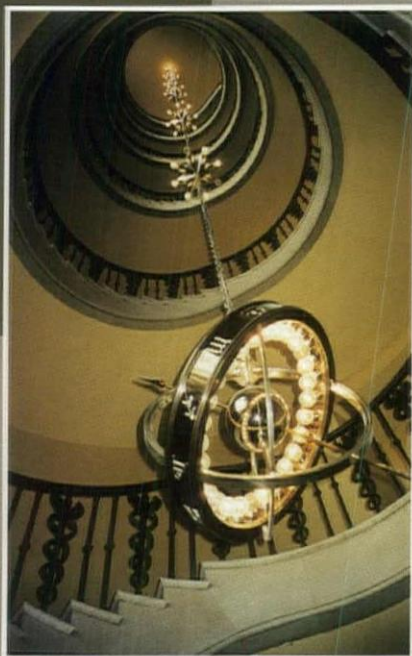

Keep costs in check Avoid a cost premium — the FlexSys system eliminates ductwork. And since system rearrangement costs are minimal, building life-cycle expense is dramatically reduced.

The next move is yours Call your local YORK sales office or 1-800-861-1001, or visit www.york.com

DO YOU DESIGN OR BUILD MULTI-FAMILY HOUSING PROJECTS?

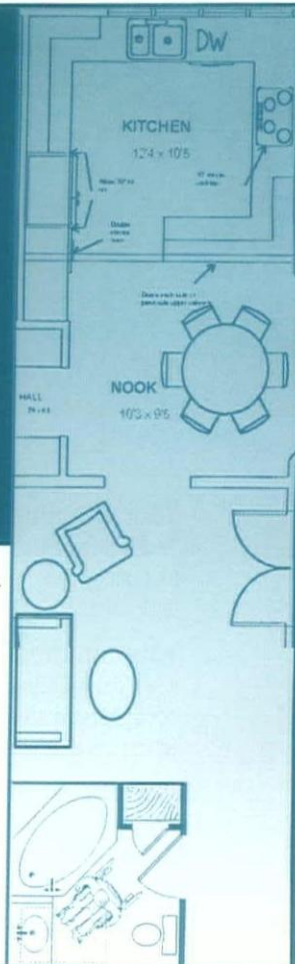

Are they accessible under Virginia's Fair Housing Law?
If not you could be liable for thousands
of dollars in damages and retrofitting costs.

Since 1991 Virginia's Fair Housing Law has required covered multi-family units to have: an accessible entrance on an accessible route; accessible public and common-use areas; usable doors; accessible routes into and

through the dwelling unit; accessible light switches, electrical outlets and environmental controls; reinforced walls in bathrooms; and usable kitchens and bathrooms. Questions? Call Virginia's Fair Housing Office:

1999 Design Awards

Eleven projects by Virginia architects were honored in 1999 with Awards for Excellence in Architecture by the Virginia Society of the American Institute of Architects. The winners, selected from a field of 96 submissions made by architects across the state, varied in function and scale from a series of small visitor services additions to a house museum near Winchester to the conversion of a seminary chapel in Richmond into an elegant, modern library. The award-winning projects were chosen by a panel of leading architects from Dallas. Chaired by Gary M. Cunningham, FAIA, of Cunningham Architects, the five-person jury also included architects Mark Dilworth, AIA, of Omniplan; Gordon Gilmore, AIA, of Hellmuth, Obata + Kassabaum; Sharon Odum, AIA, of Cunningham Architects; and Dan Shipley, a sole practitioner. The awards were presented formally to the architects and their clients on November 5, 1999, at "Visions for Architecture," a celebration of architectural designs and the contributions of citizens in the realm of preservation, building code enforcement, craftsmanship, and community development. The event, which was co-sponsored by the Virginia Foundation for Architecture, was held at The John Marshall Hotel in Richmond.

The Jury:

Gary M. Cunningham, FAIA
Cunningham Architects, Dallas

Mark Dilworth, AIA

Gordon Gilmore, AIA
Hellmuth, Obata + Kassabaum, Dallas

Sharon Odum, AIA
Cunningham Architects, Dallas

Dan Shipley
Dan Shipley Architect, Dallas

Weekend House in Jefferson County, W. Va.

Hoachlander/Davis Photography

18

Architect:
Reader & Swartz Architects,
Winchester

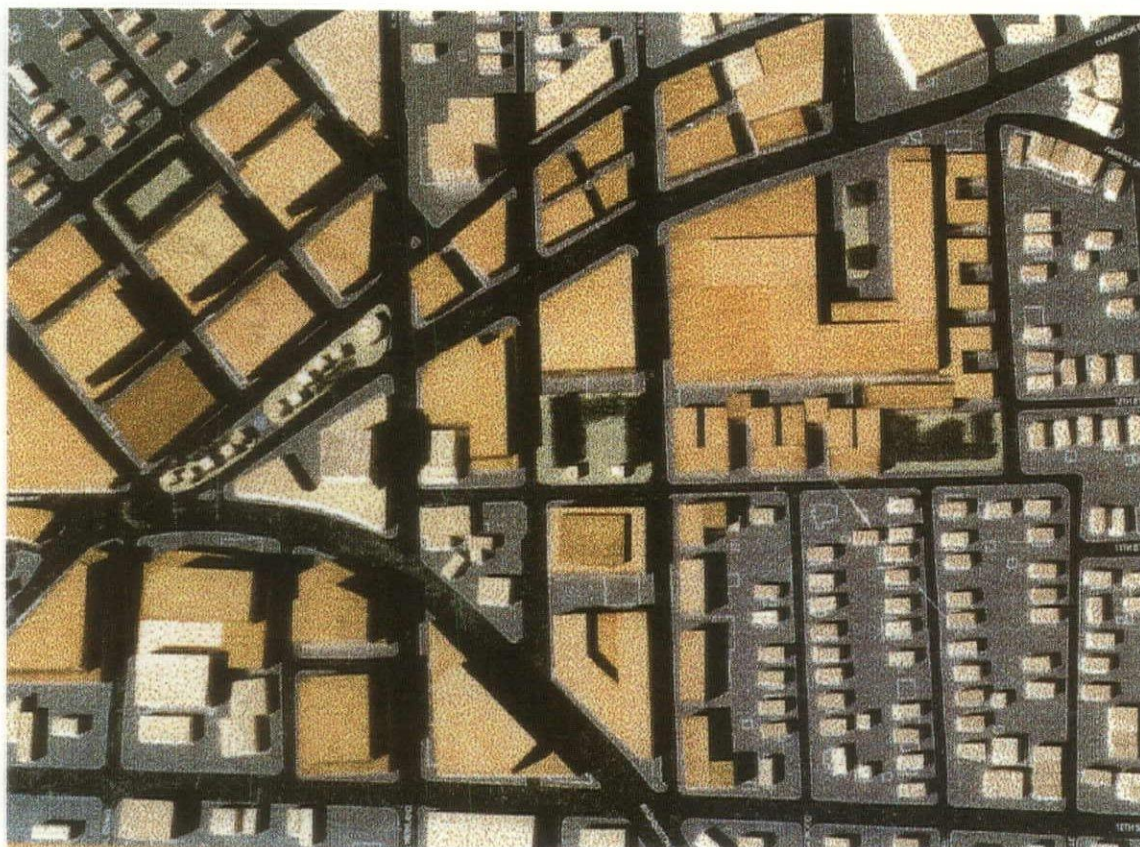

The clients for this new weekend house wanted a house that reflected their love of Northern Italy, but also drew upon the images of their childhoods in West Virginia. To counter the monotony of the site – a nondescript field – the architects created a sense of place with a cluster of buildings and the outdoor spaces they formed. They enlarged the garage into a barn with an open center bay and led the new approach road through the middle of it, at the same time creating a courtyard between the barn and house.

The house itself is comprised of three masonry pavilions linked with a low wood-frame connector. One wing contains a master bedroom and library, while the other houses guest bedrooms and a screen porch. The third – a living/dining/kitchen pavilion – is an open room with split-faced block recalling Italian cut stone.

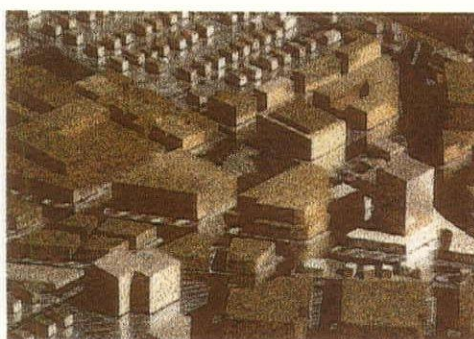

Jurors admired how nicely the building is organized on the site – the sense of approach, the creation of an arrival space, and the way the plan works around that space. Said the jury: “The architects did a great job of taking the client’s desires and making something out of them.”

**“A great job of
taking the
client’s desires
and making
something out
of them.”**

Clarendon Center Urban Design Study

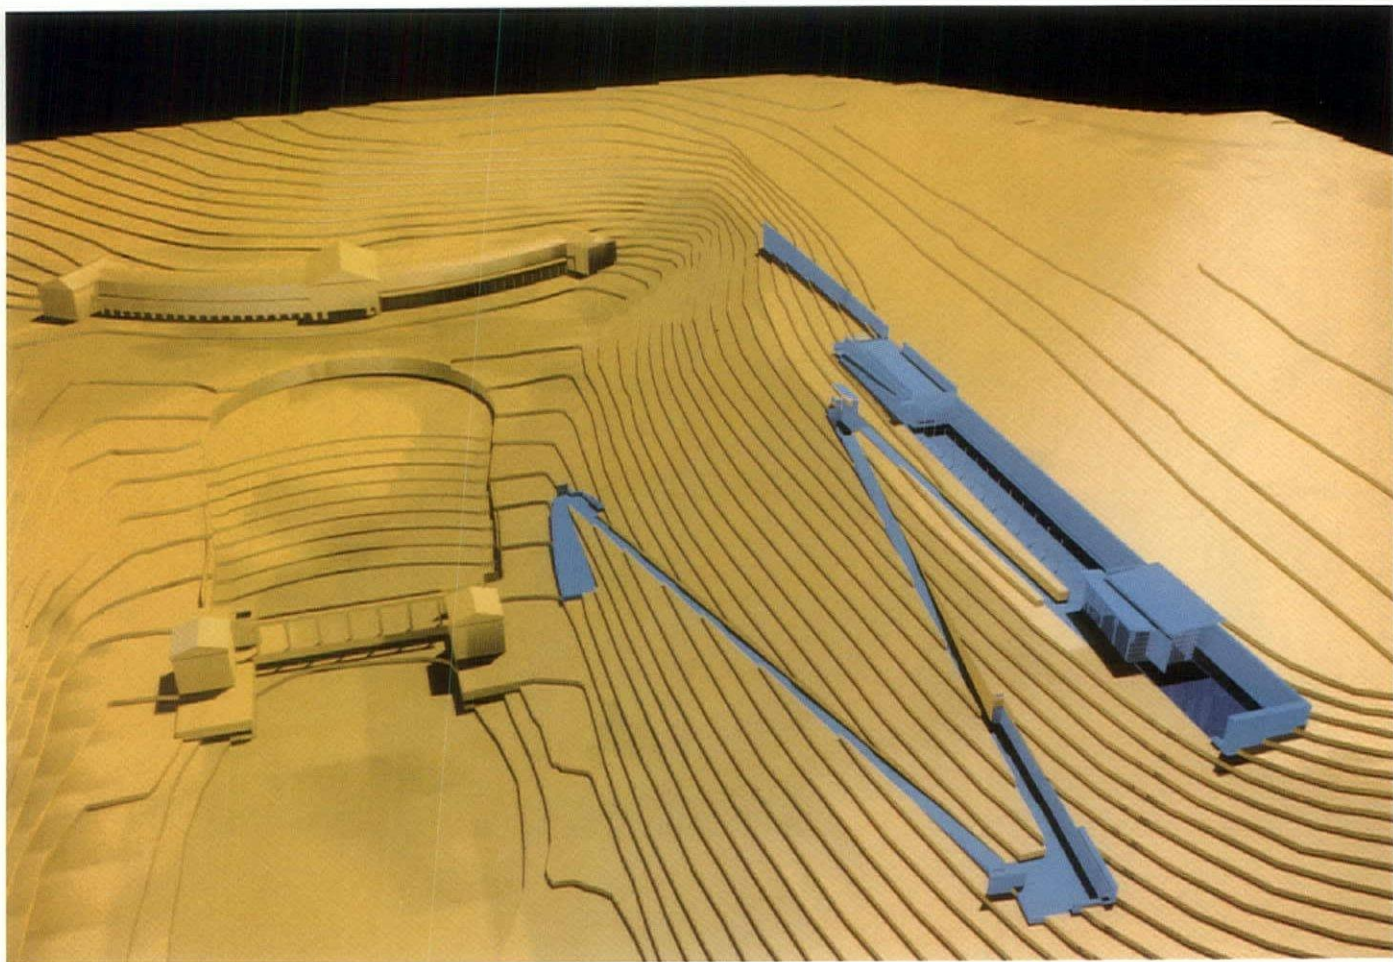

"There's a strong logic to it, but it's all very sensitively approached."

Architect:
Kerns Group Architects, Arlington
with Ehrenkrantz, Eckstut & Kuhn, New York

This examination of an urban center in Arlington proposes a number of improvements intended to simplify circulation and open space in the city, restoring order to a cityscape run amok. Among the proposals: organize development sites to create a new town square; earmark space for a museum or theater; link the nearby Metro station to the town square with a pedestrian arcade; and establish small neighborhood parks. Additional rezoning proposals are aimed at creating an urban village in Clarendon.

"It's a thoughtful and mature study," the jury said. "There's a strong logic to it, but it's all very sensitively approached. And the proposals are very realistic. They introduce new green space and develop cross axes through different sites. They are very subtle moves, but very smart moves."

20

Salem Mausoleum

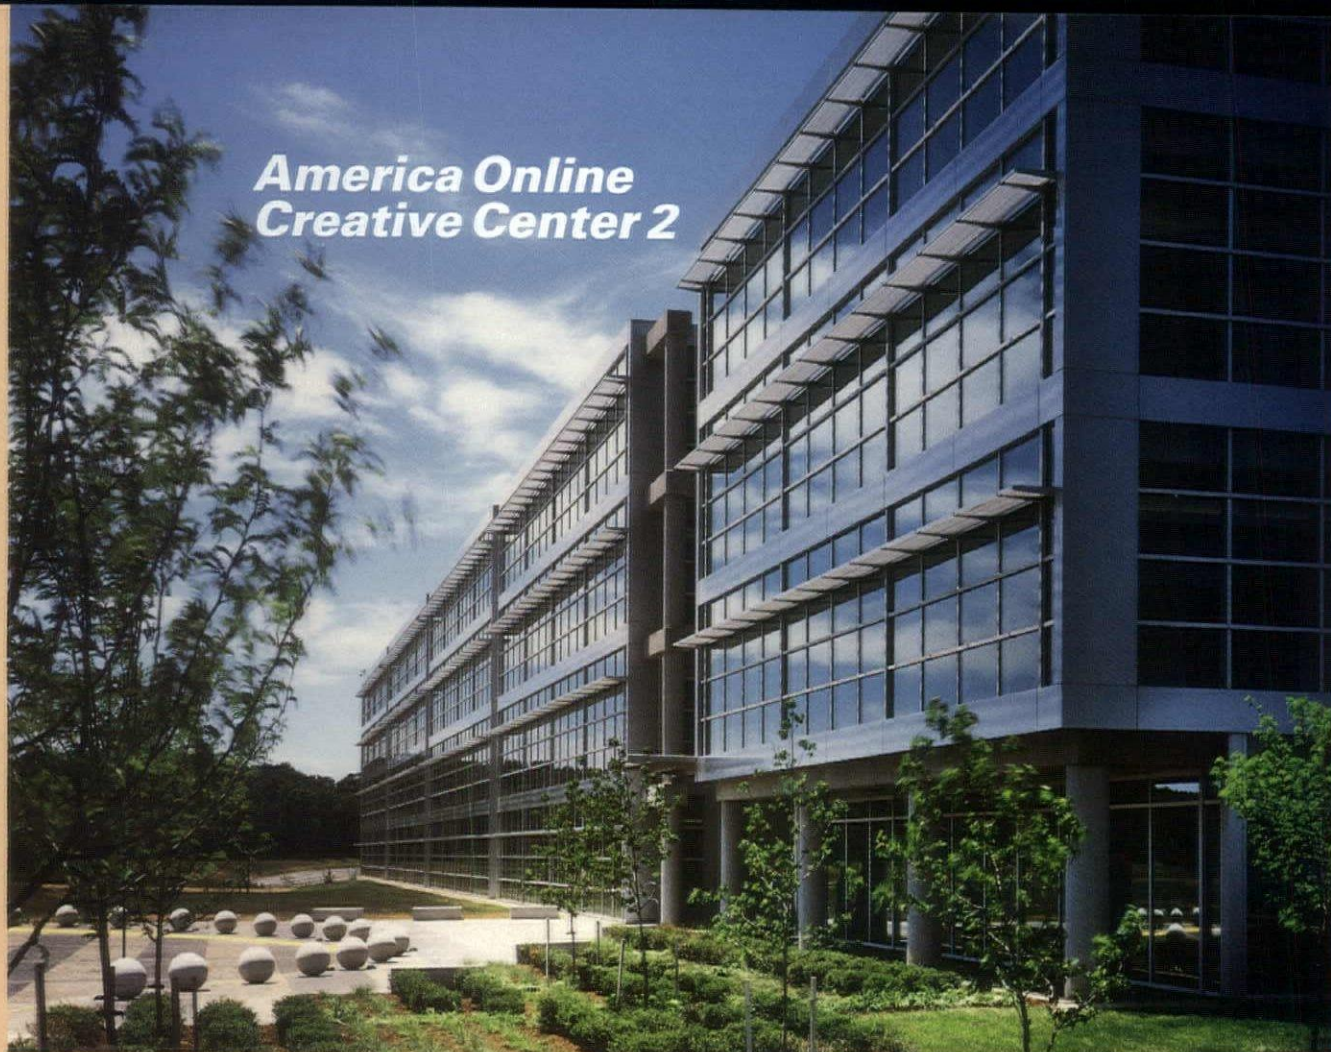

Architect:
SMBW Architects, Richmond

Owners of this 110-acre cemetery commissioned a mausoleum with 1,000 crypts, asking for a solution that defers to commanding views of the Appalachian Mountains. The architect's response establishes a new landscape atop the hill by understating the presence of the mausoleum and creating a new formal garden or outdoor room. The threshold to the as-yet-unbuilt project is a roof garden, which is connected to the formal landscape below by a processional ramp descending through rough-hewn stone walls.

The jury praised the architect's notion of placing the crypt in the landscape. "Instead of forming a space, it becomes an element that you go to," they observed. "So the journey is maybe the most important thing about it. Once you get there, you've arrived, but the journey allows you to decompress along the way."

**"The journey is
maybe the most
important thing
about it. It
allows you to
decompress
along the way."**

Maxwell MacKenzie

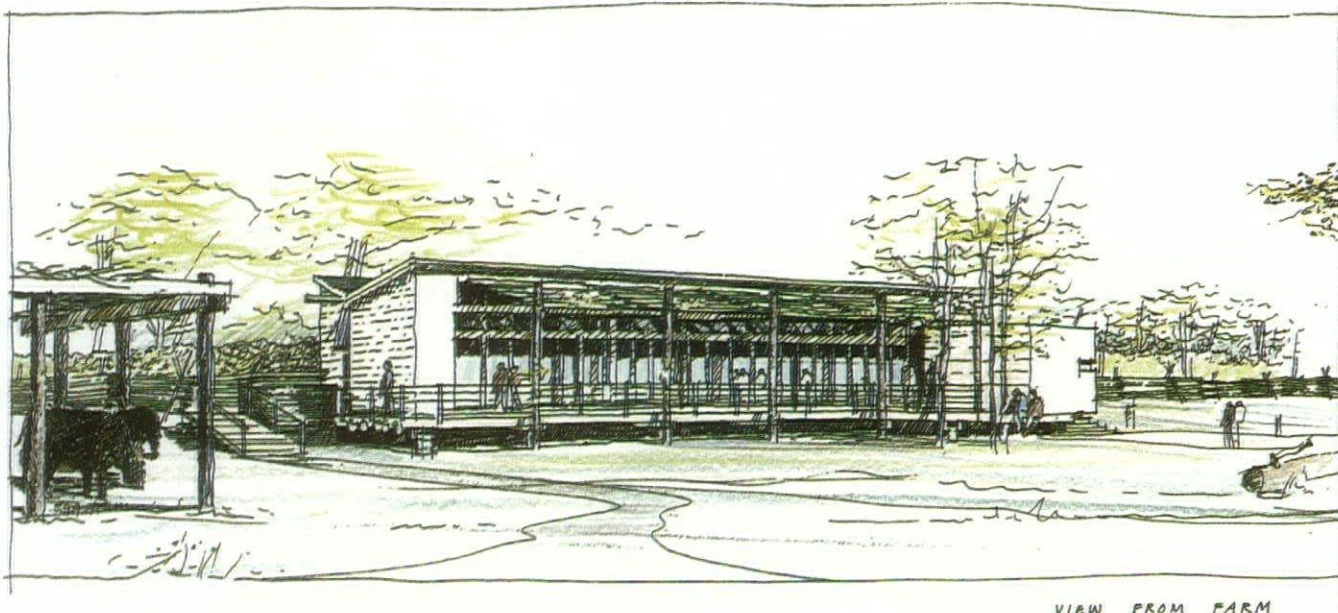

"There's a certain universality about this building – a high level of elegance."

Architect:
Ai, Washington, D.C. and Richmond

To support its explosive growth, America Online requested a flexible office building including a 200-seat auditorium, training facilities, and cafeteria space. The building's primary circulation route forms a north/south spine centered in the building. This corridor, designated by a giant blue wall, provides access to entrance lobbies, vertical circulation, and the major public spaces, including three atria. The exterior walls respond to two very different site conditions. The southeast enclosure, facing a wooded preserve, is a transparent glass-and-metal curtainwall system. The northwest wall, fronting a courtyard, reverses the relationship between skin and structure.

"This is a case where they had a good budget and a good client and they used money wisely – and it shows," said the jury. "There's a certain universality about this building. It has a high level of elegance. And what's interesting is that so many high tech clients think of the workplace as needing to be entertainment, but this one is very refined."

VIEW FROM FARM

Accokeek Foundation Education Building

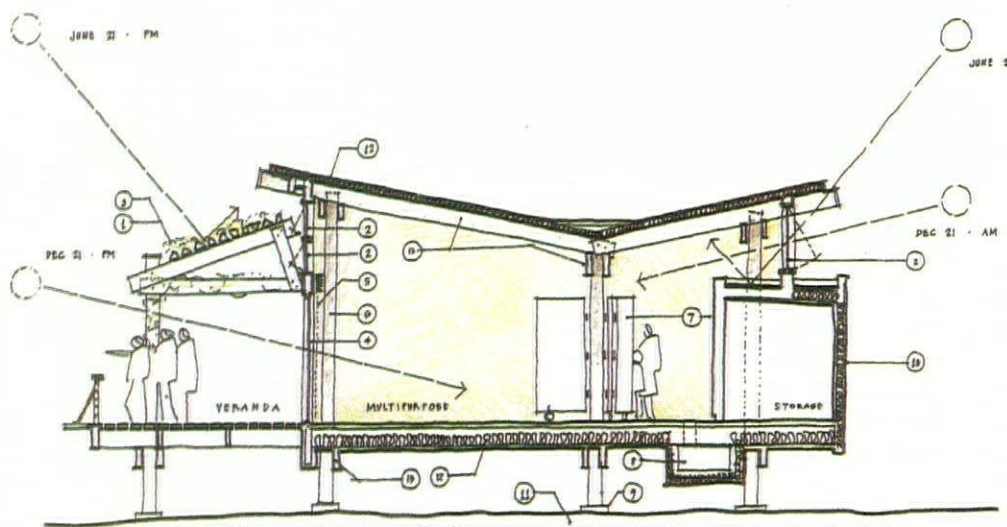

22

Architect:
Kerns Group Architects, Arlington

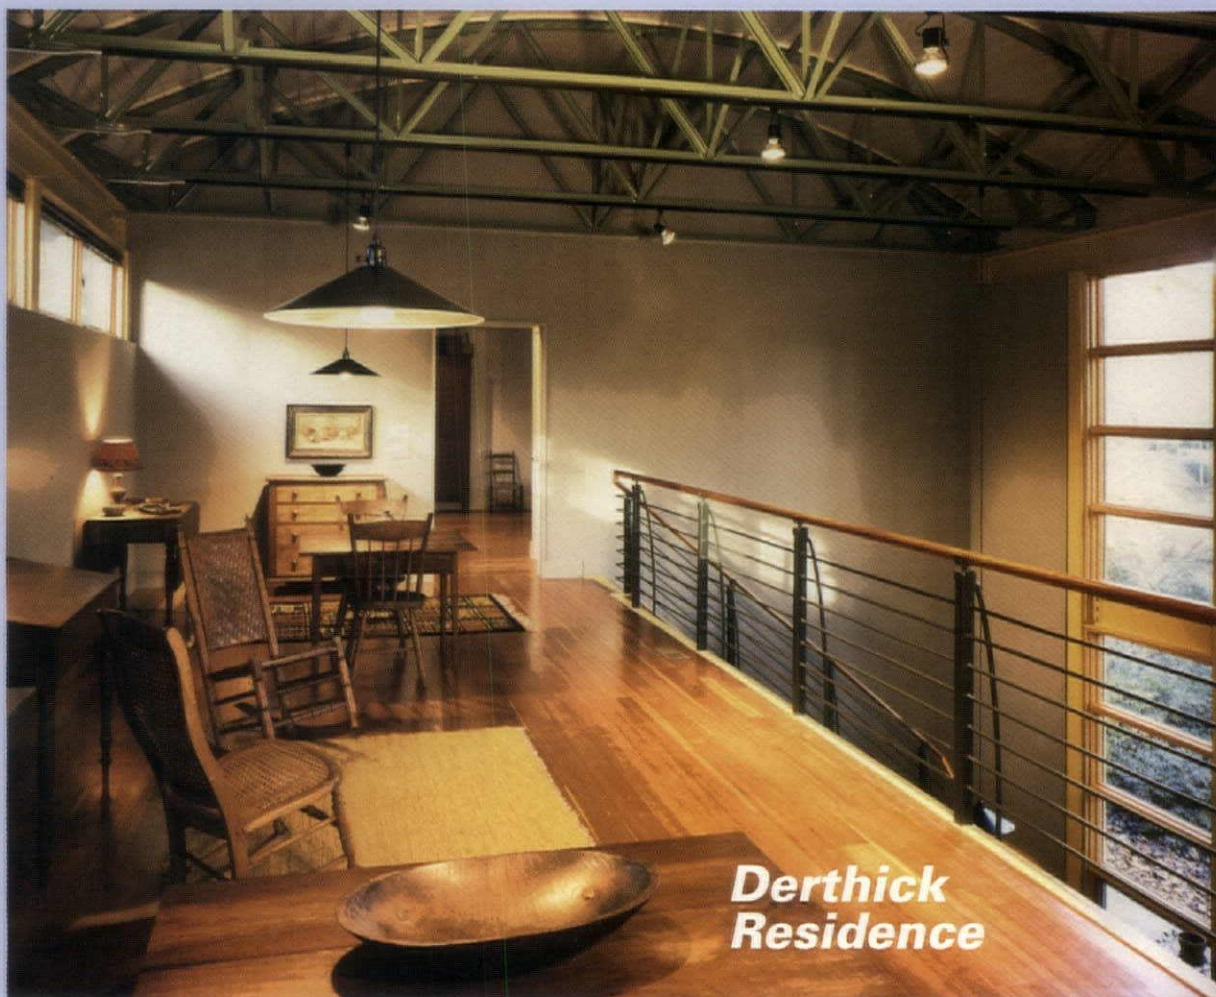

The architect of this unbuilt project was selected to participate in a design competition for a new educational building for the Accokeek Foundation, a nonprofit group that teaches land stewardship. Emphasis was placed on making a building that is compatible with nature and designed to conserve energy. Inspired by the rural "dogtrot" house of the South, the wood-framed building is designed to be elevated on hand-dug piles to minimize land disturbance. Generous openings would facilitate natural ventilation and an inverted roof was added to collect rainwater for use elsewhere on the farm.

"Its simple ideas relate to the purpose of the building," the jury said. "The drawings are wonderful, because they let you read into what the materials might be. We also admired the careful way that the building sits in the landscape—it hovers."

"We admired the careful way the building sits on the landscape—it hovers."

Sallah Baloch and Karl Kimbler

**Derthick
Residence**

23

**"The strong
aspects of this
project are the
big ideas."**

Architect:
Gwyn C. Gilliam, AIA, Charlottesville

This Charlottesville house for a retired professor – located beside a specimen garden of 50-year-old rhododendrons and azaleas – blurs the distinction between inside and out. Two main components make up the building: the private tower and the two-story-high living space. This soaring living room is connected to the garden with a large window wall and a textured concrete floor that extends out from the interior space to become a patio for enjoying the outdoors.

The jury admired the simplicity of the floor plan and the rich interiors that reflect nature. "It's almost surprising how comfortable the two forms are with each other," they said. "The strong aspects of this project are the big ideas – the juxtaposition of the two volumes and the quality of the volumes themselves."

David Sagarin

Manassas Park High School

Photos: Christopher Barrett/Hedrich Blessing

"It's well-crafted and sophisticated too. And the common space inside is so handsome."

Architect:
DO Architects, Charlottesville

Flexibility is the watchword for this 102,000-square-foot building, which can be broken down into two schoolhouses of 325,000 sq ft each. Certain spaces were designed to serve more than one purpose: the Commons also functions as a cafeteria, assembly hall, and informal theater; the stage doubles as a vocal music rehearsal space; and the athletic wing becomes a community fitness center. Nestled between the classroom wings is the building's central atrium, which contains the school's main gathering places. Large windows fill this rotunda with natural light and generate views open to views of a wooded landscape. "It's well-crafted and sophisticated too," the jury said. "It has a good site plan, a good site plan. And the common space inside is — it's not trivialized with colors. In 20 years, a building will still have a great feel."

William Smith Morton Library at Union Theological Seminary

Architect:
The Glave Firm, Richmond

The conversion of this underused church into a new library was accomplished with respect for the neo-Gothic architectural traditions of the seminary campus. The addition's exterior is a fresh interpretation of the original building – ranging from a turret of faceted glass to the bookcases placed between traditional buttresses. Inside, rich paneling and custom lighting evoke the feeling of old college reading rooms. The design culminates in the spectacular four-story atrium that juxtaposes the church's old brick wall with the addition's new wood surfaces.

Jurors complimented the library's high level of craftsmanship achieved in both masonry and wood. "The atrium looks like a great space," they enthused. "It could have been totally uninteresting. So at the end of the day, the architects identified their major opportunity and made a success of it."

"The architects identified their major opportunity and made a success of it."

Photos: Maxwell MacKenzie

Photos: Hoachlander/Davis Photography

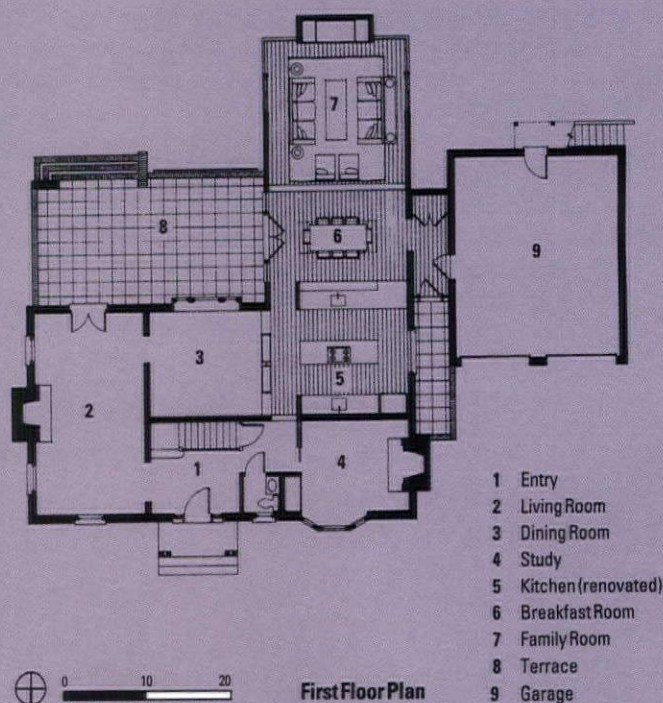

"The proportions are controlled very carefully."

Ochs House Addition

Architect:
Robert M. Gurney, AIA, Alexandria

Like many houses in this northwest Washington, D.C. neighborhood, this brick colonial did not accommodate modern living. In the new scheme, the undersized kitchen was enlarged and a dining space and family room added to the back of the house to bring in more light. The new living space – which provides a spacious volume that the existing house lacked – has a 16-foot-high ceiling and a glass cupola. A new stone terrace improves the relationship between the interior spaces and the backyard.

The jury complimented the project's consistent detailing and respect for the existing materials and planning. They remarked, in particular, on the cleverness of the cabinets in the family room, which appear to be a large piece of furniture that is holding up one side of the roof. "And the proportions are controlled very carefully too," they said.

Photos: Robert Dunay

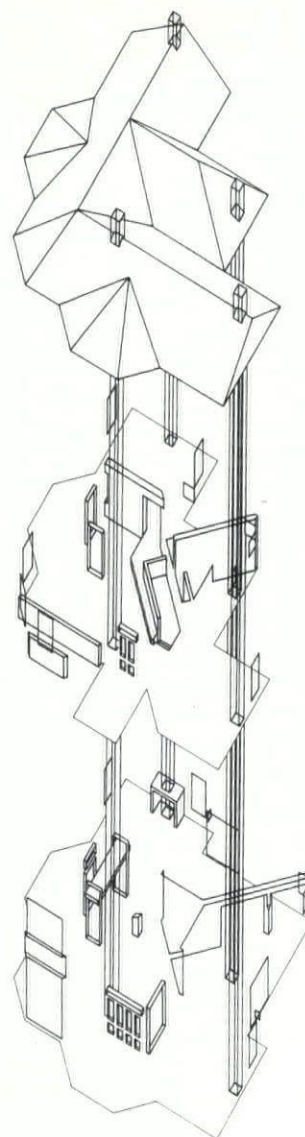

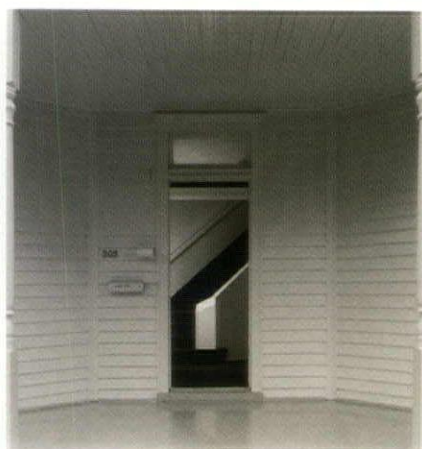

"There are views that would be enjoyable to experience over and over."

House on a Corner

Architects:
Dunay + Albright Architects,
Blacksburg

Situated on one of the original sixteen square blocks of the Town of Blacksburg, this 100-year-old building occupies a strategic location in the neighborhood and is a key piece of the area's identity. Its renovation involved the removal of walls and the construction of new interior elements in concert with the existing geometry. Flues were stripped of plaster to reveal original bricks and existing doors were reused in groups to renew the identity of the interiors. New white walls enhance the geometric play of interrelated forms and serve as a foil for warm light that reflects off the original pine floors.

Jurors loved the house's new parts, its sense of restraint, and the European sensibility that seems to inform the design. "It looks like a very interesting space to move through," they said. "There are some views that frame themselves nicely and would be enjoyable to experience over and over again."

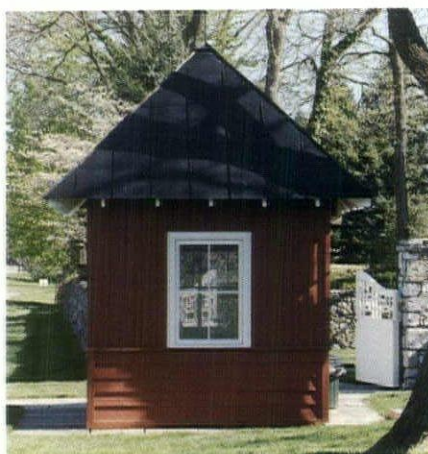

28

Projects for the Glass/Glen Burnie Foundation

Architect:
Reader & Swartz Architects,
Winchester

In order to aid the conversion of Glen Burnie's manor house and grounds into a public museum, the architects designed several new architectural pieces. Those included a new public entrance, a ticket pavilion, and a pair of buildings to house the mechanical plant, workshops, and vehicles. All were designed in a manner that complements the distinctive architecture of the manor house and garden follies, yet consciously expresses their utilitarian functions.

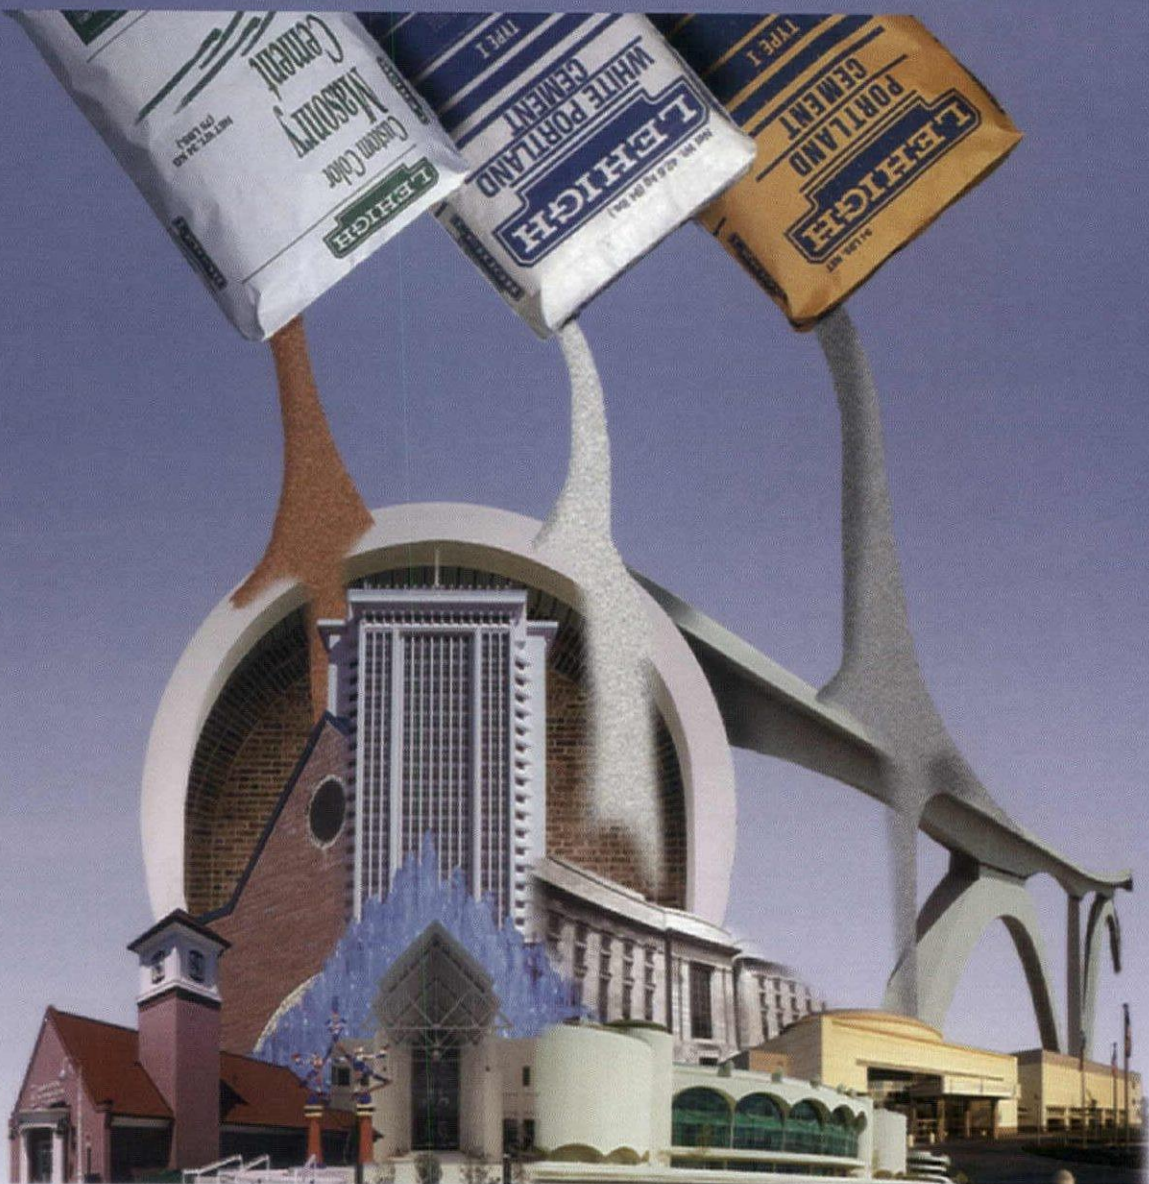

Jurors admired how the architects avoided trying to put their own stamp on the project, choosing instead to make the additions unobtrusive. "The architects' hand is very subtle," they added. "These look like buildings that would have been part of the original estate, but there are still some things about them that are very new."

"The architects' hand is very subtle. These look like part of the original estate."

LEHIGH CEMENTS

Engineered for Quality. Specified for Creativity.

For over 100 years, Lehigh Gray, White, and Custom Color Portland and Masonry Cements have been used in concrete to create architectural masterpieces. With Lehigh products, architects are given the freedom to choose a multitude of applications to achieve an unlimited range of color, texture, shape, size and pattern. Our versatile quality cements are uniquely transformed through your imagination and creativity. Contact us today or visit us on the web.

Abbott (left) sketching at a makeshift desk in the field at Murrell's Inlet, South Carolina.

William C. Noland Medal Carlton Sturges Abbott, FAIA

30

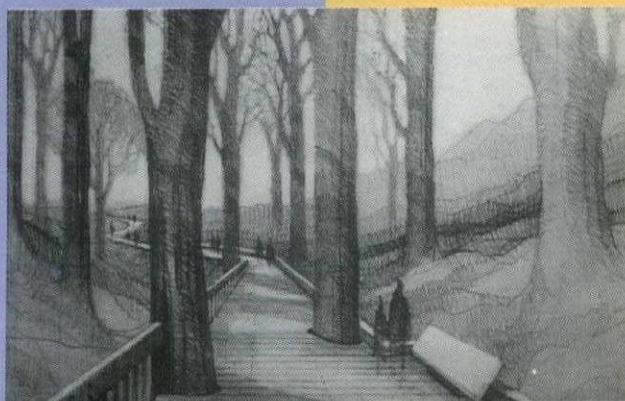

By Mark St. John Erickson

Carlton Abbott has always found his way by following the tip of his pencil. As a quiet kid transplanted from the mountains of Salem to the rolling fields of Yorktown, he drew for hours, trying to forget his shyness. As a first-year architecture student at the University of Virginia, he drew with even greater passion, trying to erase his disappointment over not attending his father's alma mater, Cornell.

More than 40 years later, Abbott sits in a small, windowless room crowded with the signs of success and achievement. Models of buildings, roads, and bridges sprawl across the conference table. Dozens of sketches hang in layers on the walls.

Though dressed like a prosperous banker – and blessed with the easy confidence of someone used to being in charge – the man who has won more design awards than any other architect in the state still depends on the talismanic power of a pencil. Selecting a ruby-red mechanical marker from a small cloth pouch, he shakes it like a conductor's baton whenever he wants to make a point. "Drawing gave me a vehicle for communication when I didn't have any other real way to express myself," says Abbott, who recently added to his considerable list of accolades by being named the 1999 recipient of the William C. Noland Medal, the highest honor given to an architect by the Virginia Society AIA.

No one who lives in Virginia can travel far without running into one of the projects designed by Abbott and those who work in his Williamsburg office. From Virginia Beach to

Among Abbott's award-winning works: a steel bridge and stair tower at James River Park in Richmond (above); site improvements at Carter's Grove plantation (below); and the Stiles Residence (facing page).

Arlington, from Staunton to the southwestern extreme of the Blue Ridge, Abbott's museums, park structures, and other buildings pop up one after another. That productivity is surpassed only by the number of design awards he and his small group of co-workers have earned over the past 30 years. At last count, the prizes from state and local components of the American Institute of Architects alone totaled 61. Among the most prominent winners are the Peninsula Fine Arts Center in Newport News, Chippokes State Park Visitors Center in Surry, and The Trellis Restaurant in Williamsburg. Farther afield are the Museum of American Frontier Culture in Staunton, pavilions and stairs at James River Park in Richmond, and headquarters for the Blue Ridge Parkway in Asheville, N.C.

Much of Abbott's visual savvy – and his lifelong passion for the visual world – can be traced to the influence of his parents. His father, Stanley, was a pioneering landscape architect who won national acclaim for his planning of the Blue Ridge Parkway. "Some of the first designs were literally done on my mother's dining room table," Abbott recalls.

His mother Helen, an accomplished artist, transformed that dining room table into the center of an unusually artistic family life. Looking down from the walls were a series of striking pen-and-ink portraits by her mother, illustrator Mary Schanck. Original paintings and drawings by Stanley, Helen, and other artists also hung around the room. Perhaps even more important

were the elaborate preparations that accompanied family dinners. Fresh flower arrangements and candlelight gave a special air to every evening meal. They also served as a stage for Stanley Abbott's philosophical musings and a stream of poems, readings, and artistic observations that usually followed the last course.

All that exposure seemed to have little impact on the youthful Carlton. "He never knew he had any real artistic talent until he went to U.Va.," says Elaine Abbott, his oldest sister. "It wasn't until he went there that everything blossomed."

In four years of study in Charlottesville, plus another year at the Ecole des Beaux Arts in France, Abbott became both a promising artist and an accomplished draftsman. He developed an extremely keen ability for understanding how people move through buildings and take in their various parts. Those skills led to early successes, but it was Abbott's parents who gave their son the first real chance to demonstrate his talents. The Abbott Residence, which won an Award of Merit from the Virginia AIA in 1968, incorporated many of the simple lines and uncluttered spaces that became signature traits of Abbott-designed buildings.

Today Abbott still approaches his architectural projects with the same intense energy and care he gives to his award-winning works of art. He moves back and forth freely between the two media, in fact, composing watercolor collages from a small kit of pre-made parts whenever – and wherever – he gets a break from design. Much of his best work, he confesses, has been assembled in the seat of an airplane or on a motel room floor.

His skills with people have played crucial roles in such projects as the Peninsula Fine Arts Center in Newport News, which underwent a tortuous series of budget adjustments and design changes before settling on what was to become an award-winning plan.

"I'm not sure many architects could have gone through all the transformations we went through," says center Registrar James Warwick Jones. "His creativity, his flexibility, and his willingness to adapt were wonderful."

Such admiration seems lost on Abbott. Despite 35 years in the business, he's still busy drawing, shuffling plans, and worrying about what it will take to do a good job. Part of that task is to satisfy the client – a building is no good if it doesn't do what the owner wants, he says. But he also wonders constantly about the broader impact of the buildings he designs.

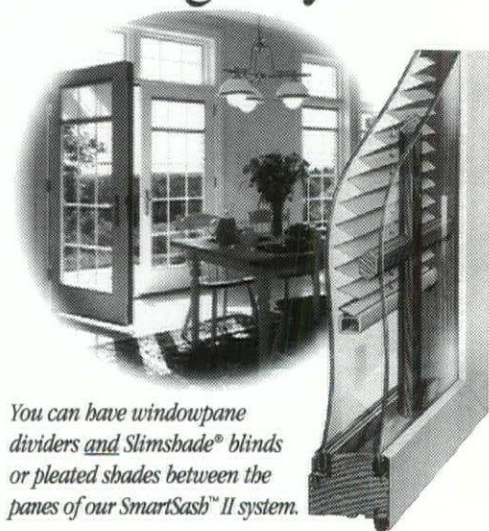

Just a few minutes away from his office on Duke of Gloucester Street, unfolding in an ugly sprawl, are the kinds of buildings he most fears. "We've built a country of stage sets – a country of Styrofoam and plastic facades – that have nothing natural or real about them," Abbott muses. "We're starting to homogenize America by tearing apart the fabric of the few real places we have left." Abbott's calling is to counter that trend: making real places in a world that doesn't have many such places remaining.

We'll give you enough space to explore your options.

You can have windowpane dividers and Slimshade® blinds or pleated shades between the panes of our SmartSash™ II system.

Up to 1⁵/₁₆" to be exact. That's the size of the space between the panes on Pella® Designer Series™ windows and doors with our unique SmartSash™ II glass system. There's room for wood windowpane dividers plus our stylish Slimshade® blinds or pleated shades for privacy. And since they're protected between the panes, dusting is strictly optional.

Whatever your next project – libraries, schools, courthouses, hospitals, high-rise buildings, office parks, multi-block developments, historical renovations, hotels or other commercial projects – we would like to talk to you about making Pella windows and doors a part of it.

The New Specification.

In March, 1998, the ASTM Committee F.06 on Resilient Flooring approved a new cove base specification, F-1861, which replaces SS-W-40A and which recognizes and distinguishes between the three separate types of cove base so that in the future the specified product will be the actual product installed on the job.

Roppe is ahead of its time in having all three of these products available now.

Type TS - Thermoset Vulcanized Rubber SBR

Type TP - Thermoplastic Rubber TPR

Type TV - Thermoplastic Vinyl

ASTM F-1861 – Type TS Thermoset Vulcanized Rubber RUBBER BASE (TS)

The Best

Vulcanized SBR Rubber Base

Benefits

- Manufactured from 100% virgin synthetic rubber.
- Very flexible, cuts like butter, easy to install.
- Cleans easily with soap and water for years of worry-free wear.
- Will not shrink.
- Will not cup.
- The 1/8" thickness hides many wall irregularities.
- Ribbed back for positive adhesion.
- Does not have to be acclimated to room temperature.
- Coils can be installed immediately as you uncoil.
- Forming corners is easy.
- Color is inherent throughout the entire base, and the exclusive low gloss satin finish resists scuffing, gouging, and most chemicals.

Disadvantages

- Its price. It costs more to produce and vulcanize a rubber product, but so does quality in any product.

Architects' Material Specifications RUBBER BASE (TS)

Flooring accessories shown in the finish schedule or listed herein as Cove Base or Wall Base shall be 1/8" (3.175 mm) thick Type TS, Thermoset Vulcanized EXTRUDED RUBBER COVE BASE as manufactured by Roppe Corporation. It shall be constructed of first-quality materials properly VULCANIZED and shall be smooth and free from imperfections which detract from its appearance. The base shall conform fully to the requirements of Standard Specification F-1861, Group 1 (solid). All Cove Base shall be of the _____ type (Straight, Style A, or Cove, Style B), with a height of _____ (2-1/2" (63.5 mm), 4" (101.6 mm), 6" (152.4 mm)), in lengths of _____ (48" (1.22 m) or 120' (36.576 m)), and in the color stated, and of 1/8" (3.175 mm) thickness. Sanitary Cove Base shall be 4" (101.6 mm) high with a 2" (50.8 mm) Sanitary Toe. The toe shall be .125" (3.175 mm) thick. The lengths shall be 48" (1.22 m) long and in the color selected.

ASTM F-1861 – Type TP Thermoplastic Rubber 700 SERIES (TP)

The Better

TPR (Thermoplastic Rubber) products are a step up from vinyl base products.

Benefits

- Less expensive than SBR rubber.
- More flexible than vinyl due to its rubber content (general guideline is 2 - 8%).
- The 1/8" thickness hides many wall irregularities.
- Top lip design helps base fit tightly against the wall.
- Ribbed back for positive adhesion.

Disadvantages

- More expensive than vinyl base.
- Manufactured like vinyl (some are extruded, some molded).
- Cuts and installs like vinyl.
- Shrinkage possibilities same as vinyl.
- Must be acclimated to room temperature before installation.
- Coils need to be unrolled at least 24 hours before installation.
- Forming corners is more labor-intensive.

Architects' Material Specifications 700 SERIES THERMOPLASTIC RUBBER (TP)

Flooring accessories shown in the finish schedule or listed herein as 700 SERIES BASE OR WALL BASE shall be 1/8" (3.175 mm) thick Type TP Thermoplastic Rubber extruded base, furnished by Roppe Corporation. It shall be constructed of first-quality materials and shall be smooth and free from any imperfections which detract from its appearance. The base shall conform fully to the requirements of Standard Specification F-1861, Group 1 (solid) Style A (Straight) or Style B (Cove). The Cove Base shall be _____ (2-1/2" (63.5 mm), 4" (101.6 mm) or 6" (152.4 mm) in height and in lengths of _____ (48" (1.22 m) or 120' (36.576 m)). The Cove Base shall be of the _____ type (Straight or Cove), 1/8" (3.175 mm) gauge, and in the color stated.

ASTM F-1861 – Type TV Thermoplastic Vinyl VINYL BASE (TV)

The Good

Vinyl Base is a good choice when price is a factor.

Benefits

- Co-extruded top layer resists scuffs and scratching, and won't fade, crack or chip.
- Inexpensive because it is made from PVC vinyl.
- Top lip design helps base fit tightly against the wall.
- Available in 2 thicknesses, .080" and 1/8".
- Ribbed back for positive adhesion.

Disadvantages

- Wall irregularities can telegraph through .080" base.
- Possible shrinkage problems.
- Must be acclimated to room temperature 24 hours before installation.
- Coils need to be unrolled at least 24 hours before installation.
- Forming corners is more labor-intensive.

Architects' Material Specifications VINYL COVE BASE (TV)

Flooring accessories shown in the finish schedule or listed herein as VINYL COVE BASE OR WALL BASE shall be Type TV, Thermoplastic Vinyl ROPPE VINYL WALL BASE, furnished by Roppe Corporation. It shall be constructed of first-quality materials and shall be smooth and free from any imperfections which detract from its appearance. The base shall conform fully to the requirements of Standard Specification F-1861, Group 2 (layered), Style A (Straight) or Style B (Cove). All Cove Base shall be _____ (2-1/2" (63.5 mm), 4" (101.6 mm) or 6" (152.4 mm)) in height and in lengths of _____ (48" (1.22 m) or 120' (36.576 m)). The Cove Base shall be of the _____ type (Straight or Cove), .080" (2.03 mm) or 1/8" (3.175 mm) gauge, and in the color selected.

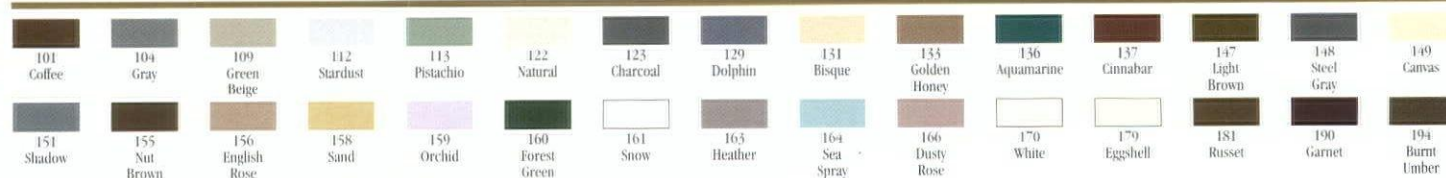

Roppe's new MatchMates system gives you 25 beautiful colors which are available in every product we make (all three kinds of Base, as well as our Rubber and Vinyl Treads, Tile and Accessories).

Architecture Medal for Virginia Service

For unusually significant contributions to Virginia's built environment or to public awareness of it.

When Shakespeare wrote, "All the world's a stage, and all the men and women merely players," he described many of us, but not Charles Longworth. Years ago, Longworth left the bit parts and lead roles behind. His strength was in directing. Although he is equally adept at flying an airplane or leading a corporate board, it is his leadership of the Colonial Williamsburg Foundation for which he was awarded the Architecture Medal for Virginia Service.

As one admirer noted, "the magnitude of his responsibilities was daunting, but Mr. Longworth managed the employees, collections, buildings, hotels, properties, holdings, taverns, restaurants, shops, and visitors with an impressive sense of dignity and professionalism." In every pragmatic and visionary phase of its mission, Colonial Williamsburg expanded, improved, and broadened its reach under his leadership. He sparked growth in employment, income, and endowment; in historic buildings and support facilities; in the collection of historic materials, and in the foundation's worldwide reputation for excellence.

During Longworth's 15-year tenure as foundation president, Colonial Williamsburg became a living stage upon which a host of educational programs played to appreciative audiences. As a backdrop to these programs, the foundation improved and expanded the colonial "stage" to enhance the messages being portrayed. And under his watch, fifteen major new buildings were built and nine others restored or renovated. Among them was the Bruton Heights School Educational Center, a state-of-the-art communications and education facility that consolidated nine departments and saved a historic school building from demolition.

Through reorganization of the foundation's hotel operations, new acquisitions, golf course construction, renovation of Shields Tavern, expansion of the Williamsburg Lodge, and \$10 million in capital improvements to hotels, Colonial Williamsburg was boosted into national prominence as a leading resort and convention destination. Other attractions that benefited from Longworth's initiative include the Dewitt Wallace Decorative Arts Gallery, an addition to the Abby Aldrich Rockefeller Folk Art Museum, the Wolstenholme Towne Archeological Museum, and the Carter's Grove Reception Center. In total, his stewardship of Colonial Williamsburg's valuable resources and his contributions to national understanding of Virginia's history created a legacy that will long survive.

Charles R. Longworth

As president of the Colonial Williamsburg Foundation, Longworth was equally at ease piloting his private plane (above) as he was entertaining dignitaries such as Prince Charles (below).

TRADITIONAL ARCHITECTURAL styles endure; traditional construction materials typically do not. That's why Fibertech is revolutionizing the renovation and new construction industries with architectural fiberglass elements that stand the test of time.

Strong, lightweight and easy to install, Fibertech puts new life into structural or decorative cornices, columns, capitals, brackets, balustrades and other architectural components in a range

of standard and custom styles. Precision molding methods allow us to recreate even the most complex shapes or intricate ornamentation. Everything old is new again.

And Fibertech's integrated texture and coloration effectively replicates virtually any finish – including painted wood, aged metal, plaster, stucco, and stone – so painting, peeling, flaking, fading, rust or rot is a thing of the past!

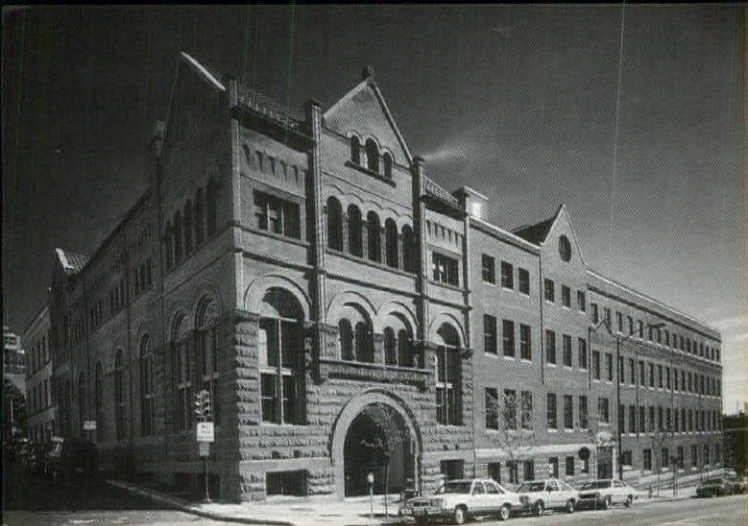

For details on ways to make everything old new again, contact Sue Smink at 864-654-2300.

T. David Fitz-Gibbon Architecture Firm Award **The Glave Firm**

36

Adaptive reuse was still a phrase in the making when James Glave, AIA, was already injecting Richmond's old buildings with new life. The firm he helped to found, Glave Newman Anderson, set the standard for others to follow in projects such as the Ironfronts, the Virginia Supplemental Retirement System building, and Linden Row. For more than 30 years, this firm has been a wellspring of creative architecture through its context-driven approach, weaving detail and meaning into every aspect of their work. In 1994, the practice reconstituted itself as The Glave Firm, with a focus on cultural, institutional, and adaptive reuse projects. It has earned a national presence in the hospitality field on the basis of projects such as The Homestead in Hot Springs, Virginia, and The Carolina Inn in Chapel Hill, N.C.

Each project the firm accepts elicits a research exercise to give the multidisciplinary staff an understanding of the context, program, and client. This critical step establishes the conceptual framework from which the firm's design products emerge. The process has led to award-winning results in commissions such as the Morven Carriage Museum, William Smith Morton Library, and Virginia Historical Society.

In addition to its commitment to clients and context, the firm has consistently maintained a commitment to the architectural profession and its development, spawning many other firms in the Richmond area and encouraging the participation of its directors and staff in professional organizations, community outreach, and educational programs.

The Glave Firm's portfolio includes preservation projects such as the Virginia Supplemental Retirement System building (top), office buildings such as Theater Row (above), and hotel interiors such as The Homestead (left).

Distinguished Achievement Award

Helene Combs Dreiling, former president of The Dreiling Partnership in Roanoke and now Managing Director for Stakeholder Relations at the AIA national headquarters in Washington, D.C., has shown unparalleled leadership within the profession. Her activism has benefited every level of the American Institute of Architects, from her presidency of AIA Blue Ridge to her role as Virginia Society director and director of the Region of the Virginias. In 1999, she was elected as one of three national vice presidents of the AIA, a position in which she served until joining the national staff. Along the way, her focal point has been education and the relationship between schools of architecture and practitioners. Among the causes she advanced: internships should be integrated with professional degree education.

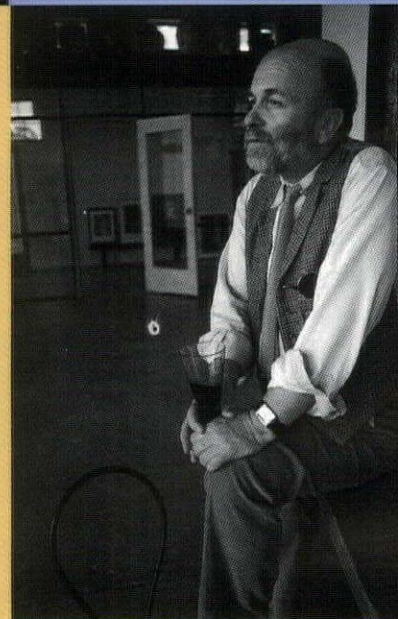

Presented for achievement by architects in design, practice, education, service to the public, or service to the profession.

Helene Combs Dreiling, FAIA

Jeff Levine has planned and designed housing for public, private, and nonprofit entities across the U.S. and in England. His credits include work on Richmond's Tobacco Row apartments and a host of affordable housing initiatives for the Richmond Redevelopment and Housing Authority. Through his own practice, Shelter Design, and pro bono work with organizations such as Habitat for Humanity, he continues his personal research into accessibility and environmental issues facing the housing industry. Levine's own house, an adaptive reuse of a metal building in an inner-city neighborhood, has received widespread recognition in the regional and national press.

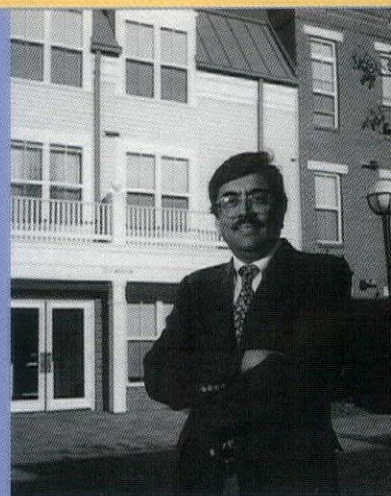

38

Jeffrey Levine, AIA

Honorary VSAIA

He is not an architect, but for more than 25 years he has been a powerful advocate for neighborhood revitalization and community economic development. As founding director of the Better Housing Coalition in Richmond, T.K. Somanath has actively sought out citizen involvement in the projects sponsored by the coalition. His efforts to build consensus among existing neighbors increase the odds that new housing units and the people who live in them will be welcomed to the community. Through his leadership, derelict neighborhoods in the city and surrounding counties have been revived. Of his approach to infill housing, Somanath has said, "It's like working with a worn Oriental fabric. Take great care in stitching it back together when it seems worn out – and it will serve you well."

T.K. Somanath

If only they'd had GranCem® cement.

39

No doubt, the Ancient Romans had good intentions when they paved the Appian Way, all the way from Rome to the Adriatic Sea. But they didn't have GranCem® cement.

If they had, they'd have known that GranCem® cement is made from recyclable materials, providing significant environmental advantages for paving applications. And that mixing GranCem cement with ordinary portland cement makes concrete stronger and more durable.

This timeless combination of environmental stewardship, quality, and innovation makes GranCem cement an outstanding choice for your projects. To find out more, call **1-877-GRANCEM**, or visit www.grancem.com. **Timeless Quality.**

Test of Time Award

The Allied Arts Building was hailed as a great step forward in Lynchburg architecture when completed in 1931 by the architecture firm of Johnson and Brannen and was declared one of the best Art Deco buildings in the state in the Virginia Museum of Fine Arts' 1992 exhibition, "The Making of Virginia Architecture." The architect's intent was to create a composition of structural piers that rose sixteen stories from the heavy base that contained commercial functions, and its realization has long been the most identifiable landmark on the city's skyline. In his book, *Lynchburg, An Architectural History*, historian Allen Chambers asserts that the building's modernism "has scarcely been advanced—or even equaled since—in Lynchburg."

The Allied Arts Building, completed in 1931, remains a key element of the Lynchburg skyline.

The Allied Arts Building

The Award for Preservation

In recognition of efforts to preserve Virginia's rich built heritage.

Farmington Country Club

The original structure at Farmington, in Albemarle County, has a pedigree dating back 200 years. The first architect to design an addition to the house was Thomas Jefferson in 1803. The latest additions were completed in 1999. Circumstances prevented Jefferson's design from being built until the estate was bought in 1927 for a country club and residential community. The charter members insisted on having Jefferson's design realized. Over the years, no fewer than seven architects have worked on the house. But by attaching a series of wings and galleries, they have maintained the original home's residential scale and preserved its character. For holding their architects to such high standards, the owners and members of Farmington Country Club have performed a noteworthy service.

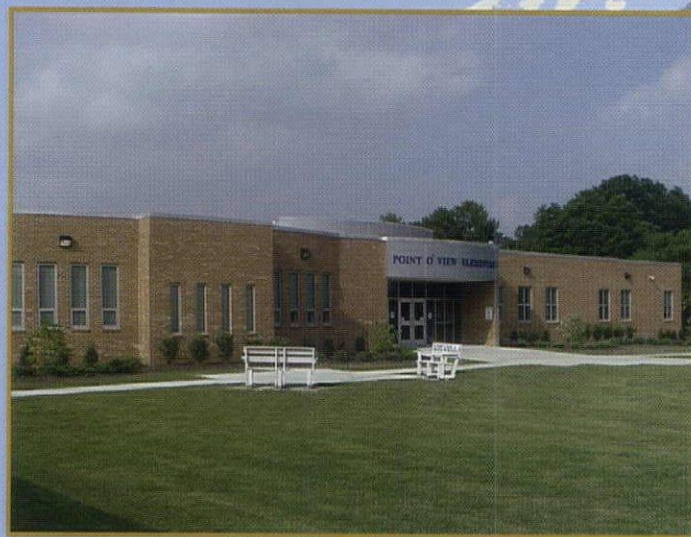

Historic interiors at Farmington have been treated with care.

Courtesy VMDO Architects

Our Products Are Everywhere

From the neighborhood office park to apartment complexes in China and the CERN Nuclear Research Facility in Lusanne, Switzerland, our environmentally proven polymer coatings and waterproofing penetrants are specified by architects and engineers worldwide for their durability, high quality, long life and earth friendliness.

*Sprayed cavity wall behind brick veneer with an all-rubber polymer.
No asphalt.*

Asphalt Free Waterproofing Solutions—

- Incredibly Elastic ■ Non-toxic ■ Non-carcinogenic
- UV Resistant ■ Guaranteed not to leak for a lifetime

Aluminized, Rubberized Roof Maintenance

- Fast Drying ■ Weather Resistant ■ Light Reflective
- Unaffected by Long-term Immersion in Water ■ Seamless

Low Cost waterproofing polymer for roughest commercial & residential jobs.

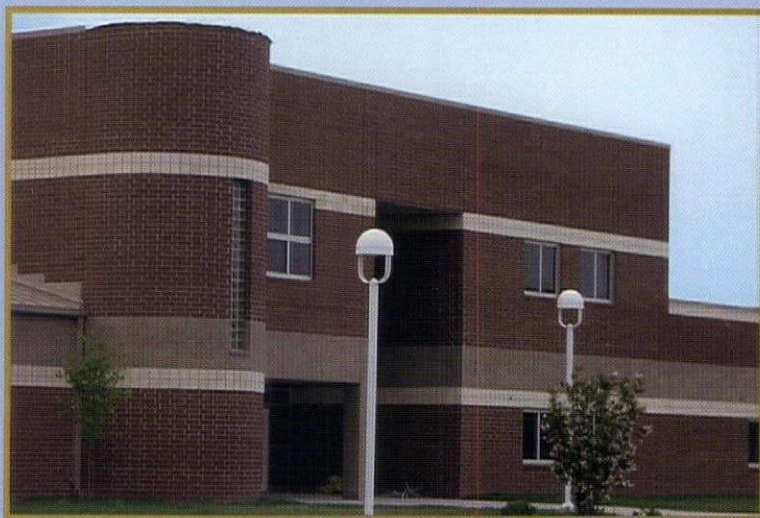

- Non-toxic ■ Contains No Asphalt
- Seamless Protection ■ Highly Elastic
- Excellent Adhesion & Crack Bridging Elasticity

A Permanent Weather Proof for Concrete & Masonry

- Resists Freeze-thaw Damage
- Forms Permanent Chemical Bond
- Stops Water & Salt Intrusion
- Lower Initial Cost & Longer Service Life
- Non Yellowing

No asphalt.*

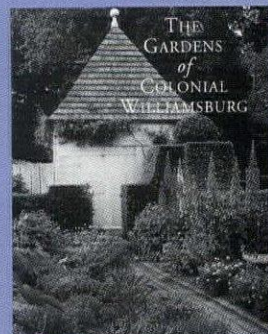

Society Honors

To recognize individuals or organizations whose efforts complement the architecture profession in Virginia.

Kent Brinkley, FASLA

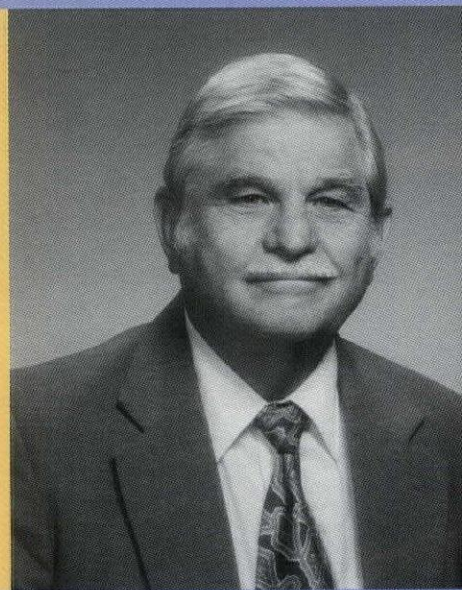

Landscape architect Kent Brinkley enjoys digging into history as much as he enjoys digging in the dirt. For 16 years, he has directed the research, planning, and execution of landscape efforts conducted by the Colonial Williamsburg Foundation. His work has enhanced visitors' experiences at many Williamsburg structures including the Williamsburg Lodge, the Abby Aldrich Rockefeller Folk Art Museum, the Winthrop Rockefeller Archaeology Museum, and Shields Tavern. In addition, Brinkley co-wrote the award-winning book *The Gardens of Colonial Williamsburg*, now in its third printing. And his passion for history extends from garden research to Civil War reenactments – even to his appearance in several scenes of the full-length movie “Gettysburg.”

Jack Proctor

42

To many Virginia architects, Jack Proctor is not associated with the building code – he IS the code. Officially he serves as deputy director for the Virginia Department of Housing and Community Development and as policy and planning director for the department's Division of Building and Fire Regulation. It was under Proctor's guidance in the mid-1970s that Virginia adopted and embraced the Commonwealth's first uniform statewide building code. And whenever special interests attempt to insert language in Virginia statutes or in the building code to dilute its uniformity, his voice is among the first and loudest in opposition. In that regard, he is a protector of the public interest.

Jaeger & Ernst

Barboursville-based Jaeger & Ernst bills itself as custom cabinetmakers. To the architects who seek Walter Jaeger and Craig Ernst's skill in transforming their designs into reality, they are collaborators. To the owners who seek quality furniture, custom millwork, or fine cabinetry, they are artisans. Founded in 1972 by Jaeger and joined in 1980 by Ernst, the shop now employs eight skilled craftsmen in a modern shop. Utilizing a Macintosh-based CAD system, each of the owners works individually with architects and clients to develop projects from conception, through complete working drawings, to production and installation. In the face of today's market pressure for high-volume production, Jaeger & Ernst remains one of Virginia's few truly custom shops.

How to Use This *Directory*

FIRST

If you are trying to locate architects in a particular area, but don't know the firm by name, look in the index that begins on page 105. That's organized by city and town.

SECOND

If you know the name of the firm you are trying to locate, simply thumb through the following pages and find the name in the alphabetical listing.

THIRD

Here's what you will find under the firm listing.

Name, address, and phone number.

● Principals and Firm Personnel

If you want to talk about a possible commission, ask for the person listed as “client contact.” If you want to talk to the firm about using a new product or service, ask for the person listed as “vendor contact.” In smaller firms, these contacts will be the same person.

● Principal areas of practice

While architects pride themselves on being generalists, many firms develop particular strengths over the years. This listing includes the four most important areas of a firm's practice, though other project types aren't necessarily excluded from the range of work a firm is qualified to do.

● Firm specialties

Here is where many firms take the opportunity to elaborate on the types of work they do or to make qualitative statements about how they go about practicing their profession. This statement may help you understand the intangible qualities of the firm a little better.

● Recent projects

We have limited each firm to naming no more than five of their recent completed buildings. Take note: Many of the buildings may have been recognized for design excellence or other attributes. If you are considering hiring this firm, go take a look at some of the buildings first and ask the building owners about their level of satisfaction with the results.

LAST

A few words about this directory. Contained here are the architecture firms which have a member of the Virginia Society AIA as a principal. There may be other principals and employees at the firm whose names are not listed. The information published here is provided by the firms and we assume it to be accurate, though we do not assume liability for its accuracy.

Firm Specialties

Our practice is small and personal. We seek to create architecture that in some way makes a positive contribution to the built environment and is also responsive to the aspirations of the owner. This is a challenging enterprise whatever the building type. But whether the project is a single house or a large-scale facility, we believe that if it's worth doing at all, it's worth doing well. Our clients and our planet deserve nothing less.

Recent Projects

Gardens at Sunday Park, Midlothian; Relocation and addition to a plantation dependency, Gloucester (AIA James River Design Award); Appler Residence, Vienna; Williamson residence, Urbanna (AIA James River Design Award); Commons Townhouses at Kanawha Trace, Richmond (Virginia Society AIA Design Award, 1988)

Architectural Design Group, Inc. provides three-dimensional design as part of the standard design package. Technology is rapidly changing and with that evolution comes growth. ADG provides in-house photo-realistic renderings, virtual reality (VR) walkthroughs and computer animation. We also have the capability to produce promotional videos for fundraising and marketing an architectural product. Utilizing technology within the design and construction process enables us and clients to visualize the project and also allows spatial and lighting analysis within a space.

Commercial

Firm Specialties

"These days, when economic considerations are paramount, anyone who's planning to build a primary residence, a vacation retreat or a retirement home would do well to learn some lessons from the Guernsey/Tingle school of architecture," Michael Pretzer, *Mid-Atlantic Country*. "I find Guernsey/Tingle a pleasure to work with; their enthusiasm, attention to detail and service they bring to each project is most refreshing," Gerald D. Smith, Director of University Services, Christopher Newport University.

Recent Projects

Confederate Hills recreation center, Henrico County; Chesapeake Bank Lafayette Financial Center, Williamsburg; renovations, James River residence, James City County (*Better Homes and Gardens*, September 1998); operations building, Pamplin Park Civil War Site, Petersburg; office building, Williamsburg Area Chamber of Commerce, Williamsburg

Firm Specialties

Rust Orling + Neale Architects has been providing architecture, planning, and interior design services to the public and private sectors since 1979. Our primary focus has been in land planning and the design of housing, commercial office buildings, and corporate facilities. Project experience also includes the design of museum and exhibit spaces, conference and meeting spaces, shopping centers, retail shops, restaurants, and light industrial buildings. This experience has translated to suburban sites where other contextual influences form a framework for design.

Recent Projects

Shepherdstown Presbyterian Church restoration and addition, Shepherdstown, W.Va.; Gum Springs Elderly Housing; Highland House Condominiums, Snowshoe, W.Va.; Regent University Alexandria Campus Conference Center; St. Coletta School for Autistic Children, Washington, D.C.

**Concrete Masonry
 Promotions Council**

EDUCATION SERIES PRESENTS

*School Construction with Masonry
 &
 Moisture Control Strategies with Masonry*

Featured at

**Building Virginia
 2000**

Learn best practices in masonry design and construction from leading industry experts. Discover cutting edge technologies and design strategies for your masonry projects. Each program will be worth 1.5 learning units and includes health, safety and welfare credits.

**November 2nd & 3rd
 at the Richmond Convention Center**

A Reflection Of Your Reputation.

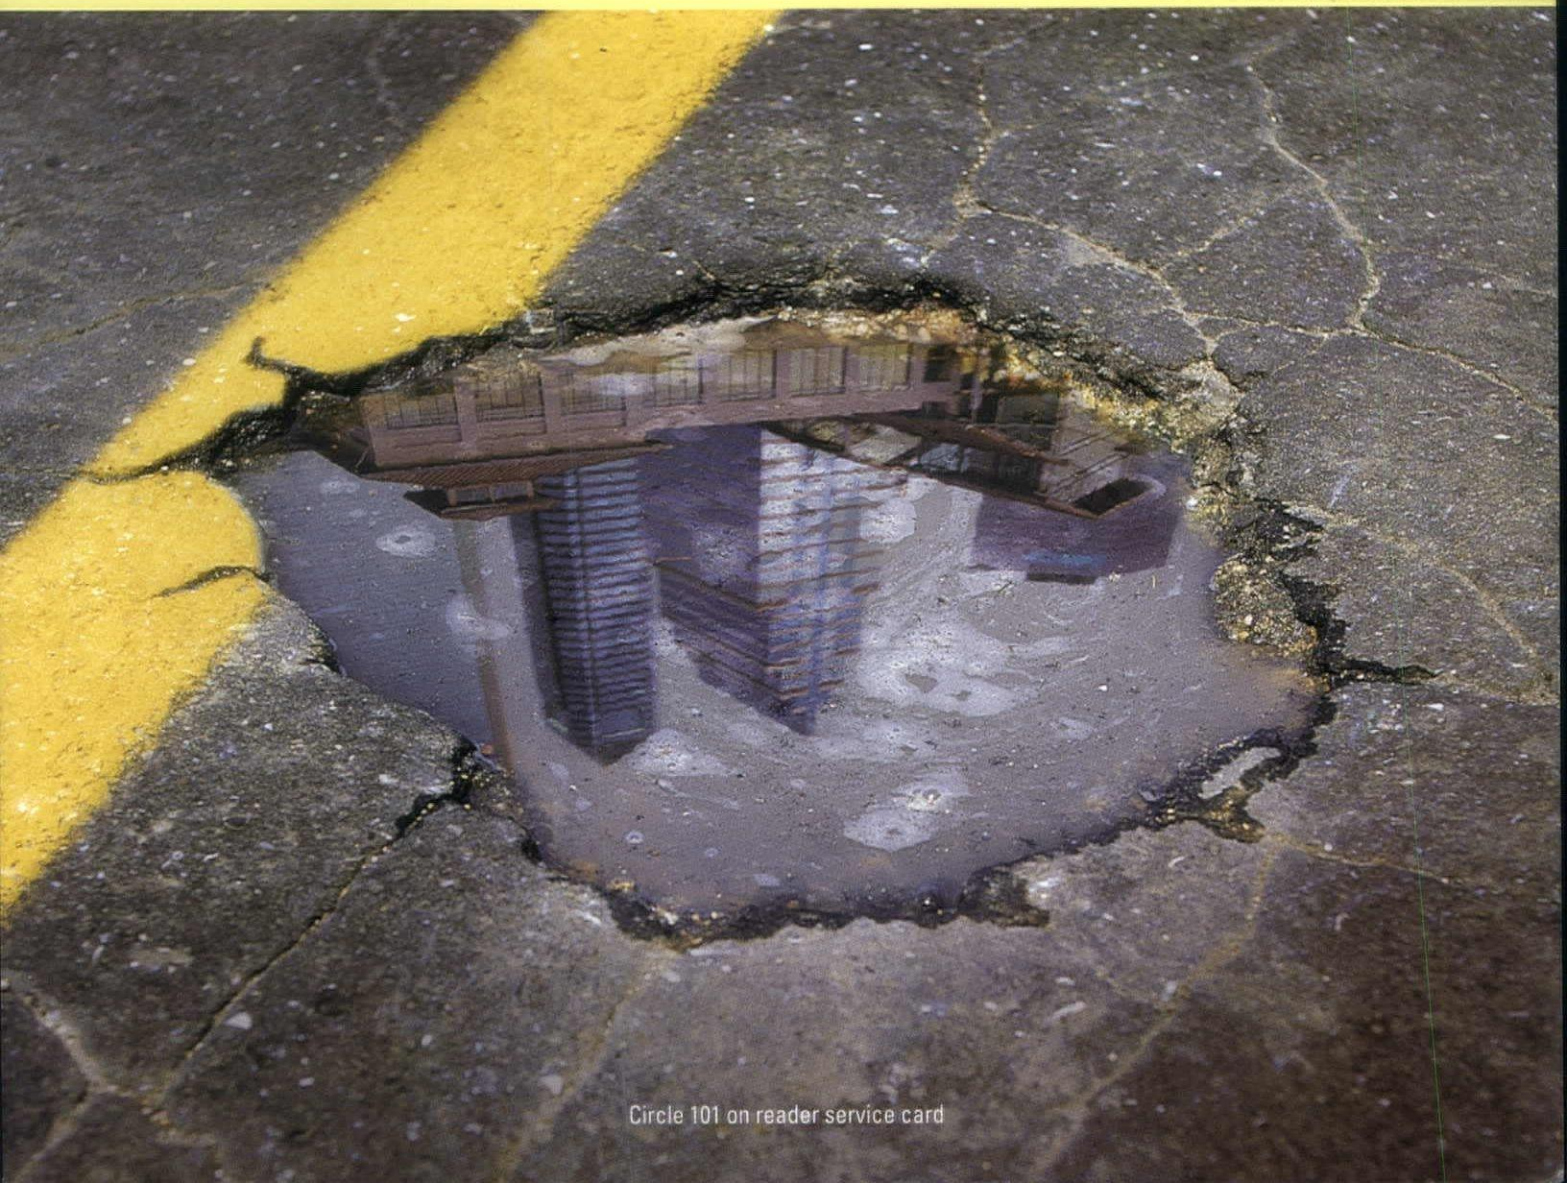

When designing parking areas, it is sometimes hard to overcome client demands for the lowest initial cost possible. But, not long into the lifetime of a property, that low-cost choice of an asphalt parking area will begin to deteriorate and create maintenance problems which drives costs up. Concrete parking areas create premier entryways that showcase your projects like no other pavement can. Concrete's strength and durability reduces repair costs while lasting decades longer than alternative pavements, providing lower life cycle costs for property owners. Call today for more information about specifying and designing quality concrete parking areas.

Concrete Parking Areas - A Signature Of Your Commitment To Quality.

**PARKING AREAS
CONCRETE**
