Negative first impressions are hard to overcome. That’s why concrete should be your only choice for paving or resurfacing parking areas. Concrete creates premier entryways that showcase your projects like no other pavement can. Concrete’s strength and durability reduce maintenance costs while lasting decades longer than alternative pavements. Its long life also means less inconvenience caused by repairs and resurfacing (...and no black footprints tracked into the building!) And when the time comes to resurface your asphalt parking lot, concrete whitetopping can give your property a bright new look of quality.

Concrete Parking Areas - A Signature Of Your Commitment To Quality.

Call The Virginia Ready-Mixed Concrete Association at 804-977-3716 for Information.
"I'd like all wood, inside and out."  
"OK."

"Oh, and I want it to be really secure."  
"OK."

"Maybe some sidelights."  
"OK."

"You know, a different design for the panes might be better."  
"OK."

Introducing the Marvin Inswing French Door. For that strange and unusual situation when a client changes their mind.

Now as clients request more, you can give them more. The list of options goes on and on. Higher performance rating? Extruded aluminum clad exterior, and all furniture-finish wood interior? OK. We can help.

World-class implementation, training, and support can make all the difference when it comes to bringing your vision to life. Avatech Solutions is the nation’s largest specialist in addressing the design automation software and technical issues that face architects. And as the country’s largest reseller of Autodesk tools, we offer a unique blend of real-world experience coupled with an in-depth understanding of the most advanced software techniques. Get in touch with your local Avatech office at 1-800-706-1000 or log on to www.avatechsolutions.com and realize how big your ideas can become.
Contacting the AIA in Virginia: A Source List

Need to find an architect? Want to know more about our professional association and what it can do for you? Here's a list of how to reach the state and chapter offices in Virginia.

Choosing an Architect for Your House

Each architect has an individual style, approach to design, and method of working. So it's important to find an architect who is compatible with your personal style and needs. To help in your search, here are a few basic steps to follow.

Awards for Excellence in Architecture

Nine projects by Virginia architects were honored in 2000 with Awards for Excellence in Architecture. The winning projects varied widely in function and scale from a narrow rowhouse in a dense urban neighborhood to an expansive conservation center for Native American artifacts.

Society Honors & Awards

Presenting the distinguished winners of awards to recognize the exemplary efforts of architects and good citizens who have offered service to the AIA or improved the manmade environment.

Directory of Virginia Architecture Firms

An alphabetical listing of AIA-member firms in Virginia. To locate firms in a particular city or town, look first in the index on page 74 that's organized by location.

Directory of Virginia Society AIA Members

An alphabetical listing of individual members of the statewide professional organization for architects.

Consultants to the Design Professions

This resource for design firms lists vital data and recent project information on a range of design industry consultants.
For over 100 years, Lehigh Gray, White, and Custom Color Portland and Masonry Cements have been used in concrete to create architectural masterpieces. With Lehigh products, architects are given the freedom to choose a multitude of applications to achieve an unlimited range of color, texture, shape, size and pattern. Our versatile quality cements are uniquely transformed through your imagination and creativity. Contact us today or visit us on the web.
Need to find an architect? Have a reason to talk to our professional association? Want to know more about our annual industry show? Here's a list of how to reach the state and chapter offices in Virginia.

Each architect has an individual style, approach to design, and method of working. So it's important to find an architect who is compatible with your personal style and needs. To help in your search, follow these few steps to success.

**Build a list of possibilities.** Ask around. Find out who designed projects in your community that you like. Get recommendations from friends, relatives, and acquaintances who have worked with architects. Check to see if the architect is a member of the American Institute of Architects (AIA). Membership in the AIA means that the architect subscribes to a high professional purpose to advance standards of practice and service to society. This includes having a code of ethics and access to a variety of professional and technical resources.

**Contact your local AIA chapter.** Many have lists of member-owned firms that are interested in doing various types of projects. The most complete statewide list is published in this directory, but you can also search for firms on the internet at www.aia.org.

**Call each firm on your list.** Describe your project and ask the architects if they are available to accomplish it. If so, request literature that outlines the firm's qualifications and experience. If the office is unable to handle your project, ask if they can recommend another firm.

**Interview each firm.** Interviewing a firm gives you a chance to meet the people who will design your project and to learn if the chemistry between you is right. You may be working with your architect for a long time, so choose someone with whom you feel comfortable. Allow at least an hour for the interview, preferably at the architect's office where you can see where the work will be done. Some architects charge for the interview, so ask if there is a fee involved with the consultation.

**Ask questions.** How busy is the firm? Does it have the capacity to take on your work? Who will handle the job? Insist on meeting the person who will actually design your project. What is the firm's design philosophy? Talk about a project budget and the range of fees that the architect would anticipate for your project. Before you select an architect, ask to be taken to at least one completed project. Also ask for references from past clients. These are invaluable. In addition, you might want to obtain an Architect's Qualifications Statement (form B431) from the Virginia Society AIA offices. This standardized document may be used to verify an architect's credentials and other information prior to selecting an architect for a project.

**Making the final cut.** Unlike buying a new car or new appliance, you can't see the product and test it out. The architect provides a professional service, not a product. The right architect will be the one who can provide the judgment, technical expertise, and creative skills - at a reasonable cost - to help you realize a project that fits your practical needs as well as your dreams.

This brief introduction was excerpted from "Home Delivery," a guide to how an AIA architect can help you realize your dream home. Copies of the publication can be requested by calling the Virginia Society AIA at 804-644-3041.

Richmond, Virginia 23227-4300
6th CENTURY SUBSTRATE

Project: The Pyramids of Chichen Itza
Designer: Mayan - Unknown
Product: Handhewn Stone

Probably founded by the Mayan tribe of Itza in 514 A.D., Chichen Itza was taken over by the Toltecs around 900 and flourished until around 1200, when it was abandoned. The most notable pyramid is El Castillo, rising to a height of 100 feet with staircases on four sides leading up to the temple of Kukulcan at the top.

21ST CENTURY SUBSTRATE

Project: Janeway Children's Health & Rehabilitation Center, Canada
Architect: Health Care Consultants
Fabricator: Vicwest, Canada
Product: ALPOLIC/fr Custom Champagne Metallic

This six-story, 140,000-square-foot building was clad with ALPOLIC/fr Custom Champagne Metallic. The architect purposefully selected the dry gasketed aluminum composite panel system for its simplicity in attachment. He selected the custom color to give the building a crisp, fresh, colorful and sharp profile in its surrounding environment.

In the 16th century, early Mayan builders utilized the very latest in materials and techniques to achieve their civilization's most creative creation. In the 21st century, ALPOLIC® prides itself in being a leader in innovative technology, taking aluminum composite materials in new directions. In fact, we're the leader in offering new and innovative products that can help you realize your visionary designs. Utilizing the solvent-soluble fluoropolymer resin Lumiflon® developed by Asahi Glass in 1982, ALPOLIC® created a patented coating process with PPG/MEGAFLON®, a high-performance fluorocarbon, as our primary paint finish. We were the first to offer a virtually endless palette of colors limited only by a designer's vision. Today, we remain on the cutting edge of substrates with such unique products as ALPOLIC STONE SERIES®, ALPOLIC A-LOOK®, Steel, Stainless Steel, Copper, and Titanium finishes. When you have a vision for the 21st Century, create your masterpiece with ALPOLIC products.
Since 1946 Allied Concrete has understood the quality of our products goes hand in hand with the quality of the people we work with throughout the masonry construction community.

To ensure the product application produces the best possible result, Allied Concrete Products performs a role which is inclusive of architect, engineer as well as craftsman. We strive to provide this service through educational, and tutorial sessions in the field or at our manufacturing facilities.

We manufacture and distribute a wide range of concrete products, such as: Concrete Masonry Units, Integrally Colored Split Face, Fluted and Ground Face Concrete Masonry Units, and Integrally Colored Concrete Brick. Anchor™ Retaining Wall Systems and Pittsburgh Corning Glass Block® offer the designer the opportunity to augment both the structure and the grounds that surround it.

We strive to work in partnership with architects and engineers sharing our combined knowledge for a greater outcome. Because everyone needs allies.

For further information or to participate in an AIA sanctioned presentation, please contact Stephen A. Coor, CSI
Nine projects by architects in the region are being honored with Awards for Excellence in Architecture. The winners, selected from a field of 103 submissions representing the state's five AIA chapters, varied in function and scale from a narrow rowhouse in a dense urban neighborhood to an expansive conservation and cultural center for Native American artifacts. Two of the projects recognized are from the category of unbuilt work.

The award-winning projects were selected by a panel of leading architects from Seattle, Washington. Chaired by Robert E. Hull, FAIA, of The Miller/Hull Partnership, the three-person jury also included architects Susan Jones, AIA, of NBBJ Architects and Rick Sundberg, FAIA, principal of Olsen/Sundberg Architects. Their day-long deliberations yielded the field of distinguished winners represented on the following pages. Photos of each winning project are accompanied by brief remarks drawn from the jury's discussions.

Vienna Presbyterian Church
LeMay Erickson Architects

This congregation has occupied its current location in Vienna since 1874, so it was important to the membership that a new sanctuary addition be built without compromising the scale of the old chapel. The new space resembles a Greek cross in plan, with each arm of the cross expressed as a gabled roof form. Inside, a 14-foot-tall oak-and-brass cross commands the space. "This church succeeds beautifully in the lighting system, in the interior wood paneling, and in the natural wood screens," said Susan Jones. "It's very elegant."

Owner: Trustees of Vienna Presbyterian Church
Contractor: Twin Contracting Corporation
Suite 300, The Offices of SMBW Architects
SMBW Architects

This renovation of an early 20th century industrial building into a Richmond architectural office grew from an effort to create an inspiring studio setting. The architects developed a new form-language using materials similar to those existing in the building. Jurors admired the design of the desk components, the way they play against the interior’s raw materials and the warmth of the space. “There’s a lot of energy in the project,” said Susan Jones. “The architects are to be commended for the spirit they brought to it.”

Owner: SMBW Architects, P.C.
Contractor: Emerson Construction Group, Inc.

Fitch O’Rourke Residence
Robert M. Gurney, AIA

Serious constraints can sometimes produce wonderful results. This townhouse, located in the Adams Morgan area of Washington, D.C., was for many years the neighborhood eyesore. The renovation transformed it into a thoroughly modern, warm, and intimate residence with light-filled spaces and a rich mix of materials. The design transcends the building’s narrow dimensions by combining a traditional orthogonal scheme with a curving geometry. The living room exploits the house’s southern exposure and the opportunity to build a new rear façade that would bring light into the loft-like space. Jurors praised the strength of the floor plan, especially in light of limitations presented by the narrow rowhouse dimensions. “I really like the play of the materials,” said Rick Sundberg. “We’re inclined to be more simple in terms of the selection of materials, but this architect did just the opposite and carried it off well.”

Owners: Mary C. Fitch and Ron O’Rourke
This project is an adaptation of an ordinary house on a spectacular site in New Creek, West Virginia. Like a village stretched across the mountaintop, the house features new rooms placed around the perimeter of the existing residence. The new scheme incorporates six volumes painted in varied colors and clad in materials such as board-and-batten, clapboard, and corrugated metal. Jurors warmed to the simplicity of forms and the playful way they fit together. “It is quite picturesque,” said Rick Sundberg. “It sits very comfortably on the site.”

National Museum of the American Indian Cultural Resource Center
SmithGroup

This Suitland, Maryland, museum conservation and cultural center for Native Americans is defined by three distinct organizational devices. First is the circle expressed in the building’s lobby, marking the spiritual center of the site. Second is the rectangle seen in the complex’s base building, which houses collections and support areas. Third is the radial roof that recalls the types of structures found in nature. “Diagrammatically, we really liked it,” said Robert Hull. “When we realized how the spiral form grew from an orthogonal plan, the two seemed to blend well.”

Owner: The Smithsonian Institution
Contractor: Clark Construction
Returning the Mansion to its 1813 origins required more than interpreting bits of fabric, remnants of faded wallpaper, and decorative details obscured by countless layers of paint. After nearly 200 years of service as the Richmond home to Virginia's governors, the residence was refurbished through the custom manufacture of fabrics and patterned carpet and the restoration of furniture, wood doors, trim, and mantles. “Of all the historical projects we reviewed, this one had the most integrity in its careful restoration and materials research,” said juror Susan Jones. “It is exquisitely detailed.”

This facility in Bowie, Maryland, houses sophisticated computer and telecommunications equipment on a single floor, creating a large footprint. Most employees work up front; the rear portion contains sensitive hardware with strict security and fire-protection requirements. The building’s outer shell suggests the intensive use of technology inside: the window wall is made of a tension rod truss assembly with stainless steel connections pinning the glass to the truss. “It seems extremely rigorous,” said Rick Sundberg. “And when you dig deeper into the details, you see it is quite beautifully done.”
Wedged between Route 28 and a soon-to-come office park, this unbuilt office building in Dulles Town Center has a split personality. A sculpted backbone rising from the top creates a fin that divides it in two – one side responding to the highway with its smooth, folded form and metallic appearance, the other an ordered concrete grid facing the anticipated town center. "This project is extremely elegant," said Susan Jones. "It takes an office building and creates a machine out of it. Then it adds a lyrical quality."

Owner: Dulles Town Center, LLC
Contractor: Tompkins Builders

Pope John Paul II Cultural Center
Leo A. Daly

The Pope John Paul II Cultural Center in Washington, D.C., draws its inspiration from architectural forms and gardens found in Catholic tradition. Separate volumes articulate the identity of major components – such as entry rotunda, chapel, and galleries – and culminate in a prominent copper-clad wing roof. "It's very well realized in terms of its planning and its elevation," said Susan Jones. "And the roof, as a unifying feature for what is a very disparate and complex program without much overt symbolism, was an important gesture to make."

Owner: The Pope John Paul II Foundation
Contractor: James G. Davis Construction

Tidewater 757-473-1178
One of Ford's most challenging recent projects was the renovation of a plain warehouse to create the new Children's Museum of Richmond.

D ick Ford doesn't think he's done anything special. Though he has served the architecture community for thirty-odd years, Ford, when asked about his remarkable record, replies with gratitude, as if by allowing him to serve them, architects have given him the equivalent of a million-dollar lottery ticket. "I just find it rewarding," he says in a self-effacing manner.

Ford's taxing regimen of practice and community service would drain most others. But he finds strength and satisfaction in the many roles he plays. The energy he devotes to so many causes is one reason, perhaps, that he was recognized in 2000 as the recipient of the William C. Noland Medal, the highest honor an architect can receive from the Virginia Society AIA.

A lifetime Richmonder, Ford came from a family familiar with construction. "The earliest memories I have of building are of my grandfather, who was a small contractor." In his grandfather's garage, Ford made things with leftover wood and played with tools. By the time he was 15, Ford had acquired a skill at mechanical drawing. Because of his sketching talent, his family thought he would become a ship designer like his uncle. Then a friend mentioned architecture school to him. "I was clueless to what that meant. It sounded interesting," Ford recalls. Just to see what would happen, he applied to the University of Virginia Architecture School and was accepted. Once in college, Ford thrived.

When he came to Richmond in 1968 to work with the emerging firm Glave and Anderson, he felt it was only natural to get involved with the local AIA. "It was an opportunity to force myself to get out there, to get involved with the public. I wanted to try to influence policy and be an active part of a larger community," Ford says. Soon after, the discussion on reorganization of the state's AIA structure began, and Ford was selected to serve on the planning committee.

This beginning with the AIA led to Ford's leadership in many other campaigns, including the establishment of a permanent headquarters for the Virginia AIA, enthuses Robert A. Boynton, FAIA, who worked with Ford early in their careers. The movement from a small storefront to the current headquarters, the Barret House, was a phenomenal jump and the renovation of the historic landmark was a tremendous undertaking. From the beginning, Ford stimulated an outpouring of financial assistance and organizational commitment to see the project through.

Ford continued to move upward in the AIA, taking positions at the national level and working to protect the interests of Virginia architects. Currently, Ford serves on the national AIA board of directors as director of the Region of the Virginias, which he was instrumental in creating in 1986. Until then, Virginia was one of five states in the Mid-Atlantic Region, and many felt its interests were not adequately represented.
In addition to his broad scope of work within the AIA, Ford has directly influenced planning and construction both in the city of Richmond and across Virginia through his service on architectural review boards. As chair of the city's Urban Design Committee and vice-chair of the Richmond Commission of Architectural Review, Ford encouraged informed discussions as both committees dealt with issues such as the controversial Arthur Ashe statue, the new Canal Walk, and the expansion of the Richmond Convention Center.

Today Ford is chairman of the state Art and Architectural Review Board, which is responsible for protecting the aesthetic quality of state-owned buildings. Ford says he is "constantly amazed" at the board's authority to aesthetically judge every project built on state property. "That says a lot. I know of some states where there's a review board for capital outlay, but these boards aren't supposed to look at design or aesthetics. That is our very narrow purpose." The broad spectrum of projects and regional concerns across the state make it an exciting task to serve on this board - always striving to maintain a high level of quality regardless of circumstance or location.

Given all this, who would think Ford would have time to work? Nevertheless, he devotes forty-plus hours a week to architectural projects for Bovington Rothschild Rowland Architects, the Richmond firm where he is an associate. Creating a balance between his architectural practice and community service is often difficult, but Ford says his heart is in the architecture. "I do the rest because I want to give back to the community that's given so much to me." One of his most memorable recent projects, the Richmond Children's Museum (completed when he was at Dewberry & Davis, in collaboration with Vincent James Associates of Minneapolis), was what Ford calls "a very intense project." Recycling an empty warehouse and creating a modern addition was both taxing and exhilarating. The result is dramatic: the striking, colorful modern design stands in contrast to the neighboring Science Museum of Virginia's classic edifice. Projects on Ford's radar now include collaboration with Michael Graves on the design of Richmond's First Freedom Monument. "The Council for America's First Freedom wants this monument to have the same sort of importance to Richmond that the Arch does to St. Louis, and that's a pretty big order."

Both Ford's contextually sensitive work as an architect and his unwavering service to the architectural profession point to his overriding goal: to build more effective, more sustainable, and more satisfying communities. Ford believes that community concerns need to be a more significant part of architecture. "Some of the simpler concepts architecture has to offer will be rediscovered as people start to think about renewable resources, the environment, travel distances between home and work, and the things that take us away from community. It's time to rediscover community - I think we're headed in that direction."

Some say that Mary Lily Wiley’s life is an open door through which she has led the people around her. Virginians— and all Americans — are fortunate that some of her hard work and financial support has helped ensure that the extraordinary architecture left by Thomas Jefferson will survive. In so doing, she sought only the success of the work itself and of the individuals who were asked to carry it out.

Upon her strong shoulders, Molly Wiley has lifted whole causes as well as individuals. Her contributions to the University of Virginia, Poplar Forest, and Monticello, for instance, have inspired others to support restoration programs for these sites, Jefferson’s three most important architectural works.

Though she typically shuns the limelight, a few years ago Wiley abandoned that tack to bring a sense of calm and reasoned debate to the turmoil created when Disney wished to build an ersatz historic park near her Middleburg home. Her leadership was integral to rallying an opposition that defeated the park proposal. While her activities unquestionably have preserved endangered architecture and viewsheds, her long-term goal is to educate, using buildings and their settings as integrated artifacts to instruct later generations on craft, lifestyle, and social history.

Hal C. Craddock, AIA

As one supporter wrote, “Hal is the reason the Distinguished Service Award was created.” In everything he does, Craddock dives in with an infectious enthusiasm that sweeps the opposition off its feet. A setback is only an opportunity. For instance, when he lost a battle to preserve a Lynchburg firehouse, he and other businessmen formed a group that successfully lobbied the city to establish the Lynch’s Ferry Authority with a charter to preserve and revitalize the downtown area. With an attitude perhaps honed in his Peace Corps days, Craddock sees problems and finds solutions.

Willard E. Gwilliam, FAIA

Now retired, Will Gwilliam is recognized for his work with the Colonial Williamsburg Foundation. For thirteen years he directed the development and maintenance of the archaeological and architectural authenticity of the colonial village. His charge was to preserve the 500 buildings within the National Historic Landmark property while keeping the property open seven days a week for visitors, residents, and businesses. Gwilliam’s expertise in juggling the priorities of budgets, staff, business, and preservation kept alive and enhanced a significant piece of Virginia’s architectural heritage.

Bruce M. Justice, AIA

Bruce Justice is honored for his work for his fellow architects. As a trustee and officer of the AIA Benefit Insurance Trust, he helped the Trust develop a benefits package for the smaller firms that provided affordable access to insurance and retirement plans. As former national AIA President Benjamin Brewer observed, “Bruce’s effort to find a resolution to issues concerning the AIA Benefit Trust demonstrates the power of his commitment and reflects a deep concern for the welfare of the profession.”

Science Museum of Virginia

In addition to its eight-point mission to inspire and educate, the Science Museum may add one more: to raise the public’s awareness and appreciation for architecture and demonstrate effective reuse strategies for significant landmarks. Twenty-five years ago, the Museum began a systematic renovation of its new home in Broad Street Station. The work culminated in 2000 with a gala reopening, exposing fully once again architect John Russell Pope’s grand space and elegant detailing, originally unveiled in 1919. This award acknowledges the Museum’s leaders for their consistency of purpose, steadfast vision, and persistence in pursuit of a dream.

Test of Time Award

North Wing – Virginia Museum of Fine Arts

The modernist addition to the Georgian-style Museum of Fine Arts, when completed twenty-five years ago, opened to the praise of state officials, former directors, and the public at large. The addition still serves as the main entrance for the museum, welcoming visitors with its gracefully curved masonry walls and covered entries. The coziness of the narrow vestibule cradles visitors before releasing them into the double-height space of the museum’s entry lobby, lit from the north by a floor-to-ceiling wall of glass. Designed by Hardwicke Associates, Inc. of Richmond, the addition is complemented by a sculpture garden designed by landscape architects Lawrence Halprin & Associates of Portland, Oregon.
The finishing touch for children's spaces
For hospitals, schools and daycare centers — anywhere children need something better to do than sit and wait, professionals specify our interactive play furniture. It's designed for fun, and built for easy maintenance and long life. Sample chair and catalog available to AIA members at no cost.

www.graphisoft.com
www.aecinfosystems.com
This honor acknowledges those who inspire or complement the architecture profession. They may work in the practice of an allied profession, research, education, planning, legislation, writing, or craft.

James W. Price

Almost since stepping into the Poplar Forest restoration project eight years ago, Jimmy Price has been considered an integral part of the team, not merely a contractor. A restoration that looks like the original is not enough for someone who keeps a copy of Vitruvius in his pickup truck. Through research, Price has revived long-lost procedures specifically to restore Thomas Jefferson’s retreat. For example, by burning lime for putty and incorporating the putty into lime-based mortars, his crew’s restorations have resulted in greater authenticity. Through workshops, Price hopes to provide other skilled artisans with more appropriate means to preserve historic structures.

Bill Chrisman

Artist and sculptor Bill Chrisman is equally adept at the intricate details of a life-size hummingbird or molding the bas-relief model that will become an architectural detail enhancing the texture or symbolism of a building. His latest work, reproduced in precast concrete, can be seen on the façade of the new Torgerson Hall at Virginia Tech. The building features thirty-one sculpted panels created through a collaborative process with the project team, which included architects and other artists. Chrisman transformed two-dimensional sketches into three-dimensional clay panels that served as the basis for molds from which the architectural precast panels were made.

Theo Van Groll

Educator and furniture designer Theo van Groll has taught at the University of Virginia School of Architecture since 1972. In teaching and designing, he has reinterpreted the principles of the de Stijl movement in fresh forms. This functional, economical, and joyful furniture and cabinetry has been installed in many residences including his own, which was featured in the spring 2000 issue of Building Ideas magazine. Although his work has been exhibited and published, his ability to inculcate his love of furniture crafts in numerous students is equally important in this recognition. His students’ periodic exhibitions have been called an inspiration to faculty and other students alike.

Paul L. Knox, Ph.D.

Paul Knox is an educator and a scholar, using his talents to further the knowledge of urban geography through research while helping to prepare students to enter the profession of architecture. As a university distinguished professor and dean of the College of Architecture and Urban Studies at Virginia Tech, he has sought to strengthen the relationship between academia and the profession. Knox’s research and numerous publications in urban development continue to provide a solid knowledge base for use by architects and planners.

Edwin J. Slipek, Jr.

Ed Slipek is an ambassador for the architecture profession to everyman. Through his writings and lectures on architecture, architectural history, and building design, he introduces the public to the qualities inherent in good architecture and urban design. Slipek’s commonsense approach to his topic reaches central Virginians most often through his articles in Richmond’s Style Weekly. For his lectures to advanced high school and college students and to senior citizens in the Elderhostel program, he takes advantage of the architectural legacy abundant in Richmond and nearby Washington, D.C., to conduct field trips to communities and important buildings.
The making of great Architecture.

The golden triangle partnership — a devoted builder teamed with a talented architect and trusting owner — is the secret to Horizon Builder's award-winning portfolio of custom residences. Our craftsmen are passionate about technique, focused on detail, and have the experience to troubleshoot issues well before the eleventh hour. You've created a vision. Horizon will make your plans a reality.

IT'S IN THE BAG!
THE LEADING CUSTOM COLOR MASONRY CEMENT

**DEPENDABILITY**
- 800 standard colors
- Customized colors available
- Compatibility/contrast between masonry units and mortar
- High quality, stable pigments
- Maximum color uniformity with quality control procedures
- Lime-based mortar
- Time-tested tolerances between all bags and shipments of specific color designation

**APPLICATION AND STRENGTH**
- Composed of Hydraulic Lime, not a filler
- Ease of application
- Greater bond strength
- Meeting special strength requirements specified in ASTM C-270 for Type S and Type M mortar
- Guaranteed color continuity on projects with various mortar strengths

**AVAILABILITY OF SAMPLES**
- Supplied in 70 pound bag (150 brick panel)

**CONVENIENCE**
- All in one bag Hydraulic Hydrated Lime, cement and quality pigments

**VALUE**
- Highly affordable
- Popular colors at competitive prices
- Price variances based on diversity factors

How to Use This Directory

FIRST
If you are trying to locate architects in a particular area, but don’t know the firm by name, look in the index that begins on page 74. That is organized by city and town.

SECOND
If you know the name of the firm you are trying to locate, simply thumb through the following pages and find the name listed alphabetically in the directory.

THIRD
Here’s what you will find under the firm listing.

• Name, address, and phone number.

• Principals and Firm Personnel
If you want to talk about a possible commission, ask for the person listed as “client contact.” If you want to talk to the firm about using a new product or service, ask for the person listed as “vendor contact.” In smaller firms, these contacts will be the same person.

• Principal areas of practice
While architects pride themselves on being generalists, many firms develop particular strengths over the years. This listing includes the four most important areas of a firm’s practice, though other project types aren’t necessarily excluded from the range of work a firm is qualified to do.

• Recent projects
We have limited each firm to naming no more than five of their recent completed buildings. Take note: Many of the buildings may have been recognized for design excellence or other attributes. If you are considering hiring this firm, go take a look at some of the buildings first and ask the building owners about their level of satisfaction with the results.

LAST
A few words about this directory. Contained here are the architecture firms which have a member of the Virginia Society AIA as a principal. There may be other principals and employees at the firm whose names are not listed. The information published here is provided by the firms and we assume it to be accurate, though we do not assume liability for its accuracy.

Plastic Kote Interior Acrylic is designed for high-end new and existing residential and commercial work. Available in flat, eggshell and a newly improved semi-gloss, Plastic Kote is the professional's choice for premium interior paint. Plastic Kote's elegant finish and rich colors are bound to please even the most demanding clientele. Plus, it’s designed for and tested by professional painters—so you’re bound to be pleased, too!

- High-hide flat finish offers one-coat coverage and excellent washability
- Eggshell finish produces a soft luster appearance, yet maintains its washability
- New & improved semi-gloss finish is block-resistant—ideal for window trim, doors and woodwork
- Available in a wide range of custom-tinted colors for even the most discriminating customer
**Flat Finish**
For use on properly prepared interior drywall, ceilings, masonry and incidental wood surfaces.

**Available in:**
- One Coat White
- Shell White
- Antique White
- Bone White
- Black
- Full range of tint bases for over 1,400 custom colors

**Product Features:**
- Double the washability of conventional flats
- High hide for one-coat coverage
- Low odor
  Sheen = 1.5 - 2.5%

**Eggshell Finish**
Ideal for properly prepared interior trim, woodwork and large surfaces such as ceilings requiring a low-luster finish.

**Available in:**
- One Coat White
- Shell White
- Antique White

**Product Features:**
- A washable eggshell finish
- Resistant to burnishing
- Low odor
  Sheen = 25 - 35%

**Semi-Gloss Finish**
Formulated for use on properly prepared interior trim and woodwork requiring an easy-to-maintain, scrubbable finish.

**Available in:**
- One Coat White
- Shell White
- Antique White
- Bone White
- Black
- Full range of tint bases for a wide range of custom colors

**Newly Reformulated Product Features:**
- A truly scrubbable finish
- Adheres to glossy surfaces (minimal surface preparation required)
- Block-resistant—doors and windows won’t stick.
- Resistant to burnishing
- Low odor
  Sheen = 55 - 65%

**NOTE:** The sheen levels presented on this page are representations only and may not reflect the actual sheen of the paint.
