Let us help make your vision a reality. Simonton® windows and doors may only be one part of your project, but their numerous benefits will enhance your design for years. Simonton produces a wide scope of windows and doors that are energy efficient and built to exacting specifications for your next light commercial or residential project. Backed by a company with over 65 years of outstanding service, you’ll appreciate our industry-leading warranty and dedicated service that helps you during all phases of your project. Learn more at simonton.com/archdetails.
Tragedy counts many victims. Including the unfortunate architect who ignores acoustical engineering. Faulkner's classic Shakespeare reference serves up an apt warning for architects: Ignore the twin evils of noise and vibration and risk tragic consequences.

The last thing you want to hear is bad news about acoustical design—or the lack thereof. From mechanical hum to environmental noise, the pitfalls are lurking. Whether you need to ensure vibration-free lab settings or provide workspace speech privacy, Phoenix Noise & Vibration can help. With staff board-certified in noise control engineering, we offer solutions designed on the front end versus trouble-shooting on the back end. Or worse. (You sure won’t like the sound of that.)

Make sure your next project has a classic ending. With acoustical engineering by Phoenix, it’s bound to resonate success.
“The Holcim Awards appeal to students, to professionals, to everybody who has an interest in sustainable construction and design. All can stand together and talk as equals in the arena.”

Reed Kroloff, Director, Cranbrook Academy of Art, USA.

4th International Holcim Awards for sustainable construction projects. Prize money totals USD 2 million.

Renowned technical universities lead the independent juries in five regions of the world. They evaluate projects at an advanced stage of design against the “target issues” for sustainable construction and allocate additional prizes for visionary ideas of young professionals and students. Find out more about the competitions at www.holcimawards.org

The Holcim Awards is an initiative of the Swiss based Holcim Foundation for Sustainable Construction. It is supported by Holcim and its Group companies and affiliates in around 70 countries, including the United States. Holcim Ltd is one of the world’s leading suppliers of cement and aggregates.

Salvaging Beetle-kill trees chronicles the Eco-Story of the year!
Le Raison d’être por VSAIA

Welcome to the annual issue highlighting the members of the Virginia Society of the AIA and their firms. These are architects who believe in the value of coming together as architects to advance the influence, effectiveness, and status of their profession.

As principals and leaders within their firms’ practice, these are also women and men who recognize that architectural practice is also a business endeavor—that to do good they have to do well. In that regard, the VSAIA serves as a valuable business aid.

With the idea that business collusion is entirely off the table for discussion, of course, the Society works for architecture firms by ensuring that state legislators and regulators understand the role of the profession within the planning, design, and construction industry. That architects have a role in public health, safety, and welfare that no non-licensed individuals can fulfill. That architecture is a profession and not a trade, and therefore that their conduct is judged on a professional standard of care and certainly not on the basis of a product warranty. That the value of architecture reaches far beyond first-cost considerations in the realization of a building and architectural services for public works must be evaluated on a qualification-based selection process. And that AIA architects stand above those who are not AIA members because the public realizes their adherence to a strict code of ethics and life-long commitment to continuing professional development.

So, as you peruse the lists herein, feel all the professional pride to which you are entitled when you see your name and your firm’s listing here. So that this compilation serves as a convenient client resource, there is also a cross-referenced index of firms by location. As we endeavor to commit these data online, if you find discrepancies, please forward them to the Inform editor: dgordon@aiava.org.

But wait, there’s more. This issue also contains material that will help you engage the expanding economy. See, for instance, the article on social media. There is some fun with the presentation of architecturally inspired barbecue. And, for school-design basics, there’s a short piece at the back on the importance of sound absorption in classroom design.

In the pursuit of design excellence, we also present an interview with Bernard Tschumi, the proto-Deconstructivist who will also keynote the ArchEX conference this November. For the issue’s underlying theme, read Will Morgan’s essay on page 9 that sets the tone for both the book review and the feature article here. (Our reader survey earlier this year said that we needed more spice in these pages. Well, here it is.)

And, as always, do commit to visit readinform.com for more than these pages can hold and “like” Inform Magazine on Facebook.

Have a happy fall.

—John W. Braymer, Hon. AIA

Acoustic design for schools.
A
t
rchitects thrive off of feedback. That collaborative give-
and-take is critical to helping designers achieve their
client’s vision. Architects are also, by nature, highly visual.
A desire to engage and be visually creative are two reasons
among many why social media is ideally suited for architects
to communicate their message with a broader audience. If your
firm hasn’t yet jumped on the social media bandwagon, it’s not
too late, but you need to get going because it’s not a fad and it
can produce real results.

So how can architects and project managers harness
social media for their benefit and for the greater good of design?
Use these social media best practices, common among all
industries but tailored to architecture, as the foundation for
your firm’s social strategy.

1. Create. Knowing your overall message, dovetailing
with your firm’s mission, is first and foremost. Whatever
content you create and communicate to your fans or followers
each day should support that ethos and also coincide with your
social media campaign goals. If you have a handle on that,
changes are, you already have the content you need to back
up your message. Drawings, photographs, articles, blog posts,
company news, construction milestones, and project detail
Web pages are all excellent candidates for content. Also think
about video, which helps bring projects to life, as a form of
content to post on your social platforms. Watch your length,
though, even as mobile apps like Vine continue to fracture our
attention spans for video.

When you are ready to deliver your message, remember
that content on social media is built to be consumed in “bite-
size” nuggets, so no long treatises on the methodology behind
the design process of that new athletic facility all in one
Facebook status update. Find a way to deliver your message in
short bursts of information, coupled with imagery. If you have
to explain further, send your audience to a landing page on
your Web site, an online white paper, or in-house publication
that goes into more detail. Also, limit “architect-speak.” Put
your message in easily understandable, layman’s terms.

As always, when you are creating content, be mindful
of copyright laws—make sure you have permission to post
something that wasn’t generated in-house. Consider privacy issues
(e.g., children in photographs), and think twice about doling out
professional, potentially liability-laden advice via social media.
Save that for genuine real-time, in-person consultations.

2. Share. This is the mantra of all social media platforms. Share
with your “likes” or followers the photography from
your latest finished project or the rendering that ultimately
becomes the celebrated new community center. Show off
what’s happening in the office or the volunteer activity in
which your firm participates. Provide project updates on
highly anticipated new buildings or behind-the-scenes photos
of current construction.

Social media is inherently a form of publicity. If you
want to attract more work from the governmental sector, for
example, then you need to show your audience that you have
the portfolio to back it up. Tell people what you are doing, or
they won’t know. You never know where your next client will
hear about you—it could be on Facebook or Twitter.

Be a regular presence on social media. On Facebook or
Google+, post at least two to three times per week. Twitter, on
the other hand, is much more ephemeral, and can handle a
higher volume of conversation—aim for 5 to 10 tweets per day.

3. Engage. Social media aren’t just for broadcasting
your message. You need to “talk back,” so chat away. Are you
attending an architecture conference, for example? Help out
your colleagues who couldn’t attend or keep your audience
informed with regular, pithy quotes or learnings from the floor,
or follow conference hashtags while making new connections.
Networking is the name of the game, after all.

Engaging also means getting to know those who have chosen
to “like” you on Facebook or follow you on Twitter (or whatever
the social platform may be). Acknowledge their comments and
respond to their questions. If you get to a point where there’s too
much to respond to, then set aside 10 to 15 minutes a day to reply
back and do what you can. (Then again, maybe it’s time to hire
a part-time social media coordinator.) Take some initiative and
comment on other people’s posts or tweets.

In the vein of engagement, please, follow people back on
Twitter, specifically. Take a quick look at their profile to see if its
a Twitter bot, and if they appear to be an actual, well-intentioned
human being, then give them a follow. You can always unfollow
them if they flood your stream with nonsense. Use Twitter’s
“Lists” function to sort your followers; consider creating a list
specifically for those whose conversations you must follow (hint:
potential clients or highly active community members).

In the cases where you may be working on a sensitive or
_controversial project, and your social profiles are flooded with
_invective, now is the time to “not” engage. Address legitimate
concerns, but engaging in a social battle with online “trolls”
or in ways that will upset your client will get you nowhere. In
many cases, its best to ask your client first if you can Facebook
or tweet about a particularly sensitive project anyway.

Traditionally, the marketing department manages social
media strategy for the firm, but seriously think about tapping an
Best Practices by Jennifer Pullinger

in-house SME—Subject Matter Expert—a social-savvy project manager or architect and make him or her the “voice” behind Facebook or Twitter. No one knows the business of architecture better than they. They know how to “talk the talk” truly and authentically and can be passionate social ambassadors for your message and company.

4. Collaborate. When you share content, ask for feedback or comments, or any other “call to action” you want to put out there. Feedback is good. But it can be bad, too, so keep an eye on the comments. In the cases where someone is clearly being mean-spirited or abusive, don’t hesitate to delete a comment or ban someone. Spell that out in your social media policy and post it to your Web site or Facebook’s “About” section.

If you are ready to dive into the deep end of the social media pool, you can use social media to workshop ideas or crowdsource new innovations in design. Pick your audience’s collective brain on how to solve a design problem. You can even crowdfund a worthwhile civic project. Start a Kickstarter campaign to fund the design of a much-needed community resource or educate people about the value of architecture through an exhibition or speaker series.

Connecting and collaborating via social media should be reinforced with an “offline” or rather “face-to-face” community engagement effort, however, but starting the conversation online is a great way to encourage ongoing dialogue with your audience leading to in-person interaction.

5. Measure/monitor. If your firm’s marketing director or principal likes to keep track of those proposal-to-interview and interview-to-win/conversion ratios, then they will also likely want to measure how quickly your social networks are growing and if your social activities are paying off. Simply keep a spreadsheet that monitors your social growth by month; Facebook’s Insights also provides useful analytics that reveal how well your content performs.

Social media agencies and corporations like to measure much of their effort by return on investment. Before you launch into a coordinated social strategy, set ROI goals. Obviously, one goal is to get more work, but it’s often hard to track back a tweet or Facebook post to that kind of conversion reporting. Or, perhaps your existing marketing efforts to secure new projects are just fine, and your goal is to improve community relations or educate the public. Whatever your goal is, tailor your message accordingly and establish some metrics, such as how many new “likes” or followers you secure over a period of time, how many more comments you receive online, or how much referral traffic you get to your Web site as a result of your social outreach.

Beyond measuring, if you really want to get into the weeds, invest in a social media monitoring service that allows you to dig deeper and find out where the conversations you are interested in are happening online. This may be useful for the bigger firms where the glare of scrutiny is much more intense, and where you want to monitor what’s being said about a particular project. At the very least, set up some Google Alerts with keywords (your firm’s name, major projects, for example) so you can be notified when “the Internet” is talking about you. Google Analytics, also free, will help you monitor where your social media traffic originates and which platform is outperforming the other with new Web visitors and referral traffic.

6. Commit. Social media platforms have proliferated since Facebook hit the scene (or perhaps the grandaddy of all social media, MySpace, should be given credit for the phenom). While Facebook wasn’t the first social service—merely the most successful so far—it won’t be the last. There’s LinkedIn, Tumblr, Twitter, Google+, YouTube, Vine, Pinterest, Instagram, Path, and endless blog platforms and mobile apps. There are almost too many social channels now, so don’t take on more than you can realistically handle. Do this right or don’t bother. Nothing is worse than going through the effort to establish a social media presence—a Facebook page or a Twitter profile—just to see it die on the vine within a few weeks because you didn’t “feed” it content on a regular basis. Letting your social media profiles languish can also make people think that you don’t have follow-through.

Here’s a simple strategy, especially if your marketing team is under-staffed: Start with Facebook, get into the swing of that, then try out either Google+ (paired with YouTube, which is owned by Google; Google+ is valuable for search-engine optimization—SEO) or Twitter, each of which are the top three mainstream social platforms in the U.S. Don’t be afraid to experiment with Vine or Pinterest too, but in the end, you need to focus on what works. Stay on top of emerging trends with sites like Mashable or Mediabistro. There also needs to be firmwide buy-in on your social strategy. That means your coworkers and employees (if they have social profiles) should be highly encouraged to share also (which, if done by enough people, can spark content virality), engage, and in general support the firm’s social media efforts. If your own employees and coworkers don’t like (I mean, literally, “like”) what you are posting as the firm’s social media manager, why would anyone else?

Virginia is for history lovers. Or so we were told in a state campaign designed to attract tourists to the birthplace of Presidents and battlefields of unspeakable carnage. Looking at much new construction in the commonwealth, an observer might conclude that a heavy reliance on history is something akin to the proverbial rubber crutch in an orthopedic hospital. The past here does not so much support new architecture as it keeps it from being healthy.

Virginia is not just the only state obliterating its urbanscape and farmland, but it is especially tragic given the role that history allegedly plays in the state’s image. 20th-century architecture seems not to have existed here, or rather few architects or builders dare acknowledge its legacy or embrace its lessons. Technologically advanced, environmentally efficient, and spiritually inspiring buildings that respectfully cluster on the land and contribute to the commonweal are the exception. Modern—clearly a dirty word—can hardly compete against lowest-common-denominator construction; brick veneer and molded-plastic “colonial” details rule.

This issue of instant history gets really scary when you look at something like the 43-acre office park in Midlothian that calls itself The MillWorks. The Chesterfield County community 10 miles west of Richmond does contain some ruins from the early coalmines here. But a 150,000-square-foot shopping center is being created in the guise of an “historical office village,” one that its developers claim, “will feature some of the Richmond area’s finest architecture modeled after mills and ironworks of the 17th and 18th centuries.”

What is really manufactured at the MillWorks is anti-history. This freeze-dried, unpatinated past is employed to obscure what is otherwise a dreary office park—pimping the past to sell commercial real estate. Buildings with the gravitas of Saran Wrap offer only a superficial echo of 18th-century life.

Names like Coalfield Commons Place and Main Street temporarily obscure the creation of myth from inconvenient truth—like the dogmatic early Colonial Williamsburg, but done on the cheap. This area may have seen some of America’s earliest mining, but is the image of slaves scrambling for coal at the bottom of 700-foot shafts the cozy image of old Virginia that the developers really wish to impart? One can raise a latte at the Urban Farmhouse Market and Cafe to the 55 miners killed here in an explosion 1855.

In a generation or two perhaps, mold and rampant vines will make MillWorks more convincing, with a sense of time’s passing—if the plastic lasts long enough and the place does not become a slum. Even so, the past here is a lie. Such disingenuousness confuses us from knowing where we stand in the continuum of history, not to mention discouraging us from achieving a better-designed future.

The architectural genealogy at the upper, less speculative end of new housing is a little more sophisticated. But the putative reasons for refusing to embrace Modernism’s challenges or benefits are equally schizophrenic. For builders of homes and suites of offices, an ersatz Georgian is apparently the only acceptable costume in which to disguise ourselves. In part, New Urbanism—which is neither—has created an easy way out, where jingoism masks a paucity of worthwhile ideas.

An exception to this is found in the work of Peter LaBau, a Charlottesville designer with three decades of experience as a restorer of old houses. He decries “such awful housing stock as is being thrown up here” and finds “the dreadful houses against the gorgeous scenery extremely disturbing.”

Regional farmhouses inspire LaBau’s latest house, nestled in a mountainside outside of Roanoke, but the result is contemporary. Its multiple parts read as an organic outgrowth of the practical, connected-buildings agrarian aesthetic. As LaBau refreshingly notes, he wants “meaningful, affordable, vernacular architecture that is a product of its climate, culture, and geography.” Made by a revolutionary process that recycles beetle-killed pine trees harvested from Colorado forests, the house’s board-and-batten siding is an encouraging example of an innovative commitment to build sensibly upon the past.
This summer, museums across the Mid-Atlantic embrace collections to offer exquisite objects, unique pairings, and compelling content.

A Conversation with Bernard Tschumi

by Ghasal Abbasy-Asbagh

GA: As one sees from Red Is Not a Color, which is a generous autobiographical chronology of your work to date, yours has been a long, cumulative journey, which has had a profound effect on the discipline—its pedagogy and practice. What or who would you say were you responding to or reacting against or affiliated with early on in your career? What are those affiliations for you right now, if any?

BT: From 1968 to the early '70s I felt one had to take a step back; not accept all the received ideas that architecture had been known for. After I graduated, I stopped designing so that I could think about what architecture is. As part of that, I started to look at literature, film, and other disciplines in terms of what they could bring to architectural thought.

The late '70s were the beginning of a return to the past. That was inspired by the work of, among others, Robert Venturi in America and Aldo Rossi in Europe. The title Post Modern aside, I saw it as a pre-Modern movement. To me, this was problematic. I was far more interested in recapturing the spirit and concept of the avant-garde of the early 20th century. Post Modernism in architecture quickly became dominated by people such as Robert Stern, Paul Goldberger, and Prince Charles. I felt much closer to people such as Frank Gehry, Peter Eisenman, and Rem Koolhaas—even though their work had nothing to do with mine. They were interested in a new attitude toward the discipline. Today, rather than those two very different approaches, architecture is all over the place, with perhaps the only strong dogmatic ideology being the intensely image-driven obsession of making iconic objects. I feel relatively antagonistic against that very simplistic way of looking at architecture. There are individuals who are doing very interesting work, but I do not perceive them as an organized force; maybe because I do not yet have historic perspective. Still, there is every reason to anticipate further fantastic ideas. I am extremely optimistic about the future of architecture. Of course, the definition of architecture will change, too, because of things such as communication technology and our acceptance of virtual space.

Regardless of a current style, architecture is simultaneously about concepts and derived experiences. These are abstract ways of organizing space for which we are trained and that don't come easily to most people. Then, once it is built, there is an experience that people do understand. You don't have that in mathematics alone. For instance, with a Gothic cathedral, the architect uses abstract formulas and geometries that become awe-inspiring experiences only through the resulting building. That is true of all periods of architecture. Deconstruction was not a style. For me, it was the constant questioning rather than a formalist set of answers.

GA: Your years at Columbia [1988-2003] produced perhaps one of the most significant shifts in architecture education, with the introduction of the Paperless Studio. How do you think our tools affect the way we work?

BT: Look back through various periods of history. Perspective drawing in the Renaissance changed the way architects look at the world. In the early Modern movement, the mode of representation shifted to axonometrics, which also shift our way of thinking. My own interest in modes of notation used by artists, dancers, and film makers has had an influence in my own work. So there are always moments that are ruptures—paradigmatic shifts in history and periods of invention.

When we started the Paperless Studio at Columbia, I could look at the work on a screen and tell immediately if it was by a student of Greg Lynn, Hani Rashid, or Scott Marble. In that regard, the computer is simply an accelerator. At the time, though, we were experimenting with many software platforms to explore a multitude of interests and approaches. Now we have merely a handful, with only a few specialists using other systems. That homogenization is very bad. Drawings by Paul Rudolph matched his thought process and were very different from, say, Corbusier or Charles Moore. If we all are doing the same hyper-realist computer-generated drawings, then we risk practicing Iconism and not architecture. If you are only looking for the money shot—the icon—and you don't form the concept and derive the experience, is that even architecture?

Ghazal Abbasy-Asbagh, a graduate of the Harvard GSD, currently teaches at the University of Virginia School of Architecture. For a complete transcript of the interview, visit ReadInform.com.

Architecture Exchange East is produced by the Virginia Society AIA
The Chesapeake House: Architectural Investigation by Colonial Williamsburg
*edited by Cary Carson and Carl R. Lounsbury*
Chapel Hill, N.C., The University of North Carolina Press, copyright The Colonial Williamsburg Foundation
2013, 488 pages, $60

Ever since John D. Rockefeller Jr. began funding the restoration of Williamsburg in 1927, the Colonial Williamsburg Foundation has been building a wealth of knowledge on early American architecture, craftsmanship, and cultural history. Still, as the preface of this book points out, Colonial Williamsburg itself is perceived as much disturbing romanticism as Colonial historicism.

With *The Chesapeake House*, the foundation displays the serious side of its mission through 17 essays by 10 well-versed researchers who explain in great depth and breadth why late 17th to early 19th century East Coast homes—both modest and grand—looked and worked the way they did, changed over time, and are so difficult and expensive to recreate in this day and age.

Most early American homes were modeled after the styles of England and Europe, even though those styles here lagged behind the far side of the Atlantic by as much as a century. Americans who derived their livelihood from farming, resource harvesting, and nascent industry may have gotten their architectural inspiration from England and Europe, but their lifestyles were quite different from those of their recently separated forebears. Further, as agricultural processes and commerce evolved during the early years of European occupation of the New World, so did the relations among land owners, townspeople, laborers (including indentured servants and enslaved people), and transients.

This book, written and edited over more than 25 years before its release this year, is a thoroughly documented analysis of how those changes are reflected in the layout, construction, detailing, landscaping, and ornamentation (or lack thereof) that developed in cottages, main houses, and ancillary buildings throughout the mid-Atlantic Tidewater and Piedmont region.

We learn of the slow development of a caste of artisans and craftsmen and their adaptations to accommodate what first was something of an extended community of owners and laborers, but later morphed into a strict hierarchy of landowner families, craftsmen, freemen without land, servants, and fieldworkers. Documenting this history enables an increasingly accurate forensic analysis of existing buildings based on materials, evidence of alterations and additions, and remnants of finishes and decorative elements. That analysis—in the ever-expanding circle of knowledge accrual—allows further understanding of the function and interplay of people's daily cycles of life. The reading can require re-reading, occasionally, to capture the nuance of what is being discussed, and there is a bit of repetition among the various essays, but if you are interested in a virtual understanding of living history, you will enjoy *The Chesapeake House*.

Most among us can never understand what it is to live as self-sufficiently as the early settlers had to, so there are many “ah-hah” moments in this book. For instance, in the concluding essay, written by Carl Lounsbury, he laments how craftsmanship has slowly been bleeding away from residential architecture as a result of industrialization. The well-to-do still have the luxury of better materials and amenities, he says. But even modest homes today—through innovations in materials and components—are luxurious in comparison to their early-American counterparts. A result, he argues, is not so much a homogenization of style and commodity as there is a loss of unique character among our individual contemporary homes. Truly stick-built new homes are a rarity at best. And with them, so too has craftsmanship given way to machine milling and nail-gun assembly.

Nonetheless, there is an interesting takeaway from this book. As we move toward the often-technology-driven quest for net-zero buildings, it is always a good thing to turn back and study the architecture of those earlier times to absorb a lesson or two. After all, net-zero energy use was pretty much all our forebears knew. As the Colonial Williamsburg Foundation claims in its mission statement: “The future may learn from the past.”

— DEG
The Contours were starting a new chapter in their lives, retiring from California and wanting a place in the Virginia Piedmont where they could work; he could jam with his musician friends; they could entertain and be close yet visually separate from the neighboring communities, including nearby Roanoke; and their children had a commodious place to visit.

The existing early 1800s cabin on the property was inspirational, but not functional for their needs, recalls Peter LaBau, their regionally based architect. It wasn’t salvageable, “but did have exposed stone on the foundation and a rambling look with older and newer pieces joined, and that really moved them,” he says.

“They wanted a central core, as the original cabin had been, with a voluminous feel inside and appendages working off of that. She also liked the idea of blending in more contemporary flavors so that it wasn’t just a period knock-off.”

The interior solution was a compartmentalization of spaces. His office is on the lower level and rather simple to accommodate his nocturnal work habits, and it is adjacent to his acoustically isolated music room. Her office and bedroom are directly above with breathtaking views of the Blue Ridge, owing to her love of daylighted space. A berm separates the house visually from their nearest neighbor about a quarter of a mile away.

The house is situated on a modest plateau enlarged from the original hillside clearing. The approach is steep and winding, with the first element that comes into view being a stabilized outbuilding, which serves as much as a folly as a storage area, LaBau says. The drive ascends just beyond the house to an overlooking garage connected to the house via a pergola. The home’s footprint—including a modest landscaped yard (more of a 45-degree sloped rock garden)—takes up only a modest amount of the couple’s hillside forest acreage. Boulders and large rocks salvaged from the site became recreated outcroppings.

The building materials were also chosen to evoke a feeling
of age and accumulation. The structure is timber with steel roof spans, and the look of structural stone is created from a cultured stone exterior finish that came in at $3 a foot. “This stuff gets better all the time,” LaBau extolled. “And we set it without grout so that it looks dry laid.”

The timber frame was pre-manufactured by Conner Homes, whose owner LeBau knew when he worked in New England. Shipping to Virginia added embodied waste energy, but otherwise the materials are sustainably harvested locally to the Conner factory. Their waste factor is 7 percent that of stick-built framing, the lumber is superb, and they deliver factory efficiency, LaBau explains.

Another major factor in making the home appear as if it had evolved over generations was the look of the exterior siding. “When Erin first came to me, she brought photographs of Western structures with the once-painted-now-faded look, which they really wanted,” LaBau says. “And it was totally fortuitous that a cold e-mail came to me soon after from Harvest Timber,” (which now works locally through WT Fary Brothers). “I wanted to use reclaimed materials on the cladding. But for an exterior application, I was really reluctant to use something that wouldn’t last.

“The siding from Harvest Timber, though, is harvested from beetle-killed trees, which they cut before it has dete-

# Directory

## Search by Firm Name

The architecture firms listed in this directory have a principal who is a member of the VSAIA. There may be other principals or employees of the firm who are not listed. Firms are listed alphabetically beginning on this page.

This listing includes the four primary areas of a firm’s practice, although other types of projects aren’t necessarily excluded from the firm’s range of work.

Each firm has selected up to five of their recently completed projects. If you’re considering hiring a firm, consider visiting some of the buildings listed. Ask the building owners about their experience with the firm and if they’re satisfied with the project.

### In each firm listing you’ll find:

- **Name, address and phone number**
- **Firm principals and personnel levels**
- **Principal areas of practice**
- **Recent projects**

WOOD DESIGN AWARDS

Nomination deadline: September 30, 2013

Each year, WoodWorks hosts an award program to recognize excellence in wood design and showcase innovative buildings that demonstrate wood’s strength, beauty, versatility and cost-effectiveness.

Categories:
- Institutional Wood Design
- Wood School Design
- Commercial Wood Design
- Multi-Story Wood Design
- Beauty of Wood
- Traditional Use of Wood
- Green Building with Wood
- Innovative Wood Engineering

About WoodWorks
Free design and engineering support for non-residential and multi-family wood buildings.

For project support, email help@woodworks.org.

There is no cost to nominate a project for a wood design award. Download nomination forms at woodworks.org.

Now a Southside suburb of Richmond, Midlothian has an industrial history that stretches back to colonial times. The first commercial coal mine in the colonies was there, which, in turn, powered the Tradegar Iron Works nearby. That history dissipated in the latter half of the 19th century, though, as railroads opened up the richer coal deposits to the west and the Midlothian mines became unprofitable.

In more recent times, as commercial activity in the area strengthened and Chesterfield County became a residential hotspot, recent arrivals sought to reclaim some of the significance of the area’s past. One prominent group, the Village of Midlothian Volunteer Coalition, serves as a fulcrum for these efforts.

Longtime developer and philanthropist Tom Garner and his brother William manage the property on which the former mine stood, and they decided to create Millworks, a regional center, park, shopping arcade, and office complex that would fulfill the concept of a regional center that celebrates Midlothian’s history. What if—as happened along Richmond’s waterfront—the area’s industry had kept going strong into the mid-20th century, and an infrastructure of buildings had developed? It probably would have experienced the same mid-century decay and late-century re-emergence that Shockoe Bottom had in the capital city.

To create a master plan, the Garners brought in Architects Dayton Thompson & Associates to work with the Volunteer Coalition.

“They are a dedicated group,” says Principal Fred Thompson. “But their base of architectural vocabulary was limited. For some, Chesterfield’s past was focused on Georgian, Federal, or Victorian architecture. We had to convince them that there are other solutions.”

Team presentations carried the day, and the coalition approved the plan, which calls for a five-section build out. Midway through completion of the first component, the recession hit. Elements in place are a bit disjointed currently, Thompson concedes. They include a full-scale, 35-foot-tall replica of the original headstock over Mine 3 and an adjacent miniature amphitheater.

“What you see now is just phase one of things to come,” Thompson says. “Right now, the real architectural story is about the vision and teamwork among the owner, county, community, contractors, engineers, and ourselves.”—DEG

LANDSCAPE ARCHITECTURE: Land Planning & Design Associates
(See ad on page 118)
A confluence of factors led Chris Fultz, AIA, to pursue one particular passion of his: smoked meat. He is a Texan, after all, and living here in the Southeast typically means barbecued pork covered in sauce. To get good smoked brisket, he says, he had to do the cooking himself.

And lest you think that barbecue is anything but white-hot serious in the Lone Star State, all you need to read are the words of the country’s only full-time barbecue editor (for Texas Monthly, no less) Daniel Vaughn, himself an architect and author of the recently published The Prophets of Smoked Meat: A Journey Through Texas Barbecue: “For me a great piece of smoked meat is the epitome of Texas barbecue. And that’s without any sauce or accoutrement. ... If you go to the cathedrals of barbecue in central Texas they view sauce as something to be served on the side or not at all. ... Great barbecue has a perfect balance of tenderness, moisture, seasoning, smokiness and beefiness. It’s something that wakes you up and makes you take note.”

Wishing to share that perfect balance with his Virginian cohorts, starting in 2010 Fultz has been working the coals competitively as part of Team Pigsweat, earning trophies and recognition around Central Virginia. Then, during the down times of the past year or so, he put his knowledge of low-heat, slow-cooking offset smokers to paper, found a first-rate metal fabricator, and founded ZZQ Texas Craft Barbeque. Now, with his new smoker in tow, he has converted his vigor and vision to an upstart business concept, which he aims to convert into a catering business once he has leaped all the legal hurdles. His mission is to deliver, as his business card promises: “Authentic slow-smoked barbeque inspired by the tastes and traditions of Central Texas.”
One of the key principles of building a top-of-the-line offset smoker is to regulate the heat and distribute it and the smoke evenly within the sealed grill. The result, in the hands of a master griller is pink-ringed, succulent, carnivore-liciousness.

On his Fultz Architects Website, he expounds: “Midnight fires, thick smoke, slabs of seasoned meat, bourbon, and friends huddled around the fire waiting on the first morsels of brisket. Much like design, barbecue is my passion. Blending technical and intuitive acuity, it hones the senses and feeds the soul the same way a beautiful work of art or architecture touches us. Similar to architecture, barbecue is a hand-made craft that is influenced by regional context, the landscape, the elements, and the skill of the author which demands passion and mindfulness. Because food is a fundamental part of our shared experiences, ultimately BBQ is about connecting with one another. Like design, barbecue is a universal language that appeals to my most basic instinct to create and to share that creation with friends and family.”

He does accommodate for his adopted locale. “To be authentic barbecue it must use what the local/regional landscape provides,” he explains. So he uses white and red oak in lieu of the post oak and live oak traditional to Central Texas.

And he is generous with his wisdom, willing to share his design for an even-heating, temperature-controlled, trailer-mounted offset smoker. From his design, his sheet-metal fabricator created templates for the heavy-gauge steel parts and meticulously assembled them to create this beautiful piece of functional art. The logo was inspired by an industrial designer friend in New Orleans and designed by a Richmond graphic design team, he adds.

Before you get too far into your own plans for following suit, be advised that Fultz attributes much of the success of the smoker fabrication to the shared commitment of his metal working partners. And, when asked if they’d be willing to build another, he had a surprisingly sharp one-word answer: “No.” —DEG

Solar & Engineered Products for Home & Business

- Solatube
- Brighten Dark Rooms
- Energy Efficient
- Natural Daylighting
- Full Spectrum Light
- No Heat Transfer

9432 H Atlee Commerce Blvd
Ashland, Virginia 23005

Land Planning and Design Associates
Since 1971, LPDA, a landscape architectural and planning firm, has designed places for people. Our process focuses on soliciting meaningful input from the end user and client, so need and function are translated to the built environment. LPDA serves Virginia and the Mid-Atlantic region with offices in Charlottesville and Sterling, Virginia.

Dreaming Creek
Timber Frame Homes, Inc.
Heavy Timber Construction... For over 20 years, we’ve built partnerships with architects and builders to create world class timber frames. We merge luxury, sustainability, grand rooms, and eco-friendly materials in residential and commercial projects nationwide. Our standards of quality make the difference. Download an architectural binder from our website.

Young Ears Need Good Acoustics

by Nick Colleran

We hear best what we already conceptually recognize. As adults, we overcome less-than-optimal reverberation time or sound levels by filling in the blanks, even when up to half of the verbal message being conveyed is unintelligible. Young minds, on the other hand, are at a distinct disadvantage in this regard. It is for that reason that acoustics are near or at the top of the many school building performance factors being studied today—such as lighting, air quality, and thermal comfort.

Unfortunately, inferior classroom acoustics are all too common. They often have a speech intelligibility rating of 75 percent or less, which is the equivalent of missing every fourth word. It is an even bigger concern for students for whom English is a second language.

Older classrooms, with their block walls, vinyl tile floors, and chalkboard, often act as echo chambers. Windows contribute somewhat to sound reflectivity, too, although they at least absorb some sound in the lower frequency ranges. The sound-absorption coefficient (SAC) is the ratio of a material’s ability to absorb sound divided by the incidental sound, and SAC varies with sound wave frequency. For instance, glass, as noted, has a SAC of 0.35 at 125 Hz (plus, it welcomes in daylight and views). As a comparison to other more highly reflective surface materials, painted block ranges from 0.06 to 0.10 SAC, linoleum or tile floor is 0.02–0.03 SAC, and chalkboards, though traditionally important to classroom instruction, come in at 0.01–0.02.

Timing and taming

The combination of typical classroom tiles, windows, doors, chalkboard, and plaster produces a reverberation time of 2.5 to 3 seconds in the critical speech range. The ideal classroom should be in the range of 0.40–0.60 seconds RT60 (the time for sound to decay by 60 dB).

Reverberation can easily be brought down to a reasonable level with fiberglass acoustical tiles in the ceiling. Their absorption numbers range between .75 SAC and .90 SAC, many times that of the surfaces cited above. For large areas with high ceilings, such as basketball courts, hanging baffles are usually the most effective control, due to their added exposed absorption on backs and edges.

Sound control also involves minimizing distracting background noise. Although one can turn away from or hide a visual distraction, ignoring background noise is not so simple. Sound fills a room as reverberation and surrounds everything everywhere.

There is distraction from outside noise sources, foot traffic or other activity above, media playing in adjacent rooms, and HVAC equipment, to name a few. Students who are able to tune out background noise are also often tuning out the teacher’s voice. And if it isn’t tuned out, background noise leads to misunderstanding.

Acoustic control is a primary design consideration, from the materials selected for surface coverings to floor and wall detailing that blocks sound attenuation. As you would expect, attention to these details during design and construction is relatively inexpensive, compared to an after-the-fact fix. There are white-noise generators meant to mask background noise, for instance, but these are often as distracting as the noise they are trying to mask.

Acoustically absorptive materials are typically porous. Sound that must travel a labyrinth of tiny open spaces loses energy and quickly wears itself out. An acoustical wall covering (aka, wall carpet) is a common solution for school interiors. Acoustical wall panels do have a lower SAC than common wall coverings, but the wall coverings have more surface area. Floor carpet on walls would also absorb sound but does not always meet fire codes for vertical installations.

Installing acoustical ceiling tiles with a high SAC rating and adding wall covering can greatly improve room acoustics. Acoustical wall covering wears well, is easy to install, and provides a uniform reduction in sound throughout the classroom. Acoustical wall panels, for their part, require less wall surface to achieve the same acoustical effect.

Nick Colleran is a principal of Acoustics First Corporation, past-president of the Society of Professional Audio Recording Services and the Virginia Productions Services Association, and a former recording artist and audio engineer.
Tragedy counts many victims.
Including the unfortunate architect
who ignores acoustical engineering.

Faulkner’s classic Shakespeare reference serves up an
apt warning for architects: Ignore the twin evils of
noise and vibration and risk tragic consequences.
The last thing you want to hear is bad news about
acoustical design – or the lack thereof. From
mechanical hum to environmental noise,
the pitfalls are lurking. Whether you need
to ensure vibration-free lab settings or
provide workspace speech privacy, Phoenix Noise
& Vibration can help. With staff board-certified in
noise control engineering, we offer solutions designed
on the front end versus trouble-shooting on the back
end. Or worse. (You sure won’t like the sound of that.)

Make sure your next project has a classic
ending. With acoustical engineering by
Phoenix, it’s bound to resonate success.

Acoustical Engineering Solutions.
