The Answer To Lower Building Costs

Beloit College Dormitory Addition

General Contractor, Kennedy Construction Co., Beloit, Wisc.
Architect, Maurice Webster, Evanston, Illinois

Precast Flexicore slabs, for floor and roof construction, were specified for construction of this addition.

FLEXICORE provides fast, all-weather construction
FLEXICORE cuts days off building schedules
FLEXICORE is fire-safe
FLEXICORE is attractive for ceilings
FLEXICORE requires minimum finishing and maintenance
FLEXICORE provides economical, low man-hour construction

HEAT with GAS

Only with GAS do you get clean, dependable, completely automatic heating. No orders to make, no delivery worries . . . you have instant heat the moment you need it.

With GAS heating you have diversity and flexibility, uniformity in fuel cost, reliable service and longer life of heating equipment.

That's why more and more churches, schools and institutions specify heating with the quality fuel . . . GAS!

GAS DOES IT BETTER automagically!

A PROGRESS PICTURE...
OFFICE LIGHTING AT THE HARNISCHFEGGER CORPORATION, MILWAUKEE

THE NEW
Superior lighting in excess of 100 footcandles.

THE OLD
Good quality but low level lighting — 40 footcandles.

Photo was taken before lighting modernization was complete. Modernization now completed.

The NEW offers excellent quality lighting plus adequate lighting levels for visual comfort throughout the room. Acoustical baffles provide satisfactory sound conditioning. Here is a combination of lighting and acoustical treatment which creates a comfortable atmosphere for all employees. This results in increased production and less fatigue.

Call our lighting engineers when you have lighting problems.

An Interesting and Thought-Provoking Discussion With a Sociological Approach
Delivered at the Annual Convention, Wisconsin Chapter, A.I.A.

In the "Pirates of Penzance" there is the line that "The Policeman's Life Is Not a Happy One." For different reasons, the same thing can be said about the sociologist's life at this time in history. We are living at a time when it is not popular to look carefully at the larger aspects of our culture. It is quite acceptable for any and all of us to seek explanations of current problems in terms of psychology. As a matter of fact, it is not only acceptable, but even fashionable, for persons to admit of psychological problems, to have neuroses or psychoses. Not too long ago it was said that the average Navajo or Hopi family consisted of father, mother, three children, and one anthropologist. To the urban family, where income affords such luxuries, a psychiatrist or analyst has been added and the avant-garde sophisticates find it fitting to boast of their consultations and therapeutic sessions on the couch. Incidentally, I hope that all of you have listened to Katie Lee sing "Songs for Couch Consultation." But the sociologist is not in such a happy position today, and many are turning into social psychologists because of the safer and more prestigious status conferred by the emotional support for some time and which are bolstered by the emotional support which sociologists must take with caution to upset, provoke, or even engage a goodly proportion of those to whom he speaks. His criticisms are of necessity directed toward things that have been established for some time and which are bolstered by the emotional support which comes to things traditional. In short, he is very apt to speak critically about things which have become sacred in the eyes of the people. As these folk tales, the folk lore, of the time in history. We are living at a time when it is not popular to look carefully at the larger aspects of our culture. It is quite acceptable for any and all of us to seek explanations of current problems in terms of psychology. As a matter of fact, it is not only acceptable, but even fashionable, for persons to admit of psychological problems, to have neuroses or psychoses. Not too long ago it was said that the average Navajo or Hopi family consisted of father, mother, three children, and one anthropologist. To the urban family, where income affords such luxuries, a psychiatrist or analyst has been added and the avant-garde sophisticates find it fitting to boast of their consultations and therapeutic sessions on the couch. Incidentally, I hope that all of you have listened to Katie Lee sing "Songs for Couch Consultation." But the sociologist is not in such a happy position today, and many are turning into social psychologists because of the safer and more prestigious status of the latter.

If the sociologist keeps his eyes upon his own data, namely, the institutions and customs of mankind, and if he says anything of significance about them, he is almost certain to upset, provoke, or even engage a goodly proportion of those to whom he speaks. His criticisms are of necessity directed toward things that have been established for some time and which are bolstered by the emotional support which comes to things traditional. In short, he is very apt to speak critically about things which have become sacred in the eyes of the populace. The risk of so alienating listeners is an occupational hazard which sociologists must take without whining if he seeks to carry out seriously the obligations of his chosen field. If I am successful in saying anything of value here this morning, the nature of the sociologist's role which I have just spoken about will be quite manifest.

Another hazard which confronts sociologists is the one which involves the constant efforts of other people to tell him what he ought to say. Because of my happy relationships with the architects at the University of Illinois, I had come to the naive conclusion that all architects were so minded, but, alas, such is not the case. I accepted the invitation to come here upon the condition that Mr. Nat Sample would send to me three suggestions for a topic. This he did, and I promptly ignored his good suggestions, and substituted one which I called "Feudal Values, Business Society, and the Architect." You will note the harassment of the lowly sociologist in the brutally altered topic as it appears on your program, wherein the word "Future" replaces "Feudal." This attempt to induce the sociologists, at least this one, to look to the future rather than to the dark ages comes to naught, and I stubbornly and perhaps unreasonably return to the first wording of the title of this brief talk.

There are four sub-topics of this main topic which I wish to bring to your attention. The first concerns the basic values of the period generally called "Feudal" in history books: Second deals very briefly with the status of the creative artist of that period: The third notes the basic value-system of the "Business Society" and the last calls to your attention the role of the creative artist in the world in which we live today.

FEUDAL TIMES AND VALUES.

The traditional church shown on this month's cover is St. Peter's Lutheran Church, of Chasburg, and is the work of the A.I.A. The firm of Steffen and Kemp, Milwaukee. Readers may recall that in January we also featured the work of this firm, as we treated their contemporary design of another church. This is done to reveal the wide scope of their work. For more on this modern design, please turn to pages 6 and 7.

Few relationships are as rewarding to the interior decorator as working with an architect. The architect is the decorator's most exacting and challenging client and requires her best efforts. All too often, however, the architect looks askance at the relationship and to convert him from this attitude may take strong persuasion.

Why this reluctance? The objections heard from the architect's side are practically limitless. Sometimes his experiences with decorators has soured him on the whole profession. Or he may say that he is capable of choosing the color schemes and furnishings himself for all but the most elaborate interiors. He may decide that a school or office building is too utilitarian, a church too sacred as well as aesthetic values. Modern buildings, with their complex heating and variety of components, require that today's architect be concerned largely with the technical problems of functionality and engineering. The architect, because of his need to keep pace with the constantly changing materials and methods in his own field, finds himself with less and less time to devote to the minor arts, which support the interiors. The age which permitted Michelangelo, Brunelleschi and da Vinci to combine Fine Arts and Architecture, and to do this superbly, is past. The growing body of knowledge and training required for such success is too massive to master today. While the architect should explain the type of interior that he desires, he usually has neither the market-information, time, nor organization to produce it.

The interior decorator, assuming that she has been drawn to her profession in the first place because of an innate artistic ability and that she has subsequently armed herself with a thorough knowledge of history of arts, interior architectural drawing, and the whole array of crafts and trades on the market, is precisely the specialist needed to refine and interpret the structural ideas expressed by the architect.

Is choosing a color scheme or ornament really so simple a project? Colors have their suitable place, time and limit of use. To turn color into the room designer's most valuable and delicate instrument requires not only the study of technical facts, such as color characteristics, their capacity of light absorption and creation of optical illusions, color compositions, etc., but also a remarkable artistic ability. Ornament should never submerge the structural effect nor dominate the design. Many contemporary buildings are outstanding because of their expressed simplicity and intellectual discipline. The play of light, shade and shadow may then be the most effective procedure of decoration.

Working in connection with an interior decorator may be the best insurance of preserving the integrity of the architect's design. Or, if the client employs his own consultant, he may profit by taking a hand in the selection of a suitable decorator. In either case, it will be to his advantage to be the "mental" employer, discussing interior plans and estimates with the decorator.

A composer may conduct his own music, but more often it has been the masterly interpretation of skilled conductors that has made his harmonies live. The interior decorator's most challenging job is to interpret the architect's conception and not introduce a new, rival strain of thought.

IT'S NO SECRET!

Jack Train of Skidmore Owings and Merrill spoke on "Business Administration" at the February convention. A summary of his remarks appeared on page 4 of the February issue of the Wisconsin Architect including mention of a formula used by his firm to determine fees charged their clients. The formula is: Technical cost plus overhead plus profit equals fee.
PRECAST CONCRETE offers Many Structural Advantages

All the advantages of conventional concrete construction are built-in features of buildings employing precast concrete structural units. This type of construction is well-suited to schools, hospitals, churches, factories, stores and service buildings.

Structures using precast concrete units can be built to conform with all applicable building codes. They can be designed to withstand violent lateral forces caused by earthquakes, tornadoes or atomic blast—and they meet all the structural requirements of fire-safety, rugged strength, resistance to weathering and low annual cost common to all concrete construction.

The accompanying photos show construction details of Lindley Elementary School in Asheboro, N. C. The entire structure—roof and canopy, walls and hallway—is framed by 114 precast concrete bents.

A field engineer will gladly call on you if you'd like more information on precast concrete construction.

to Worship

In contrast to the pictures in the January issue, we are showing a church in the traditional design in this issue. Both are the work of the same firm—Steffen and Kemp, A.I.A., of Milwaukee. This is St. Peter’s Lutheran Church, of Chasburg, and is a splendid example of traditional treatment of a House of Worship. These photos show various views of the structure, and its use of stone and wooden arches in the finest traditional design.

MOTHERS' ROOM, LEFT REAR
Dewey...

From Page 3
are handed down from generation
to generation, they express the
hopes and fears of the people telling
them as those who listen to them.
We find such evidence in the An­
derson and Grimm collection of
stories, and in many of them we
see repeated the theme of the low­
ly person finding the prince or prin­
cess and ever after living happily
in upper class bliss. The ideal life
is that of power, wealth, and idle­
ness, and the lord's feudal demesne
symbolizes the basic values of the
time. The upper classes have serfs
and peasants and ladies in waiting
to do their bidding, and the feudal
lords and ladies toil not, neither do
they spin except as whims move
them.
Now, this is not to imply that the
feudal life was devoid of things
good or beautiful, nor that com­
passion for the less fortunate (or less
worthy) was missing from the
scene. Mixed in with this ideal of
the triumvirate of idleness, power,
and wealth were other and sounder
ideals which reflected either unique
departures by individuals or the in­
trusion of more sensible customs
which must exist in some measure if
society is to survive. But still, in
general, the basic, instituted, pur­
posefully established and transmit­
ted ways of doing things and ways
of feeling about things were these
values which we identify as feudal
or class values. Such values had
existed, of course, for many cen­
turies before the development of the
medieval period in Europe, as any
careful study of history will show.
STATUS OF THE CREATIVE ART­
ISTS UNDER FEUDALISM. In the
feudal society the artist was not
free, as is well known. He was not
the powerful and wealthy man of
leisure, but was the employee, the
hireling of the feudal lords of the
church, the merchant system, or of
government. The artist's products
were those which pleased the men
of power, and the castles, palaces,
churches, and forts reflect the val­
ue system within which the artist
worked. The magnificent cathedrals
standing amidst slums: The fortress
which demanded so much of the
time and energy of the people who
created it: The palaces and castles
which stood in stark contrast to the
hovels of the men who designed and
built them—these are the concrete
embodiments in art forms of the val­
ues of the feudal period. Even in the
latter feudal period, the time of the
renaissance, the great artists and
architects were not free from the
need to channel their talents accord­
ing to the wishes of the time. The
unilateral contracts and commis­
sions which bound the worker but
not the employer were typical: the
artist was a wage-earner and not
free to design as he wished. Even
a Michelangelo was restricted in his
creativity to those things which
pleased the powerful upper classes.
That anything of value came out of
the period is attributable to the hap­
py accidental meetings of class
persons in whom sensitivity for art
and the creative artist, as, for ex­
ample, the chance meeting of one
of the Medici and Michelangelo in
the garden with the Greek statues.

AIA Offers New Films
For Rent or Purchase

The first two in a series of semi-animated movie shorts on architectural subjects have been completed by The American Institute of Architects as public relations aids for chapters and state societies.

"What's a House?" the first of these 15-minute cartoon films, traces the evolution of the American house from the "carpenter classic" to the residence of the future. By acquainting the audience with some of the problems of site planning, orientation and building technology the film indirectly points up the essential role of the architect in residential design.

"A School for Johnny," addresses itself to the problem of filling the increasing need for schools without overstraining community resources. The film relates some of the primary factors the school architect must consider in designing for today's education and attempts to clarify some misconception about comparative costs and economy in school design.

Both films are done in simple Disney-like cartoons and charts on a minimum budget. Both include color photographs by outstanding architectural photographers. The films may be either purchased or rented from AIA. The purchase price is $65 per film.

TWO ADDED TO MILWAUKEE FIRM

Four Wisconsin Chapter members, Herbert L. Ebling, Henry P. Plunkett, Albert F. Keymar and Leo A. Kelly have announced the association of Dale R. Johnson and Daniel D. Reginato.

The firm name of the organization is Ebling, Plunkett and Keymar, Architects. Offices are located at 1220 North Milwaukee street.

Milwaukee Division Meets at MAC

The Milwaukee Division's February meeting was a joint dinner-meeting with the local chapter of the American Institute of Decorators at the Milwaukee Athletic Club.

Following the dinner, Miss Lois Hagen of The Milwaukee Journal acted as moderator for a panel discussion on cooperation between architects and decorators. Architect panel members were Wallace Lee, Frederick Schweitzer and Wendell Isley. Wood Pollock, Mrs. Evelyn Jensen Jelinek and Miss Marie Crowley represented the decorators.

Subjects under discussion included fees, the phase at which decorators should enter the building picture, and types of decorating services offered.

ZARSE SPEAKS

Wisconsin Chapter member Leigh Zarse performed a helpful public relations function last month when he spoke to 47 boys at a "Career Day" held at Don Bosco high school in Milwaukee.

Our Kids Deserve—

FIRE RESISTIVE SCHOOLS!
... and they can have them with UNIT GLUED LAMINATED CONSTRUCTION!

For the past quarter century Unit Structures, Inc. has pioneered in the development of functional, fire-resistive schools. It is a proven fact that laminated wood structural members are safer in case of fire ... no chance of sudden collapse which can so easily happen with other unprotected structural materials ... and that is only part of the story. The true economy which is achieved through the use of Unit laminated wood construction is essential in today's budget conscious building programs.

FLOOR and ROOF SYSTEMS

The DOX PLANK system was selected for use in this modern church because it combines the high compressive strength of concrete and the high tensile strength of steel. DOX PLANK features make it the favorite of architects, engineers, and contractors for use in schools, commercial buildings, factories, apartment houses, and private homes. It offers the special advantage listed below.

- Economical
- Is Fire Resistant
- Saves Time and Labor
- Immediate Working Deck
- Speeds Building Occupancy
- Reduces Cold Weather Delays
- Conforms With Standard Building Practices
- Eliminates Hazards of Improper Field Construction

FROM WROUGHT IRON TO CURTAIN WALLS...
1893-1958

During the past three generations, a great transition has taken place in architectural metal work as we have moved into the age of the light metals. But even the achievement of the most modern expression of this age—the curtain wall—owes a debt to the earlier artisans of the forge.

We, at FLOUR CITY, recognize the rich heritage left us by the art blacksmiths. Over the years, their experience and knowledge of the plastic possibilities of metals has been inherited by our new generation. Our metal fabricators of today, now aided by modern machinery, fit and assemble curtain walls for multi-story buildings with the same care and skill that has distinguished our products for the past sixty-five years.

FLOUR CITY was one of the first fabricators of curtain walls. For us, it was not a change of direction, but rather another step forward in the use of our human and material resources.

Obviously, the architect with an imaginative and creative design must rely upon skilled and experienced fabricators to assist him in advancing the frontiers of architecture. We, of course, cannot predict what the walls of tomorrow will be, but we can and do assure you... if those walls are made of metal, the finest will be fabricated by FLOUR CITY.
