Forrer Standards Are Rigidly Maintained
From Shipping Room To Your Office

Few of Forrer's customers ever meet Bert Mueller, head of the shipping department. Yet he performs an important part of Forrer's service. He supervises receiving and checking of incoming merchandise, and maintains control of Forrer's large stock inventory. When your order is received, Bert's department fills it. He makes certain that every item you order is in perfect condition... then schedules swift, yet careful delivery to meet your request. No... you may never meet Bert Mueller and the men in his department when you deal with Forrer, but you can be certain that the care they take in upholding their share of Forrer's service is one more reason you get more when you deal with Forrer.

The Forrer name in office furnishing means far more than furniture to those who are now Forrer customers. You, too, will find that when you call on Forrer, you receive service based on a sound knowledge of office furnishings... as applied to your specific wants and needs whether you're furnishing a private office, a general office, or buying individual pieces.

The DOX PLANK system was selected for use in this modern school because it combines the high compressive strength of concrete and the high tensile strength of steel. DOX PLANK features make it the favorite of architects, engineers and contractors for use in schools, commercial buildings, factories, apartment houses and private homes. It offers the special advantages listed below.

- Economical
- Is Fire Resistant
- Saves Time and Labor
- Immediate Working Deck
- Speeds Building Occupancy
- Reduces Cold Weather Delays
- Conforms With Standard Building Practices
- Eliminates Hazards of Improper Field Construction
Committees Should Note This Action!

All Wisconsin Chapter members were reminded last month by action of the Board of Directors of the importance of the following resolution, first passed at its meeting of June, 1957:

"Effective June 14, 1957, the chairmen of all state-level committees of the Wisconsin Chapter, A.I.A., whose committees affect the welfare of the architects at large, shall have the approval of the Board of Directors of the Wisconsin Chapter, A.I.A., before any findings of their respective committees are submitted to any other professional society, or to the press, or to the public in any manner. In further emphasis of the importance of screening vital information, the president of each of the divisions of the Wisconsin Chapter, A.I.A., shall be so instructed that they also shall be responsible for the screening of their Division Committees to avoid unwise disclosure of information."

Because of the importance of the subject, and the possible bad effect that could be created if it were not recognized, the Board re-stressed the action at its meeting in April.

NEW OFFICERS. When the Madison Division met last month at the Cuba Club, one of the important agenda items was election of officers. Here are the new leaders. From left, are Robert Cashin, president; Robert Torkelson, vice president; and Harold R. Ames, secretary-treasurer.

PUBLIC RELATIONS. A panel of recognized authorities in the field featured a meeting held last month at the Milwaukee Central YMCA under the auspices of the Milwaukee Division to explore public relations problems of architecture in the area. This photo shows members of the panel, and part of the audience of Milwaukee Division members who attended. From left, are John Kadonski, public relations director of the Milwaukee County Medical Society; Tom Nammacher, of "Let's See" magazine; Miss Loretto Fox, public relations director of the Falk Corporation; and Tom Eschweller, panel moderator. Another member of the panel, Jack Russell, former Wisconsin Chapter executive secretary, is not shown in this photo, principally because he was on the operating end of the camera that took the picture.

USE THIS LABEL

Shown at left is a sample of the gummed labels now available to Wisconsin Chapter members. They are urged to attach this identification to all renderings and photographs submitted for publication to any newspaper or magazine.

Cost is 30 cents for a pad of 50 labels. They may be obtained from the Wisconsin Chapter office.
Court Censures Unregistered Practice

Olie C. Kempf, a building designer, was found guilty April 3rd at Port Washington by Judge Charles L. Larson of unlawfully practicing architecture without being registered as an architect. District Attorney James J. Koenen pointed out that Kempf had entered into a Contract July 25, 1956 with the City of Port Washington “to perform professional services” in connection with planning and supervising construction of a new City Hall exceeding 50,000 cubic feet in content. Although Kempf had “associated” with a professional engineer who sealed the plans, the professional engineer had never signed the Contract with the City of Port Washington, nor had he signed the plans or any of the certificates for payment to contractors, evidencing his supervision of the work.

Under investigation by the Directors of the Wisconsin Chapter of The American Institute of Architects are several other cases of non-registered persons practicing architecture under Sec. 101.31(7) of the Wisconsin Statutes by employing registered architects or professional engineers to seal plans and make token supervisory inspections of construction.

According to Gerald J. Rice, Attorney for the Wisconsin Chapter, an employed architect must be “responsible” directing the professional practice of an unregistered firm or corporation engaging in such practice; and such architect who is in “responsible charge” must actually “sign” any and all plans and specifications and not merely seal them. Rice cited an Attorney General’s opinion, 36 A. G. 50-52 (1947) as further requiring that the majority of ownership of any such firm or corporation must be held by registered persons and that the practice of engineering must be directed by a registered engineer and the practice of architecture by a registered architect. Rice also cited State Ex rel Lytle v. Godfiron, 241 Wis. 533, 6 N.W. 2d 652 (1942), to the effect that a non-registered person, who employs a registered architect, must not “himself perform any services which he could not lawfully perform without a license.” If so, he cannot recover for his services.

The possibility of Sec. 101.31(7) being held unconstitutional if a proper case arises, was suggested by Rice, who pointed to State Ex rel Winkler vs. Benzenberg, et al. 101 Wis. 172. In that case Chapter 338 of the Laws of Wisconsin for 1897 provided for licensing of plumbers and permitted a firm or corporation to engage in the business of plumbing provided the manager of the corporation or any one member of a firm was licensed. In holding the law to contravene the Fourteenth Amendment to the Constitution, the Wisconsin Supreme Court said, “It seems entirely clear that there is...

New AIA Membership Emblems
Produced; Three Types Available

A.I.A. membership emblems—in button, pin or charm form—are now available to members, at a cost of $6.00.

The emblems are printed in gold on a maroon background. The face of the badge is 14 carat gold. They are made with three kinds of fasteners—as a button for those who desire a lapel insignia; as a pin for the vest; and as a charm for the watch chain.

They may be ordered from the A.I.A. Washington office. A check or money order should be enclosed, and purchasers should indicate the type of emblem they want.

The emblems have been created because of the belief that A.I.A. members are proud of their professional society, according to Exec. Director Edmund R. Purves.

FOUR FROM CHAPTER SPEAK LAST MONTH

Four Wisconsin Chapter members aided the profession of Architecture, public relations-wise, by making speaking engagements last month. Charles Haeuser spoke to students at North Division High School in Milwaukee; Maurey Lee Allen addressed the Northern Illinois Chapter at Rockford, Ill.; Mark A. Pfaller spoke at the annual banquet of the Wisconsin Dimension Stone Association, and W. Robert Jennings addressed the Racine Kiwanis Club.

Foundation Fund Now Totals
$7,000; More Needed for Grants

A recent anonymous gift of $1,000 to the Wisconsin Architects Foundation raising investment funds of the Foundation to $7,000, was announced at a Meeting of the Foundation members at the Astor Hotel, April 11, 1958.

"Current funds available for scholarship grants and loans amount to $768.99. This means that we will have to raise approximately $1500 by August, if we are to continue the aid to Wisconsin boys afforded by the Foundation in past years," said Francis J. Rose, President of the Foundation. "The letters of appreciation from the many boys helped by the Foundation should give a feeling of pride and satisfaction to all the Wisconsin Architects and their friends who have contributed to maintain the Foundation."

New Members of the Foundation, recently appointed by the Wisconsin Chapter of The American Institute of Architects, are Julius Sandstedt, Karel Yasko and Wallace Lee. Retiring Members Gerrit J. DeGelleke, Maurey Lee Allen and Joseph Durrant were praised by President Rose for their faithful and enthusiastic support and service on behalf of the Foundation.

Officers elected April 11th for the current year are: Francis J. Rose, President; Karel Yasko, Vice-President and Wallace Lee, Secretary-Treasurer. Committee selections are as follows: Membership and Finance, Julius Sandstedt, Lloyd B. Knutson and Theodore Eschweiler; Architectural Education, Scholarships and Prizes, Karel Yasko, Frank C. Shattuck and Wallace Lee, and Civic Improvement, Carl W. Schubert, Leigh Hunt and Francis J. Rose. Architects and others desiring to contribute now may use the following form:

TO THE WISCONSIN ARCHITECTS FOUNDATION:
759 N. Milwaukee St., Milwaukee 2, Wis.

Please enroll me as a sustaining contributor to the Wisconsin Architects Foundation for the year 1958; and accept my gift in the sum of $____________________ ($5.00 or more) to sustain the work of the Foundation.

ARCHITECTURAL SKILL has brought beauty and utility to alleviate an overcrowded condition in one of the nation's foremost dental schools.

Marquette University's new Dental Wing, the work of Grellinger and Rose, A.I.A., Milwaukee, is now in full operation. It will give Dentistry students access to facilities including an X-ray room, a television demonstration room, a conference room, classrooms, laboratories, offices and lounges for students and faculty.

Design and furnishings combine to make this new addition a splendid example of a happy marriage of functional use and eye-warming appeal. Child-size dental chairs are colored coral pink; side rooms are sound proofed so that dentists can work on crying children without disturbing the rest of the clinic.

The side rooms, also used for graduate studies and demonstrations, are lighted differently to reduce eye-strain and shadows for the dentists. One room's ceiling is a solid blanket of lights, while another's holds a single spotlight and a strip of lights on two sides.

An oral surgery demonstration room is equipped to originate closed circuit television broadcasts enabling large classes to observe operations performed.

A 146-seat lecture classroom is designed to use every type of visual aid. Seats are arranged in rising tiers. Many types of lighting effects are possible.

Word has been received from the Octagon that Andrew J. Kreishman, 900 N. 58th St., Milwaukee, has been elected a member of the A.I.A.
Eight-story office building or one-story store... both prove versatility of

**TILT-UP CONSTRUCTION**

From coast to coast architects and engineers are turning to Tilt-up, the fast, economical method of concrete construction for stores, warehouses, office and industrial buildings, hospitals, schools, homes and apartments.

Tilt-up is adaptable to individually designed or standard buildings. It is quick and easy and reduces form building to a minimum. Wall panels are cast flat in simple edge forms—usually right on the concrete floor—and then tilted up into position with power cranes or hoists.

Forms for door and window openings are positioned in the walls before placing the concrete. Walls can be sized to meet a wide variety of requirements. After panels have been tilted up into position they are tied into one integrated unit with cast-in-place piers and beams.

Tilt-up structures have all the desirable qualities of any concrete building. They're strong and durable. They resist decay, termites, storms, vermin and fire. Their first cost is moderate, they give lifetime service and they cost little to maintain. That's true low-annual-cost construction!

**PORTLAND CEMENT ASSOCIATION**

Hi-Lites
OF THE APRIL BOARD MEETING

At its meeting on April 11, the Board of Directors:

Approved advancement of two Junior Associate members to Associate membership—William Stenavich, a draftsman with Brust and Brust, and Elmer Trantow, who is employed by Grellinger and Rose, both of Milwaukee. Also accepted as a new Associate member Howard W. Phillips, a graduate of the University of Illinois, and an employee of Herbst, Jacoby and Herbst, Milwaukee;

Ordered the commencement of proceedings against a Wisconsin Chapter member for alleged unethical conduct;

Heard an excellent report by Julius Sandstedt, chairman of the Chapter Affairs Committee, regarding Samples Exhibit Buildings in other states, and the feasibility of such a project being undertaken by the Wisconsin Chapter. The Board asked that his committee continue its investigation;

Reserved a Chapter room at the A.I.A. convention to be held in Cleveland in July;

Heard a report by Maynard Meyer, Milwaukee Division president, concerning the Division’s plans for the year. He pledged that it would encourage Jr. Associates to be more active, work toward raising the status of the architect in the eyes of the community, activate division committees and foster a greater interest in public relations and civic design. He recommended investigation of conflict between state and Milwaukee division committees; and

Approved the program outlined by Nathaniel Sample and his membership committee for a membership drive to begin immediately and continue through June 14. Details are printed elsewhere in this issue.
This clinic is a busy place, when scores of patients are treated simultaneously. Note the excellent lighting, and well-selected use of material.

A feature of the new wing is this conference room, added when the new wing was built.
Wood-Aluminum Combination New Possibility in Railing Design, Report

Wood has been added to aluminum to create a new concept in aluminum railing design. Blumcraft of Pittsburgh has combined the warmth and elegance of natural-finished wood with the structure of aluminum to develop their new post style No. 170.

A choice of select birch or American walnut trim is available to the Architect to relate the railing design to the surrounding decor and color. The wood-trimmed post will be furnished to the metal fabricator in rubbed-satin finish. All of the Blumcraft adjustable features are contained in this post, which can be used with any of the stock handrail shapes.

Blumcraft railings are said to have received enthusiastic reception by architects for all types of structures. By making their components available to all metal fabricators, Blumcraft has provided the architect with the element of competitive bidding required for public projects as well as for private work.

With the advent of the Low-Cost Tube-Line the Architect now has available two price lines of Blumcraft railings. A survey which Blumcraft made among fabricators in various parts of the country indicates that Tube-Line is in a price range of aluminum pipe railing. The De Luxe Line, because of its labor saving adjustable features, is said to be less costly than a quality custom-built railing.

Some Blumcraft installations which have been built by local metal fabricators include:

Walther Memorial Lutheran Church, Milwaukee; Atlas Iron & Wire Works, Milwaukee, Fabricator; Steffen and Kopp, Milwaukee, Architects; New City Hall, Green Bay; Badger Wire & Iron Works, Milwaukee, Fabricator; Foeller, Schober, Gene, Safford & John, Green Bay, Architects; Mother of Perpetual Help Church, Milwaukee; Reinke & Schroeder, Ine., Milwaukee, Fabricator; Herbst, Jacoby and Herbst, Milwaukee, Architects; Residence Hall for Women, State College, Eau Claire, Wisconsin; Mason Grand Lodge, Milwaukee, Fabricator; Fritz von Grossmann, Milwaukee, Architect; Pius XI High School, Milwaukee.

(Continued on Page 14)

GOOD LIGHTING Complements GOOD DESIGN

Planned church lighting requires a combination of technical skill and artistic taste. Lighting fixtures and light sources must harmonize with the architectural design. Built-in flexibility of lighting control is important, for overall illumination, altar lighting, and all other special lighting required to fit each type of church service.

Buff Hackberry
Adds Distinction
and Beauty

This new, graceful First Methodist Church is a model of design and beauty built of Ottumwa Chiefs, a lovely buff brick with its rugged, hackberry texture.

Any of these companies will be happy to send you color reproductions of Ottumwa Chiefs or any of the many other colorful brick and tile which they produce, including back-up tile, partition tile, face tile and acoustile.

Ottumwa Chiefs are a brick of surpassing beauty. This nature-colored buff face brick has a texture similar to the Hackberry Tree. It is coarse enough to provide the desired depths of horizontal shadows, yet fine enough to be self cleaning.

You'll find in the wide selections of striking color and textures in the brick and tile, made by these companies, the clay products for your new building.

SEMINAR. Here's a scene of the Curtain Wall Seminar, sponsored last month at the Hotel Pfister, Milwaukee, by the Milwaukee Chapter of the Producers Council. A total of 65 architects and 53 PC guests and members attended. Shown here, F. T. Comee, of Kaiser Aluminum, is making a presentation. Others on the platform, from left, are Fred Wehe, of the Overly Manufacturing Company; PC Pres. Tom Cantwell; and Joseph H. Flad, president of the Wisconsin Chapter, A.I.A.

Architects desiring a copy of the new 1958 catalogue M-58 may write to Blumcraft of Pittsburgh, 460 Melwood Street, Pittsburgh 13, Pennsylvania.

The post office department has announced a new issue of A.I.A. Centennial Stamps. These special stamps will be available through July 1, 1958.
CAMPAIGN NOW ON FOR BIG MEMBERSHIP

Invitations to some 100 Wisconsin registered architects to learn more about the A.I.A. and the Wisconsin Chapter were mailed last month. This was the first effort of a campaign for new members being conducted by the state Membership Committee, chairmaned by Nathaniel Sample. It is planned that each office will be contacted by a Chapter member who will invite prospective members, Associates and Jr. Associates to become more familiar with A.I.A. membership advantages.

Chairmen named for each division are William Losch, Milwaukee; Robert Torkelson, Madison, and Paul Kilp, Northeast. They are spearheading a contest among the divisions to determine which has the greatest percentage of membership increase by the June 14 deadline. The winning division will be named at the summer meeting of the Chapter. Other membership committee members include Robert Klocksin, Melvin Siewert and Harold Ames.

Lawsuit... From Page 3

discrimination in favor of firms and corporations as against a plumber doing business alone. The plain meaning and effect of the law is that several plumbers may form a partnership or corporation, and all engage in practical plumbing when only one of their number has obtained, or perhaps is able to obtain, a certificate of competency. Thus three or four incompetent plumbers may associate with another who has a certificate, and become thus enabled to do business, while a man perfectly competent, but doing business alone, must go through an examination and obtain a certificate. This is certainly discrimination between persons under the same circumstances and conditions. It grants special privileges to members of a firm or corporation, and imposes special restrictions upon persons engaged in the same business who wish to prosecute their business alone."

In cases, where it is known that unregistered persons are actually practicing architecture and the architect and professional engineer who “sealed” the plans involved is not responsible by contract to a client or to anyone other than his unregistered employer. Rice recommended that the local building inspector be urged to stop construction until satisfied that a registered person has become “responsible” for the plans by a proper contract with the owner and is actually supervising construction as required by Order No. Ind. 23.5200 of the Wisconsin Industrial Commission.

NEW PUBLICATION MAKES APPEARANCE

"The Architect" is the newest publication on the A.I.A. editorial front. It is a monthly newsletter of the Milwaukee Division, which will reach the membership mid-way between monthly meetings.

Editor is Division Secretary-Treasurer Robert C. Klocksin.

Cut field painting costs with Milcor Bonderized Deck!

Milcor's prime finish withstands rough handling

Shipping, storage, and erection can damage ordinary factory-applied prime paint. And, as you know, a finished paint job can be no better than the prime coat.

To assure a high-quality base for field painting, Milcor Roof Deck is Bonderized, then flow-coated with an epoxy-resin enamel, oven-baked to abrasion-resistant hardness. The result is the most durable prime finish ever applied to steel roof deck. If field painting is required, one coat will do the job instead of two.

See Sweet's section 21/InL—or write for catalog 240.
KOHLER SINKS

FOR BUILDING-IN

Enameled cast iron... superior in quality, durability, satisfactory service

Easy-to-sell advantages:

- Available in colors and white.
- Non-flexing cast iron construction assures maximum strength, protects the enamel, controls clatter, provides a solid mounting for disposal units.
- Cast in one piece—no joints, full length ledge, built-in soap depression.
- Acid-resisting clear through the sparkling, easy-to-clean enamel.
- New Edgewater fittings—entirely of brass, chrome-plated—insure maximum resistance to corrosion and wear. Convenient, high-arched swing spouts.
- Duostrainers make the deep, roomy basins water-retaining; removable cups collect waste.
