Architectural Precast Concrete

Imaginative repetition of precast elements can provide a dramatically bold or beautifully subtle facade, while keeping costs at a practical level. Architectural precast concrete is the modern building material that works willingly with your creative concepts, bringing out the best in your plans.

Call us when you start planning your next project. That's when we can help you most by suggesting how to take maximum advantage of our production facilities and techniques.

Separate
Doesn't
Necessarily
Mean
Equal!

... particularly when you compare separate contracts with single contracts. That's when the merits of the separate contract system become obvious. Separate contracts aren't merely equal to single contracts; they're far more advantageous.

Mechanical systems have become too complex to leave any of their elements to chance. That's why letting SEPARATE MECHANICAL CONTRACTS is so important.

Awarding SEPARATE MECHANICAL CONTRACTS to reputable mechanical contracting firms assures technical knowledge, experience, and quality workmanship. Specialists are employed to perform highly specialized work.

The results are better efficiency for architects and engineers, proven economy for clients.

Compare separate contracts with single. By every standard, the separate method isn't just equal. It's much superior.
A communique received by Regional Director, George A. D. Schuett, A.I.A., from President of the Institute, Chick Marshall, F.A.I.A., reflects action brought about in response to the National Directors push for providing more direct services to the membership. The communique is as follows:

"The January 6-7 Charette on the severe impact of current economic recession upon the architectural profession has just concluded at A.I.A. Headquarters with the following major results:

1. All Institute programs and activities should be re-evaluated and first priority emphasis given to assisting Institute members weather these troubled times.

2. A.I.A. should immediately play an active role in the public arena at National, State and local levels to try to produce immediate increases in the market for architectural services in ways consistent with the overall public interest.

3. A.I.A. should immediately provide a "survival kit" of ideas produced by the charette direct to every member and serve henceforth as a clearinghouse and dispenser of such information.

I personally concur completely and have arranged immediate action to implement these and other detailed charette results. A bulletin will go to every A.I.A. member by "First Class" mail on Monday, January 13. Grassroots is being re-aligned to place added emphasis on surviving economic conditions.

We are encouraged by the possibilities we see in the survival ideas in the Federal Government's current unallocated design requirements, and particularly by the esprit of the entire A.I.A. Staff in attacking these problems.

I ask that you personally assist by informing A.I.A. members of these steps and by expressing your direct assurance as a part of the top Institute leadership that our entire approach and emphasis is conditioned by this top priority concern."
Three good reasons for selecting Weil-McLain

THE CHOICE—Choose from a complete line of oil, atmospheric gas, and combination gas/oil boilers, from 187,800 to 6,060,900 BTU/Hr.

THE FLEXIBILITY—Match any job requirement with a choice of factory-tested packages, factory-assembled sections, or individual sections.

THE QUALITY—Only Weil-McLain has such quality features as flame-retention oil burners, asbestos rope seal, short draw rods, multiple tankless water heaters, forced draft firing and, of course, cast iron construction.

Choice, flexibility, and quality...three good reasons for contacting your nearest Weil-McLain distributor.

Wisconsin Architect January, 1975
In line with the above actions by National A.I.A., the W.A.I.A. will offer a new training lab on "How to make it through hard times". This lab deals with forecasting the outlook for firms during an economic downturn, as well as assessing realistic potentials for success along different options, and creating profitable options for action. Members should be receiving registration materials in the mail shortly. The lab will be conducted Saturday, February 15, 1975, at Stouffers Top of the Marine, 111 East Wisconsin Avenue, Milwaukee, Wisconsin. Registration fee for A.I.A. members will be $50.00, and for non-members, $75.00. For more information, call the Chapter Office at (414) 276-2250.

In the economic bulletin issue of the A.I.A. MEMO, dated January 1975, which was sent to all Corporate members, a listing of new and expanded services which must be looked at by architects, was given. It is worth repeating again here for those Corporate members, and also Professional Associate, and Associate members who do not receive the A.I.A. MEMO: "Architects can find and take advantage of the many opportunities open to them for performing services that they are qualified to do, but have not done traditionally. They include:

- Consulting with cities in preparing Community Development plans and programs
- Retrofitting to make existing buildings energy-efficient
- Conducting feasibility studies for adapting old buildings to new uses
- Consulting with financial institutions to review projects they are considering funding
- Conducting space management studies for corporations and institutions
- Designing interiors
- Preparing Environmental Impact Statements
- Conducting research in a broad range of design and environment-related fields
- Conducting post-occupancy evaluation studies
- Construction management
Looks as good as "old"

Better! Hand Molded Colonials by Illinois Brick faces the future endurably with the tradition and appearance of older reclaimed brick. Molded front and end surfaces with interesting variations in "light and shadow" textures bring a sunny warmth to both interior and exterior surfaces. Chiaroscuro in brick made possible by IB's skills in molding brick and unique flashing methods. Hand Molded Colonials provide a contrasting complement to parklike landscaping and natural settings. It also fits in pleasingly with such design features as the mansard roofs so effectively used by Mission Hills Country Club Village.

Perhaps IB Hand Molded Colonials Brick can make your project look as good as old. And Illinois Brick offers fast service on a wide range of other brick types and colors to meet your most exacting specifications — and schedules. These styles include London Fog Blend and many, many others. Call or write for more information.

Mission Hills Country Club Village
Northbrook, Illinois
— Estimating for contractors
— Real-estate appraising
— Conducting educational programs for other architects
— Surveying existing buildings to make them conform to OSHA's safety and health standards and to new federal and state laws regarding barrier-free buildings
— Programming
— Advocacy planning for community groups

The new Compensation Management Guidelines for Architectural Services to be published in February, will certainly add to your help in determining compensation for all services. A seminar is being planned for a part of the W.A.I.A. Convention on this subject. Look for more information re: CONVENTION '75.

W.A.I.A. has been notified that the deadline for submission of resolutions to be acted upon at the 1975 Convention is February 14, 1975. The chapter executive committee meets February 13, to consider any resolutions that should be brought before the Resolutions Committee of the A.I.A. Resolutions will be acted upon by the Convention to be held May 18 - 22 in Atlanta, Georgia.

The Southeast Section had their elections in January, and their new Officers were not included with the other sections in this past issue. Newly elected Officers for the Southeast Section for 1975 are:

- Thomas M. Slater, A.I.A., President
- John H. Simonitsch, A.I.A., Vice-President
- Richard M. Woods, A.I.A., 2nd Vice-President
- Jerome A. Kowalski, A.I.A., Secretary/Treasurer

Keep the dates of April 22 - 24 open for the 1975 W.A.I.A. Convention at The Abbey on Lake Geneva in Fontana, Wisconsin. John Jacoby and his committee are actively putting together what will be an exciting event for all members. Just a note ... the party event will include an opportunity for local talent in a professional setting. If you are a piano player, or singer, and want to join in a real fun night, contact Claude Gagnon of Wisconsin Face Brick, phone (414) 353-6060, exhibitor member of the 1975 Convention Committee, or contact John Jacoby, Chairman, or Alan Carlson.
Efficient building idea:
Use this much more Fiberglas roof insulation and save up to $27,000 every 60,000 sq.ft.

Those are the potential savings you could realize on the initial cost of heating and cooling equipment. Your client could also save an additional $2500 a year on fuel.

Simply by using 2\(\frac{1}{4}\)" instead of \(\frac{3}{4}\)" of Fiberglas* roof insulation.

These particular savings were figured for a suburban office plaza in the northern climates (zone 1). Factors taken into account were: the normal temperature range of the region, size and type of roof deck, the "U" improvement due to thicker insulation. And the added cost of the thicker insulation.

How much can you and your client save by using 2\(\frac{1}{4}\)" insulation?

Send for our free booklet "Raising the Roof." It'll show you how to figure your own savings for your section of the country for common types of roof decks.

COMPETITION ANNOUNCED:

The 1975 Red Cedar Shingle & Handsplit Shake Bureau/AIA Architectural Awards Program has just been announced to more than 50,000 architects throughout the United States and Canada.
We're too busy to boast about our Drawing Reproduction Service

Right now, our primary concerns are turning out top-quality reproductions for our customers and maintaining fast turnaround times on all jobs. So, to keep on schedule, we won't spend a lot of time explaining our capabilities. We'll just list some of them for your review:

**Drawing Restoration**
- worn but valuable drawings restored photographically

**Revisions**
- reproductions made specifically to reduce redrafting time and expense

**Second Originals**
- excellent quality reproductions for making highly legible distribution prints

**Size Changes**
- reductions or enlargements made to provide scale changes and distribution prints

**Scissors Drafting**
- a photoreproduction technique for reducing your repetitive drafting work

And a great deal of our work is done with high-quality Kodagraph films and papers made by Eastman Kodak Company. If you are hurrying to meet drafting deadlines, contact us today. We think you'll like the results.

ENGINEERING AND COPYING PRODUCTS
As was done in 1973, the program is being conducted to honor architects of projects demonstrating design excellence and significant functional or aesthetic uses of cedar shingles or shakes.

Co-sponsored again by the American Institute of Architects and the Cedar Bureau, the program has been approved by their Boards of Directors and is open to all architects or teams of architects who have completed projects utilizing cedar shingles and/or shakes after January 1, 1970.

Categories of the 1975 Architectural Awards Program include residential single-family, residential multi-family, vacation homes, commercial/institutional, interiors and remodeling/restoration. First awards and merit awards are available in each of the six categories. Certificates of participation will be presented to all program entrants.

Entry forms are due May 26, 1975... entries July 7. They will be judged on July 24-25 and winners will be formally announced at the Annual Meeting of the Bureau to be held in Seattle on September 19, 1975.

Entry forms, rules and information may be requested by writing Red Cedar Shingle & Handsplit Shake Bureau, Architectural Awards Program Department, 1143 Washington Building, Seattle, Washington 98101.

The Society of American Florists will sponsor a symposium on the use of living plants in the interior environment to be held June 22-24, 1975 at the Crown Center Hotel in Kansas City, Missouri.

The purpose of the symposium, titled "... from the plants' point of view", is to bring together those involved in the specification of interior planting, such as architects, interior designers, and landscape architects, with those concerned with the production, installation, and maintenance of living plant material. The widespread use of plants in commercial interiors such as office buildings, hotels, and shopping malls, has created a need for closer coordination among these professions to insure aesthetic as well as functional success for a project.
DIAMOND CORE DRILLING
Holes drilled up to 18 in. diameter.

DIAMOND WALL SAWING
An entirely New Method of making Door, Duct, Window or other type Openings in Re-inforced Concrete Walls. Walls sawed to a depth of 30" or more.

DIAMOND FLAT SAWING
DEEP Sawing Inside or Outside Buildings for Piping, Conduit or other Application Sawing to a Depth of 15" or more.

CALL ONE OF THE THREE CON-COR CO. OFFICES LISTED BELOW FOR THE LATEST INFORMATION ON OUR NON-DESTRUCTIVE METHODS OF CONCRETE SAWING AND DRILLING.

Noted professionals involved in the design and execution of interior plantings will discuss such topics as the man/plant relationship, building design for the use of plants, interior design with plants, selection of plants, plant availability and new varieties, cultural conditioning, and interior garden maintenance. The symposium will be highlighted by an educational exhibit using a wide variety of living plants to show how they add harmony and personality to various commercial interiors.

The Crown Center Hotel was chosen as the site for this symposium since it offers a splendid example of an interior garden complete with waterfall.

For additional information on the symposium, contact John Blake at the Society of American Florists in Alexandria, Va. at (703) 836-8700.

The School of Architecture and Urban Planning at the University of Wisconsin-Milwaukee is seeking applicants for the position of Dean of the School, to succeed John Wade, AIA, Dean since 1968, who has announced his resignation effective with the end of the fiscal year, June 30, 1975.

The School offers three degree programs: a B.S. in Architectural Studies, a Master of Architecture, and a Master of Urban Planning. The Urban Planning degree was initiated during the Fall, 1974, and a final approval of the departmentalization and a change of name which will reflect the offerings in both architecture and urban planning is now pending. Both the Architecture and Urban Planning programs in the School can be characterized by:

1. An interdisciplinary approach to education, with faculty from a broad range of disciplines.

2. An activist approach to teaching, research, and service, which makes use of the Milwaukee Metropolitan area and its problems as well as its resources.

3. Commitments to change within the respective professions.

A Search and Screening Committee, which has been formed, invites nominations and applications for the position. Candidates should have administrative experience, an interdisciplinary view of both architec-
the ideal way of integrating "ROOF DECKS" and structure for an economical and rational building

Not only are DUWE DULITE ROOF DECKS an economical engineering approach for tasteful architectural expression, but much more too. For example, DULITE ROOF DECKS —

- Have a two-hour fire retardant value as stated by the Insurance Rating Bureau. This means building owners are assured a higher safety factor and lower insurance premiums.
- Are Underwriters' Laboratories approved.
- Have a high insulating quality that is equal to 2" rigid board insulation.
- Permit energy savings through reduced heating costs.
- Help owners meet OSHA requirements for sound control because of their acoustical effectiveness (NRC = .75).
- Allow for "nailability" where desired to cover them with various types of roofing materials on sloped or flat roofs.
- Have a light, gray natural finish that can easily be spray-painted.
- Are produced with a "textured surface" for added decorative attractiveness.

- Weigh no more than 10 pounds per square foot.
- Are made with DuCrete aggregate, the lightest and strongest aggregate available.
- Consist of roof slabs in three thicknesses — 3", 3-1/2", and 4" and a variety of lengths up to 8'4". Standard lengths are 4 and 5 foot.

ture and planning, and a research orientation. They should also have a history of meaningful personal accomplishments, as well as a record of contributing to the development of their associates and a willingness to work within a decentralized decision-making framework.

Applications or recommendations, accompanied by resumes, should be sent to:

Professor Damie Stillman, Chairman
Search and Screening Committee for
Dean of the School of Architecture
Sandburg Hall W 1340A
The University of Wisconsin - Milwaukee
Milwaukee, Wisconsin 53201

The Department of Architecture at the University of Wisconsin - Milwaukee has 24 students living and studying in London for the spring semester. The program, headed this year by Associate Professor Tim McGinty, includes studying architecture in England as well as the city of London. Assistant Professor Wayne Attoe is taking time out from a leave of absence to join the group to deliver a course on the history of London as part of the course work.

The program is running on a shoestring budget with students paying regular tuition fees at UWM as well as paying for their own transportation and housing in London. The school is providing funds for several honorariums to bring English architects into the program as lecturers as well as paying for part of the transportation expenses of the faculty. Professor McGinty said the budget is very tight and the School is looking for funding to fill in where the University cannot. This year the program could use $200-$500 to help with expenses like renting projectors, buying supplies, maps, and a few relevant books that cannot be ordered through the University. In addition the school is looking for ongoing funds from individuals or a firm of about $1000-$1500 a year to cover some transportation expenses and to cover other costs for supplies and honorariums not assignable to the University.

The program is informally co-ordinated with the School of Architecture of the University of Nebraska which offers a similar program. The Nebraska program is funded by an architectural firm that previously had donated funds for the travel expenses of a single student. The firm

THE DRY LOOK

The Jordan Marsh dome and roof surface at the Shopper's World (Allied Department Stores) in Framingham, Mass. has a new look, thanks to Anchor White Cap Coating. The problem areas, which appeared to be an incurable disease for many years, are visible on the right portion of the picture, showing through the light orange primer. The left side of the picture shows the beautiful transformation that has taken place. Anchor White Cap is not only an attractive coating, but has also provided the Allied Department Store with durable waterproofing and easy maintenance, all at competitive prices since 1972. Guide specifications for new and existing structures are available upon request.

- Busch Stadium
- Newark Airport
- Capital Centre
- Ranger Stadium
- Charlotte Civic Center
- Seattle Coliseum
- St. Paul Civic Center

DUKANE CORPORATION | COMMUNICATIONS SYSTEMS DIVISION | ST. CHARLES, ILLINOIS 60174
Kitchen sinks aren't dull as dishwater any more. Kohler lets you offer 12 inviting colors and White. And features that make self-rimming cast iron sinks as practical as they are pretty.

Top left: New Trieste (43" x 22") in Tiger Lily. Big twin compartments, center waste disposal basin, swing-away spout, and spray arm.

New Alterna fittings include four accent inserts for each handle.

Top center: New Swinger, spray-control device, fits most kitchen spouts. At the touch of a finger tip it aerates, swivels and rinses sinks clean.

Top right: Lakefield (33" x 22") in Avocado. Includes large compartment, ample waste disposal basin, spray arm, swing-away spout, White Flair fittings.

For more great kitchen ideas, with great sales appeal, write Kohler Co., Kohler, Wis. 53044.

ASPHALT PAVEMENT
A DIRECT REFLECTION ON THE TOTAL BUILDING STRUCTURE.

This reflection can enhance or degrade the appearance of the total building structure for many years.

Asphalt Pavement starts to deteriorate as soon as it is laid.

GILSABIND SEALING is the way to help assure that this reflection of the asphalt pavement is an asset.

GILSABIND added to Asphalt Pavement: THE RESULT IS:

1. More effective seals pavement pores or voids

2. Increases adhesion qualities of the asphalt mix

3. Creates a stronger, denser surface

4. Restores normal rich look of freshly laid asphalt

5. Other Advantages of GILSABIND SEAL

1. Gilsabind can be placed on newly laid asphalt.

2. Gilsabind cures ready for striping in 1 to 12 hours.

3. Gilsabind treated pavement will not become soft or tacky.

4. Gilsabind can be applied any time of year (as long as pavement is dry).

5. Gilsabind is more economical than most other seals.

C — Residential Cooling  
H — Warm Air Heating Systems  
I — Industrial Sheet Metal  
K — Kitchen Equipment  
M — Sheet Metal Specialties  
S — Sheet Metal Buildings  
V — Commercial Ventilating and Cooling

Wisconsin Architect, January 1975
Bomanite: concrete with character

Bomanite, the patterned concrete, brings new dimension to concrete surfaces.

Bomanite is an attractive surface with the appearance and character of brick, tile, or cobblestone, in a wide variety of colors, patterns, and textures.

Bomanite is a proven process, widely used around the world for malls, sidewalks, crosswalks, and other interior-exterior paving applications.
