The GUARANTEED COPING COVER SYSTEM

We guarantee our new PERMASNAP COPING SYSTEM against water leakage, Period.  
The secret is a styrene gutter chair at each joint that quietly carries water away.  
We also make sure the system stays in place. Without expensive imbedded anchor bolts. A special adhesive replaces them. And it sticks against 60 lbs per square foot of uplift.  
Permasnap Coping Covers are also simple to install. It has to do with the “snap” in the name, but it’s simpler if you see it for yourself.  
All in all, it’s a pretty simple system. Only three parts. And we guarantee all of them. Specify Hickman.

Wisconsin Architect/July, 1976
The June issue of the Wisconsin Architect/Punch List included eight of the sixteen projects which were recognized by the 1976 Jury in the Awards Program of the Wisconsin Society of Architects. The remaining eight are covered in this issue.

Thanks are in order to John T. (Jeff) Nichols, AIA and his Committee members: John Milsap, AIA, James Kennedy, AIA, Gordon D. Orr Jr., AIA, Leonard A. Widen, AIA, Ronald Bowen, AIA, and Alan J. Carlson, Executive Director. The Jury, as announced in the June Issue, was Anthony J. Catanese, Chairman, Theodore C. Bernardi, FAIA, Stan Gladych and Pat Papadopulos. Awards Chairman Nichols is pictured below with the Jury at the site of the February judging at the Oneida Country Club, Green Bay, Wisconsin.

The American Institute of Architects has set up a mechanism for dealing with major issues — including possible changes in its ethics — that will come before its 1977 national convention, according to AIA President Louis de Moll, FAIA.

A 1977 Issues Committee has been created to deal with the three questions of AIA’s Standards of Ethical Practice, dues, and membership. The committee includes a coordinating group made up of six members of its Board of Directors and chaired by First Vice President-elect Elmer Botsai, FAIA. Three sub-groups have been named to address the three specific issues of ethics, membership, and dues.

The ethics sub-group, under the chairmanship of AIA Secretary-elect Robert M. Lawrence, FAIA, will consist of four task forces, each charged with studying and reporting on one of four major ethical issues: advertising; expanded practice; foreign practice, and free sketches.

Each task force will be chaired by a Board member and will include four representatives from the leadership of the Institute’s chapters. President de Moll said that task force members had been selected to represent the widest possible cross-section of AIA membership, based on such factors as geographical region, age, size of firm, and type of practice.

The four task forces will hold meetings in cities across the country during the summer in order to hear from as many Institute members as possible on each ethics question. They will also meet together to assemble reports for presentation to the Coordinating Committee and to the membership at “Grassroots” meetings early in 1977. The final report will be presented at the national convention, to be held in San Diego in June.

A complete listing of AIA members named to Issues Committee posts is attached.

Coordinating Group
Elmer E. Botsai, FAIA, San Francisco, CA, chairman
Louis de Moll, FAIA, Philadelphia, PA
John M. McGinty, FAIA, Houston, TX
Robert M. Lawrence, FAIA, Oklahoma City, OK
Jerome M. Cooper, FAIA, Atlanta, GA
Charles Schwing, AIA, Baton Rouge, LA
William L. Slayton, Hon. AIA, staff

Dues Sub-Group
Charles E. Schwing, AIA, chairman
William G. Wolverton, Hon., AIA, staff

Ethics Sub-Group
Robert M. Lawrence, FAIA, chairman
J. Winfield Rankin, Hon., AIA, staff

Advertising Task Force
J. Harold Box, FAIA, Arlington, TX, chairman
Roger Yost, AIA, Portland, OR
David M. Bowen, AIA, Indianapolis, IN
Linda H. Michael, AIA, Alexandria, VA

Expanded Practice Task Force
Eugene C. Swager, AIA, Peoria, IL, chairman
William R. Hawley, AIA, Palo Alto, CA
Albert E. McCall, AIA, San Antonio, TX
Arthur Hoag Jr., AIA, Orlando, FL

Foreign Practice Task Force
Robert B. Marquis, FAIA, San Francisco, CA, chairman
Robert F. Gatje, FAIA, New York, NY
Donald P. Schlegel, AIA, Albuquerque, NM
Talbot R. Wilson, AIA, Houston, TX

Joseph J. Champeaux, AIA, Lake Charles, LA
Isham O. Baker, AIA, Washington, DC

Membership Sub-Group
Jerome M. Cooper, FAIA, chairman
J. R. Kirkland, staff

The third question I would like to raise is this: how "ideal" are the "Ideal Cities" projected by the Modern Movement? Let me try to answer the question in a roundabout way.

The City of Zagreb, in northern Yugoslavia, has a population of about 750,000. All but 100,000 live in the old city, north of the River Sava, in buildings and along streets, squares and parks, some of which date back to the Middle Ages.

To the south of the River Sava, there is a new town — the New Zagreb — with a population of about 100,000. It is an impressive complex of concrete and glass towers, town houses, schools, shops, and other community facilities, all spaced far apart and separated by generous park areas, well planted and well paved. Around the perimeter of the New Zagreb there are wide superhighways that lead into the old city, as well as to the surrounding countryside farther south. There are parking lots, bus stops, trolley car stations, and a brand new airport. Although the New Zagreb may not measure up, in every detail of its plan or of its individual buildings, to the standards for a modern city established by such pioneers as Le Corbusier, this community of 100,000 is an impressive, updated version of Le Corbusier's Ville Radieuse — first proposed in the early 1920's, and now the stereotype of New Towns and of Urban Renewal from Boston to Brasilia.

The only trouble with this Ville Radieuse to the south of the old Zagreb is that it is dead.

Every evening, the people of Zagreb gather in the streets of the old center of town, around what is now known as the Square of the Republic. The center of the old town is jammed with pedestrians, its sidewalks crowded with cafes, its streets closed to automobiles and opened wide to young and old alike, who stroll about, chatting, window shopping, showing off and having the time of their lives doing it.

Meanwhile, to the south of the River Sava, those great expanses of greenery between the concrete-and-glass apartments are deserted. No one ventures out — not for fear of crime but for fear of boredom. People stay inside their modern apartments — unless, of course, they have taken off in the general direction of the old town center, to join their fellow citizens.

The New Zagreb, a Ville Radieuse almost par excellence, is a dead city, a place of loneliness and alienation. Whereas the Old Zagreb, designed by no one, made seemingly unworkable by the invasion of the automobile — this is where the action is. And there, in these old and not very convenient houses, live most of the architects responsible for the design of the new city!
PROFESSIONAL LIABILITY . . .
ONE GOOD REASON TO SPECIFY
. . . LIGHTNING PROTECTION

With professional liability insurance costs rising, Insurance Companies going out of the Architect and Engineers Liability Insurance business, and the high settlements made by our court system, it has become even more necessary to specify Lightning Protection Systems.

Federal and State regulations require architects and engineers to design a safe building. This includes designing systems for the protection of life and property from fire and other perils. Lightning, Natures' most destructive force, is one such peril.

Owners, Architects, Engineers, and Insurance Companies, can no longer plead that "Lightning is an act of God". Court decisions have recognized effective protection against lightning damage is available at a reasonable cost. Accordingly, those responsible for the design of buildings or structures which may be subjected to Lightning discharges, should protect themselves by designing and specifying a system meeting all the requirements of nationally recognized Lightning Protection codes. Systems should be designed by professionals and installed by firms specializing in such installations.

PUT A PROFESSIONAL ON YOUR STAFF — CALL —

HARGER
LIGHTNING PROTECTION, INC.
551 NORTH AVENUE, LIBERTYVILLE, ILLINOIS 60048
Zagreb is merely one of hundreds of similar examples around the world. In Paris, London, Berlin (East and West), Milan, New York, Los Angeles, Osaka and God only knows where else, there are gleaming new neighborhoods, faultlessly (or almost faultlessly) designed and planned according to the highest standards laid down by the Modern Movement — new neighborhoods as dead, much of the day and night as the New Zagreb. And in some of these same cities there are crooked old streets bursting at the seams with people and life and commerce and entertainment; and dingy old buildings crammed full with the apartments of the very same architects who designed those sanitary, air conditioned diagrams on the other side of the river or the tracks.

The reasons for this failure of modern, urban design are many; but I suspect that the principal reason is very simple: the ideal modern prototype — the Villes Radieuses of Le Corbusier, or the Siedlungen of the Weimarer Republik — were well-intentioned diagrams, scaled to the rather terrifying, impending mechanization and automation of 20th century urban life. They were diagrams scaled to the automobile age, rather than organisms scaled to the needs of man. Le Corbusier's idealism — and the idealism of many of the other modern pioneers — was indeed touching: they proposed their gleaming towers, scattered among groves of trees, lawns, lakes and streams in almost lyrical terms, speaking of man’s yearning for greenery, sunlight, fresh air, and space. All very true — but man’s primary yearning, it seems, is not for great expanses of open space, but for other men (or women, or children). What these Ideal Cities of the modern movement lacked so distantly was small, dense spaces in which people could rub shoulders and interact — i.e. have fun, have arguments, even, if necessary, have fights. The most devastating, albeit unconscious commentaries on those spacious, Ideal Cities are the sculptor Giacometti’s emaciated giants, blindly traversing vast landscapes people only with other, similar figures passing by, mute, and in a kind of procession of alienation.

What is missing from these well-intentioned diagrams for Ideal Cities is something so obvious as to have escaped the eyes of most critical observers. What is missing is, quite obviously, the street. The street — that most vibrant, exciting, irritating and yet most stimulating of all outdoor spaces. It was replaced by parks (OK for Sundays), by squares (OK for demonstrations and public addresses), by playgrounds (child-ghettoes), and by shopping centers (OK for supermarkets; not quite so OK for their customers).

Suddenly, the street was gone. We were given vistas, plazas, and traumas. Some innovators in the modern movement — those who proposed to replace cities with “megastructures” — also proposed streets or sidewalks up in the sky, by which they meant pedestrian walkways, on upper levels of contiguous ribbons of high-rise buildings, on which children would frolic and their parents would stop and chat. It was a charming idea, but its logistics were flawed: streets-in-the-sky, or sidewalks-in-the-sky, are very difficult to people to any level of density, since not very many people live on the 21st floor of a megastructure (say); and streets-in-the-sky, or sidewalks-in-the-sky, are very difficult to make very interesting unless they are lined with shops, which would further reduce the number of people living on that hypothetical 21st floor. Many megastructures (or ministructures) endowed with such airborne streets have been built; and every one of their airborne “streets” has turned out to be a desolate concrete runway, leading nowhere.

If you think that I am exaggerating when I blame pioneers like Le Corbusier for the destruction of the street, let me read you something that he wrote in 1929, in the magazine *L'Intransigeant*. "The street," he wrote, "is the well-trodden path of the eternal pedestrian, a relic of the centuries, a dislocated organ that can no longer function. The street wears us out. And when all is said and done we have to admit it disgusts us. Then why does it still exist?" He obviously thought it shouldn't, and waxed lyrical in describing an alternative vision: "Look over there! That stupendous colonnade which disappears into the horizon as a vanishing thread is an elevated one-way *autostrada* on which cars cross Paris at lightening speed. For twenty kilometers the undeviating diagonal of this viaduct is born aloft on pairs of slender stanchions... When night intervenes the passage of cars along the *autostrada* traces luminous tracks that are like the tails of meteors flashing across the summer heavens... the street as we know it will cease to exist." Robert Moses, the megalomanic highway builder who constructed 627 miles of superhighways in and around New York City, never went quite so far in eulogizing his own masterpieces; nor did he understand their implications quite so clearly.

In the early 1970's, some 50 years after Le Corbusier's first sketch for a *Ville Radieuse*, the most interesting "New Town" built in the U.S. in this century was completed in a swamp some 30 miles south of Orlando, Florida. The town is known to men, women and children, everywhere, as Walt Disney World, or WDW. It — the town itself, the so-called "Magic Kingdom" — measures only about 70 acres in size, or four times the size of Rockefeller Center in New York. (WDW, with vast expanses of natural and man-made lakes, jungles, and resorts, measures 28,000 acres, twice the size of Manhattan Island.) The Magic Kingdom is America's most interesting "New Town" because it is a town of streets. It is also, incidentally and very importantly, an urban organism, with an infrastructure of service tunnels and ducts, and a superstructure of monorails and other, airborne transportation systems. But, above all, WDW's Magic Kingdom is a streetscape. It is jammed with people, and lined with stores and restaurants and theaters. It is not, of course, a real town — nobody lives there, and the cute facades are gingerbread, rendered in plastic.

But WDW's Magic Kingdom is, in fact, infinitely more "real" than, let us say, the New Zagreb. People jam its streets after having paid a pretty penny to do so — whereas no one in his or her right mind would pay to visit those *Villes Radieuses* that the modern movement has built, ad nauseam, from Osaka to Washington.

Some of us live in those sanitized *Villes Radieuses* because the price is right, and because the plumbing frequently works. And whenever we get a chance, we take a vacation to visit those wonderful old towns and cities that were built to the scale of man — those wonderful old towns and cities that are criss-crossed by dark and smelly and crooked little streets of the sort that Le Corbusier sometimes referred to as "human sewers". None of us would ever think of vacationing in, let us say, Co-op City, The Bronx, New York. Nor does it seem very likely that our children, or their children, or generations after them, will ever be tempted to do so.

Nor are they likely to wish to visit the New Zagreb, or the new East Berlin, or the New Cumbernauld, or the New Chandigarh. The cities we love are places of intimacy and interaction, rather than landscaped wastelands of alienation. The places we love are those that can do very nicely without automobile and without much mass transit — because everything of interest and of human value is close at hand, jammed together, mixed up rather than sorted out by some benighted modern planner — a marvellous, stimulating, creative mess — the very antithesis of Corbu's vertical order, and of Wright's horizontal boredom — Broadacre City, after which so much of America's suburban sprawl has been patterned.

So here we are, with a dream that we lost, with a dream that has turned, not infrequently, into a nightmare — a nightmare of broken glass, of ravaged cities, of forms that don't function, and of functions that don't perform. We, the architects, think that the world has been cruel to us — and it has been; but we haven't been exactly gentle with it.

And now the post-Modern World is here, whether we like it or not. Our first step into that new and unfamiliar world should be, I believe, a re-examination of our past performance. That has been the purpose of my talk. And once we have re-examined our past, and reconsidered our present position, I think we will be able to play our part in helping mankind deal with its enormous problems.

I love this profession; there are very few that are more selfless. In the vastly profitable business of building, everybody gets rich — except the architect. The builders get rich, the bankers get rich, the realtors get rich, the contractors get rich, the manufacturers of building materials get rich, and the construction workers get rich. The only one who is consistently impoverished is the architect — and of course the victim of all this frenetic building activity, the proverbial Man in the Street.

I propose that we, the architects, who have been used and exploited and cheated by all the profiteers in American building — exploited because we were so blindly idealistic, so hopelessly uncritical — that we turn around and make common cause with those who really need us, and who are closest to our hearts and minds: the men and women and children in the streets of this planet.

Thank you.

The Fall Workshop Committee enthusiastically announces that this year’s Workshop will be held on October 14th at Scotland Resort in Oconomowoc. Key speakers will lead discussion on topics such as: Continuing Education/Mandatory for Recertification; Advertising; Contract Building: Registration; Professional Liability, and “Free Sketches.” Active participation by all professionals both members and non-members is critical as we all face the theme of this year’s Workshop “The Challenge of the Changing Practice of Architecture-Opportunity or Disaster?” Plan now to attend. Your suggestions on subjects or speakers are welcome. Please address them to Fall Workshop ‘76 Committee, % A.I.A. office, 788 North Jefferson Street, Milwaukee, Wisconsin 53202.

Mac Slater Co-Chairman
High Blood Pressure is the country's leading contributor to stroke, heart disease and kidney failure. Any of which can kill.

And, frighteningly enough, one out of every seven of your workers has it. And half of them have no idea they're walking around with this time bomb inside them.

That's because there are usually no symptoms. The victim feels fine. But all the while, the time bomb is ticking away. Until, suddenly, it explodes.

But you can help. By giving your employees a chance to check their blood pressure. It takes only seconds to measure a person's blood pressure. And it's painless. Best of all, your own medical or nursing personnel can do the job, simply.

When a case of High Blood Pressure is detected, the employee is then referred to a doctor for treatment. And treatment is usually as simple as taking a pill every day.

To help you implement this life-saving program, we have a special kit, "Guidelines for High Blood Pressure Control Programs in Business and Industry." The kit includes complete instructions on screening, publicity, referral, follow-up, education. And more.

Send for your kit today. It may be the best thing you've ever done for your employees. And your company.

Mail to:
National High Blood Pressure Education Program
120/80, National Institute of Health
Room 1012, Landov Bldg.
Bethesda, Md. 20014

Please send me __________ copy(ies) of "Guidelines for High Blood Pressure Control Programs in Business and Industry."

Three good reasons for selecting Weil-McLain

THE CHOICE — Choose from a complete line of oil, atmospheric gas, and combination gas/oil boilers, from 187,800 to 6,060,900 BRU/Hr.

THE FLEXIBILITY — Match any job requirement with a choice of factory-tested packages, factory-assembled sections or individual sections.

THE QUALITY — Only Weil-McLain has such quality features as flame-retention oil burners, asbestos rope seal, short draw rods, multiple tankless water heaters, forced draft firing and, of course, cast iron construction.

Choice, flexibility, and quality... three good reasons for contacting your nearest Weil-McLain distributor.

See what Kohler has done with color, shapes, and new ideas for modern living.

Kohler Fiberglass Walls 'n All bathing modules. Smoothly molded Fiberglass - easy to install and so easy to clean, and keep clean. No tile, no grout, or hard-to-get-at corners.

And because they're Kohler - they're in color. Six decorator acclaimed colors and white - including our newest Fresh Green and Pink Champagne.

Pictured. A. The Bimini - the newest addition to the Kohler line. Measures only 32" x 36" and designed for remodeling projects. Shown in Pink Champagne.

B. The Barbados - a 5' bath and shower module, shown in New Orleans Blue.
C. The Trinidad - a 46" x 34" shower cove in Harvest Gold.
D. The Tobago - showing luxury - it has a built-in seat. 48" x 36" shown in Fresh Green.
E. The Bath - 5½' x 7' of bathing luxury. Shown in Black Black.

One of the most elegant mansions from colonial history is the Governor's Palace in Williamsburg, Virginia. Its architecture proclaims a dignity and character which only brick can convey. We take pride in being a manufacturer since 1885 of the largest selection of color, texture, and size of brick in the industry. Your BELDEN Dealer will show you the facts, or write us at Box 910, Canton, Ohio 44701.

Precision Metals' zinc-coated steel door frames stop rust before it starts.

Cold rolled steel.  Zinc-coated steel.

Both metals, painted with two coats of acrylic over Surface Treatment, were scratched and subjected to 1000 hour salt fog test.

The severe salt fog test proves Precision Metals' zinc-coated steel door frames have excellent resistance to rust and corrosion. The uniform zinc coating forms a durable barrier that wards off corrosive elements. If scratched, an electrochemical action "heals" the coating, so the steel remains undamaged.

Zinc-coated steel frames require no sanding before painting, which saves time and labor costs at the job site. The resulting finish is smooth, even and durable.

Precision Metals fabricates zinc-coated steel door frames, to your profile, gauge and size specifications. To meet your required quantity and delivery schedules. Stop rust at the door. Specify Precision Metals' zinc-coated steel frames for every job.

For more information, call or write today.
