"Hello... Bob's Caulk City? I'd like the complaint department, please."

In your industry there are already plenty of problems to choose from without you having to worry about caulks that just don't make it. When it comes to price, what sounds like a winning number at the time can turn out to be a real leaker a little later on. And that's a direct reflection on you.

You don't have to cut your own throat to cut costs. S&S Sales recommends the full line of G.E. Silicone caulks. G.E. Silicones perform better and last longer. They also gun easier and faster than other sealants regardless of the weather and even eliminate the need for primers in most cases. G.E. Silicones save you time and money right now and a lot more money years from now. They may even save your reputation.

So, stop worrying. Talk to the pros at S&S Sales about Silpruf, Gesil-N, Silglaze-N, and SCS 1200 sealants from General Electric and stay cool. Without the help of Mother Nature. There is no equal.

You say you finished laying out a couple of mechanical diagrams and your co-workers said they looked like they should be stuck onto a refrigerator with little, plastic, fruit-shaped magnets and it’s made you so crazy that the only thing you’ve considered creating since is a scene?

Looks like you could use a little Professional Control.

Come in off the ledge, big guy. So you can’t draw a straight line. With a Computer-Aided-Design system (CAD) from Professional Control Corporation, all you need to do is push a few buttons to go from the ideas in your head to graphics that’ll knock those office Rembrandts flat on their canvasses.

PCC-CAD systems give you the ability to create shapes, shade, colorize, position . . . whatever! You can also call up elements stored in CAD libraries or create your own libraries as you go along for even greater design power and speed. PCC-CAD systems are great for sales proposals, installation guides, reports . . . the possibilities are endless and the effects, incredible.

All PCC-CAD solutions are IBM compatible. Our software packages like AutoCAD, VersaCAD, Anvil 1000 and Crossroads are used in house by our own engineers. That’s important!

So stop getting frustrated and start getting results, chief! Give PCC a call for more information or a demonstration and go nuts! Uh . . . on a PCC-CAD system, that is.

PROFESSIONAL CONTROL CORPORATION
We put results on line.

If the number of phone calls to the WSA office is any indication, concern among members over the cost and availability of liability insurance is growing as rapidly as

... restoring balance
the premiums for such coverage.

and fairness to
In response to this concern, the WSA has been instrumental in pulling together a diverse Wisconsin's civil

justice system.
group of state-wide organizations and associations interested in working for statutory

changes that would help control excessive liability insurance costs by restoring balance

and fairness to Wisconsin's civil justice system. The Wisconsin Coalition for Civil Justice — which has grown to include over 90 governmental, business and professional groups — is supporting five specific reforms in the state's tort system. These reforms

involve such issues as joint and several liability, punitive damage awards, noneconomic awards and contingency fees.

Representatives of the WSA are actively involved with the Coalition's efforts, but it will take much more than that to get this important legislation enacted into law. It requires your active involvement as well.

We all know that we are in the midst of a liability crisis. The cost of insuring against that liability has become an important factor in the overall costs of providing architectural services. However, meaningful civil justice reform will not be adopted unless state legislators hear from you about the real depth and breadth of the crisis.

This grassroots contact is vital.

Bill Babcock
Executive Director
Flying in and out of Madison is now a greater pleasure for all concerned — passengers, waiting friends, and working staff. The newly completed Dane County Regional Airport terminal building is three times its former size, now about 90,000 square feet. It offers weather protection, convenient traffic flow, and, because of added carriers, airport users can now tap into almost every major U.S. airline from this airport.

Architect for the project was Potter Lawson & Pawlowsky, Inc. with associate architects Hellmuth Obata & Kassabaum. Kraemer Brothers was general contractor.

Most appreciated by the traveling public will be the second floor concourse and loading bridges. Only the small commuter craft passengers still board by crossing the tarmac to the plane stairway. People with walking disabilities now have a special entrance adjacent to handicap parking spaces. Inside there is elevator service to the second floor, where restrooms have no doors for barriers.

The airport modernization is a hidden benefit for the city of Madison as well as for travelers. The new weatherized facility was a determining factor when Itzhak Perlman agreed to do a fall concert in Madison. Boarding planes without loading bridges adds much to the fatigue of constant travelers. Wheel chairs used to be lifted up to the planes via fork lifts. Even waiting can be a pleasure in the immense new concourse. It is no longer restricted to passengers. After passing through the security check, spectators can go up the escalator and enjoy the expansive window area overlooking the runways. Gray carpeting, hundreds of comfortable burgundy chairs and accents in burgundy provide a restful atmosphere. Lounge and rest rooms are adjacent. New acoustical treatment and a new sound system make all messages to passengers understandable. All public areas are air conditioned.

At ground level there are many improvements which regular travelers will appreciate, beginning with the parking area which has about 300 more spaces. A new entrance with a generous canopy gives weather protection for unloading cars and buses, plus adequate space for the taxi line. A heated vestibule with double doors protects the interior from winter winds.

On entering, the public areas are well defined. Ticket counters are spacious and inviting with adequate queuing space for rush periods. Pre-ticketed passengers go directly to second floor concourse.

With an eye to the future, each area of the terminal can be easily expanded if necessary. Ticket counter and waiting area can be expanded to the south, baggage handling and car rental to the north, and passenger concourse to both north and south. Baggage handling is fast and simple; it is brought directly inside through service door for unloading on the new large carousel. A special ramp has been installed for oversize baggage — pet cages, skis, etc.
Across from the car rental area is a convenient conference room which can be rented by business groups by the day or half day. It is near the new kitchen and food service area which includes a bar. Adjacent to that is a separate newsstand and gift shop. Comfortable seating is scattered throughout and again the color scheme is restful, rose and beige.

Under the second story concourse is a giant carport space. This convenience is much appreciated by airport employees. It provides work space as well as storage for maintenance and winter runway equipment.

Another advantage is the segregation of private plane passengers from commercial passengers. Private passengers now have their own entrance, thus easing security operations.

Peter Drahn, airport director, reports that the various stages of construction ran four to six months ahead of schedule and came in about $800,000 under budget. Total cost of terminal building was about $7,200,000. No taxpayer money went into the airport expansion. It was financed through bonds.

Dane County Regional Airport now handles 90 flights per day, about 900,000 passengers in the past year. It is the third largest airport in Wisconsin, but the second busiest. Milwaukee and Green Bay are larger.

James T. Potter, AIA, Photography
Architectural Signage

When architects stopped to see our display at the 1986 Convention, they were impressed by the broad range of signage available from Andco. They were anxious to take the new 42 page catalog or to mark down the "Sweets" number 10.11a.

We were surprised to see that so many architects are now planning to incorporate signage into their design concept instead of leaving it to an "afterthought" by others. We are happy so many like the flexibility of the tasteful, useful and practical examples that Andco brings to them.

We are pleased to have participated in the renovation of the Dane County Airport by providing the signage.

Spray-applied ThermoCon gives you thermal, sound and condensation control in one application. The product is available in a number of standard colors including Texture White, Architectural White, Tan, Light Grey and Black.

The product can be painted after cure for color coordination.
The AIA standard form documents are intended to be used as originals for the written contract between the parties. Changes are usually necessary to adapt the standard form documents to local customs and practices and to the special arrangements of an individual project. However, these changes are accomplished in distinctly different ways from those used with model forms.

In contrast to standard forms, model forms are intended to be used as reservoirs of suggested language which the drafting party may or may not choose to include in the final written contract. AIA Document A511, Guide for Supplementary Conditions, is a model form, one of three currently published by AIA. The key difference between model forms and standard forms is that modifications to the language of a model form become blurred and hidden within the integrated text of the author, whereas the modifications to a standard form are clearly differentiated from the language on the pre-printed form.

Two methods are recommended for modifying the standard form documents. One is through the attachment of supplementary conditions, special conditions or amendments. For example, AIA Document A201, General Conditions of the Contract for Construction, may be amended through the attachment of provisions drawn from AIA Document A511.
The other recommended method of modifying the standard form contracts is by writing, typing or striking out language directly on the preprinted form. Care must be taken in making these kinds of changes. Handwritten changes should be initialed by both parties to the contract. Under NO circumstances should preprinted language be struck out in such a way as to render it illegible (as, for example, with blocking tape, correction fluid or X’s that completely obscure the text). This may raise suspicions of fraudulent concealment, or suggest that the completed and signed document has been tampered with.

It is definitely not recommended practice to retype the standard form documents. Besides being a violation of copyright, as discussed below, retyping can introduce typographical errors and cloud the legal interpretation given to a standard clause. Retyping eliminates one of the principal advantages of standard form documents. By merely reviewing the modifications made to a standard form document, parties familiar with that document can quickly understand the essence of the proposed relationship. Commercial exchanges are greatly simplified and expedited, good-faith dealing is encouraged, and otherwise latent clauses are exposed for scrutiny. In this way, contracting parties can more confidently and fairly measure their risks.

**COPYING STANDARD FORM DOCUMENTS**

Most AIA documents are copyrighted under the name of the AIA national organization. The national AIA, as owner of the copyright, has the exclusive right to make copies, to authorize the making of copies by others, to prepare derivative works and to distribute copies, except as limited under the laws of the United States.

The AIA documents are intended to be used as “consumables” — that is, the original purchased by the user is intended to be consumed in the course of being used. Many of the documents contain blanks to be filled in. There is no implied permission to reproduce these documents, nor does membership in the American Institute of Architects confer any further right to reproduce them.

Nevertheless, there are three types of licenses which the AIA may grant to individuals and organizations for the reproduction of its copyrighted documents:

1. A license-to-purchaser for the reproduction of the entire preprinted form in limited quantities and under limited circumstances;
2. A license-to-purchaser for reproduction of excerpted materials under limited circumstances; and
3. A formal written license obtained by written application to the AIA.

**LICENSE-TO-PURCHASER: ENTIRE DOCUMENT**

This license, authorized by resolution of the AIA Board of Directors in 1976, applies to most AIA documents with blanks to be filled in by the user; exceptions are AIA Documents A511, A511/CM, A571, A701 and A711. This license is automatically granted upon purchase of a document, but it does not take effect until the document is filled out with all information appropriate to a specific project, including signatures where appropriate. The user may then make up to ten copies of the completed document for that specific project.

This license is granted based on the recognition that the purchaser may need further copies of the executed contract. Additional copies are usually needed for administrative purposes, and copies may even be needed for distribution to other parties to the contract on a specific project. This license does not permit the user to reproduce the AIA documents without their blanks filled in, or by retyping or rewriting.
License-to-Purchaser: Excerpted Document

This license, also authorized by the AIA Board of Directors in 1976, is granted to purchasers of AIA Documents A511, A511/CM and A571. These documents are model form documents, and contain recommended language for use in modifying AIA Documents A201, A201/CM and A271, respectively, along with explanations of that language.

It is intended that users of these documents retype selected language from them and include it in their project manuals as supplementary conditions. The license applies only to the recommended language and not to the explanatory language. There is no limit to the number of copies that may be made, since the number of project manuals cannot be known. Here again, however, reproduction must be for a specific project and not for general office use or information.

Neither of the two types of license-to-purchaser described above applies to AIA General Conditions documents (A201, A201/CM, A201/SC and A271) or AIA Instructions to Bidders documents. With the exception of the Federal Supplementary Conditions of A201/SC, which are not copyrighted, only originals of these documents may be used unless specific written permission has been granted by the AIA national organization.

Written License

Under certain circumstances, a written license to reproduce may be granted by the AIA. The normal procedure is for a party to write the AIA Documents Program requesting permission to reproduce an AIA Document. A standard application form has been prepared and is ordinarily used for the written application. Upon receipt of the completed application form, AIA staff will review the request. The staff may or may not grant the request, having weighed 1) the difficulty the party would have utilizing the AIA documents in their customary and intended fashion as pre-printed forms, as against 2) the possible effect the licensed reproduction will have on the goal of the AIA Documents Program — standardization of construction contract documentation — and on the good name and reputation of the AIA.

This process may take over a month to complete, and may be costly due to the additional fees and royalties charged to the applicant. Currently, a minimum application fee of $15.00 is charged to all applicants. In addition, royalties equal to the retail cost per copy of the Document may be charged for copies used for construction-related purposes. If the intended manner of reproduction involves complexities such as integration of AIA language with non-AIA language, a supplemental fee of up to $300.00 may be charged to help pay for staff time needed to review and administer the application and license. The fees and royalties described above are additive.

Summary

The purpose of protecting the language of the AIA documents is twofold: to protect the AIA's interest in its work product, and to protect the user from the consequences of unauthorized reproduction. As stated earlier, such consequences may be fairly minor ones arising from errors in transcription, or they may be major ones arising from an intent to deceive. Either way, it is in the interest of the party offering the document as the basis for an agreement, and of the party considering that offer, to use the preprinted standard form AIA documents. Both parties are thus assured that the terms are accurately presented and fair, and are spared the expense of exhaustively researching the document.

1987
STATE
LEGISLATIVE
CONCERNS

WISCONSIN SOCIETY OF ARCHITECTS
AMERICAN INSTITUTE OF ARCHITECTS
321 S. HAMILTON STREET
MADISON, WI 53703
608/257-8477
The following is a summary of the major legislative concerns and recommendations of the Wisconsin Society of Architects for 1987.

**Professional Liability Insurance**

Like other professionals and owners of small businesses, architects are in the midst of a liability crisis. Architects assume levels of professional and personal liability far in excess of their level of compensation — probably to a greater degree than any other profession. The cost of insuring against that liability is extremely high and has become an important factor in the overall costs of providing architectural services.

For example, in 1960 there was an average of twelve liability claims per 100 insured architects. In contrast, today the claim rate amounts to over 50 claims per 100 insured architects. Moreover, the severity of the average liability claim has more than doubled since 1969 to nearly $50,000.

The excessive cost of liability insurance is driving some Wisconsin architects out of business. Other Wisconsin architects are being forced to “go bare,” i.e. operate without insurance coverage. All architects are frustrated with the continued increase in claims — an evolution that appears to permeate not only architecture and the construction industry, but society as a whole.

Architects believe certain statutory changes are appropriate and necessary to help hold down the high cost of professional liability insurance and, thus, overall public and private building costs.

**Civil Justice Reform**

A critical examination and careful overhaul of our current civil justice system is necessary. Statutory reforms clearly are required to establish a reasonable and predictable balance between the legitimate demands of individuals to be compensated for genuine negligent acts and the excessive liability claims and costs associated with our current civil justice system.

Efforts are underway in almost every state to address the liability crisis, with new tort reform laws already a reality in a growing number of states. In Wisconsin, a Legislative Council study committee was created to review factors affecting the cost and availability of liability insurance and a special task force on property and casualty insurance, established by the Wisconsin Insurance Commissioner, has issued preliminary recommendations.

To restore balance in the state's tort system, the Wisconsin Society of Architects has joined together with over 90 other groups to establish the Wisconsin Coalition for Civil Justice. The Coalition is made up of governmental, educational, social service, business and professional groups. The Coalition's five-point legislative proposal outlined below involves: replacement of joint and several liability, elimination of punitive damages, prohibition of double recovery, a cap on noneconomic awards, and court review of contingency fees.

**Joint and Several Liability**

Maintain the concept of comparative negligence, but replacement of joint and several liability with a determination of the defendant's obligation to pay based on the proportion of damages his or her negligence is found to bear to the actual injury, not on ability to pay as a “deep pocket” defendant.

**Punitive Damages**

The elimination of punitive damages except in cases of intentional torts.

**Double Recovery**

The prohibition of double recovery in compensation for an injury.

**Noneconomic Awards**

Placement of a $250,000 cap on awards for noneconomic damages.

**Contingency Fee**

The court in which a civil tort action is conducted shall review and approve the amount of every contingency fee paid as being reasonable to the circumstances.

The Coalition's proposal reflects a rational and responsible approach to reforming our civil justice system and, ultimately, lowering liability insurance costs. It protects the rights of the injured to seek redress through unrestricted access to the courts, while at the same time deterring frivolous litigation and providing a degree of predictability and reasonableness to damage awards not present in the current system.

A good example is the proposal to limit the liability of those who cause injury to others to their proportionate share of the responsibility for the injury. In its implementation, the current “joint and several liability” concept imposes a substantial and inequitable liability on individuals and companies with large assets or insurance policies, i.e. deep pockets, regardless of their degree of fault in causing an injury. Fourteen states have recognized this problem and have recently abolished or substantially revised this concept.

Another big problem is non-meritorious suits. When anything goes wrong with a building, the architect and engineer are virtually assured of being named as co-defendants — even where there is absolutely no evidence of responsibility. In architect liability cases, the cost of defending against lawsuits accounts for 35% of the combined insurance company and “deductible” losses. What is interesting is that over half of the lawsuits are ultimately settled with no payment to the plaintiff by either the architect or their insurance company. Yet, due to the high cost of defending against such frivolous litigation, even when architects win ... they lose.

Clearly, the 1987 Legislature will need to address the issue of civil justice reform. The Wisconsin Society of Architects believes the five-point proposal recommended by the Wisconsin Coalition of Civil Justice warrants legislative consideration and enactment into law.
Statute Of Limitations

Another factor affecting the liability exposure of architects and others in the construction industry and requiring legislative attention is the statute of limitations governing actions against those involved in the design and construction of buildings in Wisconsin.

For decades courts have recognized the prerogative of legislative bodies to establish certain time periods (statute of limitations) within which lawsuits can be commenced. Wisconsin statutes contain many such limitations.

During the last several decades the Wisconsin Legislature has enacted two statute of limitations laws covering the design and construction of improvements to real property. On both occasions the Legislature indicated that actions must be commenced within six years of the completion of a building. Subsequent Wisconsin Supreme Court decisions, however, have altered the legislative direction and allowed parties to pursue claims many, many years after the six-year statute of limitations.

Legislation proposing various changes to Wisconsin statute of limitations was introduced late in the 1985 Legislative Session. This legislation was supported by a consortium of design and construction industry organizations, including the Wisconsin Society of Architects, that believed it was important and in the public interest to establish a finite period following the substantial completion of a building after which no action could be brought for errors and omissions in the planning, design and construction of a building. The need for such legislation certainly has not diminished. During the 1987 Legislative Session, the Wisconsin Society of Architects and other affected organizations will again be supporting the adoption of similar statute of limitations legislation.

Economic Development

Promoting economic development in Wisconsin has moved to the top of most everyone's agenda. While many new economic development tools are already in place, the Wisconsin Society of Architects shares in the strong public consensus that state government must continue to investigate ways to make Wisconsin's business climate more attractive for job-creating investment and business location and expansion.

The Wisconsin construction industry has been one of the hardest hit sectors of the state's economy. Between 1979 and 1985, total construction industry employment in Wisconsin dropped 20% — a loss of nearly 16,000 jobs. In contrast, overall private employment in the state actually grew, albeit very slightly, during this period. As a result, construction industry jobs, which accounted for 5% of total private employment in 1979, now represent less than 4% of all private jobs in Wisconsin.

Most analysts predict that recent federal tax changes will have a positive effect on the national economy in the long run. However, the short-run impact of federal tax reform on capital investment and construction activity is uncertain at best, with many forecasting an initial negative effect on the economy.

Much of the Legislature's attention during the first half of 1987 will be focused on the next state budget — with particular attention given to whether or not Wisconsin should adopt federal tax changes for state income tax purposes. How state government reacts to certain federal tax reform provisions — such as the treatment of capital gains income, new accelerated depreciation rules, and higher corporate taxes — could have a significant influence on decision makers' perceptions of Wisconsin’s climate for economic development.

Every effort should be made to mitigate as much as possible any adverse effects of federal tax reform on the health and vitality of Wisconsin's economy. The Wisconsin Society of Architects encourages the Legislature to remain sensitive to economic development concerns and issues as it debates the host of state spending and tax policies contained in the next state budget.
MEMORANDUM

DATE: January 1987
TO: Members of the Wisconsin Legislature
FROM: Robert D. Cooper, AIA
President
SUBJECT: 1987 Legislative Concerns of the Wisconsin Society of Architects

In the rush of events during the legislative session, it is difficult to effectively communicate with all interested legislators on the various issues which concern Wisconsin architects.

The accompanying position paper provides a summary of the Wisconsin Society of Architects' major 1987 legislative concerns and recommendations. It is our attempt to help you better understand both the positive and negative impact of legislation on architecture in Wisconsin.

Our legislative agenda for the session includes:

- Specific proposals for controlling excessive and ever-increasing professional liability insurance costs by restoring a reasonable balance to the state's civil justice system,
- Enactment of a clear and definitive statute of limitations for actions against architects and others involved in building construction in the state, and
- Support for state economic development policies and programs to improve and protect the health and vitality of Wisconsin's economy.

This position paper speaks to the major public policy issues which Wisconsin architects have addressed in the past and will continue to address in the future. Many of these concerns are wide reaching, affecting many other Wisconsin organizations. For example, the recommendations on civil justice reform and the statute of limitations reflect the general consensus of a large number of similarly affected groups.

Hopefully, you will find this position paper both interesting and informative. Do not hesitate to contact the Wisconsin Society of Architects if you require further information on any of these issues.

On behalf of the Wisconsin Society of Architects, I wish you all the best for a productive legislative session. We look forward to working with you on these and other issues as they arise throughout the session.

Planning For The Future

Few individuals or firms take the time necessary to adequately plan for the future. Oftentimes it seems we are just too caught up in everyday events, duties and responsibilities to look very far ahead. This lack of long-range planning is perhaps even more prevalent among non-profit associations and professional societies.

In an effort to buck the trend, the Board of Directors of your Wisconsin Society of Architects set aside time this past Summer to critically examine the major activities undertaken by the WSA and to establish appropriate program goals for the next five-year period. Armed with several sets of financial projections, Board members diligently and conscientiously took up their assigned tasks and peered into the future. It was a productive session which allowed the Board to review many of the broad policies and goals which guide the WSA.

**Long-Range Planning Report**

The results of this initial long-range planning effort were both rewarding and reassuring. Goals and objectives were reviewed and delineated for five major program areas: the WISCONSIN ARCHITECT magazine, the annual Convention and other meetings, the Qualification Based Selection (QBS) program, government affairs, and chapter activities.

In most instances, the Board of Directors affirmed the current perceived goals of these programs — and that was reassuring. Moreover, based on reasonable financial projections, it was determined that with appropriate planning and management the WSA should have sufficient resources to vigorously pursue the established long-range goals.

**Magazine**

The WISCONSIN ARCHITECT is a separate corporation owned by the WSA. The monthly publication of this magazine and its being self-supporting by advertising revenue was determined to be extremely ambitious when compared to other publication efforts by similarly sized or larger state organizations.

The following goals of the WISCONSIN ARCHITECT were affirmed: 1) to be a forum for the publication of work done by WSA members, 2) to be a tangible presence of the WSA to both the membership and the larger construction industry, 3) to continue to be financially self-sustaining, and 4) to be a communications tool for the WSA to its membership and the larger Wisconsin construction community.

**Meetings**

The WSA currently conducts three types of meetings — an annual Convention, a Fall Workshop, and special meetings as needed. Perceived goals of these meetings included encouraging membership involvement and peer interaction and providing opportunities for individual professional development.

Following a general discussion on WSA meetings, the consensus of the Board of Directors was that: 1) the Convention, as the major source of WSA revenue, should be protected and nurtured with an effort to increase net income 10% per year; 2) the Fall Workshop should focus on individual development and business practice and management; 3) the current general format and quality of the WSA Convention and Fall Workshop is appropriate and should be continued; and 4) membership involvement in planning the Convention and other meetings is necessary and important.
QBS
Qualification Based Selection (QBS) is a pioneering effort by the WSA which seeks to provide public and private owners with assistance in developing methodologies for architectural selection. The primary essence of QBS is the maintenance of a staff person at the WSA who is available to work "one on one" with owners in developing their individual QBS system. It currently is funded by an AIA grant through 1987.

The following long-range goals for the QBS program were established: 1) the QBS effort should be continued and monitored; and 2) there should be a search for funding to continue QBS beyond 1987. In general, the Board agreed that the QBS program was highly meritorious and warranted continued nurturing, oversight and growth.

Government Affairs
Government affairs efforts by the WSA include working with the Legislature and state administrative agencies to provide visibility to the WSA, a platform for comment on governmental matters pertaining to architecture, and a ready access to the legislative process.

The consensus of the Board of Directors was that the WSA government affairs program should include the following: 1) monitoring and influencing legislation that affect architects and architecture, 2) maintaining good working relationships with administrative agencies, 3) monitoring of agencies and working with them for improvements, 4) interacting with other professional groups, and 5) promoting government affairs activities to the membership through WSA publications.

Chapter Activities
As a voluntary association composed of individual members, it is important to maintain grassroots contacts with those members. Reflecting the importance of such contact, a great deal of time was spent discussing chapter activities and membership participation in relation to the WSA's long-range plan. A number of suggestions were made for strengthening and improving chapter activities.

In the end, the consensus of the Board of Directors was that: 1) the chapters are the grassroots of the WSA; 2) chapter activities should focus on non principals — students and associates and others who are not firm principals, and 3) chapter activities should not be based upon expectations which are totally out of reach.

1987 And Beyond
Where do we go from here? Current plans are for your WSA Board of Directors to update the five-year plan and financial projections on an annual basis.

What is needed is your input, involvement and feedback as WSA members. How well do the adopted long-range goals match up with your ideas and perceptions of the direction the WSA should be heading? Your comments and suggestions are welcomed, and, in fact, represent a vital part of the WSA's long-range planning process.

EDITOR'S NOTE: As the 1986 president of the WSA Board of Directors, the author initiated the WSA's long-range planning effort.
IMPORTANT NOTICE
FREE COMPUTER DESIGN SERVICE
FOR MASONRY WALLS

THE WISCONSIN CONCRETE & PRODUCTS ASSOCIATION IS OFFERING A NEW SERVICE WHICH WILL ANALYZE OR DESIGN MASONRY WALLS FOR LOW, MID OR HIGH RISE BUILDINGS. THIS SERVICE IS OFFERED FREE TO DESIGN PROFESSIONALS—ARCHITECTS AND ENGINEERS—IN THE STATE OF WISCONSIN.

DATA PROVIDED: The program will check resisting moments limited by steel stress, masonry stress and deflection of the wall. It also checks shearing resistance limited by shear stress and bond strength and checks flexural compressive stresses, both allowable and actual. Once the stresses have been determined, the programs will check various masonry configurations to arrive at the configuration which would be the most economical construction.

Seeking an Associate or Looking for a New Position?

Try the WSA Job Bank

If you are looking for a new position or seeking an associate, the WSA Job Bank can help you. There is no charge for using the service.

If you have any questions or need more information about the service, call Sandra at the WSA office (Madison - 608/257-8477; Wisconsin - 1-800-272-4483.

Cheney Lifts provide the freedom to get up and down stairways.

THE LIBERTY® WHEELCHAIR LIFTS enable individuals to ride safely and comfortably on a wide variety of stairways. The Lifts are so versatile they can accommodate top or bottom overruns and even go across intermediate landings.

- Optional space saver rail
- 500 pound load rating
- Mounted to one wall only
- Outdoor installations

THE HANDI-LIFT® Vertical Wheelchair Lift provides safe stairway and building access for people confined to a wheelchair. Feature for feature, it's unsurpassed for safety and versatility.

- Lifting range of 4 to 12 feet is highest in industry
- Provides a full 12 square foot platform
- Adapts to numerous indoor and outdoor applications
- 500 pound load rating ... optional 750 pound load rating available.

Where a restrictive access is required, you'll find the Handi-Enclosure® unsurpassed for safety and ease of installation.

To find out more about the freedom Cheney Lifts can provide you with, call or write the Cheney Company.

1987 Convention Committee
The WSA 1987 Convention Committee has been working night and day to put together the best Convention ever on May 6 and 7 at The Olympia Resort in Oconomowoc.

The following men and women who “volunteered” for this important assignment deserve some recognition: Fred Zimmermann, AIA, Chairman; Harry Wirth, AIA; Mary Beardmore; Charles Slater, AIA; Jack Fischer, AIA; Steve Harms, AIA; and Bob Greenstreet.

WSA Tape Library
The WSA’s VHS Video Library includes the following box office hits: Professional Liability, Coping with the Legal System, Increased Architectural Compensation, Project Scheduling and Budgeting, Project Management, Negotiating Higher Fees, How to Price Design Services, The Architecture of Frank Lloyd Wright, Selling Design Services, and A Brief Case for Excellence. Call Sandra at the WSA office for more information. Remember... You can keep the tapes for up to two weeks.

Liability Clauses
A growing number of design firms are responding to the current liability crisis by including “limitation of liability” clauses in their project contracts. That is a key finding of the 1986 Design Service Fee Structure Survey sponsored by the Professional Services Management Journal and the A/E Marketing Journal.

Of the firms participating in the survey, 36% reported they have limitation of liability clauses in at least some of their current contracts. In addition, 7% of the participating firms reported they are adding the cost of liability insurance to their fees as a separate reimbursable item.

New Historic Building Code
The new Wisconsin Historic Building Code took effect on October 1, 1986. The code is designed to facilitate the restoration and rehabilitation of designated historic buildings.

Provisions of the new code:
- Permit an owner of an historic building to elect to be subject to the code in lieu of any other state, county or municipal building code;
- Permit the use of original or duplicates of original materials and original construction techniques; and
- Require DILHR to review plans within 15 days and to act on petitions for variances within 10 days.

The code also contains information on how to apply to DILHR for use of the code, how to verify buildings are qualified historic buildings, and how municipalities may request the certification of local historic preservation ordinances for historic building code purposes.

New AIA Software
A new software package, FM: FORECAST, from the AIA’s professional systems division gives architects the capability to provide facility and space forecasting services.

FM: FORECAST is available as one of AIA’s new MASTER SYSTEMS software tools, and runs on IBM PC’s and compatibles. Call the WSA office or 1-800-424-5050 for more information.

Tax Credit Survives Reform
The federal tax credit for the rehabilitation of historic buildings survived the Tax Reform Act of 1986, but at a reduced rate.

The new credit is 20% instead of the previous 25%, effective for property placed in service on or after January 1, 1987. In addition, full adjustment to basis is now required, and depreciation has been set at 27 1/2 years for rental-residential and 31 1/2 years for commercial buildings.

Transition rules have been established, and the new “passive loss rule” will limit the use of the tax credit for some taxpayers. Most of the other requirements for the historic building rehab tax credit remain unchanged.

NAAB
Talk about getting involved, Paul Graven, FAIA, of Madison just completed his sixth year on the National Architectural Accrediting Board, including this past year as president. Improving the processes of accreditation and promoting the enhancement of architectural education were topics discussed at NAAB’s Annual Meeting in Ixtapa, Mexico.
Minuteman Program

First organized over eleven years ago, the WSA office is updating its list of architects volunteering to participate in the WSA's Legislative Minuteman Program.

The 1987-88 Session of the Wisconsin Legislature is upon us and will no doubt include numerous issues of major concern to your profession and your practice. Statute of limitations, civil justice reform and economic development initiatives are just several examples of the type of legislation likely to be taken up during the current legislative session.

When compared to the very substantial benefits to the profession that could result from your interest and involvement, the time required to participate in the WSA Minuteman program is minimal. Don't forget, sign up before midnight tonight!

Membership Action

Wilson, Dale D., was approved for Associate Membership in the Southeast Wisconsin Chapter.

Duarte, Joaquim Manuel, was approved for Student Membership in the Southeast Wisconsin Chapter.

Jarvis, Richard C., was approved for Student Membership in the Southwest Wisconsin Chapter.

Gorski, Daniel S., was approved for Associate Membership in the Southwest Wisconsin Chapter.

Wermuth, Michael, was approved for Associate Membership in the Southwest Wisconsin Chapter.

Johnson, Charles W., was approved for AIA Membership in the Southwest Wisconsin Chapter.

Nolck, David, was approved for AIA Membership in the Northeast Wisconsin Chapter. He has transferred from Montana.

Brew, James S., was approved for Associate Membership in the Northwest Wisconsin Chapter.

Kosarzycki, Henry A., was approved for Associate Membership in the Northeast Wisconsin Chapter.

Eagon, John, was approved for AIA Membership in the Southwest Wisconsin Chapter.

Meyer, Daniel A., was approved for Student Membership in the Southeast Wisconsin Chapter.

People and Places

Yarbro-Kempinger Architects, Inc. have moved! But, the P.O. Box, Zip Code and Phone Number will remain the same. Their new office is located at 1488 W. South Park Avenue, Oshkosh, WI.

Frank G. Pletcher, AIA, has been appointed President of the newly formed firm of FRANK G. PLETCHER & ASSOCIATES ARCHITECTS. Specializing in the design of commercial industrial and multi-family construction projects, the company also announced the new location of its main offices at 230 Sussex Street, Pewaukee, WI 53072. Phone No. (414) 691-3636.

Associate News

Now is the time to begin the application process for the 1987 Architect Registration Examination next June.

The first step is to contact the State Registration Board and request the required application materials. According to Jeri McClennahn-Ihde, the Associate member representative on the WSA Board of Directors, you should call or write the Wisconsin Department of Regulation and Licensing at the following address and phone number between January 12 and February 27 for these materials:

Wisconsin Department of Regulation and Licensing
Bureau of Business and Design Professionals
P.O. Box 8935
Madison, WI 53708-8935
Phone: 608-266-2112

Exam materials, including a machine readable application form, will be mailed out by the department in mid-March. The application deadline for the 1987 examination is April 10. The architect registration examination is scheduled for June 15-18, 1987.

Contact the WSA office for more information on the registration examination ... and good luck!

Richard Gustafson

It is sad to have to report that Richard E. Gustafson, a past President and active member of the WSA, died last month in Green Bay.

Licensed as an architect in both Michigan and Wisconsin, Gustafson was a Vice President with John E. Somerville Associates, having joined the firm in 1955. He specialized on work in the health-care field, but perhaps will be most remembered as the architect who designed Lambeau Field in Green Bay.

The profession will miss its good friend and colleague, Dick Gustafson.
Are The Metal Edges And Copings You Specify The Best For The Money?

If you're not sure, call us.
We're Weather-Tek. We represent Metal Era.
We'll tell you if the metal edges and copings you specify are bent under manufacturer-controlled conditions, with full warranties.
Or if they're merely "shop bent"—subject to variances of workmanship, color finishes and the like.

Our consultants can help make sure the edge you want is compatible with your building design, roof membrane and application parameters.
So call us. You'll find our problem-solving capabilities as dependable...as our products.

What's the difference between a roof window and a skylight?

The difference is very straightforward. A roof window opens and pivots so both glass surfaces can be cleaned from inside. A skylight does not pivot for cleaning. Of course, there is a difference in quality and value among manufacturers. But, a simple comparison of features, quality and price will show you why VELUX, with 44 years of experience and craftsmanship, is the world leader.

In addition to our four distinctive models, VELUX provides precision-engineered prefabricated flashings to make installation easy and weathertight. We also offer quick delivery and a full range of optional accessories and glazing.

To learn more about the difference and the possibilities, write for our free 24-page full-color brochure, “The Complete Guide to Roof Windows and Skylights.”

VELUX — The world leader in roof windows and skylights.

Total-frame, precast/prestressed concrete office buildings from J. W. Peters provide greater design flexibility for architects — and a big boost to the bottom line for developers. The clear spans possible in precast/prestressed offices leave the developer completely free to design interior spaces in any dimension desired. Fabrication can begin before site preparation, saving weeks of construction time.

Erection on the site won't be hindered by cold or inclement weather. Attractive exterior treatments such as marble, granite or exposed aggregate are incorporated right at J. W. Peters' plant. J. W. Peters is a leader in the construction of total-frame office buildings. For more information, contact J. W. Peters & Sons, Inc., P. O. Box 160, Burlington, WI 53105. Phone 414/763-2401.

In response to numerous requests from builders, architects and consumers, VELUX-AMERICA INC. is introducing their new Model TPS-5, a top-hung roof window with an integrated screen and outside dimensions of 27½" x 46½". Since its introduction in 1983, the Model TPS has quickly grown to become VELUX-AMERICA INC.'s most popular roof window. VELUX reports that recently there has been an increased demand for a roof window with the TPS features in approximately 2 x 4 proportions. The new Model TPS-5 is designed to meet this growing preference.

For more information about the new Model TPS-5 roof window or other VELUX roof windows, skylights and accessories, contact VELUX-AMERICA INC., P. O. Box 3268, Greenwood, SC 29648. Photo courtesy of VELUX-AMERICA INC.

“Blueprint for Success,” the 1987 Commercial Builder's Show, offers an exchange uniquely designed for the Wisconsin/Upper Peninsula Michigan commercial building industry.

Green Bay, Wisconsin's new Expo Centre is the setting for this two-day trade event, scheduled for March 10 and 11, 1987, 1:00 to 8:00 p.m. General and sub-contractors, architects and engineers are invited to review the latest industry trends and technology to assist in all job development stages. Over 200 exhibitors will share up-to-date information on products and services; special programs will feature nationally-known experts addressing commercial building industry topics.

The show is sponsored by the Fox Valley Chapter of the Construction Specifications Institute, and endorsed by over 20 industry associations and builder's exchanges throughout Wisconsin and the Upper Peninsula.

For pre-registration or exhibitor information, contact Pam DeWitt, Event Coordinator, Green Bay Expo Centre, (414) 494-9507.

A totally precast/pre-stressed concrete frame building is more than aesthetically pleasing. Eliminating perimeter beams and columns, vertical architectural wall panels become exterior load-bearing members. The results: significant energy efficiencies and a fast-track building schedule.

If desired, horizontal load-bearing spandrel panels can be combined with ribbon windows.

J. W. Peters has fabricated several structures cited by national design awards. Your project could be next.

P.C.I. National Award Jury: "From a space, column and leasing standpoint, the building is optimal."

You say you finished laying out a couple of mechanical diagrams and your co-workers said they looked like they should be stuck onto a refrigerator with little, plastic, fruit-shaped magnets and it's made you so crazy that the only thing you've considered creating since is a scene?

Looks like you could use a little Professional Control.

Come in off the ledge, big guy. So you can't draw a straight line. With a Computer-Aided-Design system (CAD) from Professional Control Corporation, all you need to do is push a few buttons to go from the ideas in your head to graphics that'll knock those office Rembrandts flat on their canvasses.

PCC-CAD systems give you the ability to create shapes, shade, colorize, position...whatever! You can also call up elements stored in CAD libraries or create your own libraries as you go along for even greater design power and speed. PCC-CAD systems are great for sales proposals, installation guides, reports...the possibilities are endless and the effects, incredible.

All PCC-CAD solutions are IBM compatible. Our software packages like AutoCAD, VersaCAD, Anvil 1000 and Crossroads are used in house by our own engineers. That's important!

So stop getting frustrated and start getting results, chief! Give PCC a call for more information or a demonstration and go nuts! Uh...on a PCC-CAD system, that is.

PROFESSIONAL CONTROL CORPORATION
We put results on line.

For more information, call Milwaukee headquarters in Milwaukee, Wisconsin at 414-251-3000, extension 58.

A Distinctive Wauwatosa Retirement Community required Distinctive Window Design — Pella and Ver Halen helped meet the challenge.

The San Camillo project in Wauwatosa, Wisconsin incorporated Pella clad trapezoidal skylights and windows to create a unique sunroof bay — 200 of them. These windows, as well as the other 1000 clad casement windows and sliding glass doors, were supplied with bronze tinted insulating glass and were installed by Ver Halen's factory trained and experienced installers.

Pella custom shapes, sizes and clad colors offer unlimited flexibility to suit the mood and scale of each project with anything from monumental circleheads to integral muntins to your choice of colors in low maintenance aluminum exterior cladding.

Your Pella representative from Ver Halen, Inc. can tell you more. For information call 1-800-242-6212 or send the attached coupon.

The significant difference in windows and doors.

□ Please send me the latest literature on Pella for replacement and new construction.
□ Please send me information on Pella's free CAD library.

Build in efficiency... with natural gas

Natural gas. It’s clean and non-polluting. It’s economical. It saves space with no storage. And it’s more efficient than ever, thanks to today’s advanced technologies.

Best of all, prices are lower than they were three years ago. That means natural gas will continue to be your best energy value, today and in the future. Build with confidence — specify natural gas.

For help with questions or calculations of energy prices and supply, as well as building efficiency and equipment, just call us at your local WP&L office.

Wisconsin Power & Light Company
Welcome to the 1987 addition of the Construction Industry Handbook. Keep it handy. You will find it to be an invaluable reference throughout the year on matters pertaining to the Wisconsin Society of Architects (WSA).

Published as the February issue of the Wisconsin Architect magazine, this Handbook is distributed to all members of the WSA as well as engineers, general contractors, interior designers, landscape architects and many others involved in the design and construction industry. In addition, the Construction Industry Handbook is made available to public and private owners in Wisconsin who contact the WSA for assistance in establishing a process for selecting an architect for their building projects.

Your comments and suggestions are appreciated with reference to other individuals or organizations that should receive copies of this Handbook next year, as well as revisions or changes in content that you feel are appropriate.

One last word. Please continue to refer to the advertising portion of the Handbook when looking for products or services. Without this support the Wisconsin Architect and this Handbook would not be possible.

VELUX presents a fresh new idea in fixed skylights.

Until now conventional fixed skylights could only offer natural overhead light with no ability to vent stale, heated air and allow fresh air to enter. Well, VELUX innovation has changed all that.

The new VELUX fixed skylight Model FSF features a unique ventilation flap. This exclusive VELUX feature lets you enjoy the benefit of limited ventilation even with an economical skylight.

It's innovations like the Model FSF fixed skylight that keep VELUX the world leader in roof windows and skylights.

The Tri-Fount™ Washfountain — the best way yet to move traffic through a washroom.

It's as easy as 1, 2, 3.
1. It can wash one or two or three people at once.
2. It meets all barrier-free codes.
3. It’s a real cost saver—saving water and energy with each use, saving time and trouble with minimal maintenance through the years.

Each of the three independent spray nozzles is controlled by its own push button, so each user activates a single metered 0.5 GPM flow of preblended water. It really cuts down on waste and waiting time.

Leg and toe clearances, and required reach to the push buttons and water streams, are well within existing barrier-free codes as well as ANSI A117.1-1980 standards.

Less than five pounds of pressure activates a safe, tempered flow of water which shuts off automatically. Optional backsplash-mounted soap valves are available, too.

Concealed spray formers, recessed push buttons, and a rugged access panel provide unsurpassed vandal-resistance.

The Tri-Fount™ Washfountain is also easy to maintain, with front access to all supplies and stops. The unit’s metering valve assemblies employ the same basic design as Bradley’s field-proven 90-75 metering faucet. Timing can be adjusted from five to twenty seconds by turning a screw—without turning off the water. And if the metering cartridge should ever fail, it can be replaced quickly and easily.

For color brochure and Multi-Fount™ Series case study sheet, call Stickler & Associates, Inc., 333 N. 121st Street, Milwaukee, WI 53226. Phone 1 414 771-0400.

Bradley Corporation
We get the job done better.
President's Message

The Wisconsin Society of Architects has continued to grow in strength in the past year — increasing in membership and maintaining a sound financial base while meeting the legislative challenges affecting the practice of architecture in Wisconsin.

Our Qualification Based Selection (QBS) program has helped numerous public and private users of architectural services develop meaningfully organized interview procedures to assure the selection of qualified architects for their projects. In fact, this QBS process has the potential to become a national guideline for architect selection. We are continuing to work for and support legislation that will help to reduce the excessive liability insurance rates faced by architects. Since this issue affects many other professional groups in Wisconsin, we are joining forces with them to improve the insurance climate in Wisconsin. The WSA continues its liaison with the Wisconsin Department of Industry, Labor, and Human Relations and Division of State Facilities Management to address building code, building code review, and building standards issues of importance to Wisconsin architects. These areas will be ongoing concerns of the WSA in the coming year.

1987 promises to be a challenging year for our profession. New tax laws will have an impact on the way we practice architecture in Wisconsin and the types of building projects available to Wisconsin architects. The WSA will be looking at ways to help our members meet these challenges. I urge you to use the resources available to you through the Wisconsin Society of Architects and the American Institute of Architects to help you manage your practices.

In the pursuit of these interests, we should re-emphasize the importance of architectural design and the positive impact that good design can have on Wisconsin livability. We need to project the understanding to those promoting Wisconsin that the quality of life in our state is affected positively by good architectural design and that businesses interested in locating in Wisconsin will find skilled and creative architectural firms here to meet their design requirements. We compete with architects from outside our state for projects in Wisconsin, but should not take a back seat to them. The WSA, in the coming years, should encourage our members to design imaginatively and creatively while encouraging architectural clients throughout the state to both support and challenge their architects to create stimulating environments. Teaching the value of good design is an ongoing process requiring our constant effort and mutual support. We need to think positively about architectural design in Wisconsin, actively discuss it in various public and private forums, and strongly encourage owners of the positive qualities of good design.

The opportunities and challenges for the WSA in 1987 are exciting ones. We are in a position to continue to project a positive image for Wisconsin architecture. Along with the Board of Directors of the WSA, I look forward to your continued support of your organization, your help in realizing our goals, and your constant efforts in support of architecture in Wisconsin.

Robert D. Cooper, AIA
President
Wisconsin Society of Architects
American Institute of Architects
FAST-FORWARD

If you haven't been here lately, you haven't been here.

Change. News. Excitement! Those are the things we're made of these days. With new names, new showrooms constantly being added to our collection of well over 1500 manufacturers.

Knoll and Decorators Walk have just joined the ranks of IMS resources like Hickory, Sarreid and Sunar/Rauterman. All under the same roof. Which means this is one of the few Design Centers in the country where you have access to both contract and residential furnishings in one convenient location.

The way things are going, you may soon be spoiled for going anywhere else.

To receive a buyer's pass, call or write for an application. Once approved, your name will be added to our events mailing list. If you simply need an update, call for our most current directory listing of tenants. Then, come be a part of the excitement!

SOLID SECURITY

WITH ...

Custom and Standard Fabricating
Detention Equipment
Security Hollow Metal
Security Hardware
Bullet Resistant Plate and Glass

Throughout the United States and around the world, our specifications and details are written and designed to provide a complete security/detention section to compliment architectural plans and specifications...for jails, prisons, holding facilities, banks, embassies, commercial, industrial or military installations.

We meet your design criteria/We assist in security programming/We provide all engineering drawings/We guarantee our products and delivery/We let our work speak for itself!

Kalwall... Nobody does it better...

... and we prove it every day. Kalwall/Structures Unlimited skylights, curtainwalls and window systems are the most cost effective at bid time and ESPECIALLY over the life of the building! Kalwall controls heat gains and heat losses better than any other system on the market today! Let's face facts:

Fact: Best U Factors (.40, .24, .15) R Values = 2.5, 4.16, 6.67
Fact: HVAC Load Reduction — Shading Coefficients Down to a .16!
Fact: Unlimited Size and Areas with Class "A" U.L. Roof Systems
Fact: Save on Support Structure — Kalwall Dead Load is 2.5 psf
Fact: Design Flexibility — Kal-Curve or Standard Roof and Walls
Fact: Maintenance Free — No Skylight or Window Cleaning
Fact: Proven in over 30 years of Architectural Award Winning Buildings

NBS, Inc. provides complete design-engineering and budget assistance through conceptuals to working drawings for the most cost effective designs. Kalwall is our major system. We've been installing Kalwall systems for hundreds of satisfied architects and owners in Wisconsin-Michigan since 1977. For complete quality assurance and responsibility, nobody does it better!

NBS, Inc. also represents PowerStrut Space Frames, 5.2E1c • EPI Architectural Systems 7.8Ep Bristol Fiberlite 7.8Bri • Fashion Inc. 07610/Fas • Amerec 13052/Ame

Don't try to buck the odds. You’ll lose. If you've got asbestos in your facility, get rid of it now! Why prolong your liability?

Asbestos is a killer!

BUT . . . Make certain you have a qualified fully insured abatement contractor. Ask questions. Do his procedures meet or exceed EPA and OSHA regulations? Is he a state of the art contractor? What about safety? If he doesn't care about his people, he surely won't worry about yours. Are the lines of communication open between you and him? Wait a moment. Save yourself some time. Call HSA CONTRACTORS, INC. They're fully insured. Their employees are fully trained and qualified abatement specialists. They perform the job quickly with a minimum amount of disruption. H.E.P.A. equipment is used to transport hazardous fibers safely up to 1,000 ft. through a hose from a low speed shredder. HSA CONTRACTORS carefully removes the saturated asbestos and quickly transports it to certified waste locations. However, before any of this takes place, HSA CONTRACTORS provides a site survey . . . identification of asbestos problem areas . . . air monitoring analysis . . . budget projections and scheduling . . . and abatement options.

Call or write us today for more information.

You'll breathe easier!
The Wisconsin Society of Architects of the American Institute of Architects (WSA) with over 850 members is the state component of the national organization representing architects and related professionals in the state of Wisconsin. Members from private firms, corporations, industry, government, and education join together to maintain and represent excellence in architecture, the profession and to the public. This is accomplished through the many programs the WSA offers its members.

WSA membership offers many different opportunities for education and career development. The WSA is striving to help in advancing each individual's architectural skills, professional understanding and career opportunities.

With offices located in Madison, the WSA is directed by a Board of Directors which sets priorities of the organization and initiates new programs. The Board of Directors consists of 20 representatives from the state's four local chapters. The president and vice-president of each chapter automatically are members of the Board. Five Directors-At-Large are elected by the state membership from the local chapters through an at-large election. An Associate member and two students also serve on the Board. The four primary officers compose an Executive Committee which is selected by the Board of Directors from the membership roster of the WSA.

There are in excess of 45 standing commissions, committees, and short-term task forces which recommend and execute policies, plans and produce programs. Membership on these state groups is drawn from the WSA membership.

When professional architectural expertise is needed by national, state or local government bodies, members are nominated from the WSA to serve on such committees.

A full-time staff located in Madison and headed by an Executive Director handles day-to-day operations and is available to all Wisconsin members as a liaison to the AIA and as an information center.

The WSA is composed of four chapters, each having its own Executive Committee and accompanying committees and programs pertinent to its part of Wisconsin and its communities. Emphasis of the chapters is on participation and special events tailored to their needs through local meetings and seminars. All members have the opportunity to affect the direction of their profession and produce progress in many areas.

Seeking an Associate or Looking for a New Position?

Try the WSA Job Bank

If you are looking for a new position or seeking an associate, the WSA Job Bank can help you. There is no charge for using the service.

If you have any questions or need more information about the service, call Sandra at the WSA office (Madison - 608/257-8477; Wisconsin - 1-800-272-4483.

Wick Builds Your Success

Newspaper publishers, hardware store owners and hundreds of other successful business people have discovered that Wick can answer their new building needs.

Since no one knows your business better than you, we listen to you first. Then we help plan a building to meet your needs best, including the most efficient layout to save you time and labor every day. We can also incorporate energy-saving features to keep monthly operating costs low. Finally, such details as doors, windows and finishes are matched to your needs and preferences.

We know the building business. Thirty years of experience and the Wick system for post-frame construction ensure that you get a quality building without expensive delays. You also save 20-40% over other construction methods.

To obtain a copy of our new commercial buildings brochure, contact your nearest Wick dealer, or call toll free at 1 800 356-9682. In Wisconsin, call 1 800 362-5457. Do it today.

Quick...which building products cost less today than 5 years ago?

Bricks? No.
Mortar? No.
Windows? No.
Insulation? No.
Roofing? No.
Plumbing? No.
Wiring? No.
Lights? No.
Carpeting? No.
Doors? No.
Paving? No.
Natural gas? Yes!

Natural gas...Your best energy value

Last year over 2,000 multi-family living units were started in the Greater Milwaukee Area which were heated with natural gas. Developers, builders and owners like gas because its low operating cost attracts buyers and renters alike.

So if you want to "move" your projects fast, use natural gas. We'll show you how easy—and smart—it is.

Wisconsin Natural and Wisconsin Gas serve nearly three quarters of a million customers in Southeastern Wisconsin, including the high growth areas immediately south and west of the city of Milwaukee. If you have a project in any of these areas or need some general information, call one of our utilization engineers for some fast, free advice on improving your bottom line.

40 Wisconsin Architect February 1987
IT COMES WITH EVERYTHING AND COSTS YOU NOTHING.

Consider what each Wisconsin Bell public telephone comes with.

It comes with customer and employee acceptance because, quite simply, it meets all their calling needs. They can use either coins or Calling Cards, make collect calls and bill calls to a third number, and make local calls, as well as long distance calls through many long distance companies.

Each Wisconsin Bell telephone comes with trained technicians to handle maintenance and repair.

Each comes in heavy-gauge steel, is weather and vandal resistant, and meets all federal and state requirements for the disabled. Each comes with our unmatched 100 years' experience in public communications.

Each comes headache-free, since we handle fraudulent long distance calls, refunds, customer complaints, slugs, vandalism and stolen sets.

And each comes with commissions, a valuable source of extra income for your business.

What does all this cost you?

Nothing, if your business qualifies for a public telephone. There's no installation fee, no initial purchase investment, no ongoing financial commitment, no maintenance and repair expense, and no charge for outdoor enclosures.

Call your Wisconsin Bell Public Communications consultant today. Offer your customers and employees the public telephone service they appreciate.

1-393-2772 (TOLL-FREE)*

*Toll-free only when dialed from residence, business or public telephone numbers served by Wisconsin Bell.

©1986 Wisconsin Bell

Wisconsin Bell AN AMERICAN COMPANY

Helping you communicate.
If you send me a site plan plus a set of floor plans and elevations, I will be happy to estimate the cost of photographing your project.
P.O. Box 181, Onalaska, WI 54650.

Drop-In Stair System was used for the exit stairs from the new boxes at Lambeau Field in Green Bay.

Is The Roof You Specify Up To Current Fire Codes?

If you're not sure, call us. We're Weather-Tek. And we do more than supply roofing materials. We supply answers. We offer a wide range of technical services. Executed by a staff of professionals. At no charge.

And of course, we offer a full line of quality products. Each backed by a full warranty. So if you have questions about fire codes—or anything else—give us a call.

You'll find our problem-solving capabilities as dependable...as our products.

(414) 425-3322

Techline is modular.

Cabinets and wall systems for the kitchen, bathroom, and office. Our durable white laminated surfaces, precision hardware, and state of the art design make the Techline System a contemporary and economical solution to your cabinetry needs. Readily available, Techline is European design and beauty—without the import price.

The Overwhelming Choice
In Floor Underlayments.

We've poured our underlayments in apartments, condominiums, office complexes, single-family homes and shopping malls. More than 600 million square feet of Gyp-Crete® and Gyp-Crete 2000® have been installed nationwide. For new construction or renovation, they're the overwhelming choice in floor underlayments.

Here's why:
• Sound and fire control
• Accepts virtually all finished floor goods
• Pour over wood or concrete subfloors
• No shrinkage cracks
• Pour to depths of ¼" to 3"
• Accepts foot traffic within 90 minutes
• Fast, efficient installation
• Leveling capabilities

WORKING EFFECTIVELY TO MEET THE ENERGY CHALLENGE
“EVERYTHING WE DO TOUCHES YOUR LIFE”

Our Technical Manuals and Specification Manuals can help you.

61 Wisconsin Architect February 1987
Wisconsin architects in recent years have won many important awards and commissions across the nation. They have also served thousands of clients, large and small, throughout Wisconsin and the Upper Midwest with skill and dedication. If you need the services of a highly qualified architectural firm, you will find a suitable one in this Directory. Or if you aren't sure you need an architect, any of the firms listed herein will welcome the opportunity to meet with you to provide professional advice and recommendations.

Movable Wall Systems
The ultimate in selection and flexibility.
selectra Movable Wall Systems add new dimensions to the terms function, versatility and flexibility. selectra allows you to select any type, color or texture of finish, including real wood paneling and carpeting, and glass to match with any interior decor or floor plan.

FEATURES:
Flexible, Contemporary Design — Offers the end user unlimited opportunity to mix or match any type of paneling from ¼” to ⅜” in thickness.
Non-Progressive Erection — The skeleton can be erected and wired with the paneling to be installed later. Also, individual panels can be removed without damage to or need for removal of adjacent panels.
Ease of Installation — The wall system has been designed to facilitate easy installation and remodeling so that change can be handled with a minimum of office routine interruption.

ADVANTAGES:
• Tax Advantages — Qualifies for Income Tax Investment Credits and accelerated depreciation schedules.
• Flexibility in cost — reasonable initial installation costs and tremendous savings when remodeling.
• Reusable Materials — 90 to 100% of the materials are reusable when remodeling.
• Time Saving — remodeling is accomplished quickly and easily, many times without disrupting the office routine.

SELECTION OF HEIGHT
Cornice height movable walls provide visual privacy without interfering with existing heat, air flow and lighting systems. Available with combinations of glazed and solid paneling, and doors to form semi-private offices.
Ceiling height movable walls are ideal for private offices, conference areas or to divide departments. Available in heights up to 12 feet, with solid doors, windows and ceiling high glass, selectra walls offer the ultimate expression of the individual and good taste.

OUTSTANDING SOUND CONTROL QUALITIES
With two mix or match panels each ⅜” thick and sound absorbent insulation, selectra Movable Walls offer you the best possible sound control in a movable wall. According to tests A.S.T.M. E-90-61T and AMA-11 by Geiger & Hamme Laboratories, selectra Wall offers "an average transmission loss of 46.4 decibels in the Speech Privacy range."

Ask About Our "In-Stock" Program!
Bronze Finish Available For Immediate Delivery

selectra
702 E. Washington Avenue Madison, Wisconsin 53703
(608) 222-2113
Select the Wall System, the finish and the panel materials that work best with your design statement. Select selectra.

- **selectra** Movable Walls provide you with the widest possible selection of materials from which to choose your panel type, color and texture. With panel thickness variable from 1/4" to 3/4", the material is totally at the discretion of the architect, designer or owner.

- The metal components are available in both extruded aluminum or anodized bronze finish.

- Doors and windows are also available in selectra walls. Door units are interchangeable with standard panels and can be either ceiling height or standard height.

**Types of coverings available for Movable Walls:**
- Real Wood Paneling
- Carpeting
- White/Chalk Boards
- Glass Panels
- Vinyl Covered Panels
- Woodgrain Vinyl Panels
- Cork Boards
- Fabric

Just a few of the many selections shown below.

Digging near underground power lines and other utilities can be dangerous. Before you dig, uncover the facts. If you are digging in Wisconsin call Diggers Hotline at least 3 days before digging.
1-800-242-8511
In Wisconsin
344-5111
Milwaukee Area
1-800-922-6576
Outside Wisconsin

State law requires you to notify owners and operators of underground facilities at least three working days before you dig. One call to Diggers Hotline alerts most major Wisconsin utilities. If there are utility lines under the site you specify, the company will mark their locations for you.

Save this ad. It's one you can live with.

Benefits of Membership in WSA

1. **Work.** Whether you are an employee or an employer, WSA helps you get work by means of job listing, referral, “how to” seminars and cassettes, etc.

2. **Marketing Information.** You get no place without this today. WSA organizes seminars, makes available printed material, cassettes, inserts information in the Wisconsin Architect.

3. **First Hand News** affecting the practice of architecture by means of committee reports, Hotline, Wisconsin Architect, etc.

4. **State Agencies’ Contracts** are updated with the help of WSA representation. Some past inequities have been corrected.

5. **AE Selection** by means of bids is an invitation to disaster. You know it. Does your prospective client know it? Get the background and current information on this development.

6. **Insurance Rates.** Maybe your premium or your exposure can be reduced. WSA has committees working on this, information and advice to give you.

7. **An Eye On Legislation** affecting zoning, planning, professional registration, taxes, procurement of services and other matters of interest to the profession and the construction industry.

8. **Legislative Relief.** WSA has an active legislative committee and minute-man program.

9. **An Eye On Building Codes.** Committees have been working at state and national levels to improve regulations affecting buildings.

10. **Continuing Education** programs on all of the timely subjects, like marketing, energy conservation, production efficiency, etc.

11. **Library of architectural books** is available on loan at no charge. Cassettes and slides on a wide range of important subjects are available at no charge.

12. **Exchange Of Ideas, Exploration** of mutual technical and professional problems at local and state meetings.

13. **Learning By Association** with other architects and distinguished non-architect guests. Every person you talk to at local or state meetings is an expert on something.

14. **You Become Part Of** effort to maintain and improve high ethical and technical standards. For instance, a lot of discussion is taking place now on the new revision of the AIA Standards of Professional Practice (the “Code of Ethics”). Why don’t you get in on this?

15. **A Forum** for presentation of viewpoints. You play a part in establishing the standards of the profession by expressing your opinion at local and state meetings.

16. **Participation On Committees.** You can be on a local, state or national committee almost for the asking. This could be very broadening and very instructive.

17. **Common Front** presented on issues important to the profession. Witness WSA activity against competitive bidding.

18. **Contract Forms** and other documents. These are sold by WSA to members with same-day service. WSA members pay a discounted price for documents.

19. **Hotline and other communications** which keep members up to date on numerous important matters. For instance, a synopsis of senate and assembly bills which are of interest to us are included after a review by a committee and attorney.

20. **The Wisconsin Society of Architects, Construction Industry Handbook,** issued yearly, is a reference for valuable information not found elsewhere. Look through the latest issue and discover its great value.

21. **Public Relations** program in Wisconsin newspapers and our own magazine, The WISCONSIN ARCHITECT, distributed to important people outside the profession. This educates the public, upholds the image of the architect.

22. **Status And Prestige** enhanced by membership in local chapter, WSA and AIA. This translates into personal satisfaction and better respect by the community.

23. **Information Service** on such professional matters as state laws (proposed and enacted), document forms, state administrative structure, licensing, sources for other needed information.

24. **Job Bank.** For employees searching for employers and vice versa.

25. **Honor Awards** program at both the State and Chapter levels which provide peer recognition, as well as local, state and national publicity to winners.

26. **WATS Line** - A toll free phone number to be used in contacting the WSA office.

27. **DILHR Plan Delivery** - The WSA staff will hand carry your plans to DILHR, pick them up, and return them to you for a nominal fee.

28. **Workmans Compensation Insurance** - WSA members can participate in a group plan which will return a dividend.

29. **Agenda’s** of the Division of State Facilities Management are available in order that members can keep track of developing state jobs.

30. **Video Cassettes** are available for use in your office on a variety of topics including fees, project management, project scheduling, and the legal system.

31. **Intern Development Program** is a methodology for individuals pursuing architectural registration to obtain experience in all areas required for registration. WSA members are active in this program . . . both employers and employees.

32. **Young Practitioners Seminars** are a chance for young practitioners to come together to discuss a variety of topics of particular interest to them.

33. **Professional Competence** is mandated by state laws and the Department of Regulation and Licensing. The WSA office actively pursues cases where there have been allegations of actions which are not in compliance with those rules and regulations.

34. **An Office Away From Home** is available at the WSA office. Parking, library, phone, walking access to state agencies and the state capitol is all available.

35. **Group Health Insurance** is available to WSA members through a very competitively priced national policy.
Robert Allen Fabrics

Prade Inc. invites you to view the complete line of Robert Allen fabrics. The showroom provides a professional staff to assist you in your selections for both commercial and residential applications. Take out samples are available, free of charge, for your convenience.
REGULAR MEMBERS are architects who are legal residents of and have been licensed or registered by any state, the District of Columbia or any U.S. Territory.

ASSOCIATE MEMBERS are persons who are legal residents of Wisconsin and are employed in a professional or technical capacity under the supervision of a licensed architect directly related to the practice of architecture, or are employed in circumstances recognized by licensing boards as constituting credits towards architectural licensing.

PROFESSIONAL AFFILIATES (State members only) are non-architects, registered to practice their professions where such requirements exist with established professional reputations. Professional Affiliates may include engineers, planners, landscape architects, sculptors, muralists and other artists, professionals in government, education, industry, research, and journalism, and other professionals whose work is related to the practice of architecture.

STUDENT AFFILIATE (State members only) are undergraduate or post-graduate students of architectural schools or secondary school students within the territory of the WSA.

**SUPPLEMENTAL DUES NOTES**

The AIA Regular Member is also responsible to the Institute for supplemental dues beginning on January 1 of the year following admission based upon the number of registered architects in the firm (both employees and employers as of January 2) at the rate of $170.00 each. The firm will be given a credit of $100.00 against its supplemental dues obligation for each such registered architect who is an AIA member.

Invoices for national and state, dues will be mailed in December.

Members who have not paid WSA dues by July 31 shall be in default and shall be so notified. Members still in default as of September 31 shall be terminated.

Enhance with Tile

From TILE OF DISTINCTION

Ceramic Tile Showrooms

Ostara floor tile and Incepa wall tile. A delightful duet from INCERCQ. Perfect harmony of appearance, line after line. Solids, murals, mosaics, motifs—all in a medley of colors and sizes. Beautifully in tune with most others, too. High quality. Easy to clean. There are also Ostara "step-safety" designs for the bath, the kitchen, the poolside—wherever wet surfaces could be a hazard.

When your customers demand classic harmony at home, Ostara and Incepa tiles are just the overture you need.

Visit us at the AIA Convention
The Wisconsin Architects Foundation (WAF) was created in 1954 for the purpose of supporting Architectural Education in Wisconsin, principally through scholarships and grants. To date, over $100,000 has been distributed to 150 students.

In recent years, the WAF contributions to Scholarships have gone primarily to UW - Milwaukee students. With greater financial resources, the WAF would be able to support Wisconsin students at other institutions as well as offering grants and prizes for programs that relate to the improvement of the practice and profession of Architecture in Wisconsin.

The members of the WAF encourage your contributions, either by way of annual membership or donation to the endowment fund. Tax deductible contributions and membership are an act of participation in support of the strength and vitality of the Architectural Profession in Wisconsin.

Within the next several months the WAF will contact all Wisconsin Architects, along with numerous other individuals and corporations who support and appreciate architecture. You can help by undertaking your annual membership and endowment donation to the WAF. You can additionally help by impressing upon those in related professions and industry of the vitality and benefits of the WAF.

For further information, contact current members of the WAF or our Executive Director, William Babcock.

IMPORTANT NOTICE
FREE COMPUTER DESIGN SERVICE FOR MASONRY WALLS

THE WISCONSIN CONCRETE & PRODUCTS ASSOCIATION IS OFFERING A NEW SERVICE WHICH WILL ANALYZE OR DESIGN MASONRY WALLS FOR LOW, MID OR HIGH RISE BUILDINGS. THIS SERVICE IS OFFERED FREE TO DESIGN PROFESSIONALS—ARCHITECTS AND ENGINEERS-IN THE STATE OF WISCONSIN.

DATA PROVIDED: The program will check resisting moments limited by steel stress, masonry stress and deflection of the wall. It also checks shearing resistance limited by shear stress and bond strength and checks flexural compressive stresses, both allowable and actual. Once the stresses have been determined, the programs will check various masonry configurations to arrive at the configuration which would be the most economical construction.

Seminars on time management and training managers will be featured at "BLUEPRINT FOR SUCCESS," the Commercial Builder's Show set for March 10 and 11, 1-8 p.m. at the Green Bay Area Expo Centre.

Guest speaker David Burstein, Vice-President and Manager of Southeast Operations of Engineering-Science, Inc., is a registered professional engineer with over 12 years' project management experience. His March 10 address will describe how technical people can develop skills to become successful project managers. Burstein's March 11 presentation on time management will benefit industry professionals interested in a shorter, more effective and less stressful work day and lifestyle.

"BLUEPRINT FOR SUCCESS," sponsored by the Fox Valley Chapter of the Construction Specifications Institute, will showcase the latest commercial building industry trends for general and sub-contractors, architects and engineers. For complete pre-registration information, contact Pam DeWitt, Event Coordinator, at (414) 494-9507.

THE CHENEY COMPANY'S Handi-Lift is a versatile, space efficient vertical wheelchair lift, specifically designed for installation in very confined areas with little available floor space. However, the Handi-Lift doesn't sacrifice platform area for space efficiency — there's a full 12 feet of platform available. The Handi-Lift is available in 5 lift heights, ranging from 4 to 12 feet. The standard load rating is 500 lbs., and a 750 lb. load rating is an available option. In addition, the Handi-Lift is UL listed.

For more information contact THE CHENEY CO., P.O. Box 188, New Berlin, WI (414) 782-1100.

WISCONSIN SOLAR DESIGN'S extruded aluminum glazing system facilitates custom designs for unique shapes and sizes of slope glazing, greenhouses, solariums and custom skylights. The system has a PPG polycrystall III finish available in a wide variety of colors. The glazing gaskets are extruded rubber with a silicon final seal. The system accommodates all glass thicknesses and types. Write or call for specifications, preliminary pricing and samples. WISCONSIN SOLAR DESIGN, 6349 Briarcliff Lane, Middleton, WI 53562 (608) 851-2112 or (414) 444-1639.
