The New DB1000- One Fixture, One Solution.

**Bronzelite's DB1000 Inground Lighting Fixtures
Combine Versatility and Functionality for a
Superior Lighting System.**

Bronzelite® introduces the first of its kind inground lighting fixture that simplifies specification and adapts to your changing job site conditions. The all new DB1000 features a unique multi-tap ballast that can be changed quickly to any voltage requirement, saving installation time and eliminating delays resulting from changing specifications.

For unmatched lighting versatility, select spot, flood or wall-wash reflector assemblies that utilize Bronzelite's TouchAim™ lamping module system with 15° vertical and 360° rotational adjustment. Lamping options range from 32 watt fluorescent to 250 watt HID, including the Philips MasterColor™ metal halide lamps for whiter light and precise color. Built to be practically indestructible, the DB1000's high-strength, corrosion resistant fiberglass reinforced polyester housing will carry loads up to 3,000 pounds*, and the high temperature Rytron™ lamping module will withstand temperatures up to 200° C.

- **Twist-lock Lens Frame**
- **Error-free TouchAim® Adjustment System**
- **Liquid-tight Cables with Toolless Connectors**
- **Multi-Tap Waterproof Ballast Module**
- **Double Lens Protection System with Flat Silicon Gaskets**
- **Cast Bronze Lens Frame with Compression Limiters**

* For loads up to 3000 lbs., DB1000 must be equipped with an optional drive-over lens.

HYDREL

FLOODS OF OPPORTUNITY

A High performance Architectural Flood Lighting Family

The new
7000
Series

The newest member of the Hydel 7000 Family of floodlights, the **7000 Series**, is a compact unit complementing the very successful 7100 and 7200 Series Hydel floodlights. The new **70 Watt HID 7000 Series floodlight** provides a wide dynamic range of lighting options with new HID, quartz, incandescent, or fluorescent lamps.

The **7100 and 7200 Series** provide power capabilities to **175 Watts and 1000 Watts** respectively, with **eight standard distributions** for each unit. Key features of these three series include: positive sealing, internal glare control, multiple mounting options, and contemporary styling—all supplementing superb **ITL documented performance.**

7000, 7100, and 7200 Series

7801 and 7800 Series

The Hydel **7800 and 7801 Series**, additional flood family members, are precision luminaires in a **compact, high performance Euro design**. To **400 Watts** in popular distributions.

Yoke mounted 1000 Watt 7200 Series with surface mounted ballast

Lite Trac® Line Voltage MR-16

Think

Prescolite

A NEW QUALITY OF LIGHT

Problem:

Low voltage MR-16 lamps offer unique advantages for display lighting, but the cost of necessary transformers may make them difficult to use on certain types of commercial and residential projects. In addition, the need for a transformer in some cases requires a size of fixture that eliminates the advantages of a small two-inch diameter lamp.

Solution:

Prescolite's new series of Lite Trac Classic Miniatures, utilizing the latest advances in line voltage MR-16 incandescent lamp technology. This exclusive introduction provides all the advantages of low voltage track lighting without the need for a bulky transformer, while allowing the fixture to be dimmed with a standard incandescent dimmer. Its small profile, excellent beam control, and outstanding light output make this a valuable new specification tool for lighting professionals.

The ACV™ Valve System (patent pending)

The ACV™ Valve System (Anti-Condensation Valve) utilized in B-K Lighting's PAR30/PAR38 fixtures expels moisture-laden air from the hermetically sealed optical compartment, creating an internal vacuum and eliminating the possibility of condensation. Contact us today for more information.

FOR YOUR INFORMATION ...

Welcome to *Architectural Lighting's* annual Lighting Source Directory. This valuable reference guide provides access to more than 1,300 North American manufacturers and suppliers of lighting (and some related) products. To make the Directory easy to use and understand, we've divided it into two main sections:

Alphabetical Listings: In the first part of the Directory, you will find the company's name, address, phone and fax numbers, e-mail address for inquiries and website. Some manufacturers are specially advertised with a logo and a short description of their company and its capabilities, in their own words.

The listings in this Directory are for manufacturers only. It is possible, though, that some reps and distributors may be listed. These listings are an oversight and should be reported to us so that they can be removed.

Product Category Listings: More than 650 companies responded to our survey to tell us what product categories they manufacture. In this section, you will see category headings for all major lighting product types, then a list of manufacturers. To contact these manufacturers, look them up in the alphabetical listings. Note that light "source" in this Directory means lamp, not fixture. Some companies are specially advertised with "company profile" pages. In addition, you will find profiles for both the International Association of Lighting Designers (IALD) and the National Council on Qualifications for the Lighting Professions (NCQLP), just two of the many significant lighting organizations that *Architectural Lighting* supports and with which we maintain close working relationships.

It is extremely important to us at *Architectural Lighting* and to your fellow readers that you report a mistake if noticed. If you believe your company should be listed, want to suggest new product categories or see a company listed that is not appropriate for this Directory, please fax (212) 279-3955, Attn: Lighting Source Directory. Please send all general comments to me at ctrauthwein@mfi.com.

I'd also like to take this opportunity to point out that, once again, this Directory issue was made possible in part due to the tremendous assistance of Dave Burtner of inter.Light. *Architectural Lighting* is extremely grateful and appreciative of his efforts.

And if you haven't already done so, make sure to check out his website at lightsearch.com. While you're browsing, click onto lightforum.com for interviews with leading lighting designers, technique, technology and design articles, links to the industry's hottest sites and discussion and queries on lighting-related topics.

On a final note, a heart-felt thanks to Targetti Sankey SpA for supplying us with the artwork for this month's cover, portraying light as a magical phenomenon. The images shown are from the Targetti Art Light Collection, which, says the company, arose as an answer to the question, "Is there not a third dimension of light?" The collection is inspired by the desire to successfully extend to art the dimensions of a world that cannot be relegated to the confines of science and technology and by the knowledge that "the only art that is alive is one that finds its elements in the surrounding environment." This collection makes tangible the idea of an art that draws on the innovative collaboration between the artists who have produced the light works and the company's many years of experience.

For this collection, artists were invited to create art works that utilize any method of light, based on the understanding of the correlation between the artistic creation and the industrial production. The artists were commissioned to create works that contain light—different techniques supported their concepts, language and style. Fluorescent, dichroic and neon sources, wood lamps and fiber optics all became the means for the creation of these works. The Targetti Art Light Collection utilizes the technology of electric light as material, content, concept and aesthetics to produce a visual collaboration of art, industry and science.

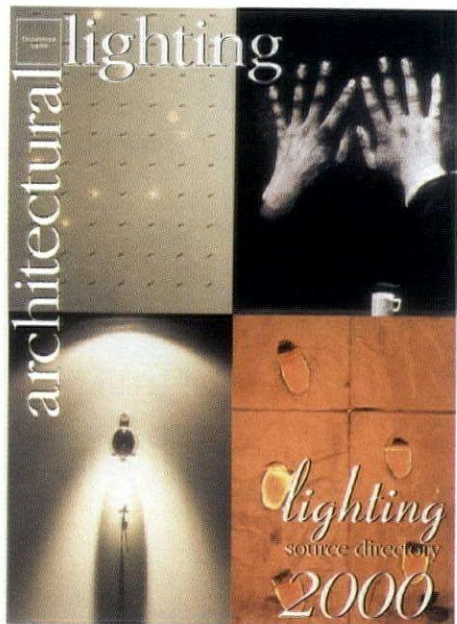

Pictured on the cover clockwise from top left: *Untitled 1997* by Olafur Eliasson—iron, varnish, electronic system, body motion sensor, 12V 10W lamps; *Untitled (Ogni cosa)* by Lena Liv—photographic image on glass using iron, handmade paper, fluorescent lamps; *Crepuscolo* by Hidetoshi Nagasawa—iron, varnish, copper plexiglass, fluorescent lamps; *Laboratorio* by Fabrizio Corneli—iron, varnish, brass, silver cast, crystal, dichroic lamp.

From all of us at *Architectural Lighting*, happy holidays—here's looking forward to a new year, new millennium. ■

“FINALLY SOMEONE HAS SEEN THE LIGHT.”

*JoAnne Lindsley, IALD
Architectural Lighting Designer
Lindsley Consultants Inc.*

For JoAnne Lindsley, lighting is one of the most important aspects of a building's design. The way she sees it, proper lighting is a tool to help people do their job more effectively. Which is why when it comes to making her job a lot easier, she really appreciates a formatted comparison tool like c-z.com.

IT TOOK 2 YEARS, 50,000 HOURS AND 287 ARCHITECTS TO BUILD.

Built by design professionals like JoAnne, c-z.com boasts an ever-growing inventory of product information. Detailed, uniform product data – it's the kind of quick access to information you'd expect from a resource that was built to be online from the beginning. So when it comes to researching your next project, turn on c-z.com.

www.c-z.com

The way to get work done.

**NOW YOU
SEE 'EM.**

**NOW YOU
DON'T.**

RECESSED•TRAK™ IS BACK.

If you're looking for truly low-profile lighting, but need far more adjustability than eyeballs or cans, it's time to consider Alkco's Recessed-Trak™.

Recessed-Trak™ includes a unique light module which allows maximum aiming and 380° rotation, so there's never a dead spot. The miniature quartz halogen lamp's point source filament provides precision optical control for pinspotting, accenting, highlighting and wallwashing.

And its innovative system design integrates easily into most any ceiling, including residential joist, modular lay-in, suspended, and even plenum constructions.

So the next time you need all the flexibility and fixture placement of track, but want a system that's hidden from view, choose Recessed-Trak from Alkco. **Because Nothing Looks Better.**

ALKCO 

where quality comes to light™

Best Light fixtures produce up to 35 percent more light than other fixtures. Best Lights' patented design collects all the lumens produced by the lamp and reflects them for maximum efficiency. Best Lights' direct and indirect lighting systems achieve high uniform light levels with fewer fixtures for significant energy savings.

Dimming HID lighting is Ecopower's specialty. Our unique and proven panel-based dimming technology uses existing standard lighting and makes it dimmable, no costly ballast or capacitor retrofits and no special fixtures. Savings as much as 50 percent can be realized in warehouses, sports facilities or anywhere HID lighting is used.

Our fixtures are so highly coveted,
that when customers buy them...
they promptly hide them.

Our 'Hole in the Wall' fixtures are plaster/fiberglass castings. They illuminate your space without calling attention to themselves. Call us for more information at 626.579.0943 or visit our website at www.elplighting.com.

HYDREL

The Hydrel
9000 Series established
a new benchmark for
in-grade lighting

Today's M9000 Series
Raises the
BENCHMARK

A single M9810, MH400 wall wash illuminates an eight story wall. The new M9000 Series achieves the widest range of ITL photometrics for in-grade lighting.

The 9 inch M9400

Designed to accommodate the popular new color corrected metal halide lamps to 70 watts in a unique housing with a small nine inch footprint for an unobtrusive, efficient installation.

The 400 Watt M9800

First in-grade fixture to accommodate 400 watt mogul base lamps. Provides a new alternative for floodlighting architectural structures with in-grade concealment. Eighteen inch footprint, available in wallwash, spot, and flood.

New M9000 Series features:

Cooler Operation: new convective design and double lenses reduce surface temperature.

External Aiming: aim mechanically and optically without entering lamp module.

Locked Settings: indexed and locking components allow relamping without reaiming.

Rugged Construction: computer aided design and tough materials surpass drive over requirements.

HYDREL

Spec Leviton!

For one-stop SPECing in virtually all lighting control market categories — theatrical, entertainment, architectural, commercial and residential — think Leviton Lighting Control Division.

Leviton makes the most advanced *architectural* lighting control systems in the world. These versatile, pre-set custom controls offer aesthetically pleasing and durable front ends. All kinds of configurations can be accommodated, and they're perfect for commercial applications.

Our Innovator™ series of lighting controls combines advanced *theatrical / entertainment* functions with sophisticated, intelligent controls for capabilities never before available. As examples, LCD monitor displays channel and cue information on demand... up to 384 stage lighting channels and 512 intelligent light channels... up to 1,536 dimmers... up to 128 simultaneous independent auto crossfades to address cue lists.

And Leviton *box-mounted* dimmers offer the finest digital circuitry for advanced control along with high styling. For instance, our Monet™ is the right choice for scene-lighting capability as well as multi-point control.

As a result, we enable you to SPEC Leviton for all your multi-use environments, such as hotels, schools, office buildings, convention spaces, museums, restaurants, sports arenas, concert halls and theaters, to name just a few examples.

Discover the next millenium of lighting control systems today — at Leviton's Lighting Control Division. Join the growing numbers of those who specify Leviton. Call 1-800-323-8920. Or visit our website at www.leviton.com.

Electronic Metal Halide Ballasts

by Aromat

Confidence!

Aromat's electronic metal halide ballasts provide you with the confidence to experience the beauty and efficiency of high color rendering metal halide lighting

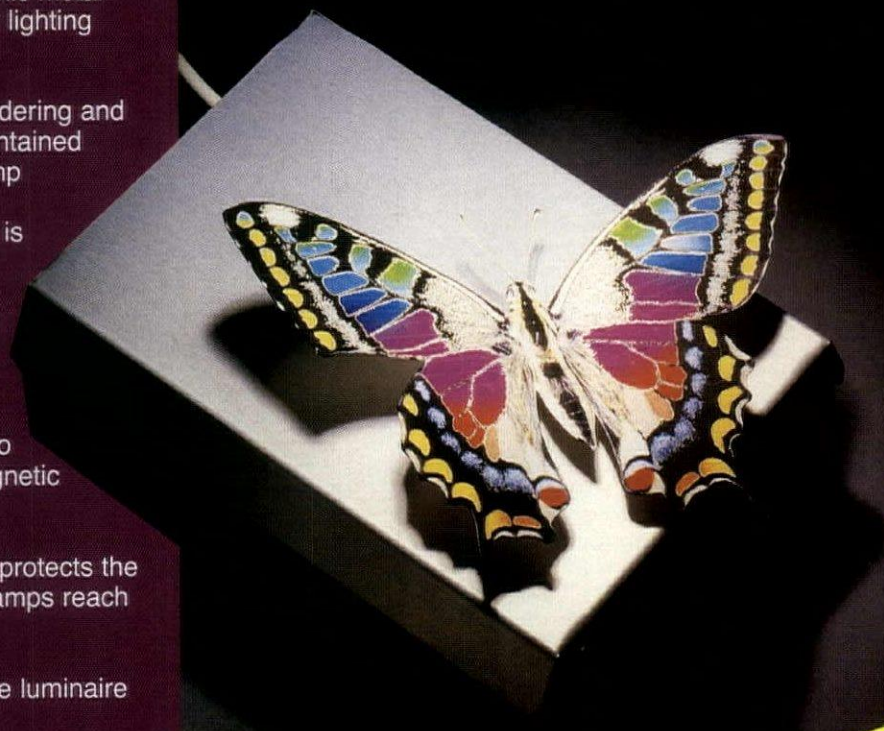

A confidence built on 10 years experience in manufacturing electronic metal halide ballasts by the world's leader in electronic lighting technology!

Utilize Aromat electronic metal halide ballasts in your lighting system! Here's why:

- Consistent color rendering and lumen output are maintained over the life of the lamp
- A five year warranty is available
- 35, 70 and 100 watt models in either 120 volt or 277 volt
- Energy savings up to 20% vs standard magnetic systems
- A "turn off" function protects the entire system when lamps reach end of life
- Small size for flexible luminaire designs
- Quiet operation - no "humming"
- Thermally protected to "shut off" in high heat situations

You now have the "CONFIDENCE" to take advantage of a "lighting system" that brings metal halide lighting to new levels.

Small, Long life, Consistent Great color!

150W Now Available!

Aromat is Matsushita Electric Works (MEW) in the USA. MEW, with over \$12 billion in sales revenues, is a worldwide leading manufacturer of lighting equipment and electronic components.

Call us today and let the leader in electronic metal halide technology work for you!

Bruck Lighting USA

Bruck is the leading innovator in the area of low-voltage halogen cable and track systems. Pioneering a new approach to design, Bruck has been a developer and promoter of new standards in aesthetics, product quality and safety.

Low-voltage halogen systems have evolved into a highly demanded form of lighting, finding a diversity of extensive and varied applications. Bruck Lighting provides an assortment of product styles, which facilitate both discreet highlighting within an architectural frame and the vibrant illumination of the room.

Bruck Lighting offers seven low-voltage systems. Among the most popular are:

Flex-Line—The only completely flexible two-circuit track system on the market today. Able to make very small curves to fit virtually any design whim without retaining any memory. The system's two independent circuits allow for twice the wattage within the same space.

V/A—This track, consisting of two hollow copper tubes with plastic insulation, can both change direction and elevation by the use of different track connectors.

High-Line—Bruck Lighting is the co-creator of the two-wire cable system. This system is able to extend from wall to wall, wall to ceiling and ceiling to ceiling up to 30 ft. without the use of center ceiling supports.

Shou—Designed for the two-circuit system utilizes matte aluminum, handcrafted cherry wood and white opaque glass for its fixtures.

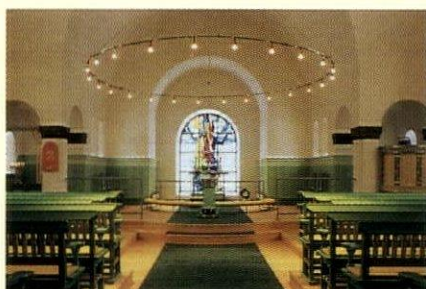

Nearly all Bruck Lighting fixtures are now available with a universal plug-in connector that enables pendants, spot and accent fixtures to be applied to any Bruck system or to be used as monopoints.

Bruck's extensive experience and success in Europe ushered in a new era in lighting in America. Bruck's sister company in North America now stocks products and has a complete technical and customer service office in southern California that enables us to provide better customer service and a quick turn around time.

company profile

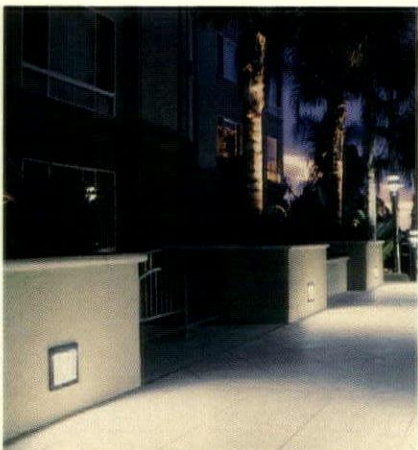

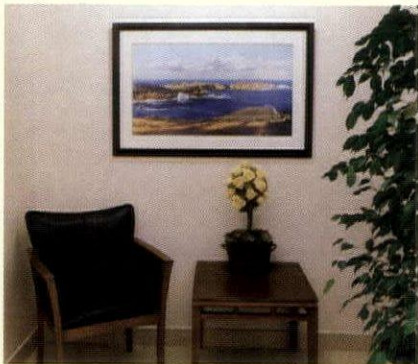

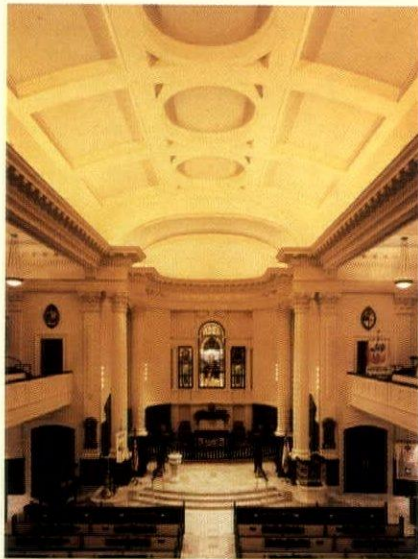

Engineered Lighting Products

Engineered Lighting Products was actually started as a response to a recurring lighting design problem. The founder, Ralph W. Swarens, has applied his degree in Illuminating Engineering to many facets of the lighting industry since 1961. After owning a rep agency, he started his own lighting consulting firm in 1976, which ultimately served as the foundation to launch Engineered Lighting Products in 1985. As a lighting consultant, Mr. Swarens solved lighting problems. As a manufacturer, he designs and builds the solutions.

Since its solution-based inception, Engineered Lighting Products has never wavered from its problem-solving dedication in new fixture development. The company continues to utilize new technology for developing more effective and efficient luminaires. Over the years, ELP has been granted several U.S. patents because of its innovative fixture designs, which provide superior answers for today's lighting problems.

The majority of the luminaires use efficient high-color-rendering fluorescent and metal halide lamps and are designed to light a room or surface without glare. ELP offers numerous lamping configurations, and its unequalled line of wall-wash fixtures are varied enough to be used in retail, offices, medical facilities, institutions, schools and residences. Many of the company's fixtures, such as cove lights or wall-recessed fixtures, light spaces indirectly. Even the revolutionary, patented 2x2s and 2x4s light computer spaces indirectly to promote comfort and productivity.

When you combine superior fixture designs that offer function, efficiency and aesthetics with a knowledgeable, long-term staff that provides timely assistance with lighting design, layout, technical questions and order servicing, you have the reason for the company's continuing growth and success.

company profile

Light Project International

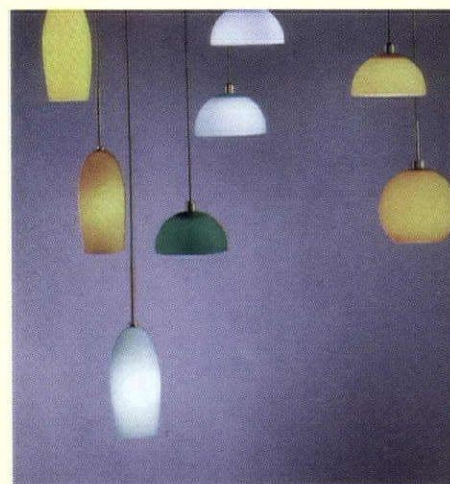

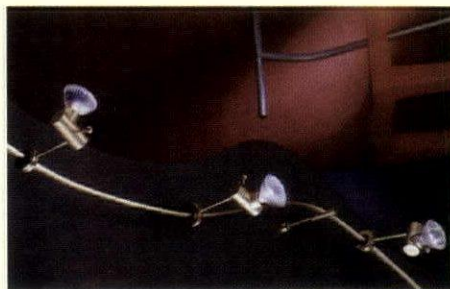

Since 1993, Light Project International has been bringing high-quality, low-voltage European lighting to the U.S. market. While not the largest company in the low-voltage sector of the lighting industry, Light Project offers the widest selection and highest quality of products from eight separate and distinct lines. New items are introduced yearly that reflect the creativity and ingenuity of our European designers.

The pendant fixtures pictured to the left exemplify the beauty and simplicity that have become a hallmark of the Light Project brand. A mixture of Italian glass and German engineering, slight adjustments are made at our Sterling, VA factory to ensure full compatibility with U.S. standards. These fixtures may be track-mounted or monopointed from a variety of elegant canopies at the customer's discretion. A wide variety of colors and shade types is available.

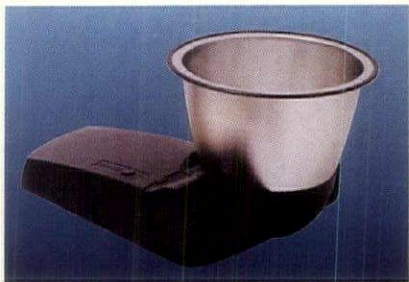

For outdoor use, the B-Light system of linear architectural facade lighting offers a superior alternative to traditional spots and floods. Prominent installations include the Louvre, the Mexican Parliament building and most recently, the world-renowned Benjamin Hotel in New York City. Combining powerful illumination with exceedingly long lamp life, these unique xenon fixtures are easy to install with a slim profile that renders them unobtrusive by day and dazzling by night. Custom lengths and colors are not a problem, and smaller extrusions are available for indoor use.

Recent additions to the Light Project family of products include a sleek, field-bendable monorail track with matching heads and a line of over 100 new wall sconces, all of which are ADA and NEC compliant.

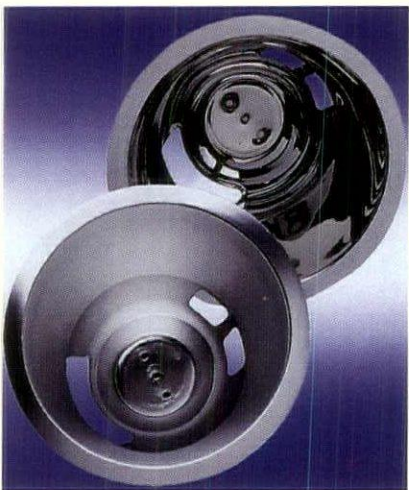

Catering to the commercial and high-end residential markets, our national network of representatives is always available to answer technical questions or provide detailed specification assistance on any project, large or small.

Prescolite

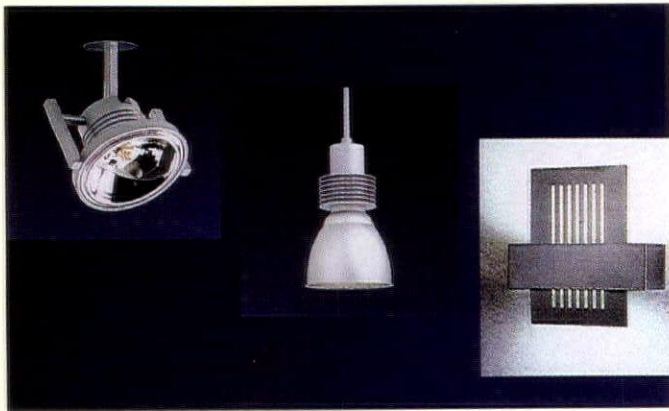

In 1944, Pres Jones founded Prescolite in a residential Berkeley garage. He founded his new company on the idea that lighting fixtures could be designed and manufactured that would not only effectively perform their lighting task, but also actually enhance the architectural interior designs in which they were installed. He believed Prescolite could do this while offering the contractor a product that was easier to install and maintain at an affordable price.

In the intervening 55 years, Prescolite has grown, added significant manufacturing facilities, acquired other lighting companies and been acquired itself. Over the years, Prescolite has been associated with the Hanson Lighting, USI Lighting and C.P.M. names. Recently, Prescolite completed a variety of business changes due to its recent growth as a part of LCA (Lighting Corporation of America) and U.S. Industries (NYSE-USI) and as part of its strategic preparation for a new century in a new millennium.

In 1995, under new management and with a mission from LCA to return to its historical position as a leader in point-source lighting, Prescolite began a period of growth unparalleled since its earliest history. In 1999, Prescolite completed a reorganization that transferred its Life Safety Products Group to newly formed LCA Emergency (including newly acquired Dual-Lite), transferred its Moldcast brand name to AAL (Architectural Area Lighting, a part of Kim Lighting) and announced the discontinuance of its Prescolite Controls brand name. The completion of these management transfers and decisions will allow Prescolite to focus exclusively on point-source lighting: recessed downlights, track and decorative and utility surface lighting products.

Since 1996, Prescolite has experienced compounded average double-digit growth in its core product areas of point-source lighting, as increasingly the design community has re-examined the Prescolite product line and approved of the changes in quality and breadth and depth of line that have occurred over the last several years. The improvements in the Prescolite product line are no accident. With the change in management in 1995, LCA set a direction for Prescolite, including the necessary support for both plant and infrastructural improvement as well as new product development.

Starting with Lightfair in 1996, no lighting company has brought to market as many new products as Prescolite. Most importantly, the types and nature of these new products haven't been just about quantity, but rather about the quality of the products brought to market. In 1996, Prescolite was the first to bring to market triple-tube optics for recessed downlights. In 1997, Prescolite released its patented Virtual Source optics, the first 4-in. aperture metal halide downlights and its first electronic emergency battery packs for T4

Prescolite's Collection '99 by Wever & Ducre

downlight (the 1999 Lightfair Best New Product of the Year award winner), its new Lite Box Lite Deco product Line, Lite Trac Line Voltage MR16 track heads and the Collection '99 by Wever & Ducre product line. In 1999, Prescolite also premiered the release of multi-wattage Intelectplus dimming; full-range dimming for compact fluorescent downlights with end-of-lamp-life protective circuitry, low inrush and low THD at the lowest price in the industry. This new ballast, although electronically superior in all of its features, is truly remarkable because of its open 0-10V architecture, making it possible to be used with virtually any dimmer manufacturer's product.

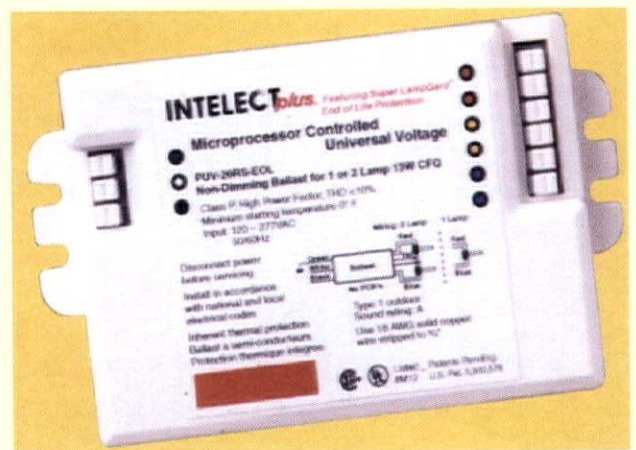

These exciting products reflect an underlying philosophy at Prescolite that is taking them into the new century. Prescolite is the inventor of ISD or Integrated Systems Design. This unique product development approach views the lighting fixture not as an end product, but rather as a building component. As such, each lighting fixture is designed as a systems component that requires concurrent design consideration of the mechanical, optical and electrical fixture; the lamp, the ballast, any connected electrical or electronic switches, dimmers or occupancy sensors. In addition, the ISD design philosophy and approach require the fixture designer to appreciate the fact that in the finished building system, the human being is a component part as well. This appreciation of the human component explains the success of Virtual Source optics. The unique patented geometry of Virtual Source is the first downlight reflector optic to deal with the viewer ergonomically as a part of its product design strategy. The design and development philosophy at Prescolite has led to a recognized position in the lighting industry as an innovator and a design leader.

Looking to the future, Prescolite is positioned well to meet the needs of our industry. It comes with a legacy of innovation from

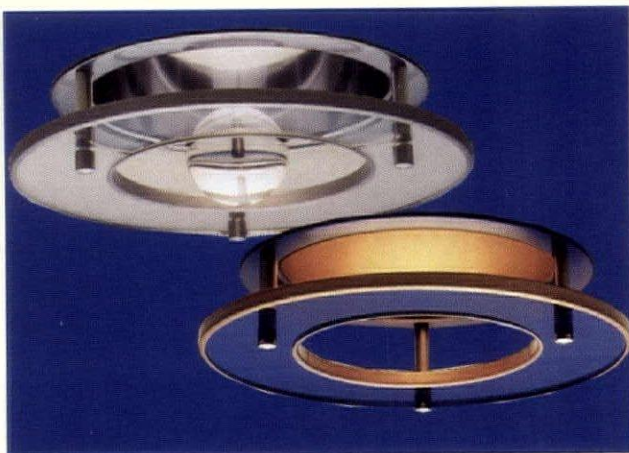

its founder Pres Jones, while benefiting from a young and energetic management team recognized for their obvious passion for lighting. The corporate advertising slogan is a reflection of that passion and also represents a corporate commitment. The corporate slogan, "A New Quality of Light," remains a promise to the professional lighting community by Prescolite to continue to innovate in design, bringing to the market meaningful products with features that truly benefit the designer, the engineer, the contractor and ultimately, the owners and users of the spaces in which their products are applied.

compact fluorescent. In 1998, Prescolite released its two revolutionary modular product lines, M3 modular track lighting (patent pending) and Signos modular decorative downlighting trims (patent pending).

These new modular offerings provide designers with literally thousands of customizable options at standard pricing and with standard lead times. In 1998 as well, Prescolite introduced Intelectplus ballasts, including multi-voltage operation and both low inrush and low THD (an industry first). In 1999, Prescolite released its (patent pending) American Matte reflector finish, the Phos surface

company profile

Cooper Lighting

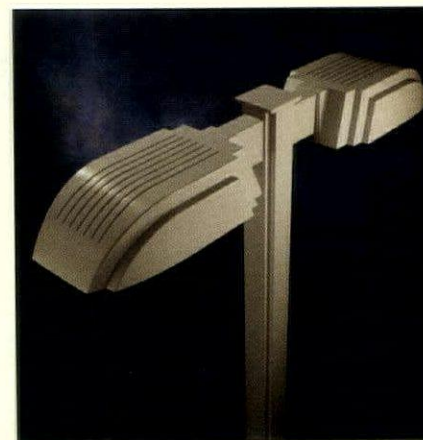

When the roots of Cooper Lighting took hold nearly five decades ago, the commitment was to achieve unprecedented levels of performance in lighting fixture design, manufacture, distribution and service.

As a leading producer of incandescent, fluorescent and HID fixtures, and as a part of Cooper Industries, a diversified Fortune 200 company, Cooper Lighting continues to distinguish itself by manufacturing innovative, energy-efficient, aesthetically exciting and cost-effective lighting fixtures serving the residential, commercial, industrial and utility market places.

Under the leadership of its president, Fritz Zeck, the company is now comprised of 14 highly respected and recognizable brands including *Halo Lighting*, the nation's leading manufacturer of track and recessed lighting fixtures. Sister companies are *Lumark Lighting* and *McGraw-Edison*—leading indoor and outdoor HID manufacturers; *Metalux Lighting*, *Neo-Ray* and *Corelite*—fluorescent direct and indirect manufacturers; *Iris Lighting Systems* and *Portfolio*—architectural-grade recessed lighting for both the residential and commercial markets, respectively; *Fail-Safe*—complex environment lighting; *Sure-Lites*—emergency and exit lighting; *Optiance by SuperVision*—fiber-optic lighting; *USL*—sports lighting; and *Lumière*—landscape lighting.

With these outstanding brands, unmatched service through its Customer First Center in Peachtree City, GA and superior education and training at The Source located at its Elk Grove Village, IL headquarters, Cooper Lighting gives new meaning to the single-source concept.

Its vast market coverage, quality and depth of products and unwavering commitment to service are the characteristics that define Cooper Lighting and make them a reliable partner for architects, lighting designers and interior designers.

company profile

Lighting Services, Inc

Lighting Services Inc (LSI) is the leading specialty manufacturer of track, accent, display and fiber-optic lighting systems for museum, retail, architectural contract and residential use. Since 1958, LSI has been dedicated to designing, engineering and manufacturing lighting fixtures of the highest quality. Our reputation for creativity and innovative design, coupled with specification-grade products and intelligent personalized service, has made us the manufacturer of choice among the most discriminating specifiers of lighting.

Lighting Services Inc is the manufacturer of choice for most museums, including the Metropolitan Museum of Art, Guggenheim Museum, Art Institute of Chicago, U.S. Holocaust Memorial Museum, Norton Simon Museum, San Francisco Museum of Modern Art, Museum of the American Indian, American Museum of Natural History and many, many others.

Lighting Services Inc provides display lighting for most of the nationally prominent stores such as Nordstrom, Tiffany & Co., Gucci, Saks Fifth Avenue, Ralph Lauren Polo, Neiman Marcus, Barney, Bloomingdale's, Bergdorf Goodman and many, many others.

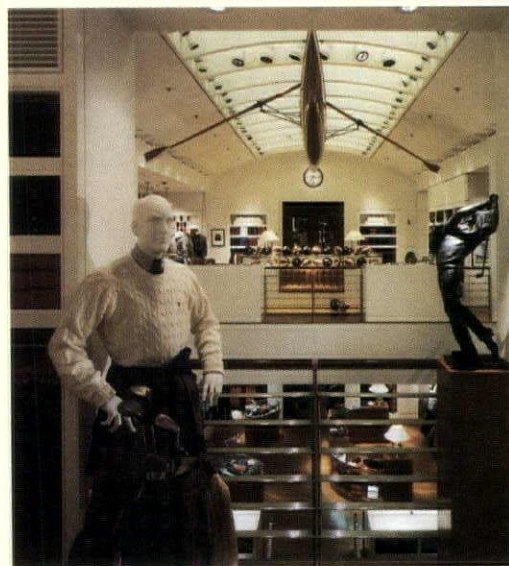

Lighting Services Inc track and fixtures are specified for attractions such as Disneyland, Disney World, Epcot Center, MGM Studios, Universal Studios, Monterey Bay Aquarium, Baseball Hall of Fame, Cowboy Hall of Fame, NCAA Basketball Hall of Fame, NBC, CBS and many, many others.

Lighting Services Inc lighting systems and accessories are used internationally at the Hong Kong Convention Center in Hong Kong, Empress Palace Exhibition Hall in Singapore, Hyatt Hotel in Osaka, Coca Cola in Moscow, Mandarin Oriental in Indonesia and many, many others.

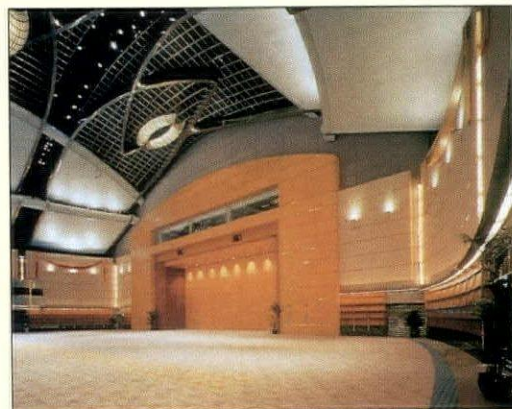

Lighting Services Inc has worldwide representation serviced by regional sales managers and over 100 local representative organizations. For your local representative, call toll-free (800) 999-9574.

company profile

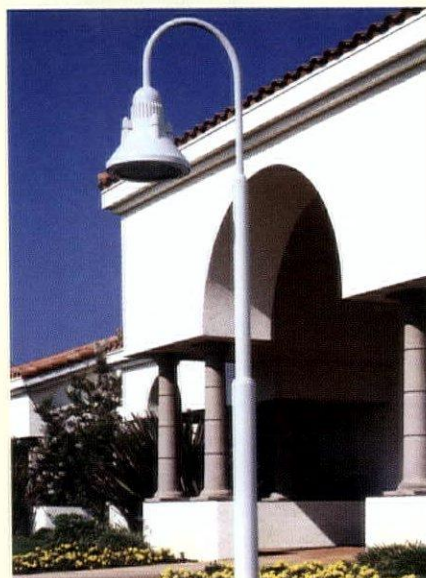

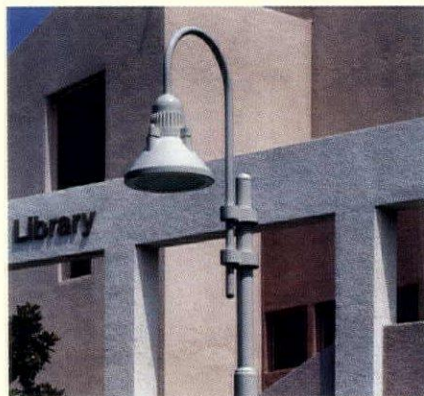

Kim Lighting

Kim Lighting has been creating innovative outdoor lighting solutions since 1933. From the beginning, it has taken a lighting design perspective toward product development. Today, this approach remains intact and is the core of the company's focus. New products are developed to solve lighting needs and to provide efficient and attractive solutions.

Kim's approach to design has evolved into a special "Theory of Relativity." This defines the relationship of luminaires to the position they occupy in the site environment. Area lighting is developed to an entirely different set of design and performance criteria from pedestrian level luminaires, which are different from criteria used for wall-mounted products. This approach addresses performance requirements, physical scale, detailing and the perspective from which products are viewed when installed in real world environments. The process also recognizes that outdoor area lighting is seen most often when it is not functional, during the day. This daylight visibility means Kim products must be attractive when they are not in use and perform well when the sun goes down. This sensitivity to product visibility, placement and function is a Kim hallmark.

The integration of design, from site/area lighting to mounting intimate with architectural surfaces, produces a unification that appears well-considered to site occupants. For example, the Era (RA Series), for site/area and roadway illumination, is complimented by a smaller companion design for pedestrian areas at lower mounting heights. For illuminating building surfaces and site features, Landscape Accents and AFL floodlights offer a wide range of options to adapt to virtually any need. Each product provides a distinct function, while utilizing shared design detailing, scaled to reflect specific locations in the site environment.

Every Kim product is produced to last from premium materials, finished in-house in Super TGIC powder coat, and supervised through a program that is audited to ISO-9001 standards. While several others have come to copy Kim product appearances, they fail to capture the attention to detail and spirit that comes from being the originator of ideas.

company profile

B-K Lighting

Since 1986, B-K Lighting has been dedicated to providing the lighting industry with high-quality, innovative and fairly priced outdoor lighting fixtures. Then, as now, we continue to strive for excellence in both design and quality. We utilize the latest in computer-controlled equipment to produce the many machined aluminum and machined brass components to exacting standards. This type of precision manufacturing ensures our fixtures have quality and craftsmanship unequaled in the lighting industry.

All machined aluminum and cast aluminum components are made from low-copper or copper-free aluminum, designed to meet stringent marine-duty-salt-spray test requirements. All brass components are solid brass, not simply brass-plated. All aluminum components are protected by a chromate-conversion process after fabrication and then finished in one of eight rich, polyester powder-coat finishes. This process ensures the best possible protection of the fixture—both inside and out—from the hostile outdoor environment. Solid brass fixtures can be finished in any one of three luxurious brass finishes or in a polyester powder-coat finish.

All B-K Lighting fixtures are listed wet location. Loctite sealing compounds and silicone O-rings are used to ensure many years of trouble-free performance. All hardware is manufactured to exacting standards from stainless steel materials and then plated or finished as required. By using any of our many optical accessories, precise beam patterns can be achieved to put light only where it's wanted and to control unwanted brightness and glare.

Service is not just a slogan at B-K Lighting, but a way of life. Even with all the finishes, options and accessories we offer, our delivery times compare to the best in the industry. In addition, our knowledgeable design and application departments can provide immediate design and engineering assistance.

Quality, service, innovation and value all add up to make B-K Lighting the number one choice in outdoor architectural lighting.

company profile

Lumière

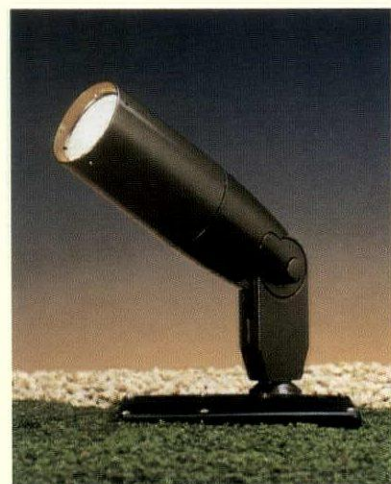

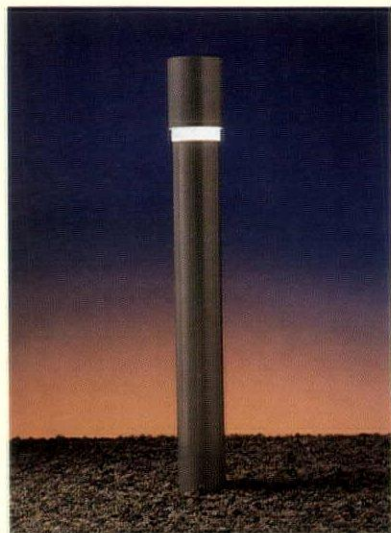

The name Lumière has become synonymous with design, quality and function in outdoor architectural, landscape and specialty fixture lighting. As a result, Lumière fixtures have been specified on many noteworthy projects around the world, including this small sample: Franklin Delano Roosevelt Memorial; Ronald Reagan Library; United States Marine Corps Korean War Veterans Memorial; Disneyland; Disney World; Disneyland Paris; Mandalay Bay Hotel (Las Vegas); Grand Wailea Hotel (Maui); Olympic Village (Barcelona); Sea World; and the Nikko Hotel (Tokyo). Lighting designers, landscape architects and architects the world over rely on Lumière fixtures to add that extra measure of performance and beauty to their projects.

Lumière makes a wide variety of fixtures and accessories for every application, including area, accent and downlights, path lights, mini bollards, step lights, wall-mounted lights, well lights, unique underwater accent lights and outdoor imaging projectors. Light sources include 12V MR16 and MR11, HID, fluorescent and standard line-voltage incandescent halogen.

Many of our fixtures are award winners. For example, our Hollywood #1701 imaging projector won the Design Excellence Award at a recent Lightfair International, as well as an ADEX Award from *Design Journal Magazine*. The prior year, our metal halide Coronado Series won the ADEX award. Lumière also received the coveted "G" Mark Certificate of Merit from the Japanese Ministry of International Trade and Industry for "originality, excellence of design and outstanding contribution to the landscape environment." Other fixtures, such as our Cambria #203, have become industry standards.

The newest additions to the Lumière fixture lineup are our Coronado 750 Series ultra-compact metal halide in-ground fixtures and the Aspen Series of mid-size bollards. The Coronado in-ground fixtures feature MasterColor metal halide lamps and an unrivaled feature set in the most advanced in-ground lighting fixture yet conceived. The Aspen bollards boast ease of use and performance features—including one version with a field-adjustable photometric pattern—that outperform even full-size bollards. Both new series continue Lumière's commitment to excellence in fixture design and performance.

Lumière. Expanding opportunities for artistry in light.

company profile

Venture Lighting International

Venture Lighting International, an Advanced Lighting Technologies company, was founded in 1983 and is a metal halide, high-intensity lighting manufacturing company based in Cleveland, OH. From its inception, Venture has been focused exclusively on the advancement of metal halide lighting technology. Today, Venture is the international leader in providing total, state-of-the-art metal halide lighting systems that set new standards for the quality of light.

With the power of a worldwide manufacturing and distribution network, Venture Lighting is uniquely capable of designing, manufacturing and marketing complete, optimized metal halide systems, in particular the revolutionary Uni-Form, pulse-start system. By manufacturing and supplying all system components, Venture Lighting offers satisfaction and unsurpassed performance in a synergized lighting system package.

The company's emphasis continues to be the development of innovative, environmentally-friendly products designed for a wide range of metal halide lighting applications. Venture's high-quality, competitively-priced metal halide lamps, ballasts and controls have accelerated the annual market growth rate of metal halide to double that of other lighting technologies. Venture offers a wider selection of metal halide lamp types than any other manufacturer. Of the 300+ lamp types marketed by Venture Lighting, more than half are unique lamps designed and manufactured exclusively by the company. Of the new lamp types offered by the competitors in the last 10 years, about 50 percent were also developed by Venture. Venture's exclusive Uni-Form pulse-start technology continues to lead the industry with its state-of-the-art approach to metal halide lighting.

company profile

Ushio

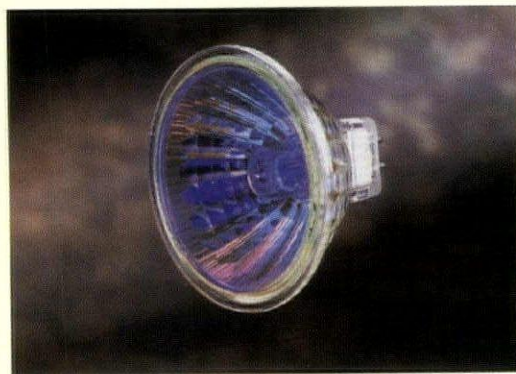

Ushio is an international manufacturer of specialty HID and halogen light sources for a variety of general illumination applications, including landscape, architectural and fiber-optic designs. Ushio offers a complete line of quartz halogen and discharge lamps for exterior, interior and display lighting including: standard and specialty MR11 and MR16 reflector lamps; compact single- and double-ended metal halide; UV-protected and long-life MR16 lamps; and explosion-proof metal halide.

Ushio's series of Ultraline MR16 reflector lamps is rated at 10,000 hours of useful lamp life, which is twice the lamp life of other MR16s on the market today. Our Ultraline series is available in 35W and 50W versions with wide, medium and spot beam spreads. This series contributes to Ushio's largest variety of specialty reflector lamps in the market today. For this reason, Ushio is the preferred choice for light sources among progressive lighting designers.

The special quartz burner on the Ultraline lamps eliminates 90 percent of the UV emissions that tend to fade and discolor sensitive objects. Another unique attribute of the Ultraline series is the titanium oxide coating on the lamp reflector. While the dichroic reflector coatings of generic MR16s tend to degrade with lamp life leading to color shift and light loss problems, the titanium oxide coating on the Ultraline eliminates this problem and provides consistent color throughout the life of the lamp.

Ushio's new UHI Colorlight series of colored compact metal halide lamps produces saturated colors of green, blue, magenta and orange without the use of colored lenses or gels. Ushio's Colorlight series is available in double-ended, recessed single contact-based 150W versions. Lighting applications include amusement parks, open-air theatres, museums, galleries, stage effects, building accents and garden lighting.

Ushio's Whitestar is the newest 4200K high-color-temperature lamp added to the series of specialty MR16 lamps. Balanced for light in the visible spectrum range between 480nm and 630nm, the Whitestar lamp also reduces emissions in the UV range. The Whitestar provides a better alternative to other "full-spectrum" MR16s. The Whitestar is available in a 12V 50W version with a 36-degree beam spread. The Whitestar features a luminous intensity of 1200cd and a useful lifetime of 4,000 hours. Applications include highlighting jewelry, illuminating artwork and color matching.

organization profile

IALD

The International Association of Lighting Designers

The International Association of Lighting Designers is an internationally recognized organization dedicated solely to the concerns of independent, professional lighting designers. Founded in 1969, the IALD now has over 600 members worldwide. As the only global organization that focuses on lighting design, the IALD provides a worldwide forum for the accomplished lighting designer as well as those just entering the profession. The IALD strives to set the global standard for lighting design excellence by promoting the advancement and recognition of professional lighting designers. Governed by a 10-member Board of Directors, the IALD is a volunteer organization that relies on the active participation of its members.

Qualifications for IALD membership vary by membership level. Professional membership is limited to lighting designers with a minimum of four years of senior design experience and is based upon completion of a peer review of selected projects. Associate membership is available to all other practicing lighting designers. The IALD welcomes Affiliate members who are design professionals from related fields, teachers of lighting and members of the press. Those in manufacturing, sales or utilities are not eligible for membership. All IALD members subscribe to the IALD Standards of Ethical Practice, Vision and Mission.

IALD members are recognized through member referrals, use of the IALD acronym and public awareness programs. The Association supports its members through professional development and continuing education by providing information related to professional business standards and through its internship program, which brings qualified young people into the field of lighting design. Through the IALD Internship Program, qualified students have the opportunity to learn about architectural lighting design while working with a professional design firm, and IALD member firms have access to talented assistants.

The IALD is actively involved in many industry activities including:

Energy policy. The IALD monitors and influences energy standards throughout the world. These efforts involve public education, consultation to code-writing authorities and regulatory agencies and participation in projects related to lighting quality and lighting energy. The IALD also offers technical assistance to members of the association on energy-related issues.

Awards program. The Lighting Design Awards Program, established in 1983, recognizes lighting projects which display high aesthetic achievement backed by technical expertise. Designers from around the world have been recognized for their excellence.

Metrics of quality. The IALD is working to improve lighting quality through the development of situation models of lighting comfort and effectiveness which will form the basis of research and the establishment of minimum quality for design.

Lighting design seminars. As part of its commitment to improving the quality of lighting design, the IALD provides educational sessions on lighting developments at its own conferences, trade shows and meetings, and at the request of other organizations.

Additionally, the IALD actively participates in several lighting trade fairs around the world, provides annual scholarships and grants to students and researchers in the area of lighting design and formed The Lighting Industry Resource Council (LIRC) in 1996 to provide a forum for IALD members and lighting manufacturers to discuss current topics, trends and issues in the lighting area. The LIRC adds a critical dimension to IALD activities and improves the quality of lighting overall. Currently, the LIRC is developing Specification Integrity Guidelines.

All IALD members receive *IALD Reflections*, a bi-monthly publication issued to maintain communication among the membership, as well as a directory of IALD and LIRC members.

To search a directory of lighting designers and view a calendar of events and announcements regarding the internship program and job opportunities, visit our website at www.iald.org.

To learn more about the IALD, contact them at (312) 527-3677, fax (312) 527-3680/Merchandise Mart, Suite 11-114A, Chicago, IL 60654.

organization profile

NCQLP

National Council on Qualifications
for the Lighting Professions

NCQLP

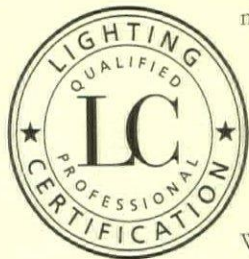

The National Council on Qualifications for the Lighting Professions (NCQLP) is an independent, nonprofit corporation established by the lighting industry to develop and implement a voluntary certification program. NCQLP's mission is to certify lighting professionals thereby promoting the general well-being of the public through effective and efficient lighting practice. The NCQLP and its member organizations have established a certification process by which practitioners in lighting and lighting-related fields, through a standardized testing program, demonstrate their knowledge and experience in lighting.

The Lighting Certified (LC) program is a voluntary, industry-led effort that recognizes professionals who have met specific basic standards as measured by the LC examination. These specific standards, set through an intensive peer development and review process, are measured by a standardized examination that tests critical knowledge and the application of principles and technology to industry-specific practices.

The Lighting Certified (LC) examination is offered annually in November. After two years of examinations, more than 800 professionals now hold the LC credential.

NCQLP's membership includes organizations and federal agencies; membership is open to organizations and associations in lighting and related industries.

American Society of Interior Designers (ASID)
California Energy Commission (CEC)
Electric Power Research Institute (EPRI)
Illuminating Engineering Society of North America (IESNA)
International Association of Lighting Designers (IALD)
International Facility Management Association (IFMA)
International Interior Design Association (IIDA)
Lighting Research Center (LRC)
National Electric Manufacturers Association (NEMA)
The National Lighting Bureau (NLB)
The Nuckolls Fund for Lighting Education
U.S. Department of Energy-Facilities Energy Management Program (DOE-FEMP)
U.S. Environmental Protection Agency (EPA)
U.S. General Services Administration (GSA)

The development of the Lighting Certified (LC) credential was funded through a major grant from the U.S. Environmental Protection Agency (EPA). Additional significant support has been provided by the Department of Energy-Federal Energy Management Program (DOE-FEMP), International Association of Lighting Designers (IALD), International Illuminating Engineering Society of North America (IESNA) and the California Energy Commission (CEC). The NCQLP also receives extensive support from manufacturing and lighting companies.

For additional information, contact the NCQLP at (301) 654-2121, by fax at (301) 654-4273, through its website www.ncqlp.org, or by mail at 4401 East-West Highway, Suite 305, Bethesda, MD 20814.

CCI Lighting

100,000 Hours of LED Life With No Color Loss

CCI Lighting offers the LED Orion Collection. This water-proof design is available in a variety of colors, voltages and sizes for both indoor and outdoor use. At CCI, our specialty is providing a custom product to fit your specific project requirements. And, like our product, our superior customer service and on-time delivery are second to none. For more information on our new MR16, Recessed and Linear product lines, please contact us at (847) 541-4020.

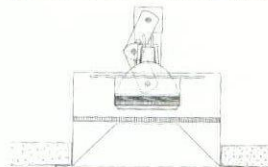

CIRCLE NO. 50

Dreamscape Lighting Mfg., Inc.

**Mystique Pinhole Trim
+
Flush Trim Collar
(patent pending)**

A remarkably different recessed light.

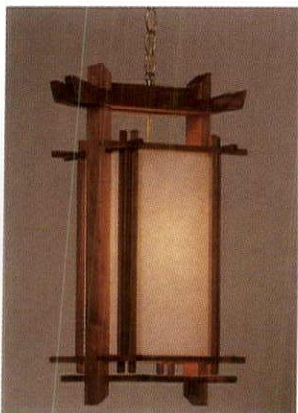

Please visit our website at www.dreamscapelighting.com for the full story or call 310-838-7043 for information.

CIRCLE NO. 53

Cherry Tree Design

The Kyoto Pendant features interlocking joinery and a structure that is reminiscent of the East with its upwardly bent top beams and chamfered sides. The diffuser is available in glass, paper or mica and is pictured here with natural rice paper. This light is made of solid cherry. Our color lighting catalog includes many Asian and contemporary lighting designs, and we are often commissioned to build custom lights for a variety of commercial and residential projects.

CIRCLE NO. 51

Dreamscape Lighting Mfg., Inc.

Miniature T5 fluorescent fixtures are a powerful light source, yet they measure only 3/4 in. wide. Excellent lumen output and high color rendering make this a great vanity light.

For more information on our products, visit our website at www.dreamscapelighting.com or call 310-838-7043.

CIRCLE NO. 54

Davis/Mueller Lighting

Davis/Mueller Lighting's 3110 Series is one of many newly introduced, specification-grade pendant fixtures. Available in numerous sizes, lamping options and finishes, all designs can be complemented with matching sconces and surface mounts. All fixtures are made of solid brass. An acrylic diffuser is shown. Other styles in cast glass and natural alabaster are also available.

For more information on our products, call 888-Dav-Mull or visit www.davismuller.com.

CIRCLE NO. 52

Dreamscape Lighting Mfg., Inc.

Reflections Vanity Light

Light emanates from the acrylic or glass panels set flush with the mirror. The T5 fluorescent light source provides a soft but powerful vanity illumination.

For more information, visit www.dreamscape lighting.com or call 310-838-7043.

CIRCLE NO. 55

Eclipse Lighting

The Galileo Series offers a complete line of decorative, specification-grade outdoor and ADA-compliant indoor luminaires. Designed to provide glare-free security lighting with a choice of compact fluorescent, HID or incandescent lamps. Available in a wide range of model styles, sizes and finishes. All feature durable, modular construction and unique retrofit capability for the decorative cage. Ideal for commercial, institutional and residential applications.

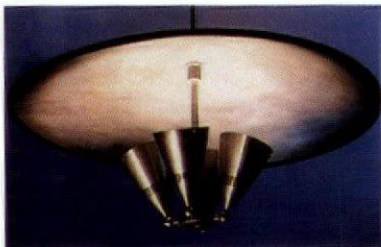

Custom designs available. For more information: (773) 481-9161; fax (773) 481-0729; www.eclipselightinginc.com.

CIRCLE NO. 56

Fabulux Inc.

Four brushed aluminum bullets, each rated for a maximum 300W, throw light up into a perforated aluminum dish that passes 50 percent of the light through to the ceiling, reflecting the rest below in a soft pool. Stem and canopy are painted silver-gray hammertone; dish is edged in neoprene.

CIRCLE NO. 59

Engineered Lighting Products

Our low-level floodlights are available for various PL, Quad and Biax fluorescent lamps. Excellent color rendering is provided, which eliminates the unpleasant color distortion created by many HID fixtures. Light levels easily meet IES recommendations with excellent max./min. ratios. Some models have cold weather starting to -20 degrees. Only 4-in. recess depth.

CIRCLE NO. 57

Hatch Transformers, Inc.

Hatch Transformers, Inc. offers low-voltage transformers for halogen lamps and electronic ballasts for compact fluorescent lamps. A state-of-the-art 35W and 70W electronic HID ballast will be available early 2000. Higher wattage HID ballast will have late 2000 availability.

Contact Hatch Transformers, Inc. for your electronic transformer and ballast needs: (813) 288-8006, fax (816) 288-8105; www.hatchtransformers.com.

CIRCLE NO. 60

Excelite

Pyramis—the beauty of faux alabaster in an attractive contemporary style.

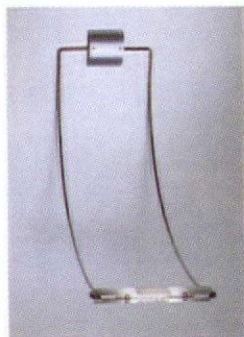

The diffuser is smoothly luminous over its full-length. Pyramis wall bracket uses two T8 lamps and provides generous uplight and downlight. Ideal for vanity, over-bed and large-space ambient lighting available in 2-, 3- or 4-ft. lengths, plus matching wall sconce.

CIRCLE NO. 58

Italiana Luce

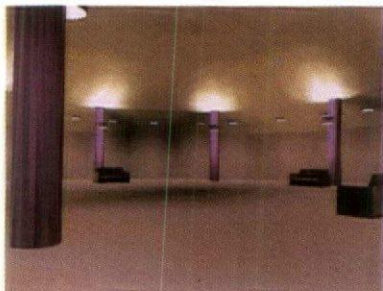

Bridge is a collection of ceiling and wall fixtures and features a tempered glass shade with a perforated metal diffuser on the bottom for diffused light and clear glass on top for direct light. The support is anodized aluminum and the stems are polished chrome. The arms extend 24 in. from the wall and are 25 in. long. Also included in the collection is a Bridge short version with an arm extension of 6½ in. 250W linear halogen bulb is included. UL-approved.

CIRCLE NO. 61

Lighting Analysts

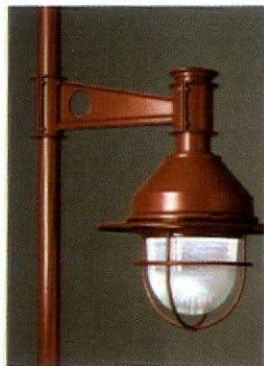

AGI32 is a three-dimensional lighting analysis program capable of producing numerical values and color renderings for complex illuminated environments either interior or exterior. AGI32 can import and export CAD-compatible DXF format files and operates with IES format photometry from any lighting fixture manufacturer.

CIRCLE NO. 62

Lumec

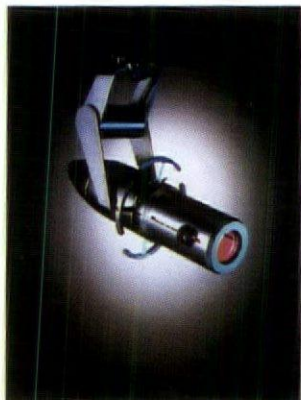

The Transit family of post-top and suspended luminaires offers exceptional looks, photometric performance and ease of maintenance. The post-top TR10 and suspended TR20 luminaires come in the Sealsafe sealed optical system that offers a cut-off reflector hermetically sealed over a tempered glass lens or a prismatic vessel. This ensures that the internal surfaces of the optical system will not deteriorate, thus producing a better Light Loss Factor (LLF). Other features include tool-free access and various mounting and pole options.

CIRCLE NO. 65

Lighting Services Inc

The BP75 Series is a dramatic, unique design for state-of-the-art projection lighting. Designed for display and architectural environments, the BP75 features a unique drop in cartridge with the ability to project, focus and rotate up to 100 degrees any combination of (two) patterns (gobos), which can be either glass, metal or dichroic color filters simultaneously.

CIRCLE NO. 63

Lumenton

Choose from a variety of modern and untraditional outdoor posts. All made from the highest grade of aluminum die cast in three distinctive colors of white, black and verde green. All posts are accentuated by their matching wall or gatemount. Complement your design with Lumenton wall sconces. All units available in incandescent, compact fluorescent or HID.

Visit our website at www.lumenton.com.

CIRCLE NO. 66

Luceplan USA

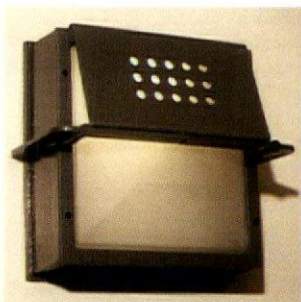

Fortebraccio provides highly aimable, energy-efficient illumination for a broad range of task applications in both contract and residential environments, in portable desk, table, floor models, as well as wall-mounted versions. Classic conal shades are affixed to counterbalanced, single or dual lamp arms with a center rotating axis and integrally designed handles that extend out at the front for precise placement of the lamp head. 60W soft white incandescent, 100W A19 incandescent or miniature 100W T10 halogen lamps provide illumination.

CIRCLE NO. 64

Luminis LC

Luminis offers a complete selection of imaginative solutions for architectural outdoor and indoor lighting using high quality cast aluminum components. Luminis' Nautilux NT800 Series is a versatile solution to lighting, geometry and architecture.

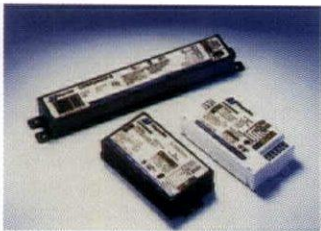

Visit us at www.luminis.com.

CIRCLE NO. 67

MagneTek

The new Triad compact fluorescent ballasts feature a low-profile design and universal input voltage (108-305V) and meet ANSI requirements for end-of-lamp-life shut-down circuit. Designed for flexibility in office, retail and outdoor applications, the ballasts are ideal for downlighting and small architectural fixtures, as well as outdoor applications. The new models operate one 42W, one 32W, one 26W and/or two 26W compact fluorescent lamps, as well as 24W T75 and 28W 2D lamps.

CIRCLE NO. 68

THHC Lighting

THHC Lighting, the originator of low-voltage miniature Rigid Loop, Festoon and Wedge-base Xenon lamps, presents the newly developed Xelogen JC bi-pin lamps. The Xelogen bi-pin lamp series is available in 12V and 24V at 5W, 10W, 20W, 35W and 50W with a life expectancy of 5,000 to 20,000 hours. Other advantages of Xelogen lamps when compared to its halogen equivalent are: less heat, low pressure, no UV hazard, dimmable, no shielding required and ease of handling (bare hands do not damage lamp). THHC Xelogen lamps are an ideal replacement for halogen JC bi-pin lamps in countless lighting applications.

CIRCLE NO. 71

Prima Lighting Corp.

Prima Lighting Corp., a California-based company, announces its premier 12V flexible monorail system featuring a completely new image and concept. Designed to fit today's fashion track lighting, Orbit is available in a choice of two contemporary finishes—champagne and silver. For more information, call (661) 775-4839.

CIRCLE NO. 69

Times Square Lighting

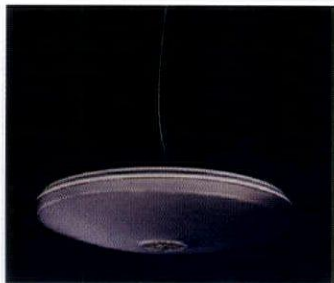

The SB56MH 150W metal halide fixture from Times Square Lighting is perfect for lighting applications where an object to be illuminated is a fair distance from the light source. Atriums and shopping malls are good examples for use of this fixture. Lamps are available in both 15 and 30 degrees.

CIRCLE NO. 72

SPI Lighting

SPI Lighting's ips pendant offers an alternative to HID high- and low-bay lighting. Ips' low-profile housing accommodates an optical system that achieves a 92-percent efficiency. The pendant uses four or eight 40W and 55W compact fluorescent lamps to deliver up to 38,400 lumens. Ips is available with various mounting accessories.

CIRCLE NO. 70

TPR Enterprises, Ltd.

Manufacturer of fiber-optic lighting systems including halogen illuminators, metal halide illuminators, DMX-addressable illuminators, synchronizable illuminators, lenses, fiber-optic bundles, fiber-optic curtains, side-glow fiber and fiber-optic signs. We also manufacture a broad range of lighting equipment for entertainment retail and themed environments.

17th Annual
Lighting Design Awards

call for entries

INTERNATIONAL ASSOCIATION OF LIGHTING DESIGNERS

IALD

Program Description

The Lighting Design Awards were established to increase awareness of quality lighting design by recognizing lighting installations which display high aesthetic achievement backed by technical expertise and exemplify a synthesis of the architectural and lighting design process. As a collection of work, the awarded projects illustrate the diversity of techniques used to create outstanding lighting design.

2000 Eligibility

Anyone may enter a project for an award. The project must be a permanent architectural lighting design solution, interior or exterior, for which construction was completed after 1 June 1997. Lighting products, lighting equipment and lighting design for theatrical performances are not eligible.

Judging

Projects will be judged individually based on aesthetic achievement and technical merit in accordance with the designer's concepts and goals. The IALD encourages submissions of all types and sizes of projects. This is not a competition. There is no minimum or maximum number of awards granted. Each project will be judged on its own merits, not against other projects. Judging will take place over two days in February.

Awards

There are two types of awards, Awards of Excellence and Awards of Merit. Special recognition may be given for certain unique solutions. Award winning projects will be recognized at the IALD Awards Dinner and Presentation on May 10, 2000, in conjunction with LIGHTFAIR INTERNATIONAL in New York, New York. Winning projects will be published in leading architectural and design publications and included in the IALD slide library.

Submission Requirements

All text submissions must be in an 8-1/2 x 11 inches or equivalent format. No mention or identifiable illustration of a specific lighting design firm or designer may appear as any part of the presentation except the cover page.

INTERNATIONAL ASSOCIATION OF LIGHTING DESIGNERS

17th Annual Lighting Design Awards

CO-SPONSORED BY ARCHITECTURAL LIGHTING

CALL FOR ENTRIES

Please include all of the following for each entry—

Cover Page: Please provide the IALD with the following information on a cover page to your entry:

- Entrant's Name
- Street Address, City, State or Province, Postal Code, Country
- Phone and Fax Number
- Name of Project
- Location of Project
- Date of Completion of Project
- Lighting Designer on Project
- Size of Project (in square feet or meters)
- Installation Cost of Project
- Watts per Square Foot or Meter

Written Brief: A synopsis of the special challenge(s) or restraints of the project and a description of your design solution (75 word max.) This is a critical part of your submission and is the only written information read in the first round of review.

Keyed Description: A technical description of the project, cross-referenced by number to each slide you have submitted (50 words per slide max.). The descriptions should include types of fixtures used and reasons for their selection.

Slides: A maximum of ten (10) 35mm slides of the project. Originals or high quality duplicates are required. The quality of the photography is important in the judging process. Avoid the use of fill light. Enhanced or retouched photographs are not allowed. Entrants are encouraged to include photographs which show the project in use, in context with its surroundings and from a human vantage point. Professional photography is advisable. Smaller scale projects should show more detail rather than reducing the number of slides. The IALD recommends a minimum of six (6) slides per project. If plans and drawings are required to describe the lighting solution, we recommend photographing essential information and including them as slides. If the project is a renovation, an image of the project before changes is recommended. If the project includes exterior lighting, at least one daytime photograph is recommended. All slides must be labeled with project and firm name and numbered to correspond with the keyed description. With slides positioned right reading, number each slide in the upper right corner and place project name in the upper left corner of the slide. Photographs, drawings and/or magazine articles will not be considered.

Return of Slides: The IALD will retain the slides of all entries for educational purposes unless you specifically request that they be returned. If you wish your submission to be returned, please indicate so in writing and include a return self-addressed envelope with the submission.

Entry Fee: (per entry, in U.S. dollars)

- \$40 IALD or LIRC Members
- \$75 Non-Members

Payment is by check, money order or credit card (MasterCard or VISA). Checks must be payable in United States currency, made payable to IALD. A single payment may be used for multiple entries. Please do not send cash.

Address entries to: IALD Awards Program, International Association of Lighting Designers, The Merchandise Mart, Suite 11-114A, 200 World Trade Center, Chicago, IL 60654 USA, Telephone 312-527-3677, Facsimile 312-527-3680, E-mail: iald@iald.org

Make sure you include:

- Cover Page
- Keyed Description
- Entry Fee
- Written Brief
- Slides

Incomplete or late entries will not be considered.

SUBMISSIONS MUST BE RECEIVED NO LATER THAN FEBRUARY 1, 2000
