It's Your Project. It's Also Your World.

Design a better view. When you specify Repreve, you're creating a reprieve for the planet. Repreve fiber is made from 100% recycled materials, making it one of the most earth-friendly fabric ingredients anywhere. And because Repreve fibers are certified for 100% recycled content, they may contribute to LEED System credits. Can one designer make a more beautiful world? We'd like to help you try.

Start with the authentic 100% recycled fiber of choice.

Visit our Fabric Library at www.repreve.com. Ask your supplier about the family of Repreve recycled fibers. Or email us at reprevemarketing@unifi.com.

To recognize innovative, life-enhancing interior design that contributes to the quality of healthcare

**Rules for Entry**

**Professional Categories:**
- Submittals (except for conceptual) must be built and in use by June 1, 2010. Entries also must be more than two years old or have been entered in previous Healthcare Environment Awards competitions.
- Submittals must be contained within one binder and must include professional 8 x 10 color photographs and at least one floor plan. Conceptual submittals must include color renderings.
- Submittals must also include the project name and location, submittal category, and a brief program statement (300-500 words)
- The design firm name, address, and contact person's name, e-mail, and phone number must be provided in an envelope at the back of the binder for purposes of anonymity
- Each submittal must include a $250 entry fee

**Student Category:**
- Submittals must be contained within one binder and must include professional quality photographs or renderings
- Submittals must include project type and a brief project description (300-500 words) addressing the goals of the project and how and why the final project improves the quality of healthcare
- Student names, address, and verification of student status in the form of a letter from the school registrar certifying enrollment at the time the project was completed must be provided in an envelope at the back of the binder for purposes of anonymity
- Each student submittal must include a $25 entry fee

**Award Categories**

**Professional Categories:**
- Acute (inpatient) Care Facilities
- Ambulatory (outpatient) Care Facilities
- Long-Term Care/Assisted Living Facilities
- Health and Fitness Facilities (environments in which the primary purpose is to provide healthcare and related services)
- Landscape Design
- Conceptual Design

**Student Category:**
- Awards will be given for innovative design solutions that enhance the quality of healthcare delivery. Entries can include, but are not limited to, healthcare products (furniture, furnishings, etc.); healthcare settings (patient areas, examination rooms, corridors, etc.); or technology (equipment, systems, etc.).

**Rules for Entry**

**Professional Categories:**
- A demonstrated response to the program statement
- A demonstrated partnership between the clients and design professionals
- Client feedback or testimony that the project seeks to improve the quality of healthcare: Does it demonstrate sensitivity to patient needs and seek to improve therapeutic outcomes, enhance staff performance, and increase visitor and community participation? Were higher satisfaction ratings by patients, families, and staff a key design objective? Professional conceptual and student entries:
  - A demonstrated response to the goals mentioned in the project description
  - Visual and graphic images that support an environment capable of improving the quality of healthcare

**Recognition/Awards**

- Winners will be announced at an awards presentation during HEALTHCARE DESIGN.10, Nov. 13-16, 2010, in Las Vegas.
- An award will be presented to each winner
- Winners will be required to assemble presentation boards of winning projects for display at HEALTHCARE DESIGN.10
- First-place winners will receive a complimentary registration to HEALTHCARE DESIGN.10
- Winners will be published in an upcoming issue of Contract magazine featuring healthcare design
- Winners and honorable mentions will be contacted individually by Aug. 9, 2010.

**Judges**

Judges to be announced will include interior designers and architects with expertise in healthcare design and a member of the board of The Center for Health Design. The competition is sponsored by Contract magazine in association with The Center for Health Design, the HEALTHCARE DESIGN.10, and The Vendome Group.

Video did not kill the radio star, Netflix has not killed the movie theater, and online colleges like the University of Phoenix, Kaplan University, and DeVry University most certainly have not killed the on-campus education experience. Even during the darkest days of the current economic recession, school and university construction continued, albeit at a slower pace, thus representing one of the few “bright” spots of opportunity—relatively—for architects and interior designers.

For example, according to American School & University magazine’s 2010 school construction outlook, Stanford University in California suspended or cancelled $1.3 billion in planned projects in 2009 but still had 87 construction projects worth a total of $1.5 billion in design or construction underway at the end of the year. And, according to the report, “At the K-12 level, 2009 saw fewer of the huge bond referendums that have appeared on ballots in recent years. But some districts were able to overcome the economic gloom and persuade voters to support ambitious projects.” Namely, in 2009 Detroit voters approved a $500-million bond referendum to renovate or build 18 public schools, and in Fairfax County, Va., voters approved a $232.5-million plan to build a middle school and upgrade several other campuses.

Ailing physical plants and demographic shifts continue to drive a lot of school renovation and new construction projects, but so too do broader social trends like the rapid evolution of technology, sustainable building practices, the increasing sophistication of student populations (particularly at the higher education level), and the demand among lower income communities for the same quality of educational experiences accessible to higher income populations. In this issue we see prime examples that span the rich gamut of project types: a successful charter school in a highly marginalized neighborhood of Oakland, Calif., a student center that creates a new focal point for an already well-established college campus in San Diego, and a new student housing facility in downtown Phoenix, intended to draw students to an urban campus.

This issue and our accompanying online education focus at www.contractdesign.com also dwell a bit on the renaissance of the public library, which no longer necessarily is a place for quiet research and reflection, but instead has happily and logically taken on multiple roles as teen center, after-school caregiver, coffee house, technology center, museum, and archive, etc. Thanks to technology, the reach of education no longer is confined to school buildings. In fact, it is not confined to any physical place at all.

Nevertheless, what physical space offers and what all of the project types in this issue have in common is this: they all use design as a means to build community as a fundamental aspect of good education for all ages and socioeconomic levels. And that is why the University of Phoenix will never supplant the Phoenix campus of Arizona State University.

Healthcare environments that let caregivers get back to the business of healing. Before we put pen to paper, we observe. And what we’ve seen are nurses walking/running over five miles every shift, navigating chaos as they juggle six tasks at a time. Their desire to help people heal is frustrated by the environment itself. At Nurture, we’re removing obstacles, starting...
Whew, I've been running around like a nurse all day.
Fit for an Iron Chef

Cleveland—Richardson Design is going hog wild for “Iron Chef”—and it’s not because of the show’s steep culinary competition. The Cleveland-based design firm recently completed work on Iron Chef Michael Symon’s new B Spot Restaurant, which can only be described as biker chic. Located in Cleveland’s Woodmere suburb, the 90-seat venue combines old-school biker elements with a contemporary flair to give diners a unique, casual experience that is a diversion from downtown’s typical streamlined fare.

“Michael wanted to create the atmosphere of a casual biker bar and envisioned a Harley Davidson hanging from the ceiling, and his wife Liz wanted to have a vintage beer-can collection displayed prominently in the dining area,” says Scott Richardson, principal designer at Richardson Design. “But we weren’t creating a theme restaurant; we realized we needed to be subtle and artistic in the way we interpreted this concept.”

The eye-catching wall incorporates the restaurant’s “B” logo in an innovative display of 1,750 vintage beer cans, which includes several hundred from Symon’s operations manager Sam Lindsley. Richardson says that it was this artistic revelation that inspired him to treat the giant wall of aluminum cans as a cohesive collection, “The cans themselves became almost like individual mosaics or pixels, in that once combined and arranged accordingly, they could reflect something much greater,” he says.

Another design challenge was Symon’s desire to have a Harley Davidson hanging from the ceiling. Aside from the sheer weight of the request, Richardson did not want to play into the biker bar cliché. Using photographs of motorcycle parts, Richardson created a deconstructed sculptural piece with pendant lighting. Other elements of “recycled” design include fabricated rolling steel doors, a reconstructed cemetery fence that separates the restaurant from the neighboring retail areas, and use of old wood from an Ohio barn.

“Michael wanted a one-of-a-kind destination burger experience for B Spot,” Richardson. “The end product is part biker bar and part Michael Symon. From concept to execution, the restaurant completely embraces Michael’s personality and lets his customers know what he’s all about.”—SS

City of Light

New York—iGuzzini is bringing a “light” Italian touch to New York. The lighting manufacturer officially launched its first U.S. showroom in May in a second-floor space overlooking Madison Square Park in New York. The modern, 4,700-sq.-ft. iGuzzini “illuminazione spa” was made possible through a joint venture with Canada-based Sistemalux Group.

“Tamo happy to welcome iGuzzini to the Italian system here in New York, iGuzzini is quintessentially New York. It makes you think of the Statue of Liberty welcoming newcomers and about all the energy in light,” says Francesco Talo, council general of Italy. Adolfo Guzzini, president of iGuzzini, adds, “A lot of the Italian designers, such as Gucci, use our lights. Entering the market here gives us the opportunity to place iGuzzini in front of the competitor market.”

Throughout the showroom’s interior, sectioned drop ceilings create multiple low-hanging displays to showcase the lighting fixtures at a closer viewing level but still allow for passage beneath, while sconces and streetlight-style fixtures line the outer walls. Floor-to-ceiling glass windows offer visitors a fantastic view of the park across the street and create the illusion that the showroom is, in part, also putting the incoming natural light on display.

The overall design scheme was conceived to provide visitors with wide range of products to fully absorb the iGuzzini experience. The space offers room to display 80 percent of iGuzzini’s current products, some of which are pending approval for the U.S. market (only about 40 to 50 percent of its products are available in the United States to date).

Already established in 16 other countries, iGuzzini “left [entering] the U.S. market for last because it was the hardest to enter,” according to NYC iGuzzini showroom manager and technical sales representative Giorgio Pierini. —SS

APCO's Elements 2 system of decorative components & finishes combines the functional benefits of a comprehensive modular sign system with the unique look of a custom design. At the center of Elements 2 is SiennaCORE™, a thermoset composite backer with 50% recycled content, comprised of materials from FSC certified sources. Standard options include a range of wood, stone, translucent, solid color and custom decorative finishes that customize the look of APCO's award-winning FullView®, Accord15® or curved-face Arcadia® modular systems. With 20 shapes and 82 standard finishes, the combinations are limitless, offering creative solutions for any interior environment.
New York—The 22nd International Contemporary Furniture Fair (ICFF) was an encouraging signal that economic hope for the design community is on the way. Held at the Jacob K. Javitz Convention Center in New York City from May 15 to 18 with 590 exhibitors, almost 23,000 interior designers, architects, designers, retailers, manufacturers, and distributors attended by the annual trade shows’ close.

“‘This is the event I look forward to most every year,’” beamed Peter Schultz, AIA, president of Richard Schultz Design and son of the 80-plus-year-old designer. “People are here to look at and appreciate your designs. I don’t think anyone really thinks about pushing that sales tip, as it is in a lot of other expos.”

While the array of products on display presented an assortment of style and innovation, a few major design themes prevailed, including the contrast between texture and clean lines, as well as incorporating bright and bold colors.

A focus on texture and rich designs that made visitors want to touch the products was prominent. Trove, for example, launched a new variation on its existing Marquee wallcovering, printing an historic theater scene on a textured, glass-beaded surface. Sette Cento at the Ceramic Tiles of Italy pavilion displayed its The Factory collection that portrayed stunning photo visuals—including a jazz musician, Audrey Hepburn, and the Brooklyn Bridge—via a glaze over thin and short textured lines. BRC Designs showcased its Spider Sofa, composed of either black or brown recycled zippers and silk fabric ties as an eco-friendly and reinvented version of shag-styled seating.

On the other end of the spectrum, many exhibitors aimed to push the mark with rounded edges and clean lines in plastic/fiberglass forms and wood. The sleek and intriguing Pharo stackable indoor/outdoor chair by Wilde & Spieth features a unique throne-like fiberglass silhouette in nine colors with built-in or removable cushions. Also, Herman Miller displayed for the first time its expanded line of Eames Plastic Molded Chairs.

Bold colors such as lime green; bright reds, oranges, and pinks, and pure-tinted greens and blues were seen throughout, as well as options to ground the palette with crisp white and pure black. The popularity of metallics seen at the Milan Furniture Fair continued.

Red-Light Revelry

Amsterdam—While prostitution is illegal in all U.S. states except Nevada, "window shopping" for sexual encounters is a typical, daily occurrence in Amsterdam—and not to mention a highly profitable business. But according to Concrete Architectural Associates (CAA), it's time for bordellos in this age-old industry to give the seductive red light a contemporary makeover to keep today's clients coming back.

CAA's recently launched "The Hoerengracht" exhibit by designers Edward & Nancy Kienholzt at the Amsterdam Historical museum portrays the firm's design for the new brothel window, explores the wants of all those involved in Amsterdam's sex industry, and considers what it will take to achieve modernization.

"This project gives a new vision on this critical subject of the prostitution industry in Amsterdam Red-Light District," says Sofie Ruytenberg, visual marketer for CAA, "While the design doesn't push the current style directly, it contributes to the conversation among the community, politics, prostitutes, brothel owners, and punters, as well as support and assistance groups for prostitutes."

CAA's brothel modular design features one and a half circular rooms enclosed in a semi-transparent, easy-to-clean plastic material. The half-sized, crescent-shaped room features a large, glass window that stages the girls under flattering lighting—red hues and blacklights—to viewers on the street. Behind, the adjoining full room houses an oval bed with a white mattress and pillows under a mirrored ceiling. The space can be sealed off with a mirrored sliding door and LED programming can change the room lighting and hues.

A unique aspect to the design is the ability for the prostitutes to personalize their rooms to better suit their preferences or match their clients' fantasy environment. Additional elements—such as a sink, small fridge, locker, and extra storage—are positioned in the recesses behind the circular fixtures in the room.

"This 21 century bordello enhances the beauty that surrounds her and contributes to the attractiveness of the lady. The ability to personalize her room increases the comfort level and gives her more space to give input for the room," says Ruytenberg. "The girls will feel better and be more attractive when working in a beautiful environment."

"The Hoerengracht" exhibit is on display at the Amsterdam Historical Museum through August 29 and includes the proposed 21st Century Bordello by trend forecaster Li Edelkoort.—SS

15. Student/Conceptual

Fees:
Entry fees are $200 for the first project submitted and $175 for each subsequent project. (For design school students or class of 2010 graduates who submit student work in category 15, the fee is $75 per project.) Please submit fee with entry and make checks payable to Contract.

How to enter:
No kit is needed. Submit your entry in a standard-sized (no larger than 10 in. by 13 in.) three-ring binder with end pockets. Enclose the following items in the order noted:

- A brief description of your project, including client objectives, design program, square footage, budget, if available, and date of occupancy (important) typed on a single sheet of paper and enclosed in a clear plastic binder page. If you are submitting student work, indicate the school and assignment.

- No more than 10 color prints (8 in. by 10 in. in size) of professional architectural photography of your project (or in the case of student/conceptual work, two dimensional renderings), each enclosed in a clear binder page. Do not send slides with binders.

- Entries will not be returned.

Entries must be received by:
FRIDAY, SEPTEMBER 24, 2010
Harmonious Renovation

Los Angeles—HGA Architects and Engineers (HGA) struck a note with the Los Angeles City College (LACC), which selected the Calif.-based firm to lead renovations on Clausen Hall, the school’s music facility originally built in 1962. The adaptive reuse project includes the renovation of the facility’s recital hall, coaching studios, band room, music library, and faculty offices. Additionally, the hall will gain a new a 150-seat lecture hall, as well as multiple classrooms and practice rooms. Total project cost is projected at $13 million, and completion is slated for 2012.

“As in most adaptive reuses, the renovation purges some building elements while carefully reusing others,” says HGA project manager James Matson, AIA. “Consistent with the existing brick-and-concrete aesthetic of the building, the design conforms to campus design guidelines for functionality, durability, and sustainability while maintaining the building’s contextual relationship to the campus.”

A major challenge is the renovation of the main recital hall, which will be demolished down to the existing structure to incorporate a penthouse for acoustics, rebuilt sloped floors, new variable acoustic draperies and wall panels, and ceiling reflectors. New support spaces, such as a green room and recording studio, will be added. New mechanical, electric, and plumbing will upgrade the building’s overall energy efficiency and indoor climate control, and recycled materials and low-VOC floor finishes will be used. On the exterior, existing surfaces will be cleaned and repainted/refinished, and custom graphic work will make Clausen Hall a visual focal point for the campus.—SS

Tech start-up Designer Pages and MMPI partner to merge the physical and digital show experience for NeoCon® 2010 attendees

Are you on LinkedIn? Facebook? What about Twitter? If you’re an A&D professional, your answer is likely no. Although designers are the pioneers of style innovation, the industry as a whole is ironically far behind on the social media front. However, tech start-up Designer Pages (DP) is aiming to get the industry up to speed through a partnership with the Merchandise Mart (MMPI) to seamlessly integrate online sharing opportunities at NeoCon®.

The collaboration started when DP exhibited at NeoCon® 2008 and piqued MMPI interest with its socially powered product search platform. The two companies explored the benefits of a partnership, as both had a similar goal to help manufacturers reach buyers. “They’re doing it with showrooms, and we’re doing it via pixels on the screen,” explains Jacob L. Slevin, co-founder and CEO of DP. “The partnership is to really think about how we can merge the physical and digital search experience, starting with trade shows but then taking that to showrooms, design centers, as far as we can.”

NeoCon® 2009 saw the partnership’s first leg. DP sponsored a Twitter-inspired installation—a scrolling, visual Twitter feed displaying all tweets generated from the show floor. DP arranged for a group of Citizen Bloggers, comprising more than 30 design students, to cover the event and tweet about their findings. The “experiment” was a huge success, with a minimum of one tweet per minute for three straight days.

“Last year everyone walking by was like, ‘What is Twitter?’” says Slevin. “The purpose of the installation was to express how Twitter is a tool to generate useful information...how the Web can help the way we work. It was able to help thousands experience NeoCon® as though they were in the Mart themselves.”

Building on last year’s success, Designer Pages is adding another key player to the collaboration: Contract magazine will help generate content and support for NeoCon® Live (live.necon.com), the show’s virtual press room and a one-stop-news-shop for the A&D community. The online platform will aggregate and display live editorial content, photos, and videos from a variety of design blogs, publications, and tweets and encourage others to join in the conversation.

This year more than 40 Citizen Bloggers, including Contract associate editor Stacy Straczynski, will contribute to NeoCon® Live’s real-time updates, as they tweet about new products and seminars. As an added bonus, the three most prolific bloggers will win an opportunity to be regular contributors to Contract’s TalkContract.com blog for a year.

According to Slevin, the NeoCon® Live portion is very much tied to the Twitter application from last year in that both aim to showcase that in an environment like NeoCon® all attendees can offer valuable information to collectively paint a picture of the day’s events.

“In collaboration with the Mart and Contract magazine, we have the support to gain more participation, more contributions,” Slevin says. “We’re trying to create a global feed of the editorials from every source so attendees can access it very easily. Having Contract contribute is going to validate that exercise deeply.”

Contract also is helping DP gain support for the new My NeoCon® component, the event’s first online tool that allows members of the A&D community to plan their show experience on a printable NeoCon® Guide of the Mart and preview products showing on the floor. The tool includes a heavy social component, which allows users to share their product picks and NeoCon® Guide with colleagues. Contract editor-in-chief Jennifer Busch is one of six design celebrities who is actively sharing her NeoCon® Guide at my.necon.com.

“As we celebrate our 50th anniversary and look to the future, Contract is happy to be working with Designer Pages to help push NeoCon®—and the industry—into the digital age,” says Busch. “The opportunity dovetails nicely with our own goals of expanding our online presence and offerings.”

Even more capabilities will be available at future NeoCon® events. DP and MMPI are planning a mobile integrated product search that will enable attendees to snap photos of their favorite products and save them to a virtual NeoCon.com and DesignerPages.com workspace. The key to acceptance of these new features among the social media-hesitant A&D community will be a gradual integration and providing the "what’s in it for me factor.”
Nienkämper Furniture + Accessories Inc.
Space No. 365
The Cocoon Lounge Chair by Nienkämper is a combination of the outdoor strap chairs of the '50s and the '1970s' indoor woven reed papas chair. The knit mesh cocoon has an air of lightness, while the bent rod base adds structure. The mesh cocoon comes in nine standard knit colors, with custom colors available. The base can be finished in any of Nienkämper's powdercoat finishes.

It's time to start thinking about signage in a new way.

We did.

Fusion™ SIGNAGE COLLECTIONS

Signage is usually an afterthought. Fusion was created to change that. It utilizes materials and shapes from the space to provide visual continuity.

Robot technology beyond the common sense of seating

Achieving the same flexibility as the human body is the goal for ultimate seating comfort. Robot Leg Technology by OKI Electric Industry, based on studies of the skeleton and muscle mechanisms of the human body to reproduce natural jumping and landing, tells it all. Gently conforming to body movement, Leopard gives full support from the moment you sit down to when you stand up. The soft contact is like being held in somebody's arms. Leopard surpasses the common sense of seating.

The world's most advanced ergonomic seating. Developed from robot technology.

A NEW CONCEPT SEATING
focus

approaching the bench

Allsteel extends its Stride furniture line with new bench and storage solutions

By Danine Alati

In 2007 Allsteel began to research a furniture solution that would accommodate the open plan to private office, adapt to changing business needs, support different worker types, and do so with a heavy emphasis on sustainability—and the Stride collection emerged. Building onto this integrated, kit-of-parts, workspace solution, designed by IDa Design and introduced last NeoCon®, Allsteel is now introducing the second phase of Stride at NeoCon® 2010. “The new storage and benching components are the culmination of creating the complete office,” says D.J. Heil, Allsteel’s senior manager, product management. “Our initial research into a complete open office environment yielded this need, and we challenged the designers to come up with new solutions for storage in a bench.”

IDa Design owner Mitch Bakker and his team took a holistic, user-centric approach to designing furniture for the entire office. Researching what benching needs were unmet or under-met, they found that storage was overwhelmingly lacking. “It is crucial to have access to things without impeding egress,” Bakker says. “The solutions we designed work well in a bench and also align with the rest of the Stride line.” The new pieces provide access to power, voice, and data, and offer the capability of long spans of surface (15 ft.) without support and longer expanses with unobtrusive supports.

People turn to benching solutions for space efficiency so IDa maximized space while balancing users’ personal needs with their collaborative needs. One concept is a small storage piece with a sliding top, used as a horizontal surface or seat; the unit slides under the main worksurface and offers easy access to storage. Another shared cantilever unit truly maximizes space by separating workstations and allowing two workers on either side to access the same piece. The storage compartment on one side features a magnetic back, which becomes a tack board for the user on the other side. An additional 3-ft.-high lateral file can be used in between workstations and in collaborative areas.

Bakker calls this collection “simple yet sophisticated and scalable. We were not going for a trading bench, but this product can be built up to have more functionality.” It’s available with an open leg or closed, faceted panels; divider screens come in simple glass or textile panels, and a monitor arm can slide into the tool rail at the center of the bench surface.

Stride offers full flexibility and customization, yet all options are as green as possible. “Our original formal intent was to develop the greenest product we could,” explains Heil, “and we achieved that in terms of finishes, materials, sourcing, how it is manufactured.” This is the first Allsteel product line to utilize the Design for the Environment (DfE) framework, and it earned MBDC Cradle-to-Cradle Silver certification.

*Shaw® © 2010 Shaw, a Berkshire Hathaway Company*
When Benjamin Pardo asked renowned industrial designers Masamichi Udagawa and Sigi Moeslinger to design a new furniture system for Knoll, no one was more surprised than the designers themselves.
"We started thinking about the structure of highway signs, where the horizontal rail is floating above the leg structure," says Udagawa. "We focused on this connection between the legs and the horizontal rails," thus finding the workable solution that would allow them to achieve their aesthetic goal of simplicity. The Antenna™ Workspaces system that resulted is defined by delicate legs with cantilevered surfaces that create a Modernist composition of floating planes and crisp detailing.

Thin, 1-in. square tube steel legs support worksurfaces of wood, laminate or glass. Structural integrity was still a big issue and has been resolved with a diamond-shaped steel rail the runs between each pair of legs and is attached to the top by a cast-aluminum cradle. The rail can connect one worksurface to another in a variety of configurations, ranging from the more standard desk with return to the increasingly popular benching configuration involving long expanses of worksurface. It also allows the legs to be positioned anywhere perpendicular to the length of the table—a solution that offers "a smaller number of components but a large number of planning alternatives," says Pardo. Low fences containing power and data also can be used to support worksurfaces, shelves, storage cabinets, and other accessories. "Simplicity and flexibility are two main advantages," adds Udagawa.

The materials palette also was opened to a broad range of possibilities, since the work surface serves no structural purpose. Once again based on their expertise in user interface, the designers steered clear of high-tech materials, instead developing a palette of more natural and tactile ones. "People spend a lot of time in the office," says Udagawa. "We wanted to offer comfort—not with domestic materials, but with materials that make the environment softer and more comfortable." Colors, shapes, materials, and structure are all very simple and allow for a layering, articulation of space, and expression of personality.

Moeslinger refers to the look of Antenna Workspaces as a "here I am" aesthetic; it chooses honesty over pretense or fuss and conveys a lightness that "feels very much of this time," while also paying homage to the designs of Florence Knoll. "We both like Florence Knoll a lot," says Udagawa, who, like Knoll, attended Cranbrook Academy. "We tried to tap into the optimistic feeling of her time."  

Udagawa and Moeslinger reinterpreted the concept of highway signage to develop a thin, square, steel tube leg and support rail that ensure the structural integrity of the versatile Antenna™ Workspaces, in any variety of configurations.
Despite rumors to the contrary, the ever-rising popularity of the computer and the e-book has not sounded the death knell for public libraries. Indeed, the reverse is true. Although the Internet may make information ubiquitous, the more time people spend in isolation at their computers, the more they hunger for civic engagement. Libraries always have had a role in bringing communities together. Now, more than ever, they are serving multiple roles—as after-school youth centers, senior centers, job centers, and extensions of the town square. In many cases, libraries share locations with schools or community centers. As the pace of change in modern life accelerates, library design is changing too.

Inviting in Children
With school systems struggling with budget cuts, public libraries play a crucial role in education. It is important that libraries be inviting and engaging spaces for children, in order to engender a love of reading, learning, and exploration that will prepare kids for success in school and beyond. Modern libraries embody the playful nature of free-choice learning while providing expert guidance through the wild frontier of the Internet.

To attract younger patrons, many new libraries are introducing youth-friendly themes. The Cerritos Library in Cerritos, Calif., designed by Glendale, Calif.-based CWA AIA, Inc., has a "Save the Planet" theme. The children's library includes a 15,000-gallon saltwater aquarium, a full-size replica of a Tyrannosaurus Rex, and a Banyan tree. Sounds of the rainforest play in the background.

Libraries also are cultivating teens, creating separate areas that encourage socializing and collaboration. Trends in education are shifting toward teamwork, so providing spaces where students can work together on projects makes sense. Movable modular furniture and booth seating around circular tables replace fixed-seat individual workstations. Some libraries also offer video production studios, available to the entire community.

In this new Sacramento community center, the public library has a remote unit with an ATM-style book dispenser (above; photo by Jay Graham). Public libraries are no longer quiet zones; the Belmont Library in Belmont, Calif., invites children in with youth friendly environments, designed by Field Paoli (left; photo by David Wakely).
Although color is the byword for many companies' branding and corporate facilities, we still find the predominance of neutrals and muted tones throughout most office buildings. Colored accent walls, upholstery or furnishings usually carry the color mantle. Today's neutrals are not boring, nor are they simply grey, beige or white. Complex neutrals are more interesting and are infused with color in chameleon-like tones that cross from one color family to the next. Warm and cool neutrals mix well with the many varied wood-tones in furnishings.

In addition to incorporating child-friendly themes, many new library designs integrate technology for young users, as Field Paoli did in the children’s computer area at the Almaden Library and Community Center, in San Jose, Calif. (above; photo by David Wakely).

Involving teens’ input in the design of their spaces can go a long way toward giving them a place where they feel at home. The teen area at the Tustin Public Library, designed by San Francisco-based Field Paoli, incorporates computer workstations, small group study rooms, and young adult-oriented collections. Giving teens their own designated area helps screen the rest of the library from noise, but more importantly, it gives them a sense of ownership and comfort. In any case, libraries as a whole are no longer devoted to silence as they once used to be. At the new Salt Lake City library, staff wear buttons reading “No Shhh.” In most new designs, a few dedicated quiet zones provide room for concentrated work, while the rest of the library is open to conversation and, in many cases, food and beverages.

**Technology = Mobility**

Libraries already are offering free electronic copies of books for use in e-readers. Many libraries have implanted radio frequency identification chips in books and have installed factory-style materials sorting systems to speed check-out and check-in. The District of Columbia Public Library offers an iPhone app that replaces the traditional library catalog. But the impact of technology is most evident in patron spaces. The popularity of wireless networking has reduced the need to provide hard-wired Internet connections at tables throughout the library. Rather than offering fixed workstations with desktop computers, many libraries now allow patrons to check out laptops. Users can sit anywhere they find comfortable to use their own or library-provided gear.

With the current increased emphasis on sustainable design, there is a trend toward incorporating natural lighting in libraries to a greater extent than before, which makes controlling glare a challenge. Because the new generation of touch-screen devices such as the iPad are usually held with the screen parallel to the ceiling, high overhead lighting can be problematic. A combination of indirect daylight and individual task lighting tends to work better.

**Flexibility for the Future**

Because of the increasingly rapid pace of change in modern life, libraries need to build in flexibility to accommodate future changes. The best option is to create open areas that can be reconfigured as needs change. More libraries than ever are relying on easily movable furniture and fixtures—even shelving on wheels—allowing service points to move for specific events or in response to changing patterns of usage. Movable partitions incorporating extensive glass allow for the subdivision of space to suit different uses, while still making it easy for library staff to observe what’s going on. Library staff also are more mobile, wearing wireless headsets and roving through the library rather than sitting behind a reference desk.

Libraries will continue to evolve. A number of libraries already have. In Berkeley, Calif., the South Branch library offers a tool lending library, allowing people to check out anything from a screwdriver to a cement mixer. Given the tough economy, similar kinds of lending options may catch on. Library parking lots also would make ideal pods for car or bike sharing programs. The Public Library of Charlotte and Mecklenburg County in North Carolina has partnered with the arts community to develop a children’s creativity center called ImaginOn. The Contra Costa County Library in Northern California has placed ATM-style automatic book dispensers at BART stations. Libraries need to continue to rethink themselves, building on their long legacies as guides to bodies of knowledge and as focal points within the community that help bring people together.

TEK Architects has designed the Kupferberg Holocaust Resource Center at Queensborough Community College to celebrate the triumph of life

By Jennifer Busch
Photography by Brian Rose

November 9, 1938, the night that became known in history as Kristallnacht, or the Night of Broken Glass, is widely considered by historians to represent the official beginning of the Holocaust. In a coordinated attack by the Hitler Youth, the Gestapo, and the SS on Jewish people in Germany and Austria, 91 Jews were murdered, more than 25,000 were arrested and sent to concentration camps, 267 synagogues were destroyed, and thousands of homes and businesses were ransacked. Seven decades later, the remembrance of that night, the ensuing horrors of the Holocaust, the eventual triumph over the Nazis, and the important historical lessons left in its wake have been expressed in the architecture of the Harriet and Kenneth Kupferberg Holocaust Resource Center and Archives (KHRCA) in Queens, home to one of the largest U.S. populations of Holocaust survivors.

The KHRCA had existed for 20 years in cramped and uninspiring quarters in the basement of the library at Queensborough Community College (QCC), part of the City University of New York, when college president Dr. Eduardo Martí and KHRCA executive director Arthur Flug determined that it was time to raise the Center’s profile on the campus. Following a public design competition, they commissioned Manhattan-based TEK Architects to design its new home. “The Center was a jewel in the rough,” says Martí. “By putting it in the forefront of the college campus, we created a beacon for the community. It gave form to the function.” The new, 8,000-sq.-ft. Center allows the Holocaust program to experiment with space, according to Flug. “At the Kupferberg Holocaust Center we look at the Holocaust as more than an historical event,” he says. “We consider it the greatest hate crime ever committed. The building gives us access to an unlimited number of options to study the Holocaust.”
“It is a building of allegories that casts a shining light on a dark era in the history of the world. From the cracked glass to the dark passage to the temporary exhibits, TEK did a masterful job in creating a space that speaks to our mission. It is a building of hope.”
—Eduardo Martí
Despite the fact that a high concentration of Holocaust survivors live in the surrounding neighborhoods, and their lives are the subject of student-produced permanent exhibits within, the Center's unique mission—it is the only facility of its kind on a college campus in the State of New York—was equally inspired by the blended student population at QCC. "We have about 15,000 students. One-quarter of them are white, one-quarter of them are black, one-quarter of them are Hispanic, and one-quarter of them are Asian," explains Marti. "A lot of them have been subject to prejudice, and a lot bring prejudices with them. The Center uses the lessons of the Holocaust to illustrate the dangers of unbridled prejudice." The final exhibits, for example, focus on such historical events as the Armenian genocide, the Rwandan genocide, and other cataclysmic human exterminations that some members of the student body of 141 nationalities may be more familiar with, thus spreading the significance of the Holocaust to multiple cultures.

Given the weight of the subject matter, the architecture of the KHRCA easily could have taken on a somber tone, but this elegant glass box serving as a focal point at the campus entry by day and a beacon for the community at night is anything but. "How do you design something that is not a funerary monument?" says TEK principal Charles Thanhauser of his challenge. "We wanted to convey a serious tone but not a funerary tone."
It was predetermined by the client that the building would be a glass box, and Thanhauer says that given that parameter, his thoughts kept returning to the Kristallnacht. So ultimately, he developed a design that references this dark night in history. The contrast of angled glass panels with regular glass panels is meant to convey the image of shattered glass, while the sheltering black wall and roof reaching up and across the structure insinuates the growing doom. The entry procession, up a long staircase and into a narrow slot between the glass box and the outside wall, alludes to the trains that carried Jews to the concentration camps—and for six million, to their deaths.

Inside, the journey continues. Visitors are greeted by a light-filled glass hall with permanent exhibits produced by QCC students that tell the story of the Holocaust from the eyes of local survivors through video, still images, and text. A narrow passage leads from the entry hall into a temporary exhibit gallery deprived of natural light. As visitors proceed through this gallery, articulating walls expand and contract the width of the space, and the color gradually shifts from light to dark gray in a symbolic reference to the Jews’ journey into darkness. A library and archive, lecture hall, classrooms, offices, and an outdoor patio round out the program.

The permanent gallery space is filled with natural light in an emphatic celebration of the triumph of survival (right). Student-produced exhibits in video, still image, and text formats focus on personal accounts of the Holocaust as seen through the eyes of local survivors (above right). By contrast, the reception desk (above) is dark, and the long, narrow, temporary exhibit gallery (opposite left) transitions from light gray to dark, signifying the Jews’ descent into growing darkness. According to architect Charles Thanhauer, the light-filled Center by day and night (opposite right) is intended “to cast a relentless light on the Holocaust.”
At night, the glowing glass box lit entirely from within casts what Thanhauser calls "a relentless light on the Holocaust." (On a practical note, Martí points out that QCC also had to make sure that it did not cast a relentless light on the neighbors.) Indeed, a sign at the entrance to the temporary exhibit hall reads, "And when the last survivor is gone, who will tell of the Holocaust?" According to Martí, the Kupferberg Resource Center was created and endowed to live in perpetuity and is being well-used to educate students, faculty, and the community around the purpose for which it was built—to keep memories of the Holocaust alive, and make sure the college community and the surrounding community never forget its lessons.

"It is a building of allegories that casts a shining light on a dark era in the history of the world," he notes. "From the cracked glass to the dark passage to the temporary exhibits, TEK did a masterful job in creating a space that speaks to our mission. It is a building of hope."

lighting the way

Starkweather Bondy Architecture helps an Oakland charter school realize its full potential

By Danine Alati
Photography by Cesar Rubio (interiors); Ken Gutmaker (exteriors)

Set as a beacon in an economically depressed neighborhood in Oakland, Calif., the aptly named Lighthouse Community Charter School, designed by Starkweather Bondy Architecture, offers its 650 K–12 students, their parents, and the community a new schoolhouse in which they can take pride. The public charter school, founded in 2002 by Jenna Stauffer along with her husband and a group of "like-minded people," had outgrown its previous space and temporarily was located in a three-story office building with a dark, choppy layout. When a $15-million gift from a private foundation made the new school possible, Stauffer, director of strategic development for Lighthouse Community Charter School, and Starkweather Bondy partner-in-charge Phred Starkweather chose an industrial, tilt-up, structure on a 3.5 acre site just off the freeway near the Oakland airport. At first sight, the practically windowless concrete building with a wood-truss roof might not have appeared as a viable option. But the design team had a vision for maximizing two fully glazed interior courtyards to make them central elements to the design and converting parking lot space into playgrounds.

"The attraction of the location was the large, open site, served by public transportation with outdoor space that you don't usually find in an urban setting," explains Starkweather. Here, the school is set as a haven in the midst of a rough neighborhood. With a diverse student population and a high number of educationally disadvantaged and ESL students, Lighthouse committed to its mission to prepare students for college or careers by equipping them with the knowledge, skills, and principles to be self-motivated, lifelong learners. The school's five tenets are: high expectations, a rigorous curriculum, serving the whole child, family involvement, and professional learning community. Family involvement is crucial to Lighthouse's philosophy of learning, as is a connection to...
The appeal of the location for the new Lighthouse Community Charter School was the expansive 3.5 acre site (opposite), which offers outdoor space. Starkweather Bondy designed the new schoolhouse to bring nature inside. A courtyard set at the core of the lower and middle school building is used as an outdoor classroom (this photo).
the total community, and Starkweather Bondy's design promotes this sense of transparency and community-based learning.

"The school serves the students well. All grades have their own space," Stauffer explains. "Also it was important for us to have a space that welcomes the whole community. And we wanted to create a safe place. So many of our students are struggling that we don't ever want them to worry about whether or not they are safe here." Stauffer says that when students are in a place where they are safe, they can concentrate on their studies. Likewise, when teachers are in a stable school and not uprooting their classrooms every summer, they can focus more on their instruction. "Providing a permanent home for the Lighthouse Community School frees us up to focus on what really matters," she adds.

Since the building required extensive structural repairs, mechanical system upgrades, seismic work, and life safety, security, and accessibility improvements, little budget was left for the interiors. Starkweather and his team therefore had to be crafty with how they allocated dollars. Designed as a series of glass boxes with integrated courtyards that bring the outdoors in, the new school is actually two buildings—the north for the upper school, and the south for the lower—that have shared functions to create one cohesive unit. By necessity the upper school has its own entry, but the programming promotes cross-pollination between the two. For example, the library for the high schoolers
The light, bright palette of the Lighthouse school is immediately apparent at the reception area, which features the school's emblematic yellow and green colors (opposite bottom). While designing for cross-pollination between the upper and lower schools, Starkweather Bondy also worked to create unique identities for each. The upper school has a student center, or "think tank," used for group or independent studies (below), connected to a courtyard for social activities (opposite top). The layering of spaces is evident in the lower school, where one can look from a kindergarten classroom out through the courtyard to a third grade classroom and the Family Resource Center (left).

“We wanted to create a safe place. So many of our students are struggling that we don't ever want them to worry about whether or not they are safe here.”
—Jenna Stauffer
Integral to the school’s interior design scheme, the courtyards bring nature inside and afford students views outside from various indoor positions. The high school courtyard (left) is set adjacent to the multipurpose room, which serves the whole student population as both the cafeteria (left middle) and the gymnasium (bottom left).

is in the lower school, while the multipurpose room in the upper school serves as common ground. The high school side has a student space called a “Think Tank,” and a corresponding courtyard for social activities, while the lower school’s courtyard is positioned more as an outdoor classroom. “For these kids in East Oakland, this is more nature than some of them have ever seen,” Stauffer notes. The Family Resource Center centrally located in the lower school adjacent to a courtyard offers a visual connection to most areas of the school and welcomes the community. There is a visible layering of spaces so that one can look out from a classroom through a courtyard and into another classroom.

Overall, the interiors palette is pretty basic, according to Starkweather, with simple materials and colors emblematic of the school. Green and yellow were established before the designers came on board, but they looked for a fresh approach to executing these colors. Carpet is used to facilitate wayfinding, hallways are wider for easier circulation, and copious glazing maximizes daylighting.

While the limited design budget and breakneck time line of 14 months proved challenging, the project was rewarding for all parties involved. Starkweather had been doing pro bono work for Lighthouse for years prior to this project simply because he believes in its mission. “Pix and his team took our little vision and magnified it. It’s pretty amazing to be able to understand what a school community wants and make it better,” says Stauffer of Starkweather’s commitment.

And “better” also applies to academic results. Lighthouse Community Charter School’s state assessment test results have steadily increased over the past five years, but the greatest testament to the school is in its students. A pioneer senior reflects on her journey at Lighthouse in the school newsletter: “I heard about Lighthouse. The name itself really caught my attention, and...I knew right away that it would be different...I immediately felt a sense of community...I felt very welcome and safe. Because of Lighthouse, I have found joy in learning again.”

Clerestory windows (this photo) along the upper level of the south wall create a sense of transparency and allow daylight to enter the space. Reading areas (opposite) are located just inside, where daylight pouring through floor-to-ceiling glazing is controlled with fritted glass above and screens at table level. The young adult area is located at the far end of the reading area, away from the young children’s zone.
A new community library by Davis Brody Bond Aedas breaks the traditional mold and sets a 21st-century tone for a citywide library renovation program in Washington, D.C.

By Jean Nayar • Photography by Paul Rivera/archphoto

Just as the publishing industry is undergoing a metamorphosis—thanks to the Internet and the exploding forms of electronic media—libraries are changing, too, partly to accommodate the new media, but also to adapt to cultural shifts in the way information is absorbed and shared. Benning Library in Washington, D.C., designed by Davis Brody Bond Aedas, provides a blueprint for the new 21st-century public community library. It also promises to serve as a cornerstone and model for a series of library renovations and building projects scheduled to take place throughout the District over the next five years.

The first new library facility completed under an ambitious citywide library building program initiated by Ginnie Cooper, the chief librarian and executive director of D.C.'s public library system, the Benning Library is located on a sloped site along Benning Road in an underserved area of northeast Washington, D.C., near a commercial shopping area in the same location that the community's previous 50-year-old library had once stood.

The old library was an underused, outdated structure designed to accommodate traditional library functions and was disconnected from the community, both literally and figuratively, according to Peter Cook, principal of Davis Brody Bond Aedas's Washington, D.C., office.

"It faced Benning Road, which is a commuter thoroughfare without a lot of pedestrian traffic," he says. "When Max Bond and I visited the site before we began the design of the new library, we discovered that the parking area adjacent to the shopping mall actually was the lifeblood of the community, the place where people mixed and chatted, the place where there was excitement and energy." (Firm partner Max Bond was instrumental in shaping the design of the new library before he died in February 2009.)

With no entrance to the old library on the side of the building that faced the parking lot, there was no real connection between the library and the community's vital center. The architects realized that to be successful, the new library had to engage the community at its heart.

The new $12 million, two-story, 22,000-sq.-ft. library establishes that essential link to the community. It does so with what Cook refers to as "two front doors connected by a generous staircase." This axis, which stretches from one front door facing Benning Road through the building and down the staircase to the other front door facing the parking lot, is just one of the design features that engages the community. Other user-friendly building characteristics include expansive south-facing windows that let in lots of natural light and...
create a sense of transparency, north-facing clerestory windows with views to the park north of Benning Road, and a series of small and large public gathering and meeting spaces.

"To Ginnie Cooper’s credit, we were encouraged to push the envelope on what a public library could be," says Cook, noting that traditional libraries often were reminiscent of bank buildings—massive, small-windowed, foreboding structures set back from the street. “One of the primary limitations in old library buildings is electricity,” says Cooper, who has overseen the renovation and construction of numerous library buildings throughout the country. “With so many people bringing in laptops and using WiFi these days, there aren’t enough outlets in old buildings to plug them in and not enough electricity to power them. We developed a standards program that not only will accommodate print on paper, which is still a large part of what the buildings must house, but also will be flexible enough to support new technologies, be energy-efficient, and be places of pride for the communities going forward.”

Two-thirds of the Benning Library was dedicated to spaces that house traditional library functions, which were interpreted by the architects in a contemporary way. The entire top floor of the structure contains an information desk; adult, young adult, and children’s reading areas and book stacks; as well as tutoring rooms and self-service checkout areas. The other third of the building houses nontraditional library spaces, including two 10-person conference rooms, a 100-seat meeting room, and staff lounges.

In accordance with a District mandate requiring that all facilities constructed with public funding be built to meet LEED Silver standards, the new library also incorporates a conscientious mix of green building materials and techniques. Recycled materials are used throughout, and floor-to-ceiling glazing on the south façade permits the building to be illuminated with natural daylight that is fully controlled with sections of fritted glass and integrated shading. Artificial lighting is sensor-controlled to reduce energy consumption. Copper siding along the

A mural created by a community-based arts and education group known as Life Pieces to Masterpieces adds personality and energy along the eastern wall of the building where the children’s sections of the library are located (left). Red Eames chairs offer a place to sit and read at the start of the periodicals section of the library (above left).
"We were encouraged to push the envelope on what a public library could be."

—Peter Cook

upper level and glazing along the lower level of the west façade aids in managing hard-to-control westerly daylight. And an eco-friendly green roof links the building with the surrounding landscape and improves the quality and quantity of storm water run-off.

"A thousand new library cards have been issued since the library opened [in April], and the book borrowing rate in the first month was equal to three months of borrowing in the previous space," says Cooper. "We take great pleasure in knowing that these talented architects have applied their high standards of quality in designing a fine building for this community. It's a community that really needs a good library, and the people love it."

Yazdani Studio brings “extroverted” design to the University of California, San Diego, breathing new life into the student union with the entirely transformed, all-inclusive Price Center

By Holly Richmond
Photography by Timothy Hursley (model photography by Tom Bonner)
The four-story atrium (this photo) serves as the campus living room and complements the exterior courtyard. The ground floor is mostly used for dining, while the upper levels accommodate student organizations and the ballroom. A mural of clocks titled “Another” and inset terrazzo floor tiles are by artist and UCSD faculty alumnus Barbara Kruger. The south side of the Price Center features a grand staircase, much like the Spanish Steps (opposite), which provides an amphitheater-like atmosphere for relaxing and people watching.
“It had to be a building that engaged users in a way that was productive and thoughtful, and presented a design that was both notable and timeless. I believe the Price Center does this in full.”

—Boone Hellmann

“The atrium is all about movement,” says Yazdani, noting the space’s multiple planes and linear accents (left). “Not only are the students in constant motion, but the design informs movement as well.” The One Stop station (above) is essentially an all-purpose concierge for student activities. An open, airy lounge with flexible seating (opposite) is an ideal location for students to meet in small groups or study independently.
How often do teenagers and young adults get to make multimillion-dollar decisions? Surely not often, but that is exactly what happened at the University of California, San Diego (UCSD), with the $53 million expansion of the Price Center—the university’s popular, yet outgrown student union. Mehrdad Yazdani, principal of Yazdani Studio of Cannon Design based in Los Angeles, was in charge not only of the Price Center’s redesign, but also with listening to and incorporating the ideas of the project’s design committee consisting of two dozen students and numerous student organizations, as well as faculty, administrators, and the university’s own design team. “We all asked ourselves, ‘What is a student union in today’s world? How has its role changed over time? How do students interact? And how do they learn?’” recalls Yazdani. “It was a dynamic, interactive design process that resulted in an equally dynamic, interactive building.”

At 172,000 sq. ft., the Price Center East expansion was designed to accommodate UCSD’s 29,000-student population, with an estimated 16,000 students passing through the building each day. Situated at the heart of the campus—the university’s “living room”—the original Price Center (West) already was well-established as a hub for dining, socializing, and events. “However, it was a very ‘introverted’ building,” says Boone Hellmann, associate vice chancellor of facilities design and construction, and campus architect. “It featured a central courtyard that was bordered on three sides by the building’s program elements, but everything faced inward.”

When the university’s growth necessitated an expansion, the solution was to create an “extroverted,” highly permeable addition that offered many points of entry and exterior design features, like plazas and staircases, to offer a sense of connectivity to the surrounding campus. The Price Center East addition expanded the bookstore and other retail spaces, as well as food service and the available area for student organizations. “The building is located on a sloping site, the addition has two ground floors, as does Price Center West, which enhances the accessibility and usability of the building from all sides of campus. ‘People pass through this building to get to nearly all other areas of campus,’ Yazdani explains. ‘We looked at the traffic flow and used that information to inform the design, namely where meeting areas, study zones, and outside venues were placed.’”

Yazdani goes on to explain that by no means did his team nor the university’s student-lead design committee want to simply expand and repeat the original building’s design, but rather to complement it by becoming connected to—and contextual with—the entire campus as it grew. Consistent with the planning goals of the UCSD master plan and the University Center Design Guidelines, the addition’s architectural character and multiple points of entry aid the transformation of the surrounding University Center neighborhood into a “town center.” Yazdani explains, “The design was focused around the central courtyard, which served as a lively pedestrian-
oriented area where people would move to and from the 'downtown' area. Therefore, the addition needed to be urban in nature to respond to the future of the campus. With that requirement in mind, the addition is not a large mass, which is common on many academic campuses, but instead is broken up into a series of smaller volumes that overlap and respond to the urban edge of the campus. "Varying the scale offered variety and visual interest," Yazdani adds.

Hellmann concurs with Yazdani's perception of how the building is contextualized within the campus framework. "There is an interest in the architecture itself because there is so much variety, and this is true on the interior and exterior." From 24-hour study lounges to a dance studio, to numerous rooms for student organizations, and a vibrant, always-bustling four-story atrium, the building is in a perpetual state of multitasking. "If you are a student today, you research online while listening to your iPod, while texting a friend, while people-watching. This addition, the hub of campus activity, responds to every need," Yazdani says.

Yet another task the building and the students rose to meet was adhering to the university's sustainability initiative, equivalent to a LEED Silver rating. The HVAC system is tailored to the microclimate of the La Jolla Mesa and uses relief air for multiple purposes. Additionally, students enjoy 144 bicycle racks, frequent shuttle service accessing a variety of locations, electric recharging ports, and trees and landscaping that shade 30 percent of non-roof surfaces, reducing heat-island effects.
As the UCSD architect for 23 years, Hellmann appreciates the challenge—and how Yazdani Studio and the student design committee rose to meet that challenge of building an addition to the student union of this magnitude. "It had to be a building that engaged users in a way that was productive and thoughtful, and presented a design that was both notable and timeless. I believe the Price Center does this in full," says Hellmann. However, he is most proud of how the students utilize the building and their feelings about its design and construction. He adds, "The students have a space that they love to use, and they are keenly aware of the importance of their input. They tell me how ‘cool’ it is to see the outcome. I couldn’t agree more."

For a project source list, see page 108 or visit www.contractdesign.com.

The multipurpose auditorium (opposite, top left) features flexible seating and advanced A/V systems. A series of blue-painted study rooms on the ground floor adjacent to computer kiosks offer a spot to do research or check e-mail (opposite, bottom left). Large windows define the ends of volumes to connect the interior of the building to the exterior campus (opposite, top right). Numerous perforated aluminum stairways reinforce the building’s connectivity on the interior and exterior (above). A vibrant yellow corridor (below) helps students make an easy, yet dynamic transition between the original Price Center West and the new Price Center East.
The new commons building (opposite top and bottom) showcases light and air, blurring the line between indoors and out. Garage doors flip open on the commons (this photo) allowing students to spill out onto the grounds and take advantage of the excellent microclimate.

The Branson School's new buildings tread lightly on their rolling campus in Ross, Calif., thanks to a design by Turnbull Griffin Haesloop

By Amy Milshtein  •  Photography by David Wakely Photography
Pretty is as pretty does. But that is never enough. Charming as the campus of The Branson School in Ross, Calif., is, the independent high school needed improvement to keep up with the demands of modern education. Enter Turnbull Griffin Haesloop with a solution that's green, neighbor-friendly, and beautiful.

Founded in 1920, The Branson School used to be both a day and boarding school. Today it is an independent high school set on a 1.7-acre campus in the residential community of Ross, about 11 miles north of San Francisco. Even though no one lives on campus anymore, the site is filled with small houses that had been jiggered to accommodate classrooms and services for the school's 320 co-ed students.

The buildings and site are not short on charm, but they lacked functionality—an observation all too obvious to Mary Griffin, FAIA, a principal at Turnbull Griffin Haesloop, whose children attended the school. “Knitting the campus together was the real challenge,” she remembers. “They had this wonderful location with great buildings, but nothing really supported the quality education that the school was delivering.”

Andrew Pauley, the school’s director of finance and operations, agrees. “We had computer wires looped through basement windows,” he admits. “It was time to do the upgrade that the school needed and students deserved.”

The Branson School took the neighbors into account when renovating the campus. As an independent school, it remains important to keep activity facing inward and not overly tax local roads and resources.

Turnbull Griffin Haesloop took the first step by moving the commons dining area away from the front gate, instead situating it in the heart of the grounds. Connected to the main path of student travel, the commons now works as the nexus of the campus.

With a limit to how much square footage the school could build, the architect took advantage of the area's excellent microclimate by designing the commons as an indoor/outdoor space. Large
"The campus has been transformed from a beautiful place to a beautiful place that serves the students and staff. The site is now tailored to work for the school."

—Mary Griffin

The music building (above) supports a variety of performances. A new computer network runs through the entire campus including the new digital media lab (below). Views from various classrooms, including this art room (opposite top), showcase the school’s glorious grounds, which were improved during the project. The school attempted a LEED Platinum rating with such green features as photovoltaic panels (left). The commons area (opposite bottom) has been moved to the interior of the campus creating a central nexus and moving traffic away from the neighboring community.
garage doors flip up, allowing students to spill onto the courtyard at will. The building itself is a transparent wall of individual panels of glass separated by timbers all set under a sloping roof. The mirage-like effect fits the existing campus well while looking crisp, clean, and modern.

Along with the commons, Turnbull Griffin Haesloop constructed a fine arts building. Like the commons, it is outward facing, stepped around mature trees that have been cleaned up to reveal their beauty. In fact, the entire grounds were improved during the project, including water management, grounds work, and a new computer network infrastructure. "I have to commend the school for doing all the work at once instead of in phases," says Griffin. "It was a huge undertaking, but they weren't daunted."

The school also committed to building as sustainably as possible, attempting a LEED Platinum rating, which is difficult to achieve considering there is no public transportation to the site. Green strategies include: a living roof, radiant heating, natural ventilation, photovoltaic panels, and pervious paving. "Getting this project done on budget and in 15 months was a huge challenge," recalls Pauley. "The different teams pushed themselves as hard and far as they could."

Both client and architect are pleased with the result. "The campus has been transformed from a beautiful place to a beautiful place that serves the students and staff," says Griffin. "The site is now tailored to work for the school." Grounds are more comfortable for walking and playing, services like counseling are grouped in the commons area now instead of all over campus, different varieties of performances have taken place in the music room, and no one is tripping over computer wires.

"It has the same level of beauty but with a high level of functionality," concludes Griffin. And that earns an A.

students and the city

Taylor Place, an Arizona State University student housing complex, designed by SmithGroup, puts a sexy pulse back into Arizona’s urban heart

By Stacy Straczynski
Photography by Liam Frederick
When American actor Steve McQueen said, "I would rather wake up in the middle of nowhere than in any city on Earth," he obviously couldn't have fathomed the urban appeal of Taylor Place, a $120-million, 352,000-sq.-ft. housing complex for first- and second-year Arizona State University (ASU) students. At the heart of ASU's new Phoenix campus, the SmithGroup-designed facility is the realization of a three-pronged collaboration between the City of Phoenix, ASU, and Capstone Development Corp. to not only revitalize an underdeveloped section of the city's downtown but also to attract ASU students to actually want to live on campus.

The main driver behind the project was a joint desire to bring a college campus to downtown Phoenix: The city wanted a means of stimulus for the area, while ASU sought to extend the programs at its College of Nursing and Health Innovation and Walter Cronkite School of Journalism. By moving these schools out of the main Tempe campus, ASU students would be closer to internships and public programs.

ASU set up shop in several existing buildings, but the major missing piece was an attractive and comprehensive housing option for students. (At the time, the Phoenix students were living in an old Ramada, complete with cleaning service.) The two institutions enlisted Capstone Development Corp., a student housing, management, and construction firm, to purchase the land and manage all aspects of the financing and realization, including the hiring of local architecture and design firm SmithGroup. With three clients, each coming to the table with its own set of goals and parameters, SmithGroup's designers needed to create a set of residential high-rise towers for freshman and sophomore students that provided all the latest bells and whistles while remaining within the standard ASU housing portfolio; provide sections of the buildings that would be retail-oriented and offer public access; and provide a proper balance of privacy and safety for students.

The solution was an aesthetic and functional mixed-use structure. Two 13-story towers set the stage for Taylor Place. Tower One (completed in August 2008) features a one or two student-per-room option, while Tower Two (August 2009) features a two-per-suite format. A unique aspect within the double and single room layout is that each includes its own HVAC unit with thermostat and bathroom, offering a prime incentive for residents.

Selected "city view" rooms throughout the towers feature floor-to-ceiling glass windows, which offer another amenity to students and serve to enhance and differentiate the exterior composition, covered in an aluminum composite of varying shades. "It was an architectural decision that lent itself to the program by offering students variety. And so I think those two worked hand in hand," says SmithGroup design principal Mark Kranz, AIA, LEED AP.

Taylor Place also caters to "consumer demand" by providing an assortment of social spaces for the students to study, eat, and interact, many of which are located outdoors to take advantage of the mild climate.
"Students these days want their own identity...but also a place to come together," explains Kranz. "When you have [private rooms], you have to pump up the other spaces because you don’t want students to become isolated. You want to give them the ability to feel a part of a larger community. It’s an interesting balance and one of the experiments on this project that has been hugely successful."

The entire first floor conjoins the towers and is allocated for 11,000-sq.-ft. of retail space. An outdoor urban shade garden at the corner of First and Taylor Streets provides an area where the entire community can mingle during normal business hours. "What I like best is the way the building integrates public and private space," says Chad Izmirlan, senior vice president of Capstone Development Corp. "We get a lot of people from the public having breakfast or lunch at Taylor Place—police officers, postal workers, surrounding business employees, etc." The space also houses a 10,000-sq.-ft. main dining hall and swanky lounge.

This theme of "shared" community also is carried through the student-only areas. Open-air bridges on each floor connect the towers, encouraging resident interaction. Each odd-numbered floor bridge contains a study pod, furnished with comfortable white sofas. These are visible from the street via their bright, rusted orange color and provide the city below a glimpse into student life.

Sky Lounges, located on every other floor and joined by an interconnecting stairway, also serve to bring students together, while floor common areas provide access to communal TVs, vending machines, and laundry facilities.

But perhaps the most appealing feature of Taylor Place is the designers' choice to infuse technology into the project. The entire building is outfitted...
Visible from the street, the bright orange-colored bridges (left) highlight and adjoin the towers. Each odd-numbered bridge houses an open-air student study pod (below) with outdoor lounge furniture to encourage students to mingle. The pods blur the lines between public and private, giving passersby a chance to view Taylor Place’s bustling student life inside.

“It’s what students expect these days. We’re catering to students who were born in the ’90s...They communicate differently than our generation. They have text messages, Web portals, digital displays, and every student has a preferred way of communicating.”

—Chad Izmirian

for Wi-Fi access, and large digital monitors throughout the building notify students of important announcements. Even the laundry room is wired to notify students via text message or Web notification when machines become available.

“It’s what students expect these days,” says Izmirian. “We’re catering to students who were born in the ’90s...They communicate differently than our generation. They have text messages, Web portals, digital displays, and every student has a preferred way of communicating.”

“This is not your grandfather’s dormitory. The typology of student housing has evolved rapidly in the last 20 years,” Kranz adds. “When you integrate technology, position and consolidate interaction spaces, and then use them in a way that can connect back to the urban environment, as well, that’s where the ability for innovation begins.”

As the only true urban student housing facility in Arizona to date, according to Kranz, the project did well to spark some life back into a once lackluster metro area. The city is now “bustling with students in a way that has never been more visible, and Taylor Place is a big part of that,” he says. “The spaces are fantastic and I think a lot of us are jealous that dorms didn’t look like this when we were in college.”

no such thing as business as usual

By Jennifer Busch

In January, I had the pleasure of serving as moderator for the 13th annual IIDA Industry Roundtable. During the two-day event at the IIDA headquarters in Chicago, the discussion among the IIDA board of directors, members of the IIDA college of fellows, and representatives of major manufacturers focused on the changing business landscape between manufacturers and design professionals, and emphasized the importance of knowledge exchange between these two groups. In particular, economic conditions, social media, and client dynamics were identified as key trends driving change in the relationship between designers and suppliers of commercial furnishings and finishes, resulting in new business models that are anything but “business as usual.”

Among the key questions posed in the session:

• How has product specification changed?
• How has the virtual world changed business practices?

In some cases, the discussion offered answers; in others, it raised questions. The recently released findings of the roundtable, compiled by Jeanne Fisher, IIDA senior director, communications and marketing, are summarized below.

Allen Parker, Industry IIDA, Kimball Office Furniture, kicked off the meeting with some observations about past recessions giving rise to innovative and enduring organizations that have had the ability to capitalize on economic change, thus setting the tone that times rife with hardship are also rife with opportunity.

Compressed schedules and reduced talent pools at design firms are requiring principals to reevaluate how they deliver design services, while clients are reevaluating internal processes, which requires interior designers to consider new ways to create space. Moreover, design firms of all types are rethinking their approach to marketing in order to find work. Firms that can offer innovation, promote the value of real estate, and communicate the link between real estate assets and interiors will be well-positioned to take advantage of the economic recovery.

Forum attendees see evidence that as clients better understand their own workforce and new work processes, they also are understanding that design can be an innovation tool that can impact their business models, and importantly, how design firms can drive this process. Design matters more than ever in a cost-driven economy. The challenge for the interior design community to communicate that function is at the core of good, innovative design, and aesthetics follow.

The design community, like most business sectors, has experienced widespread workforce reductions, resulting in changing roles for those remaining. Forum attendees noted that many design firms have made difficult decisions to let go of principals and higher-salaried designers, in favor of keeping workers who bring more value, including those with significant project management experience and those well versed in technology. Senior designers and even principals have been required to dive into the design process more; in many cases, management level employees are managing design processes more than they are managing people. And business development has become the new responsibility of a growing percentage of staff.

The manufacturers in attendance gained insight into what is driving product specification today. As design firms with tighter time constraints and fewer staff are deluged with product information, manufacturers must be careful to manage sales and marketing relationships more carefully. This is crucial, as designers acknowledge that relationships with manufacturers’ sales representatives and dealers often are more important than the products themselves.

Designers look to manufacturers—particularly those on the front line—to know their products inside and out; understand the business of the firms they call on and the market sectors these firms serve; help manage designers’ time by offering information and solutions; help educate young designers and resource librarians around the vast array of available products; collaborate on custom product solutions; and offer outstanding customer service. Designers appreciate when manufacturers approach their clients directly, thereby eroding the designer’s role in the specification process.

And everything, from design firms’ best business and design practices to the way manufacturers market and sample their products and manage customer relationships is subject to ongoing evolution as a result of virtuality. E-mail campaigns, blogs, Web sites, social media all are being employed by manufacturers in their quest to market their products to designers. And though design firms, and particularly younger staffs, increasingly are resorting to online resources as their first platform for product information, the industry by and large remains committed to the personal relationship as the primary sales and marketing tool.

For the complete report, “No Such Thing as Business as Usual,” visit contractdesign.com.
"So many new discoveries are allowing us to push beyond what we imagined possible whether it is designing a piece of medical equipment or an environment. It is exciting and means design will never be stayed and we will never have learned everything about design as technology is advancing daily."

Lauren Rottet, IIDA
member since 1994
Independent schools are under intense pressure to provide 21st century academic facilities, while managing tight operational budgets that have been further diminished by the shifting economic landscape. To date, the trend for independent schools is to utilize a negotiated bid versus competitive bid process where the institution, architect, and contractor team up early in the design process to deliver the proposed project. The advantages of negotiated bid are many, including identification of best design and construction practices, enhanced understanding of the project scope and budget by the project team, and coordination of construction operational issues. Within the negotiated bid process, independent schools increasingly are being challenged to look at a range of delivery methods available to best serve their projects.

There are three methods commonly employed, each with distinct advantages: 1) design-bid-build, 2) design-assist, and 3) design-build. Although each of these delivery models can conceivably be used on any project, choosing the most appropriate model for your specific project can save time and money, and give the project team the best opportunity to meet project goals and objectives.

Factors when choosing the delivery model should include:

- Complexity of the building and site program
- Intricacy of the design
- Budget
- Schedule
- School infrastructure and operational concerns and conditions
The following case studies illustrate why a particular delivery approach was selected for a project and the pros and cons for each of the three methods.

**Design-Bid-Build:**
The majority of independent school projects are constructed using this traditional approach, which entails an architect creating a complete set of construction documents and the contractor bidding and building the structure as approved by the client and regulatory agencies. Windrush School, an independent K-8 school in El Cerrito, Calif., chose this approach to attain LEED® Platinum rating for its middle school/library addition. Sustainability was the strongest driver of this project; therefore, the complexity of the building design requirements warranted the inclusion of specialized structural and MEP consultants to achieve the required level of sustainable design expertise. This approach generally is preferable for building projects with complex building systems and specialized programs. The other delivery models may not provide access to the skill set or design capability required for multifaceted projects, and the project could fall short of meeting project goals and objectives.

**Design-Assist:**
This approach requires the architect and his/her consultants, the contractor and subcontractors, to work together to evaluate building system options to determine which are the most appropriate for the given project. The architect and his consultants ultimately are responsible for the building documentation, but the project team and the client receive the benefit of the collective expertise of the entire group to flush out design and constructability issues. The contractor's familiarity with the design intent, prior to bidding, also can reduce potential change orders during construction. Junipero Serra High School, located in San Mateo, Calif., is utilizing this approach to implement the school's master plan, which required an update to the complex and dated campus infrastructure. The project team explored the various delivery approaches available and landed on the design-assist method as the most appropriate, based on the premise that the contractor's and subcontractor's input regarding conditions of existing systems, constructability of proposed systems, and costs were essential. This additional input gave the school a sense of comfort, knowing that the preferred option had been validated by the design team, contractor, and client, all from their own unique perspectives. The downside of this approach, however, is that the design team and the design process can get bogged down by multiple parties weighing in on key decisions and by potential conflict over the recommended approach to the design.

**Design-Build:** There are many variations to this approach, but in each case, a portion of the design is completed by the contractor and his subcontractors with the goal to streamline the design and construction process. De La Salle High School in Concord, Calif., recently completed a pool renovation and new pool building over summer break. To complete the project during this short window of time, the pool and the majority of the building design documentation was completed by the design-build contractor and pool subcontractor, rather than the architect. The building design also took advantage of a pre-engineered metal building system, which provided cost savings as well as reduced fabrication and installation time. The design-build approach requires the contractor to have access to design-build subcontractors, which limits the number of contractors from which to choose and can often restrict the design to conventional building systems.

As we've illustrated, one design approach does not fit the needs of all academic institutions. The school leadership should weigh the best options against the project requirements, including the complexity and specialization of the design requirements, budget, and schedule.

While many schools traditionally utilize the design-bid-build approach, the design-assist and design-build are alternative methods that may be more appropriate. They can reduce costs and shorten construction time lines; on the other hand, they may limit the design options and innovation. School administrators can realize distinct benefits and weigh potential limitations for their projects by teaming with a proven architect and contractor to determine the best project delivery process.
Contract asks three designers to name and explain their favorite products from Salone Internazionale del Mobile 2010

1. Pudelskern
Mrs. Robinson
www.pudelskern.at  Reader Service No. 250
Designed by the Austrian design group Pudelskern, the Mrs. Robinson chest of drawers is wonderful. It is a simple yet beautiful and pure design.

2. Piet Hein Eek at Rossana Orlandi
Chandelier
www.pietheineek.nl  Reader Service No. 251
The wonderful Dutch designer Piet Hein Eek created the most unique chandelier using different old and recycled glass lamps and unifying them into a very attractive small or extra large light unit. Just a beautiful chandelier for a minimalist lobby.

3. GAN by Gandia Blasco
Mangas
www.gan-rugs.com  Reader Service No. 252
I was simply mesmerized by the beautiful concept of the design and the process of making these unique area rugs, designed by Patricia Urquiola and named Mangas (which is the Spanish word for sleeves, as in a sweater). The large scale of the weaving, the textures, and the colors make me feel that I just want to keep looking at it. Very clever!

4. Neutra
Vitality sink/bowl
www.neutradesign.it  Reader Service No. 253
Neutra by Arnaboldi Angelo makes sinks, tubs, and bathroom accessories carved from rare and precious woods. What a unique combination! My favorite item is this gorgeous sink/bowl made of wood.

5. Magis Design
Sparkling chair
www.magisdesign.com  Reader Service No. 254
A super sleek company, Magis Design has a very well-known group of designers, and it was difficult to select only one product. But I did select Marcel Wanders' Sparkling Chair as my favorite. It's really special, unique, and fun.

6. Lapalma
AP stool
www.lapalma.it  Reader Service No. 255
My absolutely favorite product of the show is the wooden stool designed by Shin Azumi. It is stackable and very lightweight. I nicknamed it the "Fortune Cookie Stool." It comes in natural or black.

7. Vitra
Flower bench
www.vitra.com  Reader Service No. 256
This Vitra bench is not only a beautiful, sensual shape that is familiar yet unexpected—particularly in a corporate or institutional environment—but it also enables people to sit facing each other to have a dialog in an informal setting. So it is highly functional too.

8. Molteni & C
Arc table
www.molteni.it  Reader Service No. 257
The Arc table by Foster + Partners comes only in a glass top—round or oval. The material for the funky leg design is of lightweight concrete with fiber in the mix. It's a very sexy, one-of-a-kind, special table.

9. Kartell
Bloom pendant
www.kartell.com  Reader Service No. 258
The Bloom pendant fixture by Kartell comes in white, off-white, and black. The black one is extremely beautiful.
2. Kimberly Sacramone, IIDA, LEED AP Principal, Director of Interior Architecture HLW International New York

10. Molo Design Softwall product
www.molodesign.com Reader Service No. 259
It's a unique and flexible organic building system with endless possibilities.

11. Extremis Sticks
www.extremis.be Reader Service No. 260
The Sticks product is an interesting space divider for the open work environment and other unique round lounge furniture groupings and benches.

12. Officinanove M box storage units
www.officinanove.it Reader Service No. 261
These beautifully crafted metal modular storage units come in great colors. Officinanova offers many other interesting metal light fixtures, storage units, benches, and lighting, as well.

13. Borella Design YUU wall system
www.borelladesign.com Reader Service No. 262
This beautifully crafted and detailed wall screening system allows you to create semi-enclosures with a variety of accessories and options, including metal tables with curved corners.

14. Molteni & C Arc Table
www.molteni.it Reader Service No. 257
This beautiful sculptural concrete table base with glass top is perfect for those situations where data and electric are not required.

where Location: Bayside, Queens, NY. Total floor area: 10,500 sq. ft. No. of floors: 1 level (plus lower level machine room). Average floor size: 8,500 sq. ft. Cost/sq. ft.: $500.

Project: Lighthouse Community Charter School (p. 78)

Project: Benning Library (p. 84)

GreenShield is about Choices.

We looked to nature’s solution for cleaner and greener fabrics. Through patented nanoparticle technology GreenShield dramatically reduces the amount of harmful chemicals used for superior water and stain repellency on fabrics.

Now you can make the right Choice.

GreenShield®
The first and only textile finish inspired by nature.

What do you consider to be your greatest professional achievement? Contributing to improving the daily life of millions of people from every part of society. The New York City subway projects are good examples. We hope Antenna Workspaces [the new system introduced by Knoll this NeoCon®] will also serve that goal well.

What is the most fulfilling part of your job? First, when we find an elegant solution for a complex problem. Then, when the solution, typically after long periods of development, finally materializes and makes an entry into the real world, where it becomes part of somebody else’s life. Seeing the production line for our design is a humbling experience.

What do you think are the biggest challenges facing product designers today? We need to change people’s behavior through design for a healthier society—not only physically healthier, but also environmentally and socially. Lots of pressing issues are man-made and derived from shortsighted poor judgment.

What is the best thing you’ve learned in the past 10 years? Clients are critical in the success of a project. If a first encounter with a possible client doesn’t feel good, it may be better not to pursue the relationship. It will save lots of agony.

What inspired your career choices? MU: Since my childhood, I was fascinated by the relation amongst form, material, and function. Originally, it was derived from WW2 weapons, then shifted to more civilized things like buildings and electronics.

SM: A dissatisfaction with the artifacts surrounding me in my immediate environment while growing up, most notably the furniture and the consumer electronics.

If you could have selected another career, what might you have been? MU: Could try being an architect, I am curious.

SM: Design was always my first choice, or else a musician—if only I could play an instrument very well.

What advice would you give to design students or those just starting out in the field? Be open-minded and flexible; it may take you in a direction you didn’t plan, but one that turns out to be very exciting.

How do you foresee the future of industrial design changing? Future design should be utilized for the betterment of society through changing peoples’ behavior. Here it is crucial to think about interaction between artifacts and people, as well as interaction amongst people mediated by artifacts.

What would you like to leave as your legacy? Something that keeps inspiring people will be a great thing to leave behind.
