Celebrating a Humane Collection for the Healthy Workplace

As it is summer, when many take some time off post-NeoCon, this is a good moment to both look back at that annual confab in Chicago and to reflect on where we are as a design profession and industry. This issue will help you do just that.

We offer a bit of a microcosm of the best of all scales, from the products that won Best of NeoCon (page 45) to four unique featured interiors that are each on a different continent (page 103) to the winning projects of our Inspirations Awards sponsored by Tandus Centiva (page 134). And Leigh Stringer, a workplace expert at the firm EYP in Washington, D.C., authored an important article exclusively for Contract on the design of healthy workplaces (page 130) based on her recently released book on the subject.

Stringer cites evidence demonstrating that business success is intrinsically tied to employee health and well-being, and she offers examples of how the built environment can play a more meaningful role in that equation. She suggests that the most forward-thinking companies that incorporate health and well-being considerations do so by regularizing flexibility and choice into the work environment. That point is of utmost importance for today’s designers of interiors as well as the designers and manufacturers of furnishings.

With that in mind, I was very pleased with the Best of NeoCon jury's selection of the Zones collection for Teknion as the 2016 Best of Competition winner. Designed by Tom Lloyd and Luke Pearson of London-based PearsonLloyd in collaboration with Teknion, Zones absolutely stood out from the NeoCon introductions this year. Multiple companies at NeoCon introduced furnishings for a more casual, open office influenced by hospitality. But PearsonLloyd’s design for Zones is bold, ambitious, and, in some ways, unexpected. Sophisticated in overall conception, Zones can change perceptions about the approach to furnishing today’s workplace.

As a collection that directly addresses the needs for flexibility and choice that Stringer writes about, Zones is inspired in concept and craft. Read our interview with Pearson and Lloyd (page 48) as they explain their design process and the broader concepts that went into creating Zones. Perhaps the most important starting point for Pearson and Lloyd was their premise that, as they say in our interview, “there is no single industry view of what is the best workplace.” Accepting that premise allowed PearsonLloyd the creative freedom to conceive Zones.

Teknion and PearsonLloyd then boldly developed a line of furniture that is intended for a designer and their client to flexibly arrange, with a wide variety of seating options, table configurations and heights, enclosures, and spaces for more private work or discussion. Yes, workplace enclosures are needed, but the form and look is no longer a corporate cubicle or awkward pod. They also created Zones with the understanding that, while privacy is a concern, furniture is just one element in a workplace interior solution for solitude and acoustical control.

Teknion and PearsonLloyd are also to be commended for the collection’s beautiful craft, with beechwood and straightforward materials and joinery. They kept the design language simple and refined, without needless bells and whistles. In the words of Pearson and Lloyd, the design is based upon “a limited number of themes—including materiality, color, form, and construction. The resulting visual cohesion allows different parts of the collection to be curated together in a seamless manner, without having to create a single visual aesthetic.” The collection is truly humane in its aesthetic, and will contribute to any healthy workplace.

Enter the Interiors Awards
This is also the time of year to remind you to enter your best recent projects in the 38th annual Interiors Awards, presented by Contract. The Interiors Awards honor outstanding commercial interiors worldwide, and the entry deadline is September 15. Entries are accepted in 14 professional categories as well as a student category. Winners will be published in our January/February issue, and honored in front of more than 600 people at the Interiors Awards Breakfast. Read about the five Interiors Awards jurors on page 14, and visit contractdesign.com/interiorsawards to enter. Good luck!

Sincerely,

John Czarnecki, Assoc. AIA, Hon. IIDA

NeoCon® Showroom and Booth Design Winners Announced

KI, 3form, Universal Fibers, and Benjamin Moore honored in the 21st annual IIDA/Contract competition

The International Interior Design Association (IIDA) and Contract announced the winners of the 21st annual Showroom and Booth Design Competition at NeoCon in June.

"This annual competition challenges designers and manufacturers to create a unique experience that educates and entertains in limited space," says Cheryl S. Durst, Hon. FIIDA, IIDA's executive vice president and CEO. "The winning showrooms and booths at this year's competition were not only visually stunning, but they created a lasting impression on attendees—illustrating a true celebration of design."

The winners were chosen based on originality in design, visual appeal, and effective use of materials, as well as remarkable implementation of color, texture, lighting, and graphics. KI won in the Showrooms Greater Than or Equal to 4,000 Square Feet category for its space designed by Sheila LaCount and Chandler Pierce. 3form won in the Showrooms Less Than 4,000 Square Feet category. 3form designed its space by Standard Issue Design. Universal Fibers, designed by Christine Hart, Anne Gibson, and Kimberly Lindstrom of Gensler Chicago, won in the Booths Greater Than or Equal to 400 Square Feet category. Benjamin Moore's booth by LionHeart won in the Booths Less Than 400 Square Feet category.

The jurors were Rebecca Dorris Steiger, IIDA, of ZGF; Peggy Hoffmann, IIDA, of FGM Architects; Valerie Jardon, IIDA, of Box Studios; Jill Lee, IIDA, of Buffalo Design; Wendi Reynolds-Donohue, IIDA, of Nashville Office Interiors; and Amy Todd, IIDA, of Bostwick Design Partnership. —WILL SPEROS

2016 DIFFA/Chicago Illumination Gala
Nearly $400,000 raised for Chicago-area service agencies assisting those with HIV and AIDS

More than 500 design industry professionals attended the 28th annual Design Industries Foundation Fighting AIDS (DIFFA)/Chicago Illumination Gala on June 11. The event raised nearly $400,000 through a live auction and raffle for Chicago-area service agencies dedicated to assisting those living with HIV and AIDS.

Contract magazine was the event’s national media sponsor, and Contract Publisher John Rouse, Hon. IIAD, was honored with the DIFFA/Chicago Unsung Hero Award for his commitment to the chapter and its fundraising efforts.

A highlight of the evening was the passionate and emotional appeal by Dr. Rob Garofalo, who is affiliated with Northwestern University’s Feinberg School of Medicine and Ann & Robert H. Lurie Children’s Hospital of Chicago. Garofalo received a standing ovation after sharing his own experiences both treating patients and living with HIV himself.

The gala co-chairs were Mary Jo Fasan of Jo Chicago, Jeremy T. Davis of Steelcase, and Brigg Klein of Neiman Marcus. Event sponsors included Herman Miller as the legacy benefactor, The Design Center at the Merchandise Mart as sustaining benefactor, and Steelcase as presenting sponsor. Modern Luxury/Interiors Chicago was the gala's local media sponsor. Host sponsors included Shaw Contract Group, Arlen Music Productions, and Event Creative. The gala cocktail sponsor was Mesirow Financial, and Wystar Design served as the brand design sponsor. — JOHN CZARNECKI
Not Afraid of Denim

Jeans are no match for Allante Touch, a cleanable vinyl with a soft, supple hand that resists denim dye transfer better than any product on the market. Stands up to traffic, stains, mildew and sun.

Tod Williams and Billie Tsien to Design Obama Presidential Center

TWBTA partners with Interactive Design Architects, with building location and concept forthcoming

The Obama Foundation announced on June 30 that the husband-and-wife team of Tod Williams and Billie Tsien has been selected by President Barack Obama and First Lady Michelle Obama to design the Obama Presidential Center in Chicago, which will include the presidential library and archives as well as a museum. Williams and Tsien lead the New York-based practice Tod Williams Billie Tsien Architects | Partners (TWBTA). Chicago-based firm Interactive Design Architects (IDEA) is partnering with TWBTA on the project.

This selection is a milestone with women leading the design team: Billie Tsien will be the first female design principal of a U.S. presidential library. Also, the president of the firm IDEA is Dina Griffin, an African-American woman who is a native of Chicago and a member of Contract magazine's editorial advisory board.

While the design team has been announced, an exact location for the Obama Presidential Center, which will be the first presidential library in Chicago, was yet to be determined at press time. Two locations are being considered in Washington Park and Jackson Park. The announcement of the location will likely be made soon, with a conceptual design to follow. Construction will begin months after President Obama leaves office.

In 2015, 140 architects from 25 countries submitted qualifications for the Obama Presidential Center. Seven firms were shortlisted in late 2015. The other shortlisted firms were Adjaye Associates, Diller Scofidio + Renfro, Renzo Piano Building Workshop, John Ronan Architects, SHoP Architects, and Snohetta. John Ronan was the only Chicago-based architect on the shortlist.

In 2014, President Obama awarded both Williams and Tsien the National Medal of Arts, the U.S. government's highest award given to artists and art patrons. Major cultural works by Williams and Tsien include the Barnes Foundation art museum in Philadelphia, the University of Chicago Logan Center for the Arts, and the American Folk Art Museum in New York. Just 13 years after it opened in 2001, the American Folk Art Museum was razed to make room for an addition to the Museum of Modern Art in New York, and the demolition was the subject of intense scrutiny in the city's architecture and design community. TWBTA, recipient of the 2013 AIA Architecture Firm Award, won a 2003 AIA National Honor Award for the American Folk Art Museum.

The architects of the most recent U.S. presidential libraries were Robert A.M. Stern (George W. Bush); Polshek Partnership Architects, now known as Ennead (Bill Clinton); HOK (George H.W. Bush); KlingStubbins (Ronald Reagan); and Jova/Daniels/Busby (Jimmy Carter). —JOHN CZARNECKI

The jurors for the 38th Annual Interiors Awards have been announced by Contract, and the deadline to enter is September 15, 2016. Entries can be made online at contractdesign.com/interiorsawards.

The 2017 jurors are (above, from left) Sara Agrest, AIA, IIDA, director of interiors at Dattner Architects in New York; Todd Bracher, principal of Todd Bracher Studio in New York; Sheyla Conforte, ASID, IIDA, principal and director of interiors at Solomon Cordwell Buenz (SCB) in Chicago; Jeff Hollander, AIA, IIDA, president of Hollander Design Group in San Diego; and Carrie Renegar, IIDA, director of interiors at BB+M Architecture in Charlotte, North Carolina.

Agrest, who joined Dattner Architects in 2013, has a diverse background in designing architectural interiors for healthcare, workplace, and education environments.

Bracher designs products and furnishings for numerous companies, and also oversees design strategy for a variety of businesses. He previously led Tom Dixon’s design studio and served as creative director of the Scandinavian luxury brand Georg Jensen.

Since 2007, Conforte has led the interior design practice at SCB, where she sets the design strategy for corporate and institutional projects and oversees all aspects of the interiors studio.

Hollander has led his own practice since 2009 with his partner, Viveca Bissonnette, after many years with Gensler. Hollander Design Group specializes in strategic planning, architecture, interior design, graphic design, and product design.

Renegar oversees the interiors portfolio at BB+M Architecture. She has years of previous experience in New York as a designer of interiors for workplace, fashion, retail, and hospitality projects.

The Interiors Awards celebrate great design in projects across 14 professional categories of commercial interior architecture and design, as well as a student category. Winners of the 38th Annual Interiors Awards will be published in the January/February 2017 issue of Contract and honored at the Interiors Awards Breakfast in New York on January 27, 2017. —STAFF

Why You Should Never Lower Fees

by Evelyn M. Lee, AIA

While attending the American Institute of Architects (AIA) National Convention in Philadelphia in May, I had an interesting conversation with several peers regarding the pricing of our professional services.

As a strategist for the firm MKThink, I noted that our hourly rate for design strategy is much higher than a firm would charge for standard interior and architectural services. And while I am a licensed architect, I recounted that one of the reasons that the AIA appellation does not follow my name on my business card is because I prefer that clients view me as a consultant first and do not use the fact that I am a licensed architect to question the rate that they should be compensating me.

For standard professional services, though, what can interior design and architecture professionals do to ensure that we are compensated for the full value that we bring to the table? The simplest response: Never lower fees.

I often hear the complaint that many clients do not understand the monetary value of the services that designers offer. But, in order for clients to understand, we all need to consistently charge the full cost of our services. Sure, that may be easier during robust economic times, but it should also hold true during the more difficult years, too. And there will inevitably be tough times ahead.

Here are three specific reasons why design professionals should never lower fees:

Someone will always do it cheaper

If you lower your fees by five percent, someone else will always be willing to lower their fees by that much or more. Part of selling yourself and your firm to potential clients requires quantifying the accurate cost for your quality work and services, even when that may come at a premium compared to the competing firms.

Besides, do you really want a client that is hunting for the best bargain? What kind of work would ultimately come out of such a partnership? If you are in a position in which you constantly have to cut costs to compete, consider refocusing your practice on the types of clients that you can be of the greatest service to, and, more specifically, those who understand the value of your work.

You forfeit future bargaining power

Once you give a client a discount, they will always expect it, especially if you prove you are able to deliver a full set of services at the discounted rate. Raising your price after the fact inadvertently forces the client to reevaluate the relationship and consider whether or not they should stay with you or switch to a competitor.

For most firms, especially during economically challenging times, agreeing to reduced compensation from one client usually means doing the same for all new clients. That potentially results in an entire portfolio of work that will never pay you for your full value.

Your profit margin goes down

Firms determine their rates for a reason. But no matter how the equation comes together, the best practice is to base it on the right numbers that will make a business profitable and sustainable. Cutting fees ultimately requires the firm to work harder to make up for lost revenue. It means you need more clients or projects than you would otherwise likely need to carry. When that happens, it is not always possible to ensure the best work is consistently delivered to all clients.

During my conversation at the AIA Convention, one firm principal admitted to calling competitors to ask them why they are lowering fees. He said that he takes the time to educate them in basic economics, hoping they understand that lower fees collectively devalue the entire market. Surprisingly, some of his competitors actually listened to his advice and held strong, even through the recession. Today they are all the better for it.

You may think that now—when so many firms are trying to keep up with all of the work that they currently have—is a curious time to be addressing this topic. But, why not? Rather than wondering why design services continue to be devalued, now is actually a good time to revalue the rates that you have been charging. Ask yourself and your management team: Is the firm being compensated adequately?

When the next down market occurs, get creative about cutting your overhead—but not necessarily your staff. Evaluating your fee structure now will enable the firm to not have to reduce its rates in the future.
Every design is a journey.

A+I, with Valerio DeWalt Train Associates, designs new public spaces appealing to the building's knowledge economy tenants
By Edward Keegan, AIA
Photography by Bob Grosse

Rejuvenating theMART’s public realm

Beginning with NeoCon® in June, visitors to the Merchandise Mart in Chicago have been pleasantly surprised by new public spaces that address the building’s evolving tenant base.

Since its 1930 debut as the largest building in the world—originally a wholesale center for Marshall Field—visitors have arrived in a tidy, symmetrical three-bay-by-five-bay double-height Art Deco lobby with terrazzo floors, travertine columns, and mosaic murals that define the era’s architectural aspirations through classical tranquility. Much of the original lobby remains intact today, but the real difference is immediately adjacent: a new reception area, as well as a grand staircase that leads to a social hub and food hall on the second level. Here, visitors and workers have new options for simply hanging out.

New York–based firm A+I, with Chicago-based Valerio DeWalt Train Associates as architect of record, designed the series of strategic interventions to help, in part, rebrand the venerable 4.2 million-square-foot building as theMART. The renovations, which cost approximately $40 million, address the needs of those who inhabit the building year-round. What was once primarily home to showrooms and wholesalers has now diversified to include many workplaces for companies—including Motorola Mobility, Yelp, Razorfish, ConAgra Foods, and Braintree—as well as coworking spaces for startups such as 1871 and Matter. The interior renovations were designed to appeal to young, tech-savvy employees.

Lifestyle amenities for today’s tenants

“It’s about accommodating knowledge economy workers,” says A+I Principal Brad Zizmor. “The shoe shine stands and newsstands of the 1950s are not meaningful anymore. We needed to provide a 24-7 lifestyle amenity.”

The biggest design intervention is the 5,600-square-foot grand stair, which runs counter to the lobby’s primary axis, connecting the formal Art Deco space with the new casually disposed lounge on the second floor. Most of the stair is actually bleacher seating. “The last thing that it is about is getting from one level to another,” he says.

With the interior changes, the architects riffed on the building’s original repetitive, geometrically derived Art Deco ornament, albeit using more contemporary means that relate directly to the tech industry firms that now call theMART home. For the
The new staircase with bleacher seating (right two) envelops the reception area (above), which has a modern desk set off by 566 unique bronze panels. Both the food hall (opposite, top) and the lounge (opposite, bottom) at the top of the stairs have stripped-down interiors, exposing the bones of theMART's structure. A variety of casual seating is in place throughout.
The stair and the reception desk beneath it, travertine and bronze are the primary surface materials. Behind and above the desk, the architects installed 566 unique bronze panels—each just 1/64-inch thick—with varying embossments, debossments, and perforations derived through parametric and computational design means. The surface deformations give the panels the rigidity required to maintain their shape while the perforations open up to felt that covertly provides sound absorption.

The interior of the second-floor lounge and renovated food hall area is treated like an excavation, revealing the building’s tightly gridded concrete frame. “It’s a beautiful structural system, meant to support furniture,” Zizmor says. In the lounge, the floors and ceilings are exposed, with comfortable seating areas, and a barlike countertop provides multiple ways for workers to relax throughout the day. Somewhat temporary for the time being, more hospitality-focused interior adaptations are planned for the lounge.

“At 86 years old, theMART is still prominent in the marketplace,” says Myron Maurer, chief operating officer of theMART. “That’s unusual.” The marketplace now responds to a generation that respects theMART’s history but has new, inventive uses for its interiors. The thoughtful design by A+I honors the past while accommodating contemporary demands.
Active Sitting for Engaged Comfort
Herman Miller partners with forpeople to design the Keyn Chair Group that responds to users’ shifting movements

The Keyn Chair Group has seat backs made of a sculpted one-piece polymer shell (left) that reclines up to 10 degrees while allowing the seat to move forward. The chairs are available with either a four-star base (below) or as a stackable four-leg chair (right). Variations on the chair upholstery are available, including an option for the seat and half inner-back pad (bottom).

Research conducted by Herman Miller reveals that people move around an average of 53 times per hour when seated. And if their chairs are inflexible, people tend to become less engaged in their work over time. Herman Miller’s Keyn Chair Group aims to support one’s body as it shifts, maintaining comfort and minimizing distraction in the workplace.

To design the range of meeting and side chairs, Herman Miller partnered with London-based design agency forpeople (originally established by four people, now with a team of more than 100). Keyn features a modular system of four parts: base, cradle, seat shell, and upholstered pad. The sculpted one-piece polymer shell incorporates a back that reclines up to 10 degrees while simultaneously allowing the seat to move forward. This enables the chairs to accommodate upright postures as well as more relaxed and slightly reclined stances.

“We gained valuable insight around the observation of ‘boring meeting syndrome,’ which is something that hadn’t been addressed,” says Richard Stevens, founder and creative director of forpeople and lead designer of Keyn. “What happens to people when they’re seated for a long time? How do their concentration levels affect their seated position, and how can the chair best aid these changes? This research informed the development of the moving seat and back—a totally new innovation.”

Available in North America later this year, Keyn has two base options—four-leg or four-star—with either a painted, trivalent chrome, or polished aluminum finish. The four-leg option is stackable. Seat shells are white or black. Variations on the chair upholstery are available for the entire seat and back, the seat alone, or the seat and half inner-back pad. To add interest when the chair is viewed from the back, five reverse contrast colors can be specified independently on the semi- and fully-upholstered versions.—MURRYE BERNARD

Rockwell Group established its reputation as a leading practice in the design of hotels, restaurants, and theatrical sets. While not as well known for workplace interiors, David Rockwell's firm has brought its hospitality expertise into the office with the Unscripted collection. An ambitious debut for Knoll, Unscripted offers 30 products across six categories.

With elements that are freestanding and movable, Unscripted is designed to allow improvisation and cultivate community within the workplace. "Our interest is in getting people to look at their work environments as a stage on which movable furniture can be arranged in endless configurations," says Rockwell. "You can craft the scene around what it is you're doing that day."

The Unscripted collection spans seating, tables, storage, border and step elements, and accessories. Seating options include individual and modular upholstered lounge pieces, swivel seats, unstructured poufs, stools, and benches. Tables range from long library formats to sawhorse versions, as well as drink rails, tall tables, easy tables, desks, and wire-base occasional tables with wood tops incorporating curved touchpoints. Included within the collection's storage solutions are modular elements, credenzas, consoles, lockers, hospitality carts, and mobile carts. Unscripted also features accessories, such as a lap tray, canvas bins, down pillows, and seat cushions.

To create varying degrees of visual and acoustic privacy, Unscripted offers border elements, called the Creative Wall and Puffy and Telly screens. Providing transitions between different types of spaces, step elements are cubic forms with plywood, metal, or upholstered finishes that can take the form of bleachers, amphitheaters, or even what Rockwell refers to as pocket parks. "The collection is very much open to what people will do with it," says Benjamin Pardo, Knoll's director of design who worked closely with Rockwell. "It's truly an invitation for workplace designers and their clients to personalize their own space." —MURRYE BERNARD

knoll.com
Unscripted comprises 30 products, such as seating options that include individual and modular upholstered lounge pieces (1 and 8), as well as stools (3) and unstructured poufs (7). Unscripted tables range from long library versions (7), to drink rails (3), easy tables, work desks, and wire-base occasional tables with wood tops incorporating curved touchpoints (1 and 5). The collection also features storage solutions and accessories, such as lap trays (2 and 7) and canvas bins, as well as border (4 and 6) and step elements (2 and 7) to provide seamless transitions between different types of workspaces.

Best of NeoCon 2016 Winners
Best of NeoCon® 2016

Ninety-four awards presented in the 27th annual Best of NeoCon competition

Contract magazine Editor in Chief John Czarnecki (3) presented the awards (5) with Best of NeoCon Competition Director Eileen McMorrow (4) at the Best of NeoCon Breakfast in front of a capacity audience at the Renaissance Hotel (2) in Chicago. Tom Lloyd (1, left) and Luke Pearson (1, right) of PearsonLloyd accepted the Best of Competition distinction for designing the Zones collection for Teknion.

Contract magazine Editor in Chief John Czarnecki presented 94 awards to the winners of the 27th annual Best of NeoCon 2016 competition at the Best of NeoCon Breakfast in Chicago on June 13. The Best of Competition distinction went to Teknion for Zones (page 48) designed by Tom Lloyd and Luke Pearson of London-based design consultancy PearsonLloyd. In addition to Gold and Silver Awards, 10 Innovation Awards (page 68) and four Editors’ Choice Awards (page 67) were given.

A record-breaking 424 entries in 43 product and furnishing categories were received this year. The 43-member jury was composed of interior designers and architects, as well as corporate, government, and institutional facilities management professionals who are responsible for selecting and buying furniture and furnishings for their organizations or clients. Jurors were organized into nine teams to view and hear presentations on each product in person at theMART. Manufacturers and product designers had the opportunity to discuss product details and to answer jurors' questions.

The Best of NeoCon competition is sponsored by Contract magazine, theMART, the International Interior Design Association (IIDA), the International Facility Management Association (IFMA), and the McMorrow Report for Facilities Management. Each of the Best of NeoCon competition winners is featured on contractdesign.com, contract-network.com (which also includes all Best of NeoCon entrants), and mcmorrowreports.com.

Best of Competition
An interview with Luke Pearson and Tom Lloyd of PearsonLloyd, the designers of Zones for Teknion

The Zones workplace furniture collection by Teknion, designed in partnership with London-based PearsonLloyd, was named the 2016 Best of NeoCon Best of Competition. Zones includes seating, tables, screens, and easels, all of which can be arranged in a multitude of ways. Seating options are a club chair in two models, a gently curved armchair, a lounge chair with a slight angular recline, a stool with a wood or upholstered seat, and a bench with a solid-beech frame and beech plywood back. Tables, with soft edges and turned wood legs, are available in a variety of sizes and shapes. Also, Zones features a series of compact, semiprivate work enclosures, or pods, that help to diffuse sound and provide a sheltered place to work or have a discussion. Contract interviewed Luke Pearson and Tom Lloyd about this award-winning collection.

Describe the research that led to Zones. How long did it take? What research into working did you conduct or review?

We started our collaboration with Teknion in autumn 2014. The first six months were almost entirely research, looking at the major trends influencing contemporary life, including technology, emerging markets, new service models and demographics, sustainability, and wellbeing. These themes range beyond just the world of work, and the research was intentionally focused outside the potentially narrow field of vision within the industry.

What conclusions did you come to?

Alongside those mega-themes, we developed a point of view around the needs of the workplace now, where we think it might be heading, and why. One of the most interesting conclusions that we have drawn is that there is no longer a single industry view of what is the best workplace. This lack of certainty is a great environment for challenging the previous norms and developing new ideas. Also, how and where workplace furniture is used is diverging away from offices and into retail, higher education, hospitality, and new sectors, such as coworking and coliving spaces.

How did you implement the research as a differentiator in the design process?

The use of research and knowledge regarding work, workspace, and new work styles is no longer restricted to the biggest or strongest brands in the sector, and there is a surprisingly common narrative emerging from all corners of the market that discusses such issues as collaboration, millennials, hospitality, the need for silence, or wellness. The biggest challenge is finding a creative response that stitches these widely understood themes together and is grounded in understanding utility, beauty, and accessibility to the market.

Many furniture companies have introduced collections for the casual, collaborative office. How does Zones stand out from other collections on the market?

Zones is characterized by balance. It is a balance of work settings, styles, and postures, as well as a balance between craft and technology, between efficiency and warmth, between the new and the familiar. The design and feel of the collection is, in part, down to our DNA, our interests, and our design philosophy. The collection is knowledge driven, with the full range in terms of choice of settings, postures, ergonomics, and materiality—merging the cultures of work and home.

What details do you consider unique to Zones?

There is less focus on upholstery- and textile-based solutions in the Zones collection as compared with many other solutions. There seems to be a contradiction in the industry between searching for maximum sound absorption for spaces that, by definition, can never be acoustically secure. In our view, too much sound absorption can also create an uncomfortably deadening sensation, which does not promote well-being.

Regarding the design and construction of the collection, Zones has a simplicity and elegance that is consistent throughout. How did you achieve that?

We were looking for a limited number of themes—including materiality, color, form, and construction—that could be applied across a large range of pieces. The resulting visual cohesion allows different parts of the collection to be curated together in a seamless manner, without having to create a single visual aesthetic. The language of the system is neither "shouty" nor too mechanical.

Understanding the emergence of hospitality as an industry theme, we do not think most companies want their employees to work in a faux-hotel environment. Finding the right mix of professionalism and humanity was key to the success of the collection.

What is the importance of beechwood in Zones?

The emergence of wood in the contract market in recent years is clear to see. As a material, wood has moved from casegood production to being seen in direct relation to tooled componentry on chairs and tables. In Zones, we were very interested in the mix between the craft of wood and the technology of tooled aluminum and plastic parts. In this case, we have sought to maximize the potential of wood as an engineering material as well as something that brings warmth and humanity to the workplace. Beech has a long heritage in the furniture industry and has great functional and aesthetic qualities. Using traditional lamination techniques in the Zones collection elevates the material...
to one of engineering excellence and helps tie together the various elements of the collection.

**How do you see work changing, in general?**

In the office, the decline of the bench and rediscovery of privacy further impacts design. More broadly, the rise of millennials means that when and where people work will continue to broaden. Technology is a driving force in unlocking new ways to work, ways that merge hospitality and office cultures. Coworking has emerged as a mainstream work style, and decentralization will challenge planning as faster rates of expansion will simultaneously force organizations to have multiple locations.

Zones

Best of Competition: Furniture Collections for Collaboration
Gold Award: Furniture Collections for Collaboration
Zones is a comprehensive series of furniture products that addresses the need for both focus and collaboration, as well as for workshop areas within the office environment. It includes new furnishings, applications, and settings for contemporary workstyles, ranging from creative, intimate settings to places of retreat. Zones addresses the growing importance of hospitality spaces as a new form of workplace.

Jurors Comments
- Inventive use of materials and design throughout
- Refined, clean
- Approachable details
- Soft, friendly, and comfortable
- Nice sensory experience
- Shape is very friendly, functional, and inviting

Also Awarded

Zones Bench Gold Award: Seating: Benches
Zones Table Silver Award: Conference Room Furniture
Tek Pier Gold Award: Technology-Integrated Solutions
Teknion Sanna by Pablo Gold Award: Lighting: Task/Desktop/Furniture-Integrated
Winner Profile: Andreu World

Alya Chair

Gold Award: Seating: Conference
The Alya chair is an armchair with an upholstered seat and back. It is available in many base options: a four-legged beech base, a steel sled base, or a central base (with or without casters) finished in polished aluminum, white, or black.

Jurors Comments
- Comfortable and lovely
- Well-crafted and detailed stitching
- Beautiful proportions

Duos

Gold Award: Seating: Stacking
Duos is an ergonomic and lightweight seating collection. Available as a stackable chair or armchair, Duos can be specified with an upholstered seat and back, with an upholstered seat only, in an all-wood version, or with a wood back and mesh seat.

Jurors Comments
- Love it! Smart and beautiful
- Endless wood-stain and finish options
- Elegant, comfortable, and great price point
- Andreu World does it again!

Designtex Bespoke Surfaces

Gold Award: Surfacing Materials/Finishes
A collection of resilient images and 15 materials combine to create custom surfaces uniquely tailored for branded architectural environments. The images have been curated from the Designtex Bespoke Image Portfolio, a collection of works from contemporary artists and photographers, and are digitally applied to wallcoverings, glass film, textiles, ceramic steel, decorative rigid panels, and magnetics.

Jurors Comments
- Good substrate option
- High resolution
- Mid-range price point
Winner Profile: DeskMakers

Hover Benching

Gold Award: Furniture: Benching
Height adjustability meets design flexibility with Hover Benching from DeskMakers. Manufactured in California and Michigan, Hover Benching features a laminate trough system, available in 20 finishes, to neatly distribute power. The height-adjustable bases are offered in 12 finishes.

Jurors Comments
- Functional without complex mechanical construction
Stand Up for Great Office Design

Achieve the ultimate in office design flexibility with DeskMakers. Browse our collection of customizable laminate casegoods, tables and desking on deskmakers.com or call us for more details.

Winner Profile: KI

MyPlace

Gold Award: Healthcare: Guest/Lounge Seating
MyPlace is a simple, adaptive, and configurable lounge system. It serves as a backbone to accommodate a variety of work styles in a range of settings, from individual focus areas to open regenerative spaces. MyPlace allows for the creation of flexible areas for small groups to work privately but transforms easily into larger configurations for gathering areas and lounge environments.

Jurors Comments
- Shapes are customizable
- Built in power/data is excellent
- Broad statement of line, very versatile
- Pays homage to the design of the past
- Wide assortment of design possibilities
At KI, we’re intensely proud and appreciative of our 2016 Best of NeoCon awards.

But the true best of NeoCon is sharing time with you, the wonderfully bright and talented professionals of our industry.

We thank you for allowing us to share our showroom with you, along with our perspectives on space and product design.

As always, we look forward to continuing the conversation.

Winner Profile: Koncept

Z-Bar LED Pendant

Gold Award: Lighting: Decorative

Koncept introduces a new light into the Z-Bar family. The Z-Bar desk and floor lamp designs have been reinvented as a unique and customizable pendant fixture that can be fashioned into any shape or configuration required to best illuminate and enhance a space.

Jurors Comments

- A beautiful addition to the line
- Elegant, sculptural, and so simply adjusted
The Best of NeoCon GOLD award-winning Z-Bar Pendant is created to be a part of a modular system. Each “light bar” independently rotates 360 degrees and can be connected to create a number of standard configurations and customizable patterns to fit spaces of any size. Our online building tool is available to aid in design customization.

Suspend a set of pendants from another to simultaneously shine ambient light onto the ceiling and direct light onto a table, or create a dramatic and sculptural piece that illuminates a lobby or entryway on its own. The pendants are compatible with any dimmer, so controlling the brightness levels is simple and can be done by remote or switch.

Infused Collection

Silver Award: Flooring: Hard-Surface
More is more! Infused is a sophisticated and usable collection of LVT that creates a mosaic of graphic patterns inspired by the bold and playful cultural spirits of several cities: Mexico City, Philadelphia, Chicago, Atlanta, and New York. The tiles are designed to be mixed and remixed to match with any designer’s vision. They are available in 9-inch-square and 2½-inch-by-36-inch formats.

Jurors Comments
» Love the patterns and the backstories on the creation of the collection
» Bravo! I will absolutely specify the Infused Collection

Divergent Collection

Gold Award: Healthcare Flooring
Divergent is a progressive yet calming collection of LVT and modular carpet that unites both platforms in function and form for healthcare environments. Lush designs in a palette drawn from wood, soft metals, cool industrial materials, and complementary neutrals create a spa-like, hospitality-inspired feel. Both the carpet and LVT are engineered for heavy commercial traffic.

Tarkett THE ULTIMATE FLOORING EXPERIENCE
Conexus

Editors’ Choice Award: Lounge Furniture Collections
HBF has teamed with longtime partner Michael Vanderbyl to create a work/lounge chair designed to function across any contract setting. The new Conexus lounge chair and ottoman collection has HBF’s dedication to craftsmanship at its core. Conexus fills the void between task and lounge, designed so that it can function whether grouped with multiple chairs around a table or standing on its own.

Jurors Comments
- It’s a new version of the Eames chair
- Beautiful details at material transitions
- Versatile functionality for conferencing or lounge
- Iconic and sculptural
- Elegant and casual at the same time

Christiane Müller Collection

Gold Award: Textiles: Upholstery
HBF Textiles has teamed with Amsterdam-based designer Christiane Müller to create her eponymous collection, a series of tactile fabrics that blur the line between work and home with artistic flair. The series focuses on fabric with character, using texture, yarn, and color to create personality. It balances durability and innovation with comfort and quality to lend the signature HBF Textiles look.

Jurors Comments
- Quality level that hasn’t yet been seen in the industry
- Industrial design—structural but soft and comforting
- Simplistic structure of yarn
- Multidimensionality to line
- Outstanding
Fabrics with a character.

Experience Loft.
Our urban-inspired lounge chair has a casual elegance that is modern with just the right amount of edge. A sumptuous silhouette and a cozy embrace, Loft is the perfect complement to the classic or contemporary space.
Knowing that our readers design a diverse array of projects, we are featuring four interiors, each of which is a different typology and located on a different continent. Architect Miguel Angel Aragonés designed a sublime resort, Mar Adentro (cover and 104), on Mexico’s Baja California Sur. In Copenhagen, Denmark, the firm JJW Architects created the dynamic South Harbor School (page 112), which incorporates multiple levels of playgrounds on rooftop terraces. The Zhongshuge Bookstore (page 118) in Hangzhou, China, was designed by XL-Muse to be a destination with a fantastical, playful children’s area. Isay Weinfeld, who is currently designing the new Four Seasons restaurant in New York, conceived the beautiful Juana la Loca (this page and 126) in Bogotá, Colombia.
Mar Adentro
Miguel Angel Aragonés crafts a highly refined, dreamy resort with residences in Mexico, evoking serenity by the sea.

The complex is primarily a series of cubed structures that appear to float upon pools of water connected by concrete pathways. A restaurant and lounge area is nestled in a nestlike structure in the middle of the water.
In contrast with the hard-lined geometries of the architecture, an organic structure made of sticks houses a restaurant and lounge area.

If one were to ask Mexican architect Miguel Angel Aragonés if there is a common thread within his work, he would likely respond with the same poetic quality that infuses it: "There's a simplicity of materials, a simplicity of ideas, a simplicity of principles," he says.

From his earliest small-scale, government-supported housing projects to his vision for the home of Mexico’s President Enrique Peña Nieto, all of the spaces that Aragonés has created are characterized by rigor and restraint. And his latest project, Mar Adentro—a hotel-and-residential complex in San José del Cabo, Mexico—further serves as an expression of his refined-yet-rarefied spatial point of view. Aragonés not only designed the three-phase project, but he also purchased the land, developed the property, and now operates it. The complex includes a mix of 51 residences, 194 hotel rooms, and six restaurants, as well as yoga studios, a private cinema, and saltwater pools.

Like a theater focused on the ocean view
The overriding inspiration for the design of Mar Adentro was its context—eight acres of land along the coast of the Sea of Cortez in Baja California Sur. "The most powerful thing you can do as an architect is create atmosphere," says Aragonés, who, when seeing the property for the first time, was struck by the utter minimalism of the landscape—the clean horizon line of the sea melding into the surrounding desert devoid of shadows beneath the blazing sun. "I imagined a place that was like a theater, and all of the spectators would be completely focused on the scenario—the scenario of the ocean."

To manifest this vision, Aragonés devised a scheme based on three expansive platforms of water that surround a series of white cubic structures. The volumes seemingly float upon the liquid horizon line. "The effect is the sensation of being surrounded by the sea."
An open-air restaurant (opposite, left two, and bottom) is positioned to overlook the water. Mar Adentro's white plastered concrete walls are punctuated on three sides with modern variations of traditional celocías (left). A pathway over platformed pools leads to both an area with lounge chairs and a nestlike structure that shelters a restaurant.
Hotel rooms (this page and opposite) feature Mexican travertine floors as well as finishes, furnishings, and fixtures that are custom-fabricated by Poliform. LED lighting can be adjusted to change color to alter the mood (opposite, left two).
Key Design Highlights

The minimalism of the landscape—where the desert meets the sea—served as the main source of inspiration for the design.

A series of white cubic structures containing residences and hotel rooms appear to float on stepped plazas of pooled water.

Elements of traditional Mexican architecture influenced the interior details, such as the use of blind facades.

In contrast to Mar Adentro’s more geometric volumes is a hivelike enclosure for a restaurant and lounge.

Residence and hotel room interiors are fitted with custom prefabricated Poliform finishes, fixtures, and furnishings.

he says. Introspectively angled toward central stepped plazas of pooled water, the cubelike volumes are defined with white plastered concrete walls on three sides. The walls are punctuated with modern variations of traditional celocías, which are small screened openings that allow light to filter in while still preserving privacy. On the sea-facing sides, the structures are clad with floor-to-ceiling glass, allowing occupants to view the endless expanse of water before them.

The platforms and clean-lined fachadas ceigas (blind facades) reflect the common practice among Mexican architects to “pay homage to the wall,” says Aragonés. “It gives you structure, it gives you privacy, it gives you the sensation of a more powerful, protective space, and it gives you intimacy in a very Mexican way.” The effect also creates shadows, which Aragonés envisions to be “like an image by the painter Giorgio de Chirico.”

Amid all the hard lines and strict geometry of the architecture, Aragonés says a counterpoint was needed. Curving concrete pathways on the water lead to the counterpoint: an organic nestlike, breathable structure of sticks covering a restaurant and lounge area that completes the composition.

Inside the residences and hotel rooms, the streamlined simplicity continues within minimalist interiors fitted out completely with finishes, furnishings, fixtures, and fittings custom-fabricated to Aragonés’s specifications by Poliform. Based on a module that expands or contracts to create units of different sizes, all of the components—including doors, kitchens, wardrobes, bathrooms, sinks, furniture, tables, and beds—were prefabricated in Italy, shipped to Mexico, and assembled on site.

Modern comforts and amazing views

Atop Mexican travertine floors, the furnishings and finishes bring sleek creature comforts to the rooms while allowing for unobstructed views. Even the discreet LED ceiling lighting, which can be adjusted to change color to alter the mood, and the custom scrim shades that seal off the interiors without blocking sight lines or air flow, were tailored to contribute to the overall effect. “This approach allowed us to create high-quality interiors at reasonable cost and to build efficiently, with everything you need to feel good,” says Aragonés.

The Mar Adentro dining options—all of which are outdoors, open, and yet intimate—offer variations of local Mexican food. The final two of the six restaurants will open this December, and both will offer organic food.

Overall, it was the pure landscape of desert meets sea that inspired Aragonés and his architecture. In turn, Aragonés hopes the locale will inspire both residents and visitors. He says, “The universe had created a desert joined to the sea along a horizontal line. It is the purest, most minimalist landscape.”
A dramatic waterfront building in Copenhagen is a powerful teaching tool

By Lydia Lee
Photography by Torben Eskerod
and Laura Stamer
Positioned along a canal, the school has playgrounds on top of multiple terraced rooftops. A large outdoor stair made of ash doubles as a gathering place for students.
Key Design Highlights

The school was designed to offer a broad array of diverse interior and exterior environments for learning, socializing, and activities. Inspired by the Spanish Steps in Rome, a striking outdoor stair made of ash provides a picturesque place for students to gather.

Well-designed playground structures envelop the perimeter of the building, which incorporates green rooftops.

The interior features durable furniture and finishes, including walls of pine, Kerto, metal panels, and plaster, as well as floors that are either wood, concrete, or covered with a polyurethane finish.

Playgrounds on the building's cascading rooftop terraces (above) and along the perimeter of the school (far right and bottom) also function as a public park for the neighborhood. The outdoor stair (right) offers additional space for students to gather. Multiple floors have views into the large interior atrium (opposite two) that is a focal point for the school.
Shortly after the first school year began last August, teachers at the new South Harbor School in Copenhagen, Denmark, discovered an interesting problem: They were having trouble keeping track of students because they were spreading out all over the building. "The kids go in spaces where we do not expect to find them," says headmaster Morten Biering. "Some kids [choose to spend recess] in the atrium—they think it's an exciting room."

The allure of the architecture by Copenhagen-based JJW Architects is such that students elect to come in from an expansive playground during their free time. Indeed, the building, which will eventually serve 850 students from the Danish equivalent of preschool through middle school, was deliberately designed to offer a wide range of environments for learning and socializing in direct contrast to the formal rigidity of many schools, particularly those in dense urban settings.

"We know from science that kids learn better when they are active. We focus on creating diverse learning facilities that motivate them to move their bodies and open their minds," says Lars Lindeberg, a partner at JJW, a 30-year-old firm that also specializes in public housing and commercial buildings. The dramatic design was the winning entry in an international competition held by the city of Copenhagen in 2006. The school was completed in 2015 after the plans were revised to accommodate population growth.

**Building as landscape and playground**

A focus on childhood activity is evident from the outside, where a landscape of well-designed playground features literally envelops the school. The building-cum-landscape incorporates playgrounds on rooftop terraces that double as a public park for the Teglholmen neighborhood, a formerly industrial area that is being redeveloped. A grand 50-foot-wide outdoor stair, constructed of wood and inspired by the Spanish Steps in Rome, provides a place to congregate and watch the activity along the canal. The architecture integrates smoothly with the adjacent area: There are no barriers between the school's playground and its surroundings, and the stairs lead directly down to the water's edge.

From the street, the building's two-layer facade creates a dynamic effect for passersby.
The building is clad in rock wool fiberboard panels printed with graphic patterns and words, such as phrases from The Little Mermaid by Hans Christian Andersen and the diary of Christopher Columbus from his voyage to America. Thin aluminum fins serve as a screening element over the facade, revealing the underlying architecture and graphic patterning.

**Planned for new education pedagogy**

Located on a wedge-shaped parcel along a canal, the complex building is five stories high at the entrance and gradually slopes down to three stories toward the waterfront. The ground floor contains a science lab, music rooms, and a wood shop. Above, the first floor is primarily administration and student services, as well as a dental clinic. Upper floors are designated for the different grades. While every class has its own classroom, each of the floors includes a large shared area designed to accommodate two or more classes for newer forms of instruction, such as team teaching and mixing students from different grades. Students can also spread out here for small-group gatherings.

A soaring atrium near the entrance allows profuse daylight as well as natural ventilation into the center of the building, leading to a double-height school square. One can get a glimpse of the various spaces from the different levels, but the routes to them are not obvious: That is by design. “Some of these kids might be in this school for 10 years, and the traditional layout of long corridors with classrooms on either side is so boring,” says Lindeberg. “We wanted to create many ways of moving through the building while still having quiet, acoustically controlled learning spaces.”

Inside, finishes and furniture were chosen with an eye to durability. Wall fenestrations are a combination of pine, Kerto, metal panels, and plaster. The ground-level floor is concrete, while the upper levels have floors that are either wood or concrete covered with a polyurethane finish. The music room’s floor has carpet tile to improve the acoustic quality of the space.

The walls of the atrium and common spaces are lined with vertical knotty pine slats. These can be easily replaced if damaged and also help to absorb sound—a welcome design consideration for a school with hundreds of children. The spacious gathering areas increase the possibility of many different activities when compared with a typical school plan.
An area of staggered bleacher seating allows for student assembly (top and above). Meals are shared in a double-height interior with pine walls (above, middle), and the school incorporates special seating near windows (above, left) and in nooks (opposite). Students can learn about food preparation in a large well-appointed kitchen (left).
Zhongshuge Bookstore

By Michael Webb
Photography by Shao Feng

Customers are encouraged to linger on stepped, cushioned benches with reading lights within the rotunda, an elliptical enclosure lined with bookstacks. A mirrored ceiling creates the illusion of a larger space and infinite bookstacks.
XL-Muse evokes the illusion of infinite space in a bookstore in Hangzhou, China
Key Design Highlights

Not conceived as a typical retail outlet, Zhongshuge bookstore celebrates the spirit of books and invites customers to linger.

Various zones provide diverse experiences for interacting with books, including an abstracted forest, a reading corridor lined with dark wood shelves, an elliptical rotunda, and a fantastical children's area.

Throughout the store, low ceilings are entirely covered with mirror glass to create a sense of infinite space.

A nearly symmetrical layout aids in wayfinding, and the alteration of light and dark finishes adds drama.
Inspired by the natural beauty of the city of Hangzhou, an abstracted forest of books (opposite, bottom right) features treelike columns adapted as shelves (opposite, top). The benches (opposite, bottom left), which angle around the columns, represent rivers. Beyond the forest is the reading corridor (left and below), featuring dark wood shelves, hanging lamps, and a row of reading tables.

Printed books are durable, portable, and often cherished objects, but brick-and-mortar bookstores face increasing competition from online retailers and the proliferation of digital media. Jin Hao, a Chinese bookseller who is also a publisher, decided to create a new paradigm for a store so appealing and well stocked that it would become both a destination and a popular hangout. His goal was, in short, not just a bookstore but the most beautiful interior within a given city.

Friends introduced him to Li Xiang, a designer who leads XL-Muse, a 20-person firm in Shanghai. Li was educated in Malaysia and England, and her firm XL-Muse has won a succession of awards for its varied buildings and interiors. She created three stores for Jin in Shanghai, each with a distinct personality designed to convey the spirit of books.

Bringing nature indoors
Those three retail explorations proved a run-up to Jin's Zhongshuge bookstore in Hangzhou, a major regional city that was once the capital of China. In this interior, Li has fulfilled Jin's goal within a busy shopping mall, transforming a generic 10,000-square-foot space into a cave of wonders. "Hangzhou has been called an earthly paradise for the beauty of its scenery, its forests, and lake," she says. "In this project, the most important element is the abstract forest. I used pillars as shelves and distributed them randomly, like trees in nature. There are some twisty benches around the pillars, representing rivers. Trees supply oxygen for our lives, and the forest of books provides wisdom."

The white bookstack forest of columns can be seen through the glass storefront, enticing shoppers to enter and explore. Here, and throughout the store, the low ceilings are entirely covered with mirror glass. Shoppers are caught up in their own reflections and the illusion of seemingly infinite space, which prompts them to look to the higher
The children's area (right and below) contains a stylized miniature roller coaster and displays picture books on whimsical, curved blond-wood shelving (far right). An elliptical rotunda (opposite, top) is lined with bookstacks and features cushioned benches with reading lights (opposite, bottom).
shelves and become active participants rather than passive spectators. Screws and shatterproof membranes securely attach the glass panels at each corner without distracting from the seamless expanse of reflected imagery. Construction was a challenge, and Li and her team worked closely with artisans to create mock-ups.

**Spaces for reading and playing**

Beyond the forest is a central reading area that has the character of a traditional library: a book-lined concourse with dark wood shelves and a row of reading tables lit from hanging lamps. From the point of entry, one can catch a glimpse of the rotunda, an elliptical enclosure lined with bookstacks and illuminated by a circular skylight. Cushioned benches with reading lamps are positioned along the perimeter and encourage shoppers to linger. The store includes a cafe that stays open late and draws a diversified clientele with its lively program of book signings and lectures.

Parents are encouraged to bring children to explore an elaborate playground, located in a corner of the store, that fuses entertainment and browsing. Picture books are displayed on whimsically curved blond-wood shelving amid fun rides, and the floor presents a map of the galaxy that instructs and inspires. Service areas and an office are located in the opposite corner of the store.

The bookstore’s symmetrical layout with strong axes makes wayfinding easy, and the alteration of dark and light materials adds an element of drama. The ceiling mirrors double the apparent interior volume and heighten the impact of each section of Zhongshuge. As Li says, “We wanted readers to feel the power of books through our design.” Buoyed by an enthusiastic public response, XL-Muse is currently designing more bookstores for Jin in China. ©
Juana la Loca

By Sam Lubell
Photography by Monica Barreneche
Isay Weinfeld designs a calming and elegant progression of spaces for a restaurant interior in Bogotá, Colombia

Located on the third floor of Urban Plaza, a glass-and-steel tower in the center of Bogotá, Colombia, the restaurant Juana la Loca by Brazilian architect Isay Weinfeld is a study in spatial progression. Visitors follow a sequence of spaces—welcome hall, bar, kitchen, dining rooms, and terrace—that are each defined by their own materials, lighting, furniture, and dimensions. The experience is gallerylike as much as it is one for fine dining.

“IT was all about finding the right tone in every aspect of the project,” says Weinfeld, who is currently in the news in New York because he is designing the new location for the Four Seasons restaurant. For Juana la Loca, Weinfeld carefully crafted a mood throughout the interior that is elegant and contemporary yet still cozy and welcoming, with wood and metal panels covering surfaces wherever possible.

The genesis of the restaurant’s circulation—in which rooms become gradually smaller but brighter—occurred when Weinfeld’s team realized that the kitchen needed to be placed in the center in order to meet technical requirements. Dividing the overall interior into roughly two halves, the design strategy focused on establishing an entrance sequence to the kitchen and crafting a dining experience beyond.

Crafting a sensory experience
The 5,600-square-foot restaurant’s simple, brightly lit entry hall is clad in shiny sheet metal, providing ubiquitous reflections of the guests as well as glimpses into the spaces beyond. The next step in
Juana la Loca

Architect: Isay Weinfeld
Client: En Compañía de Lobos
Where: Bogotá, Colombia
What: 5,600 square feet on one floor
Cost: Withheld at client's request

For a full project source list, see page 140 or visit contractdesign.com.

the sequence, the bar, contains a central counter topped with pale stone, which contrasts with the overall palette of the dark Sapan wood veneer walls, ceilings, and hardwood floors. Low Saarinen executive chairs surround the bar. A Lindsey Adelman–designed branching bubble chandelier that combines metal, blown glass, and hardwood brings a raw sense of the natural world inside and merges with the leafy outdoor scene that is glimpsed through a quadrant of narrow horizontal windows. The low-profile furniture and soft lighting from small fixtures in the ceiling add a vaguely nostalgic but edgy refinement.

At the heart of the restaurant, the kitchen features a long tunnel of a hallway with reflective stainless steel floors, walls, and ceilings. The lighting is kept simple with bright downlights. Guests can watch food being prepared on the enclosed, waist-high counters that are positioned on both sides. Full of lights, smells, and sounds, the experience is frenetic and sensory.

Varied dining experiences
The connected, distinctive dining rooms return the visitor to a state of elegant tranquility with walls clad in wood paneling and ceilings lined with wooden slats, recalling the lines of movement throughout the varied spaces. Subtle lighting is provided by Grossman- and Miguel Milá–designed table lamps and floor lamps by Strawser and Smith, Walter Spring, and TMM. The styles of chairs and tables vary from setting to setting, creating a sophisticated sense of surprise, while walls facing the street are covered with a jigsaw puzzle of glazed and wooden panels, adding to the quirky unpredictability.

Featuring glass doors that provide views to the outdoors, the second dining room leads to the final area, the metal-and-glass pergola-covered terrace. Although surrounded by a tranquil garden, outdoor diners are still afforded views of the busy boulevard Carrera 11 below.

The progression of interior spaces is full of energy and variety yet remains calming and elegant. Juana la Loca is an appropriate metaphor for a reborn, energetic city, as well as a good omen for those curious about the next iteration of the Four Seasons in New York.
The interior plan unfolds around a long, tunnel-like kitchen (opposite, bottom left) that connects to two distinct dining rooms (right and above) and an outdoor terrace. Creating a refined aesthetic, furnishings include low-lying chairs and tables (opposite, middle) and small lighting fixtures (opposite, right). The types of seats are playfully mixed in a dining room (opposite, top left).

Key Design Highlights

The restaurant features a progression of spaces that each boast unique furnishings, lighting, and materials to create a distinct dining experience.

In contrast to the dark Sapan wood veneer walls, ceilings, and floors, the bar is distinguished by its pale marble counter and is surrounded by low Saarinen executive chairs on all sides.

Guests can watch food being prepared at the waist-high counters that enclose the central kitchen, which occupies a long hallway with reflective stainless steel surfaces.

Two connected but distinct dining rooms feature lamps by Grossman, Miguel Milà, Strawser and Smith, Walter Spring, and TMM, while a variety of midcentury modern chairs and tables are arranged throughout.
Healthy Workplaces Are Critical to Business Success

The design of today's offices can positively impact health, human performance, and the bottom line.

By Leigh Stringer

Based in Washington, D.C., Leigh Stringer leads workplace research for EYP, an architecture, engineering, and building technology firm. A former senior vice president at HOK, Stringer authored the book The Healthy Workplace: How to Improve the Well-Being of Your Employees—and Boost Your Company’s Bottom Line (AMACOM), which was published in July. Here, culling from the research for her book, Stringer offers Contract readers some lessons related to the built environment.

As a workplace consultant, I have always been aware of the influence of the built environment on health. But it was not until I met with a long list of physiologists, neurologists, ergonomists, nutritionists, and sleep experts while researching my book The Healthy Workplace that I realized the full impact of design, not only on our health but also on our well-being and performance. The truth is, I have most often considered employee health as one item on a long list of project goals, along with saving money, being environmentally responsible, and meeting my client’s business needs. But after digging deeply, I came to believe that human health should be the foundation of both workplace design and business as well. Why? Companies thrive on the innovation and abilities of their employees. And if workers are sick, overweight, stressed, sleep-deprived, or disengaged, the employer is prevented from maintaining a competitive advantage in the marketplace.

The business case for employee health grows stronger every day. A well-respected 2010 meta-analysis study led by Katherine Baicker, PhD, a professor in the Harvard T.H. Chan School of Public Health, evaluated the return on investment for 22 companies that have wellness programs. The study revealed that medical costs fell by about $3.27 for every dollar spent on these programs, and absenteeism costs fell by about $7.3 for every dollar spent. In separate studies completed by Ray Fabius and Ron Goetzel over the past three years, the authors compared the stock performance of companies that won awards for their health initiatives with the Standard & Poor’s 500 Index. No matter how the researchers sliced the data, companies with a focus on health significantly outperformed the S&P 500.

Clearly, human health is a driving force for business growth. But how can the built environment play a more meaningful role? Besides the obvious solutions, such as providing sit-stand desks and access to natural light, how can workplace design positively impact health and, ultimately, human performance? Here are five particularly compelling strategies.

1. Provide workers with a choice on how, when, and where they work

Epidemiological studies from Robert Karasek and Töres Theorell, published in their book Healthy Work: Stress, Productivity, and the Reconstruction of the Working Life (Basic Books, April 1990), showed that, regardless of job function, workers who felt more in control of their work and work environment were less likely to suffer from heart disease and stress. One suggestion, therefore, is to find...
ways to integrate flexibility and choice into the work environment, including where, when, and how employees work. This may result in multiple options, including reconfiguring the workplace to contain a variety of settings that better suit individual work preferences. It may result in allowing for tailored furnishing or technology solutions, such as a treadmill desk or a second computer monitor for some employees. And it could also necessitate policy changes, such as offering work-at-home or flexible schedules.

2. Nurture biophilia
Humans have a strong desire to be among nature, which is to be expected—for most of human history we spent all of our time outdoors. This human preference for the natural world, often referred to as biophilia, was introduced by biologist E.O. Wilson. He suggests that there is an instinctive bond between human beings and other living systems. As Terrapin Bright Green noted in its 2012 report “The Economics of Biophilia,” evidence exists that biophilic environments can improve stress recovery rates, lower blood pressure, improve cognitive functions, enhance mental stamina and focus, decrease violence and criminal activity, elevate moods, and increase learning rates.

Biophilia-based design can manifest in many ways. The most obvious approach is to incorporate real plants, water features, and views to nature. But another, more subtle way to create analogues that are one degree of separation away, such as materials and patterns that evoke nature, including artwork, ornamentation, biomorphic forms, or the use of natural materials.

A third way to incorporate biophilia-based design is through the configuration of space—by organizing interior environments or man-made outdoor landscapes with elements similar to natural environments. It may sound odd, but evidence exists to support the concept that humans prefer to be in settings that mimic the African savanna, with wide open spaces, access to places of refuge (similar to under a tree), and areas that are elevated. Interior and exterior environments that simulate these configurations may evoke a positive psychological response.

3. Leverage choice architecture
The phrase “choice architecture” in retail refers to how products are presented and the impact on consumer decision-making. In a workplace, many companies are using this strategy by reducing the availability of unhealthy foods.

Employers can also subconsciously encourage healthy eating habits in the workplace by creating an inviting, convenient place for workers to eat with nice lighting and views outdoors, by providing a space for people to store their own meals and snacks (to deter the use of vending machines or going to restaurants), or by installing refrigerators with glass doors to encourage all to see—and more likely grab—healthy foods that often need refrigeration.

4. Install lighting to fit circadian rhythms
Our internal circadian rhythm, or biological clock, regulates the periods of sleepiness and wakefulness throughout the day. This rhythm is controlled by a part of the brain at the back of the eye, and it is triggered by changes in natural daylight. Unfortunately, most of the workforce spends 90 percent of the day indoors, and that plays havoc with the human sleep cycle. To combat this, consider installing a circadian lighting system designed to trigger wakefulness in your next workplace project. Circadian lighting in workplaces takes into account natural and artificial light, a certain intensity of light at the desktop level, and the presence of high light levels for a certain amount of time during the day. Even if your workspace is lit at 500 lux, which is more than enough light for reading and most work tasks, it will not necessarily reset a sleep schedule.

Also know that the light that is important to our circadian rhythm is different from the light that is important to our visual system because of the spectral difference in the light sensitivity of our photoreceptors. Special LED lights are required if we want to use them to increase our wakefulness or help us sleep.

5. Locate buildings near parks or public transportation
Studies have shown that the proximity of a workplace to parks and other recreational facilities is consistently associated with higher levels of physical activity and a healthier weight. The same goes for proximity to public transit—there is a link between access to public transportation and physical activity, since transit use typically involves walking to a bus or subway stop.

In one 2011 study by Richard Wener, a professor of environmental psychology at the Polytechnic Institute of New York University, train commuters walked an average of 30 percent more steps per day and were four times more likely to walk 10,000 steps per day when compared with car commuters. Not all design projects involve a new location, of course. But if relocating is an option, consider including building-selection criteria that take employee health into account in ways beyond simply access to a fitness facility.

Seeking data outside the design professions
From my discussions with hundreds of people on the topic of health and well-being at work, I learned that a large amount of data is available but not all of it resides in our industry. To truly advance our thinking and the sophistication of our buildings, design professionals need to leverage and connect with the breadth of health data from other fields as it relates to wellness programs, environmental health and safety, engagement, and human performance. It is in our best interest as designers to look across industries for integrated solutions when it comes to health because we are all working toward the same goal, and human health issues are impossible to solve in silos.

The good news is that the design industry is well positioned to lead the way. We may not be health professionals, but we know how to implement a vision, and our collective impact is profound.
ICFF Cool Meets Miami Heat at First-Ever ICFF Miami

The first annual ICFF Miami will map the newest frontier of what’s best and what’s next at the Miami Beach Convention Center from October 5-6th, 2016.

Why Miami?
ICFF, North America’s platform for global design, connects with the luxury hotbed of the Americas through the introduction of the first-ever ICFF Miami.

The region represents the leading center of luxury development in North America and is home to the highest concentration of high-end retailers and luxury outlets outside New York City. In addition, Miami represents one of two North American cities to make the top 10 list of the 2015 Wealth Report by Knight Frank.

This is ICFF Miami
ICFF Miami is the largest and most prominent design gateway between the Americas. The inaugural event will feature what’s best and what’s next in global design, insightful programming, and a 25,000 net sq. ft. show floor abuzz with over 3,000 interior designers, architects, retailers, representatives, distributors, facility managers, developers, manufacturers, store designers, and visual merchandisers.

Meet the Miami Design Market
Miami is home to 10,000 architects, interior designers, and developers involved in high end interiors.

The hottest designers, developers, and retailers from the Caribbean, Mexico, Central and South Americas will convene during the two-day celebration at the Miami Beach Convention Center. Join the party and connect with the luxury hotbed of the Americas.

Register today at icffmiami.com to experience the first ever ICFF Miami
ICFF Cool Meets Miami Heat

October 5–6, 2016
Miami Beach Convention Center

ICFF Miami in partnership with Luxe Interiors + Design.

Contract is pleased to present the winners of the eighth annual Inspirations Awards, sponsored by Tandus Centiva. The Inspirations Awards recognize a commitment to social responsibility in the design of commercial interiors with the intent to improve the quality of life for people in need. Through these awards, Tandus Centiva has given more than $50,000 in grants to worthy causes. Winners of the 2016 Inspirations Awards were announced during a ceremony in the Tandus Centiva showroom in Chicago prior to NeoCon in June, and the clients of the winning projects received grants from the flooring company.

Staplehouse restaurant in Atlanta (this page and opposite), designed by Square Feet Studio, received the largest prize: a $5,000 grant. Healthcare for the Homeless in Houston, designed by Page, as well as the Teach for America headquarters in New York, designed by HOK, each received $1,000 grants.

The 2016 competition jurors were Elizabeth Gordon, associate principal at Mithun in Seattle; Tom Krizmanic, principal at STUDIOS Architecture in New York; and Angie Lee, principal at Stantec in Chicago.
Staplehouse restaurant evolved from a popular underground supper club run by Chef Ryan Hidinger and his wife, Jen Hidinger. When the local community banded together to raise funds to help cover medical costs for Ryan after he was diagnosed with cancer, the couple was inspired to establish The Giving Kitchen, a nonprofit organization that provides aid to restaurant workers facing unanticipated hardship. Ryan Hidinger died in January 2014, and the Staplehouse restaurant was opened, in part, to honor his memory. All of the post-tax profits from Staplehouse go to the foundation.

Housed in a turn-of-the-century building in downtown Atlanta, the full-service restaurant features an open kitchen, dining rooms, and a bar, and is accompanied by office space for The Giving Kitchen. Staplehouse’s unique story is reflected in its design by Square Feet Studio, which maintains respect for the structure’s historic bones. Restored brick walls and pine framing were left exposed, while new custom lighting, glossy subway tiles, and walnut butcher-block appear throughout.

Innovative in both concept and design, Staplehouse has reinvigorated the Atlanta restaurant community while offering a physical space to further the mission of The Giving Kitchen.
Serving a marginalized population of homeless men, women, and children, Healthcare for the Homeless - Houston (HHH) provides its clients with comprehensive long-term and interim care, as well as accessible medical outreach. Architecture and engineering firm Page helped HHH to expand its mission through the design of its new downtown Houston home, which provides more than 20,000 square feet of clinic and office support space within a renovated three-story building.

The clinic's design creates functional yet welcoming spaces for HHH's clients. Translucent partitions positioned throughout provide visual privacy while still allowing daylight to penetrate. Warm, inviting finishes were selected, and the addition of a central open staircase fosters a sense of community while also serving as a security measure to offer increased visibility from several vantage points.

Page provided initial pro bono programming services and delivered design services at a reduced fee. Many materials, furnishings, and other services were donated to help HHH realize its vision―providing a vital sense of belonging for the homeless―on a limited budget.
With a new headquarters in the Financial District in New York, the nonprofit Teach for America is now able to deliver on its mission in a more robust way. Designed by HOK, in collaboration with Pentagram for environmental graphics, this is a workplace for 600 people on three floors.

Teach for America recruits and enables recent college graduates from across the U.S. to serve as teachers. Known as corps members, they commit to teaching for at least two years in a public or public charter K-12 school in one of 52 low-income communities. In this new workplace, teachers from across the country have a place to work and hold meetings.

To create a double-height interior that serves as a multifunctional area for various events, HOK created an open central staircase/bleacher linking two floors both vertically and horizontally. Taking advantage of an unusual H-shaped floor plan, HOK designed varied environments throughout the office. Color is used to organize the interiors. For example, red denotes informal gathering areas and yellow signifies audio-visual areas.
Textiles
Designers share their favorite textiles for upholstery and window treatments

Beatrice Girelli

The signs we encounter in unfamiliar spaces matter deeply.

People want to feel connection. As human beings, it’s part of who we are. And at Takeform, it’s what we do.
We offer a wide selection of outdoor chairs, tables and lounge items which provide comfort, relaxation and enhance the ambiance of any setting. Through precise construction, choice of materials, demanding tests and standards, our products support heavy-duty use common to the foodservice, hospitality and corporate markets.

The 12th Annual Contract Design Forum is a two-day gathering of the Contract Editorial Advisory Board, invited guests who are leaders in the commercial design industry, and representatives of sponsors.

This year, the Forum is open to interested commercial design professionals to register to attend. Prospective attendees can learn more about registration, fee, program, and agenda at contractdesignforum.com.

Confirmed featured speakers include Theaster Gates and Contract columnist Evelyn Lee.

Companies interested in sponsoring the Forum can contact Publisher John Rouse at jrouse@contractdesign.com.
ESI Design Transforms a Downtown Washington, D.C., Lobby with an Interactive, Visually Stimulating Installation

Featuring an interactive canvas of motion-triggered media panels, the lobby of the Terrell Place office building in downtown Washington, D.C., has been reimagined by ESI Design. The New York-based experiential design firm, led by Edwin Schlossberg, installed approximately 1,700 square feet of diffused LED displays along the walls and corridor portals of the first-floor lobby.

Activated by passersby, the responsive displays mirror the daily tides of foot traffic. Each of the nine media walls depicts a varied selection of sequential scenes, including the cyclical passing of seasons, algorithmically generated arrays of morphing kaleidoscopic threads, and cityscapes of the District’s iconic architecture, statues, and infrastructure. All of the scenes are timed to adjust to the progression of the day. Within the main corridor, concealed speakers in the ceiling and walls project ambient sounds to accompany the display’s sinuous successions, further augmenting the experience.

"The different media create distinct rhythms to give Terrell Place a unique identity and strong street presence," says Michael Schneider, senior creative technology designer at ESI Design. "Each of the media scenes reflects the time of day and the movement of people through the lobby, acting almost as a large abstract data-visualization of the ebb and flow of Terrell Place."

The floor-to-ceiling panels of motion-activated media foster an immersive, enveloping environment, recasting the lobby as a contemporary and invigorated interior that is in tune with its inhabitants.—HAYLEY ARSENault
