FLORIDA NATURAL GAS ASSOCIATION
P. O. BOX 1658, SARASOTA, FLORIDA

APRIL, 1964
Saturday the first of February, the organizational meeting of a new chapter of the American Institute of Architects was held at the Azure Tides Hotel in Sarasota, Florida.

The lower west coast of Florida’s continuous growth in population and its various building industries had produced considerable growth in the Mother Chapter, Florida Central. The new chapter encompasses one-half of the counties formerly included in Florida Central, namely, Manatee, Sarasota, Charlotte, Lee, De Sota, Highlands and Hardee Counties. Architects and their respective work have in the past years contributed a great part in the development of a ranch desired living environment and have contributed greatly to the continuing development of architecture attested to by the many awards which have been received by the professionals of the area and nearly constant flow of articles written on structures created by the area’s architects.

Roland Sellew, greatly instrumental in the formation of the new chapter, made the opening remarks and turned the meeting over to Chairman Pro-Tem, Robert H. Levinson, Regional Director of the AIA.

Chapter officers elected for the first year are Jack West, Sarasota, President; William Mason, Punta Gorda, Vice President; John F. Piercy, Sarasota, Secretary; and Tollyn Twitchell, Sarasota, Treasurer.

Elected to other positions were: Sidney Wilkinson and Frank F. Smith, Jr., FAA Directors; Werner F. Kannenberg, Douglas C. Croll, and Earl J. Draeger, Chapter Directors; Louis F. Schneider and William H. Kerfoot, Alternate FAA Directors; Chapter Historian Roland Sellew.

President Roy M. Pooley, Jacksonville, of the Florida Association of Architects, and Regional Director Robert H. Lesison, Clearwater, of

NEW WOOD HANDRAILS with an aluminum core substructure are furnished as a complete unit by Blumcraft. The solid walnut wood, with a natural hand-rubbed oil finish, is bonded to the aluminum at Blumcraft's factory. This new railing concept combining wood and metal is trademarked RAILWOOD*.

Complete 1964 catalogue available from Blumcraft of Pittsburgh, 460 Melwood St., Pittsburgh 13, Pa.
When F. Wayne White, President of the Alaska Chapter A.I.A., responded to the roll call with a firm Present, and again when Paul D. Jones, President of the Hawaii Chapter A.I.A., answered Here, applause roared through the Board Room at A.I.A. Headquarters in Washington, D.C.

Assembled on that crisp, clear morning of February 24, 1964, for two exciting days of conferences with National Officers and Staff Executives, were the Presidents of 47 A.I.A. State organizations and their Staff Executives. In an atmosphere of quiet enthusiasm and confident dignity, the discussions ranged through a broad spectrum of topics, and there was an altogether inspiring demonstration of what I feel to be the New Spirit of A.I.A.

To me, at least, the messages of President J. Roy Carroll, Chairman Wayne Hertzga, Executive Director Wm. Scheick, and Commission Chairman Scott Smitherman, all vibrated with the increasing strength of this New Spirit of A.I.A.

The conference seemed to focus on three related points of discussion. Namely, Membership growth, State and Chapter By-Laws and Ethical Standards of Practice. Opinions expressed on these matters varied to just about the same degree as expressions I have heard within our own Board and several Chapters. The differences are almost totally a matter of point-of-view, rather than objectives, and since the Institute Policy has now been established, each Chapter will, of course, adhere to those prescribed standards

The salient point about which these discussions revolve is our jealous guardianship of the highest attainable ethical standards of members of the American Institute of Architects.

It is clear that membership will be accorded to all qualified Architects who sincerely vow to accept the responsibility and fully discharge our established standards of practice. It is equally clear that violation of those standards will not be tolerated.

The Standards of Practice essentially require technical competence and objective judgement on the part of the Architect in order to render his clients professional service. Under the normal circumstance, where an owner commissions an Architect to design and administer construction of his building, the Architect's financial interest in the project is limited to his fee and he is completely free to exercise his best objective judgement in his client's behalf.

In this modern technology of business and building, however, other arrangements are sometimes developed, and it is in these situations that the ethical posture of the Architect is not so clearly defined.

Based only on personal experience and numerous discussions with leaders of our profession, I offer the following observations for consideration:

1. An architect employed by a contractor or builder can render professional services to the owner only if the contractor or builder is the owner. There can be no ethical conflict when the building is designed for and constructed by the builder and subsequently sold to a new owner. It would be difficult at best, however, to maintain an appropriate professional advisor relationship with the owner of the project under any other condition of employment by the builder. To be specific, unless the architect produces the package, the Package Deal is fraught with pitfalls for both the Architect and the Owner.

2. When the Architect becomes the employee of a Non-Architectural firm and serves the firm in that capacity, there should be no conflict of professional ethics. However, if that firm in any manner offers Architectural services based on its employee's registration, then the firm and its architect employee tread very thin ice, both ethically and legally. Ethically because the Architect as an employee must obviously consider his employer as his primary client, and legally because Architectural registration is personal and may not be transferred.

3. Joint ventures with Engineering Firms in which the Architect is in full responsible control of Architectural projects are perfectly normal and appropriate. However, if there can be any serious question of the Architect's position in such joint ventures, then a severe rationalization of professional status is obvious.

4. Speculative ventures in which the Architect promotes an idea for development, or in which he shares as owner are becoming more and more frequent. Such ventures are often rewarding and may be undertaken without violating the ethics of the profession. It is in such ventures, however, that ethical propriety is most difficult to determine and self discipline must be most meticulously imposed. Each relationship in such ventures should be reviewed very carefully to assure that the position of the Architect is precisely defined to each party involved.

Since the majority of Architects do not usually find themselves involved in the situations discussed, and since there are those regrettable few, for awhile rationalize their positions, these (Continued on Page 38)
A few years ago the decision was made to have the State of Florida represented in the New York World's Fair which officially opens on April 22, 1964. This decision was made after Governor Bryant appointed a small group to investigate the potentials for Florida entering the World's Fair. The report was favorable.

On July 11, 1962 Governor Farriss Bryant established The Florida World's Fair Authority of which Mr. Comer J. Kimball, Chairman of The First National Bank, Miami was appointed Chairman. Soon after, a Corporation was set up with Mr. W. L. Stensgaard being appointed Executive Vice President and Mr. Ed Soucy, General Manager.

The firms of Pancoast, Ferendino, Grafton, Skeels and Burnham, Architects, and Connell, Pierce, Garland and Friedman, Architects and Engineers were commissioned to prepare the design of the Florida pavilion.

Edward G. Grafton and James Garland serve as project managers for the two firms. Once the grounds plan were approved early in 1963, groundbreaking ceremonies were held on June 24, 1963 for the spectacular Citrus Tower which is sponsored by the Florida Citrus Commission.

Along a 500 foot front on Meadow Lake is Flushing Meadow Park, the Florida World's Fair Authority has created at what may exceed a $5 Million image of the Sunshine State for viewing by a potential 18 million persons during the New York World's Fair in 1964-65.

The Park, located in the Borough of Queens, New York City, is in the heart of the world's greatest metropolitan area.

The 3.12 acre Florida site, near one of the main Fair entrances which adjoins a 3,500 car parking lot, was selected at no charge to the State for the land area.

Serving as a landmark of the State site is a bright orange-colored beacon perched atop the 110 foot high Citrus Tower. The tall triangular column can be seen for miles around, from all highways, rail and air approaches.

The steel triangular truss of the Citrus Tower is encased in plastic and wood and the 16 foot diameter mammoth orange at the top of the tower is made of fiberglass. The ornaments on each side of the Tower are made of plexiglass and the Tower is illuminated from within. It is symbolic to note that the Citrus Tower was the first structure completed and lighted on the Fair Grounds. Since September 25, 1963, the Tower has been providing the symbol for the State of Florida.

Around the base of the Citrus Tower is a building, 50 feet in diameter, from which will be provided fresh orange juice to visitors.

now walls like this are within anyone’s budget!

...with NEW Georgia-Pacific INLAID Hardwood Plywood Paneling

turn the page for details→
WHAT YOU SHOULD KNOW ABOUT NEW GEORGIA-PACIFIC FACTORY-FINISHED INLAID PANELING

Until now, only custom carpentry could achieve the luxurious look of inlaid paneling. Georgia-Pacific has just put inlaid paneling within reasonable budget limits by producing it in factory-finished panels. Retail price is from $26.95 to $29.75 per panel. G-P Inlaid paneling provides the full beauty of custom inlaid work, plus the practicality of quick, easy installation and a protective factory-applied finish.

specifications

SIZES & SPECIES. Available in 4' x 8', 9' & 10' panels of 3-ply ¾" hardwood plywood. (Panels of other thicknesses available on special order). Species: Golden Elm with Walnut inlay, Walnut with Pecan inlay, Pecan with Walnut inlay and Heirloom Cherry with Walnut inlay (this features a “distressed”* finish on the Cherry).

FACE VENEERS & INLAY. All face veneers are flat sliced and book matched on 14¾" sections, 3 sections per panel, separated by 1¾" wide inlaid strips. An inlaid strip is also provided at one edge of each panel for balanced installation.

V-GROOVES. V-grooves are used at each joint between the inlaid strip and the sections. Grooves are accent finished.

BACKS. Backs are hardwood veneers conforming to the requirements of CS 35-56 and are sealed to minimize moisture absorption.

new Acryglas* finish gives hand-rubbed appearance

Both Inlaid and Gold Crest lines feature G-P’s exclusive Acryglas catalyzed resin finish in a new application that gives the appearance of a hand-rubbed oil finish. Acryglas is baked on in a 3-coat process, as per government specifications for finishing institutional furniture. This finish reduces flame spread up to 50% as compared to untreated veneers. It resists soils, stains and scuffs.

*Note: “Distressed” Cherry finish is an Acryglas application over a surface with an antique appearance.

MAIL THIS COUPON for full details on new G-P INLAID Paneling: Georgia-Pacific Corp., P.O. Box 311, Portland, Ore. 97207.

Two Architects Recipients Of Student Chapter Award

Professor Pasquale M. Torraca
University of Florida

Robert H. Levison, AIA
Director Florida Region

Each year the Department of Architecture, University of Florida, sponsors the Annual Student Awards Luncheon. This year the Department was most fortunate to have as guest speaker Mr. Philip Hiss of Sarasota.

Mr. Hiss was, until last week, Chairman of the Board of Trustees of New College of Sarasota. He has served on the Sarasota County School Board and has certainly played a significant role as a client in the architectural evolution-revolution in the Sarasota area.

Mr. Hiss spoke on the “Client and the Architect,” and related his role as a client in the selection of Mr. I.M. Pei to design the New College campus. In the text of his talk, Mr. Hiss questioned whether there was sufficient communication in the architect-client relationship, and also expressed his growing amazement at the scarcity of otherwise knowledgeable people who know so little about architecture. His talk was poignant and perhaps controversial but it was refreshing to listen to a man who is both controversial and knowledgeable.

At the luncheon, President William E. Tschumy, Jr., announced that the Student Chapter of the American Institute of Architects has initiated the award of an Annual Citation. This citation is to be awarded each year to that person or persons who have made outstanding contributions in the field of architectural education, and who have, in addition, contributed unyieldingly of their time and experience to the students of the Department.

It was with great pleasure that President Tschumy made the first annual awards to two gentlemen, each of whom are highly deserving in their respective roles.

For his devotion to the students and to the Department of Architecture, the Student Chapter, A.I.A., proudly conferred its Citation upon Mr. Robert H. Levison, Director of the Florida Region of the American Institute of Architects. Mr. Levison has been a good friend of their students for many years, and has on numerous occasions given of his time and knowledge.

The second recipient of the annual award was a gentleman who has literally devoted a lifetime to the student, to education, and to the architectural profession. A graduate of the University of Pennsylvania, this man has served the students in his role of administrator, professor, and close friend. With the utmost pride, President Tschumy conferred the Student Chapter Citation upon Professor Pasquale M. Torraca. He accepted his citation amid a standing ovation. Although Professor Torraca retires this year, he will not be easily forgotten by the students, for he is a true educator and a fine gentleman in every sense of the word.

The Citation of Merit, awarded to both gentlemen, gave recognition For Outstanding Service to Architectural Education and to the Students of the Department of Architecture at the University of Florida.

Dean Turpin C. Bannister presented the Association of Student Chapters —A.I.A. Service Award Certificate to Chris Charles Benninger of Gainesville, for valued and outstanding service to the Association of Student Chapters of the A.I.A. in a manner emulating the highest standards of architectural practice.

Graduating senior William F. Luger, Saginaw, Michigan, was awarded the Alpha Rho Chi medal for his display of leadership, service, and professional merit, and outgoing Student Chapter President William E. Tschumy of Miami was awarded the F.A.A. medal for outstanding and meritorious contributions in leadership and service among his fellows.

Professor E. M. Fcarney announced the recipients of the Florida Solite Company design competition. First prize of $75.00 was awarded to Robert Harris of Key West, and second prize of $25.00 was awarded to Clyde A. Brady of Panama City.

In addition, Howard Snoweiss, Miami Beach, was named as second place winner in the State Competition Design Project sponsored by the Florida Association of Interior Designers.

In the Playground Competition sponsored by the Park Association of New York, the following students were awarded Certificates of Commendation: Miss Lynn Schirs, Detroit, Michigan, and Richard Brown, Daytona Beach. Honorable Mention was awarded to Dale Baxter of Niagara Falls, New York.
More and more purchasers of fine homes are saying **YES**

...to the far safer, more dependable home heating that cuts heating bills in HALF

...to the economical air conditioning that's so much cleaner, safer, surer, all 'round better

**OIL home heating and**

**ELECTRIC air conditioning...**

**FLORIDA'S MOST ECONOMICAL YEAR 'ROUND COMFORT TEAM**

**AND THAT'S NOT ALL,**

**MR. ARCHITECT**

This money-saving comfort team will earn many a Thank You from your clients as they enjoy complete, year 'round comfort at lowest possible cost year after year after year. You'll never have cause to regret specifying electric air conditioning and oil home heating!

*FLORIDA HOME HEATING INSTITUTE*

*2022 N.W. 7th Street - Miami*
Florida's Fair...
(Continued from Page 8)

Beyond the Citrus Tower is the air-conditioned Exhibition Hall which is circular, having a diameter of 160 feet and containing approximately 20,000 square feet of floor space. It is 24 feet high.

The Exhibition Hall is steel frame construction with radial truss and the roof is of poured gypsum concrete. The exterior walls will be covered with marine plywood using Florida Citrus colors as the decorative theme. An integral part of this scheme will be the use of large modern panels in each bay of the walls in which will be alternated design of the map of Florida. The Great Seal of the State of Florida and the sun. These panels will be white and the contemporary design motif will be of brilliant gold.

Inside, there will be a central exhibit area, 50 feet in diameter. This area will be occupied by priceless examples of the cultural arts on loan from both public and private collections throughout the state. Around this focal area will be various exhibit spaces pertaining to industry, agriculture, sports, attractions, education, counties and cities. This structure will be air conditioned and will house the administrative office of the Florida World’s Fair Authority.

The Porpoise Pool and Stadium is a circular, outdoor amphitheater-type steel structure, reinforced with precast concrete columns. The roof is unique. It is covered with a vinyl coated fabric and in alternating panels of orange and white suspended by cables over the entire stadium.

The porpoise pool tank is of reinforced concrete and located in the center of the amphitheater with a depth from eight to twelve feet. Since the careful selected porpoises require salt water, detailed planning was achieved to insure proper salination of the water. Also air transportation has been arranged to have the porpoises transported from the Seaquarium in Miami to New York City.

One can not visualize the behind the scene efforts to achieve the porpoise show which will be a first for a World’s Fair. Detailed physical and mental requirements were prepared for the careful, hand selected porpoises. Extensive training has been underway during the past sixty days to prepare the porpoises for their performances at the Fair.

During the evening hours, the amphitheater will be devoted to performances by dance, choral groups, live fashion shows as well as film presentations depicting Florida’s many attractions and beauties. Present plans indicate as many as 5,000 performers may appear for the evening performances during the first season of the Fair which ends October 23, 1964. The second season begins in April of 1965 and continues through October of that year.

On the North side of the Florida Fair there was a need to have a visual screen separating the neighboring pavilion. The Florida Concrete and Products Association conducted a contest for the design of a decorative masonry wall. The winner for the best design of this wall was Herbert R. Savage, AIA of Miami. The masonry units are being furnished by the Association and also contributed toward the construction of the foundation of the wall.

The decorative wall will also serve (Continued on Page 37)

Compact Equipment Increases Efficiency
...and Saves Costly Space

Push-button telephones allow busy people to handle several calls at one time. These instruments speed your telephone work; make it easy for you to transfer calls; let you hold calls while you talk on another line.

Streamlined console “switchboards” sit conveniently on the corner of a desk. Yet they handle just as much traffic as a regular PBX board! These modern consoles are the answer for many business problems.

Is your equipment keeping up with your needs? Call your Telephone Company Business Office for a free communications check-up.
That’s the way it is with PICO SAFE STAIRS.® Now it’s possible to erect steel stairs stories high before walls and floors are in place. These unique units arrive ready to erect to the desired level—your building grows around the stair framework. The-pre-erected stairs carry between-floor traffic during construction and provide pre-determined dimensional guides. Factory control assures maximum adherence to plans and specifications. Architects and builders agree: “PICO SAFE STAIRS are the most important step(s) in planning.”

Florida Steel Corporation is licensed to manufacture and sell PICO SAFE STAIRS.® For further information about these revolutionary steel stairs see your Florida Steel representative, or write: Florida Steel Corporation, 1715 Cleveland Street, Tampa, Florida.
Membership in The Florida Association of Architects includes all Corporate members of the American Institute of Architects assigned by the Institute to A.I.A. Chapters in Florida and The Florida Association of Architects and all Professional Associate and Associate members of the eleven A.I.A. Chapters in Florida.

The Florida Architect
specify Mahogany...giant sizes, immediate delivery, no extra cutting costs!

As the world’s largest producers of genuine mahogany, we import our own... entirely from Central and South America, and always have a good stock of both logs and lumber. That’s why we can give you what you want, cut to specifications, when you want it.

You may finish genuine mahogany in virtually any color or degree of tone, and we can supply up to 20-foot lengths, 24-inch widths, and 4-inch thickness. This prestige product is available at prices competitive with many inferior woods.

So in much larger sizes, you can use the same wood that brought world renown to such names as Chippendale, Duncan Phyfe and Stradivarius... the same mahogany that remains unchanged, uncracked, unwarped in the Cathedral of Ciudad Trujillo built in 1514... the same magnificent material chosen for the interior of the luxurious new Hotel Sheraton in San Juan.

And if it’s slipped your mind, tests by the U. S. Forest Products Laboratory and Cornell University show genuine mahogany to be superior over other popular hardwoods in nearly all properties for mortising, boring, planing, warping, shaping and turning. So let your imagination go when you plan how to use it.

When you want the prestige of adding that “extra something” to your work, use genuine mahogany. Write direct for more information and address of your nearest distributor. We will be happy to cooperate with architects and decorators.
flameless electric YEAR-ROUND
Year-round electric air conditioning is gaining momentum all the time... for every type of residential, commercial, industrial, recreational and institutional application.

Builders, realtors and architects agree that here in Florida year-round indoor climate control is normal and necessary to modern living, working, and doing business.

And since refreshing coolness is essential to summer comfort, why not use the same equipment to provide cozy warmth during cold spells? It makes good sense... saves good dollars, too... and versatile year-round air conditioning serves this dual purpose.

Flameless electricity does it best — Year-round all-electric air conditioning — the most automatic of all — is the only kind that has no flames and hence makes no dirt, no soot, no fumes. It is clean and odorless... needs no flues or vents. It has fewer component parts, less "extras". That means less chance of mechanical failures. It is essentially trouble-free. There's no adjusting needed, no watching required. It operates with push-button simplicity, or with automatic thermostatic control.

In central air conditioning installations, the same ductwork system delivers coolness or warmth, filters indoor air of dust and pollen, and controls humidity. With compact room units, no ductwork is required.

Tried and proven reliability — With electric air conditioning you're sure of the tried and proven benefits of a half-century of research, development and engineering know-how. Hundreds of thousands of installations all over Florida attest to its dependability. Hundreds of models are available for complete flexibility and every conceivable requirement.

Most economical from first to last — Year-round electric air conditioning gives greater economy, too, not only in initial cost but also in the greater economy of installation, maintenance, space requirement, and lower cost per ton to operate. It helps to sell homes faster, makes apartment renting easier, improves efficiency of workers, and provides a pleasing and comfortable environment for customers.

We invite you to ask us for factual information. There's no obligation.

Florida’s Electric Companies... Taxpaying, Investor-Owned

Florida Power & Light Company - Florida Power Corporation
Gulf Power Company - Tampa Electric Company

APRIL, 1964
Fire safety comes first—economy's a bonus in Florida schools of MODERN CONCRETE

Fire protection should certainly be one of the most important considerations when building a new school. Concrete provides this protection—and at exceptionally low cost. Concrete can't burn. It stays solid and safe... never wears out.

Concrete helps keep classrooms quiet, too. It reduces sound entry into rooms—decreases the need for sound-proofing within rooms. And concrete is one of today's most attractive building materials. New design and construction methods provide interesting surface textures and colors, new shapes and styles for walls and roofs.

Concrete saves on upkeep expense. There is no need for painting. It is easy to see why concrete with its long life, low cost and upkeep is the first choice of so many communities for their newest schools of every size.

THE FLORIDA ARCHITECT
WHEN THIS ROOF DECKING GOES UP COSTS COME DOWN!

- DOWN GO MATERIAL COSTS!
  No need for additional insulation—or, for extra framing and finish material. As you sheathe with weatherproof Homasote Roof Decking panels, you get constant resistance to heat, cold, air and moisture penetration—plus a finished interior!

- DOWN GO HANDLING COSTS!
  Four thicknesses of "Easy-ply" deckings let you select your most advantageous rafter spacings. There's nothing to apply on the ceiling side—panels are factory finished, in a wide selection of attractive effects.

- DOWN GO FINISHING COSTS!
  Ceiling side of panels can be supplied with washable white kraft paper and vapor barrier, with wood-textured, striated and cork laminate finish or primed in acrylic latex colors to order.

Approved by B.O.C.A. (#54-15), S.B.C.C. (6330)

HOMASOTE COMPANY
TRENTON 3, NEW JERSEY

April, 1964
1. Except for minimum coordination requirements, do you favor awarding contracts for architectural services to private enterprise, or do you favor having these services performed by employees of various state departments?

2. Would you, as Governor, consider the use of Architects as professional advisors to state boards or commissions charged with the control of the building process wherever possible?

3. What is your opinion of the propriety of a Governor's actions in either promoting or permitting the practice of awarding contracts for architectural, engineering and related professional services on State construction projects primarily to personal friends and/or for those who helped most in the Governor's election?

4. If elected, do you foresee any need for the State, during your administration, to increase its staff or activities in the professional practice of architecture or engineering on State projects in competition with private enterprise?

5. The growth of the State requires the preparation and execution of planning for community facilities which must ignore existing political boundaries, through coordinating authorities such as Metropolitan Government is for Dade County, the effective and efficient provision of adequate public facilities and services can be achieved, therefore:
   a. Do you recognize the need for overall county and regional long-range planning?
   b. Do you recognize the need of coordinating agencies with governmental authority to prepare and execute plans for countywide and regional facilities and services without regard to existing political boundaries?
   c. Will you effect vigorous and relentless leadership for the enactment of enabling legislation relative to the establishment of such coordinating authorities?

---

**Questionnaire For Candidates...**

**Answer...**

**By FRED B. DICKINSON**

Thank you so much for your letter of March 13, and for the interest which your association has shown in the selection of Florida's next governor.

Listed below are my answers to your questions:

1. I favor awarding contracts for architectural services to private enterprise, and I do not believe it is necessary to increase the staff or activities of the state in competition with private enterprise.

2. Wherever possible I would use architects as professional advisors to state boards or commissions charged with the control of the building process.

3. I believe that contracts for architectural services should be given on a merit basis to firms best qualified to do the work without any consideration at all whether they happen to be personal friends of the governor, or helped most to bring about the governor's election.

4. Same as No. 1.

5. It is always good practice to do planning in advance and I am in favor of this planning going forward, ignoring existing political boundaries so that better coordination of public facilities and services can be achieved, and I will do everything in my power to enact enabling legislation to establish coordinating authorities to see that this original planning is carried out.

---

**Answer...**

**By SCOTT KELLY**

I find it necessary to answer your letter of March 13th very briefly because, as you know, I am literally "rushed to death."

The following are my answers to the questions which you listed:

1. I would favor awarding contracts for architectural services to private enterprise.

2. I would, as Governor, consider use of architects as professional advisors to state boards and commissions charged with the control of the building process wherever possible.

3. As Governor, I would approve the policy of awarding contracts for architectural services and so forth on the basis of ability rather than as political rewards.

4. I do not foresee any need for the state, during the time I hope to be Florida's next Governor, to increase its staff or activities in the professional practice of architecture or engineering on State projects in competition with private enterprise.

5. A—Yes
   B—Yes
   C—Yes

---

**Answer...**

**By JOHN E. MATHEWS**

I have your letter of March 13th, and wish to assure you that I not only have the highest respect and admiration for the Florida Association of Architects, but have always worked closely with them in their legislative programs.

I am most pleased to see the interest your association is taking in the present gubernatorial race.

I am a firm believer in the use of private enterprise whenever possible with reference to services rendered to governmental agencies.

(Continued on Page 29)
ABOUT THE QUESTIONNAIRE

Identical letters and a copy of the Questionnaire were sent to nine candidates for the office of Governor in the 1964 elections. Four of these men—Messrs. Burns, Holley, Karl and High—did not acknowledge our letter nor reply to any of our questions. Mr. Folks acknowledged our letter but did not reply to the Questionnaire. Replies from the other four are published in full...

(Continued from Page 28)

I certainly do favor the use of architects as professional advisors to state boards or commissions which have control of building programs.

It is not only morally and ethically wrong, but extremely bad governmental practice for any governor to award contracts for architectural or professional services just to personal friends.

I have long been an advocate of overall county and regional long-range planning, and the journals of the House show that I introduced bills to set up a statutory framework for this in both the 1957 and 1959 sessions. I will continue to press for such legislation.

Mathews...

Question 1. I favor the least expensive way for the best results.

Question 2. Yes, I would consider the use of Architects as professional advisors to state boards or commissions.

Question 3. My opinion is that contracts should be awarded strictly on merit of bid, nothing for personal or political debt.

Question 4. I do not see any need to increase its staff or activities at this time.

Question 5. A. Yes, B. Yes, C. Yes.

Book Review

Prestressed Concrete for Architects and Engineers by H. Kent Preston, is designed to show architects and engineers how available prestressed concrete materials are assembled into buildings that are aesthetic, safe, and economical. The author presents, in illustrated detail, existing buildings of all types as examples of current uses of prestressed concrete and its great potential.

Basic principles of stress distribution, a discussion of properties peculiar to prestressed concrete, and procedures of fabrication and erection are included in the ten chapters of the book. Span-load tables for typical sections, detailed drawings of standard methods of framing, a specification for the structural design of j oints and connections, a code for structural design, and a suggested procedure to be followed in designing a prestressed concrete building are given as guides in the design of new structures.

The first chapter, an illustrated introduction to prestressed concrete, shows what has been done and tempts the reader to try it himself. Chapters Two and Three cover basic principles of stress distribution and new concepts inherent in the use of prestressed concrete. Chapters Four, Five, and Six describe materials and methods of manufacture and erection, and give full data on typical members including cross-sectional details and span-load tables.

Twenty-two pictures, drawings, and charts of framing details with appropriate discussions are incorporated in Chapter Seven. Other chapters cover special factors which must be considered in designing a prestressed concrete structure, with a step-by-step procedure to be followed in designing an economical structure; and important specifications, including specifications of design of joints between precast members. “Tentative Recommendations for Prestressed Concrete,” a complete code for design prepared by a committee of ACI-ASCE experts, is given in the Appendix.

The author, Mr. Preston, is Chief Product Engineer—Construction Materials—The Colorado Fuel & Iron Corporation, John A. Roebling’s Sons Division, Trenton, New Jersey.

Planning an apartment? motel? hotel?

Or an office, school or institutional building?
Specify the Dwyer Compact Kitchen in the size and capacity required for the application. There’s a full line of Dwyers from 39” to 72” in length, for conventional or recess installation. Include refrigerator, gas or electric range and bake/broil oven, deep sink and storage. Heavy-duty construction and vitreous porcelain finish assure lasting durability and beauty.

APRIL, 1964
Personnel and Duties of FAA Committees for 1964

Commission on Professional Society
James Deen
FAA Treasurer

1 ... MEMBERSHIP
Chairman: Lester N. May
Duties: To encourage Chapters to study AIA membership changes, to foster increased membership in the FAA in all categories and complete the analysis of the FAA membership.

2 ... PUBLICATION
Chairman: H. Samuel Kruse, FAIA
Duties: Assume responsibility for the publications program of the FAA and act as liaison between the editor of THE FLORIDA ARCHITECT and the Board. There shall be meetings held regularly, in conjunction with Board Meetings.

3 ... CONVENTION
Chairman: Dana B. Johannes
Duties: To develop an FAA Convention format and organization for the 1964 convention consistent with the professional needs of architects in the State and consistent with the best public relations impact. To produce effective written guidance for future conventions based on experience of the 1964 convention.

4 ... BUDGET
Chairman: James Deen
Duties: To operate in accordance with the direction of the By-Laws.

Commission on Education and Research
William T. Arnett
FAA Vice President

1 ... AWARDS AND SCHOLARSHIP
Craftsmen Section
Chairman: Hilliard T. Smith
Duties: To foster craftsmanship within the building industry and to conduct the Craftsmanship Awards Program, which includes the statewide selection of the Florida "Craftsman of the Year."

2 ... AWARDS AND SCHOLARSHIP
Education Section
Chairman: McMillan H. Johnson
Duties: To conduct the program of student awards including the FAA Medal, and to administer and serve as trustees of the student loan funds including the FAA Student Loan Fund, the Rudolph Weaver Student Loan Fund, and the Sanford Goin Memorial Loan Fund.

3 ... EDUCATION
Chairman: Jack West
Duties: To conduct educational activities in the field of architecture.
5. SCHOOLS AND EDUCATIONAL FACILITIES

Chairman: Andrew J. Ferendino

Duties: To provide professional leadership in the study of the principles of planning schools and educational facilities, to establish productive contacts at state and local levels, and to cooperate with governmental and private agencies in matters of mutual interest; to disseminate contributions to professional knowledge by publication, to cooperate with the School Plant Section of the State Department of Education in conferences on school affairs, and to promote contact with the state organization of County Superintendents concerning school building regulations and their effect on school design and educational programs.

Commission on Professional Practice

Richard B. Rogers
FAA Vice President

1. OFFICE PROCEDURES

Chairman: Earl M. Starnes

Duties: To assist the architect to perfect himself in his profession through technical improvement in his office organization and techniques; and to develop seminars and office aids to accomplish this purpose.

2. PUBLIC RELATIONS

Chairman: Edward G. Grafton
Vice Chairman: Herbert R. Savage

Duties: To work closely with the Chapters on the problem of the public relations of the profession; and to consider means whereby the programs developed at State and National levels can be extended to the maximum degree at the Chapter level. To schedule, if feasible, a Public Relations Seminar for the entire FAA membership to fall between the May and September Board meetings.

3. FAA - FAIA

Chairman: Archie G. Parish, FAIA

Duties: To assist and encourage Chapters in submitting appropriate nominations for AIA Fellowships.

4. FAA - FES

Chairman: Roy M. Pooley

Duties: To promote professional relations between architects and engineers.

Commission on Architectural Design Group

C. Robert Abele
FAA Vice President

1. COLLABORATION WITH DESIGN PROFESSIONS

Chairman: A. Robert Broadfoot, Jr.

Duties: To foster the Fine Arts and to promote a close relationship between architects and sculptors, painters and others practicing the arts allied with architecture; and to prepare a list of those artists available to architects.

the American Institute of Architects, were present at the meeting of the new chapter to present the good wishes of their respective organizations, and charged the officers and members of the new chapter with the responsibilities to further the high ideals of The American Institute of Architects, and to continue their important roles as leaders in their respective communities. They further stressed the importance of the Architect to his community as arbiter of public taste and leader in providing an attractive community image.

The support of all the members was evidenced by the exceptionally high attendance at the initial meeting.

FAA GOLDEN ANNIVERSARY CONVENTION
November 11-14
Jacksonville

News & Notes
41st Annual Golf Tournament...

The F. Graham Williams Company of Atlanta is doing the calling—and for the 41st time. The open invitation applies to architects and architectural draftsmen of the Southeast; and it refers to the Company’s 41st Annual Golf Tournament and Dinner. This popular event will be held on Friday, June 12, 1964, at the East Lake Country Club, Atlanta, Georgia.

If you plan to attend this year’s annual event, help your hosts by writing Mr. John H. Hallman, President, about your plans at 1690 Monroe Dr., N. E., Atlanta.

(Continued on Page 36)
Seminar–Plant Planning for Profits

The date to remember is Friday, April 17th; location—Roque Room, Exposition Park, Orlando, Florida; time, 9 a.m.; why, to attend FAA Seminar on Plant Planning For Profits in conjunction with the Florida Industries Exposition.

The three hour program on Plant Planning For Profits will explore the architectural programming for industrial progress.

Also of interest to architects will be the afternoon program presented by the Associated General Contractors of America. The theme of the AGC program is New Construction Technique. The topics for this program will be concerned with “Tomorrow's Buildings Today,” NASA “Building for the Future” and “New Shapes in Concrete.”

FAA members should make plans to attend both seminars as well as the Florida Industries Exposition, which will be held during April 14-17.

The Board of Directors of the FAA will hold their second meeting of 1964 on Saturday, April 18th, at the Cherry Plaza Hotel in Orlando.

PROGRAM
FRIDAY, APRIL 17

9:00 A.M.—Statistical Analysis—Florida Industrial Growth. Dr. Paul Douglass, Director, Center for Practical Politics, Rollins College.

9:10 A.M.—The New Industrial Environment. John B. Langley, AIA.

9:50 A.M.—Digest—Moderator, Dr. Paul Douglass.

10:40 A.M.—Digest—Moderator, Dr. Paul Douglass.

10:45 A.M.—Presentation of Mid-Florida Chapter AIA Citation by Robert B. Murphy, AIA, President.

11:05 A.M.—Selecting Architectural Leadership. Richard Boone Rodgers, AIA.

11:30 A.M.—Summary—Moderator, Dr. Paul Douglass.

11:40 A.M.—Question and Answer Period.

Fulfilling the original concept of architect and client for outstanding business interior designs.

Architect: Wahl J. Snyder, A.I.A.
Interior Designer: Vern Currie, A.I.D.

During the past several months the Board has been concerned regarding complaints being received in its offices relating to ethical standards of practice.

I do want to point out, that your Board as the Administrative and Regulatory arm for the members of our profession in Florida, cannot and does not dictate to the individual registrant or to the various Chapters how architect-client relationships should be handled. Your association has established sound ethical standards for the guidance of all registrants and complaints concerning these standards should be handled by the Chapter and the State Association Committees. It is only when an alleged violation of Chapter 467 of the Florida Statutes is reported that your Board can take official action.

It does concern us, however, that members of the profession are being unjustly accused of undesirable practices. It is not necessary to elaborate upon the fact that, as a result of such accusations the entire profession is spotlighted in the glare of unfavorable publicity. Rumor is an ugly weapon in the hands of vindictive persons; innocent persons many times suffer from the rumors being circulated.

Your Board feels, therefore, that we all should re-examine client relationships to insure that such charges cannot be made in the future. Let us ask ourselves if we demand the same high standard of administration from our office staffs and associates as we have set for ourselves.

When accepting a commission do we carefully explain to the client, regardless of estimated project cost, the legal and administrative features of the contract? Is such contract in writing to insure against hazy memories and misinterpretation of pertinent facts? The client should be thoroughly briefed on the responsibility assumed by the architect in accepting the commission. Further, he should be familiar with his legal responsibilities so far as the contract is concerned.

The architect has the full professional responsibility for the project from drawing board to completion. His is the responsibility for keeping the client informed of all matters involving the architectural phases of the project. In his supervision of the project he bears the responsibility to seeing that the contractor and others employed in actual construction perform their work according to contract with maximum dispatch.

If we bear these items in mind we will find that through satisfied client relationship our professional stature will increase. No opportunity will be had for disgruntled individuals to complain as to treatment received. The profession as a whole will benefit. If, in our daily work, we gloss over these matters with the feeling that they will take care of themselves we can only look forward to continued difficulties in this area in the future.

I am sure careful consideration will result in the proper decision, which is ours to make.

RESIDENTIAL INTERIORS

APRIL, 1964
National Library Week...

By Donald E. McIntosh, A.I.A.

The annual observance of National Library Week (April 12-19) will indeed attract the attention of the most literate generation of the best-informed nation on earth—ours! Newspaper editors will assign extra space for book reviews and library news in general; networks, educational television and radio will broadcast mentions and features appropriate for the occasion. And the magazines will carry their full share of timely library news while librarians and their key staffers assemble at the George Washington Hotel, West Palm Beach, for the three-day Florida Library Association meeting, April 9-11. The nation's major book publishers will be there with their latest and best, as will book binders, makers of library furnishings and suppliers.

Important among the year's accomplishments is the completion of St. Petersburg's new central library, and the construction start of Jacksonville's downtown library project.

In Tampa, the library system has been markedly upgraded under the leadership of board chairman, Charles Fendig, the city's past mayor, Julian Lane, the present mayor, Nick Nuccio, and city librarian, William Frieze. Already complete and in use is the new north Tampa branch, and an addition to the Port Tampa branch. A new Seminole branch building is now on the boards, and Tampa's proposed municipal central library is ready for bidding. Architects are McLane, Rancon, McIntosh and Bernardo, McElvy and Jennnewein, Tampa. John Hall Jacobs, Atlanta, is the consultant.

The new Tampa library will occupy a 2.22 acre site in the downtown river front Urban Renewal area and will contain approximately 100,000 square feet on four stories. The entire first floor and mezzanine are designated for public usage. The 375,000-volume closed stack room occupies the third floor. Mechanical equipment, service departments and administrative offices occupy the fourth floor. The service entrance and bookmobile facilities are located under a free-form domed auditorium which has a seating capacity of 200. Two elevators at opposite ends of the building will serve all floors.

BBE Craftsman Awards...

Skills displayed by twelve mechanics in the building trades earned Craftsmanship Awards in the Broward Builders Exchange annual recognition of expert work in the creation of homes and buildings. The Broward County Chapter of A.I.A. cooperated in this annual event.

The skills displayed a variety of crafts ranging from creation of a stained glass window to the laying of an outstanding gravel patio.

Winners of the awards were carpenters Paul Nichaus, Joseph R. Owen, Jr., J. Bruce Garland, Calvin Smith and Harold Whitney; plasterer Ronald E. Lussford; brick mason Edward Scanlon; stone mason Larry Abate; Stanley Romano, for lathe; Volveno Toffolo, who laid the patio, and Gary Dufresne, who put in the window.

The twelfth man was a general contractor, John Dec, who won a carpentry citation for work he performed in building his own home.

The principal speaker stressed the self-respect in work. Noted Florida Architect Alfred Browning Parker of Miami spoke of the satisfaction which can be gained through putting skills and talents to use in constructive activity.

Warren J. Hower, Chairman of the BBE's Craftsmanship Awards Committee distributed the citations. He said that a total of 46 items were nominated and inspected by committee members last year. Nominations may be made only by architects or engineers.

The winners and awards program were applauded in talks by BBE President Edward A. Heep; Jack Zimmer, 1963 President of the Broward Chapter of the A.I.A.; and Richard Mills, 1963 President of the County Unit of the Florida Engineering Society.

Members of the Craftsmanship Awards Committee of 1963 were: Architects, James Hartley, Bob Kerley, George Polk, Louis Wolf; Engineers, Constantine Eberhard, Eugen C. Hedges; Architectural Field Supervisor, Herbert Hinman, General Contractors, Warren J. Hower (Chairman), Harry T. Jones, Glenn Sampson and Charles Ham.

New Spirit...

(Continued from Page 7)

four points appear to create a gray area in our thinking, locally and nationally. Therefore, if my observations will serve to stimulate thought and discussion, a useful purpose will have been served.

When the gavel descended at the precisely appointed hour to close that Washington conference, I am confident 48 Presidents of A.I.A. Organizations departed with renewed enthusiasm, deeper understanding and the New Spirit bubbling happily in their hearts.

I leave a fuller report of the proceedings of the Committee on State and Chapter Organization to the capable hands of the Institute staff and its communications media.
Florida’s Fair...
(Continued from Page 13)
as background for principal landscaped areas depicting beach areas
with sand donated by Daytona Beach
around the alligator pool.
The Bridge to the Keys winds along
the edge of Meadow Lake overlooking
two cooling fountains in the Lake.
Here also is Flamingo Isle where spe-
cies of these aquatic birds in all their
brilliant plumage will be seen in
Tropical palm garden settings. The
250 foot long broadwalls will end in
the home area where visitors will in-
spect a beautiful, Florida retirement
home.
The original design plans for the
Florida buildings specified stucco con-
struction but due to the extreme cli-
matic conditions plus the cost to
provide heated tents for this type of
construction, the early plans were
disregarded. Mention of this is signi-
ficant since stucco is typical of Florida
construction and knowledge of why
the buildings were built as they are,
should be known by Floridians.
The entire project was a particular
challenge to the architects and engi-
neers since it represented construction
of buildings whose existence was
known to be for only 2 years. At the
end of this period all of the structures
must be completely demolished and
the site left in its original form to a
depth of four feet below the ground
level.
This gigantic project has been fi-
nanced by contributions from the
citrus commission, the sale of exhibit
space, revenue from vending opera-
tions, revenue from the first live por-
poise show ever to be staged on such
a grand scale, gifts arranged by a spe-
cial committee and a contribution
from the state government.
The image of Florida will be por-
trayed beginning April 22nd to en-
courage additional millions to:
1. Spend their vacation in Florida
2. Come to live in Florida
3. Establish their business and in-
dustry in Florida
4. To buy, use and consume more
   Florida products
5. To enjoy year around sports and
   living in Florida
We have every reason to believe,
says W. L. Stensgaard, Executive
Vice President of the Florida World’s
Fair Authority, Inc., that all Florida
will be proud of her attractive and
competitive exhibit at the Fair.

April, 1964
Here is a small test you can use to prove to yourself and others that gas cooks cleaner. The flame of a match held over a smoking cigarette, as on this illustration, completely consumes the smoke. Natural gas itself is 100% combustible so the only residue as a result of gas cooking comes from the grease and smoke from the food itself... and with gas cooking even these foreign materials are consumed by the gas flame. Even odors from onions and other highly-fragrant foods are largely consumed by the gas flame. Nothing cooks as clean as a flame. Want to know more about natural gas cooking? Call your local natural gas utility company.
IT'S NOT CONCRETE

This striking monolithic design is enhanced by that certain elegance found only in natural marble — yet, it costs even less than concrete. GRANOLUX Trowelled Marble eliminates the fetters imposed on your imagination by ordinary construction materials. It allows you to transform your inspired curves, angles, and planes to absolute reality in unique natural marble. Only GRANOLUX, the remarkable trowel-applied aggregate surfacing, offers this versatility never before possible in natural quarried stone. Exhaustive ASTM tests plus more than eight years of extensive European installations have proved that exposure will only enrich its inherent beauty.

GRANOLUX/ trowelled marble

CEMENT ENAMEL DEVELOPMENT, INC.
18656 FITZPATRICK, DETROIT 28, MICHIGAN

This application over sealed exterior grade plywood exemplifies the versatility and exceptional cost advantages of GRANOLUX. It bonds permanently to block, brick, plaster, gypsum-board, concrete (precast, cast-in-place, or prestressed), and other sound backings. Applied on site, it covers surface irregularities with a durable, luxurious coat of marble. Scores of natural marble colors. Send for brochure and ASTM data.
As a special project to raise funds for the Sanford Goin Architectural Scholarship Fund at the University of Florida, the women’s auxiliary of the Florida Central Chapter, AIA, is undertaking a series of auctions-by-mail of original paintings by Florida artists.

To launch the project, six painters from the Clearwater area have donated three watercolors, two oils, and one black and white lithograph which will be sold to the highest bidders and all proceeds contributed to the scholarship fund.

The Florida Architect will publish a photograph of one of the paintings each month, along with details of its value, colors, and size, together with a brief sketch about the artist.

Minimum bids— to be determined by the market value of the painting— will be announced with each photograph. All bids should be sent to Mrs. Edmund MacCollin, 1480 Sunset Point Road, by the 20th of the month in which the picture appears. Checks should be sent until the winner is notified as soon after the monthly deadline as possible; but it is asked that a bank reference accompany each bid.

**Boy in Park**

by

Grady Kimsey

An impressionistic painting of a boy’s head against the vertical background of a park fence and metropolitan skyline. It is done on plywood with the strong color and bold technique that characterizes the work of the 36-year-old newcomer to Florida art circles.

Now associated with the Artist Market Gallery in Clearwater, Tennessee-born Grady Kimsey was art director of television station WATE-TV in his native Knoxville for 10 years before moving to Florida in 1962. The same year he was winner in the art category of the Guide Award for southeastern states.

A graduate of the University of Tennessee, where he majored in fine arts, Kimsey has exhibited at the Braille Memorial in Memphis, the Atlanta Art Museum in Georgia, the Columbia Museum in South Carolina, and Carousel Theatre, McClung Museum, and Dulin Gallery in Knoxville. He has also had a one-man show in Clearwater at the Artist Market. At the Knoxville Center’s annual exhibitions, he won purchase prizes in 1954, 1959, and 1960.

“Boy in Park” is framed in flat, charcoal-black accents the dark lineaments of the tanned face and throat. The painting is predominantly in shades of blue with the brick tones of background buildings behind the black fence. The frame is four inches wide with overall dimensions of 27 by 38½ inches.

Valued at $200, minimum bids will start at $140.

April 22 is the deadline for entering bids, and all bids should be mailed in or before that date to Mrs. Edmund MacCollin, 1480 Sunset Point Road, Clearwater, Florida. A bank reference is requested with each bid, but checks should be sent until the winner is notified as soon after the closing date as possible.
