The Brand Peonies

originated by O. F. Brand and Son, America's foremost hybridizers of the peony. Good peonies naturally divide themselves into the following two classes:

1. Those which are beautiful only when carefully nourished and whose beauty must be developed inside, away from the sun.
2. Those which develop and retain their beauty in the field often times under the most adverse conditions.

Into this last class fall the Brand varieties as they were selected, because they could stand the acid test of the peony, which is the field test. The flower that will stand right out in the field day after day in the blazing sun and still be the almost universal choice of thousands of visitors as they inspect the fields, is a good flower.

Our Chestine Gowdy and Phoebe Cary were first and second prize winners, American Peony Society National Show, Cleveland, Ohio. Two best Peonies introduced since 1910 Mary Brand, first Red and Martha Bulloch, first pink out of a possible four firsts in the color classes at the Great Show just held by the North Western Peony and Iris Society at St. Paul, Minn.

If you want our beautiful new catalog which describes the best of the Brand peonies together with all of the good peonies of other growers, send for it now for this fall's trade. We have an immense stock of roots in all sizes and ages to suit the individual choice of our customers. We not only carry a large stock of our own varieties, but a complete line of the world's best of other flowers. Give us an opportunity to send you a copy of our recent catalog.

A. M. BRAND, Faribault, Minn.
FLOWERS OF THE FUTURE

"Many people both in this country and in Europe are of the opinion that the Iris is 'the coming flower.' This belief is an inspiration to real lovers of the genus, because it will mean a more common knowledge of the riches that they are already enjoying."—B. V. Morrison in *June Country Life*.

It has been my opinion for some years that Irises will some day obtain the recognition they richly deserve. At present the demand for new varieties indicates that they will be used in greater quantities than ever before, particularly when formal effects are desired.

August and September are specially favorable months for planting Irises, and my new Wyoming Seedlings offer, to most people, novelty in pattern and color so much sought for at this time. Some of my seedlings which I particularly recommend are:

<table>
<thead>
<tr>
<th>Name</th>
<th>Color</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chester Hunt</td>
<td>Minnehaha</td>
</tr>
<tr>
<td>Hyatath</td>
<td>Navajo</td>

LAWTON RESUMES

ORIENTAL RUGS

While there will never again be great quantities on hand and weaving gone as fast as quality is made, new rugs have appeared. We are quite sure that these rugs have been woven especially for the American market in harmony with modern fashions. They are both rare and beautiful. Furthermore, they are the result of expensive labor and materials that will be reflected in the final cost. We offer this collection with the confidence that it will prove a success.

...
Do you know the charm of Line?

Rich dim brocade on a wonderful old chair, the deeper glow of hangings, the mellowed Oriental tracery of rugs, the cool neutral background of a roughcast wall. Yes, this lovely room owes a great deal to its colour.

But it owes even more to its line—to the springing curve of the ceiling, the narrow clear-cut oblong of the doorway, the just proportion of the furniture, the originality and restfulness of the spacing and grouping.

The Autumn Decorating Number
SEPTEMBER
HOUSE & GARDEN

Tells you how to give this charm of line to your own home—tells you in words, and by pictures that go all the way from the trees along the drive to the disguise under which an investigating mind might discover the living room radiator.

As to the house itself—the shell for all your treasures—there's an English house, a Dutch Colonial cottage, and two Pennsylvania houses in sturdy stone. The leading article tells you just what you ought to know of furniture, its period, craftsmanship, and finish, before you and your checkbook go shopping. There's a chat, too, on collecting crystal—another on the framing and hanging of pictures—a page of new fabrics—a lively discussion of the living room that whisks into its tablecloth and serves dinner under your very eyes—informative articles on the electric laundry and the electric breakfast.

When we come to think it over, there's just about everything in this number of House & Garden from the Signs of the Zodiac as tamed by the housescape gardener, to a page of decorated offices where really soulful business men spend their sophisticated hours.

It isn't money that makes the house beautiful—it's knowing how. Read September House & Garden and you'll see why.

If you have a house that needs redecorating, be sure to reserve a copy of this Autumn Decorating Number at your usual newsstand now.

35 Cents a Copy

$3 a Year
AUTUMN FURNISHING IN SEPTEMBER

With September starts a bigger and better House & Garden. The child is growing. It will be almost man-size by the time this Fall Furnishing Number reaches you. The reason? Well, the best material available from decorators, architects, manufacturers, gardeners and landscapists is constantly being assembled. The next issue will always be better than the one you have in hand. That is House & Garden’s available future—it constantly grows more interesting, more practical, more inspiring.

This September number, for example. Nothing could be more useful than a practical knowledge of furniture—what you should know about furniture before you buy it. These matters are clearly explained by Matlack Price. On another page are found furniture suggestions from the shops.

If you have never considered picture hanging an art, you will when the definite rules are explained in September. Or if you have never thought of using the zodiac signs in decoration, you will find suggestions here.

Of the many articles on decoration two are quite unusual—schemes for the decoration of offices and plans for furnishing a living room that must serve also as dining room. Most offices are forbiddingly inartistic, but these two are the acme of comfort and good taste. The dining-living room is also a feasible solution for those whose space is limited. Prices will go with these pieces. There will also be prices on the pages of new fabrics and furniture.

Prospective builders of all girths of purse will be interested in the large brick house, the Georgian Colonial, the Pennsylvania farmhouse and the little Dutch Colonial design shown in this number. Ventilating the house will be explained by an architect who understands all the secrets of air currents and the brick bonds will be explained on another page.

The equipment articles cover the electrical laundry—the most modern addition to the household—and the electrical breakfast, with priced pieces from the shops.

The use of non-classic sculpture in the house forms a fascinating subject dealt with in this issue. There are also two pages of old Italian gardens and fountains, works of master artists, that have many suggestions for the American garden.

A new department makes its appearance with September—dogs. And if you don’t enjoy these intimate studies of dogs in their relation to the house and grounds, then you do not understand these four-legged friends. Dogs will be in House & Garden every month hereafter.

There will be twenty-nine different topics on the September contents page. Only a few of them are mentioned here because August needs the space. But this is to be remembered—you will have a weightier magazine to start the fall—more editorial pages and illustrations.
THE MARQUISE DE POMPADOUR

Among the collectors that France can write in her Golden Book of Art-Lovers ranks high the name of the Marquise de Pompadour. Without her patronage, as Voltaire observed, the culture of her time would have found itself in a sorry plight under the rule of a king whose thoughts had little or nothing to do with the finer things of life—that king who stood at the palace window looking forth as the cortège of the Pompadour passed by in a drizzling rain and remarked, "It is a wet day for the Marquise!" This portrait is by François Boucher (1703-1770), who was the court painter to Louis XV.
Collector from a portrait by an unknown engraver. Giulio Mazzarino went to Paris at the invitation of Cardinal Richelieu, and after Richelieu's death became Prime Minister. He accumulated immense wealth and was a great collector.

Collectors of Yesterday

They Range From Augustus Caesar to Horace Walpole and Make the Modern Collector a Member of a Noble Throng

GARDNER TEALL

This is an age in which Achilles gives way to Douglas Fairbanks, Helen of Troy to Mary Pickford. At least Homer in the original is unpopular and to confess to a liking for Virgil in the Latin is to be frowned upon by those who have persuaded certain of our universities to turn backs on the very cultural premises that have given structure to civilization. As for myself, I shall continue to be old-fashioned. Only this morning I have been dipping into good old Pliny's Letters. Now more than ever I am convinced that those who cried most loudly against the classics were those who knew nothing about them. Where, I ask, in all literature will there be found more things of human interest than in the writings of those old masters of antiquity? It is Francesco Petrarca's chief title to fame that he was an inveterate collector of classical writings, that he devoted himself with an unending enthusiasm to the recovery of the literature of the Ancients. And yet he knew nought of Greek, little enough of Latin from the point of view of scholarly attainment in the language. What he did realize, did sense, was the value to intellectual development of these bygone literary Titans, and at Padua he warred against the medievalism which was, after all, nothing more than a warring against the complacency of his own times, just as the very attitude of those of to-day who fight against such of the finer things of life as are to be reached only through contact with the original writings of Homer, Euripides, Aristophanes, Sophocles, Horace, Virgil, Cicero, Caesar, Ovid, Plato, Pliny and the rest are, in effect, smugly complacent in their acceptance of cultural things as they stand.

Renan called Petrarch the first modern man; if only we could be as modern! And what a debt the world owes to his collecting propensities, an instinct connected with an intelligence!

Of course, there were hundreds, one may venture to say thousands of collectors who were his contemporaries, for the love of beautiful and of interesting things is seldom separated in the normal person from the desire to own them, a desire that has produced more history and more romance than one would dream of. There are those who dissolve pearls in wine, those who treasure them in necklaces; these two sorts are in the world. To Petrarch each scrap of writing was as precious as a pearl to be added to a necklace to adorn the fair throat of Learning, and his accomplishment, his devotion to this hobby marks him as the very

Spanish scene, showing a corner of an old street in Seville, with its antiquarian book and antique shops. From a painting by Benlliure y Gil, a contemporary Spanish painter, born 1858. Courtesy of the Anderson Galleries.
Prince of Collectors of Yesterday.

Tullus' Sale

I suppose there have been collectors ever since things were discovered to be collectable. Every object of human creation seems eventually to fall within the collecting class; Father Time saying when. C. Plinius Cæcilius Secundus Epistularum sounds somewhat formidable when looked upon by a foe to the classics, but this morning it yielded this morsel from the XVIIth Letter of the VIIIth Book, a letter from Pliny to his good friend Rufinus: "You have now all the town gossip; nothing but talk of Tullus. We look forward to the auction sale of his effects. He was so great a collector that the very day he purchased a vast garden he was able to adorn it completely with antique statues drawn from his stores of art treasures." Ancient Domitius Tullus! would that we knew how your sale came out. Did you turn in your tomb that some Eros from Praxiteles' own hand, some Amor chiselled by great Pheidias himself fetched a hundredth of its value only? Or did you rush off to Dis and to Proserpina with the gleeful tale of how friend Pliny, who thought to get something for nothing, was forced up to a prince's ransom by Lucanus in the matter of that little sardonyx gem, engraved by Pyrgoteles, finer, the auctioneer declared, than the Perseus by Diocles? How human it is to wish to know!

Nero as a Collector

Those old Romans were great collectors. Even when the creative spirit had degenerated they were appreciators of the fine things which the Greeks had produced. Petronius, that Arbiter elegantarium of Nero's court, amassed thousands of remarkable art treasures that even the Emperor longed to possess. Coming under Nero's displeasure, and dying under the Emperor's orders, he disdained to imitate the servility of those who, under like penalty, made Nero their heir and, as Suetonius tells us, filled their wills...
Among Italian collectors Lorenzo di Medici stands out as leader. From a portrait by Giorgio Vasari with encomiums of the tyrant and his favorites. Petronius broke to bits a goblet of precious stones out of which he commonly drank, that Nero, who had coveted it, might not have the pleasure of using it. Incendiary, violinistic Nero, Nero who on shaving off his beard for the first time put it in a golden box studded with precious gems! What would not collectors of a lock of hair of this great one and of that give to discover the beard of Nero! I dare say, in no time was human nature more perfectly understood than in Roman days. Even Augustus Caesar was wont to amuse himself by a device explained in gossipy Suetonius as follows: "He used to sell by lot amongst his guests articles of very unequal value, and pictures with their fronts reversed; and so, by the unknown quality of the lot, disappoint or gratify the expectation of the purchasers. This sort of traffic went round the whole company, every one being obliged to buy something, and to run the chance of loss or gain with the rest." How many of us who have frequented the art sales in American cities, from the old Clinton Hall days to the present, would have imagined that Pliny took such things as seriously, Augustus Caesar such things in jest? How old the new world is, how new the old!

Antiquarians Old and New

From the time of the ancient Athenian vase shops, and even from long before that, to our own day, when we may browse in the realms of antiquarians at home, the bazaars of the Far East and the quaint inkle-nooks of Europe when we are travelling, collecting has been a passion with the many as well as a mania of the few. But we, ourselves, are more prone to collect the things of yesterday than were the collectors of yesterday to collect the things of the centuries before their time.

Lorenzo di Medici, Lorenzo the Magnificent, found time when steering through the perilous channels of endless family feuds to immortalize himself as a collector. To the efforts of Cosimo, his grandfather, are due those priceless classical and oriental manuscripts which formed the nucleus of the Laurentian Library in Florence. The grandson was worthy of his forebear. Through John Lascaris he procured from the monastery of Mount Athos two hundred manuscripts of greatest importance for the Lauren-

tian. Alas, this incomparable collection together with the treasure of antique sculpture, vases and other works of art was partly broken up and destroyed when Florence was sacked under the rule of Lorenzo's wretchedly incompetent son, Piero. Lorenzo, notwithstanding his love for ancient works of art, was a ready patron of the art of his time. Lorenzo's daughter, Catherine di Medici, had all the Medici love for art, and she, too, patronized living artists lavishly, as her husband's father, Francis I, had done in France before her. She it was who took such constructively active thought for the planning of the Tuileries, and her interest in books, manuscripts and other things led to enriching the collections of the Bibliotheque Nationale.

The Golden Book of France

What a remarkable list of collectors France can write in her Golden Book of Art-Lovers—Jean Grolier, De Thou, Pierre Jean Mariette, Cardinal Mazarin, Comte de Caylus—to name but a few of literally thousands! Nor must we forget Madame de Pompadour, whose library and marvellous collection of works of art were sold after her death. There is no question but that Madame de Pompadour took a constructively active thought for the planning of the Tuileries, and her interest in books, manuscripts and other things led to enriching the collections of the Bibliotheque Nationale.

Examiner Arms, by José Villegas, a noted Spanish painter (1848——).

An interior showing three gentlemen in 17th Century costume examining pieces of ancient armor in the collection about them.
clivities were rich spoils indeed for the Cromwellians. In the quaintly worded old catalogue recording his possessions we find noted, amongst other things, "Item, a landscape piece of trees, and some Moorish water, wherein are two ducks a swimming, and some troup of water flowers, being done in a new way, whereof they do make Turkey carpets, which was presented to the King by the French ambassador; in an all over gilted frame, 1 ft. 10 x 2 ft. 5 wide."

Horace Walpole’s Virtuosity

Some of King Charles’s treasures in the century following passed into the hands of Horace Walpole, who housed them in his villa, Strawberry Hill, that “Gothic castle” which revived the English 18th Century taste for Gothic design. Austin Dobson’s book Horace Walpole, says of the Master of Strawberry Hill: “As a virtuoso and amateur, his position is a mixed one. He was certainly widely different from that typical art connoisseur of his day,—the butt of Goldsmith and of Reynolds,—who traveled the Grand Tour to litter a gallery at home with broken-nose busts and the rubbish of the Roman picture factories. As the preface to the Alder Walpoliana showed, he really knew something about painting; in fact, was a capable draughtsman himself; and besides, through Mann and others, had enjoyed exceptional opportunities for procuring genuine antiques. But his collection was not so rich in this way as might have been anticipated, and his portraits, his china, and his miniatures were probably his best possessions.”

We must not judge Walpole’s virtuosity by all that accumulated in his house—Wolsey’s hat, Van Tromp’s pipe-case, King William’s spurs, and, I dare say, some chips of stone from the Parthenon! But let it be remembered that these things were gifts to Walpole, and as such were just as necessarily within reach as the cut-glass wedding-present pickle-dishes of our own century must be given shelter against the sudden appearance of their donors. Perhaps there is merit in the discipline of such tender-heartedness.

Well, gone is Master Horatio, gone the wits and beaux and the belles of his day, but he remains in our thoughts as the Georgian master of Chelsea china pseudo shepherds and shepherdesses, the most elegant of collectors, the most brilliant of subjects in the sovereign realm of precious bric-a-brac. We are glad that he lent his presence to our ranks. So, you see, collecting is not merely a fad of recent generations. In that which has gone before there is ever a peculiar fascination. The field is limitless, its duration unbounded—things which to us of today are commonplace by reason of their niches in our everyday life, will be treasures to posterity a hundred years hence. Thus will the love of collecting go on from generation to generation, with new converts always ahead.
The severe classical style following the Third Colonial Period has been called American Empire. It is successfully used in this dining room, where green painted walls, consoles, mirrors and table all produce a room of pleasing dignity.

A classical Empire cornice of dull gold lightens the green walls. The white wood trim is early Georgian in character, the chairs of a Chippendale design and the rug shows Adam proclivities. A marble baseboard gives a foundation.

The inset plaques and brackets with busts are Empire features. These busts reproduce in green bronze originals excavated at Herculaneum during the 18th Century. They were executed by di Angelis of Naples.

AMERICAN EMPIRE
As Reproduced in the Dining Room of E. Elliott Guild, Esq., at Boston, Mass.
LITTLE & BROWNE, Architects
THE collecting habit, like everything else, doubtless started with the cave man. One day he brought home a shell that caught his eye—a pretty shell of pinks and grays. He set it on a shelf in the cave and told the family that he'd keep 'em if they touched it. By and by he brought home another and then another until the shelf was full. On rainy days when he had nothing else to do, he scratched pictures on the shell, and he'd chortle to the wife and children if they jiggled his arm while he was at his art work.

In time, the cave proved inadequate because the women folks wanted a decent home to bring up the children in, and the family moved to the hut. The pink and gray shells were moved along with the babies and the bear skins and the gourd casseroles, and made quite a pretty show in the new tight little hut.

By and by the hut grew to a cottage and the cottage to a house with an upstairs and a down. Then the family began to have more than one suit of clothes, and a place had to be provided to keep the winter wardrobe. So an attic was built to the house and all the old things that weren't needed, or had been broken or had outlasted their usefulness were stored away there and forgotten.

Then one day an adventurous soul with a sense of curiosity went up to the attic and rummaged around. Among the old things he found a heap of pink and gray, faded, dusty shells. There were pictures of these shells when they were new, and he brought them downstairs and said, "Oh, look what I found up in the attic!" And he set them on a shelf by the window and told the children he'd thrash them within an inch of their lives with his yataghan if they dared touch them.

And other men and women, seeing these shells, started rummaging in their attics and brought to light untold treasures of the past. And as they adorned their houses with them they began to think more kindly of their ancestors.

That doubtless is the way collecting started. It begins in the accumulation of ordinary day-to-day objects, it is enriched by discarding and forgetting these day-to-day things, and finally becomes popular by discovering them again.

In the meantime they rest in the attics of the world awaiting their discoverers. Consequently, without attics collecting would be an impossibility—and so would many of the good things of this old world.

And yet there are people who don't believe in attics!

ALL people, like Caesar's Gaul, are divided into three parts—those who consider an attic a dump, those who think it a treasure trove and those who don't believe in attics at all.

There is a certain group of people—and their numbers are growing— who believe the best way to handle the difficulties of today is to shatter the world to bits and remake it closer to the heart's desire. And they go about their work with murder and arson and pillage or absurd legislation. The Bolsheviki mind has existed from the beginning of time, but because it has been held in check some of the good things of the past are left to us to hold down to coming generations. In every chaotic situation there has arisen some man who threatened to brain the race if it touched his pretty shells. He wanted those shells for himself and his children, and he grew old enough to appreciate them. The old Bolsheviki—and the new—believe that no man has the right to inherit from a forebear or call anything his own. Should the Bolsheviki prevail today, decent men and women will have to give up the pleasant habit of collecting, and the attic will become as useless as adenoids.

Contrasting with this Bolsheviki type are the other two. One maintains a half-and-half attitude toward the past. They are eternally laying things on the table, discarding them to the attic of Time. They really don't believe in the past; they merely cling to it because they aren't quite sure which way the future will jump.

The others—those who look on attics as treasure troves—believe that in the past lies the hope of mankind and its available future. Of the three groups this seems the most sensible. Old faiths, old lovers, old institutions are constantly being put up in the attic of the world where they gather dust and the fine patina that only age can give. But there is still much usefulness in them. There is still beauty to charm the eye and the romance of time to stimulate the imagination. A new age revives them. Men haul them forth. "Look what I have found up in the attic!" And they become popular again.

THERE is something about collecting that never entirely dies. Its heritage, stretching back to those pink and gray shells in the cave, may be dim at times, but it goes on and on, constantly being resurrected in one phase or another. For this reason men find it a source of constant refreshment. It keeps them young because it never grows old. Let it be bandboxes or bottles, stamps or Whistlers, Japanese prints or Colonial lamps, neither the acquiring nor the owning comprise the whole of collecting's lure. It is this vast reaching back into the past that makes it so popular a hobby, this discovering things in the attic of yesterday.

The past without men and women means nothing. Just so collecting without a comprehension of the men and women of the past means nothing. A chair five hundred years old is merely so much wood and leather, but a chair that men and women lived in and the peaceful sleep of honest folk who laid them down in it. You cannot collect anything without having generations of ghosts looking over your shoulder. You cannot go into an attic without arousing the spirits of the past. Once you become a collector you join the innumerable throng of those who have made and cherished these things, a throng hopeful that you will appreciate them, care for them and hand them on to other folks when your interest in them dies.

THE people who don't believe in attics—the Bolsheviki of all times—believe that an intangible something called the State should own and control all possessions. During these next few years we shall see which will prevail—the intangible State or the tangible person. It is a line-up between those who cherish the institutions of the past and an idea, between those who feel the innumerable throes of yesterday and those who do not.

In this arrangement of forces the collector is the loser. He must cease collecting for the sake of cornering the market in a certain collectable object, he must cease hiding away his possessions from public use and enjoyment. He must prove to the world that collecting is not a mere whim or fancy by which to spend his surplus cash, but that it stands for a belief in the good and beautiful things of the past, that it is as legitimate an amusement as seeing baseball or playing golf, that it is as necessary to a full life as reading books or listening to music.

Beware the Gimlet-eyed Collector
Who haunts the Manse,—a Ghoul, a Spectre,—
That, when the Aged Owner dies,
He may achieve some Battered Prize;
He craves some Highboy famed in Fable,
A Warming-pan, a Gate-legged Table,
A Chelsea Jug or Ale, or
Or Girandole by Chippendale.
An Antiquarian Fanatic,
He snoops about the Dusty Attic,
And if he finds a Spinning Wheel,
My Stars! you ought to hear him squeal!
Oh, drier than a Latin Tutor,
His Talk is all of Marks on Pewter
And Sheffield Plate and Jackfield Ware,
And what is Common, what is Rare.
Act Abolishing Collectors
Would find, I take it, Few Objectors
Except (one cannot well deny),
The Folks from whom Collectors buy.

—Arthur Guterman.
Perhaps the finest background that can be given wrought iron is a rough plastered wall. They both are fashioned by hand and have the sturdy imperfections and delightful texture of hand-wrought work. Combined with marble, as in this hallway, they produce an effect that no other architectural mediums can approximate. This view of hall and stairs is from the New York residence of F. F. Palmer, Esq. Delano & Aldrich were the architects.
FURNITURE FOR THE LONG HALL

A Problem That Is Solved by Grouping

When the hall is not so attenuated it can be used as a reception or living room. Against paneled walls dignified pieces are placed and groupings made with chairs, lamps and occasional tables. The principles used here apply to even the most modest hallway. W. & J. Sloane, decorators
FLEETS THAT NEVER SAIL
Model Craft Today Form One of the Most Romantic and Stimulating Subjects the Collector Can Command

HARRISON CADY

Time was when collecting ship models was left almost entirely to artists. Ever, in search of the picturesque with which to adorn the studio, they would return from summer sketching trips with a "square rigger" bought for a few dollars in some little fishing village. If they journeyed abroad they would send home a quaint Dutch model from Maarken, a fishing boat from Brittany or perhaps an early 18th Century Dutch man-of-war from Amsterdam.

Suspended from lofty studio ceilings the little ships, stirred by frolicsome skylight breezes, would swing restlessly about and strain at their slender cables as though anxious to begin the voyages they were destined never to make. Artists looking up from a busy day's work let their eyes wander over their tiny fleet and find in them a stimulus to imagination.

Ship of Dreams
A brave little Viking ship pushing its bow from the depths of a shadow conjured up visions of hardy Norsemen battling the winter tempest.

A bit of sunlight catching the silken sail of a galley brought to mind Cleopatra and her dark skinned coremen driving her golden barge through the waters of the Nile.

A model of a caravel bears the name of "Santa Maria" and in imagination we see in the starry watches of the night the lone figure of a Columbus dreaming of a New World.

On a bracket an early French man-of-war, its sides bristling with guns, is slowly bearing down on a bulky Indiaman, its hold filled by fancy with a cargo of shining silks, porcelains and jades, rich spices and all the treasures of the Indies. An early American man-of-war, its port holes painted Chinese red, turns the mind toward the gallant days of Paul Jones—privateersmen—with tarred pigtails and pea jackets with brass buttons, and white pantaloons, cutlasses and pistols who roved the high seas.

And so on through the tiny fleet ending with a model of a true American clipper ship, one of the famous packet vessels that won the American Merchant Marine everlasting fame.

This also I suppose, is the reason why men in more commonplace callings have commenced gathering these tiny ships and get to look upon them as a means of forgetting the humdrum happenings of every day life. After an evening with Conrad or Stevenson, your true ship collector loves to let his eyes rest on his miniature boats, for in the delicate traceries of their rigging link all those heroes of the sea that have gone fleeting across the pages of history.

The Early Models
It is difficult to determine how far back the history of model ships goes. We sometimes find them in very early paintings. Samuel Pepys referred to the model ships of the British Admiralty in his famous diary. In the 16th and 17th Centuries the navies of the European countries made scale models as a preliminary to building their warships, while for centuries it has been the custom of Britain, that master builder of ships, to make models as guides from which to work out real ships or plan improvements. These constructor's models, on account of their extreme accuracy, are

Ship models should be displayed as near the level of the eye as possible and against a plain background that will silhouette the beautiful detail of the rigging.
The French flush deck frigate “La Braill euse,” made by Henry B. Cidver, is considered the finest example of his work. She is 44” long and built on a 1-50 scale. This model of a Maine coaster, built in 1701, reproduces the exact rigging and lines of the original type. From the Harrison Cady collection. Highly prized and now very difficult to obtain.

In the ancient days when the Romans held maritime supremacy, it was a custom to make votive offerings to Neptune, God of the Sea, as supplications for safe voyages and escape from storms. At first these offerings took the shape of dripping sea-stained garments hung in the Temple of Neptune in Rome, but, with the passing of centuries, the votive offerings took the form of ships. In Britain, Spain and Holland sailors placed a model of their ship before their patron saint in the village church as a votive offering. These offerings in the shape of Old Dutch galleons with sails all set and pennons flying still hang from dusky ceilings in many Cathedrals of Holland. Long wars took the other votive offerings such as precious stones, gold and silver but these little toy ships escaped the melting pot and are a delight to the tourists of today.

One of the interesting phases of ship models are those of bone made by prisoners of war. These are very rare. They were built in the prison camps of France and England by men who were held prisoners during the wars between the French and English in the late 18th and early 19th Centuries. Prisoners would work together in constructing one of these miniature boats to sell or exchange for tobacco and other luxuries not provided in the prison camps. It is said that the men saved the beef bones from their meals for working material and from them made these quaint little ships. Some of the bone models took from two to three years to build and they rank among the most accurate model ships in existence.

[Early American Models]

The custom of building models was much in vogue in America in the last century, when they became quite common. Nearly every captain and sailor’s home had a model of some favorite ship. Many of these sailors’ models are crude and inaccurate as regards proportions and details, although these very faults sometimes combine to make a picturesque craft. The common faults of sailors’ models are in making the block and spars too large in scale for the hull, but, one sometimes finds sail...
models that are wonderful in detail and proportion. I have in my collection a model of the clipper ship "Haze" built in Mystic, Conn. in 1852 and lost in a gale off Cape Horn some years later. It was made by Captain Forsythe, master of the ship, and was a work of love, for every detail is fashioned in the most perfect and painstaking manner. It was the work of many months, and I like to think of the sturdy New England skipper passing away the tedious hours of long cruises in shaping its tiny parts, in the days when New York was ninety days from Java Head and one hundred and ten from Hong-Kong.

Another model of mine is of the New Hampshire, an American ship of the line which was built by one of her crew. It is unusually accurate, and for many years was hidden behind a lumber pile in a sail loft in Gloucester.

Now and then one finds a model of a clipper ship whose sails bear the emblem of the Black Ball or Red Ball Packet Line, those famous ships that did much in lowering maritime records between New York and Liverpool.

In the early part of the 19th Century it became a practice of many marine insurance companies to require a model of every ship which they insured. This accounts for many of the fine models of square riggers made in the years from 1800 to 1825. These are fine examples of ship-building architecture of the period.

The decay of the Art

On the decline of the American Merchant Marine the custom of building models fell into disuse and the little ships for the most part were neglected or stored away in attics, or given to children as playthings until eventually broken up. Several times I have found badly battered hulls with rigging and masts gone, beyond repair yet showing lines and workmanship of great beauty.

Occasionally however, a family revered the work of its ancestors and such a model would be carefully preserved. One boat of my fleet is a singular little model of a Maine Coaster. During a summer holiday spent in one of the beautiful little seaport towns of Maine, with my friend John A. Williams the artist, our quarters were in the home of a family whose ancestors were sea captains. One afternoon the conversation drifted back to the days when this little port was a flourishing ship building center and its clipper ships renowned the world over. I asked our hostess if there were any models of these ships owned by townspeople and to my surprise she said "Why I believe we have a model somewhere in this very house." A hunt was inaugurated and after a long search the model came to light in a remote part of the attic. It didn't prove to be a clipper, but was a much earlier craft and bore the maker's name and the date 1791. Skillfully drawing (Continued on page 56)
The Italian chest, when of the right proportions, makes an excellent serving table. The architectural painting above is in perfect harmony, and the chairs balance the grouping.

In the dining room of the Henry G. Vaughan house at Sherburn, Mass., the walls are covered with a Dutch scenic paper, and a Dutch cupboard is used for the sideboard.

One so fortunate as to possess a Hepplewhite sideboard should give it a place of honor in the dining room and enhance its beauty with silver and brocade.

A dresser of the Dutch type is used in the Vaughan dining room as a serving table. It is pleasantly in harmony with the Dutch cupboard pictured below.
A NEW PHASE OF AN OLD FASHION
Hutches, Cabinets and Consoles Are Again in Vogue as Accessory Furniture for the Dining Room
MARY H. NORTHEND

"WHAT an attractive dining room!" This exclamation pleased me, for I knew I had transgressed from the ways of my predecessors. I had added odd and interesting pieces of furniture, grouped them to the best advantage and the result was unusual and charming.

It was while dining with Grandmother one day that I realized the necessity of changing old customs. Living as she did, in the old family house, she had kept intact her belongings. Against the wall in the dining room still stood the old mahogany sideboard flanked by Sheraton chairs. While this was all in good taste, it was dull. I wanted to change their positions, grouping them to better advantage, but refrained, realizing the indignation it would cause.

This set me to thinking about dining rooms in general and the importance of the proper placing of the sideboard.

Shearer and Hepplewhite

Now sideboards are well worthy of place in every home. In creating their designs the great cabinet makers put something more than mere artistry. Let us study Shearer, who first brought them into existence; Hepplewhite, who has given us masterpieces, and Chippendale who preferred to design serving tables only. These various sideboards are easily distinguishable, as each great craftsman left behind him a determining mark, which enables us to place them in the right period.

Shearer originated the sideboard, as shown by his book of designs in 1778. This gave the suggestion to Hepplewhite who first brought them into existence; Hepplewhite, who has given us masterpieces, and Chippendale who preferred to design serving tables only. These various sideboards are easily distinguishable, as each great craftsman left behind him a determining mark, which enables us to place them in the right period.

These various sideboards are easily distinguishable, as each great craftsman left behind him a determining mark, which enables us to place them in the right period.

We must not look for sideboards before the latter half of the 18th Century—for it was then that they superseded side-tables. The gap between was filled by Chippendale, who preferred what he termed "sideboard tables." These were usually of mahogany, the frame being elaborately and beautifully carved in designs of birds, flowers and shells. These were about 5½ in length and often were topped by marble.

Any of these pieces are appropriate for the modern Colonial dining-room, so much in vogue today. But the sideboards, unlike those of a century ago, have usually a background of old brocades or old block prints, outlining them to better advantage and pronouncing their position in the group.

Dutch and Spanish Cabinets

It is a liberal education to study these old pieces and familiarize ourselves with the expressions used by the craftsmen of different countries and periods. They doubtless received their inspiration from rare bits that found their way into their own country from other lands. This is particularly true of a Dutch cabinet which shows an Italian influence in the design, due probably to some contact with Italian cabinet makers. It is particularly appropriate for a dining-room where the walls are hung with paintings, representing scenes along the canal of the Hague. For a (Cont. on page 58)
One can sit in the cool shade of the tea house and let the eye wander across the mirrored lily pool and trace its path up the brick steps and ramps of the terraces to the house on the hill. It is truly a garden of degrees. The axis lies east and west, with the house at the east commanding beautiful morning and evening views. It is enclosed with walls of red and brown tapestry brick. The treads of the wide steps are flagstones nosed with brick. Crushed gray granite with brick edges makes the paths. The borders are planted with perennials giving, in this climate, a succession of bloom and variety of color and form for some ten months—from February to late December.
The garden is as simple and dignified as the towering fir trees in the background, and the general aspect is pleasingly magnified by the vast surroundings of meadow and the rolling and partially wooded hills of the Tualatin Valley. From the house in the morning one sees the white columns of the temples glistening in the sun, thrown out in bold relief against the black green of the Douglas firs, and in the evening they are soft and subdued while the sun sinks in the jagged, sawtooth skyline formed by the giant pirs.

Half-encircled by the curved pergola and protected by the surrounding hills and woods, the lily pool is almost never ruffled by the wind, and the nymphs grow there undisturbed. In this mild climate of Oregon one can live the whole year in this garden. Only a few weeks intervene between the last blooms of the late fall in December and the early spring flowers in February. Perhaps, on one or two mornings in January there may be a tracery of ice on the pool, but it never lasts for long in the warmth of this sheltered valley.

L. M. THIELEN, Landscape Architect
FURNISHING the BAY WINDOW
How it Can Be Made a Distinctive Feature in a Room With Well Chosen Curtains and Furniture

C. C. HOWE

UNLIKE the days of the late 18th and early 19th Century, architecture consists now in developing the inside as well as the outside of the house. This method has brought about most successful results. Today we are not bound hand and foot to follow a certain set type of decoration, but are able to express individuality in the development of our homes.

William Morris has well said that architecture is the study of the requirements of the home. Definite constructive ideas are worked out that produce harmonious and impressive results. The bay window is an outcome of one of these ideas. It has become an almost necessary adjunct to the 20th Century home. Wide or shallow, it is a pleasing feature, and where conservative effects are used, it enables us to transform an otherwise dreary room.

The Mission of the Bay
Massive archways produce light and shade, both of which are important features in interior decoration. Into this scheme, nothing fits so successfully as the bay window. It is an addition that demands careful consideration in designing or home planning. It must lend itself successfully to the architecture of the house, harmonizing with the panel, the door, and other special features in order to make an attractive whole. So the bay window has a mission of its own, bringing as it does not only sunshine and health, but adding a decorative, distinctive feature to our interiors.

It is usually placed at one end of the room, or at the side, where it breaks the expanse of wall space. It should be designed either horizontally or perpendicularly, according to the height and size of the room. The horizontal ones are hardest to plan, as they do not take up as much space as the perpendicular, which are generally wide and shallow. It is essential to consider the molding and paneling, which should be in harmony with the rest of the decoration.

Proportionate Windows
The size of the window must be according to the room, and it should be placed always in the center; a few inches digression either way will spoil the desired effect. Generally double sash windows are utilized for this purpose, as they are better for lighting, but occasionally casement windows are introduced, especially where the architecture is Gothic.

Formerly the dining room was the principal place for the bay window. Today, however, the architect, realizing its value, is introducing it in every room in the house.

Built-in Furniture
In the living room, with its built-in, cushioned seat, it has become a popular part of the decorative scheme, and even the austere hallway is brightened by the adding of a protruding bay.

A charming idea has been worked out in a summer home, where the entrance hall has been widened just as one enters the living room, with a semi-circular bay window, ornamented with grille work. Here also is a built-in desk and window seat. This is used as a morning room and writing room combined.

Plain glass is generally used for lighting purposes, although occasionally we come across one of rich ornamental or stained glass. Most of the art glass used for this purpose is leaded. The lead forms a pattern and holds together the plain panes which occasionally show a slight color. These windows seek to imitate the lighting effects found in the old cathedrals of Europe, and are best when used with the Gothic style of architecture. They require a formal type of room, one that is well lighted and not dependent entirely on the bay for light.

While the bay is generally a part of the architectural scheme of the house, a very attractive effect can be gained by introducing one into a plain, square room. Take away the small window and replace it with a semi-circular formation used generally with a shingled or tiled roof. Great care should be taken, however, to fix the curved line into the setting, and the windows should be uniform in treatment. This does not necessarily mean a similarity of sizes, but a repetition of the same detail will often produce a pleasing appearance. Horizontal bays should always have an uneven number of windows to make them effective and well balanced. They should show ornamental molding and consistent details, both of which do much to enhance the general composition, taking into consideration, of course, the grouping of the windows and their distance from the floor.

In your dining room is small, the effect of space can be gained by introducing a bay window. The expanse of glass gives it an outdoor appearance and has the additional advantage of causing a breeze. This should be draped in order to bring out the best line and to shade the room from too much sunshine. If the hangings are used as side panels, they should hang straight, with very little gathering, and for decorative purposes, a valance should be hung across the top, using double goose neck rods. These when finished, not only modify the expanse of glass but add greatly to the charm of the room.

The Window Hangings
For hangings, white ruffled net curtains are always attractive, giving a note of simplicity to any room in which they are placed. They also serve as a good background for chintz over-curtains and harmonize with any color scheme evolved.

For the bedroom, striped blue taffeta hangings lend a note of distinction to yellow walls, and gray furniture, with blue cane inserts. They are made more interesting by finishing with quaint frills and tie-backs of taffeta. Plain strips of the over-curtain are fashioned over the window, to give the effect of a flower. Casement cloth forms an ex-
A bay window is an integral part of the room and its furniture should be in harmony with the other pieces. Here the curtains are claret-colored brocade against white panelled walls, with an unusual valance.

Occasionally we find a seat built into a bay window cushioned in shades of yellow. This is effective when the windows are curtained with decorative lace hangings. Instead of over-curtains have yellow damask, fastened to a long pole with rings. These not only frame the window and give a touch of color to the room, but can be drawn together at night.

Red and white are distinctive when a rich red brocatel is used, with delicate lace curtains underneath. Ornamental ends and uprights of gilt give an unusual touch to this interior.

In dealing with the subject, we must not neglect the breakfast room. A charming breakfast room can be made in a semi-circular bay; or, if there is a bay window in the dining room it may be furnished as a breakfast corner.

Gold and white have been

The bay window in a bedroom offers the logical place for the dressing table, the windows affording light from both sides. The colors in this boudoir are interesting—striped blue taffeta curtains and dressing table apron against yellow walls. G. T. Davis, decorator.

Where the bay is shallow and long quite interesting furniture groups can be made with large chairs and small tables. Here the arrangement is enhanced by a vine wicker and curtains and valances in a soft gray tone chosen as a theme for a most charming bay window in a drawing room, flanked on either side by columns topped with gilt griffins. The curtains, a heavy brocade, are over delicate lace curtains that fall almost to the floor.

A different effect has been produced by designing a dignified bay at the end of a formal drawing room. Here the lovely gray panelled walls form an excellent foil for the Louis XVI and Venetian furnishing. The under-curtains of old filet have over-draperies of green taffeta, finished with a rich green and gold velvet valance.

The bay window has solved the lighting question most satisfactorily, as it brightens up even the darkest room of the house, adding a decorative touch which emphasizes the architectural details of the room.

A drawing or living room will take on new life by the introduction of this type of window, as it lengthens and gives dignity to the whole apartment.
OLD IRISH GLASS

From Cork, Belfast, Londonderry, Ballycastle and Other Parts of Erin
Comes a Glass Fit for the Collector's Cabinet

MRS. T. P. O'CONNOR

A LARGE dining room with two doors, one leading from the hall, the other opening on a flight of stone steps descending to an old Southern garden which breathed the perfumes of Araby.

Night blooming jessamine, crépe myrtle, clove pinks, honeysuckle, a riot of roses, geraniums, and heliotrope, gardenias, and star jessamine all commingled their sweet breath in spicy, intoxicating fragrance.

The six windows of the long room were curtained in wistaria and clematis. A high black mantelpiece with a red brick hearth gave it character, the floor was of oak, and it was furnished with a sideboard and table of noble proportions, a dinner wagon, and many chairs—which were needed for the open-hearted hospitality of the old South.

The summer was just beginning. The windows were all open. The shadows were at their longest! At sundown the darkies would set the table elaborately, for "Miss Marcia" their mistress and the Judge's wife were expecting company to supper. Crocheted mats would be judiciously distributed—tablecloths were only used for dinner—a candelabra from Cork, holding many sperm candles would be placed at either end of the table. The custard cups of generous proportions, in a grapevine design, with the edge of gentle oblong scallops, would be filled with delicious cool custard made of fresh eggs, rich milk, flavored to a nicety, and ornamented with little snowy volcanoes of stiffly beaten white of egg erupting quince jelly.

The china closet would be unlocked by the black housekeeper, and the piece de resistance, an imposing Waterford épergne of cut and engraved glass, would be carefully lifted and placed in the centre of the table. The glittering glass centrepiece seemed to her the most beautiful object on earth, more lovely even than the magnolia grandiflora, upon whose leaves she printed with a pin communications to the fairies. The time was long before those rainbow cups with quivering white mountains were served, and she was not surprised to see her cousin William, a good-looking West Point cadet—pretty Mary Fleurnay's sweetheart—grow tired of waiting for the butler, reach his hand over the table, and with little finger elegantly separated from the others, delicately lift a cup of custard to present Mary as a love offering.

Alas, a mischievous fate was too generous. His hand not only carried the ambrosial goblet, but attached to that gracefully curved little finger was the stiff white mountain and the quivering peak of jelly from the neighboring cup. It waved like a tasty flag of truce; would it fall? Would it cling until his hand blissfully touched Mary's? The big eyes of the little girl distended to an enormous size, she watched her embryo soldier cousin with breathless interest. Presently her father noticed her absorbed gaze, saw the impending catastrophe and uttered a severe reprimand in a single word, "William!"

The hand quivered, the white banner seemed about to furl, but no, the fold clung tenaciously to the finger, cup and mountain were both victoriously deposited on Mary's plate, amid shouts of laughter and heartless exclamations.

The first water jug is from Waterford, 1820. The second, strawberry diamond cutting, Cork, 19th Century. The third, from Cork, 18th Century. The middle decanter dates from Cork, 1800, the left one is of 19th Century Cork make and the third, with trifle rings, is from Cork, 1820.
How little it takes to make the young and the gay yet more joyous!

Often when I see a bit of old Irish glass, that beloved picture comes before me. I am a happy child again, filled with complete satisfaction to be near the father I loved so well. The beauty of Irish glass means much to me, for its subdued radiance holds memories of gracious and unforgotten days.

The Beginning of Irish Glass

As early as 1585, the manufacture of glass began in Ireland. Queen Elizabeth gave a grant to a certain Captain Thomas Woodhouse for making glazing and drinking glass. He was to make glass “as cheap or better cheap” than similar glass in foreign parts. By 1597 a good deal of glass had been made, and a petition was sent to Her Majesty to further and increase the industry. “The argument addressed to the Commonwealth, stated that in this way the timber of England would be preserved, the superfluous forest of Ireland would grow again.” And that “Much trade and civility will increase in that rude country by inhabiting those great woods.”

The Irish are naturally artistic. Nature has endowed them with a daintiness of touch; they have hands—an eye for line, and a feeling for design. The smallest exhibition of Arts and Crafts in Dublin justifies this assertion. The glass industry became a flourishing one in Ireland. There were not only factories in Waterford, but in Dublin, where in 1750 a miniature and landscape

Waterford Glass

Glass was not made in Waterford until 1729. In October, 1783, the Penrose brothers were advertising in the Dublin Evening Post, “All kinds of flint glass, useful and ornamental. We have a large number of the best manufacturers, cutters and engravers, by which we can supply every article in the most elegant style.”

In 1785 a Mr. John Hill, a great manufacturer at Stowebridge, went to Waterford, taking with him skilled workmen from Worcester. England at this time acknowledged that Irish glass excelled her own. In May, 1849, the Waterford Flint Glass Works were making “decanters, claret jugs, water jugs, liqueur bottles, carafes, pickle urns, salad, celery and sugar bowls, butter coolers, cream ewers, custard and jelly glasses, dinner and table lamps, gas chandeliers, crystal chandeliers for six lights, and beautiful specimens of Bohemian and Venetian glass.”

(Continued on page 60)
In the construction of the William Wiese residence at Scarsdale, N. Y., stone, tile, half timber and stucco are successfully combined. Roof lines come close to the ground, thereby producing a broad, low and hospitable front.

On one side the great hall, a room of baronial proportions, is a dining room finished in old ivory Georgian paneling; on the other, the library with its pointed windows and vaulted ceiling.

The second floor accommodates two bedrooms en suite and two other chambers with their respective closets of good size. The master suite of bath, chamber and sleeping porch is an excellently arranged feature.

A hooded entrance, characteristic of this type of architecture, gives an air of hospitality and makes a fitting passage to the great hall which lies directly behind.

The Half-Timbered House in the Suburbs

W. Stanwood Phillips, Architect
In the Colonial houses of New England the classical interior door was a sine qua non. It was beautifully proportioned and modeled.

In modern reproductions of the classical doorway the frame is often painted one color and the door another. Delano & Aldrich, architects.

A succession of wide doorways, each with its distinctive frame, affords a pleasing vista. In this, the New York residence of A. G. Paine, Jr., the wide doorways add to the openness of the room scheme. C. A. H. Gilbert, architect.

In the New York residence of Stewart Walker, the architect, an old cupboard has been introduced for a doorway, a novel and distinctive treatment.

The interior door is capable of carrying much decorative detail. In this doorway of an English residence a decorative panel is introduced over the lintel.

Inside glass doors with lights above make an unusual treatment. This type, in a London house, opens from the entrance hall. Atkinson & Alexander, architects.

A purely classical design has been used in this New York residence interior door, the frame and door contrasting in finish. C. A. H. Gilbert, architect.
Lured by the rumor of an auction sale, we had journeyed down to this little Pennsylvania town of old stone houses and brick sidewalks. Directed by the corduroyed hostler boy, we crossed the courtyard of the hotel and read this notice:

"COME TO MY BIG COMBINATION SALE HELD AT THE BRICK HOTEL, NEWTON, PENNSYLVANIA."

Here followed a detailed description of live stock obviously written for a farming country, and then came the paragraph that interested us:

"These goods are listed. Big lot of Household Goods—such as suits, bureau, washstands, chairs, of all kinds, three-burner gas stove, lamps, a lot of tools and an endless amount of other goods that always come in at the last minute. So bring on anything and everything, except hogs (can't sell 'em) and we will get you a fair price for them. Terms cash.

IRA H. CORNELL."

The promises held out seemed somewhat at variance with the fulfillment. Chairs of one kind seemed to us to be nearer the truth as we looked at them huddled disconsolately together; chairs of incredible shabbiness and mediocre character, but I must say the "endless amount of other goods" justified itself. There were no hogs. With buggies and farm racks, racing gibs and family surreys, all in various stages of dilapidation gathering hourly to go cheerfully under the hammer, why this embargo against the economical porker?

A Motley Collection

Country wagons were already unloading their collections of junk. There were horsehair sofas with downtrodden look, several old brass lamps, a kitchen stove, two marble-topped tables, a number of pictures too frightful to be endured without laughter or tears, an old candlestick with the snuffer missing, a badly used Lowestoft cup, a cider jug of beautiful burnt orange glaze and several bits of cheap pine furniture. We threaded our way between the discouraged sofas and rusty bed-springs and silently selected our treasures, indicating to each other in nods the desirability of bidding on this or that; hoping that no one else would notice our interest in the little mahogany mirror with the cracked glass but the excellent frame, the one odd chair worth while, a beautiful but decrepit Empire sofa, a little brass shovel, a few good old books published in the latter part of the 18th Century, and a roomy chest of drawers in sad repair.

A brand new and shiny Ford drove up with a flourish and three large wooden wash tubs were unloaded. A country washstand was pushed off unceremoniously and an endless number of white stone china bowls and pitchers. "Ma don't need this stuff any more," announced the youth as he scrambled among the potato sacks in the bottom of the machine. "We've had electricity put in, an' runnin' water," he held up a tiny gem of a gilt mirror in careless hands and thrust it out. "Might as well take this old thing." My hands went instinctively to take and put the charming "old thing" in a safe and secluded spot, but the auctioneer's assistant swung it nonchalantly over to the seat of a broken chair with the caustic remark:

"It's got a piece coming out of the frame."

Ignoring this, the boy slammed out two old ornamented sheets of tin such as are used in country parlors under...
the best base burner stove. "You kin have those—we're going" to have steam heat put in next winter," and with this commentary on the increasing fortunes of his family, he drove off as recklessly as he had come.

The Missing Molding

We gazed after him marveling, and when I swung, as does the needle to the pole, to the little old gilt mirror, a Jewish dealer was before me. The loose piece of molding he carelessly removed and thrust into his pocket before my startled eyes. Two ladies of color wandering up to look superciliously at the pretty thing, he turned away. "You could take some gildin' to it 'Vangie," suggested one doubtfully. "I cawn't see no more'n half ma' haid in dat thing," put in the other, petulantly. They moved on and paused in front of the mahogany framed mirror. I came closer and listened shamelessly. "Now there's some sense in that old one. It sho do set me off"—she preened a bit, thrusting nearer to it and disturbing two earnest country women deep in confidential conversation on the edge of one of the discouraged sofas.

Trolleys, rigs and cars of all description were unloading people and household goods. Horses were being trotted up and down, dilapidated buggies, gigs and racks were standing in orderly rows. Farmers and countrymen crossed continuously, urging balky calves along, carrying some, dragging some at cart ends, and coaxing others by the simple means of twisting their poor little tails.

The stack of household goods in the corner was increasing amazingly in quantity if not in quality. There had arrived among other things, a sextant and a box of brass drawing instruments that the Illustator later bid in, an old desk—thick with dark red paint, two feather beds, a tool chest, a few old prints, poorly framed, a pair of iron urns, gray with paint, and a gilded spinning wheel. Sacks of corn and buckets of feed were ranged along the porch and a suitcase full of the most undesirable nicknacks, novelties, and cheap jewelry.

A darky peanut vendor passed, persuasively touting, "Peanuts, lovely food! Buy peanuts from the Waldorf man!"

What They Bought

The auctioneer, already mounted on his block, had started in vigorously on the jewelry. We lost our chance on the little brass shovel, our attention being otherwise engaged. It went for fifteen cents to a nice young workman already the proud possessor of the suitcase, a lady's wrist watch and a bucket of feed. Later I screwed up my courage and offered him a quarter for it. When I saw him load, besides these things, a cross-cut saw, four boxes of socks, an electric iron, a phonograph, and a Mission chandelier of green glass and imitation bronze, into the back of a spring wagon and tie to the tail board a sprightly little mare, I felt that to such a munificent buyer my transaction must have seemed puny indeed.

A large brass kettle had escaped us also, this time beyond recall, and I watched with envious eyes its possessor throw it hardily into one of the numerous new little Fords fussily wheeling about.

"Do to mix feed for the hogs in," he explained to the lookers-on, and I wandered unhappily away, lacking the courage to exchange it for the price of a wooden pail or even a galvanized washtub. The peanut man's admonition reached my ears: "Be as liberal as you can, congregation! Don't let a nickel get mouldy in your pocket!"

The Woman Dealer

A woman dealer had driven in, determined to pick up something to make her trip worth while. Her efficiency amazed me, her aplomb and her ferreting eye. I had timidly offered a bid on the cracked mirror in the mahogany frame, but the colored person named 'Vangie had also taken a fancy to it and bid it up excitedly. I dropped out, realizing that 'Vangie possessed what I did not—a true gambling spirit that fired her as the smell of..." (Continued on page 54)
This two-car garage is designed along English lines. The lower part of the first floor is of stone, the superstructure of stucco on metal lath and frame construction and the roof is shingled.

COUNTRY HOUSE GARAGES

Designed for House & Garden by
FRANK J. FORSTER, Architect

Beside housing two cars, the plan includes a tool shed. A heating plant and cold storage are in the cellar, which is reached by an outside stairs.

Accommodations are for one car with a workshop in the tower, a practical feature that gives character to the composition.

Chauffeur's quarters are on the second floor of the garage above. They include a chamber, kitchen and well-lighted and large living room.

Stucco and metal lath on frame walls, wide board doors and a shingle roof are the materials to be used in the garage below.
The furniture of an old room is a sensitive index to the manner of men and women who lived in it. In the parlor pictured above you can read the history of our early New England forebears—fearfully sparse, simple as their living, stern as their creed. Some of the furniture they brought from the old country; that which they made themselves follows the forms they knew at home. Thus did the heritage of furniture pass from England to America in Colonial days.

But if the parlor of the Colonial home was forbidding, the kitchen had an hospitable comeliness. The great dresser with its shelves of glistening pewter plates and tankards, the rows of wooden mixing bowls and pails, the stores hung up against the ceiling, the table simply set for the day's meal—these things and their orderliness testify to the domestic habits of the early American housewife. These two rooms are in the Essex Institute at Salem, Mass.
Patrick Henry's estate, "Red Hill," in Charlotte County, Va., dates back to 1790. The rooms are preserved in their original condition as can be seen by the bedroom which the early statesman occupied. Its Colonial furnishings are sparse and simple—a four-poster and bedside table, sturdy bureau and easy chair. Rag carpet is on the floor and the walls are tinted.

The bedroom of Washington Irving preserved in his home at Irvington, N. Y., marks a later period than the Patrick Henry room. While the furniture is equally simple, the general atmosphere of the room indicates a later period and a different climate. A practical suggestion is found in the small patterned wall paper and furniture covers that preserve the old atmosphere.
The post-Revolutionary period is represented in this drawing room of an old Philadelphia residence, preserved in its original state with chairs, tables, settee and old desk. The contour of the furniture found an enhancing background in walls. By this time the fireplace has grown quite the plain tinted small—a mere basket for coals—and the mantel is a narrow shelf.

Compare the fireplace in the post-Revolutionary room above with the huge fireplace of this early Colonial kitchen preserved in the Essex Institute at Salem, Mass. In those first days the fireplace was the center of family life. It was so large one could sit inside. Settles were ranged by the side, and the stock of seed corn and drying herbs hung from the rafters.
“Since my daughter came back from driving an ambulance in France and from living in the various towns, she has not only brought back an international atmosphere with her but she is quite a Kitchen Red! She has revolutionized our whole culinary system.”

“You strike terror to my soul,” gasped Mrs. Whitney. “What can you mean?”

“Well, since she has returned she is keen for cutting down unnecessary effort and unneccessary processes and she thinks that the French have solved the simplifying of cooking by the use of the casserole or casserole system as I like to call it,” explained Margaret Benson’s proud parent.

“Oh, dear,” sighed Mrs. Whitney, “these fads are so overdone, generally.

“You are right, they are. But this is no fad, as it’s been popular for aeons, and if it had not been why should we not give it a trial? Because a thing can be used interminably is no reason why it should not be attempted. We drink water, yet we don’t choke or drown ourselves very often!”

“Joking aside, tell me just what is so revolutionary about Margaret’s diet?”

“She says that in these servant famine days where people either have none, one or a very depleted staff of them, processes must be cut down, handling of utensils must be decreased. Therefore cooking in dishes that can be used for cutting down unnecessarv’ effort and un

“Nonsense, dear, you can bake, roast, boil, and braise in these dishes. I have made excellent cake and bread in them, and soup and fruits and all very deliciously.”

“And yet I think scalloped dishes and marmites and things in ramakins are very good, too,” added Mrs. Benson.

“Well, they are casserole cookery, too, only those dishes are for the most part individuals, and these individual dishes are often made in the more delicate pottery wares. Naturally, one doesn’t have to have the family size always.”

“But don’t they break and crack too easily to be really practical?”

“They do not break if one uses ordinary common sense with them. When they are new I set them in very cold water for a few hours, tell the cook to apply gradual heat, never sudden heat, and that she must not put them on or in the stove without something in them, and that when she uses them on top of the stove that she must put an asbestos or metal tray under them to insulate them from too direct a heat.”

“You know common sense has to be used with all cooking utensils to lengthen their lives. But here are some of the good points in casserole cookery—Less liquid need be added when using them as the food in long cooking is more appetizing by this slow casserole cooking.”

“Of course,” continued Mrs. Benson, “because I have in my kitchen some glass utensils whose greatest attributes are rapidity in cooking. By this rapidity in cooking there is a saving of fuel, and as the utensils are taken directly from the stove, as are the casseroles, and used on the table, there is the same saving of service time. These glass utensils bring out the flavors in all kinds of foods, they do not absorb odors or grease, they are very easy to keep clean, there is never any burn to remove and one can always see inside the utensil to find out how the food is faring!”

“But think of the breakage,” again put in Mrs. Whitney as she did in the case of the casserole dishes, “they don’t break—they are strongly guaranteed against breakage in the oven. They are annealed so perfectly that they can stand intense and sudden heat and not break. Margaret came back with great tales of safety glass which is used on motors. This glass rarely breaks even if hit by shrapnel, simply cracks and crazes. I tell you this to give you confidence in what the scientific manufacturers of glass are doing today.”

“This cooking glass,” she went on, “is also made in engraved patterns which make it suitable for the most exacting table use.

“But why is it that cooking can be done so much more rapidly in the glass ware?”

“Because the glass utensil utilizes by the nature of glass composition every bit of heat in the oven and the metal utensil does not. I proved this by putting a metal and a glass pot in the oven equally full of water and the glass pot boiled very soon while the . . . well I’d hate to tell you what did happen.”

“Of course,” continued Mrs. Benson, “this glass is only usable in the oven. It is really miracle stuff because even boiling water poured into one of the utensils won’t break it.”

“Can anything be cooked in this ware?”

“Well, this is what I have cooked and it covers a pretty good range: light omelets, dried fruit, cake, bread, meat and re-chaffueurs. The glass casserole is very much in vogue at present because the glass ware is adaptable to slow cooking, too.”

“Well, I certainly like the type of revolution that Margaret has imported,” said Mrs. Whitney enthusiastically, “It’s amazing, isn’t it, to think what can be done with glass and china fire-proof as they have become!”

“No, not when you think of crossing the ocean in sixteen hours, talked Mrs. Benson.

“But what is amazing is that women are so slow to investigate and are willing to live in their unexplored mediaval culinary rugs, while in every other line they seem to be so up and coming.”
THE SALIENT POINTS OF THE MODERN KITCHEN

Space, Light, Order, Cleanliness and Labor-Saving Equipment Comprise Its Virtues

Set down in order, the facts of the kitchen to the right, which is in the New York residence of C. M. McNiel, Esq., are glazed brick wall, cove corners, linoleum tile floor, hooded French range, hot plate table, pot rack, and work table all in good position, and the sinks by the window. F. Stern, architect.

In the kitchen below, in the New York home of Frederick Leison, we find tile walls with rounded corners, a tile floor, built-in cupboards, pot and lid rack, a hooded French range, work table and chopping block. The equipment and arrangement save labor and make for orderliness. H. A. Jacobs, architect.
The living room of this high ceilinged, old fashioned Washington Square house is made joyous with green blue walls and an English chintz with a vivid design of birds and flowers on a black ground. Between the two tall, ruffled curtained windows stands an effective group of Adam green console table and mirror with mauve colored flaminces. There are vivid touches of orange in cushions and lamps, and on the dark stained floor is a white bear rug.

The library is done in vivid tones of terra cotta and gray green. A brilliant wall paper with terra cotta predominating in the design has been set in panels of the gray green walls and shellacked a mellow tone. A pair of little old Chinese figures mounted into lamps are among the interesting touches. The furniture is covered in plain terra cotta and in slip covers of all-over flowered chintz. A black carpet keeps the room in harmony.
A queer little old English clock is one of the interesting objects in the living room. Near it stands a chintz-covered comfortable arm chair with a conveniently placed small table, with its accompanying accessories of flowers and lamp. In creating these rooms Mrs. Bennett has added to her already successful career on the stage an enviable reputation as decorator.

The living room coloring is used in the dining room. A portrait of Mr. Richard Bennett in one of his great successes, "What Every Woman Knows," hangs above the mantel. Mulberry colored curtains are caught back on old crystal sconces, and the blue of the room is accentuated in the blue glass edged mirror, and the old blue Bristol jar beneath.
OLD ENGLISH INTERIORS in AMERICAN HOMES

British History is Written in the Development of Its Rooms—Their Adaptation to Houses of Distinction in America

C. J. CHARLES

Whether it is in the climate or whether it is in the soil, something has made English oak unapproachable as a material for decoration.

The wood of the lordly oak used in the house imparts real dignity and proportion. In any scheme of interior decoration the question of color is of vital importance, and in this respect oak will always hold its own. In no other wood can we find such subtle color, or one that blends so well with its surroundings, as oak which has acquired the patina of age.

Oak for a Background

Nothing equals its effectiveness as a background. Armor, tapestries, rich embroideries, mezzotint engravings, delicate water color drawings, or the grandiose and immortal paintings of Velasquez or Titian are all assisted by the quiet tones of old oak. It is like the subdued radiance of old gold or the mellow qualities of old wine.

Then, to the American, there is the sentimental side of old English oak, the historical interest that attaches to this material which is taken bodily out of those old manor houses and mansions and brought to the new world. It bespeaks the innermost life of an age that produced a Shakespeare. It reveals the spirit of England's most heroic epoch. The culture and ability of her statesmen, and the courage and endurance of the men who fought the nation's foe, found an echo in the stone and oak which remain to this day a monument and example of a comfortable English home.

In order to understand the development of old English interiors, it is necessary to have in mind the evolution of the English house, which sheltered this ornamentation in its various stages.

The earliest form of an English house built in permanent fashion was the keep. These were located in the midst of earthworks, which the Conqueror and his followers found scattered over the land. The works were strengthened by stone walls for the purpose of a more effective defense, with projecting towers, so far as these might prove an advantage. The keep, thus protected from enemies, was the first form of the "Englishman's home," which he has staunchly defended in all ages. Built of stone, it was for the domestic use of the owner, his family and immediate attendants, whilst, for the accommodation of the vassals and retainers who overflowed from the towers and keep, temporary wooden structures were regarded as forming an adequate shelter.

The keep was a massive rectangular structure, usually several stories in height, varying in size from 30' to 80' square. The walls were of great strength and seldom less than 8', and often as much as 16' to 20' in thickness. There was but one room on each floor, but the enormous walls were honeycombed with small mural chambers and contained many recesses which were used as sleeping and retiring places by the family and principal guests, whilst in most instances a circular stair built into the stone connected one floor with another.

Inside the Keep

The interior was sombre of necessity, because the exigencies of defense made lighting only permissible by means of narrow slits in the walls. The fireplace was a mere recess in the wall, with no ornamental feature and no flue as we know it, merely a funnel being provided which led to a small vertical opening in the face of the wall through which a part of the smoke—and only a part of it—could find its way out. However, this might not have been so objectionable as one may imagine, for there are more unpleasant odors than those of the smoke of a pine or oak log.

This primitive form of home, of course, had but primitive adornment. The only attempt (Continued on page 50)
A half-timber old English room arranged as a library, showing a restricted use of panels at the farther end and the hooded chimney piece.

The molded ceiling is another feature. Here it is used in a paneled library with a carved mantel and a typical leaded and decorative window of the period.

The rooms of this period were sparsely furnished, but each piece sturdily made, in harmony with the heavy carved timbers and stone chimney.

In this dining room we have the plaster ceiling, the carved chimney, paneled walls, the tapestry and the deep windows of the period.
IN THE VEGETABLE GARDEN THIS MONTH

Success in the Summer Garden In Not Merely a Question of Planting and Allowing to Grow—Here Are Ways to Get Full Value from the Maturing Crops

WILLIAM C. McCOLLOM

THERE are very few gardens that realize their proper dividends. The fault usually lies with the owner of the garden. One of the causes of failure is that the crops are not gathered at the proper time and are wasted entirely. Take Swiss chard, for example; if it is kept cut, the young, succulent shoots are tender and of high food value, but when allowed to become tough and old, are coarse and almost worthless. The secret, if there is any, is in frequent cutting. Give it away if you cannot make better use of it, but do not waste it. New Zealand spinach also requires cutting frequently, in order to insure the best quality.

This is also the time to gather onions. The large ones should be stored away for winter use and the small ones pickled, preserved, or made use of in some similar manner. Lima beans should be used only when young. The older beans, those that have passed their best stage, should be allowed to ripen on the vine, to be used in the winter as dried beans.

Gather your crops at the proper time. This is one of the secrets of a successful garden. It is nice to see things growing, but from an economical point of view it is far nicer to see them really produce, so the habit of the good gardener should be to gather vegetables daily. Success can only be measured by the size of your market basket.

What to Can Now

Canning offers large possibilities to the owner of a garden. It saves waste and is the salvation of over-production in crops. Of course, it is not advisable to wait until the vegetables are passed before they are canned. However, this is frequently done, and the practice must be severely condemned. It is just as necessary that vegetables should be fresh in cans as otherwise. Vegetables canned at the proper time have a much better color and keep better than old, tough vegetables, which require extra cooking. Tomatoes should be gathered frequently and canned; the method used must, of course, be decided by each individual, but the purpose of canning is to prevent waste and whenever enough fruit for a few cans is available, the preserving kettle should be brought forth and made to do its work.

' Corn should be ripening fast at this time and as this crop is the best of the year, it is well to can as much as possible now. Lima beans for canning, too, and First of All. At the same time make a sowing of spinach. It is always a good practice to sow these crops together as they make excellent combination crops. Radishes, lettuce and endive may also be sown now. Lack of moisture at this time of the year, coupled with the intense heat, will soon destroy the germinating qualities of the seeds. It is advisable, if there is no irrigation or other means of watering the ground, thoroughly to soak the drills before sowing. This is preferred to soaking the seeds as is sometimes done, thereby encouraging germination so that the roots are pushed forth into a very dry soil.

Setting Out Strawberries

Strawberry beds set out at this time of the year will bear a full crop of fruit next season, provided, of course, potted plants are used. Strawberries, like other garden crops, will pay fully for any particular attention that is set aside for them. Use plenty of manure and a liberal quantity of bone meal. As a result of this care, the plants will build up sufficient crown between now and the fall to insure gathering a good crop of fruit next year. The plants should be set 2' between the rows and 1' apart in the row. Keep all runners removed. It is advisable to use both the stamineate and pistilate types of flowers, to insure proper fertilization, which in the end means fruit.

For the home garden always select varieties for their quality, disregarding entirely the commercial types that are valuable for their shipping qualities. A larger and softer berry is preferred for home use and is of much better quality and flavor.

After cane fruits have finished fruiting the canes should be gone over very carefully, removing all the dead wood. This should be done immediately, as they are easy to remove now. Remove the old shoots at the ground line by means of a pruning knife or scissors. Cord should be used to tie the new shoots in position. When the new shoots have reached a considerable size, growth should be stopped by pinching. This will cause numerous side shoots to develop, which will bear fruit next season. It must be kept in mind that it is at this season of the year that this class of plant is developing growth which determines the quality of next season's crop, and it is well to keep them matched in case the ground is dry. Like most plants of woody growth, raspberries, blackberries, etc., are subject to numerous insect pests, and the plants should be kept
I tie the young berry shoots need support, tie them together now. Cut out the old wood at the ground sprayed with a combined lead and Bordeaux mixture compound.

Sooner or later the real gardener who hopes to be successful must come to the conclusion that the application of water artificially is necessary. This has long been conceded; the only point left to determine is which system is best suited to your individual needs. Any garden that is not equipped with some means of irrigating is only traveling at half speed. In other words, it is absolutely impossible to obtain full value from a garden where water is not always available in usable quantities.

Crops are hastened to maturity by the application of water. Seeds are germinated during dry weather conditions, and as most vegetables are composed of 90% or more of water, the necessity of frequent watering is readily apparent.

Systems which have the pipes exposed are the most practical, because of the tempering of the water before it comes in contact with the plants. Systems that operate in a square or rectangle are also preferred because of the equality of distribution. Those that operate in circles leave an open space in between, or overlap the work. Most of these systems are not troublesome to install as few pipes are underground, and there is really no reason why they cannot be installed at this time of the year.

Failures in the Garden

Failures in gardens can be traced to lack of interest. This is often due primarily to lack of ability, and leads to discouragement and consequent failure. It is usually not any one factor, but many, that lead to poor gardens. To begin with, they are badly planned and poorly fed, which means lack of manure or other fertilizers. Cheap seeds are used, and the whole thing is reduced to such standards that failure is inevitable. These gardens always die a slow death at this time when the dry weather is collecting its toll.

Gardens that are properly prepared show it now by their luxuriant growth and color. Those who produce do so because of their desire to accomplish something; those who fail can charge their mistakes to lack of interest in overcoming obstacles.

Too many people think that to be interested in, and to love a garden is all that is necessary for its success. This is where they make their first mistake. Just as in any art or profession nothing can be accomplished without hard work, so in the art of growing things, labor, intelligence and inherent love of the subject are necessary for success. Whoever said that "genius is an infinite capacity for taking pains" must have had gardening in mind. The vast gulf between the professional and the amateur is nowhere better illustrated than in planting and developing a garden.

A lover of music does not expect that by merely buying a song, all that is necessary to success is to sing it. Why then does the flower lover labor under the delusion that all that is required for a rose to bloom in all its glory is merely to plant it? Allied with a love of the subject must be sound knowledge of its principles, and a willingness for hard work, if one is desirous of insure real and lasting success.
In this little country house the hip-roof design is developed along simple but permanent lines. The lower floor is stucco, the ends of the second and the dormers are shingle and the roof slate, giving a variety of harmonious textures with plenty of light and shade. The foundation planting is good.

A doorway arrangement, common to certain types of Colonial houses, has been reproduced here. It is a six panel door with side lights set in a frame of dignified moldings. The overhang gives protection to this entrance.

**THE HIP-ROOF HOUSE**

*Home of W. P. Beazell, Esq., Forest Hills, L. I.*

AYMAR EMBURY II, Architect

The simplicity which characterizes the exterior is evident in the room arrangement. On the first floor is a house-depth living room, with its porch, a vestibule hall and lavatory, a small dining room with pantry behind and a kitchen in a separate wing. Upstairs three chambers, three baths and a maid's room afford sufficient space for a small family. Closet accommodation is sufficient and all rooms are well ventilated and lighted.
For the tiny baby comes a folding "Kiddy Koop." White enamel with animal insets, 40" square, $12

The nursery may be completely furnished with specially sized painted furniture of a "peasant design," in any color desired with quaint animal decorations. A rush-seated couch, wide enough to be used as a bed, comes at $107; the small-sized armchair rocker, $23; armchair, $22; play table, suitable for nursery meals, $28; small settle, $12; side chair, $30

A convenient article for the nursery is a "wicker bureau," with four roomy compartments and cover, painted cream or white enamelled, at $9.50. Next to it, a small-sized clothes rack, $3.75.

Something quite new and original for a more grown-up playroom is a set of painted furniture with toy soldiers as the chief motif in the design. These wear a bright red uniform in contrast to the ivory color of the furniture. The table, $20; book shelf, $18.50; toy box, useful as a bench, $30; armchair, $20

SEEN IN THE SHOPS FOR THE NURSERY

Purchases may be made through the House & Garden Shopping Department, 19 W. 44th St., New York City. Cheque must accompany order.
Abundant watering of the roots is essential when evergreens are being planted.

Gather and use the egg-plants while they are still young and full of juice.

When the crop is over, dig the pea vines into the ground to enrich it.

When the seeds of which are sown directly in the garden rows, they are still young egg-plants while the ground is dry, it is best to use overhead sprinklers or boards for this purpose. These are involved in many types of evergreen plants, and make a habit of watering them twice daily until the shoots are large enough to be transplanted into the greenhouse.

Frogs, toadstools, and other pests are started from seed soon now.

Old advice, but good—keep the ground well cultivated.
We offer for inspection

A SUPERB COLLECTION OF ANTIQUE MOSQUE RUGS

in Ghiordes, Koula, Ferraghan and other weaves of great interest to all lovers of early Eastern Art.

Also an assortment of Antique and Modern Oriental Carpets unsurpassed in extent and merit, in a wide range of sizes.

We are prepared to weave Rugs of any desired dimensions, in designs and color-effects planned to meet your special requirements.

We will be glad to advise you as to what we have for your particular needs.

Interior Decorators Floor Coverings and Fabrics Furniture Makers

FIFTH AVENUE AND FORTY-SEVENTH STREET, NEW YORK

WASHINGTON, D. C.

SAN FRANCISCO, CAL.
at formal decoration took the form of shields, arms and trophies of the chase fixed upon the walls, which both satisfied the pride of the owner and furnished some relief for the plain walls. The floors were of wood, rough, sturdy and substantial, and there were great square beams supporting the ceilings. The doorways were small and of the simplest description. Tables and seats were of the plainest hewn character—all of solid oak and devoid of carving.

The Hall

Then a change came over the politics and security of the nation. The country became more and more settled and defense was not so imperative, so the keep, which was piled up, one story on another, took a more convenient and livable form. The rooms were placed alongside each other on the ground, and the manor house type emerged. It is this manor house which has developed through the centuries into the house of modern times.

The fortified manor house, in addition to its strong outer walls, was usually surrounded by a deep ditch or moat, across which a drawbridge was placed, which could be raised or lowered as occasion demanded, and which led to a strongly defended gateway. The principal feature of these fortified houses was a central hall, where everyone lived when indoors. It was the living, dining and sleeping place for all. Adjoining this at one end was a room or rooms for the master, which was called the solar, and at the other end a culinary department, which formed the headquarters for the servants. The hall, or principal room, was necessarily of large size, lofty and of one story, with an open timber roof, sometimes freely decorated. Its importance was so pronounced that the house itself was called "The Hall," a name which is applied to the principal house in a parish to this day. A screen was usually placed so as to form a corridor between the hall and the kitchen, and this screen was developed into one of the principal decorative features of the hall of the Elizabethan and Jacobean periods.

In the manor house attention became concentrated on comfort and privacy rather than defense, as the condition of the country became more and more settled. Little by little, drawbridges and moats were no longer required; the surrounding walls, though they continued to be of great strength, needed no defensive towers; houses began to be planned with courtyards, more expansive windows were introduced, sheltered gardens and terraces became possible. The wider opportunities for commerce and adventure enabled the traders to become rich and the nobles more powerful. There was added to the great hall, in which the old time baron had sat at the table with his family and guests in patriarchal relation to his retainers and serving men, the long gallery for entertainment and for the retirement and privacy which the lord and his lady might seek from the common throng. Development of the house continued along English lines until the classical period came along, when English architecture became thoroughly Etruscan. The heroic and pure period of English decoration was over. The classical period remained to the end of the 18th and the beginning of the 19th Century, when it passed into strictly modern values, that are of no interest whatever from the art standpoint.

The Classical Period

The classical period was ushered in by architects, proud of their ability to destroy the old and erect the new. The distinctive characteristics were the absence of gables and the substitution of sash windows for the old mullioned form. This took away the picturesque treatment characteristic of the old style, which gave way to cold, careful spacing and other arrangements not conducive to artistic effects. The classical spirit seemed to pervade all artistic efforts, whether in painting, sculpture or literature. Staidness and noble proportions were achieved, it is true, but sincerity gave way to artificiality. Persons of distinction seemed content to forgo the comforts of home for the opportunity of living the stately life.

This period is perhaps best represented by Pope, himself a stilted classicist, who, when Blenheim was described to him, was compelled to say, "I sit from all you have been telling me 'tis a house and not a dwelling." Having traced the development of the house itself, we now arrive at the decorations. It is these adornments which interest us here in America, because so many of them have been taken bodily from their English settings and removed to this country, and also because they have served and still serve as models for reproductions of great beauty and sound artistic value which also serve to make our homes livable.

Ever Look Into
The Monroe Pipeless
For Heating Your House?
Costs Little — Saves Much

Perhaps you already know a bit about Pipeless Heaters and how one pipe and one register actually heat an entire house.

Perhaps you are one of the ones who has just plain said “there isn’t any such animal.”

Perhaps you acknowledge it’s a good thing, but mentally limit its use to Bungalows or certain types of very small houses.

Perhaps then you don’t know as much about pipeless heating as you should—provided of course, you are interested in heat comfort and coal economy.

Perhaps you may find it will pay you to install a Monroe Tubular Pipeless alongside your boiler, as a coal saver for the mild months.

If you do, you will be doing exactly what a lot of others have done. Especially since coal is so high; which fact makes us think you will want to send for our Monroe Pipeless booklet.

“Monarch Outstrips ’em all”
Old English Interiors in American Homes

(Continued from page 50)

The most characteristic feature of the Elizabethan and Jacobean houses is the screen around the family hearth. In the earlier Gothic period of English decoration they were always arched or pointed, and this can always be taken as a distinguishing feature between the Tudor and the Elizabethan and later styles. The large bay window, with its quaint and sometimes busy patterned treatment, also formed one of the most important features of the façade. Occasional introduction of stained glass found its way here and there, and increased its effect.

Many of these old English windows have found their way to America, carefully preserved from their original settings, and brought here without injury, to be installed in American homes as nearly as possible in the same way as in the original house. There is something intimate and livable about these windows that makes a decided appeal to the American mind.

Next we come to the doorways, chimney pieces, roofs and ceilings, the simplicity of which was the most striking feature of the Medieval and Gothic styles. These always present a strong contrast to the elaboration bestowed upon them in later periods.

The earliest type of door—that in use in the ancient keeps—was a cross stretcher on the back of a few boards like the cover of a packing case, and was generally strengthened by wrought iron straps. Its simple construction was succeeded by an obviously better method, that of framing the thickest pieces together and introducing the thinner wood as panels. The iron hinges and fittings of both the Tudor and Gothic doors are worthy of attention. The interior of the doorway first became an important feature during the Elizabethan era. The earlier simply molded arrangement gave way to doors flanked by pilasters. The door heads were sometimes lavishly ornamented, the doors themselves freely carved and carved, with much fancy dress played in their embellishment.

This rather fine treatment, which was so delightful, gave way to the more stately period before mentioned, after the ideas of such trained architects as Inigo Jones and others. With the advent of Christopher Wren and Vanbrugh, pilasters were superseded by more massive, almost detached columns supporting a bold frieze and cornice, sometimes a straight, broken or semi-circular pediment enclosing a shield or similar decoration. The Brothers Adam introduced the discreetly enriched and carved architraves, friezes and cornices so often evoked by their names.

The English Stairs

The development of the English staircase lagged behind, remaining an unimportant feature in decoration until the 16th Century. In the ancient keep it was usually built of stone, on the upper floor, contrived in the solid masonry, and even at times nothing less primitive than a ladder served to connect one floor with another. The development of the staircase, when it did start, however, was very rapid.

The width increased enormously, and the whole staircase became, in short, one of, if not the most decorative features in the house. The handrail became massive, the space between it and the stout string course filled in with turned or square shaped balusters, or, as occasionally happened, with carved and fretted woodwork. The newel posts were important and carried up well above the handrail, with their tops either wrought into striking shapes or crowned with heraldic animals.

In the late 17th and during the 18th Century the one exception to the making of everything bold and heavier was the staircase. The massive newels and handrail made lighter, the stringer course dispensed with, and the ends of the stairs and handrails again was that the handrail, which had previously been strong to newel, was ramped, that is, curved upward at each turn of the stair to hold the foot of the step, while carving was tidily introduced in the turned balustrade and the end of the steps, and finally toward the top of the century came the elliptical staircases and the iron balustrading of the "Adam Hall."

Chimney Pieces

Next comes the chimney piece. While no longer remaining purely utilitarian, it assumed the importance of an architectural and decorative feature.

From the earliest times the fireplace had always been the object of interest. Originally it was placed flush with the wall, with a projecting hood to catch the smoke, which was carried out of the room by a chimney shaft through the wall, but later, when recesses were made and chimney shafts introduced, this hood became an important feature during the Elizabethan and later periods. The chimney piece was often decorative and interesting, but it was not until the Elizabethan period, when greater attention was paid to their design and their dimensions increased, that they became the chief feature of the room. The fashions of the day, fantastically pillared or carvings supported the heavy molding over the fire opening, and panels and panels were supported by a corbel, reached and apparently supported the ceiling itself. These panels were generally two or three steps up and, as with the ceilings, heraldry played an important part in their decoration. The family arms were the chief ornament, which form of decoration, besides gratifying the family pride, imparted a dignity to the room, if any excuse is needed for this display; "where should sentiment linger if not around the family hearth," as the old house, its history and its builder.

Chimney pieces were originally more frequently made of stone than of wood, and many splendid examples, finely carved, are to be found. Some of the finest have been brought to America, and placed in rooms with decorations coeval with their origin.

The same changes that we have described in the treatment of the doors and paneling affected the chimney piece. Architects, who had by this time asserted themselves, adopted a larger handling of the design, and instead of the smaller panels above the fire opening, this space was treated in the same fashion as the walls of the room. The chimney piece still retained its importance, but the style of decoration was altered, and the insertion of a portrait, still life or landscape, chrysized with architectural rams, replaced the carved panel. This form of decoration gave an agreeable note of color and interest to the room.

And now, having considered some of its appurtenances, we come to the walls of the room.

English Paneling

Old English oak paneling! It was carried all round the walls as a sort of lining, but it was not necessarily a fixture or looked upon as such, and could be taken down with ease; in fact, it is recorded that the paneling would sometimes pass by agreement to some other

(Continued from page 52)

And then, after its zenith, came the eclipse of the panel room and all that it stood for in decorative life.

The change began in the middle and latter part of the 18th Century. Wood paneling began to be scanted, the walls were left unrelied, and other painted or covered with some of the daintiness figured and gilded lacquer from France. Woodwork and other objects became gilded, and silk damask was used to harmonize with it, applied in flat panels and surrounded by a carved and gilt wooden frame. And, as if to add to this, the fallen oak, there came, from France, wall paper in imitation of damask and velvet! Of course, wall paper had come back as the 16th Century, but not in conflict with the noble oak in England's mansion.

Thus did English interiors lose their individuality. Much that was beautiful succeeded, it is true. The arts of China and Japan interveined, and implanted their stamp on the Louis XV style in France and the decorations of Chippendale in England. The phoenix and the dragon triumphed. Hardly a palace or a manor house in England or France lacked its Chinese room, with its painted or "japanned" lacquer walls.

Then came the classic period, which invaded France with the Revolution and passed into the Empire, and which was at this time that Dutch painting was introduced in England, and that Holland came to paint the portraits of the nobility.

The Jacobean paneling that followed is distinguished by an increasing intricacy of framing and molding, which was very often ingeniously introduced and varied with inlaid wood. With the coming of the Georges the treatment of small panels gave way to a much broader arrangement. The large panels became much wider and were generally divided by a dado rail at a distance of about 2' to 3' from the floor, while two or at most three extended to the height of the room. The moldings, again, were much bolder, and instead of being merely sunk and scratched on the framing, they were more made to project. Enrichment in carving was treated in the same way, and instead of being flat in section and conventional in treatment, was high in inspiration and modeled a naturalistic form. Fruit, flowers and birds, arranged in swags and drops, apparently hung on the walls and were carved with great boldness, delicate finish and strong relief. Naturally the reader, if he is familiar with decoration, will recall the name of Grinling Gibbons.

The Country Auction Sale

(Continued from page 33)

For America has had its art awakenings, and it is founded on the best foundation in the world—an open mind. Americans are a people possessing in full their own individuality and remaining the keenest and most sympathetic appreciation of the beautiful, added to which is the fact that a generation ago the eagerness to learn all that is to be known of good design when they are once convinced that they are in the hands of a capable teacher.

House & Garden

Are You Buying Your Plumbing on the Installment Plan?

Many people buy plumbing on the installment plan and never know it. The life of inferior plumbing material is actually determined before the plumber's truck brings it to your house. Such fixtures will last just so long, and then shame of their appearance and realization of their sanitary uselessness force you to replace them. Then comes the second payment—the same price for the fixture, the same bill for plumber's services. You come to realize how much better off you would have been to have originally insisted upon

THE TRENTON POTTERIES COMPANY

"TEPECO" All-Clay Plumbing

It is most sanitary, beautiful, practical and permanent. Permanence is not denoted by a white surface, but by what material is beneath that surface. With time, inferior materials will lose their sanitary value, dirt will adhere, the appearance becomes uninviting—the piece loses its usefulness.

"TEPECO" Plumbing is china or porcelain, solid and substantial. Dirt does not readily cling to its glistening white surface, nor will that surface be worn away by scouring. A wise investment—beautiful one.

If you intend to build or renovate your bathroom, write for our instructive book, "Bathrooms of Character."
Kashan study.

and against a plain background that will silhouette the beautiful detail of the rigging. Truly a boat model is worth all its cost as a decorative unit.

A single well-built replica of a ship will give an atmosphere to a room which will do much to banish the sordid cares of everyday life. It is impossible to look upon one of these models without instinctively dreaming, for a moment at least, of the original ship and the romantic lives of her deep sea sailors.

We may have our own Hog Island of which we are justly proud, but Rogers still takes her passage in the straining canvas drives the majestic square rigger over the Seven Seas.

These ship models for decorative use has given rise to a distinct class of boat, namely the decorative model. These boats are made in the present day not with the idea of accuracy as much as with an eye for their decorative value. In these interesting combinations of colors are used both on sail and hull and often the various details of the boats such as the masts and spars are distorted. Builders of these models have a fondness for choosing types of vessels that have the greatest elements of the picturesque such as the galleons of the Genoese, the war vessels of the Crusaders, Elizabethan craft, Genoese carracks, Spanish galleons, Chinese junks, Dutch yachts, etc. These are much of the original models in both the European and the American decorative models of the "Santa Maria," "The Great Harry," "The Sovereign of the Seas," La Couronne, "The Royal George," "The Golden Hind," "Half Moon," "Victory," and the "Constitution" are often duplicated.

One of the greatest difficulties that present day builders of early ship models have had to contend with was lack of good working plans, but since the publication of the Mariner's Mirror some years ago, which included all kinds of early wreck plans, we must say that the matter is somewhat easier.

**Culver—Master of Models**

It has been left to the genius of Henry B. Culver, a New York lawyer, to probably the finest models of ancient ships made in America today. Most of his time outside of practicing his profession is spent in reconstructing the ships of a by-gone day. Some ten or twelve years ago Mr. Culver built his first model which proved so successful that many of his friends asked him to make ships for them. Soon he was exhibiting models in the shows of the Architectural League, which attracted so much attention, that architects and curators of nautical museums began commissioning him to build models for their collections. At present shipbuilding is almost a second profession with him and he has made models of nearly every kind of ship from the ships down through the ships of the middle ages to the American clipper ship period.

His greatest contribution to the historic ships which are of a more decorative value, such as his model of the French Grace A' Dieu, the largest ship constructed up to that time in England and Mr. Culver's model made after a painting at the Courton Park Palace was a marvel of detail. The model of the French frigate "La Brientelle" is considered one of the most technically correct productions.

A New Phase of an Old Fashion

(Continued on page 60)
These words would express the feelings of one coming unexpectedly upon a planting of the wonderful Iris, unfolding its luminous flowers in the sunlight. Only one who has seen it so growing can form an idea of its beauty. It is of stately habit and great decorative value. The graceful flowers are of both soft and brilliant hues, ranging from white and pearl to deepest purple and maroon. Perfectly hardy and of easiest cultivation.

Our collection, one of the largest in the world, comprises the best American and European novelties. The new Excision Act bars further importation of these plants. They are therefore bound to become scarcer and higher priced.

Collection A. Tall Bearded Iris.
Price $10.00
Actual value $11.55

THE FOLEY GREENHOUSE MFG. CO., 9 W. Lake St., Chicago
Culinary Success Depends on the Range

Good food makes more appetizing when prepared on a Deane Range for it is made to order on plans approved by half a century of experience.

Deane's French Range

Built in sections, is made to burn your choice of fuels. The one shown here burns coal or wood in one section, gasolene-gas in the other, and electricity in the left hand folder, which is set in a double plate shelf of Russia iron.

Above the gasolene-gas section, with its top of interchangeable bars, is a 24-inch broiler and a breakfast or roll oven 18 inches wide, both burning gasolene-gas. Over the entire range is a mitered corner hood and ventilator to keep food vapors from escaping into the room. Both range and hood are trimmed with black nickel.

Ask your architect about Deane's French Ranges and ask us for our portfolio of unusual ranges made to order for homes of the better class.

Bramhall Deane Co.
265-265 West 36th St., New York, N.Y.

Old Irish Glass

Glass was also made at Dunannon and Belfast. The Tyrole Colliers advertised "all sorts of the newest fashions in green, blue, purple, and plain glassware, with flint stoppers; water glasses, plates, epagoge and epagoge sauce; mustard, salt, and pepper shakers, cas, jugs, cut and plain savles, jelly and sweatmeat glasses, ball bowls; globes and shades; confettions jars; with all kinds of glass fit for chemists and mathematicians; salts and salt linings; mustard casters; white phials, and all kinds of bottles for perfumers; retorts and receivers; green phials; green and white mustard bottles; enameled, cut and plain wine glasses; cruets; common, dram and punch glasses; green garde-vins; cruets; goblets, etc. The factory is equal to any in England, and can supply glass with initials or engraved to design.

The Cork Cutting

Glass was also made in Cork, Newry, Londonderry and Ballycastle. Cork was distinguished for her sharp diamond cutting, her classical four-light Grecian lamps and the generous proportions of the glass. The lips of the Cork and Waterford bottles are large, while those made in Belfast are small. The water glasses were for the Northern generosity that one finds in old glass, and possible to find more lovely shapes. The National Museum, having preserved the wonderful designs, could supply them to a manufacturer, and it is impossible to find more lovely shapes.

Modern Reproductions

Large quantities of cut glass have been made in England, America and Germany; they are exact copies in cutting and form of old specimens and are sold as such to the unwary. But to a practised eye there is a wide difference. The color is more relentlessly white, there is a harder glitter, never the tenderness that one finds in old glass, and it is lighter in weight. Doubtless glass manufacturers would still be flourishing in Ireland, but May 1st, 1797, England began her tax on Irish glass. The final blow came when a duty of £12 10s. Od. was placed on every 1,000 lbs. of metal. Ireland lost heart, the manufacture of glass instantly declined. When the excise duty was removed in 1845 the glass industry in Ireland was practically dead.

Williams Glass Factory in Dublin had orders from New York that would keep the glass house at work for a year. And in 1798, the principal province was lost, and glass, if not all of it, was sent to America, while the Irish themselves used the cheaper goods made in Bristol. That glass that now, as it did in old Ireland glass even yet to be found in this country. I know of several. Two lately came under my observation, which are the property of Miss Van Cortlandt of the Manor House, Cretonne-Hudson. Twin jugs, heavy, lustrous, and cut with a broad sweep that show a sure and master hand. They were a present to her uncle, William Caldwell, from Mrs. Butler of Dublin, and in 1854, he gave them as a wedding present to Miss Van Cortlandt's mother. What has become of the Waterford epergne of my childhood I know not, but I saw some fine lustres and candlesticks in Charleston which have passed carefully through the hands of several generations.

In 1902 a small quantity of clear white flint glass was exhibited at the Cork Exhibition. It was made of Muckish sand—where a whole mountain of glass was produced in the inanimate objects which might so easily be developed in Ireland.

The National Museum, having preserved the wonderful designs, could supply them to a manufacturer, and it is impossible to find more lovely shapes.

The public is invited to purchase genuine reproductions of old Irish glass, made in the National Museum for the Dublin Corporation.

Did your flowers fail to make connections?

"... I don't know why it was, but with all that planting we had no flowers during the first two weeks of July. That's my worst trouble, but it isn't the only one. The shrubs are too high; there isn't enough colour-range in the formal beds; and I positively hate our Carolina poplars because everybody else has them. Can't you reform us this autumn so that we can start next spring with the certainty of being happy? And—could you plan a lily pool that our own gardener could make? He's quite a handy man, really..."

A

ND she was a handy correspondent, for she sent a sketch with all the points of the compass marked and the ground-slope indicated.

Then we reached for our favorite thinking cap, and we put in phlox in fifty-seven varieties, pricked out with the hot colour of Lilium superbum, and banked with sharp spears of gladiolus. We gave her the Oriental plane tree for shade, and the European linden for that one spot where perfection of form would mean everything to the garden. Last of all we built the lily pool and told her just what roots to get and how many, so that there should be enough clear water left to mirror all the clouds and half the tea-table.

Your problem may be a refractory room that just won't come sunny no matter how you do over the walls—or where to get a new lighting fixture for the hall—or how to dispose of all we built the lily pool and told her just what roots to get and how many, so that there should be enough clear water left to mirror all the clouds and half the tea-table.

Your problem may be a refractory room that just won't come sunny no matter how you do over the walls—or where to get a new lighting fixture for the hall—or how to dispose of all that planting we had no flowers during the first two weeks of July. That's my worst trouble, but it isn't the only one. The shrubs are too high; there isn't enough colour-range in the formal beds; and I positively hate our Carolina poplars because everybody else has them. Can't you reform us this autumn so that we can start next spring with the certainty of being happy? And—could you plan a lily pool that our own gardener could make? He's quite a handy man, really...

What Makes a Home?

Our little booklet "Home and the Fireplace" gives a full explanation.

From Archaeologist to the Maker of a Nation at 26

Such is the romantic career of Colonel Lawrence, one of the most picturesque and virile characters the great war produced. It is a story not told before—the romance of a young English scholar, who instantly left his research in the deserts of Arabia to bring to the Allies an almost supernatural influence with the Arabs. Wholly unused to warfare he won the confidence of a nation, becoming one of the Arab people he led—in power the uncrowned King of the Hedjaz and one of the greatest forces in the defeat of the Turks.

Beginning in the September number of

ASIA

The American Magazine on the Orient

this story will be told for the first time. It will be a series of articles, vividly presenting a career as romantic as that of a Clive or a Stanley, by

MR. LOWELL THOMAS, War Correspondent, Traveler, Explorer, Associate Editor of ASIA who lived with Lawrence on the Arabian sands during the campaign, and knows him in action as no American does.

ASIA, fully illustrated, is the only general magazine published, treating exclusively of Oriental matters. It is as instructive as it is entertaining.

ASIA fills the need for correct knowledge about the countries and peoples of the Orient. The high responsibility we now hold in our new international position brings us into close diplomatic and trade relations with every part of the world.

SPECIAL INTRODUCTORY OFFER

Five Months for $1.00 / A Five Months' Tour of the Orient

ASIA is an expensive magazine to produce. It is therefore non-returnable to the news companies and dealers, and so not easily obtained. To show you the richness and wonders of the Orient as disclosed by the pages of ASIA, we make this special offer. ASIA sells for 35¢ per copy.

Through associate membership in the American Asiatic Association, the cost is $3.00 per year, a saving of $3.25. But you may say, "I don't know ASIA." Therefore, this special offer, giving opportunity to judge the magazine for yourself. You will get five current issues, commencing with the August number.

SEND COUPON NOW. OFFER TEMPORARY

The magazine ASIA is different from any issued. These few issues will show you that a knowledge of the East is essential to you as a cultured individual. You will find that ASIA is an educator yet not pedantic, with an appeal to every member of your family.

SPECIAL OFFER

This special acquaintance offer is temporary. Sign and mail coupon now.

Danersk Decorative Furniture

Prices can not be reduced for a long time to come in anything where labor is the important factor. Skilled wages are on the increase rather than otherwise.

Material plays but a small part in the making of DANERSK FURNITURE. That is why we buy the best woods available and take such care in the handling and curing of them. The most expert cabinet makers and skilled artists combine to give our customers the finish and colors of their own choosing for each room.

A Burn Kitchen Refuse

Home builders have found the Kernerator a successful substitute for the obnoxious garbage pail.

It burns from the top downward, destroying all odors. Built in chimney when house is erected, the

KERNERATOR
Built-in-the-Chimney

takes no extra kitchen space and requires no fuel other than the dry refuse deposited.

Absolute guarantee of successful operation. Ask your architect or write us for book of proof.

$5 Invested in Vogue
a tiny fraction of your loss on one ill-chosen gown
Will Save You $500

The instant the war was over, Paris began to dance, and, curiously enough, the dance has determined the mode of even the most sedate autumn street frock. In repose, the silhouette remains slim. But the instant one moves—walking, dancing, crossing a room—it must have grace and flow of line.

How can you get that floating effect? How should you stand when you wear it? How can you know the favored colors? How can you assure yourself added distinction of dress and save yourself from misguided or haphazard buying?

The secret is not more money. It is Vogue's authoritative, advance fashion advice.

The gown you buy and never wear is the really expensive gown. Gloves, boots, hats, that miss being exactly what you want are the ones that cost more than you can afford.

AFTER SEPTEMBER 1

24 Issues of Vogue Will Cost $6
Save $1 By Mailing This Coupon Now

Owing to the tremendous increase during the last four years in the cost of paper, labor, and materials, Vogue—rather than lower its standard of production in the slightest degree—will raise its yearly subscription price from $5 to $6, beginning September 1st.

For a limited time, however, Vogue will accept subscriptions at the $5 rate. You need not send money now. Just sign and mail the coupon.

CONSIDER, then, that for $5—surely a tiny fraction of your loss on a single ill-chosen hat or gown—you may have at hand, for an entire year (24 issues), Vogue's fashion information, Vogue's acknowledged taste, Vogue's buying skill, Vogue's personal service bureaus—all the judgment, experience, and skill of a highly paid staff of experts in everything connected with dress, entertaining, interior decoration, and the social and the intellectual life of a cultivated woman.

Special Offer—Don't Send Money Now!

If you mail the coupon at once, we will enter your subscription for 24 issues (one year) of Vogue, beginning with the Interior Decorations Number, ready now, at the $5 rate.

This offer will be held open only for a limited time; then the subscription price will go to $6.

Sign, tear off and mail the coupon
