FOUR SUMMERS
INSTEAD OF FOUR SEASONS

Mark Twain said that for years everybody has been complaining about the weather, but nobody has ever done anything about it . . .

But times have changed . . . Nowadays every man can be his own weatherman.

With American Radiator Heating, you can tune in on Summer in the fury of the blast! . . . Substitute the cheer of Summer Warmth for the chill of Winter Weather—banish the perils of cold rooms—safeguard life in seasons inimical to health—solve the problem of heating with such efficiency and economy as no old-fashioned heater knows anything about!

Let's do something about the weather!
And don't worry about the cost!
The total cost is small, and the long-term payments are negligible!

Nothing contributes more to the comfort and health of the family than modern plumbing fixtures. And you may have a perfectly appointed bathroom, even a beautiful bathroom, for less than you may have imagined.

There’s a New Opportunity in every Home
with such Groups of Period Furniture

You will find among the six hundred Kittinger reproductions many distinctive and comfortable groups which you may treasure for their heirloom value... and you will be agreeably surprised that such authentic furniture is priced within reach of modest incomes.

This Jacobean desk, companion chair and atlas will lend distinction to living room, hall, library, or bedroom. The beauty of line and proportion... the charm of richly finished solid walnut, is doubly appreciated when you realize the practical value of such pieces. When closed, the desk becomes a beautiful wall cabinet. The interior arrangement will win your instant admiration. The rush-seat chair is just the right height for writing comfort.

A revelation is in store for those who find it convenient to visit one of the Kittinger Showrooms mentioned below... where a cordial welcome awaits you. Let us send you an interesting folder picturing some of these Period reproductions by Kittinger... all in solid walnut, mahogany, oak or maple... for home, office, club or hotel. Address Kittinger Company, Dept. 44, North Elmwood Ave., Buffalo, N. Y.

KITTINGER
Distinctive Furniture
Strange... that the genius of a single family should have guided the smart world for a century in its choice of perfumes! Yet the reign of the Guerlain dynasty has been unbroken for a hundred changing years. The loveliness of the Empress Eugenie found its complement in the delightful flower odours created for her by Pierre Francois Guerlain. The gay rebels who shook off the Victorian yoke found their new daring incarnated in Jicky. The elegantes of today adore the sophistication of Shalimar.

GUERLAIN

He ought to have a toilet case ... it ought to be the best

TRADE MARK

It is not too much to say that no man should be without a toilet case. He needs one at home, and he needs one when he travels. In Stockholm or the Congo ... in the country, or at his own apartment ... mirror, razor and brushes are always where they should be. He knows exactly where to find each object, every time. ... For generations, men with an instinct for the better things in life, have governed their selection of toilet cases by the same rule with which they decide upon all articles of fine leather. If, by some chance, you could see the cases they have chosen, you would almost invariably find them marked with a tiny golden keystone R. ... That imprint is the house insignia of C. F. Rumpp & Sons, Inc., an establishment devoted to the making of fine leather goods. It assures you ... as your own appreciation of lovely things will enable you to sense ... that you can buy no better gift. ... Holding the case in your hand, you immediately discern its true value. The very feel and fragrance of the leather reflect the finished materials, and expert, unhurried workmanship. ... For the men who have labored upon these cases have an enviable knowledge of leather ... a genuine affection for the work of their hands ... a passion for excellence not too frequent in this world. ... C. F. Rumpp & Sons, Inc., manufacture fine leather articles of every description, excepting luggage. At the better leather goods stores, department stores, jewelers, and at stationers.

The Box-Type Toilet Case is much in favor with those men who travel extensively, especially when the journey will be prolonged. A sturdy metal frame supports the soft goatskin cover. ... The hard rubber fittings in deep red are both attractive and permanent. The same case also comes in alligator, pigskin, and other leathers.

A Casual Informativity marks this gentleman's set in sealskin. The case is most complete, having all the articles necessary for both town and country use. Fittings are of hard rubber, the color of mahogany, with or without 14-carat gold mountings for one's initials. The case also is available in ostrich skin.

The Military Brush Set is always in vogue. The man who must leave town on short notice finds it indispensable; small and compact, it requires but little space. The two smart brushes in this set are ebony-hafted, with silver mountings. The case is of goatskin, though it may also be had in a variety of other leathers, with other brushes.

TO THE EYE of taste, there is incomparable distinction in the subdued luxury of Linen Damask laid upon the table. Its exquisite weave, its delicately modulating tones, encompass the ritual of perfect service with a harmonious beauty that is the highest virtue of correctness. The looms of Ireland and Scotland have excelled through the centuries in creating Linen Damask Cloths and Napkins imbued with a supreme expression of this special charm. In homes where the perfect appointment of the table is a first principle of the art of living, Irish or Scottish Linen Damask is essential.

In White, or Pastel Tints. Moderately Priced

"We Dine on Linen Damask", a charming booklet on correct table settings, will be sent you on receipt of ten cents to cover mailing cost. Address The Irish & Scottish Linen Damask Guild, 260 West Broadway, New York.

THE SUNBURST

This cloth is loomed in Linen Damask to an inspiration from the radiance of the Sun. With consummate feeling for dynamic rhythms, master weavers have created a design of conventionalized irradiations and suggested shadows, ingeniously utilizing the dual tone of the fabric to an extraordinary brilliance of effect. It is one example from many exclusive designs offered to the discriminating hostess.

Over a hundred years of service to the
"Draw your chair a little closer," is the cozy invitation of this lovely French Mantel.

"Here in the warmth of my hospitality let us recall the days of Louis XIV and of Colbert, his great minister — days when the whole French nation was leading Europe in numbers, wealth, intellect and energy.

"Versailles! What memories! What brilliance! What dignified magnificence! What royal ceremonies! Those towering wigs! The embroidered velvets! Luxury in all its regal splendor!

"I was inspired into being through a masterpiece of that talented artist, Jacques Caffieri. I am, so connoisseurs say, a perfect replica of one of the most perfect examples of classic loveliness in French art — the cheminée de Caffieri, a chimney-piece in the Appartement du Dauphin at the Palace of Versailles!

"I represent the glory that belonged to France at the height of her splendor. I draw my greatest elation from the fact that I belong to the Period of Louis XIV.

"Somewhere in this great America, I know I am wanted for the central motif of a salon whose reproduction of this period of classic elegance needs a mantel of Louis XIV to recreate the beauty of Versailles artistry in fullest measure.

"I await your commands."

The foregoing is typical of the rare and lovely treasures which the House of Jackson has garnered from the far corners of the earth for its appreciative patrons. Our galleries are filled with the unusual in fireplace fittings. If you cannot call, your inquiry is invited for illustrated booklet and photographs prepared in your especial behalf. Address us in care of Department HG at New York.

The Chariot of Apollo in the Gardens of Versailles.
Custom-Type Phaeton

Smart! Exclusive! Distinctive! Convertible! Auburn first introduced this custom-type of car as a production model and made it available for the first time under $5000. Former owners of the very highest priced cars, including costly European importations, quickly recognized its vogue and outstanding value. It is an even finer creation, even more efficient and enduring, even more luxurious, and has increased horsepower. Although you get considerably more value, you pay considerably less. (By continually increasing quality and decreasing cost, is the way Auburn has become the fastest growing company in America.) Again the demand for the rare combination of its power, stamina, comfort and convertible advantages will exceed the supply. The top can easily be lowered and fits snugly in a boot. All four door glasses may be raised or lowered at will. It is an entirely open touring car, or a completely closed car, as you wish. Long, and very low; 130 inch wheelbase and 125 horsepower Straight Eight motor.

AUBURN
POWERED BY LYCOMING

AUBURN AUTOMOBILE COMPANY, AUBURN, INDIANA
Years ago, working hand in hand with our aerial pioneers, The Texas Company developed, even as far back as 1914, specialized Texaco Products to make travel by air safer, surer, swifter. In recognition of their superiority, Texaco Gasoline and Oil were specified for the "America," the first plane designed to fly the Atlantic.

It was Texaco Gasoline and Airplane Oil which carried the "Texaco No. 5" and the "Sun God" on their epoch-making transcontinental flights. And tomorrow's giant airliners, each carrying safely hundreds of passengers, will be fueled and lubricated by Texaco. For Texaco's progress in the air since the dawn of aviation is only a hint—a promise of brilliant future achievements.

The Texaco Red Star with the Green T is far more than a trademark. It's a symbol of progress and quality, of specialized products designed to meet exactly the fuel and lubrication requirements of industry and transportation. There is a Texaco lubricant for every purpose.
No motor car buyer need sacrifice body quality to price. Notwithstanding their definite and marked superiority, Fisher Body cars are obtainable in every price field.

All the cars whose emblems you see above, also bear, forward at the lower right exterior of the body, the signature plate of Fisher Body craftsmanship—sign and symbol of authentic style, more luxurious comfort and greater durability.

For General Motors cars, Fisher manufactures more than 75 different and distinct body types. In upholstering these body types, Fisher uses the highest grade of broadcloth, Bedford cord, mohair, plush and leather for upholstery materials, and finishes these bodies in an extremely wide variety of colors. These varied colors and materials, multiplied by their many combinations, result in literally thousands of individualized selections—truly a car for every purse and purpose.

Fisher Bodies are mounted upon the greatest chassis in their various price fields. In point of reliability and brilliant performance, combined with low cost of upkeep, General Motors cars have attained the highest mechanical development.

The emblem, "Body by Fisher", appearing in company with the emblem of Cadillac, La Salle, Buick, Viking, Oakland, Olds-
mobile, Marquette, Pontiac or Chevrolet, is, therefore, double assurance, not only of a better car, but of a better motor car investment as well.

How is it possible for Fisher Body to provide value so much greater? Three fundamental and all-important factors enable Fisher to build far better quality and far greater value.

The first factor is the enormous resources of Fisher. Owning its own lumber, fittings, hardware and glass manufactories—among the largest of their kind in the world—Fisher closely controls every manufacturing step, from raw materials to finished product.

The second factor is Fisher’s permanence of market, that market consisting of General Motors cars and only those cars. Fisher, therefore, is able to set its manufacturing program well in advance. It has no fear that the expensive machinery busy this year will be idle next year. Fisher’s costs are thus held to a minimum. Fisher is able to save importantly, also, in transportation expense, because its plants are units of the great factories of its customers.

The third factor is Fisher Body’s unequalled production. Fisher Body builds more closed bodies than any other body manufacturer, thus realizing economies possible only to such production.

Let these facts help and guide you when you select a motor car.
O transfer Raleigh from its own clever packet to a social contrivance of irreproachable gold will not improve the blended flavor of the cigarette. It would not startle Raleigh, who was born something of an aristocrat; it will probably not protect the cigarettes' plump, smooth freshness quite as well as Raleigh's own case. However, stone walls do not a prison make, nor golden cases a perfect even smoke. *Transfer it, if you like.*

Brown and Williamson Tobacco Corporation

Entertaining is a rare delight with a

WURLITZER REPRODUCING ORGAN

There’s a lull in the conversation. Then, an expectant hush, as you touch an electric button; and instantly, your guests are listening enraptured to the glorious harmonies with which your Wurlitzer Reproducing Residence Organ floods your home. Symphonies, ballads, classical or popular selections as you will, all are rendered with that brilliant blending of countless tone colors, that soul-stirring grandeur which make the pipe organ the acknowledged “King of Musical Instruments.”

For entertainment on all occasions, the Wurlitzer residence pipe organ, played either by hand or by reproducing music rolls, and requiring surprisingly small space, brings you the world’s best in music. There is no measuring the value of the pleasure it gives your guests and your family, the cultural development it affords your children, the distinction it adds to your home. Yet the cost is only about half what you would expect to pay for so wondrous an instrument.

You are invited to hear and play it at the nearest Wurlitzer Studio—New York, Buffalo, Cleveland, Cincinnati, Detroit, Los Angeles, Chicago, Pittsburgh.
A new idea in home furnishing
that gives a new thrill to entertaining

The Home Complete Ensemble
Shown by Leading Stores Everywhere

TODAY is the Era of Good Taste. An era of charming gowns, chic hats, rakish motor cars and artistic homes. Standards of living are exacting and exquisite. Truly an enchanting era in which to live!

But there are penalties. One must now follow the mode—or be de classe. No quarter is asked or given. Smartness is a duty. Even friendly eyes are sharply critical. Guests study your home while they sip your coffee.

Shoddy rooms—rooms that quarrel and clash—simply do not go any more. Harmony—charm—the ensemble. These are the touchstones, ruthlessly applied.

And that is why Berkey & Gay created the Home Complete Ensemble—to meet a very definite demand and need for harmony—ensemble—charm—in the smart modern home—and at a reasonable cost.

The Ensemble comprises the Kennerly suite for the dining room, the Kenmore suite for the bedroom, and the Kenwood living room group—each unit also purchasable separately.

These three groups have been carefully selected to create throughout the home that effect of harmony without monotony, and variety without discord which is the primary object of the modern decorator's art.

Each room, moreover, is planned, down to the smallest detail, by eminent authorities—the floors, the hangings, the objets d'art—and your Berkey & Gay dealer will

The Kenwood Group
for the Living Room

Comfortable, inviting, charming, instinct with friendly cheer—these terms come to mind readily when you see the Kenwood in this quietly harmonious setting. Restful comfort is apparent in the softly upholstered sofa, sofa chair, large wing chair, and pick-up or occasional chair. Convenience holds its calm place in the rectangular smoker's table, the round end table, and the smart Queen Anne console and mirror. And from the warm finish and interesting grain patterns of the walnut wood of which the tables, console, and mirror are built, to the finely chosen coverings of the upholstered pieces, the furniture impresses one with its tasteful, inviting beauty.

The upholstered pieces come in a selection of interesting, varied, and appropriate coverings. This interior is one arrangement worked out by a prominent decorator. The davenport and sofa chair display soft green mohair, with linen frieze reversible cushions. The wing chair is done in bright colored tapestry, the occasional chair in henna colored damask. Harmonious as a group, the pieces are set off in a particularly attractive manner by the colors and texture of the floor covering, walls, and draperies.

Is your living room all that you wish it to be? Why not consider the Kenwood group—or the individual pieces if you wish. They are all being displayed now.
show you diagrams and color charts which will enable you to create these effects without difficulty and without recourse to costly outside aid.

It has been possible to include the entire home in this new plan because of Berkey & Gay’s recent announcement of a complete showing of furniture for the living room.

Visit your dealer’s at the first opportunity and see this beautiful, harmonious grouping of suites and pieces. Also ask to see his complete display of advanced Berkey & Gay offerings—an infinite variety of charming new modes by America’s foremost creators of style in furniture.

The Kenmore Suite for the Bedroom

Its superb harmonies of grace and comfort have made Queen Anne our most popular furniture style. And here it is presented in a particularly outstanding form and setting for the modern home.

You will love the Kenmore for its mellow finish and its herringbone and houndstooth woods, its substantial but flowing lines, the antique touch that distinguishes its hardware. Beautifully hinged are the moldings of the bed, the curve and swell of the cabriole legs, the hand-carved shields that crest the mirrors. And the toilet table is not only bewitching but replete with convenient drawers and trays. The chifforobe is of true highboy type.

The walls against which you view the Kenmore here are panelled in delicate peach, the round floor covering is in pastel of soft champagne, peach, and turquoise sea-green. Peach gauze casts a cool spell over the window, and surprise table de jour complete this delightful effect. On the bed, ivory brocade trimmed in peach, turquoise, and heliotrope taffeta; and the chair and bench are upholstered in peach moire.

What could be more delightful in one’s own bedroom than this Kenmore Suite in the appropriate setting pictured here? For peaceful comfort, convenience, and beauty go hand-in-hand.

The Kenmore Suite for the Bedroom

Here is Elizabethan furniture, authentically translated for the modern home—and set off by a background beautiful in itself and intimately calculated to display the suite to the best advantage.

In the furniture, note the lovely grain-patterns of the woods, the authentic character of the lines, and the harmonious grouping of suites and pieces. Also ask to see his complete display of advanced Berkey & Gay offerings—an infinite variety of charming new modes by America’s foremost creators of style in furniture.

Once a bath tub marked the really modern home

Today it’s MANUFACTURED WEATHER

Here’s the story of a new type of heating system for the 1930 home that does far more than supply heated air. It conditions the air... manufactures indoor weather... provides a degree of comfort and convenience almost beyond imagination.

This weathermaking system is the adaptation for home use of the famous Carrier Systems of Air Conditioning so widely used today in theatres, hotels, department stores and office buildings.

This new type heating system is the Carrier Weathermaker. It takes the elements that make outdoor weather—warmth, moisture and air motion—combines them scientifically and controls their relationship to produce perfect weather indoors all winter long.

Until you have been in a home where a Weathermaker is actually installed, you simply can not imagine the improvement that it brings to a family’s health and joy of living.

Benefits of air conditioning proved before

Conditioning of air and manufacturing weather is new only in its relation to homes. For many years Carrier Systems of Air Conditioning have been making indoor weather in industrial plants... improvements in the manufacturing of many articles you buy and use and in the health and efficiency of employees.

Air Conditioning add to comfort and protect health.

More than 3,000 of these systems have been designed and installed by Willis H. Carrier and his associates, internationally known air conditioning specialists. These men applied the same principles in designing and perfecting a system specially for home use. And the result of their work is the Carrier Weathermaker for conditioning indoor air in winter.

How does the Weathermaker work to transform living conditions in the home? It supplies a soft warmth that does not overheat the house. It supplies and maintains auto-
The units shown darker warm the air, which is then supplied with the proper amount of moisture. The humidifying system supplies and automatically controls indoor humidity all winter long.

The filters that clean the air of dust and dirt as efficiently as a vacuum-cleaner removes dirt from your rugs.

The blower system insures uniform circulation of warmed, humidified, cleaned air throughout the house.

matically a correct relative humidity for the desired temperature. This is as important for the greatest bodily comfort and health as temperature. For the correct relative humidity in a home eliminates the too dry air that medical authorities tell us is so frequently the cause of colds and other winter illnesses.

What the Weathermaker gives you
The Weathermaker filters out bacteria-carrying dust particles so that you will have clean, fresh air to breathe. It sends out the warmed, humidified, cleaned air under positive, uniform pressure into every corner of the house, securing even temperature in all parts of every room . . . without drafts—without hot or cold zones.

Furthermore, this home system is designed to take a cooling unit, now under development, which will keep your house comfortable in mid-summer.

The Weathermaker is a new source of home health and comfort and cleanliness. It is a combined heating and air conditioning system that furnishes a constant supply of soft, balmy, gently stimulating air all winter long. The calendar may say it's January. But indoors, manufactured weather gives you all the delights of ideal spring or summer weather. And it marks your house as a really modern home.

Gas adds to efficiency . . . is the ideal fuel
Everything has been done to make the Carrier Weathermaker the most convenient and most efficient system available today. After careful consideration of all fuels, gas was finally chosen. This fuel comes into the house with the least possible trouble to you. It is the cleanest fuel. And as used in the Weathermaker, it is the most efficient fuel.

This unusually high efficiency, together with the new lower gas rates in many cities, brings the cost of gas down to a surprisingly low level. Do not say to yourself that gas is too expensive for you to use for heating until you have investigated its cost in connection with the Weathermaker. You may later regret having deprived your family of this feature of the modern home.

Consider, too, that the gas company is your fuel bin. You use gas only when you need it. You pay only for what you use, after you have used it. And with the supply coming constantly from the gas company, you eliminate the drudgery and dirt of handling coal and ashes. You save space in your cellar which you can finish off, keep clean and use as an extra room.

What of the cost of the Weathermaker itself? That, too, will surprise you. The initial cost is little if any higher (and is sometimes lower) than that of high-grade systems that merely supply heat—and have none of the other advantages of the Weathermaker.

Service to home builders
We offer a complete service, which covers details of estimating heating requirements, laying out and installing a Weathermaker system. Trained representatives will work with home owners, architects and heating engineers or contractors, from the inception of the plans to final operation.

The home owner who now has a warm-air furnace can replace it with a Weathermaker and modernize his home, using the present warm-air ducts. While you are thinking about a Weathermaker for your home, let us send you our booklet which tells in detail the many advantages of this new system. Your copy is free. Just address Carrier-Lyle Corporation, 850 Frelinghuysen Avenue, Newark, N. J.

Replace your stopped-up water pipes with Chase flexible Copper Water Tubing

Does your shower slow down to an irritating dribble when a faucet is opened downstairs? Then Chase Copper Water Tubing will end your troubles—permanently.

Before Chase Copper Water Tubing was introduced, rigid pipe was the only pipe. Easy enough to install while walls were open in homes under construction but difficult and destructive to take out and replace later.

Beautiful tile walls had to be ripped open, plaster, paint and wall paper were patched, never to look the same again.

Now your plumber works quickly, efficiently. He'll probably leave the old pipe right where it is, and work the shining new Chase copper tubing in alongside of it.

Because this tubing is flexible your plumber bends it around an obstruction here, a corner there, saving many costly fittings. He makes the necessary connections—and the job is done for all time. This tubing is 99.9% pure copper. It cannot rust.

This new Chase tubing together with special Chase Compression fittings, makes replacement a moderate expense. You end for all time the annoyance of rusty water, clogged pipes, poor water flow. You get

Pipes clogged with rust can now be replaced economically

The mark that identifies good brass and copper products

CHASE
or Comfort!

CHASE COPPER WATER TUBING comes in a coil, bends around corners, and is 99.9% pure copper. Chase Compression Fittings are marked and guaranteed.

Plenty of clean water through pipes of shining copper

clear, sparkling water at full pressure from every faucet in the house.
Telephone your plumber. Ask him to give you an estimate on replacing your old plumbing with Chase Copper Water Tubing and Chase Compression fittings.

COPPER WATER TUBING
A PRODUCT OF CHASE BRASS & COPPER CO., Incorporated, Waterbury, Conn.
A larger house—within the same four walls

Because Bryant Gas Heating adds the basement to the clean and useful, livable space, it makes possible a larger home in the same house. At the same time it makes a cleaner home and a more healthful one.

A Bryant Boiler is "as clean in the basement as it is in the picture." It brings no dirt or grime into the house and generates none. It is silent and odorless in operation. It eliminates the ups-and-downs of temperature so conducive to colds and resulting ailments. And it requires not an extra square foot of space for storage purposes—fuel, refuse or tools—only the floor space required by the boiler itself, without screening or partitions.

Set aside an adequate portion of the basement for laundry and storage and, in a Bryant-heated home, all of the rest can be made a spacious addition to the livable area.

Many a basement can be so arranged as to include both a children's playroom and an adult recreation room. Others are most useful if fitted out with a combination gymnasium and work-shop. A dance floor is highly desirable in some homes, a home-movie theatre in others. All of these uses are practical with Bryant Gas Heating, both in new houses and in remodeled and modernized old residences.

Where Winter-time is Bryant-time
The new Model 45 Bryant Boiler is the one heating plant which meets every requirement of this modern treatment of the basement.

It is a handsome piece of "basement furniture" which can be installed, without screening, in any room or passage and harmonize unobtrusively with its decorative setting. All controls are concealed beneath a stream-line-design cabinet of the same crystalline finish used on other fine metal specialties. A typical refinement of construction is the instrument panel-board where all gauges which ever need passing attention are conveniently grouped, as in an automobile.

Built for service—not servicing—as thousands of owners will testify, it can be counted upon to give twenty winters and more of dependable heat and with a minimum of human attention from first to last. Visits to the "furnace room" are timed by the calendar, not by the clock. You "let your pup be your Furnace Man!"

Free from dirt—free from vapor—free from noise—free from odor—free from revolving parts to wear out or delicate mechanisms to get out of adjustment—a Model 45 Bryant Boiler is the type of heating plant which adds a permanent asset to any house, making it a house to be envied in any neighborhood.

For complete details, which will gladly be furnished you without any obligation on your part, write

THE FURNACE MONTHS LOSE THEIR TERRORS
Lady Seymour makes available these definite helps in the selection and care of Blankets

Blankets that have a distinct health value...

Lady Seymour Blankets are made of all wool, specially selected, and their high heat-retaining, moisture-resisting qualities are due to the great number of little insulating air cells. For this reason, Lady Seymour Blankets afford the lightest, most healthful and most comforting warmth.

You may have a quick eye for beauty in color and for effectiveness of design. But where is the woman who has the highly sensitive touch that can judge the amount and the grade of wool in a blanket—whose knowledge is sufficiently scientific to determine the relative values to health and serviceability of various blankets? Lady Seymour has made it her task to make sure of these things for you—to make certain of every detail that contributes to the beauty and comfort and health-protecting qualities of blankets—every provision that makes for continued loveliness and service. All of these features are incorporated for you in Lady Seymour Blankets, and are promised you by every blanket bearing the Lady Seymour label. Lady Seymour models include solid colors, plaids, designs and two-tone effects. Double and single lengths. Beautifully boxed. At leading department stores.

Lady Seymour's NEW Coverlettes With Hand-Woven Effect

The newest throws for chaise longue or day bed are Lady Seymour's "Arlington" and "Monticello" Coverlettes, with the quaint patterns and deep fringe of the hand-woven coverlettes of the Colonial era. Many colors in combination with white. See them at your dealer's.

SEYMOUR WOOLEN MILLS
SEYMOUR, INDIANA
Since 1866
Also manufacturer of fine all-wool flannels and sport fabrics

Blankets that are lovely details in bedroom decoration....

The beautiful designs and enchanting colors of Lady Seymour Blankets are chosen by artists who specialize in bedroom decoration. The weaving is done by master craftsmen. These blankets are of such fine wool that their deep-napped fluffiness is an important feature of luxurious loveliness.

Blankets that remain beautiful and serviceable

Lady Seymour Blankets are distinguished by their strong, elastic nap which insures soft, billowy warmth through years of wear. This is because Lady Seymour Blankets are made entirely of fine, specially selected wool, handled with greatest care at every step in cleaning, drying, spinning, weaving and finishing.

The Navarre is Lady Seymour's most versatile blanket. Because it is reversible, with colors that blend or contrast, it is adaptable to almost any decorative scheme. It is particularly effective when folded across the foot of a bed or day bed.

Get this book!

A valuable booklet on the selection and care of blankets will be sent without charge if you will sign and mail us the coupon below.

SMART INTERIORS ARE NATURAL NOW

Interiors built of natural grain Tidewater Red Cypress have a rare beauty that never goes stale.
Ten years from now, when fashions in interiors have veered from "a cubist's dream" to some unpredictable modified expression of art, you will still love the delicate grain of this warmly-rich lumber.
America's greatest architects and decorators are enthusiastic in their acclaim of Tidewater Red Cypress. They advise you to use it for paneling, doors, window frames, base boards, molding, and wherever else you want the charm of a beautiful wood.

Specify

TIDEWATER RED CYPRESS
THE WOOD ETERNAL

Tidewater Red Cypress is versatile—it may be left in its natural state, waxed, varnished, stained, sand-etched, painted or charred, always with delightful effects.

BOOK OF INTERIORS—SENT FREE

Send for this book of really charming interiors. Photographs of rooms designed with a pleasing freshness of idea by famous architects have been selected to show you a variety of interesting interiors.

Write to the Southern Cypress Manufacturers Association, Dept. H. G. 1, Jacksonville, Florida.
Discriminating Taste Dictates--

QUITE naturally discriminating folk decide in favor of excellence . . . particularly in the appointments of their homes . . . . where taste and refinement are evidenced by the use of materials above the ordinary.

Such a material, for instance, as marble . . . . with its rich perfection of surface sheen and almost limitless colorings, the inimitable product of Nature's laboratories. The pride afforded by a marble stairway, marble wall base . . . . or perhaps an entrance hall wainscoted with marble . . . . comes as much from the beauty and distinction of the material as from ultimate economy.

The initial cost of marble is very reasonable, and its upkeep is practically nil.

We have recently published a series of books giving valuable facts and interesting suggestions about the use of marble in various buildings, including home and garden treatments.

Write us, naming the type of marble work you are interested in and a copy of the book covering that subject will be sent you immediately—without charge, of course. Address Department 6-X.

NATIONAL ASSOCIATION of MARBLE DEALERS
ROCKEFELLER BUILDING - CLEVELAND, OHIO
Passing Years will not mar the Beauty of these walls!

No single item in the planning of a home deserves more careful consideration than the construction of walls and ceilings. Eighty-five per cent of the visible interior is made up of plastered surfaces. Obviously if the charm of rooms is to be permanent... walls and ceilings must be preserved against the effects of age. They must be kept free from plaster cracks and defects.

The use of Milcor metal building products is the greatest assurance that the interior beauty of a home will be preserved. The reinforcement of steel provided by Milcor Stay-Rib Metal Lath prevents the development of cracks and other plaster blemishes. This steel lath is an ideal plaster base... strong... permanent and fire safe. Milcor Expansion Corner Beads preserve the trim sharpness of corners... They absorb unavoidable shocks and prevent chipping.

In the diagram you will see exactly how Milcor Fireproof Products are used to preserve beauty at each vulnerable point... Stay-Rib Metal Lath in the walls and ceilings... Expansion Corner Bead on corners. Ask your architect about Milcor Products... No home is too large or too small to warrant this finer construction.

YOUR OWN VACATION HOME—
AS YOU LIKE IT, WHEN YOU WANT IT

SEND FOR THE HODGSON BOOKLET, PICK A FLOOR-PLAN
TO SUIT YOUR NEEDS—AND ALMOST BEFORE YOU KNOW
IT YOUR SUMMER HOME IS UP, AND READY TO OCCUPY

Many people of means have chosen Hodgson Houses—sometimes for auxiliary use on large estates; more often for summer homes at some favorite lake or mountain resort. Why? Because they could be erected quickly, and be ready when wanted. All the bother of building, the fussing with contractors, estimates, litter and confusion were eliminated. And they recognized in the simplicity of line and contour architectural beauty which has the good taste to blend with its environment.

We build your Hodgson House in sections; ship it to you ready to erect. In a few days, aided by a little local labor, you're ready to move in. If you haven't time to supervise the erecting of your home,

we will gladly send a Hodgson construction foreman who will attend to all details.

Hodgson Houses everywhere have withstood the worst storms for years. Only the best materials are used. Selected weather-proof cedar and Douglas fir. The sections are held rigidly together by heavy key bolts. Details are carefully finished. Solid brass hardware, glass doorknobs, spacious closets.

HODGSON Houses
January, 1930

If RUST can invade your home ... then sooner or later expect TROUBLE

RUST—you know it... the reddish tinge... the tell-tale mark of destruction. It should be kept out of your home to avoid the many upkeep costs it causes.

Where does rust make its appearance? Wherever metal comes in contact with water; in the water supply system (water pipes, the hot water storage tank, etc.); in the outside sheet metal work (gutters, rain-pipes and roof flashings); also screens and hardware.

Rusted water pipes generally clogs with rust—slows up the flow to a trickle—discolors the water red—may spring leaks—has to be repaired and eventually replaced. Anaconda Brass Pipe, however, cannot rust.

Rusted gutters and rain-pipes are ugly... mar the walls... must be repaired and repainted frequently. Eventually they rust out. But sheet metal work when made of 99.9% pure Anaconda Copper doesn't rust.

How soon does rust come? An authoritative investigation shows that in the average home rustable metals cause trouble within seven years after installation.

How can you avoid rust? This can be easily done by using Anaconda Copper, Brass and Bronze. Thousands of homeowners are finding that these rustless metals save upkeep and replacement costs.

It is estimated that the annual rust loss in American homes is five times greater than the fire loss. For the usual one-family house, which is not rust-proofed, this rust expense will amount to an average of $60.00 annually.

Facts about Anaconda Copper and Brass

Anaconda products reach the consumer after the most careful supervision from mine to finished product. A single organization of more than a hundred years' experience is responsible for every step.

Every length of Anaconda Brass Pipe is tested. For your protection it is stamped "Anaconda"—your guarantee of lasting service. Leading plumbing contractors everywhere install it.

Every sheet of Anaconda Copper is also stamped "Anaconda." It is 99.9% pure. It can't rust.

It's easy to avoid this... a common sight in every community... replacing rusted gutters and rain-pipes with copper.

In the situation pictured above there was a box gutter lined with rustable metal connecting to rain-pipes of copper. Though installed only about seven years the gutter was badly rusted, while the copper rain-pipes were in perfect condition. New shingles had to be laid over the old gutter and Anaconda Copper gutters installed.

This replacement expense can be avoided in new construction by installing gutters, rain-pipes and flashings made of Anaconda Copper.

Children in the home—an important reason for using brass pipe

Consider the experience of Mrs. J. J. O'Donnell of Mt. Vernon, N.Y., who says:

"When we moved to our first house (in Pelham) we knew very little about rust. But we soon learned.

"First we noticed that the water pressure was growing weaker. Soon we couldn't draw water in the bathroom if a faucet was open in the kitchen or laundry. Rust was clogging the pipes. Then the water took on a reddish brown color that grew worse and worse. And I never had clear water to serve at table..."

"It was vital that the children have pure, clear water—and plenty of it—always. So in the house we built we decided to have Anaconda Brass Pipe. Since then we haven't seen a sign or trace of rust and the water is always pure and fresh."

A rust-proof hot water storage tank is an important part of any plumbing installation. If made of rustable metal its life is limited. All too often homeowners have found their cellars flooded from a leaking storage tank.

The use of copper hot water storage tanks is constantly increasing. Leading manufacturers of plumbing appliances are prepared to supply these tanks in sizes for the average home. Anaconda Copper cannot rust...it provides a permanent installation...it saves money.

Get this valuable booklet!—"The Home Owners' Fact Book," by Roger Whitman. It not only tells you how to rust-proof your house, but deals with important facts concerning planning, financing and maintenance. It will be sent upon receipt of 25 cents. Address—The American Brass Company, General Offices, Waterbury, Conn.
CRITTALL CASEMENTS

WINDOWS THAT BRING A GIFT OF BEAUTY

Crittall Casements lend the dignity of their own simple grace—the old-world charm of their quaint, leaded panes—to enrich the beauty of your home.

With this gift of beauty also come practical advantages. Crittall Casements furnish a simple motif for a delightful scheme of interior decoration. They are easy to clean; simply screened. They shut tight against raging storms and open wide to summer's wandering breezes.

There is a Crittall Casement for every type of home, large or small.

Crittall Universal Casements are custom-built to the specifications of your own architect, while Stanwin and Norman Casements are available in a wide range of standardized designs and sizes.

Ask your architect to show you pages A1131 to A1200 in Sweet's Architectural Catalogue and explain how suitably Crittall Casements can be utilized in the home you are planning. Or, if you would first investigate for yourself, we will be glad to send you our fully illustrated catalogue.

ANNOUNCING

THE DAWN
OF A NEW DAY
IN INSULATION

Today, throughout America, a new name is heard... a new symbol is introduced... a new insulating board appears. Weatherwood!... the only insulating board fabricated from hardwood. The Weathercock!... symbol of insulation efficiency.

Weatherwood!... full half-inch insulation... staunch barrier between the extremes of unfriendly weather and family comfort. And Weatherwood Lath!... perfected insulating plaster base, with the exclusive tongue and groove joint.

Weatherwood! New in heat-stopping value... new in structural strength... new in sound resistance... new in all the advantages of strong, enduring hardwood fibers fabricated into insulating building board and lath.

Weatherwood and Weatherwood Lath are being supplied to retail lumber dealers as rapidly as possible. Ask your dealer about them, or write for booklet, "The New Standard of Home Construction," with sample.

CHICAGO MILL AND LUMBER CORPORATION
111 WEST WASHINGTON STREET
CHICAGO • • • ILLINOIS
Meet Time, that tough old tester of everything in this world. To his aid, Time calls all the destructive forces of the universe. Years come and go, storms and sunshine, heat and cold make their accustomed rounds, while Time, the tough old tester, broods over the world, trying, testing, destroying. Yet Time, the tough old tester, does have his troubles. Against one material devised by man, Time and his serving-men falter. That material is genuine Puddled Wrought Iron—the metal of which Reading 5-Point Pipe is made. Watch for the next coming of Time, the tough old tester—you can learn about pipe from him.

READING IRON COMPANY, Reading, Pennsylvania

Science and Invention Have Never Found a Satisfactory Substitute for Genuine Puddled Wrought Iron
Tests show Insulite is 14% stronger as well as 12 1/2% more efficient than ordinary 7/16" insulating boards.

It's human nature, when you build, to want not only the most efficient but the strongest insulation on the market. In a recent laboratory test, the four best known insulating boards were tested for strength, and Insulite proved to be 14% stronger than any.

And not only is Insulite stronger, but—full 1/2 inch thick—gives 12 1/2% more efficient insulation than ordinary 7/16" insulating boards.

In addition to the above superiorities, the use of Insulite—because it is in large size units—cuts labor costs sometimes as much as 50%.

Insulite, chemically treated to resist moisture and not subject to deterioration, is not only economical in its first cost, because it eliminates the need of building paper and other non-insulating materials, but it also pays dividends in fuel savings through all the years to come.

Insulite used as sheathing has several times the bracing strength of lumber horizontally applied, and as a plaster base grips plaster with twice the strength of wood lath.

When you build, of course you're going to use insulation. Talk to your architect, contractor, or lumber dealer—they know Insulite. Write us for a copy of our free booklet, "Increasing Home Enjoyment," and a sample of Insulite to use in making the tests explained in the next column.

Make these two tests:

Prove Insulite's greater strength by driving a nail a half inch in from the edge and through a board of Insulite. Loop a strong cord around the nail and, with hand scales, see how much greater pull is required to tear the nail through Insulite than through any other insulation boards similarly tested.

Prove Insulite's greater efficiency. Place a cube of ice on a piece of Insulite over an automatic electric iron set at hot. See how long it takes the heat to penetrate the Insulite and melt the ice. Make the same test with any other insulation boards. Then we know you will specify Insulite.

Last year twice as many people turned from cold doubt to this certain warmth

Each year the sun turns his back upon our ice and snow and travels south—unjealous of the millions of tiny fires men light in imitation of his certain heat. Each year one tried and proven method of creating automatic heat grows greater—unjealous of a myriad of other heating methods.

It has been thirty-three years since the Spencer Magazine Feed Heater first brought automatic heat to homes. Yet time and the best engineering skill could do no more than refine the Spencer Heater. Its scientific principle stands today, as then, as the method of creating heat with an automatic fuel feed that depends neither upon machines nor fallible human skill.

Spencer automatic fuel feed is controlled by two scientific laws—the law of nature that makes fire burn up, and the law of gravitation that makes fuel roll down. These two laws have been in operation since the world began.

Even at first the Spencer added economy to convenience. The Spencer saves as much as half the annual fuel bill because it burns the small size fuels—especially anthracite—which are low in cost because ordinary heaters will not burn them satisfactorily. With the growing use of coke in Spencer Heaters, greater thousands have discovered that they can have clean and automatic heat in homes, at no more cost than with older and less healthful heating methods.

Constant improvement in design, greater savings and convenience have marked the progress of the Spencer Heater. As it grew in value it was accepted by more and more people. With increased distribution, its cost has continued to come down.

New styles, new sizes of Spencer Heaters are being introduced this year in both cast iron sectional and steel tubular types. They bring to the owner of any home, from cottage to mansion, the same savings and convenience that they provide in schools, churches, apartment houses and other large buildings.

This is an age of progress. Ingenious new devices appear so fast that many are obsolete before they are established. Inventive genius has created many devices designed to reduce the cost and trouble of securing heat. Last year twice as many people as ever before turned their backs upon cold doubt and new experiments, to accept the proven Spencer principle. This overwhelming public acceptance, better than any words, commends the convenience and economy of the Spencer, to new thousands of home owners to whom lowered prices now make it available. SPENCER HEATER COMPANY, WILLIAMSPORT, PA. Division of Lycoming Manufacturing Company.
Many nations seek it

... this rare cream-white wood
closely resembling the Cedars of Lebanon

And in the halls of Solomon—"The great court around about... was with a row of cedar beams."
—1 KINGS 7:12

As in the days of Solomon, cedars from the mountain of Lebanon were sought for temple and palace, so today a species closely resembling this ancient wood—Port Orford Cedar—is prized for America's finest homes.

Like the cedars of old, Port Orford Cedar grows in one secluded spot. Its giant trees tower only along a narrow strip of the Pacific Coast. Like this ancient wood it is widely sought. Britain builds it into her magnificent public buildings, the staterooms of her palatial liners, the interiors of her finest manor homes.

Japan reveres it! For Port Orford Cedar closely resembles the now carefully guarded "hinoki," sacred wood of Japan. So precious is Port Orford Cedar that Japanese craftsmen carefully saw by hand the boards for palace and shrine.

Now, the beautiful homes of Southern California are acquainting all America with the merits of this fine wood.

Silken smooth... this rare wood enamels to a beautiful porcelain-like luster. Cream-white, it stains to great warmth and richness. Homogeneous of fiber, it machines easily to special designs. Impervious to weathering, decay resisting, Port Orford Cedar is also ideal for entrances, porch columns, pergolas, garden furniture. Also available in panels of standard sizes and thicknesses for stained interiors and cabinet work.

Consult your architect about this rare wood. Mail the coupon today to our exclusive sales agents,
**CONTEMPORARY** glass and rugs were the subject of the second International Exhibition of Industrial Art on view during recent months at the Metropolitan Museum of Art, New York City. The considerable attention given recently to decorative and table glass makes this exhibition especially timely. Glass, permeated with bubbles, enameled, engraved, or deeply etched, is offered in varied, unique and altogether pleasing forms, created with a skill and technique almost beyond belief. Simplicity of line and delicacy of treatment are the keynote struck by such masters of the French school as René Lalique, Maurice Marinot, Henri Navarre, Jean Luce, Marcel Goupy, and the Compagnie des Cristalleries de Baccarat, as well as the craftsmen of Sweden, Austria, Czechoslovakia, Germany, Italy and England. Germany has produced many simple free-blown glass pieces for table use. Venetian craftsmen have evolved new forms and effects by employing varying thicknesses, surface textures and tints. Even in England, while much of the glass still reflects the heaviness of former days, lighter and more graceful forms are now contributed by the Russel Workshops at Broadway. America is represented by many fine pieces, especially from the Corning Glass Works and The Tiffany Studios.

FARM, forest, desert and sea, the Bible, the fireside and children's fables have inspired the frivolous blown glass miniatures that adorn the modern scene. Buchwalter, Inc., has grouped the figures in this glass creation into their proper habitats. Chickens, fighting cocks, ducks, sheep, pigs, donkeys, mules, bunnies, hedgehogs, cats, dogs and ravens populate the barnyard and are available in properly scaled families—for instance, a four-inch hen with one-inch chicks, all in yellow glass. Tiny cats with arched backs oppose snarling dogs. These traditional enemies, ready to spring at each other, are about an inch high.

AMONG the animals in the forest group are a deer and a doe in yellow, green or orchid; red, green or blue squirrels eating nuts; gazelles in various sizes and postures; a majestic stag nine inches long and six inches high; a roe and runner in black and (Continued on page 37)

OfAmusing Interest

is the wall paper No. 971 by Paul Dumas, Paris. Suggestive of the Dutch sampler style, is colorful and refreshingly different. An old mill and a peasant girl, a plump shepherd piping as he rests on the grassy bank, are figures of droll charm.

PHEASANT PANEL—Pheasants with their long tail feathers and wonderfully variegated plumage perch on a crooked branch to make a fascinating composition in this wall paper panel by Zuber & Cie, Alsace. With brilliant color, it is unusually decorative, framed in wood, or set directly on the wall.

Hand forged andirons in antique steel finish, with pierced brass tops, 23" high, $58.00. Sturdily made woodholder $30.00. Set of firetools with stand to match $32.00.

Authentic reproductions at moderate prices

119 East 57th Street, N. Y. City

A graceful example of the charm of Richter Furniture is this attractive Maple Table — which serves, among its many uses, ideally as a Tea Table. Widely overhanging top supported by four flaring and tapered, slender legs. Frame is ornamented with cut-out curves. It is 26½ inches high, top round, 27 inches in diameter. Also made with 30 inch and 26 inch oval top.

Purchase Richter Furniture through your Architect, Dealer or Decorator.
Your Family Portraits

THE hunter of animal figures will surely fall prey to the specimens designed and executed in blown glass by Marianne von Allesch and available at Eugene Schoen, Inc. A nine-inch open-mouthed crocodile is pale blue, with mauve feet and spikes and glistening white eyes and teeth. There is a blue armadillo; a strange combination of lion and dog; elephants; birds; red and white and black and white fighting cocks ready for battle; and an amusingly sway-backed, bony Rosinante, Don Quixote's homely steed.

THE inexhaustible inspiration in Nature is reflected in the endless variety of blown glass objects offered in the shops. To the long list already enumerated, Lord & Taylor adds green snails, black beetles, giant flies with outstretched wings, and bewhiskered, endearing Scotties in yellow, black or white. Benello and Pillori present a lifesized rabbit and duck, modeled of light green blown glass.

Unusual Linens at Unusual Prices

Cheerful Tea Towels $7.50 for the Modern Kitchen

Unusual Brass Tie-backs, reproductions of a charming old style: Sunshine Blue or Ruby Red glass, or White Porcelain Lilies. $15 a pair.

Made in Europe from our design and printed in four colors on fine crepe paper. Red, Green, Yellow and Blue cocktail size.

A box contains 48 assorted. Sold in exclusive shops or direct. $1.15 postage paid.

AMY DREVENSTEIDT
31 East Tenth Street, New York
How to get the Best Results with an Oil Burner

THE change from a coal fire to an oil or gas burner does not give you a new system of heating. It merely permits you to use a different kind of fuel.

The prime factor upon which the comfort and cost of heating depend, remains what it always has been—the efficiency of the boiler.

A boiler's efficiency is measured by its capacity to absorb heat. A given boiler can absorb just so many heat units per minute and no more.

Obviously there is a relation between the number of heat units the boiler can absorb per minute, and the number of heat units the fire gives off per minute. If the fire exceeds the boiler's capacity, the excess heat units are wasted up the chimney.

An oil or gas fire gives off heat at a much faster rate than a coal fire. They put a far greater tax upon the boiler's efficiency.

The line AA on the chart represents the boiler's fixed capacity to absorb heat units.

The line BB represents the slightly varying number of heat units the coal fire gives off per minute, as the fire speeds up and slows down with the opening and closing of the draughts. (Assuming that the boiler operates efficiently with coal the line BB never rises above the line AA).

The line CC represents the sharply varying number of heat units the oil or gas fire gives off per minute, as the thermostat turns it on full blast or shuts it entirely off. Its peaks rise not only far above the peaks of the coal fire (line BB) but also far above the capacity line of the boiler (line AA). The areas above the line AA are wasted heat units. They go up the chimney.

While the above is a suppositional case to illustrate a point, it does not at all exaggerate the all too common condition.

In order to get the best results with an oil or gas burner, you should have a boiler whose heat-absorbing capacity line is at the level DD on the chart.

The New Smith "16" and the "24", "34", and "44" Mills Boilers are Specially Adapted for Oil or Gas.

A boiler's heat absorbing capacity depends upon how many square inches of Fire Surface it has. The New Smith "16" has a larger number than any other boiler made of the same grate area—enough to absorb more heat than your home will ever need. In addition it has a fire brick lining, usually found only in the most efficiently operated industrial boilers. This lining increases the amount of heat by radiation in the fire pot, and prolongs the shut-off periods of the oil or gas burner. It has been estimated that this alone accounts for a 10 percent saving in fuel cost.

HAVANA

Here's a trip abroad—
not far away—not too expensive

When winter comes, the travel-wise start south to Cuba. Here is the one winter resort that offers all the modern pastimes of the complete vacation—all the benefits of travel in the bracing sunshine of the tropics—with the added pleasure of an environment that is entirely foreign—different—a thorough change of scene which means a complete getting away from the things you're tired of and carries you into the sparkle, the freedom, the fascinating atmosphere of the old world. They're coming now, by train, by highway, by water, by air, to the pleasures, interests and new experiences that characterize life in the "Pearl of the Antilles"... Havana has earned the reputation, "Smartest City in America." Out of this setting of early Spanish colonialism has risen an ultra-modern metropolis of a half-million persons, with every facility for accommodating and entertaining its throngs of winter vacationists... deluxe hotels, grand boulevards, the gorgeous Prado, imposing theatres, the opera, broad highways radiating for hundreds of miles through scenic countryside... brilliant social life and every summer sport that's known to the out-of-doors—golf, tennis, polo, hunting—deep sea fishing, swimming, yachting—horse racing at famous Oriental Park—the thrilling jai-a-lai, fastest of games—every sport doubly delightful in entrancing tropical surroundings. Here are new health and new pleasures for all the family. (There are good American day and boarding schools for the children.) Here is mental rejuvenation for the American business man; a radical change from the routine... an opportunity to forget business, with the comfortable knowledge that if need be, a phone call can bring him quickly back to his desk. Plan now to visit Cuba, the ultimate in winter travel!...

For information, etc., any travel bureau, any railroad, steamship or airplane ticket office or the National Tourist Commission, Havana.
TWO SUMMERS A YEAR?

Are you ready for another summer of fun in the sun? Why not escape to one of our pristine beach resorts for a relaxing and rejuvenating getaway?

Are you ready to relax and enjoy the beauty of nature? Why not take a break from the city and enjoy the tranquility of one of our beautiful resorts?

Are you ready for a summer adventure? Why not explore the wonders of nature or try some exciting outdoor activities?

Are you ready for a summer vacation? Why not book a hotel or accommodation that offers a perfect blend of luxury and relaxation?

Are you ready for a summer escapes? Why not plan a trip to enjoy the beauty of nature and explore new destinations?

Are you ready for a summer getaway? Why not book a hotel or accommodation that offers a perfect blend of luxury and relaxation?

Are you ready for a summer getaway? Why not book a hotel or accommodation that offers a perfect blend of luxury and relaxation?
Down where the sun begins, and life is leisurely and gay. 11-day cruises. Three beguiling picture ports lying beyond reach of winter’s icy hand: Havana, carefree capital of the Caribbean; Nassau, where the holiday spirit tarries the whole year through; Bermuda, charming winter rendezvous. Stop over at your pleasure and continue your journey on the next round of the S. S. LAPLAND, popular cruise liner. Sailings from New York: January 11 and 25; February 8 and 22; March 8. $175 up.

Imagine 46 days of luxurious cruising on a great ocean liner sailing away to regions steeped in history and romance—Madeira, Gibraltar, Algiers, Monte Carlo, Naples, Athens, Constantinople, Syracuse. In addition, the Holy Land, age-old yet ever new and fascinating, and five days in Egypt, a ribbon of green between two seas of sand. Sailings from New York: S. S. LAURENTIC, January 9; February 27; S. S. ADRIATIC, January 18; March 8. $695 up First Class; $420 Tourist Third Cabin; both including shore program.

How pleasantly you adventure in luxurious ease and modern splendor in the world-circling fleet of the N. Y. K. Line to JAPAN, CHINA AND THE PHILIPPINES, WITH STOP-OVER AT HONOLULU

Here you find the luxury of magnificent suites, the refreshment of swimming pools, and the exercise afforded by well-equipped gymnasiums. You dine from an exquisite cuisine, served by English speaking stewards, and find delight in a gay shipboard life.

Regular sailings from San Francisco and Los Angeles, $230—$320 up. From Seattle and Vancouver direct to the Orient, $175 up. Round-the-World in either direction with privilege of stop-over, $910 Rates from $650,40 up.

For detailed information, sailing schedules and descriptive literature, write Dept. 25.

Our general agents or any local railroad or steamship agent.
Forty Miles Under the Oaks and Beside the Gulf...

There is no more beautiful drive in all the world than that which skirts the blue waters of the Gulf between New Orleans and Northwestern Florida. Mile after mile of shaded concrete highways paralleling the Gulf, almost canopied by century-old oaks, pines, and palm trees.

A riot of semi-tropical vegetation—the wild rose, the cyclamen, the azalea, the crepe myrtle, the hyacinth, and varieties of water plants.

Golf, hunting, fishing, motorizing, horseback riding, polo, tennis, swimming in outdoor pools (and in the surf on the warmer days)—they are all at their best in this easy-to-reach vacation land, where splendid hotels, clubs, apartments, and boarding places afford accommodations within the reach of every purse.

THE WINTER SEASON

Here is like a return to the summer gayeties of a Newport or a Bar Harbor...but, instead of yachting togs, it’s riding habits, boots and spurs...instead of to smart bridge teas, society turns out to the rodeo...or to ride the range with the cowboys...or to the Old Missions...or to the cactus forests...or nearby Mexico. These are the scenic background of America’s Sunshine City where winter, as such, is unknown. Golf (grass courses), tennis, aviation, hunting...within easy distance of elegant hotels and good shopping facilities.

A vacation here entails only a moderate cost. Use the Sunshine Club as a tourist bureau. Information on rates, reservations, rentals...personal service to visitors before and on arrival...gratis. Just use the coupon. Come transcontinental routes Rock Island or Southern Pacific Lines...or direct Air-Rail Express.
Independent travel to Europe is so called because it makes the traveler independent of worry and annoyance. Whether you travel by private car, aeroplane, motor coach, or train, you do not leave to chance any of the essentials of the trip.

The itinerary is based on your ideas of where you wish to go and how long you can stay—London, Paris, Vienna, Madrid...and Oberammergau, without a doubt. Everything is attended to in advance—steamer tickets, hotels, seats on trains, sightseeing, etc., just as though a private secretary had arranged it all. And you step aboard the steamer with the assurance that your trip has been expertly planned from beginning to end.

A telephone message, personal call, or a note will bring to you plans and suggestions, and upon your approval reservations will be made immediately.

GREAT WHITE FLEET

Printed pages point the way

To other lands with their rich lore of romance printed pages point the way, launching the desire to follow the nomad's trail.

Just a short sail from New York or New Orleans lie the colorful lands of the Caribbean. Havana invites you to revel, Santiago to see and dream, Kingston and Port Antonio beckon from their Jamaican palm bower... Cristobal welcomes you to the Panama Canal Zone. In mountainous Costa Rica is fascinating old Port Limon; in Colombia, Santa Marta, Puerto Colombia, and legend-haunted Cartagena; in ancient Guatemala, Puerto Barrios, and Guatemala City; in British Honduras, Belize; and in orchid-tinted Spanish Honduras, Tela.

The Great White Fleet are the only ships in the world built exclusively for tropical cruising. Sailings twice weekly from New York, three times weekly from New Orleans. First class passengers only. Cruises, 9 to 24 days, all expenses included—shore motor trips, hotel, and railroad accommodations.

House & Garden SAVES YOU MONEY

Whether you have a tiny chic apartment or an estate like a young principality—whether the man of the house says, “Spend as little as you can this year,” or gives you unlimited credit . . . House & Garden enables you to get the most, the best for your money.

Take those 4 pages in the February issue that show you a series of smart, modern rooms where half the furniture may be your own old pieces, utterly changed by their associations—and the new pieces come largely from a shop with rock-bottom prices.

Take the article on halls—do yours over, and, like the lady with the new hat who fools her public into thinking she’s new from top to toe, your whole house will have new atmosphere, new charm.

Take such other February offerings as the article on the care of silver—the one on small furniture for small rooms—the one about building a house with maximum resale value because plan and site are perfectly mated—the gardeners’ discussion as to which is the best rose . . . take these articles and ever so many more, all of them by experts, put them to work for yourself . . . and you’ll save ten times the subscription price of House & Garden in the first 6 months . . . besides having a house and a garden that make you glad you’re alive!

2 Years of House & Garden $5
1 Year $4

When you open your apartment at 780 Park Avenue for the winter you can still enjoy all of the advantages of your country house . . . light and air on four sides, open fireplaces, private gardens, and great privacy. There will be only one apartment on a floor, each having four exposures including one of 85 to the south on 73rd Street and one of 88 feet to the east on Park Avenue. There are six masters' bedrooms—one on the corner facing south and east, with four windows and two large closets.

Many of the apartments have terraces—a 16-room penthouse duplex has eleven and the entire roof space besides. Apartments of 10 to 18 rooms, 100% co-operative. You may choose the plans now to suit personal preferences and requirements.
Little Skipper
Robert S. Lemmon

They often call him that because his name, Schipperke, is Flemish for Little Captain. Also, I suspect, because each of the canal-boats which ply the dyked waters of his native Belgium has its vociferous little black bundle of energy bustling here and there and bossing things as though he were, in point of actual fact, the skipper of the craft. Even though there be those who contend that the name schipperke is a corruption of schipperk, meaning "little shepherd," and that its owner is really related to the much larger Belgian Sheepdog, I'm going to stick to the "little skipper" explanation. Whether you do or not, the pronunciation is the same: Schooper-ker.

What is he like, this small black rascal from Flanders? That is no easy question to answer unless, indeed, one gives the unsatisfactory response that he is precisely like a Schipperke. The best summation of his character that I know of appeared forty-odd years ago in a Continental periodical: "A little all black devil, but minus the clumsy hoof and the tail, such is the boatman's dog. A very demon for rats, mice, moles and everything that moves. Indefatigable watchdog, he rests neither day nor night, always on foot, attentive to everything that goes on within or without his dwelling; he does not weary of inspecting the house from cellar to garret, and as soon as he observes anything amiss he warns his master by his piercing barks. He knows the ways of the household, mixes himself up with everything and ends by thinking that he directs the household.

"His fidelity to his master is unalterable, his gentleness with children is equal to any test, but let the stranger beware if he lays a hand upon an object or a person; the Schipperke has teeth and can use them.

"One meets him often on the canal-boats and on the rivers..."
Spratt's
DOG BISCUITS
These need a stamina-building diet through the winter months. Provide it by feeding Spratt's Meat Fillets Dog Biscuits—the properly balanced ration for all ages and breeds. Hold by greasers, dragoons, sporting goods dealers and pet stores everywhere. Write for free book on care and feeding.

Economical, new type construction for dog enclosures. Write today.
Even the greatest of Chrysler's previous accomplishments—epochal as they have been—are now completely overshadowed by the new Multi-Range Chryslers. In them, power, speed, acceleration, economy and safety are raised to the highest degree. New and larger engines, down-draft fuelization, and the exclusive Multi-Range transmission and gear shift create performance never before even closely approached.

In one gear alone—the Acceleration Range—you now have all the pick-up of "second" plus smooth, silent flexibility of ordinary "high." In the Speed Range—a new "high" gear—you feel as if you were coasting, so greatly is engine speed reduced at maximum car speeds. And shifting back and forth between forward speeds, no matter how swift the pace, is so quick, quiet and deft as to defy description.

There's new beauty in these marvelous cars—and new comfort, too, in their larger, roomier, exquisitely upholstered bodies, with fitments by Cartier et Cie., the famous international jeweler. As pacemakers of performance and criterions of style, the new Multi-Range Chryslers transcend even Chrysler's previous best so decisively that they leave no basis for comparison.

FEATURES:—Larger, more powerful engines ... 7-bearing counterbalanced crankshaft ... multi-range four-speed transmission and gear shift ... down-draft carburetion ... Chrysler weatherproof four-wheel hydraulic brakes ... paraflex springs ... rubber spring shackles ... hydraulic shock absorbers ... larger, roomier bodies of dreadnought non-squeaking construction ... oversize 6-ply balloon tires ... adjustable front seats ... finger-thin steel reinforced steering wheel ... luxurious pillow-type upholstery ... metalware by Cartier.

* * *

All Chrysler models will be exhibited at the National Automobile Shows. In addition, special displays during the New York Show, January 4th to 11th, in the Commodore Hotel and during the Chicago Show, January 25th to February 1st, in the Balloon Room and lobbies of the Congress Hotel.
The further residential architecture progresses in these days of curtailed leisure time and increased realization of the need for relaxation, the greater its tendency to evolve houses that are complete units. Time was when the billiard room was about the only tangible effort to provide for indoor sport at home; today we have gymnasiums, golf courses and swimming pools under the same roofs beneath which we sleep. Are we learning better to evaluate exercise, or merely becoming more ingenious in providing for it?
Travelers are still registering surprise that Whitman's chocolates, bought in the most distant parts of the continent, are up to the high mark of the same candies bought in New York or Chicago. People who live in distant parts have long ago learned that the stock of Whitman's in the local store is handled with care and sold with dispatch.

Not satisfied only to make fine chocolates right, Whitman's have built up a distribution through a network of selected agencies (nearly twenty thousand careful merchants). Each one serves fresh candies and is supplied direct from Whitman's.

Because of their popularity, Whitman's do not linger on the dealers' shelves. Success begets success. Every fresh and pleasing package sold increases the prestige of Whitman's. We take every possible care to see that the quality put into every package remains until the candy is eaten. Whitman's is the quality candy most called for—and is therefore freshest. Each package is doubly guaranteed—by us and by the dealer.

To send Whitman's quickly to distant points, step into the nearest Postal Telegraph office and file your order. A uniformed messenger will deliver the package.

STEPHEN F. WHITMAN & SON, INC., PHILADELPHIA
NEW YORK       CHICAGO       SAN FRANCISCO
ARCHITECTS AS DECORATORS. The old adage about the shoemaker sticking to his last applies to practically every profession, and especially is it applicable to those architects who try also to be decorators. During the course of every month hundreds of photographs of houses cross this desk. In many cases the exterior architecture is superb: much of it is publishable. In some the architectural backgrounds of the rooms—the paneling and such, which fall within the architect's province—are splendidly conceived and executed. But when the average architect attempts to be a decorator—the net result is appalling. It is scarcely conceivable that all architects are endowed with all the talents and all the taste. It is not to be expected that they should be as good decorators as they are architects. Why, then, do they try it? Why do they hold to the strange notion that Heaven has endowed them with more talent than those who are especially trained? Why do many of them conceive themselves as more knowing on such matters than the men and women who have spent years studying and practicing decoration? If they are impelled by an unconquerable desire then, unless they have the talent to be decorators, they should first learn something about decorating.

A UNDIETING ERA. The 18th Century in England produced not only some of the most important designers of furniture but also some of the most stupendous consumers of food and drink that the world has ever known. The quantities of good things appearing on their tables would appall us of this dining age. The average menu for one meal would last most of us a week. Nor was this gourmandizing the habit of the better classes only; it was the rule of the day. Children and grandmothers chatter and sleep; cats stretch and yawn in the sunny glare; caged birds sing in the shadowy vines; bright clothes hang on slack-stretched lines; blue flowers in patches by a road in Spain; nothing so enchants the air as the orange blossoms blooming where the hot sun draws their perfume out, the slow winds foment it about. Nothing so enlivens the air as lovers fitly garlanded with the white, bonied flowers instead. And loreis fitly garlanded.

IN SPAIN

ORANGE BLOSSOMS

Nothing so embalm the air
As the orange blossoms blooming where
The hot sun draws their perfume out,
The slow winds foment it about.

Too heavy-sweet these scented blooms
For ducile brides and jaunty grooms.
With the white, bonied flowers instead
Are lovers fitly garlanded.

II

THE BLUE FLOWERS

Blue flowers in patches by a road in Spain:
Bluer than water cupped in cleft red rock,
Bluer than evening sky washed with spring rain.

Blue flowers singly bent on thin green stems,
Ripping frail petals in a sharp spring wind,
Flashing in the sun like faceted blue gems.

Enchanting flowers, withered now in Spain,
A blue enchantment in my heart remain.

III

BALCONIES

Up and down the steep house walls
Climb balconies all vine-emowered.
From earthen pots geraniums fall,
Scarcely scent of pinks grow, many-flowered.

Bright clothes hang on slack-stretched lines,
Swing and flap in the heavy air.
Caged birds sing in the shadowy vases,
Can stretch and yawn in the sunny glare.

Children and grandmothers chatter and sleep;
Young girls lean to their lovers' sighs;
Mothers scold and scrub and sweep;
Suds splash down on the paraffle-bed.

—Kate Brewster

THE OMNIPOTENCE OF EDITORS. There has grown up a legend among the devoted readers of magazines that editors are endowed with universal knowledge. Far be it from us to disillusion our faithful followers, although it is true that within five minutes previous to writing this paragraph its scribbling editor was asked—and answered satisfactorily—the following questions: (1) what is the address of a good restaurant in which I saw him employed was at his rectory of Farrington, the next parish to this, where I found him in the street with his paint-pot before him, and much busied in painting white with his own hand the tops of the foot-path posts, that his neighbors might not be injured by running against them in the dark. What a delightful person he must have been! What a dear old soul to name the tree for! We will remember him and his post-tops when again the Halesia hang out their silver bells.

A SUPERIOR GADGET. At last a knotty problem has been solved. For years we have been dodging trying to name those decorative objects one occasionally finds in costly gardens—those complicated astronomical skeleton spheres swung on the oblique axis of an arrow. Sometimes we have called them Astrolabes (which they aren't), sometimes Armillary Spheres (which...comes closer) and sometimes Orrerys (which sounds mysterious). A dip into dictionaries set us straight. An Armillary Sphere is a skeleton sphere composed of an assembly of rings representing the positions of the important circles of the celestial sphere. The ancients used this to observe the positions of heavenly bodies. An Astrolabe is a graced circle marked with sights for taking altitudes at sea. It has long since been superseded by the sextant. An Orrery illustrates the relative motions of bodies in the solar system. It derived its name from the fact that Mr. Rowley, Master of Mathematics to George I, was financially assisted in making this machine by the Earl of Orrery.

HALESIA. Among the trees or large shrubs that are pleasant to the eye in spring along the Atlantic seaboard is the family of Halesia—Silver-bells or Snowdrop Tree. The history of their name is interesting. It was given by John Ellis (1710-1766), probably brother of Henry Ellis, Governor of Georgia, to a group of plants he discovered there, in honor of Dr. Stephen Hales, a humble English country parson who in his day was one of England's leading scientists. He is rated the last of the great naturalists to lay the foundations of vegetable physiology. Dr. Hales also served as one of Oglethorpe's trustees for Georgia. His understudy and neighbor was Gilbert White, author of *The Natural History of Selborne* which all good gardeners read. White writes of him: "The last act of benevolence in which I saw him employed was at his rectory of Farrington, the next parish to this, where I found him in the street with his paint-pot before him, and much busied in painting white with his own hand the tops of the foot-path posts, that his neighbors might not be injured by running against them in the dark."

What a delightful person he must have been! What a dear old soul to name the tree for! We will remember him and his post-tops when again the Halesia hang out their silver bells.

January, 1930
MODERNISM in architecture and furnishing is an effort to express the spirit and accomplishments of these times without too much regard for the past. It is a contemporary cross-section. Tradition, which has heretofore influenced styles, is a lateral movement—it flows from dim and distant beginnings like a river. Modernism, on the other hand, is better understood as a vertical movement, and to see what comprises it, you cut it down as you do a layer cake.

Slicing down into the contemporary trend of architecture and decoration, the first layer encountered is mechanism and the saving of labor it effects. We use more machinery in our domestic life than any decade hitherto. This ranges all the way from the mechanism of electrically-driven clothes washers and dryers and the mechanism of motor cars that furnish transportation and the refrigerator that makes ice, to telephone connections for every room, friction door hinges, machines to extract fruit juices, thermostatically controlled shower baths and electrically-operated clocks. A vast amount of labor is saved when such machines are used intelligently.

Another layer encountered in this cross-sectioning is the new uses found for familiar materials and the effect this has had on our manner of living and on our surroundings. In Colonial times, when wood and brick were about the only available building materials, definite limitations were set on the builder—-with them he had to make certain kinds of houses. Large spans were prohibited because wooden lintels did not give the structural strength that steel girders afford. In the age when primitive tools made it possible to cut wood only into small pieces, walls were covered with small panels; today machinery can peel off large sheets of veneer. If we follow tradition, we use the small paneling; if we would be modern, we use large, unbroken panels. Or consider the modern uses for familiar ma-
A bird's-eye view reveals the decorative flat roofs off the bedrooms and the play roof off the nursery. At the rear of the house is a wide terrace with a two-story structure of metal and glass which serves for sun room downstairs and as a sleeping porch above. A plan of the first floor and the grounds is shown on the opposite page.

terials—aluminum, for example. Once this meant pots and pans to the householder; now he may have the cornice on his house and its window frames made of it. Or consider the familiar problem of the roof. For countless centuries the elements have dictated the pitch of roof a man put on his house—the gable, the gambrel and the hip; today we have learned how to make flat roofs that will support a weight of snow and be impervious to rain. We can now defy the elements and live on and under a flat roof.

A third layer that is apparent is the desire to create new and simple forms of architecture to house this mechanism and these new uses of old materials and in that way to symbolize the spirit of the times. True, all this modern equipment may be built into a house of traditional character, but a complete expression would require a house that is as modern as the ironer in the basement, the motor at the door and the airplane on the landing field. A complete expression would also be a symbol of our philosophy of living. It is a salient fact that of all our contemporary architectural productions, the home alone is still being considered in terms of the past. The evolution from the past to the present has been gradual. The first tall buildings, designed in the nineties, used the traditional Classical motifs as the basis for both interior and exterior design. This anachronism persisted for many years until a
their steel construction. The home has still to experience this Reformation in architecture.

When we speak of Modernism, let us always remember that when they appeared, the great styles of the past looked very modern indeed to the men and women of their age; let us also remember that the men who created these styles were trying to meet the problems of their age with the building materials then available. In its time the Elizabethan house with its half-timbering, brick nogging and slate roof was as complete a modern expression as the reinforced concrete block houses being run up in Germany, France and Holland are modern expressions of today.

In building a new house, of course, no one relishes the idea of being laughed at for being too strikingly different from his neighbors. However, if the modern house he builds is modern in sincerity and purpose and expresses in its design the contemporary philosophy of living, he has made a distinct contribution to his neighborhood.

With these various phases of Modernism in mind, House & Garden decided to offer its own contemporary expression. It is the work of Francis Keally, architect, and Mary Rutherford Jay, landscape architect. It has gradually been evolved through twelve months of study and experimentation. The purpose in designing it was to house a modern family which rides in modern motor cars, wears modern dress, eats meals cooked by modern methods, employs the modern machinery of the household and is alive to the aspirations and impulses that stimulate this contemporary generation.

American architecture, as we have seen, has succeeded in modernizing the commercial building; our skyscrapers are modern to the nth degree—and they are American. But as yet few American architects have succeeded in creating modern houses that are not bald imitations of contemporary work in Germany and France or faint adumbrations of traditional styles tinged with modernistic motifs. The endeavor illustrated here is an American product, designed to use American wares and mechanisms, and it has the same logic and honesty of construction as the skyscraper.

Since its qualities of composition have grown naturally and sincerely from the roots of the problem, there is no special style to this house. Proportion, mass and simplification were the ideals in the exterior architecture; utmost convenience of living was the ideal in its room arrangement. We have tried to avoid that common method of building a house whereby a traditional style is first chosen and then the family squeezed into its walls as best they can.

As we are dealing with a theory and not an absolute condition, we have chosen to place the house on a lot 200 by 275 feet, about an acre and a quarter, with the entrance side facing north. Nor has any definite cost been placed on it, since its mechanical equipment will depend on the desires and purse of the builder. The actual structure is of medium size, the body being 80 feet wide and 76 feet deep, and the garage extends 35

Upstairs are three family bedrooms, three baths, a sleeping porch, sewing room and the necessary core.
feet toward the street which the house faces.

The first thing apparent about this design is that the garage stands in front of the house on the street side. Here we encounter our first outpost of the modern way of living. Before the age of the automobile, the living side of the American home faced the street. The front porch was its apotheosis of outside comfort and adornment. Today motors, either in motion or at rest, fill our streets with noise and fumes. The street side of the house is no longer desirable. For quiet and privacy we now find it necessary to locate the living rooms on the garden side, putting the service to the front where it has easy access to the street.

Moreover, this garage has been made an integral part of the design. And thereby hangs another tale. When the motor car emerged on us with comparative suddenness some twenty-five years ago, it caught us unprepared for housing the machine. Metal garages sprang up as temporary solutions and as they were ugly, they were placed as far out of sight as possible—usually in the rear of the property. To reach this structure the owner was compelled to build a road, which encroached on his available garden space, and whether the day was wet or dry he had a considerable walk before he reached his garage. In the process of gradual evolution these first mistakes have been eliminated. First the garage was incorporated into the body of the house itself, so that the problems of road, walk and the upkeep of a separate structure were all solved, and now, with the house turning its back on the street, the garage has reached the front.

In this house the garage is placed in such relation to the entrance and the house itself that it offers the maximum of convenience, accessibility and utility. There is no backing out: the car enters the garage by one door and departs by another. Doors made of leaves that fold back on the ceiling are opened and closed by an electric switch on a decorative iron post which can be reached by the driver without leaving the car.

Visiting cars pass through the driveway. There is direct and easy access from the garage into the service and main parts of the house. As shown here, the garage is designed to hold two cars; additional space can be made by enlarging it toward the street side. The doors are silvered, to harmonize in color with the decorative cornice of the house, and judicious use of plant material gives it a favorable aspect to the passerby.

A glance at the exterior of this house will show that it may be constructed of various types of materials—monolithic reinforced concrete over a steel frame; cinder or cement blocks surfaced with a smoothing coat of cement; or whitewashed brick. Whatever the material, it should be so constructed that repair bills and upkeep are reduced to a minimum by employing materials that do not deteriorate.

Floors and walls are designed to be sound-proof, fire-proof and vermin-proof. This type of construction we have come to demand in our modern hotels, apartment houses and clubs; why not in the home? The exterior walls should be insulated and an air space provided similar to that in a refrigerator. This same system of insulation would apply to the treatment of the various roofs, thus making a warm house in winter and a cool house in summer.

Other desirable features of construction and finish would include the elimination of dust-gathering cracks by providing sanitary cove bases in the rooms. Rubber tiling and linoleum could be laid in many parts to provide resilient floor coverings. All pipes and conduits are concealed between the steel channels and metal lath partitions. They
The view on this page shows the service yard and kitchen windows, the little breakfast garden and the wing containing two servants' bedrooms. Above is the nursery and the walled-in play roof with its parchesi game tiling. Directly opposite is shown a garden perspective and below it is a view picturing the guest wing, garage and entrance.

George R. Van Andel

would be of some non-corroding material.

Such decoration as is indicated on the exterior is produced by modern methods and usages. The cornice is aluminum because aluminum will not streak the walls. Decorations in the cement walls can be cut by sand-blasting over a stencil.

Since the front entrance in a Modernist house with its back to the street need not be pronounced, the portico and front door to this house are kept very simple—a cement slab affording protection against the elements and the door itself recessed into the wall. An aluminum or polished steel grille gives this door a decorative protection.

From this front door one enters a long, narrow hall with a battery of seven windows and a French door, all of leaded glass, looking onto a small enclosed garden to the right. To the left is the master's study or office, provided with bookshelves, a built-in bunk, and a closet for his private supply and golfing gear. Opening from the entrance hall are two small coat closets. Beyond them is the entrance to the stair hall.

This stair hall is not seen from the entrance hall, being placed in a separate area easily accessible from any part of the house. After all, the stair hall usually is concerned with the family and not with guests and it seems reasonable to place it so that it doesn't hit the guest in the eye. From this stair hall one can either go up into the second story or down into the party room in the basement. A special service stairs to the basement is provided in the entry off the kitchen.

The stair hall is also a center of household traffic: one door leads to the kitchen while another opens to the dining platform, and another to the entrance hall, thence down two steps to the living room.

Stepping onto that dining platform we encounter another expression of contemporary usage. A separate dining room in many cases is an anachronism: it justifies its existence for only a few hours each day. The necessary economy of space in the modern apartment house, where the dining room and living room are gradually being combined into one unit, has made us accustomed not to expect a separate room. In this house we have compromised the layout and at the same time afforded privacy for dining without detracting from the desirable dimensions of the living room. One end of the living room is designated the dining platform, and is reached by ascending three shallow steps. It is set apart by a balustrade and by heavy curtains. While the table is being set and cleared, these curtains can be drawn together, during meals they may be opened, thus allowing the diners to obtain a complete vista of the living room toward the fireplace located at the farther end.

The guest rooms are situated on this first floor—on the farther side of that little front enclosed garden, and reached by a hallway from the living room which balances the entrance corridor. Here again we come to the modern philosophy of living and hospitality. Guests are guests—even the nicest of them. We should never make them, nor do they expect to be made, intimate members of the family. The old idea of placing guest rooms on a second floor seems rather bad planning—privacy is not available for either family or guest. When the guest rooms are connected with the family quarters and if there happen to be young children in the house, life becomes very complicated. The guest usually awakens when the baby cries for its breakfast and the murmers of the bambino are thereupon stifled because there is a guest in the house. In this scheme guests are isolated in a separate wing.

Let us return to the living room. At the rear is a wide, paved terrace facing the garden and broken at the center by a metal and glass sun porch set at the head of the main garden path. This glass would be of the kind that admits the ultra-violet ray.

In both the dining platform and living room are large plate glass windows reaching from ceiling to floor and approximately seven feet wide. Through these windows (Continued on page 133)
SHORTLY before that November cyclone blew down the cañons of Wall Street, demonstrating to thousands of people that much of the money they thought they owned was only imaginary and that the rest of it could easily be snatched from them, we had received some strange reports.

The first came from the leading sporting goods shop of the metropolis: in the three previous months it had sold more home games than ever before in its history. Ping-pong, backgammon, chess, checkers—such games. Twenty-eight such were sold in a relatively short time.

Piecing together these unrelated fragments, we began to have a faint suggestion of a picture that, if only a few more pieces could have come along, would have promised an encouraging movement. If people were buying dining room furniture, it was natural to suppose that they intended to dine at home. If they were making a great outlay for home games, we would logically deduct that they intended to play them at home. Then, as we all remember, came the great wind down the Wall Street cañons, and out of the debris in its wake, we picked up more fragments of that picture. Book shops reported a sharp rise in the sale of books. People who once apparently had so much money that they didn't know how to enjoy it, suddenly awoke to the fact that they were lucky if they had a home. And from these broken and unrelated bits and reports the picture took shape. People are staying at home!

OF late it hasn't been fashionable to stay home. Thousands of people have been using the home merely as a spring board from which to dive off elsewhere. There has been a lamentable amount of useless gadding about. On coming home, instead of asking, "What shall we do?" they've been demanding, "Where shall we go?" The country club, the roadhouse and the movies have reaped their profits. Meanwhile those who elected to stay at home were looked upon with mild and condescending amusement. Those who chose to dig in their gardens instead of loafing around a country club, those who found more enjoyment playing games and pottering and reading at home of nights—such placid folks were just a wee bit dull and they didn't know what they were missing.

Having always belonged to this stodgy class, I rise to defend it. And the more that circumstances—adverse or otherwise—make this class increase, the more I see for the American people. We are in desperate need today of men and women whose dearest dream is to own a home and to stay in that home, who would rather be at home than anywhere else. We need such homes and such men and women in them, because from that basis spring the solid welfare and increasing advancement of the nation.

Being at home and the enjoyment of staying there presuppose several important facts:

1. It depends on the sort of home you have. It must contain the necessities for comfortable and decent living and a modicum of those luxuries and amenities that make life run a little smoother. Bare necessities any industrious man can usually provide for himself; the luxuries depend upon the quality of his taste and intelligence and the extent to which he is willing to save and sacrifice that he may attain them. The mirror that represents an accumulation of slim lunches, the book that cost more walking and less taxes have a way of being cherished once they are acquired. The old-fashioned habit of thrift pays lasting dividends.

2. Staying at home also depends on the quality of companionship found there—a wife, a husband, children, even pets. You must enjoy being with these people (however stodgy it may sound) much more than you enjoy being with other people. You have also to make yourself mutually enjoyable. It is an affair of give-and-take. The contact of personalities must run along smoothly and no influence, either from inside or out, can be permitted to interfere with it. Peace must dwell within the walls if contentment is to find shelter there.

3. The power of excessive (and imaginary) money has gone strangely to some otherwise normal people's heads. Having come easily, they have flung it about. They have permitted it to give them false standards. They have let it undermine companionship and place an inflated value on trivial matters. In a lamentable way appearance has seemed of more value than substance. It has fashioned petty little creeds about one's doing what is called the right thing and doing it in the right way, petty little creeds that have standardized taste and suppressed individuality.

4. A third factor in enjoying one's home is the quality of resourcefulness—the ability to stay within four walls, either alone or with others, and find so much to do that time slips by before one notices it. The book to read, the piano to play, the radio to operate, the tinkering at this thing and that, the petty laboring over a car or the repair of a table, the gardening, the scrubbing, the studying, the playing games, writing letters even—such matters constitute the ability to find employment and amusement without regard to how one is dressed or how ridiculous that employment may appear. Resourcefulness is the mark of the individual. People endowed with resourcefulness are rich; they have an other-worldly wealth. They are rich in that they enjoy their industry and are absorbed in it. They are not dependent on their appearance or how many people see them at it. The resourceful man never needs an audience.

5. These conditions are not necessarily the product of money—either the lack or the having of it; they are faculties that spring up from within a man's being, from the roots of his character. They are the fine crop he gathers from an ordered and disciplined life. He who possesses them actually misses little that is worth while. If these matters are vital to him, he will never be shaken by the storm, let the wind blow from whatever quarter it will.

RICHARDSON WRIGHT
An old-fashioned dooryard garden is divided by a bricked path leading to the entrance door and its welcoming latch-string. Tall spires of multi-hued Hollyhocks flank the gate. The residence of Mrs. Dorothy Cotton at Montecito, Cal., other views of which are shown on pages 93, 94 and 95. Roland E. Coate, Architect.
(Below) In a remodeled English basement house the original front door vestibule was transformed into a tiny flower room. The walls are lined with mirrored glass, and the floor is tiled with sections of marble, or black glass laid so that it slopes towards the center where there is a drain. Iron trees holding plants decorate the walls. The shade is glazed chintz.

Flower Rooms

In City Homes

Pierre Duval

SINCE architects and builders are continually planning novel and interesting effects, I think it an opportune time to suggest that they make a feature of a flower room, particularly in the city house or apartment. If there is not sufficient space to give an entire room up to this subject, then an alcove or deep bay window treated in a decorative manner and filled with flowers and growing plants will serve to suggest a garden room, especially if the furnishings are selected to further this idea.

Recently I was called upon to refurnish an English basement house and finding the rear room on the ground floor inadequate for living or dining purposes, this was converted by the use of mirrors, paint and marbleizing, together with Italian and French peasant furniture, into a charming recreation and flower room combined. The walls are a deep salmon tone with the texture of old plaster; the door trim and dado are marbleized black and gold and the floor is covered in composition flooring laid in uneven blocks to simulate flagstone. The chimney breast is covered with large squares of antique mirrored glass and the old badly designed mantel was replaced by simple molding marbleized like the trim. Lighting fixtures of wrought iron springing from baskets holding trailing leaves are effective notes against the mirrored overmantel.

In front of the windows is an old Italian iron grille equipped with rings to hold potted plants, and the light filters through curtains of soft pink gauze the color of the walls. An ugly outlook such as one often encounters in a city house or apartment may be hidden by the use of grilled screens set against the windows, such as the bird design illustrated on the opposite page.

In a duplex apartment furnished with Italian pieces there was a small room between the living room and dining room that was transformed into a delightful flower room. Here the walls and vaulted ceiling are painted a soft yellowish pink and rubbed down to give the texture of old chalky plaster. The entrance to the dining room is hung with a pair of old oak doors stained a dark, rich color and studded with

(Continued on page 106)
Iron brackets holding plants are effective contrasts in this flower room where the walls are Italian pink with woodwork marbled rusty black. The chimney breast is mirrored. The rooms illustrated were designed by Pierre Duvel.

Where there is an ugly outlook, an ornamental grille covering the window adds a decorative note and helps distract the eye from the view beyond. At the right and on the opposite page are delicate iron brackets for flower rooms.
Oilcloth For
All Purposes

(Above) An attractive plaid design is available in three color combinations: blue, red and yellow, blue, green and gray blended on a pale blue ground form clusters of flowers. Closet shelves, hat boxes and shoe cabinets covered with this oilcloth would make a pleasing ensemble. It is available from Stern's.

(Above) Harmonizing tones of yellow, peach, coral, orchid, green and gray blended on a pale blue ground form clusters of flowers. Closet shelves, hat boxes and shoe cabinets covered with this oilcloth would make a pleasing ensemble. It is available from Stern's.

(Right) Conventional enough to satisfy the conservative taste is this modern all-over flower pattern designed by Honka Karast. Blue, red, green, or yellow color schemes may be developed for kitchen, pantry or informal breakfast room. Courtesy R. H. Macy.

(Above) One color scheme of this quaint design has blocks with alternating borders of yellow and green, flowers of rose and blue, and polka dots of green and blue. Another pleasant combination is green and orchid with blue flowers. From R. H. Macy & Co.

(Above) This shaded block pattern was designed in the manner of modern wall papers in varying tones of red, blue, green, yellow or orange. It comes from Stern.

(Above) An attractive plaid design is available in three color combinations: blue, red and yellow, blue, green and gray. A modernized interpretation of the Lotus flower in yellow, blue, orchid or green makes a good theme for cushions, screens and table cloths, as well as wall covering. From Macy.

(Left) Ivy leaves mark a patterned oilcloth for wall and table coverings. This comes in three tones of green, orange and yellow, blue and green, rose and blue on white. Gimbel.
New Designs

In Linoleum

(Right) The ombre effect so often found in modern fabrics is achieved in this blocked linoleum: chartreuse, copper, yellow, blue-green, tan or gray. From Stern Brothers

(Right) Blocks of bright terra cotta against a background of differing shades of gray form an interesting geometric pattern. From R. H. Macy

(Right) Inspired by an ancient Egyptian tile which was a combination of alabaster inlaid with colored clay, this modern interpretation is available in green and terra cotta. Gimbel

(Above) A marbleized tile design in a variety of colors: rose and tan, green and rust, brown and tan, black and white, and grays. W. & J. Sloane

(Above) Marbleized blocks of irregular shape and differing colors against a solid colored ground present an unusual pattern. Many combinations are to be had, among them tones of green, and a robin’s egg blue ground with gray marbleized blocks. Gimbel

(Above) A pleasant variation of the regulation marbleized block pattern is this design. The black squares are marked off with bright green lines and enlivened with occasional red stars. Other color combinations are also available from C. H. Pepper, Inc.

(Left) Alternating stripes of light brown and tan resemble a floor of oak planks in texture, color and design. The simplicity of this pattern makes it especially suitable for a room decorated and furnished in the 20th Century manner. From James McCleery
Bringing An Old House Up
To Our Present Standards

Elizabeth Hallam Bohn

The limitations of a home long lived in often become so much a part of its personality that they are accepted with unquestioned loyalty. But when a new owner takes possession of a house built before the present age of comfort, many possibilities for added convenience present themselves.

With the great developments in household engineering, there is hardly a house, whatever its age and ancestry, which cannot be made thoroughly livable. And the practical check up of carpentry, heating, plumbing and lighting which should precede redecorating and furniture planning will dramatize the amazing strides modern manufacturers have taken to make possible the rejuvenation of any house.

In this age of easy living and hospitality, the heater must adequately serve thin frocks and late hours. Modern coal, gas, and oil burning equipment will easily provide adequate heat while proper insulation will keep it where it belongs. One of these systems, for example, delivers to each room at the touch of a finger as much or as little heat for this feature; merely connecting it with the light socket constantly circulates the water over and over again, combining the pleasant melody of its splash with ever changing rainbow tints and hues.

To be thoroughly modern, continuous hot water must be provided in the rejuvenated house. And with the efficiency of the modern equipment—coal, oil, gas or electrically operated—the dream of steaming water at every day or night may be easily realized. Of two types of heaters to serve the up to date home, one connects with a storage tank and keeps a large quantity of water at a certain temperature while the other heats the water as it flows. And then there is an ingenious combination which heats the bath by coal, and burns the garbage at the same motion, unless one prefers to destroy the trash, rubbish and garbage by simply pressing the button of one of the efficient and easily installed incinerators.

Many an extra bath can be tucked into an entry or even a large closet, to modernize a home which still remains in the pitcher and bowl period. While circumstance will usually determine a bath's location, it should, if any choice is possible, be located in direct line with existing piping.

**WHEN DECORATING**

And the furnishing of the modern shrine of cleanliness is a colorful experience. Perhaps the only decorative note will be a stool of pastel sea pearl tint to match the shower curtains. Or, on the other hand, the fixtures may be completely in color, paralleling comfort with beauty in their charm of line and design, while walls of composition sheet material complete the ensemble with their semblance of glowing tile.

Closets, too, may be eked out of waste spaces or may be bought in complete units for kitchen or chamber. And existing closet room may be surprisingly increased by the clever space-saving equipment on the market. Closet doors can be turned to account by attaching trouser or skirt racks and shoe racks. Garment carriers run silently out on

(Continued on page 108)
This interesting game room in the basement of Mrs. F. E. Compton’s house in Glencoe, Ill., reveals many aspects of modernism. The three-sided columns are mirrored glass; natural burlap stencilled in copper color covers the walls, and the ceiling is painted Chinese blue with lacquer red beams. Mastic tile in black and copper stripes, highly waxed, makes a good dancing floor. Other rooms in this house appear on the following pages.

A Little Portfolio Of Modern Interiors
The unusual color scheme of the dressing room was taken from the covering of the daybed—a gray and fuchsia silk painted by Jean Dunand. Fabric in soft grays covers the walls; the woodwork is colored in three shades of gray while the carpet is dark gray. The curtains are of fuchsia satin.

In Mrs. Compton's bath-dressing room the background consists of pale green walls and a yellow and salmon marble floor. Curtains are salmon silk, and green taffeta trimmed with silver drapes the dressing table. Rooms designed by D. I. M. of Paris and executed by Lord & Taylor.

**Elegance And Charm**

**In Dressing Rooms**
A practical feature of this dressing room is the mirror lined recess for the dressing table. The daybed and arm chair are palisander and ebony, the cabinet ebony with ivory knobs, and the tables chromium metal with black glass tops. Shaded fuchsia silk covers the overstuffed chair.

(Below) Another view of the game room showing the interesting mirror-faced fireplace with a modern French painting above. The furniture in this room is painted black with upholstered seats covered in silver processed leather. Armstrong, Furst and Tilton were the architects who designed this residence.
The Romance Of Architecture

R. W. Sexton

D I C T I O N A R I E S define the word architecture as "the science of building." Considered as such, the average layman could hope to find but little in the subject that he could understand. He visualizes immediately the necessity of comprehending technicalities for which his mind has not been trained and he usually throws up his hands in despair at the mere thought of even attempting to make himself acquainted with the intricacies of a subject which to him is synonymous with building.

Architecture does not mean building any more than painting means the manufacturing of paints. Architecture is rather the art of designing buildings. To be sure, the architect must understand the science of building in order that his designs may be practical and that the buildings he designs may actually be built. But he must first be an artist and possess an unusual understanding of the philosophy of life. For the buildings he designs must not merely conform to the principles of art, but must actually reflect the tendencies of the times and the character and individuality of the people who inhabit them. Thus I would enlarge on the definition of the word and say that architecture is an artistic expression of human needs and desires determined in terms of available building materials.

To parallel architecture with building tends to lose sight of design. Eliminating the element of design, architecture loses much of its appeal and interest. Design gives a romantic touch to architecture which one
would hardly expect to find in a subject recognized as a science. The design of every house, if logically developed according to established principles, tells a story that actually sparkles with romance.

One can readily understand that an architect, in order to develop a design that shall express his client's character, that shall meet his individual needs and satisfy his peculiar desires, must know his client intimately. He must familiarize himself with his client's customs, his habits, his mode of living, his likes and dislikes. An architect who attempts to design a house for you without becoming intimately acquainted with you loses sight entirely of the fact that your house must not merely be one that in its design is conceded to be beautiful, but that your house must be of such a character that it will satisfactorily serve as your home. It is in the designing of a house that is to serve as a home for some particular family that the essentially romantic side of architecture surely comes to the fore.

(Continued on page 104)

New England family traditions are cherished and clearly reflected in the house of Alton L. Miller at Scituate, Massachusetts, of which Royal Barry Wills was the architect. It is a place that reflects its owner's tastes.
Stonework Brick And Stucco

Reflect A Hillside Setting
Picturesque interest gained from outcroppings of rock on the site of Karl Heisenberg's residence at Rouken Glen, Larchmont, N. Y., has been carried to the house itself through the diverse materials employed and their happy combining. The stone supported bow window and the uniquely designed entrance are two features of more than usual merit. Hunter McDonnell was architect.
A rugged English type dwelling was wisely selected for erection on this picturesque site, at the crest of a hill. Above and on the opposite page are views of its terrace face. The home of George W. Jones, Rookton Glen, Larchmont, N. Y. Hunter McDonnell was the architect.

A Residence Of English Character

Erected In A Metropolitan Suburb
The central hall runs from entrance vestibule to terrace doorway. Kitchen and library face the front, while dining and living rooms look over the terrace and down the hillside. The two-story living room is slightly below the first floor level. Servants' rooms are in a third story.

Fine Architecture Supplements

The Natural Beauty Of A Hilltop
Clematis alpina is one member of this fine tribe that makes a notable showing in a large rock garden where it can trail at will over the boulders. Its drooping blossoms are blue.

Crocuses as a group are intrepid little beauties, coming into flower before the chill of winter has gone from the early spring air. Among the leaders in this annual advance is C. imperati.

There are many Androsaces that are worthy rock garden subjects, and a fair variety of them is now obtainable in this country. One of the easiest and most satisfactory species to grow here is A. sarmentosa, shown at the right.

The Amenities Of Rock Plant Collecting

Louise Beebe Wilder

A ROCK gardener is inevitably a collector. Or perhaps it would be more correct to say that a gardener who has in him the collecting urge is certain to find in rock gardening, more than in other phases of the craft, an outlet for his especial interests and instincts. Ordinary gardening is a more or less passive occupation, but rock gardening is distinctly active and so is bound to appeal strongly to persons of imagination and of keen curiosities. In it they find full scope for their natural love of gathering and gathering, of searching out the obscure—in short, the pleasures of the chase.

Undoubtedly the uncertainty, the suspense, the difficulty add immeasurably to the fascination of collecting anything, rare plants, no less than rare old bottles or first folios. But, whereas with the bottle or the folio you put it on a shelf, once you have got it, and aside from showing it to envious friends or selling it for more than you paid for it there is little more excitement connected with it, your rare plant goes on filling your mind with speculation and interest, for finding it is only the beginning. You have still to satisfy its whims and needs and make it live in a new and alien atmosphere.

"Too much of a strain," say some, "too great a gamble." And of course for such

(Continued on page 124)
Anemone vernalis, the wholly beautiful Lady of the Snows, is a real treasure which is worth long searching to secure. Along with many of the other jewels of its race, though, it is not at all easy to obtain from our growers.

(Below) The best efforts of many good rock gardeners are flouted by Gentiana acaulis, while for others this choice flower will thrive like a weed. It is such plants as this one that make gardening a continuous adventure.

(Above) Perhaps the loveliest of the small Daffodils is N. bulbocodium conspicuus. This variety usually grows to about six inches in height and carries rich golden yellow blossoms of hoop-petticoat form above its rush-like foliage.

In the garden of Clarence Lown, at Poughkeepsie, N. Y., the truly Alpine Auricula alpina makes itself quite at home close up under the shelter of the boulders where the soil is well drained and chip-strewn to conserve moisture.
Opportunities That Await
Gardeners Of California

Ernest H. Wilson, V. M. H.

CALIFORNIA of all States in the Union is most favored as a garden region, indeed, I know of no land where the potential possibilities of gardening are so great. With nearly a thousand miles of coastline, parallel ranges of high mountains, which effectually cut off the strong drying winds from the east, and warm interior valleys, its possibilities are limitless. In the South tropical plants flourish; in the North those of cool temperate regions are perfectly at home; on its higher mountains Alpine plants find a natural habitat.

So, where water is available, California can draw freely on the flora of the entire world for its garden making. Except the denizens of the steaming tropical forests there is little or nothing worthwhile but what the good people of California may enjoy when they wake up to the possibilities their God-given land affords! I am not without appreciation of the great variety of plants already growing there. I know that much of the world has been drawn upon to furnish the gardens of California with the plants they now possess, but the draft on the trees and flowers of the world has been slight and fortuitous rather than heavy. With the exception of a few individuals California has done very little on its own behalf to introduce plants especially suited to its needs. As a fruit-growing State it is famed the world over and when garden makers put a little of the enterprise and direct. With the exception of a few

THE COLLECTORS

In the interests of plant lovers in general and those of California in particular the world is much the poorer for the fact that the plant collecting renascence occurred during the latter third of the 18th and early in the 19th Century when gardens in California did not exist. Had they been in existence some thousands of plants now lost to cultivation would have been filling California with blooms of every description. I do not wish to disparage what the lover of flowers has brought to pass in California nor infer that niggardly variety exists there, but I do want to emphasize the fact that in cultivation in California gardens there are less than one half of one percent of the plants that are worthy of being there. What that grand old Nestor of Californian horticulture, Mr. John McLaren, has accomplished at Golden Gate Park and elsewhere in the vicinity of San Francisco is an indication of the enormous possibilities California possesses. Golden Gate Park is more than a park; it is one of the fine botanical gardens of the world and its collections have been assembled by the enthusiasm, knowledge and ability of one man in less than fifty years. What Mr. McLaren has done for Golden Gate Park can be done for the whole of California on a much more extended scale when a similar genius arises and public spirit brings into being the much-talked-of botanical garden. That California has a botanical garden in name only and has no arboretum whatsoever, is by no means to the credit of a State wealthy beyond the dreams of avarice.

ORIENTAL PLANTS

Japan, its nearest neighbor, has furnished California’s gardens with a rich variety of plants ranging from Cherries, Wisterias, Iris, Maples, Hollies, Conifers and many other plants, including the so-called California Privet. There are in southern Japan a variety of evergreen trees and shrubs, including such splendidly berried Hollies as Ilex rotunda, I. integra and I. latifolia and such noble evergreen Oaks as Q. salicifolia, Q. gilea and Q. glauca that ought to be widely known in Californian gardens. The Cherries of Japan are well known but it was my privilege to introduce a species that for the warm temperate parts of California is far superior to any other. This is Prunus campanulata which has hanging bell-shaped blossoms, rose-pink to red in color. It is native of the island of Formosa but is much cultivated in the south of Japan. Near Pasadena it flourishes and I understand that it is being planted as a road tree. The man to whom the Arnold Arboretum sent the seeds and who first flowered this wonderful red-blossoming Cherry is now dead but I hope that his successors carry on the good work. No more beautiful sight imaginable can be seen in late January and February than an avenue of this magnificent Cherry in full blossom.

A recent plant collection work in China has added a number of plants peculiarly suited to the climate of California. In this work it has been my good fortune to participate and today some of the finest evergreen Coniferous, Barberries and Pyracanthas in Californian gardens owe their origin to seeds which it was my privilege to collect in the heart of China. Another contribution that Californians appreciate is Jasminum primulinum. An evergreen Magnolia comparable with the American Magnolia grandiflora and named M. Delavayi which I collected in Japan ought to be widely grown in California and so, too, should the climbing evergreen Clematis Armandi, the handsome red-fruited Pho­tina Davidii, the plants of such Hollies as Ilex Pernyi, I. yunnanensis and I. Fastigiata.

Golden Gate Park has demonstrated that Rhododendrons can be grown and grown splendidly in California. China is remarkably rich in the evergreen members of this genus and there must be in California full fifty species of my own collecting.

CHINA’S SUPPLY

Growing in England are more than three hundred Chinese Rhododendron species, the majority of which would flourish if introduced into California. But the wealth of China for Californian gardens has been scarcely touched. The woods and mountain slopes of its warm temperate regions hold hundreds of plants especially suited to the Californian climate. One magnificent group scarcely represented in western gardens is that of the great Laurel family. The genera Machilus, Phoebe, Cinnamomum, Litsea, Benzoin and their relatives are rich in...
Climbing Plants For Many Situations

P. M. Koster

There is so much to be said about climbing plants that even when only touching on the subject we have to eliminate several classes in order to keep the material within the bounds of one article. With this in mind I remove from consideration, without further excuses, all climbing plants which are used as ground-covers, and also all climbing Roses, though I feel very much tempted to say where these latter should not be planted.

Climbing plants deserve a great deal more attention than they are receiving in our gardens. In every garden there is an appropriate place for some, somewhere. They form a different means of ornamentation from upright or trailing shrubs or herbaceous plants.

The woods offer an excellent place to study climbing plants; they grow there under natural conditions. *Ampelopsis quinqufolia*, the Virginia Creeper, rambles from rock to rock, attaching itself firmly by numerous disks which terminate small tendrils. Try to tear them loose from the rock and you will break the tendrils but not detach the disks. When a protruding point of the rock is reached, *Ampelopsis* will hang down like fringes or, if a tree is in reach, it will climb to the top of it. It has mostly five, sometimes three leaflets on a stalk; do not confuse it with *Rhus toxicodendron*, the Poison Ivy, which has always three leaflets, never five and has more shining and darker green foliage. Keep away from *Rhus* if you are sensitive to its poison, but admire it all the same!

Though less plentiful than Virginia Creeper, we will sometimes find *Bignonia radicans*, the Trumpet Vine, in the woods, ascending trees by means of aerial rootlets and dotting the woods with scarlet-red, trumpet-like flowers.

In another spot a plant works itself up by twining its slender branches around trees or shrubs, around and around, from left to right, higher and higher. It is *Lonicera sempervirens*, the Coral Honeysuckle, with its numerous flowers that are bright red outside and yellow within; it cannot hide its presence, especially in the morning or evening hours when its fragrance will tell.
How To Produce

A Perfect Lawn

F. F. Rockwell

IT is only natural that we should read, think and talk about flowers more than we do about grass. But the fact remains that a really fine lawn will attract as much admiration, and give to its owners quite as much of the pride of accomplishment, as the most successful of flower gardens.

Just recently I had a rather interesting illustration of the truth of this statement. Among some scores of visitors to a newly completed garden, including the membership of one of the larger Eastern garden clubs, scarcely one failed to notice and to comment upon the lawn, although the other features of the place commanded attention only in proportion to the number of those who happened to be personally interested in that particular thing. Next to the lawn the Rose garden was of general interest, but as one of these observers remarked, "We cannot all have Rose gardens, but we all must have lawns!"

There is a certain fascination about genuinely good turf which it is difficult to analyze. The texture, as is the case with that of a piece of velvet, may have its appeal; the springy feel of it to the foot provides a sensation which is decidedly pleasing to most of us; like the surface of a pool, the perfectly smooth expanse gives a pleasant sense of restfulness. But in addition to all of these factors, I feel quite sure that turf which comes anywhere near being perfect is so seldom encountered, and is generally considered so extremely difficult to procure, that in itself it arouses our admiration when we do come across it.

The widely circulated story of the English gardener who provided his inquiring American visitor with complete and detailed information as to how to obtain a perfect lawn—in a hundred years—well illustrates the general belief concerning the difficulties of lawn making. It is a good story, but like many others not in full accord with the facts. It is, on the contrary,
The surface soil for a lawn should be loamy and well screened. It is spread evenly, boards being used to keep the wheelbarrow from cutting into the soft earth. Strips of scarping, set on edge, define the paths. When it comes to sowing, parallel lines of twine are guides to even coverage. Finally, the whole planted area is rolled quite possible to produce a very presentable turf in a hundred days! Those beautiful bits of greensward which excite so many exclamations at the big flower shows are grown from seed in less than thirty days. While it is neither possible nor desirable to duplicate, out-of-doors, the same methods used for this purpose, they show what it is possible to accomplish with grass seed where conditions are favorable. You can give yourself and your friends a genuine surprise in out-of-doors lawn making if you are willing to undertake the following of a few definite but quite simple directions.

The suggestions for lawn making which follow probably not only do not coincide with much lawn-making advice which the reader may have come across, but at some points may go directly counter to usually recommended practices. They have proved successful with me, often under extremely unfavorable conditions. They are based not upon lawn-making traditions, but upon many years of practical experience, plus a business interest in observing results.

First of all, make your lawn in the fall if it is at all possible to do so. A good lawn can be made at other times of the year—despite the somewhat didactic statements to the contrary which are sometimes made nowadays—but fall planting has several decided advantages. The most important of these, perhaps, is that many of the lawn weeds, such as Crab-grass, the worst of all, and a number of other annual weeds likely to give trouble in the new lawn, usually germinate and grow most rapidly with the advent of warm weather in late May or early June. In the fall, they either do not start at all, or make a slow growth and are cut down by the first frost. The grasses, on the contrary, germinate quickly and grow rapidly in cool, moist weather. In the race for survival, therefore, spring sowing gives the advantage to the weeds, while fall sowing gives the advantage to the grasses. Moreover, seedling grass plants from fall sowing will continue to grow vigorously until the ground is actually frozen hard, and also “tiller” or spread out much more than they do in the spring. This helps to form a dense turf quickly, and this is the surest of all conditions for keeping out weeds. Another practical advantage of fall sowing is that there is usually more time to do the work thoroughly and carefully now than in the rush of spring.

Just how late in the fall may grass seed be sown?

That depends upon location, exposure, soil and seasons. Except in the extreme North, any time up to the middle of September will do under average conditions; with heavy soil likely to have under alternate freezing and thawing, sow as early as possible. The lawn referred to at the beginning of this article was not planted until November 1st, but that was in southern New Jersey where the soil does not usually freeze hard until late in December. Generally speaking, it is safe to plant until six to eight weeks before one may expect the ground to freeze hard.

Even if operations can not be begun until so late that it will be inadvisable to sow the seed, it is of great advantage to prepare the soil in the fall. This makes it possible to get the grass seed in in late March or early April. Almost every spring there are a few warm days when planting may be done if the ground is ready. But if one must stop to prepare it, the opportunity is gone; and it may be two or three weeks before the weather conditions will again make planting possible. Very early sown seed will have several weeks’ start of the weeds, and this may mean all the difference between success and failure. Sloping ground, prepared in the fall, may be held in position against (Continued on page 116)
The automobile, as it gradually developed from the novelty stage to become practically an essential of modern life, brought with it certain specialized housing requirements. These have grown from the point where any extra space in an out-building was considered sufficient, to the present time, when it might be spoken of as demanding the use of a specially prepared room in the house.

As was natural, our first garages were, usually, either part of a stable or an entire stable transformed after the new vehicle had supplanted its former occupants. Even when garages began to be built as garages, they continued to be considered as out-buildings. They were not even remotely thought of as a feature which might be brought into direct connection with the houses they did service for. As a matter of fact, the suggestion of such a possibility would have been scorned as an insane project, because of the fire hazard. The first generation of motor cars, of course, were constantly taking fire, with fatal consequences to themselves and the structures that housed them. Today, however, the fire risk in automobiles is an almost negligible factor—although every building that stores one should be safeguarded against it.

It was the heating problem which finally brought the attached garage into practical consideration. Cold motors in unheated quarters on winter mornings carried matters to a head; home builders began to demand that their architects design these places in such manner as to establish some sort of physical relationship between the garage itself and the heating center of the residence.

As with sleeping porches, the architects at first did not take kindly to this idea. It introduced an entirely new and foreign element into their design problem. The garage was a necessary evil, to be tolerated but not to be brought frankly into the picture. So they experimented with ways and means of hiding it in such subtle fashion as to keep it invisible except to those who approached the house directly along the drive. A considerable amount of time elapsed before the system of treating a garage as a component part of the design—as a balancing wing, etc.—became common.

Although the idea is not generally accepted in architectural circles, it is no novelty today to see an automobile entrance placed, without any effort at concealment, in the front facade of a residence. Many done in this way have been worked into the composition with most interesting results.

Thoughtful architects, after a time, began to find that with many houses erected on other than a flat terrain, the basement could be exposed sufficiently at some point to allow feasible space for a garage under the first story. And so we came upon what is by many considered the best possible solution for our problem. Using this system, no extra building, or even additional wing, need be put up, thus occasioning considerable saving in erection costs. Besides, the residence design is unhampered, except at
(Above) Typical floor plans for laying out garages of the three usual types. Below each of the plans is illustrated, in cross section, an important detail of its construction.

An example of a garage located in a house. The use of this wing is not apparent from the front. The residence of H. L. Hoyt, Great Neck, L. J. Jolino Gregory, architect

the immediate spot where the garage opens (and this, of course, is always easily screened by shrubbery discreetly placed), while heating is accomplished with the greatest possible ease and economy.

A few general rules apply to the design and construction of all garages, whether they be free-standing, a single unit of some residential structure, or placed in a basement. To begin with, they should be arranged so that adequate ventilation is assured. Then, the door opening for a single car garage should never be less than eight feet. Ten feet by sixteen feet is the minimum space required in a garage; eighteen feet will be much better, as it allows a small workbench and enough elbow-room to provide for its occasional use. All garage floors should slope about an eighth of an inch in every foot, toward a central grating over a dry well or barrel drain. Finally, municipal ordinances in regard to garage construction should be studied and con-

(Continued on page 108)
The photograph at the top of this page shows the complete assemblage of steel girders, studs, etc., to be used in the erection of the house, as they are laid out for checking purposes just prior to shipping. Each piece is cut to exact size and marked in accordance with a plan which gives its position in the structure. The central view at the left illustrates the completed steel frame of the house ready for the next operation, which will be the application of lath to take interior plastering on one side and brick exterior facing on the other. The small photograph at the left depicts a workman in the act of applying attachment strips which will hold the wire lath and its backing to the steel framework. Lath already in place may also be seen. In the picture above, the fireproof cement base upon which the floor will be laid is being smoothed down. Note the wire mesh which holds the cement.
Various Stages In
The Erection Of A
Steel Framed House

Masons are shown laying up the exterior wall at the top of the page. A union between the fibre-backed wire lath and the wall is created by a heavy layer of mortar laid between, thus giving the wall the added support of the steel mesh. The center photograph was taken when the exterior walls were in a semi-completed state. Exterior lath completely surfaces the first story and the brick walls are partially laid up. Any wood boards discernible are merely construction aids and have no place in the actual structure. The photograph directly above pictures the interior plastering. Between the plaster backing and the backing which supports the exterior wall, a dead air space provides insulation. At the right is the front face of completed residence. No features betray the fact of its steel construction. The home of W. H. Shaffer, Jr., Pittsburgh, Pa. The architects were Lyon & Taylor.
A delightfully original wall treatment is the outstanding feature of this indoor swimming pool where murals done in the manner of Godey prints depict a panorama of American sports in the Sixties. The costumes for the most part are rendered in Victorian colors—mulberry, mauve, cerise, ultramarine, moss and acid green, against a green, buff and gray landscape. The pool is on the Long Island estate of Dr. John A. Victor and was painted by Louis Bouche.

**Murals In The Manner Of Godey**

**Prints Enliven An Indoor Pool**
In southern California where an almost tropical sun constantly drenches the landscape with vivid light, the romantic architecture and decoration carried to Spain by the Moorish conquest has been found ideally appropriate. This is the patio in the home of Mrs. Dorothy D. Cotton at Montecito. Roland E. Coate, architect

Spain Of The Moors Finds A Renaissance In California
Porches and shadowed terraces are the real living rooms of Mrs. Dorothy D. Cotton's residence at Montecito, Cal., and the interior of the house is occupied only during inclement weather. Plantings achieve a splendidly natural effect and fit in well with the informality of the architecture. Roland E. Coate, architect

Broad Porches And Overhanging Roofs Offer Refuge From The Summer Sun
All the principal rooms offer individual access to the out-of-doors—on the first floor to terraces and on the second to galleried porches. Above is the front façade. The large photograph on the opposite page shows the stone-paved porch just outside the living room.
At first glance one might be tempted to say the only solution for this Victorian dowd was a profitable fire, but the architects, Howard & Frenaye, spared it this oblivion by making the turret a tower, cutting back the gable, adding a seemly porch and building a terrace.
A Dowdy House Has Its Face Cleverly Lifted

In remodeling the house, which is the residence of Wilder Gutterson, at Southport, Conn., the architects made some radical changes in the room arrangement, both upstairs and down. They also turned the main entrance to the side and marked it with a door of dignified lines. Floor plans on the opposite page show the residence before it was reconstructed. Below are plans of the house after remodeling.
The smaller English manor house inspired the design for the home of Benedict Farrar at Edgewood, St. Louis. Light gray and yellow native stone was used for walls; steel sash with leaded glass for the casement windows; slate in variegated tones of green, purple, yellow and tan for the roof; and the wooden doors and window frames are stained a deep brown.

An Architect's Home

Built In St. Louis
Four master's bedrooms and accommodation for two maids are found on the second floor. On the ground floor the location of the garage offers an interesting and practical solution. Study & Farrar were the architects and Simonds and West designed the garden and planting.
A Georgian House For North Carolina
The home of R. W. Stokes at Charlotte, N. C., is a simple dignified application of the Georgian design to a house of medium size. Its entrance portico is flanked by balancing bay windows, and in the rear the garden terrace is enriched by grape patterned roof supports in cast iron. Architectural dignity appears in the background of the rooms. M. E. Boyer, Jr., architect.
The Gardener’s Calendar
For January

This Calendar of the gardener’s labors is planned as a reminder for taking up all his tasks in their proper seasons. It is an outline, the climate of the Middle States, but may be made available for the whole country if, for every one hundred miles north or south, allowances is made for a difference of dates by seven days last week, leads naturally to a pleasant sequel. Small branches of very many of these plants, especially the deciduous sorts, will blossom in the house within a few weeks, if they are cut now and kept in water in a sunny window. The number of species that will respond to such treatment is considerably greater than most people suspect, in fact, it can almost be said that any spring-flowering woody plant which forms its buds before autumn can be successfully forced from the first of the year.

When a stormy week-end comes along an hour or so can be profitably spent checking over the garden tools, implements and general supplies, with a view to the coming season’s needs. Take a pad and pencil with you, for there is no time like the present for figuring out what will be needed when outdoor work starts.

One of the things that every gardener should have is a first-class trowel. Not one of the shoddy, department-store kind whose back is broken by the first tough root it encounters, but a real, mansized trowel with a heavy blade and solid steel shank and collar that comes well up over the hickory handle.

And you really ought to have, also, a long-fingered hand weeder, which is better suited for cultivating close around vegetable plants as well as flowers. The ordinary "claw" type is all right in its way, but it doesn’t reach deeply into the soil.

Old Doc Lemmon Said Just The Other Day—

"Wal, sir, the big rig 'v'en Jake Hopper or Lem Tillory he all over—Justice Pettit he settled it in court 's afternoon, an' he settled it good.
"The hull thing started when Jake begun sellin' gas'lin' out'n his yellin' pump for a cent a gallon less than Lem done out'n his red one. Lem's long afore Jake was gittin' all the local business, for a cent a gallon is a nickel for a few, an' that counts up when a man has as many as a dozen customers a week.
"Well, the price war hadn't been goin' a day when Lem started givin', an' the more he giveth the more folks went over to Jake's barn to git their tanks filled up. By the time Jake begun to smelt like a June bull, an' when him an' Jake met in the Post Office that evenin' he blit'er over. Ye god-dammed hoss thief!" he yelled, shakin' his fist under Jake’s nose. "Ye won't see a mesly old skeleton there’d better ye into the middle o' next week!"

"Now, Jake Hopper, even if he is goin' on seventy-five, ain't the man to let nobody talk to him thataway, so in a jiffy he’s off his coat, laid his false teeth on a shelf, spat on his hammer, an' got at it.

"Man, what a scrap! Seventy-five ag'in sixty-eight, an' nothin’ barred! Them two old seq’ls fit all over the room like a couple tomcats, an' out into the road an’ back into the room ag'in. Must’ve been ten minutes afore Lem fetched Jake a callop in the pit o’ the stummick thet knocked the defensant to the floor, an’ then grabbed the false teeth an’ stomped ‘em to pulp in him an’ went after the defensant. In the opinion o’ the Court, Jake teeth are private property same as a man’s wife or a set o’ harness or a pole-plee, an’ nobody else ain’t got no right to mess with them!"

It is the verdict o’ this Court," he says, "that whereas the duly sworn defendant had the right to bust the said complainant in the stummick or onto his corporeal body any other damage that he was man enough to commit, an’ whereas the said complainant has already got considerable satisfaction out’n the black eye he give the defendant, nevertheless the aforementioned defendant hadn’t ought to be warned them teeth. Nevertheless, the Court finds this here defendant to pay unto the said complainant the full value in every moneth o’ that dentil set what he stomped onto the face o’ the Post Office—I don’t care if it comes to as much as twenty-five dirtles dollars!"

First Week

THE field of horticulture is such an astounding vast one that enthusiastic gardeners, unless they are possessed of rare discrimination, are more than likely to find themselves wandering in its midst without knowing quite where they are going. It is this situation which gives point to the excellent advice, often given but always worth emphasis, to specialize. By taking up one or two fresh plant families each year, and working with them intensively, a true and cumulative experience which is invaluable in separating the wheat from the chaff.

In practical matters of the moment the care of Christmas gift plants in pots holds a prominent place. Coming from warm, humid greenhouses, as they do, these popular presents find ordinary living room conditions a rather rude jolt. The shock of the change will be milder, a lesser life of the plants prolonged thereby, if their ministrations are attended to. In the lives of the Rhododendrons and other evergreens, once it gets started.

One of the things that every gardener should have is a first-class trowel. Not one of the shoddy, department-store kind whose back is broken by the first tough root it encounters, but a real, mansized trowel with a heavy blade and solid steel shank and collar that comes well up over the hickory handle.

Cold work, this, but not without its immediate reward. For while you are out around the grounds you have an excellent opportunity to study the habits of many kinds of woody plants, patiently awaiting the arrival of warmer days. Lilac, Forsythia, Dogwood, Rhododendron, Hardy Azalea, Apple, Andromeda—are an antidote for the gardening blues these deserve recommendation.

Second Week

OUT-OF-DOORS, there isn’t much to do except wait for spring, unless it be such tasks as tree pruning and spraying. This does not mean, though, that you are to go around with your eyes shut, for winter is a time for observation and checking up on a number of things which may go wrong.

The conditions inside the oddframes are one of these, especially where young perennials beingwintered there are concerned. There is a dangerous risk that mice may have effected an entrance and are making merry among the plants, or some heavy rain may have soaked and sheathed the flats with ice. It is well, therefore, to lift a sahch and see that all is well.

Another situation applies to the guards which were put up last fall around the young fruit trees as a protection against the bark-gnawing of rabbits hard pressed for food. If any of these has slipped out of position, readjust it now. And then there are the windbreaks and sun-shields—burlap, boughs or whatever—which protect the Rhododendrous and other evergreens from winter damage. Exposed as they are to the full bent of the gales, these safeguards are subject to strain which often calls for attention.

Cold work, this, but not without its immediate reward. For while you are out around the grounds you have an excellent opportunity to study the habits of many kinds of woody plants, patiently awaiting the arrival of warmer days. Lilac, Forsythia, Dogwood, Rhododendron, Hardy Azalea, Apple, Andromeda—are an antidote for the gardening blues these deserve recommendation.

Third Week

THE mention of dormant flower buds on shrubs and trees, made last week, leads naturally to a pleasant sequel. Small branches of very many of these plants, especially the deciduous sorts, will blossom in the house within a few weeks, if they are cut now and kept in water in a sunny window. The number of species that will respond to such treatment is considerably greater than most people suspect, in fact, it can almost be said that any spring-flowering woody plant which forms its buds before autumn can be successfully forced from the first of the year.

When a stormy week-end comes along an hour or so can be profitably spent checking over the garden tools, implements and general supplies, with a view to the coming season’s needs. Take a pad and pencil with you, for there is no time like the present for figuring out what will be needed when outdoor work starts.

One of the things that every gardener should have is a first-class trowel. Not one of the shoddy, department-store kind whose back is broken by the first tough root it encounters, but a real, mansized trowel with a heavy blade and solid steel shank and collar that comes well up over the hickory handle.

A tool will do wonders in strong hands, and it won’t break. Even though you use it for uprooting stones and transplanting from the woods, it will last for you.

And you really ought to have, also, a long-fingered hand weeder, which is better suited for cultivating close around vegetable plants as well as flowers. The ordinary "claw" type is all right in its way, but it doesn’t reach deeply into the soil.

Fourth Week

EVEN though you may not be the subtitled soul of neatness, ordinarily speaking, practical considerations should be sufficient to lead to the building of a set of bins and shelves wherein and whereon the paraphernalia of a gardener’s workroom can be kept in some semblance of order. Such loose materials as potting soil, peatmoss, lime, bone meal and many other essentials have a way of getting spilled hither and yon, and they are confined by solid boards, while labels, twine and a lot of such small forms need shelves to keep them all in order.

Nor should the saw and hammer be hung up when the big bin and shelf job has been finished. If you are perfectly certain to need more flats for seed sowing and transplanting than you now have. Half-inch wood for side, bottoms, and three-quarter-inch stuff for the ends, will give needed substantiality. Let them measure about 12"x18"x12" when finished, and allow about 1½" spacing between the bottom strips for drainage.

When the time comes to put these flats to actual use as seedcontainers, you will do well to provide a sprayer instead of a watering can for maintaining the soil. Even the finest rose on a can will flood or wash tiny seeds unless used with extreme care, and this would mean lessened germination. A sprayer eliminates such danger.

Still looking forward, investigate the opportunities for buying very young conifers for growing in the home nursery. Several companies offer a plentiful supply of good evergreens at slight expense.

Washington Post
Have you ever tasted Real Philadelphia Pepper Pot?

A Man's Soup

What a wealth of tradition surrounds Philadelphia Pepper Pot, that favorite soup of the proud old Colonial Philadelphia aristocracy! Truly, there's a touch of genius, a pioneer ruggedness about this famous old American soup that no other soup possesses.

If you have not yet enjoyed this famous old delicacy, there's a treat in store for you in Campbell's Pepper Pot, blended by Campbell's special Pepper Pot cook from a favorite old Colonial recipe.

A rich stock, velvety smooth and bland, brimming with pieces of delicious meat, diced potatoes and carrots. Seasoned just so with ground whole black peppercorns, savory thyme and marjoram, fresh parsley and sweet pimientos. And teeming with wholesome macaroni dumplings.

Here's a soup your appetite remembers, truly a dish for hungry men! Your grocer has it. 12 cents a can.

EAT SOUP EVERY DAY AND ENJOY A DIFFERENT SOUP EACH DAY
How can a chair attain a value of $8500?

When a chair is so distinguished in craftsmanship and so graceful in proportion that it wins the admiration of generation after generation of connoisseurs, its value continually increases. The Gillingham chair, for which Danersk paid $8500 at the sale of the Reifsnyder collection, is typical.

Danersk craftsmen, in re-creating this chair, have faithfully followed each minute detail of the Gillingham piece, and have captured the same rare beauty which gives ever-increasing value to the original.

Would you like to see what an $8500 chair looks like? Pictured below is its exact counterpart, the Danersk Gillingham chair—and the pleasure of owning the Danersk piece calls for only a very moderate expenditure.

Who was the "American Chippendale"?

James Gillingham, born in England more than one hundred and fifty years ago, later a resident of Philadelphia, was not only the foremost American chair-maker of his time, but also America's leading exponent of the Chippendale style. The unusual beauty of proportion and subtle refinement of carving, characteristic of his chairs, are faithfully preserved by the Danersk Scotch and English craftsmen.

How can you recognize hand work in chair carving?

The back, arms, legs, and other sections of an ordinary chair are carved separately—before they are assembled; this means that the carving of each section must end abruptly at the joint. A truly fine chair, such as the Danersk Gillingham pictured below, is carved after the chair has been assembled, thus permitting the carving to flow over the joints in a continuous, uninterrupted and beautiful design.

Together with hundreds of other Danersk pieces for every room of the house, the Danersk Gillingham chair now stands in our showrooms. Come in and see it; not only will you be pleased with its pedigreed beauty, but pleasantly surprised at the moderateness of its price.
A DESIGN AND COLOR EXPERT ASKS A QUESTION

"Why should blankets—of such prominence in the bedroom ensemble—be so dull and drab, so uniformly uninteresting?" asks this famous style and color authority—and answers it herself by creating COLORCOVERS, soft, warm, deep-napped, patterned in the modern manner in a profusion of harmonizing pastel colors.

Ask your favorite shop to show you the new COLORCOVERS.

The answer to the what-to-do-with-the-radiator-problem lies in ROBRAS 20-20

Where you don't want the radiators to take up the best space in the room, nor be a general eyesore, nor fling up dirt on the curtain or walls—eliminate them.

Put ROBRAS 20-20's in the walls, out of sight, out of the way. They are designed to go in a space four inches deep, the depth of the unused space found between the inner and outer walls of almost every house. Only two small grilled openings betray the source of the luxurious warmth. You owe it to yourself to find out how ROBRAS 20-20 will improve your house, send for the little book "Within the Walls," or better still, the more elaborate "Proof of the Pudding."

The Romance of Architecture

(Continued from page 104)

man side of architecture, I have tried to impress upon you the close relationship of the architect to the houseowner. We spend a good part of our lives in our homes, not as much as we used to and perhaps it would be better for us if we spent more time there. But our daily rounds take us, after all, from one building to another. We leave home in the morning to go to our office; we go out to a restaurant for lunch; we stop at the golf club, perhaps, in the late afternoon, dine at a hotel, and then to a theater before going home. We are confronted with architecture at every turn. The success of our day, although we seldom stop to think of it in this light, depends largely upon the success with which the architects of the various buildings that we visited solved their several problems.

The romance of your life—and the story of the life of each one of us is a romance in a greater or lesser degree—is the very backbone of the design of all types of buildings. The design of your office building had its romantic side, for surely there is romance in your business life. The architects who were presented with the problem of designing the restaurant, the golf club, the hotel and the theater, which you, yourself, visited in one short day, will all agree that romance in architecture is not only a reality, but lends to their own problems a most fascinating turn.

Why attempt, then, to understand the technicalities of building? Why give weary hours trying to fathom depths that hold no interest for you? That is the scientific side of architecture which the architect himself only need comprehend. This is not architecture as you behold it in your daily rounds. You need not think of architecture as a series of plans, elevations and sections. You are much more concerned with the size of the living room, the accessibility of the kitchen to the dining room, and the fact that your maid can get to her room on the second floor of the house without passing through your living room.

My advice, then, is to familiarize yourself with this phase of architecture. You will not only enjoy your new house more after you are in it, but you will take an interest in seeing its design developed. For you will actually have a part, and a very vital part, in determining the design. You will find, too, that you will be more free to express your opinions; you will exercise greater interest in the selection of materials. For the result will be more to your liking because it will more definitely reflect your individuality. And the architect, too, will be more pleased because he will be inspired to a greater expression of his creative ability.

Flower Rooms In City Houses

(Continued from page 68)

iron nails, and on the opposite wall the opening is arched and fitted with iron gates in a design of scrolls and arabesques. The one wide window hung with a Venetian blind is flanked by iron brackets fastened to the wall for holding potted plants. On the wall opposite the window is a small tiled fountain of brilliantly colored Spanish tiles surrounding a turquoise bowl set in imitation stone floor, neutral in color. Around the fountain are clustered tall plants and on either side is a pair of low Italian chairs.

For one not interested in a garden room typical of Italian decoration, the deep bay window of an English type dining room in an old New York house offers many interesting ideas. This has four windows with transoms, and as the house was built some time ago the transoms are fitted with curved blue glass—that deep blue that gives the effect of moonlight when the sun shines through. The windows are hung with blue gauze on draw curtains and fitted with charming iron grilles designed in the form of twisted branches and fruit, little pots of Rose trees and birds, one of the most decorative examples of ironwork I have ever seen. These grilles are painted rusty black and under each window is a curved basket made of braided wire painted to match the grille work. In these boxes are planted the flowers of the season, mixed with Ivy trailing over the sides.

The window trim and baseboard in this room are marbleized bluish green, the ceiling and side wall being deep Venetian pink, almost lacquer color. The floor is laid in squares of bluish green and white marble with a narrow sill across the entrance to protect the dining room if the water spills over from the plants. At one end is a small lead fountain of an elk so piped that water pours from a shell over his head and trickles down over the plants onto the marble tiles where an outlet connects with the pantry plumbing.

When an old-fashioned brownstone front is altered into an English basement house, what was originally the front door vestibule may be used as a little conservatory or flower room off the living room. Break through the walls and make the top of the opening a wide, flat arch. Side walls are lined with strips of mirrored glass fitted together and held in place with glass rosettes. If it is not feasible to cover the entire wall with glass, narrow mirror panels placed on opposite walls will give much the same effect. The floor is tiled with marble or sections of black glass, not forgetting to lay the floor so that it slopes slightly towards the center where there is a drain. A narrow sill is built up in front of the doorway. In place of marble, composition flooring or linoleum may be used.

Fitted against the mirrored walls are iron trusses with curving branches, each branch made to hold a flat saucer on which is placed a flower pot. Ivy or any trailing vine will give the effect of foliage and the background has a tendency to enlarge the space in addition to reflecting the plants. At the window is a painted roller shade of flowered glazed chiffon, or, if preferred, Venetian blinds may be used painted the peach tone of the wall.
Go in a Champion! To travel by Studebaker Straight Eight, whether the journey take an hour or a week, is to understand why more people buy Studebaker Eights than any other Eight in the world. Into these velvet-powered Champions, Studebaker has engineered not only matchless comfort and style, but also the speed and staying power which have won the greatest world and international records, plus more American stock car records than all other makes of cars combined. Sales supremacy was inevitable ... particularly in view of Studebaker’s low, One-Profit prices. Studebaker Eights cost no more to own or to operate!

Bringing An Old House Up

(Continued from page 72)

their efficient overhead fixtures. And—supreme luxury—the closet may be completely lined with aromatic cedar, applied directly over plaster walls, ceiling, floor and the inner surface of the closet doors.

It is in the working center of the old house that the most startling improvements can be made in so many simple ways as raising the height of the sink and placing equipment so as to allow systematic routing of steps. Colorful walls and paint will give the vivacity which the modern kitchen demands, and if new equipment is to be bought, sink, dishwashers—in cabinet or sink models—electric refrigerators, and even laundry tubs may be found in the most gay shades. Or table-top, sink-top and window-trim of marble will assure cleanliness and long wear as well as beauty. The new console stove, too, lends decorative charm to the kitchen, covering up all signs of its practical purpose when not in use, and kitchen furniture conceals under roomy table top or capacious shelf all the appearances of modern cookery.

With the introduction of the breakfast nook many serving problems were solved for the mindless home and the informal, quick-time meal. These convenient and picturesque aids to easy living may be bought completely made and tucked into the often too roomy kitchen of an old house. Handy cupboards above—which also come ready to set up—hold special equipment for the less ceremonious service, which this homely innovation demands.

The fireplace casts the same spell today as in the sterner age when its purpose was far more elemental. The removal of a mantel of ornate design will reveal the decorative possibilities of the brick chimney face, and a smoking heath fire can often be corrected by merely building up the floor with a layer or two of brick and adding a metal hood to close down the opening to smokeless proportions. And one of the joys of the wood fire today is the ingenious lift which brings the logs from the cellar direct to the firing line without traveling across clean floors and rugs.

Modern hardware has been raised to such a high point of perfection and adapted to artificially to every period scheme that real beauty as well as practical convenience can be achieved by the change of old door knobs or hinges for a more pleasing type. Effortless privacy is furnished by the new principle in locks which, at the press of a button, securely fastens the door, while turning the knob unlocks it again. And the selection of window and door screens reveals the most ingenious developments in this highly important equipment. For, today, permanent screens roll up and down as easily as a window shade, disappearing into a metal housing at the window top when not needed and latching firmly to the sill when in use. Or the casement type swings easily inward or outward, combining convenience with strength,. warmth with beauty.

The vital and individual matter of lighting demands that fixtures and house plugs be provided in abundance with outlets for radios, vacuum cleaners, dining room appliances and the whole range of possible acquisitions in the way of heavier equipment. The lighting company will advise if the present wiring is sufficient and install the less expensive commercial circuit necessary for the electric range and for the other large appliances.

The selection of lighting fixtures is a real adventure, for splendid features are constantly being developed in the new indirect systems and in the use of small lights for ornament. Like the choice of wall coverings, wood finishes and floor surfaces, this decision is part of the artistic quest which follows the more practical business of checking up which makes a truly modern home out of the old house.

The Garage And Its Construction

(Continued from page 89)

sidered before plans are drawn up.

The scale drawings on page 89 show typical examples of the three types of garage, together with a construction detail of each one. A one-car garage attached to a house is illustrated in the first drawing. The accompanying detail is a section through the sill, illustrating the foundation, the method of anchoring a frame wall to a foundation, and a typical section through an exterior wall as in ordinary frame construction. The wall shutters on the residence proper should be thoroughly fire-stopped with brick or some recommended fireproof blocking.

The central drawing is of a two-car garage to be placed beneath the first floor of a house. Three walls are brick foundation walls of the house itself, and the fourth is also of brick. In this case the detail shows a section of the garage ceiling and the floor of the house above.

The third scale drawing depicts a detached garage to house a single car. It has eight inch brick walls surfaced with plaster on the interior, and its dimensions are the same as the other one-car structure. The detail below it shows a section through the cornice, and is complete even to the gutter. The section through the sill of the other single-car garage might be regarded as a typical sill detail of this one also, except that in the detached example the walls are brick.

This stately brocatelle comes in red, green and rose de chine • •

FROM THAT Enchanting Blend of French AND Italian that Livened the Renaissance

A fascinating compound of the French spirit with the Italian gives character to this brocatelle, as, centuries ago, it gave color to the Renaissance of both countries.

Here in this fabric, the original of which is part of Schumacher's collection of antiques, we find flowering pomegranates or “apples of love” and the horn of plenty, motifs that might have been inspired directly by typical French fabrics of the early seventeenth century. Yet the design into which these motifs are blended shows the dignified massing and distribution so characteristic of Florentine fabrics.

The luxurious texture and the skillful workmanship of this production of Schumacher’s looms illustrate a fine accomplishment in American manufacturing—and suggest once again the unusual fabrics in Schumacher collections. Decorators, upholsterers, and the decorating services of department stores will find here fabrics for every decorative use and period.

“Fabrics—the Key to Successful Decoration” . . .

This generously illustrated booklet suggests a wealth of decorative possibilities for fabrics. It will help you to plan intelligently with your decorator . . . and to discover many new sources of charm for your home. It will be sent to you free, upon request.

Write F. Schumacher & Co., Dept. E-1, 60 West 40th Street, New York, Importers, Manufacturers and Distributors to the Trade only of Decorative Drapery and Upholstery Fabrics. Offices also in Boston, Chicago, Philadelphia, Los Angeles, San Francisco, Grand Rapids, Detroit.

F. SCHUMACHER & CO
These Hand-Made Reproductions of the Furniture of Colonial America

...Are So Exact They Recall the Very Spirit of Our Forefathers

Copies of sturdy blanket chests such as nestled in old Salem attics...or gateleg tables whose originals have found their way to famous museums...stretcher tables, ladder or slat back chairs...cozy cottage bedsteads with fat squatty posts, or field beds with slender posts and testers...drop front desks, candlestands, night tables.

All hand-made by master craftsmen of today who work with the same pride and patience and skill as those of old. Maple and pine with mellow tones and worn edges such as it would seem genuine antiquity alone could bring.

These reproductions are priced within the reach of the modest home-maker.

The Old World Shop offers the old and the new...furniture, lamps, pottery, bibelots, objets d'art...and much less expensive.

Climbers For Many Situations

(Continued from page 85)

And then there is the Clematis clan, all of which need a support. They must be trained to trellises or a piece of poultry wire unless we let them ramble over rocks or low walls. We often see the very fragrant Clematis paniculata in this country but seldom the large flowering varieties, they should be planted by the tens of thousands. The right selection of varieties will secure flowers from spring until frost.

Polygemma auberti and P. baldschuanicum are two more very good vines, both of them rapid growers. They are handsome and vigorous and are covered through the hot summer and autumn with many sprays of white and pinkish white flowers, auberti with white, baldschuanicum with the pinkish white. They need support to cover a wall.

THE HONEYSUCKLES

It would not be difficult to devote an entire article to Lonicera, the Honeysuckles, but I will mention here only the climbers and not the bush forms. They are all known for their exquisite fragrance, the profusion of flowers they produce, followed by numerous berries of red, black or scarlet and for their glossy green foliage.

Many of them are evergreen, or nearly so, heiurys is the best of this type. Lonicera japonica flava, the Yellow Trumpet Honeysuckle, has bright yellow flowers; P. periclymenum, the Fragrant Dutch Honeysuckle, has flowers which are red outside and yellow inside; forstiana has white flowers; heckelii, light purple with yellow inside. They all are considerably hardy and very, very fragrant. Lonicera japonica reticulata aurea has light green leaves, beautifully netted with golden yellow; towards the autumn red mingles with these colors. It is a very beautiful variety though not dependably hardy; it dies back to the ground but in spring will recover quite vigorously; a mulch will protect it sufficiently to stand the effects of moderate frost.

There are several other good varieties, but the foregoing are enough to make a choice.

The best known evergreen climbing plant is doubtless the Ivy, Hedera helix, the English Ivy, is considerably harder than the Irish form, Hedera helix canariensis, though the foliage of the latter is larger and more handsome. But even English Ivy is not dependably hardy and needs protection in the North, so it can not be used there as a wall-cover. Around New York I have seen churches and other large buildings covered with English Ivy, it will suffer somewhat in spring in places exposed to the sun but will soon establish itself. Where it is well beached, as on rocks and smaller trellises, it is advisable to cut off the leaves in April, fine glossy foliage will soon reappear.

Ivy attaches itself to a wall by means of aerial rootlets—not only attaches but feeds itself with them. I remember a wall that was a large Horsechestnut and covered with Ivy, the vines of which were cut off near the ground for some reason or other. The plant continued to grow as if

Reflecting the Vogue

ONE of our newest and smartest suites is especially designed to anticipate style requirements in Solarium furniture, and offers an ideal ensemble for the up-to-the-minute Sun Room. All rattan in construction, finished in its natural tone, and decorated with bands of French Enamelled Cane in brightly contrasting colors; it is upholstered in a fine hand-blocked English Cretonne in a variety of charming patterns.

The name Sons-Cunningham is synonymous, in the trade, with originality of design, quality of product, finish, color, and unusual upholstery combinations. When your Solarium is furnished with their product, you have the assurance that you possess the latest and the best that can be had.

You are cordially invited to call at their showrooms, where a most representative display in a wide range of designs and colors is available for your selection. Purchases may be made through your dealer or decorator.

A portfolio of colored prints and other illustrations will be mailed upon receipt of twenty cents—stamps or coin.

FLOORS OF OAK
TRANSFORM A HOUSE

Beautiful, friendly, gleaming floors of oak throughout a home can make it seem a different place. Their polish lightens and freshens every room. They pick up rays of sunshine and spread them in a cheerful, merry glow of warmth. A beautiful flooring with its many different grainings, oak will set off any room, go with any type of architecture and style of decoration. And fine oak floors are so tremendously inexpensive!

The low cost of laying oak floors right over the old, shabby, worn floors in a home is surprising. The finest floors of oak usually cost less to install, room for room, than carpets or manufactured floor coverings. They cost little more than floors of cheaper woods that, like flooring substitutes, may wear. And oak can be laid right over the old floors, quickly and conveniently.

Persons remodeling or rejuvenating their homes have found that oak is the most economical flooring they can use. It costs little to begin with. It wears like iron—a good oak floor should give more than a hundred years of service. It is long-lasting, clean and convenient. And floors of oak actually increase the value of a house should the owner ever wish to rent or to sell.

Have your contractor, architect, or retail lumber dealer estimate the cost of laying oak floors in your home. Write for our free informative booklet, "The Story of Oak Floors."

Oak Flooring Manufacturers Association of the United States, 1247 Builders' Building, Chicago, Illinois.

There is beauty and character in the natural grain of OAK that lesser materials can never hope to express.
Beauty that endures...

Just as the smart, restrained modernism and enduring beauty of Cadillac lines, and the intimate touches of Cadillac interior appointments, cannot be convincingly imitated, neither can its simplicity of control, easy flow of power, and stamina for sustained speed be captured by any other car. If you could peer into the mechanism of these cars, you would see beauty there also—a different kind of beauty—a beauty that grows out of scientific design and ultra-modern engineering developments. It is this beauty that makes it possible for you to guide and maneuver these mighty Eights in traffic congestion as easily as you would a light, inexpensive, less prepossessing car. It is this that makes it possible for you to shift gears at any speed (from high to second, if need be) with unbelievable ease, simplicity and confidence. No tugging of the gear-shift; no timing of gears; no the slightest suggestion of clashing. It is this beauty which gives you the most powerful and responsive of brakes—brakes that seldom require adjustment, but which you may simply and quickly adjust on those rare occasions when adjustment is needed. And finally, it is this that gives you the finest type of eight-cylinder performance. If there be a question in your mind as to the exactitude of these statements, ask any Cadillac dealer for a trials car—and convince yourself. Cadillac does not ask you to take anything for granted.
HERE'S A NEW BRIGHTNESS IN BED COVERS!

Quite the loveliest things you’ve ever seen are these great, soft, luscious-colored Comfortables. Each was designed by a noted international decorator to harmonize with some one type of present-day bedroom, but all have a sparkling newness that proclaims them exclusively—Comfortables in the modern manner, in the smartest phase of decoration! The fabrics are such shimmering stuffs as never before were used—the lustrous silks and Celanese that dress designers work with. The colors, too, are so ravishing that you’ll revel in their beauty. And to sleep beneath this cozy warmth is to recognize its luxury. For Palmer Comfortables are filled with purest fluffy lambs’ wool—not an ounce of substitute! You’ll know the Palmer Comfortable by the little “candle-label” sewn into the corner. The prices range from $7 to $40 and better stores are showing them. The Palmer Brothers Company, New London, Conn.
THIS MODERN
TRANE HEATING SYSTEM

makes every room comfortable
and decidedly more beautiful

The new home you are planning will be an important part of your life for a good many years.

You expect it to be warm, even on the coldest days. You want every room to be supremely comfortable. And you rebel at the thought of cluttering the rooms with bulky radiators, wasting space and spoiling your best efforts to decorate beautifully. Why not install Trane Concealed Heating and get all the comfort and beauty this most modern method of heating can give?

When you have Trane Concealed Heat put in, every room is warmed by heaters completely concealed inside the wall. Not a bit of floor space is lost. Not a single obstruction interrupts the beauty of the room.

With concealed heat you enjoy instantaneous control of the temperature in each room. Open the grille and heat comes on—at once!

Close it and heat stops. Warmed air circulates at the breathing level. It is not wasted up the walls and through the ceiling. Because Trane Concealed Heating gives you warmth where you want it, and only as much as you need, your fuel bills show a considerable saving. Installed with Trane traps and valves and other specialties, Trane Concealed Heating is a complete vapor system which will give you many years of economical, trouble-free service. Write for the new booklet, "Modern Style in Room Heating". Address The Trane Company, Dept. 1, 252 Cameron Ave., La Crosse, Wisconsin.
nothing had happened. I mention this to prove that Ivy takes the moisture from walls which it covers and makes them dry, contrary to the belief that Ivy makes walls damp.

This vine is used largely for covering trellises on roof gardens. Nothing is better for a narrow summer screen, for it can be trained in all kinds of forms in pots, used in hanging baskets and flower boxes and can stand a great deal of hardship. Young plants are somewhat difficult and slow in growing; they should be bought grown in pots and planted without the pots.

Aristolochia stylo, the Dutchman's Pipe, is one of the well known deciduous climbers. It twines from right to left and takes hold firmly of whatever it can grasp, forming a very dense and desirable screen. Its flowers resemble a small pipe about two inches long, appearing in May and June, they are green with brown marked veins and a brown margin. Aristolochia remigia is a less desirable variety with yellow flowers.

In the beginning of this article Ampelopsis quinquemifolia, the Virginia Creeper, was mentioned. It is entirely to be covered with large walls of all kinds of buildings. There are two varieties, engelmannii and murusii, similar to the Virginia Creeper but which attach themselves to a wall even better than the old variety. Ampelopsis tricuspidataachelii needs no description; it is usually called the Boston Ivy. Local has smaller and more deeply cut foliage and is more graceful, with young growth that is red. It is a very desirable variety to cover small walls.

All Ampelopsis delight us with their glorious autumn tints. Multi-colored fruit adds further charm, and the fruit is edible. Later in the season we ask so much of climbing plants in one season! All climbing plants which are to cover a wall need help to make them take hold. This is best accomplished by tying the vines to small stakes and letting the stakes lean against the wall or by tying the vines, very loosely, to small nails driven in the wall. If you grow on trellises they need a tie every week in the growing season, after attaining some height they find their own way.

Insects and are hardly subject to disease. A thorough spraying with some oil emulsion or carbolineum emulsion, especially manufactured for spraying purposes, will destroy all insect life, eggs, etc., and secure fine health growth the coming season.

Healthy growth and flowers can also be promoted by cutting the vines back every spring and thinning them out radically. One vine, developing healthy growth and consequently good flowers, is worth four producing weak growth. Moreover, many times a better effect is created if we can see part of the building or trellis or rocks or fences through the vines. If we should cut too much, Nature will take advantage of it and make a mistake and soon fill in bare spots.

Architectural value, shade, a symphony of autumn tints, fragrant flowers of all hues and berries of all colors—what more can be expected of any kind of plants?
It isn’t while playing that children catch cold—it is afterward, when, still overheated, they sit around in damp clothes or unconsciously expose themselves to drafts. These exposures, like wet feet and sudden changes of temperature, weaken body resistance so that disease germs in the mouth get the upper hand.

Therefore, in addition to the regular morning and night gargle, see that your children, however sturdy, use Listerine on returning from play.

Listerine aids Nature in warding off colds and ordinary sore throat because it may be used full strength in any body cavity.

Gargle with Listerine regularly every day, as a preventive measure against infection. And, at the first definite sign of colds or sore throat, increase the frequency of the gargle, meanwhile consulting your physician. If serious complications are threatening, he will detect and treat them properly.

How to prevent a cold
Rinsing the hands with Listerine before every meal, destroys the germs ever-present on them.

THE SAFE ANTISEPTIC
Listerine kills germs in 15 seconds
heavy winter rains by sod strips such as those described later in this article. It is in the preparation of the soil for use that my own experience has been most widely at variance with the methods usually recommended. For several years I have made a practice of concentrating all of the plant food used in the upper two inches or so of soil. I am convinced that such stereotyped directions as "plowing under a good trash of manure," "enriching the soil four or five inches deep with sheep manure or fertilizers," "preparing the ground as for a good crop of vegetables," and so on, result not only in unnecessary labor but also in a decided waste of the plant food. If one will only stop to consider a moment the reason is quite evident. The majority of such grasses are unsuitable for lawn making do not root deeply. By far the greatest proportion of the roots of a lawn sod are to be found in the upper two inches of soil; below three, or at the most four inches, if such a sod is examined, scarcely any roots are to be found. Anyone who has had experience in laying sod knows that it is much easier to get it to "take hold" if it is cut as one to two inches thick, than when decidedly thicker, because in the latter case there are too few roots to penetrate the surface upon which it is laid. Fertilizers, moreover, are worked down into the soil by the action of rains or artificial watering. Therefore, in lawn making, concentrate all your plant food on the surface which is to be covered, or which are placed at, or which are carried down to, a depth greater than two or three inches below the surface will go to feed the weeds and not the grass.

A generous use of lime, both in preparing the soil for planting a lawn, and as an annual top dressing in existing lawns, has been proven to be not only unnecessary but, in the great majority of cases, positively injurious. All of the grasses ordinarily used for lawn making will grow in an acid or neutral soil. Many of the want weeds are lime lovers, but they are discouraged if not entirely eliminated by acid reacting soils.

**USING LIME**

Unless ground with which one starts is extremely acid, it is better not to use lime either when making the lawn or for its after care. The degree of acidity can readily be determined by the use of a good testing outfit, which costs but a few dollars and provides the means of making numerous tests—an extremely useful device for any gardener in the growing of all kinds of plants. The amount of lime to be used will also depend largely upon whether or not one wishes clover in the lawn. At the moment there is a fad for having Cloverless lawns. Like most fads of this sort it has been carried to an extreme, a moderate amount of White Clover is desirable in many ways. If gypsum or land plaster is used instead of the more widely advertised forms of hydrated lime and ground limestone, one may add the amount of lime necessary for the healthy growth of Clover without making the soil alkaline and thus encouraging weed growth. Five to eight pounds to each one hundred square feet may be applied under average conditions.

The use of manure in preparing for planting, and also as a winter mulch in the after care of the lawn, is a prac­tice still general but open to many objections. If heavy winter manure is employed it is almost certain to bring a generous crop of weed seeds, unless one can obtain it six months or more in advance and allow it to decompose before using. Sheep manures, so widely recommended and advertised for lawn use, is, in my opinion, decidedly over­rated; as a source of humus it is practically valueless, and plant food may be bought much more economically in other forms. The modern concentrated plant foods, while costing much more per pound, supply the actual plant foods—nitrogen, phosphoric acid and potash—much more economically. The animal base fertilizers, such as coarse bone, bone flour, blood and tankage, and cotton seed meal, are of no use, not though quite so convenient to keep and use as the complete chemical fertilizers. The more concentrated the fertilizer, the less the amount which need be applied. Three to five pounds of a fertilizer containing approximately 4% of nitrogen, 8% of phosphoric acid, and 8% of potash, is more than enough for use in average soil conditions.

**HUMUS IN THE SOIL**

Quite as important as the question of fertilizers in planting lawns is the use of humus in the soil, although it is often given but scant consideration. Humus is decayed vegetable matter. The efficiency of animal manures in promoting plant growth is due quite as much to the humus they contain as to the very limited amount of plant food. Where fertilizers are used, they should be supplemented by some form of humus as they themselves contain little, if any, of this essential material. Humus may be home-made by the maintenance of a compost heap. Where this is not available, one must turn to other sources. The most convenient and reliable are granulated peatmoss and commercial human preparations. Peatmoss has a greater capacity for water absorption and retention than any other soil-building material. I have employed it extensively in lawn making for several years with extremely satisfactory results. Being slightly acid in reaction, it produces just the conditions desired for grass growth. The tiny roots of the sodding grass plants recur in the moist humus particles which they find in the surface soil and are thus enabled to form quickly a dense turf which prevents a means of entry for weeds to become established.

If the preceding suggestions are to be put into effect in making a lawn, the method to follow will be somewhat different from that which is usually employed.

One may consider the structure of the lawn to be made up of three quite distinct strata, a layer-cake. The bottom one of these is the sub-soil or sub-grade, what we chiefly require is that it shall be porous to permit thoroughly free drainage.
The antique highboy in the far corner, wing chair by the fire, drop-leaf table here, rich mahogany pieces, art objects—most likely you can see them already placed in the new home you are planning to build some day. Each room is to be individually charming. Every item in it must contribute harmoniously toward its beauty.

But have you thought of hardware? This is very important in expressing character in decoration. Is that knob and key plate in perfect keeping with its surroundings? That door handle—is it truly authentic? Sargent Hardware will answer all such questions for you. This excellent quality hardware is made in many beautiful designs, authentic reproductions and modern adaptations, artistically appropriate for every architectural style—Colonial, English, French, Mediterranean.

Think of the future as well as the present. Will those locks fail to latch a few years from now? Will those hinges sag and squeak? And the woodwork—will unsightly stains soon mar its beauty? Not with Sargent Hardware of solid brass or bronze. This quality hardware is rust-proof and extremely durable. Its smooth service lasts as long as the building stands. Our illustrated booklet, "Hardware for Utility and Ornamentation," will be sent you on request. You will find it interesting and instructive.

THE DWELLING DISTINCTIVE

THE BEAUTY AND SUBSTANTIAL RICHNESS OF GEORGIAN ARCHITECTURE IS WELL EXEMPLIFIED IN THIS PHILADELPHIA RESIDENCE. IT CARRIES ON THE TRADITIONAL DIGNITY OF ITS TYPE. DE ARMOND, ASHEAD & BICKLEY, ARCHITECTS.

AN ATMOSPHERE OF WARMTH AND RICHNESS IS MAINTAINED IN EACH SPACIOUS ROOM. WELL-SELECTED FURNISHINGS, DistingUBISHED WOODWORK AND SAR­GENT HARDWARE IN APPROPRIATE DESIGN HAVE MADE POSSIBLE MANY CHARMING EFFECTS.

THE YARMOUTH DESIGN OF SARGENT HARDWARE, SHOWN AT RIGHT, WILL ADD TO THE BEAUTY OF ANY GEORGIAN RESIDENCE. WITH SARGENT LOCKS, ITS EXCELLENT QUALITY ASSURES PERMANENT SATISFACTION—PERFECT OPERATION OF EVERY MOVING PART.
How To Produce A Perfect Lawn

(Continued from page 116)

any surplus water. Above this there should be a layer, three or four inches deep, of fairly good loam containing as much humus as it is practical to secure, but to which no plant foods or fertilizers need be added. On top of this, again, comes the surface layer, at least one inch deep, and better two to three, in which both human and plant food have been incorporated. My own method of making lawns over a small area is to prepare this top-dressing separately, mixing a compost of two parts good garden loam to one of peatmoss, showing the ingredients together through a medium mesh soil or graved screen. The fertilizers are then mixed with this compost, or spread on the surface where it has been applied, one to three inches thick according to conditions. For larger areas, an extra fine and rich surface layer may be made by applying humus and fertilizer to the surface and cultivating or harrowing them in very lightly. Spent Mushroom manure which may be bought in bulk for a few dollars a ton, is one of the most satisfactory materials I have ever found for this purpose. With the careful preparation, however, it is not possible to obtain as fine a seed bed as that secured by mixing the compost and spreading it over the top.

In a seed bed prepared by either of the above methods grass-seed may be started quickly and vigorously at any season of the year. In dry weather, of course, it is essential that the surface be kept moist until the little plants are well up. In spring or early summer sowing, there will be more seeds to contend with than in fall sowing, for the reasons already explained.

KINDS OF GRASS

What grass seed is it best to sow? There has been much talk during recent years about lawns of Creeping Bent. There has been a tendency to run extremes in this as in other garden vogue which occur from time to time. Selected strains of Bent are particularly serviceable for putting greens or for other sport turfs. In my opinion it is not possible, however, to get as fine a Bent turf from seed as from stolons or cuttings. A Bent lawn needs more constant and expert care than one of Bluegrass, and the turf, while more dense, is less attractive in color. If the same amount of care which is necessary to use in procuring a Creeping Bent lawn is expended on a lawn of Bluegrass seed, I believe it will produce results more certain to be satisfactory. I mention this fact not in any attempt to dissuade any prospective lawn-maker who wants a Bent grass lawn from trying it, but merely to present both sides of the case.

Whatever grass one sow, the utmost care should be taken to procure absolutely the best seed it is possible to obtain. Cheap mixtures contain dead seed, seeds of objectionable varieties, and enough weed seeds to foredoom the lawn to failure from the start. The newly constructed lawn can be thoroughly watered, if possible, rolled before planting. This will help to reveal any soft or low spots, so that these may be remedied when light is taken over the surface preparatory to seeding. If the seeding is to be done by hand, it is a good plan to mark off with strings strips six to eight feet in width as a guide in sowing and also to divide the seed into two equal parts, going over the area twice, the second time at right angles to the first. A pound of good seed willnow from two to four hundred square feet. Extra thick sowing will be found to give a green turf more quickly.

SODDING

While using sod for an entire lawn is expensive, it does not cost a great deal to use sod strips, six to twelve inches wide, along the edges of paths, flower beds and, in general, to outline the lawn area. Not only does this give the newly made lawn a more finished appearance than it otherwise have, but the sod also furnishes a worthwhile protection, for it is at the edges that injury is most likely to occur, either preparatory—four-legged or two-legged—or from the washing of heavy rains. On terraces and steep slopes similar strips, placed four to six feet apart, will help very materially in checking any soil runs or gullying during excessive rains until the new grass has been formed. One form of a turf, Th: sod should be laid on a careful preparation and thoroughly watered surface and beaten down very firmly with the back of a spade. Give a thorough watering daily for a week or so, and firm the sods again carefully after the first few days to make sure that none of them have worked loose.

On full planted lawns, animals in the approach of freezing weather it is well to give a mulch of peatmoss, humus, or old manure that has been passed through a screen to break it up into fine particles. This should be rolled to work it in around the grass roots, and not left to lie over the blades of grass. An application a quarter to a half an inch thick will be sufficient. No fertilizer should be used at this time. A similar mulch will be beneficial to a spring-sown lawn, but it is better put on in two applications, a month or so apart after the grass has been mown once or twice. The use of acid reacting fertilizers such as sulphate of ammonia, in feeding the lawn—and it must be fed regularly if it is to be maintained in first-class condition—will stimulate luxuriant growth of the grasses without encouraging the weeds.

As unique as they are lovely! Set of 12 Dessert Plates of famous Copeland Spode China. Hand painted and signed by Copeland's celebrated artist, F. Micklewright. $475. for the set.

Masterpieces

ONE of the charms of Plummer's, so our patrons are kind enough to say, is its exclusiveness. I love to come here because I see so many lovely things I see nowhere else. Indeed, the prestige of Plummer's among smart discerning hostesses is such that many patterns of famous old-world potters are confined exclusively to this establishment—obtainable nowhere else in America. The two plates illustrated are typical. They are two of a charming set of twelve dessert plates. We wish we had room to show them all, for in no other shop in America will you find their duplicates. Indeed, we believe they are the only set of their kind in existence! Copeland Spode China beautifully executed from an old Spode mold and painted by hand by Copeland's celebrated artist, F. Micklewright. A heavy gold band encircles the edge. These varied signed paintings quaintly depict historical and American views:

super-automatic refrigeration

KELVINATORS ARE PRICED AS LOW AS $185 F. O. B. DETROIT

O f course you want quick freezing of ice cubes and delicious desserts... foods kept cool, fresh and healthfully pure for your table... every modern home demands these things from electric refrigeration.

With the new Super-Automatic Kelvinator you won’t need to worry or watch over your refrigerator to obtain these benefits.

For Kelvinator, never deviating from its path of making electric refrigeration even more convenient, more trouble-free, and more economical, has designed its newest product to be 100% automatic in operation.

A new Kelvinator discovery—Ice-O-Thermic Tubes—makes possible for faster freezing of ice cubes. Frozen in special fast-freezing trays, ice and delicious desserts are prepared in an amazingly brief period. Yet food compartments remain always at the same safe temperature between 40 and 50 degrees—neither too warm nor too cold.

In the larger Kelvinator models you even obtain a distinct cold storage compartment where fish, game, etc., may be kept for indefinite periods.

Each new Kelvinator—and they are priced as low as $185 f. o. b. Detroit—is of sturdy metal construction, porcelain-lined throughout to permit easy cleaning. Chromium-plated and butler nickel hardware in dull finish, adds to the attractive appearance and durability of these models.

A Different Christmas —
A Different Future —
For The Whole Family

Couples and husbands all over America will provide future food healthfulness and food economy by installing the new Kelvinator for the family’s Christmas. Under Kelvinator’s RedisCo monthly budget plan, the family budget will hardly be disturbed by the modest cost of installation. See the new Kelvinator now, and be sure to order the size you need in your home in time for Christmas.

KELVINATOR CORPORATION, 1425c PLYMOUTH ROAD, DETROIT, MICHIGAN
Kelvinator Limited, London, England
Old China—or new for that matter—exerts rather a stirring influence in the current scheme of home decoration, and quite regardless of the manner in which plates, cups, platters, tureens or vases might find usage, their colour and beauty are wonderfully exhilarating. Decorators and their clients, who are interested in the artistic value of ceramic, will experience much pleasure in reading the editorial and advertising columns of the Antiques and Interior Decorations Section of The Sun. It is published every Saturday and dwells delightfully on everything, both new and old.

NEW ASPECTS OF OLD FRIENDS

In seeking new and original conceptions, many feel a keen desire to retain something for which there is a precedent, some element which binds the New to the Old. Usually, this element will be the material of which a new design is wrought. And of this category, none so lends itself to infinite exploitation, as does American Walnut. In plywood panels, American Walnut offers unlimited opportunity for modern combinations of figure and pattern. And in Walnut lumber, as illustrated above, some ingenious and beautifully refreshing effects are obtainable. There are always new possibilities in American Walnut.
In thirty years devoted to building fine cars exclusively, Packard has learned much about motor car luxury. And the sum total of this long and rich experience is embodied in today's Packard Eight De Luxe—the most luxurious and the most perfectly appointed car Packard has ever produced.

The Packard Eight De Luxe is designed and built for that select clientele which knows and appreciates the finest things which life affords. Only a few—less than ten a day—are built in what is virtually a factory within a factory. There, Packard's expert craftsmen labor to produce the finest car in the world—regardless of unit cost. With colors, fittings and fabrics the personal choice of the owner, the finishing of each De Luxe model Packard is an individual task in which the finest custom traditions prevail.

The Eight De Luxe is Packard's masterpiece. Nothing is left undone to enhance its well-earned reputation for providing the finest and most luxurious personal transportation money can buy. No wonder that this car, established abroad as the great American automobile, is found, almost without exception, among the vehicles owned by royalty and the great and powerful of every nation and clime.

PACKARD
ASK THE MAN WHO OWNS ONE
THE NEW AMPICO
hailed as the world's finest musical instrument... lives in the world's finest pianos!
...an achievement of the American Piano Company

Throughout the country, thousands of musicians, professional pianists, teachers and music lovers have listened to the new Ampico and have hailed it as the supreme musical instrument of all time—unrivalled in its artistry—unrivalled in the deep and satisfying pleasure it affords to its hearers.

Between any ordinary reproducing piano and the new Ampico, there is as much difference as between the fumbling performance of a first year piano student and the flawless technique of a Rachmaninoff.

No other musical instrument in the world can bring you such music or such enjoyment, or can so exactly re-create the playing of the greatest pianists of our day as can the new Ampico.

Without the necessity of changing a roll, the new Ampico plays selection after selection, thus providing nearly half an hour's continuous musical entertainment—either short pieces interestingly grouped or longer works in their original completeness.

The new Ampico is offered in 25 different models. Its library of master recordings numbers more than 2500. And not only is it in a class by itself as a means of creating fine piano music but each of the pianos in which it is available definitely outranks other makes of similar price.

This marked superiority, found in every instrument of the American Piano Company, is the inevitable outcome, first, of 273 years of combined piano-making experience; second, of unrivalled resources which permit the use of finer materials than could otherwise be employed; third, of leadership reputation which attracts the most skilled craftsmen.

Here is the roll of honor:

Mason & Hamlin—recognized as the supreme piano—the finest (and incidentally the costliest) piano in the world—each instrument ten months in the making.

Knabe—is tone so colorful and sympathetic that Knabe was chosen official piano of that ultra-discriminating group of musical connoisseurs—the Metropolitan Opera Company.

Chickering—America's oldest piano—its history interwoven with the history of music in this country.

J. & C. Fischer—so outstanding in its class that each year European demand sends many overseas to France, England, Germany, Italy.

Marshall & Wendell—specializing in period styles, and particularly in pianos for the small room.

Haines Bros.—a piano so distinguished that over 150 conservatories have selected it as their official instrument.

The new Ampico can be had in any of the above makes. With the Ampico, the prices of these magnificent instruments range from $750 up. Without the Ampico, $375 up. Convenient terms will be arranged by your dealer, with a liberal allowance for your old piano, no matter what its make.

For complete Ampico catalogue, write to the American Piano Company, 584 Fifth Avenue, New York City, New York.

Let Higgin have your screens ready before the flies come!

FOR A REAL HOME

Your home is your “castle.” It shelters everything you hold dear in life.

Beautiful lawns, gardens and shrubs will make it a comelier place to live in. A beautiful Page Fence will make it a safer place for the “kiddies” to play in. They can be out in the open—yet out of danger.

53 Service Plants erect fence everywhere. Write for name and address of plant in your locality. Also for a copy of “Boundary Lines”—an instructive booklet on property protection. Page Fence Association, 520 North Michigan Avenue, Dept. A78, Chicago, Illinois.

BEFORE the spring rush begins, while he can give you additional care and attention . . . let the Higgin Specialist in your locality solve your screening problem once and for all!

There is a magic to Higgin Screens . . . they combine permanent protection with beauty! They are built into the architectural scheme of your home with the same consideration for artistic values as the doors and windows themselves! And they are built so strongly that they will last the lives of those openings they adorn.

Made exclusively of metal, they are trim and narrow. They let light and air in! They are durable and rigid! They cannot warp, twist or break!

Higgin makes every conceivable type of screen . . . therefore the Higgin Specialist is able to prescribe exactly the correct screen for every opening.

Look for “Higgin” in your phone book or mail coupon for complete information on Higgin All-Metal Screens or Weatherstrips, or both.

City State
For your home, too, a fine entrance of authentic Colonial forbears

Simple elegance. These two words bespeak America's finest architectural tradition—what had been up to pre-Revolutionary days. Today we call it Early American or Colonial with much affection, for it has survived nobly and is truly ours.

Now Hartmann-Sanders has captured the very essence of this strictly American beauty and expressed it with mastery in classic reproductions of its bolus plants. It has given us the parents of our modern Gladiolus, Pompraxis, Balanias, Frezias, Nerines, Vlottas, Harmanthus, the Subhodos, Lily, the Silver-tree, the parents of our Pelargoniums, Scarlet and Ivy-leaved Geraniums, the African Lily (Agapanthus umbellatus), the Parrot-flower (Strelitzia regina) and many another exquisite, all of which may be found here and there in Californian gardens, but here again the surface has only been skinned. The Cape Province alone could add a thousand valuable plants to Californian gardens. Heaths are a feature of South Africa, more than five hundred species are known, varying from prostrate, mat-like plants to large bushes and even small trees ten to twenty feet tall. Their flowers are of every color and every shape and the species in variety blossoms throughout the year. Of this vast wealth some fifteen thousand kinds are growing in California. The Silver-tree belongs to the great family of Proteaceae, of which the genus Protea itself is represented in South Africa by no fewer than fifty species. Two or three of these are known in Californian gardens but all are worthy of representation.

From South Africa

It has been my good fortune to see most of the remarkable flowers of the world and I vote the flower heads of such Proteas as P. cyanea and P. molliflora among the most beautiful and remarkable of all flowers. In South Africa are many succulent plants, including the great family of Aloe, especially well-suited for growing in southern California. They have brilliant blossoms borne usually many together in erect racemes, yellow, orange or scarlet or a combination of these being the dominant colors. To visit South Africa when the Aloes bloom is worth a long journey. Acaias and Eucalyptus are well to the fore in Californian gardens. Indeed, the latter are among the commonest of trees planted by road sides and avenues. The generous blossoms of Eucalyptus globulus is rightly esteemed in California one of the most welcome of all exotics. Of the hundreds of species of Eucalyptus Australia boasts more than well worth a place in California and none more so than the Goldfield Gum (E. torquata) with its multitude large corolly of orange to pink blossoms and many varieties with its five to six-inch broad flowers and the only slightly smaller flowers of E. erythrocarpa, E. teretifolia, E. erythrorhena, and E. pyriflora ought to be familiar to every Californian.

Acacias, too, there be equal in beauty at least to any at present grown. For binding sand dunes A. sophera ought to be widely used. The so-called sandsprays of western Australia in particular boast a thousand ornamental possibilities to adorn California's gardens. These include Boronias, Grevilles, Chorizema, Verticordias, Bonillas, Thomasias, Beauparadis, Lambfigo, Fringe Myrtles (Callistemon) Bottlebrushes (Callistemon) Leschenaultias and Dampfers, whose myriad flowers of brilliant shades of blue, orange and scarlet soon can never be forgotten. Then there are Banksias which are to Australia what Proteas are to South Africa. Brilliant blooms and unique in flower and foliage, these are bushes or trees of considerable size bearing usually huge cone-like inflorescences from twelve inches tall with outfruit stamens and pistil yellow and orange in color. Scarcely one is known in cultivation, whereas each and every one is of first water. The great continent of Australia could indeed contribute with ease a couple of thousand species worthy of California's jewel case.

New Zealand Plants

In Leptospermum Nicholletii New Zealand gave California one of its best appreciated plants. Its Gayas, Edwardsias, Metrosideros and Coprosma, and Pittosporum, of which the hybrid between the two species, E. pyriflora, is rightly esteemed to adorn California's gardens. Yet South America holds other things in store, some of them known across the Atlantic but few of which are present in this country. Among these well-suited to California are Eucryphi plantaginea and E. cordata with their large multistamined blossoms, Embeliaeacum, the Fire-bush, one of the most gorgeous of all flowering trees, Drosanthemum spinosum, known as Crinolodendron Hookeriuni, are esteemed among the most beautiful of all plants grown in favored regions in the British Isles.

This is but a page of the story one could unfold; the reservoir of plant material suitable to California is well-nigh inexhaustible. The rich regions of the world hold flowers of rare beauty and await California's seizing the opportunity rightfully hers. Some day this dream of California's gardens and with the finest of the world's floral treasures will come true. To native Californians and those who have winter homes in the State I commend the thought, "Wake up to the full advantages that your soil and climate offers and fill your gardens with the world's best."

Famous for its simplicity and beauty

... even to the hardware

If the house you are going to build must have charm and character then the New England Colonial, comfortable and convenient beyond comparison, economical to build, to heat and furnish, may easily be your choice. It is famous for its simplicity, its beauty and charm.

But it is beautiful only if its characteristic simplicity is carried out in every detail—from front door latch and lock to kitchen cupboard turn. If the hardware you choose is not correct, not of pure, authentic design, not good hardware, it will be a daily regret, a constant, costly nuisance.

It is easy to be certain of good hardware—to know that each bolt, hinge, latch and lock is a faithful reproduction. Just remember “Corbin”—the name that has meant “good hardware” for seventy-five years.

Corbin makes every hardware need in every architectural period. Every lock, latch, bolt, hinge, turn and fastener—every piece—is good hardware...if it’s by Corbin.

Send for the most helpful hardware booklet ever published

Write Dept. H-1 for “Good Buildings Deserve Good Hardware.” It will give you the important information on hardware you need before building—including illustrations of correct types for the different periods.

Amenities of Rock Plant Collecting

(Continued from page 82)

minded folk the art of rock gardening has no charms.

My interest in rock plants was first aroused nearly twenty years ago by the alluring pictures in Gertrude Jekyll's Wall and Water Gardens. In this delightful book the revelation of the encrusted Saxifrages first burst upon me; there I first saw the white Sea Campion spattered against rough stones, and learned the beauty of curtains of Auadrieta and Androsace and mats of rosetted Houseleeks. It was in this book, too, that I first came to know that anything so exquisitely dainty and perky as the Hoop-petticoat Dianthus really existed in the world of flowers. I remember that, when I went out into the garden afterwards and surveyed my stout clumps of Phlox and Peonies, my mats of lush Sweet Williams, they appeared to my excited eye as almost intolerably dull and good-tempered.

But my first reaching out towards this new class of plants was very modest indeed, not to say timid. Arabis was the first rock plant I achieved and I raised it from seed. Golden Alyssum was the next, and there were soon billowing masses of these two pleasant spring flowers at the top of a dry wall.

But when I attempted to go further I found that the nurseries failed me utterly. They offered Bugleweed, Ground Ivy and Moneywort. Not a Saxifrage, not a Gentian or an Androsace, and no small Campanulas save C. carpatica. But discouragement is a state of mind unknown to the collector—even an inexpert collector. Seeds were of course the answer to my determinations, and thereafter all went as merrily as the proverbial marriage bell, and life took on a new and vivid quality before unknown. Today the situation is wholly different, though the improvement has come about only within the past five or six years.

Though seeds must still play an important part in satisfying many of our desires, and they always will provide the most economical and the most truly interesting way of assembling a collection of rock plants, they are no longer the only way in this country. Though seeds must still play an important part in satisfying many of our desires, and they always will provide the most economical and the most truly interesting way of assembling a collection of rock plants, they are no longer the only way in this country.

But it is not the old-established nursery, save in a few cases, that is satisfying the gardening public's new appetite. All over the country have sprung up specialists, many of them women, who are devoting themselves solely to growing rare rock plants and Alpines.

Amenities of Rock Plant Collecting
(Continued from page 124)

...on its rough climate, or of insufficient beauty. But Sisyrinchium graniflorum was a genuine find, a sturdy small thing with thick shining leaves and spikes of bright blue small flowers hoisted very early in the year. Interested and all too quick to recognize its value, I later followed up other members of its clan and found S. regisplantagineus to be rather a poor flower, but S. roseum, one of the most engaging acts that it has been my good fortune to meet with. It is smaller in all its parts than its sister plant and blooms earlier, the little frilly bells appearing on their short stiff spike in March. They are pale blue in color. These plants like a cool situation in peaty soil that is not too dry.

A GEM FROM THE WEST

Thus, too, I came to know Sisyrinchium graniflorum, brilliant cousin of the familiar Blue-eyed Grass. A package of plants reached me from the Northwest so late in the season that it had practically set in. We tucked them away in the rock garden, never to see them again. Nor were we disappointed, they perished during the winter to a plant—all save one. Out of an unmarked grave arose very early in the spring a few rush-like things from the tallest of which presently swung two wide open bells of the most splendid rose-viollet—not what we know as magenta, believe me—and of the most delicious satiny texture. It was a moment of great excitement. I could not imagine its identity or whence it had come. After the flowers had withered this plant died down and I thought it gone for good, but the following spring it again appeared and went through its enchanting performance. Later Mrs. Minto, from whom it transpired it had originally come in that belated and ill-fated parcel, sent me a photograph of the white-flowered form and so I learned its name.

The Sisyrinchiums are cousins of the Iris and there are numerous kinds of them that are worth searching for. You can lay your hands upon them. There used to be a distinction (Nicholson makes it) between S. augusstifolium and S. tenerum but Farrerignores it. Yet the Blue-eyed Grass that romps about my rock garden is bluer, sturdier and altogether more of a personality than the little creature we find in the fields hereabouts. I am no botanist. I have a delightful sort with cream-colored flowers that came to me unnamed in a package of plants from Texas, that richly endowed State, and which is perfectly hardy and seemingly permanent. California offers a yellow-flowered sort and there are numerous others—all American, north or south, though some of them have become naturalized in other countries. The Sisyrinchiums are small things that no one would consider growing anywhere but in a rock garden, but they are very lovely and repay the most minute scrutiny. They seemingly like a soil not too dry, especially S. grandi-

A Wonderful Career

If you have ever wished there was "something you could do" that would provide you with a new interest in life, and with a satisfying means of your own, competent knowledge of interior decoration will open up to you a career that will be in every respect the answer to that wish. With this career could be more wonderful than one which kept you in constant contact with materials and objects of utmost beauty, and that offered you opportunities of financial reward comparable with those of any other profession?

You can acquire expert, authoritative knowledge of the principles of Interior Decorating easily, quickly, in your spare minutes at home, through:

THE ARTS & DECORATION HOME STUDY COURSE IN INTERIOR DECORATION

Operated under the auspices of ARTS & DECORATION MAGAZINE, a foremost authority on the building and decorating of beautiful homes, this Course is absolute, authoritative; and it is thoroughly taught. Individual, expert instruction given every student.

The course consists of 24 lavishly illustrated, printed lesson booklets; a complete set of samples of all the fabrics used as upholstery, draperies, hangings, etc.; and three standard books that would cost you $13.00 if bought in a store—"Drapery Cutting and Making", "The Mixing of Colors and Paints", and "Interior Wall Decoration".

There is no other course of study or reading as worth while as this Arts & Decoration course, in our judgment. Even if you do not make use of the knowledge professionally, still you'll be of enormous value to you, saving you money and increasing your enjoyment in all the purchasing of furniture and decorations you do for your own home.

Isn't it worth while to find out about this career and about a course of study which you can take in your own home of modern that will give you expert knowledge of the subject with the help of the text book, and bought six months if you are willing to give two of the time each day?

MAIL ATTACHED COUPON

and receive a beautifully illustrated FREE booklet which describes the Course in detail, and gives much interesting information regarding Interior Decoration. A

Any single variety above may be bought separately at prices listed

House & Garden's Bookshelf

The author of this book undertakes "to prove that beautiful homes may not necessarily cost more than those that are ugly." He narrates, often delightfully, his experiences with house collecting and his efforts and it is born of a closer knowledge of plants than most other forms of gardening. . . . The true rock gardener slowly and accurately learns the habits and requirements of saxicolous plants, fitting them into their places year by year until he finally accumulates a thriving collection as well and perfect in its way as an old greenhouse full of choice and personal subjects... But the true rock gardener has a fault and the true one is not necessary to cost more than those that are ugly. . . . I have seen a cottage or house which has impressed me as having charm, or that which distinguishes it from the point of view of a collector of rare plants, and it is undoubtedly a fact that no lay R. G. has ever built anything that did not come from the professional L. A. But let each get the point of view of the other and great things may be hoped for.

I shall be glad to furnish an appropriate receipt of an addressed envelope a list of dealers and collectors who are specializing in rock plants.

Plant Hill's Evergreens

PERMANENT BEAUTY — INCREASED PROPERTY VALUE

You see them everywhere — Hill's Evergreens. They add picturesqueness to foundation plantings. Colorful beauty to gardens. And as backgrounds or hedges bring a charm unlike that of any other growing thing. And the passing of the years will not dim their beauty.

Why not you, too, plant evergreens? The few dollars invested will bring you a rich return. And look to Hill's for your needs. In our 600-acre nursery are untold varieties — all shapes, colors and sizes. For three-quarters of a century we have specialized in Evergreen growing — nothing but Evergreens. Our 1930 catalog is now ready for mailing. It contains practical planting suggestions — a wealth of valuable, usable information, with 50 natural-color illustrations. Send for it today, enclosing 25¢ (coins or stamps), which will be refunded on receipt of first order.

BORDERS GROWN FROM SUTTON’S SEEDS

You have often heard of the floral beauty of English gardens. The illustration above pictures a garden walk bordered with exquisite flowers on one of the larger estates. All the flowers are grown from Sutton’s Seeds—the kind that are preferred throughout the length and breadth of the British Isles. Care and climate do not have so much to do with the quality of the blooms as quality of seed, and where Sutton’s Seeds are planted results are as pictured above.

The House of Sutton & Sons was founded in 1806. The fourth generation of the Sutton family now manages all activities. The accumulated experience, knowledge and skill that are the heritage of the Sutton family are applied to the selection, breeding and testing of seed and the improvement of the many varieties. So great has been the success of the House of Sutton & Sons that it has been for generations. By Appointment. Seedsmen to the Royal House of England.

To save time and possible delay we suggest that you write for it today.

Sutton’s Amateur's Guide in Horticulture and General Garden Seed Catalogue

While a catalogue, this book is more. The illustrations are unusually large and clear. The introductions to the various varieties and the specific descriptions of each flower make it an easy matter to know what to select, where to plant, to get the best color results, and when to plant to make sure of the longest succession of bloom. The book answers many questions that puzzle the inexperienced. Send post-paid on receipt of thirty-five cents in stamps or International Money Order.

To save time and possible delay we suggest that you write for it today.

Sutton’s Seeds

England’s Best

House & Garden's Own House (Continued from page 64)

one commands an unbroken vista outdoors. The Japanese use this idea in some of their important rooms and we might as well adopt it. Moreover, there is need for using small panes of glass. In Colonial days win­ dow panes were made small because glass was both expensive and difficult to make, the machinery of the day could only turn out little panes, and, besides, the State laid a heavy tax on windows. To use small panes in a modern house would be a silly anachronism. The mantels on all the windows used throughout the house are horizontal, so that the observer can have a clear vision without vertical obstructions.

On this main floor there still remains the service wing. This is laid out in the long area. A lavatory and flower room in front, then a little entrance corridor with two large closets. Behind this is the kitchen, pantry and a little breakfast nook. Off the last is laid out a breakfast garden, which separates the service yard in front from the vegetable garden behind. This would be kept planted with brilliant colors. Beyond and down a passage are two servants’ rooms and a bath, one of which could be used for a servants’ dining room.

THE BASEMENT

The old-fashioned cellar was and still is the hiding place for all the undesirable junk and refuse a family collects over a period of years. Into this part of the house guests never enter and the family rarely. The furnace is usually placed in a dominant central position and the area around it subdivided in a belter-skelter fashion into storage for coal, wood, old furniture, summer screens, winter potatoes, old trunks, etc. With modern construction and modern equipment, this basement can be dry, well-venti­ lated and well heated, and, following the custom of taking your fun at home, which, thank Heaven, has become fashionable once more, there is no reason why the greater part of this basement should not become the most attractive and interesting areas of the house.

Here we have turned the major part of the basement into a party and game room, bar and gymnasium combined. On the floor is a croquet game laid out in linoleum. At the one end the large fireplace has comfortable seats on each side, and at the other is a tiled bar room. The walls may be of ordinary cinder blocks of varying sizes laid up with white cement joints or they can be decorated in any amusing style one chooses. Metal ducts and a fan will provide this party room with plenty of fresh air. And since air is provided, then it can be equipped with an electric refrigerator and the other paraphernalia of the home gymnasium.

In addition to this large area, ample provision is made for the boiler room, laundry, plenty of closet space for fruits and vegetables and a special trunk and storage room with walls, ceiling and floor lined with cedar.

On the second floor, which is reached by the circular stairs of the entrance, are three bedrooms—a master’s suite at one end, an older child’s room in the middle and the nursery at the other end. Each bedroom is large enough for twins beds and each is provided with its private bath. The last item has become essential to modern living. We demand it in our hotels—"1400 baths"—and the day will come when, in speaking of a house, we will refer to it as "five bedrooms, five baths."

The master’s bedroom is a sleeping porch—the upper part of the sun parlor below. Here is ample space for twin beds, and it can be turned around, with the glass open or shut as one pleases. Thus the master’s bedroom becomes his upstairs sitting room, with appropriate furniture. There are two closets in the master’s bedroom, two in the passage, space for a safe and a commodious linen room at the end.

In arranging the bathroom facilities of the master’s suite we have departed from the stock layout. Two lavatories are provided. The tub is in its compartment and the shower in its special glass enclosure, while the toilet is independent of the other three.

From the nursery or child’s room is an open-air play roof extending over the service quarters below. This has a six-foot parapet broken by child-proof grilles. The floor is laid out in colored tiles in a pachy game.

Off the stair hall on this floor is the sewing room, with necessary closets and a wide counter to be provided with a roll of wrapping paper and facilities for doing up parcels. A fire-proof clothes chute runs directly from this second floor room to the laundry in the basement.

ROOF DECKS

All the roofs of the one-story structures are used as decks or terraces which can be reached by any and all of the bedrooms. Thus makes an attractive feature from the standpoint of convenience and being in the sun, but it affords a means of escape in time of emergency. Tile in decorative patterns gives these flat roofs a pleasant aspect from the air, an angle of vision on the modern house that improved aviation will soon require. Supports, as on ships, rim the edges of these roofs and water is carried off by drain pipes in the walls.

A three-way switch is provided beside the master’s bed, so that all the lights throughout the house may be immediately turned on. On this same switch there could be a connection to flood lights concealed in surrounding trees giving illumination to the garden when the owner is giving a party.
Beautiful Lawns with Jacobsen Power Lawn Mowers

Following a many years' conquest of the power lawn mower field in America, Jacobsen Power Lawn Mowers have captured the hearts of European Estate Keepers in competition with prominent foreign makes.

Jacobsen Power Lawn Mowers are quality built—speedy, durable and efficient. There is a size and type for every lawn from ¼ of an acre up. They earn their cost in time and labor saved and create a healthy, beautiful turf.

The "Estate" Mower is Roller Driven and cuts a 24-inch swath. It is specially designed for the fine lawns of private estates. The Jacobsen "Junior" is a quality power mower with a 19-inch cutting reel and is suitable for moderately large lawns, or lawns with numerous obstructions and terraces.

WRITE for Free Catalogue—"Lawn Beautiful." It describes the exclusive features which have won prominence for Jacobsen Mowers everywhere.

Be Certain YOUR Landscape Plans and Plantings are Correct

Entrust these vital problems to those fully experienced in creating distinctive and beautiful home surroundings. Landscaping is essentially the work of an artist with thorough knowledge of plant life and design. Hundreds of American homes owe their attractiveness to Green's Landscaping Architects. Why not let them design the plantings for your entire grounds?

They are experts who know blooming periods and the correct effects obtained by the proper combination of colors and varieties. Complete details explained in Green's New Catalog.

Green's New Catalog
Distinctively different. Illustrated in Nature's colors with helpful planting information. The result of over 30 years' experience.

New Varieties—Shrubs—Flowers—Fruits
"Approved by Green's"
Each has proved itself worthy of our highest recommendation. They are all ready to enhance your home grounds. Satisfaction guaranteed.

The Storrs & Harrison Co.
and modern house that does not look the part but maintains an Old World charm, with sagging thatch-like roof or really ancient tiles. An exposition of the appropriate use of old materials is a distinguishing feature of the book. This renders a distinct service and one which we wish might be inaugurated in America before the present period of rapid demolition and reconstruction shall have made such an effort useless.

One of the stories Mr. Barron tells is of the important contractor whose work on a short-time exhibition building was being delayed by the bricklayers who were laying only 300 bricks a day. It became apparent that at this slow rate it would be impossible to finish the building by the required date. Stopping in the evening to note the progress, he found his foreman mourning over the delay. Taking off his coat and rolling up his sleeves he said: "Look here, Tom, we'll show them what we can do." During the night he and Tom each laid 1,000 bricks and shamed his workmen into giving honest measure of service. They so admired his pluck that he not only had no farther trouble with them, but they aided him "to become one of the leading lights in the building world."

G. G. G.

GENUINE ANTIQUE FURNITURE. By Arthur de Bles, New York: Thomas Y. Crowell Company.

The outstanding feature of this book is that the writer seems to be telling his story by word of mouth, which adds incalculably to the effect of the many interesting items of his work. You find yourself reading along with zest, as if you were turning the pages of a story book. Suddenly you blink, as you realize you have been reading printed words, not listening to audibly spoken ones. Then you recall that Mr. de Bles is a distinguished lecturer, which accounts for the easy personal touch his written expression conveys.

The book treats of furniture from Gothic times to that made in America in 1840, and is illustrated with 76 photographs and 85 sketches. The vivid manner in which the material is presented, the sound judgment of the facts, the sound judgment of the opinions set forth, and the fairness of the appraisals make this an acceptable book to any one who knows that there really is such a thing as genuine antique furniture.

The chapters on "Furniture of the Late Italian Renaissance" and "The Renaissance in France" are particularly enjoyable. His material on "The Windsor Chair" in "Part III. American Furniture" is especially interesting because of the advancement of a hypothesis that instead of being originally an English product, named from Windsor Palace in the time of George III, it really originated in Windsor, Connecticut, being made in New England and exported to the old country. His estimate of Duncan Phyfe's at least open to discussion. Furniture from Phyfe's shop, or attributed to his shop on grounds of almost indisputable evidence, is turning up at frequent intervals, so that experts are being given new material each season on which to base their conclusions. Witness the notable Loan Exhibition of Early American furniture held at the American Art Galleries, Anderson Galleries, Inc., in October under the patronage of The National Council of Girl Scouts.

G. G. G.

Margaret McKenny is one of those unusual people who combine the accurate, fact-seeking mind of the scientist with the broader, more esthetic appreciation of the nature-lover pure and simple. To her, the structure of a bird's feather or the petal arrangement of a flower is not merely a key to the look of identity, she can enjoy them quite as much for their quality of beauty and perfect adaptation to the purpose for which they were created. Not a person like this sets out to write a book on any branch of natural history we are justified in expecting something well above the ordinary. We look for it to be specific and accurate but not dry, appreciative without foolish sentimentalism, informative and at the same time lightened with occasional little digressions which humanize its interest. Miss McKenny has lived up to all these expectations in Mushrooms of Field and Wood; she would probably have been equally successful were her subject trees, fish, or the rocks of the eternal hills.

Mushrooms of Field and Wood is a small volume, admirably illustrated with half-tones and several color plates by the author, which emphasizes the interest with which fungi hold for all who will examine them with care. To slip a copy into one's pocket on an exploring trip to the woods in mushroom season is to be awakened by a hitherto probably unsuspected pleasure. Even the veriest bit of thicket or meadow holds lowly fungoid treasures of a loveliness of form and color and texture that sometimes seems hardly of this earth. Questions of edibility pass from one's mind quite as completely as they did from Miss McKenny's when she planned the book, for here is a whole fresh phase of Nature lurking in the shadows. One is tempted on and on, searching this way and that in what seems becomes an absorbing pursuit. A quest which has its own thrills of discovery, too, for the true mushroom-fan never knows what rare kind he may find on the marshy margin or behind that great boulder over yonder.

The Vogue for the Outdoor Living Room sweeps the nation

FASHION has decreed that no home can be truly modern without one. New homes are planned with the outdoor living room in mind. Established homes are being modernized by the addition of one.

You can enjoy an Outdoor Living Room this summer. The creation of a beautiful outdoor living room is a simple matter and need not be expensive. Plan it as you would a room indoors. Let grass provide the soft rich carpet—plant trees, shrubs and evergreens to give privacy and screen unsightly view—add color and fragrance with Hardy flowers. Do this and you have a modern outdoor living room which will increase in value and beauty each year.

Write or consult your nurseryman or his representative. Any nurseryman displaying the insignia shown at the bottom of this page will gladly help you beautify your grounds.
The Gardener’s Scrap Book

SOIL FOR WILDFLOWERS

IT is a natural procedure, when transplanting wildflowers from their native haunts to the garden, to provide them with soil which, many times, is a good deal richer than that in which they had been growing. Solicitude for their welfare usually results in their being better fed than ever before in their lives.

Now, this rich fare may be a good thing, or it may not. It generally produces increased growth, but sometimes the plants subjected to it are actually harmed by over-eating. Even where the general health is benefited and greater size produced the net result is not always pleasing, as the increased vigor may take the form of larger stalks and leaves without corresponding improvement in the blossoms.

In general, the safest rule to follow is to set the plants in the same sort of soil as that to which they are accustomed, without any extra enrichment. The freedom from competition with other growths, which results from bringing them under cultivation, is usually enough to bring about whatever improvement may be desirable.

NEW PLANTS FOR FORCING

THE whole matter of wildflower appreciation is growing steadily year by year as the merits and variety of our native flora are brought to public attention through the efforts of a few earnest pioneers. We are fast learning to value them properly in many kinds of window planting, and there are even scattered indications of some of them being recognized as worthy subjects for indoor forcing during late winter and early spring. This latter type of cultivation is still experimental in the main, but it gives promise of interesting results.

One fact that the pioneers of wildflower forcing have estab-

FREE ROSE GUIDE

Every lover of roses may have a copy of our “New Guide to Rose Culture.” It is free on request. Tells how easily roses may be grown, how they add to the attractiveness and value of every home. We have been growing roses for 80 years and have helped tens of thousands of friends all over the country. Send for this free help today. New and old varieties of roses are shown in beautiful natural colors. Also hardy shrubs and other flowering plants, bulbs. Write us. The CONARD & CONRAD CO., Box 172, West Grove, Pa.
THE GARDENER'S SCRAB BOOK

listed is the need of the plants being subjected to a long period of fall and early winter chilling before being brought indoors. Unless they are thus "seasoned" normally they simply refuse to bloom under the artificial conditions, even though flower buds appear and considerable leaf growth is made. One of the best methods of handling them is to put up the plants in late summer, leaving the pots outdoors in a congenial, normal situation until after the first of the year. Then bring them indoors to a fairly cool room where they can thaw gradually and, when new growth appears, move them to a sunny window where they are never allowed to dry out.

WINTER EROSION

WINTER rains have a way of causing quite as much damage in the garden as their brothers of warmer days, for on sloping ground they not infrequently bring about severe erosion which buries some plants far too deep and exposes the roots to all the rigors of an inclement season. Being unable to sink deeply into the ground because of the frost, the water courses along on top, thawing enough of the surface soil to spread thick layers of mud and debris over the low areas at the expense of the higher portions.

There are various ways in which damage of this sort can be minimized, depending upon the individual situation. Terracing the slope is one, in which case the beds themselves are made level and are provided with little turf or stone retaining walls between the various levels. Where this is impractical try diverting the water before it can flow far enough to cause damage, carrying it to some portion of the slope which is not planted; in accomplishing this any available material may be used temporarily, such as boards, stones or heavy cloths. Again, it is sometimes possible to check erosion by laying evergreen boughs flat on the surface of the slope, or even placing rolls of sacking across the direction of the flow so as to break its force.
Does Your House Suit YOU?

Do you feel as though you lived in somebody else's house—the wrong entrance hall—the wrong dining room—the wrong windows that won't be fitted with the right curtains, ever?...

Then you're already dreaming of your own house made just to suit you. And you need House & Garden's Second Book of Houses.

It begins with House & Garden's Four Ideal Smaller Homes—plans, exteriors, decorating, furnishing, landscaping all complete. The Georgian House—15 pages of graceful distinction. The Spanish House—14 pages of gayety and sun. The English House—13 pages of solid comfort. The French House—16 pages of imagination and charm. Each is complete to the last chair, and none costs over 20,000!

Then there are 48 pages on construction as applied to any house...

... Sixty more houses, small, medium and large. ... Pages about log cabins, garages, driveways and turn-arounds. ... Lists of architects who have done little things in the grand manner. Lists of catalogues you may have free.

The price of all this? $4. ... The cost of a mere cushion—a mediocre vase! ... 192 pages ... 600 illustrations. Send for it today!

TRADE LITERATURE OF INTEREST TO PROSPECTIVE HOME BUILDERS

EACH MONTH THERE WILL BE BRIEFLY REVIEWED ON THIS PAGE A NUMBER OF THE NEW BROCHURES, SAMPLES AND CATALOGS WHICH HAVE BEEN ISSUED BY CONCERNED IN THE BUILDING, ORNAMENTATION AND GARDENING FIELDS. THIS ISSUE IS DEVOTED TO MANUFACTURERS IN THE BUILDING FIELD.

RADIATORS
Modern Ideas in Radiators. The McQuay Modern Radiator is described as not merely a cover or shield for an old radiator, but as a complete piece of heating equipment in itself. Both visible and concealed types are shown, and also a particularly interesting model made especially for finely finished rooms. The advantages obtained by using this radiator are explained from both the standpoints of health and economy of operation. McQuay Radiator Corporation, 35 East Wacker Drive, Chicago, Ill.

HEATING EQUIPMENT
Luxurious Automatic Coal Heating. The advantages of the automatic heating furnished by the Iron Fireman De Luxe, are discussed in this booklet. Any heating plant can be equipped with this machine, which has a clock thermostat that will maintain the fire at an even temperature. The text explains the method of operation, and how a savings in labor and fuel is effected by the use of this machine. Iron Fireman Manufacturing Company, Portland, Oregon.

INSULATION
Spray-Flake, the Low Cost Efficient Heat Insulation. The application and the advantages of Spray-Flake are explained in this booklet. It is an insulation material that is sprayed on by guns, covering every chink and crevice. All the work is done by thoroughly experienced mechanics, and in such a manner that only one simple operation is necessary there is a great saving in labor. Spray-Flake Company, 56 South Bay Street, Milwaukee, Wis.

INSULATION BOARD
The House That Grew Up. An interesting story of remodeling and repairing with Weatherwood is given in this booklet. Several small sketches show how attics and basements have been made over into livable rooms by the use of Weatherwood, which is a rigid structural insulation board that provides great structural strength. Suggestions are offered for the application and finishing of Weatherwood. Chicago Mill and Lumber Company, 111 West Washington Street, Chicago, Ill.

TILE ROOFS
Roofs. This beautifully illustrated book shows colored photographs of a number of residences roofed with Imperial Roofing Tiles, which are available in an extensive variety of shapes, shades and textures, adaptable to many types of architecture. Weatherproofing, fireproofing and insulation are among the advantages offered by the use of these tiles. A charge of twenty-five cents is made for this book. Ludowici-Celaron Company, 104 S. Michigan Ave, Chicago, Ill.

HOLLOW TILE
Homes of Permanency. A folio of house designs prepared by the Architects' Small House Service Bureau for the Structural Clay Tile Association as examples of good residences constructed in clay tile. Over fifty one and two story dwellings and their plans are illustrated. These houses contain from four to six rooms, and are of every size and type available for the construction of residences. The Structural Clay Tile Association, 1400 Engineering Building, Chicago, Ill.

VITREOUS MARBLE
Beautiful Sani-Onyx, a Vitreous Marble. A profusely illustrated booklet showing graphically just what Sani-Onyx is and the various uses to which it may be put in the home, and in stores, etc. Full color illustrations of bathrooms, kitchens, breakfast rooms in which walls, floors and ceilings are covered with Sani-Onyx, occupy the first section of the booklet. Sani-Onyx is available in five surface textures and in several standard colors.

VITREOUS MARBLE
Meriatta Manufacturing Company, Indianapolis, Ind.

FLOORING
Zenithed Floors. The desirability of Zenithed as a floor and wall material is the subject of this booklet. The attractive appearance and durability of this material, combined with its value as an insulator, make it suitable for the exterior as well as the interior. Since it is available in several colors and sizes, it can be made to harmonize as easily with almost any architectural effect. Photographs show several residences in which Zenithed has been used. Zenitherm Company, Inc., 110 E. 42nd St., N. Y. C.

WATER TUBING
Chase Copper Water Tubing. Advantages of Chase Copper Water Tubing are listed in detail. Inasmuch as the tubing is made of copper it is absolutely rust-proof. Because of its flexibility it can be bent around corners as easily as a rubber hose, thus eliminating the necessity of joining sections of pipe together by fittings, and allowing cutting into walls and floors when replacement work is being done. Chase Brass & Copper Company, Waterbury, Conn.

BATHROOM CABINETS
Morton Steel Bathroom Cabinets. Styles of Morton Cabinets for general use, and individual ones designed especially for a man or a woman are illustrated and described. If desired the cabinets can be either finished to harmonize with the tiles in the color scheme. A selection of Venetian mirrors is offered for those who prefer to have a cabinet with an all mirror door. The various exclusive features of the construction of Morton cabinets are explained in detail, Morton Manufacturing Company, Chicago, Ill.

BATHROOM FIXTURES
Color and Style in Bathroom Furnishing and Decoration. This extremely attractive brochure contains a number of illustrations in color, of bathrooms equipped with Standard Plumbing Fixtures. The origin of each of the colors shown, is explained in detail. Floor plans for several bathrooms are given. Much space is devoted to a discussion of the bathroom as an important part of the interior decoration scheme. The distinguishing characteristic of "Standard" colors is purity, both in the delicate hues and the deeper shades. Standard Sanitary Manufacturing Company, Pittsburgh, Pa.

WINDOW GLASS
Flat Glass and Libbey-Owens. The story of flat glass from its early history to its use at the present time is given in this booklet. The different processes that have been used in making flat glass are explained and illustrations and text show the method now used by the Libbey-Owens Company. The Libbey-Owens Sheet Glass Company, Toledo, Ohio.

HARDWARE
Modern American Designs in Sargent Hardware. Door hardware shown in this booklet is designed to conform with the modernist movement in architecture. With examples of door escutcheons and knobs produced by Sargent's own designers are a few types executed upon special order from individual architects' designs. While these cannot be purchased separately they afford an idea of the capability of the company in this line of work. Sargent & Company, New Haven, Conn.

METAL TILE
The Beauty of Tile at Far Less Cost. An eight page folder shows color illustrations of interior walls covered with Chromium. Chromium is a metal tile which comes in sheet form and can be applied with the same ease as wallpaper. It has the appearance of tile and is available in a variety of colors. Chromium Company, 228 N. La Salle Street, Chicago, Ill.

FIREPLACES
Heating Plan Book of Modern Fireplaces. The Heating Plan Book of Modern Fireplaces. The simplicity of its operation and the advantages obtained through its use are explained by the text. One of its special features is that it throws an extra blast of heat in addition to the heat given off by the fire itself. Just how this is accomplished is explained in detail. The Heating Plan Company, Syracuse, N. Y.

AIR CONDITIONING
Breathe "Zephyr Air". Excerpts from several articles by doctors and Health Commissioners tell of the necessity of moisture in the air. The Zephyr humidifying system, advocated in this brochure, is run by water power, which lowers operation cost. The numerous advantages of the Zephyr are listed and several illustrations show various models as they have been installed in residences and apartments. Zephyr Washed Air Company, Minneapolis, Minn.

HEATING AND HUMIDIFYING
Humidity in the Home. The first of a series of booklets intended to extend popular knowledge of the science of thermology. It has been prepared and published by the Holland Institute of Thermology in an effort to reduce authentic technical data to terms readily understandable by all the members of an average American household. The text is presented in an interesting fashion and attractive sketches illustrate various points which are brought out. Holland Institute of Thermology, Holland, Mich.

INCINERATORS
Incinerators. This booklet describes the Kerner and explains how it operates without the use of gas or other commercial fuel. The Kerner is built in a number of sizes to meet the requirements of both small and large residences and apartments. It can be used even in a house where there is no basement, as an installation can be made on the outside of the building. Kerner Incinerator Company, Milwaukee, Wis.
Making the Home more Livable Than it has Been Before

With this modern note of convenience: Telephones throughout the house, for greater ease and comfort.

Women today lead interesting, strenuous lives! There are so many places to go... so many things to do. But even with this new activity, there is one thing that still stands out above all others: Making the home more livable and more attractive than it has ever been before.

A kitchen that is a model of modern utility. Furniture with just the right touch of smartness. Guest rooms that draw little exclamations of delight from those who see them. And telephones, of course... telephones all through the house, so one is always near at hand wherever you happen to be.

It is really surprising how much the right telephone arrangements do add to convenience and comfort. In time and steps saved... in preventing "lost" calls... in affording privacy of conversation, when that is desired.

The cost is low, whether your house calls for a complete intercommunicating system, or just an extension telephone or two. Your local Bell Company will gladly help plan the arrangements which will give you the greatest convenience and satisfaction. Call the Business Office today.

Comfort is the dominant note of this library alcove, with its lamp, its deep, easy chair, its books— and the telephone right at hand for ease in placing and answering calls. The telephone literally brings the world to your elbow... your neighbor across the street... friends in other cities... even London, Paris or Berlin.

The modern bedchamber has, of course, a telephone... for true comfort and convenience, and quick communication in the time of possible emergency.

The kitchen telephone is essential in household business, saving steps and time, preventing such tragedies as burnt biscuits and scorched roasts.
Tone is to the pianist what pigment is to the painter. With it he renders a composition, colors it, and gives it point and meaning. Through it he must realize all that he knows, or feels, of music.

It is only natural, therefore, that the musician should be most critical of the tonal quality of the instrument which he would call his own... And it is peculiarly significant that virtually every musician of note, from Liszt to Sibelius, has chosen the Steinway.

Only notable superiority of performance could win and keep such universal favor among musicians. For this reason Steinway & Sons have developed their own scheme and balance of action, draft of scale, system of acoustics and exclusive design and construction of cases... in order that the Steinway may continue preeminent among pianos. The unexampled tone of the Steinway is the result of this ceaseless scientific research.

Though the Steinway sets these standards in pianoforte perfection, it is still a piano that is well within the means of people of modest income. With a deposit of only $147.50 you may have your own Steinway Grand. And though you may select your Steinway from many different sizes and models, each at a different price, there is only one quality of Steinway.

“Finlandia,” painted for the Steinway Collection by Peter Helck

The work of Jean Sibelius is deeply penetrated with the spirit of his race. His stirring tone-poem “Finlandia” is a composition of contrasted moods telling of a people determined to be free. It closes with an exultant passage which might seem a prophetic vision foreshadowing their ultimate national triumph.
Traditionally in past ages, the art of the colorist attained its loveliest development in china and porcelain. Restoring this ancient art, modern Crane potters produced such shades as the citrus yellow here seen in Corwith fixtures and shower receptor. Long ago as the bronze age, artists wrought metals into beautiful forms. Inspired by their memories, modern Crane metal workers created such exquisitely wrought bits as the faucets and wastes and spouts that serve and adorn these fixtures... Truly, the attention to detail that is the mark of fine work is found in all Crane products. For a full appreciation of the new beauty and comfort offered your home by the combined talents of Crane potters, metal workers, designers, engineers, and decorators, visit the nearby Crane Exhibit Rooms. For the final step that turns all this skill to your service, consult your architect and a responsible plumbing contractor.
